

South West Wiltshire Area Board 21st November 2018

Chimney safety

A clean chimney can help prevent fires and structural damage to your property. Regular cleaning of your chimney or flue will eliminate the build-up of soot and clear obstructions such as bird or animal nests, leaves and debris.

It is not enough to use a vacuum cleaner and you should make sure that your chimney or flue is inspected regularly.

Chimneys should be swept:

- At least once a year when using smokeless fuels
- At least once a year when using bituminous coal
- Every three months when burning wood
- Once a year when using oil
- Once a year when using gas

The following safety advice should always be followed when lighting an open fire or woodburning stove:

- Don't use flammable liquids such as petrol or paraffin to light your fire.
- Don't burn excessive amounts of paper or rubbish.
- Don't overload the fire with fuel.

When the fire is alight, check the loft space occasionally to make sure there is no smoke leaking from cracks, defective brickwork or mortar joints

Getting Ready for winter

Keeping warm in the winter means using portable heaters, electric blankets or wheatbags – but all of these carry a fire risk.

Portable heaters

- Keep heaters at least one metre (3ft) away from curtains and furniture.
- Never use portable heaters for drying clothes.
- Always unplug portable heaters before going to bed or leaving the property.
- Only use gas and paraffin heaters in well ventilated areas.

Open fires

- Keep chimneys and flues clean and well maintained, ensuring that they are swept at least once a year.
- Make sure you always use a fireguard to protect against sparks and hot embers.
- Don't hang laundry too close to the fire in case of sparks.
- Ensure that the fire is fully out before you go to bed or leave the property.

Gas fires

- A Gas Safe registered engineer should carry out installation and maintenance.
- Ventilation is essential – vents should never be blocked or obstructed.
- Do not turn any electrical switches on or off if you can smell gas.
- If you can smell gas, get out of the property and call 999.

Electric blankets

- When buying an electric blanket, go to a reputable retailer and make sure the product meets the current UK and European safety standards – for example, BEAB Approved.
- Always read the manufacturer's instructions before use.

- Never use a hot water bottle in the same bed as an electric blanket, even if the blanket is switched off.
- Unplug blankets before you get into bed unless they have a thermostat control for safe all-night use.
- When storing an electric blanket, don't fold it as this may damage the internal wiring. Store flat or rolled up.
- Examine the blanket regularly for signs of wear and tear – for example, worn or frayed fabric, scorch marks, wires poking through the material, any damage to the flex. If you find an issue, get the blanket replaced.
- Get your blanket tested by a qualified electrician at least every three years and replace blankets every ten years.

Wheat bags

Wheat bags can provide warmth, relief and comfort when used properly but, as with any product involving heat, there is a danger of fire and a risk of injury if care is not taken.

Wheat bags available in shops usually contain buckwheat. Because the moisture content and volume of filling is known, the manufacturer can recommend safe heating times. If you follow the recommended heating time, the bag should not overheat, cause a fire or burn you.

Homemade wheat bags can pose a greater fire and injury risk, because the moisture content and volume is not known, and the proper heating time can't be recommended. The use of a type of wheat other than buckwheat may increase the risks of overheating, fires and burns.

Top tips

- If you want to use wheat bags, buy from a shop rather than making your own and make sure there are clear instructions.
- Ensure that the wheat bag conforms to British Standards and always follow the manufacturer's instructions with care.
- Make sure that the wheat bag is not heated for too long, or at too high a temperature, and never leave unattended during the heating process.
- Check that the microwave turntable is working properly and is not obstructed in any way. This will ensure that the bag is heated safely, without 'hot spots' being formed.
- Don't add oils to wheat bags as, over time, you will saturate the cover cloth and create an added fire risk.
- Continual heating and drying of the wheat bag may overheat it to ignition point. When heating it in a microwave, add a cup or bowl of water on the turntable to reduce this risk.
- Don't use wheat bags or heat packs as bed warmers – only use for direct application to the body.
- Don't use if the bag shows any signs of over-use, e.g. discolouration, smell of burning or charring.
- Leave bags to cool on a non-combustible surface, such as a draining board, and never reheat bags until they are completely cooled (which could be up to two hours).

Safe and Well Visits- Home safety

Natasha Viljoen is the Safe and Well Advisor that covers Mere and Tisbury and Martyn Jones is the Safe and Well Advisor that covers Wilton. Please contact, natasha.viljoen@dwfire.org.uk or martyn.jones@dwfire.org.uk to arrange for a talk to your group or an individual visit.

A Safe and Well visit is FREE and normally lasts about one hour covering topics such as:

- Using electricity safely
- Cooking safely
- Making an escape plan
- What to do if there is a fire
- Keeping children safe
- Good practice – night time routine and other points relevant to you
- Identifying and discussing any further support the occupier may need

If you have thatch property, are living alone, have a young family, are over 65 or a smoker please get in contact with us. We want to help make you safer in your own home. If you or someone you know has mobility or sight and hearing impairments, please suggest a Safe and Well visit.

Visit <https://www.dwfire.org.uk/safety/safe-and-well-visits/> to book one.

Your local station is recruiting

On-call (retained) firefighters are ordinary people doing extraordinary work – they are men and women who may have other jobs or responsibilities as well as their vital role with the Fire & Rescue Service.

On-call firefighters are part-time staff who make themselves available for emergency call-outs depending on their other commitments. They are usually contracted for between 48 and 120 hours per week, but this can vary. Between them, each fire station team will provide cover for weekdays, evenings, nights and weekends.

How many firefighters are on-call?

Some 60% of firefighters in Dorset and Wiltshire work on an on-call basis, making them hugely important to both the Service and the communities that they serve. Of our 50 stations, the majority are crewed only by on-call firefighters and on-call staff work alongside their wholetime colleagues at many of our other stations.

Who can be an on-call firefighter?

Our on-call staff come from all walks of life: they may be employed, self-employed, parents at home or students. Some work in building or allied trades, whilst others are shop assistants, farmers, typists, factory workers or managers.

What they all have in common is self-reliance, confidence, respect, enthusiasm, team spirit and a willingness to be ready for anything when they are alerted to an emergency.

On-call and wholetime firefighters are expected to meet the same entry standards and they receive the same training and development to enable them to work to common standards.

Who can apply?

You can find out more about the role and current vacancies through these pages, but key requirements for applicants are:

- You must be at least 18 years old when you join us (you can apply once you are 17½)
- You must be able to respond and attend the fire station within five minutes (this can vary slightly dependant on location)
- You must have a good standard of physical fitness
- You must have the right to work in the UK

If you are unsure if you can apply, please contact our HR team on 01722 691444 or email recruitment@dwfire.org.uk
