# Primary and Community Care in Wiltshire

## Primary Care Networks

*'The right healthcare for you, with you, near you.'*

# Proposed major changes in the NHS Long Term Plan

- To boost out of hospital care and dissolve the historic divide between primary and community care
- People will get more control over their own health and their personalised care when they need it
- Digitally enabled primary care and outpatients
- Local NHS organisations will have greater focus on population-based and health partnerships with local authority funded services through integrated healthcare systems everywhere in England.

*'The right healthcare for you, with you, near you.'*

# What does this mean for primary and community care

- An increased share of the NHS budget
- An additional £4.5bn per year (increased from the original £3.5bn) by 2024
- This investment guarantee will fund:
  - Expanded workforce
  - Demand pressures
  - New services to meet relevant goals set out in the Long Term Plan

*'The right healthcare for you, with you, near you.'*

# What this means for Wiltshire

- A real opportunity to take the best from the past and reinvent the primary health care team but at network level
- Builds on what we have already been doing in Wiltshire through localities
- The GPs will become the leaders in the network with services wrapped around practices and developing much more integrated services for patients in their communities
- The network is about services for patients that improve patient care, can allow a practice to transform its workforce, workload and make general practice a more attractive place to work

*'The right healthcare for you, with you, near you.'*
