FUND OVERVIEW

Charinco is one of six Common Investment Funds managed by BlackRock that have been specifically designed to meet the investment needs of charities. The Fund has the power to invest in many different kinds of fixed interest securities including short, medium and long dated gilt-edged stocks, certificates of deposit, certain Eurosterling issues, debenture and convertible loan stocks and convertible preference shares. Charinco is a charity in its own right, approved by the Charity Commission and with an independent Advisory Committee. It is exempt from income tax and capital gains tax. The Fund aims to provide charities with a high level of income from a portfolio of fixed interest securities.

Key Risks: All financial investments involve an element of risk. Therefore, the value of your investment and the income from it will vary and your initial investment amount cannot be guaranteed. The fund invests in fixed interest securities issued by companies which, compared to bonds issued or guaranteed by governments, are exposed to greater risk of default in the repayment of the capital provided to the company or interest payments due to the fund. The fund invests in fixed interest securities such as corporate or government bonds which pay a fixed or variable rate of interest (also known as the 'coupon') and behave similarly to a loan. These securities are therefore exposed to changes in interest rates which will affect the value of any securities held.

CREDIT RATINGS (%)

Credit quality ratings on underlying securities of the fund are received from S&P, Moody's and Fitch and converted to the equivalent S&P major rating category. This breakdown is provided by BlackRock and takes the median rating of the three agencies when all three agencies rate a security the lower of the two ratings if only two agencies rate a security and one rating if that is all that is provided. "R" applies to securities where the issuing company is under regulatory supervision due to its financial situation. "SD" applies to securities where the issuing company has selectively defaulted on some obligations. "NR" applies to securities that are not rated. "Other" includes dividends booked but not yet received and, if applicable, short-term fixed income securities.

GLOSSARY

Effective Duration: A measure of price sensitivity of a bond to changes in interest rates. The Modified Duration of the fund is calculated as the average of the underlying bonds' modified duration values, adjusted to take account of their relative weight (size) within the fund.

Nominal Weighted Average Life (WAL): A bond's maturity is the length of time until the principal amount of the bond is to be repaid. WAL of the fund is calculated as the average of the underlying bonds' maturities, adjusted to take account of their relative weight (size) within the fund.

Yield To Worst: The lowest potential yield that can be received on a bond without the issuer actually defaulting. The yield to worst is calculated by making worst-case scenario assumptions on the issue by calculating the returns that would be received if provisions are used by the issuer.
