SITE OPTIONS ASSESSMENT TABLES

A.1. Amesbury Community Area Remainder

Amesbury Community Area Remainder - Stage 3 Site Assessment Tables

Sites considered in this Area of Search

Site S146 - Land to the west of Tanner's Lane and south of the Hollow, Shrewton	Site S1067 – Land off Maddington Street, Shrewton
Site S150 - Land north of the A360, Shrewton	Site S90 - Land between Winterbourne Earls Village School and the Railway Line, The Winterbournes
Site S151 - Land South of Nettley Farm, Shrewton	Site S91 - Land by Summerlug Estate and Railway, The Winterbournes
Site S152 - Land at Rollestone Manor Farm, Shrewton	Site S92 - Land by Railway Line and Vicarage, The Winterbournes
Site S154 - Land to the south of London Road, Shrewton	Site 3528 - Land adjacent and including Winterbourne Motors, The Winterbournes

Sites being taken forward by Wiltshire Council from this stage to Stage 4

None.

Shrewton

Site S146 - Land to the west of Tanner's Lane and south of the Hollow, Shrewton

Site context

Site size: 19.27 ha Site capacity: approximately 289 dwellings

This is an agricultural site stretching over three distinct fields from the centre of Shrewton to the east of the site, over to the A360 and open countryside to the west.

The topography of the land is variable, rising to the north. Telegraph poles cross the site.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

<p>1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?</p>	<p>The site constitutes pasture on sloping chalk, with appearance of some improvement and grazing. There is a moderate risk that much of the site could support calcareous grassland, albeit this is unlikely to be in good condition. There is a tree-lined lane and potentially mixed deciduous woodland at northern boundary. The evidence indicates that there are significant ecological issues for habitats or species protected under European or domestic legislation, or could be contradictory to Wiltshire Core Strategy Core Policy 50. Ecological assessments, together with appropriate, robust mitigation and enhancement strategies are likely to be required for this site.</p>
<p>2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?</p>	<p>There is a tree-lined lane at the northern boundary which forms a habitat which could contribute to connectivity to the wider landscape. Potentially mixed deciduous woodland on the northern boundary of the site. Connecting habitats should be retained to enable provision/maintenance of green corridors and buffer zones could provide protection and enhancement to existing habitats.</p> <p>The site falls within the visitor catchment of the Salisbury Plain SPA and an appropriate assessment would be needed to understand the potential effects of recreational disturbance.</p> <p>The site also falls within the River Avon catchment area. The River Avon/Till SSSI/SAC is approximately 60m east of the site, and 60m north of the site (at the closest points). The HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the River Avon SAC through increased water abstraction, particularly with regards to flow targets at the River Till. Mitigation is not considered possible, therefore it is not possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process. Consequently, this option should be rejected on these grounds.</p>
<p>3. Result in greater community engagement with biodiversity?</p>	<p>The development of the site for housing would have the potential to increase public access to designated and non-designated biodiversity features.</p>
<p>4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?</p>	<p>A tree-lined lane at northern boundary forms a habitat which could contribute to connectivity to wider landscape. There is potentially mixed deciduous woodland on northern boundary. Connecting habitats should be retained to enable provision/maintenance of green corridors.</p>
<p>5. Aid in the delivery of a network of multifunctional Green Infrastructure?</p>	<p>The site is very large and could notionally accommodate multifunctional green infrastructure, including corridors and incorporating/maintaining the tree-lined lane at northern boundary which could contribute to connectivity to wider landscape.</p>
<p>6. Ensure all new developments have regard to and protect BAP habitats/species?</p>	<p>The site has potential for calcareous grassland. Potentially mixed deciduous woodland on the site's northern boundary. Ecological assessment with appropriate, robust mitigation and enhancement strategies are likely to be required for this site to ensure appropriate regard to BAP habitats and species.</p>
<p>7. Consider the findings of the HRA in site selection and design?</p>	<p>The HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the River Avon SAC through increased water abstraction. Mitigation is not considered possible, consequently it will not be possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process; therefore it is recommended that options at the village are removed from the plan at this stage of the process.</p>

8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland features but there is potentially deciduous woodland at the northern boundary.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	The site falls within the visitor catchment of Salisbury Plain SPA. Appropriate assessment of the potential effects of recreational disturbance is required should the site be taken forward to the next stage of the selection process.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	The site does not fall within one of the Council's current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).

Assessment outcome (on balance) - - -

SUMMARY OF SA OBJECTIVE 1

This very large site is on agricultural land, which generally has limited ecological value due to the nature of the land use. There is a moderate risk that much of the site could support calcareous grassland and features at the boundaries such as hedgerows and trees may support protected species.

The site falls within the visitor catchment of the Salisbury Plain SPA, appropriate assessment would be required in order to assess potential effects from recreational disturbance.

The site is closely located within the catchment of the River Avon/Till SAC/SSSI and the HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the SAC through increased water abstraction, particularly with regards flow targets at the River Till. It is not considered possible to mitigate this, and it will not be possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process.

In the light of the adverse effects considered likely on the River Avon SAC through water abstraction and the inability to mitigate for this, a major adverse effect is envisaged on this objective for this site and for all sites in Shrewton.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site...

<p>1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?</p>	<p>The site occupies a large track of land on the north-western edge of Shrewton which is a sustainable location for development in line with Core Policy 1 of the Wiltshire Core Strategy. Due to its extent the site is within varying walking/cycling distances to the centre of the village (300-1,100m) where the post office/food store is located. The school is approx. 250m away from the site (at its closest point). While residents may rely upon use of the private car to reach higher order services and facilities there is also a regular (hourly) bus service available to Salisbury from the centre of the village (40 min travel time).</p> <p>This is an extensive site and development would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Locating development in the eastern sector of the site would bring it closer to the village centre.</p>
<p>2. Maximise reuse of previously developed land where possible/appropriate?</p>	<p>The development of the site for housing would take up greenfield land so re-use of previous developed land is not achievable.</p>
<p>3. Encourage remediation of contaminated land?</p>	<p>There is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. It is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.</p>
<p>4. Ensure the design and layout of new development supports sustainable waste management?</p>	<p>The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team</p>
<p>5. Protect and enhance soil quality?</p>	<p>In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence of ground contamination for this site.</p>
<p>6. Protect the best and most versatile agricultural land?</p>	<p>There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be moderate.</p>
<p>7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?</p>	<p>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources.</p> <p>The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>

Assessment outcome (on balance) - -

SUMMARY OF SA OBJECTIVE 2

The site is undeveloped and located on the edge of a large village which is generally a sustainable location for limited growth in accordance with the Core Strategy. The site is extensive and its western sector is further away from the village. In general the development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Whilst this site option would result in undeveloped land being occupied by housing, the western part

of the site is remote from the village with poor connections to Shrewton. This could be mitigated by concentrating development in the eastern sector of the site. Although the grade of agricultural land is not known, given the scale of development this could result in a moderate adverse effect if the land were BMV. On balance, moderate adverse impacts are likely on this objective and mitigation measures are considered problematic.

SA objective 3. Use and manage water resources in a sustainable manner

Decision Aiding Questions. Will the development site...

<p>1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?</p>	<p>Capacity appraisals need to be undertaken by Wessex Water in relation to both the supply of fresh water supply as well as foul drainage for which there is currently limited capacity. Additional development flows will exceed capacity at the treatment works. This is not likely to hinder the delivery of the site by 2026.</p>
<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>In the light of capacity issues, suitable and timely investment would need to be agreed between the developer(s) and Wessex Water, particularly in relation to foul drainage. Investment into foul water infrastructure is likely to be required. There is limited capacity in local fresh water distribution mains. A capacity appraisal will be necessary to determine the scope of network reinforcements.</p>
<p>3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?</p>	<p>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. Alternative harvesting systems such as underground tanks need to be explored in order to proactively manage surface water runoff from developments.</p>
<p>4. Consider the need for adequate provision of surface water and foul drainage?</p>	<p>Investigation of on-site and off-site capacity to manage surface water/discharge to sewerage systems would need to be undertaken. There is limited capacity in local foul water systems which will require a capacity appraisal, and offsite connecting sewer.</p> <p>The site is within a sensitive groundwater area so will require testing and monitoring for at least 12 months to determine the level of ground water. While no absolute constraints have been identified it is important to note that the underlying chalk may be susceptible to seasonal groundwater levels. Monitoring of groundwater levels will be required to determine a suitable storm water disposal system which may have an impact on the size and area of development. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25.</p>
<p>5. Protect, and where possible, improve surface, ground and drinking water quality?</p>	<p>The western half of the site is wholly within Groundwater Source Protection Zone (SPZ) 3, and partly within Zones 1 and 2.</p> <p>SPZ1 (inner protection zone) is defined as the 50-day travel time from any point below the water table to the abstraction source. This zone has a minimum radius of 50 metres. SPZ1 represents the immediate area around a borehole where remediation of pollution is unlikely to be achievable within available timescales, such as in less than 50 days. Therefore development would there may be a significant effect which would need mitigation; further advice would need to be sought from the Environment Agency.</p> <p>The site is within a sensitive groundwater area so will require testing and monitoring for at least 12 months to determine the</p>

	<p>level of ground water. While no absolute constraints have been identified it is important to note that the underlying chalk may be susceptible to seasonal groundwater levels. Monitoring of groundwater levels will be required to determine a suitable storm water disposal system which may have an impact on the size and area of development. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25.</p> <p>In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality.</p> <p>The site is in 60m proximity (at its closest point) to the River Till, which drains into the River Avon, so there is potential for surface water pollution caused by surface water runoff.</p>
<p>6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?</p>	<p>The site falls within the catchment of the Hampshire Avon. Current public water abstraction at Shrewton is known to impact on flows in the River Till.</p>
<p>Assessment outcome (on balance) - - -</p>	
<p>SUMMARY OF SA OBJECTIVE 3</p> <p>This is a very large site on the north western edge of Shrewton. The western half of the site is wholly within Source Protection Zone 3, and partly within Zones 1 and 2. Location within Source Protection Zone 1 in particular is considered to be a significant adverse effect. Groundwater monitoring and devising a suitable storm water disposal system would be required. Detailed site investigations and capacity appraisals for sewerage and fresh water connection to determine the required investment into network and treatment capacity improvements will also be required. Parts of the site are in close proximity to a watercourse (River Till SAC) which drains into River Avon, so there is potential for surface water pollution caused by surface water runoff. As the evidence currently does not rule out adverse effects on the River Avon/Till SAC due to water abstraction, a major adverse effect is envisaged on the aim of the SA Objective 3.</p>	
<p>SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution</p> <p>Decision Aiding Questions. Will the development site...</p>	
<p>1. Maintain and improve local air quality?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development is likely to increase local commuter traffic, which may impact on local air quality. The development is within 200-1,100m of key services and facilities and therefore accessible by foot and cycle, although the western part of the site is located</p>

	<p>further away from the village. A bus service from the centre of the village enables travel to Salisbury on a regular basis during working hours. This could limit the extent of additional traffic emanating from the site.</p> <p>Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable transport modes and may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?	Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. A traffic noise assessment will be required.
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. Due to the site size and overall number of dwellings which could be constructed a significant amount of traffic could be generated.
4. Seek to reduce development in or near to AQMAs ¹ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with Wiltshire Core Strategy Core Policy 55 to address environmental impacts.
6. Seek to contribute to air quality	Development of this site is likely to increase traffic on local roads, which may impact on local air quality. The development is

improvements by locating new development so as to reduce the need to travel by private car?	within 200-1,100m of key services and facilities and therefore accessible by foot and cycle, although the western part of the site is located further away from the village. This could limit the extent of additional traffic emanating from the site but due to the site size and overall number of dwellings which could be constructed a significant amount of traffic could be generated.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with Wiltshire Core Strategy Core Policy 55 to address environmental impacts.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 4	
<p>The site does not fall within a designated AQMA. Development at this site would likely generate noise and light pollution during construction (short term / temporary effect). Noise pollution may be an issue to a lesser extent during operation through the generation of car trips. A noise assessment for road traffic will be required. Technical measures and locating the development in the eastern part of the site could result in a reduction of car trips as village centre including facilities and services would be more accessible by way of walking and cycling could mitigate some of the effects on local air quality. Overall the site option will have a minor adverse effect on this objective.</p>	
SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions	
Decision Aiding Questions. Will the development site...	
1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources will be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.
Assessment outcome (on balance) -	

SUMMARY OF SA OBJECTIVE 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.

However, the effect of the development of this site will be to increase greenhouse gas emissions overall and consequently a minor adverse effect is likely on the objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects

Decision Aiding Questions. Will the development site...

1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?

The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. However the site lies approximately 40m to the west of the Flood Zone 2/3 associated with the River Till (at its closest point).

However, any proposals for development of this site should be informed by a site specific flood risk assessment (FRA) as the site is greater than 1ha in size. As part of any assessment and drainage strategy for development, groundwater levels should be monitored in accordance with the Council's Groundwater Strategy. In addition, any drainage strategy for the development of the site should have regard to CIRIA guidance, Part E, Chapter 25.

The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape.

2. Ensure that development can adapt to the predicted future impacts of climate change?

As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:

- hotter summers;
- milder winters;
- increased periods without rain;
- increased intensity in rainfall; and
- more extreme weather events.

Development would need to include climate change adaptation measures such as designing to prevent overheating, for heat resistant landscaping, for more resilient foundations, for drought resistant planting and for generally more resilient buildings and spaces (general design and robust materials)

3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	The ability of any development to accommodate SuDS on site is currently unknown at this time in the light of geological conditions and the need for groundwater monitoring Mitigation could be problematic
4. Minimise the risk of flooding to people and property (new and existing development)?	<p>The site falls within Flood Zone 1 but Flood Zones 2&3 lie within 40 and 60m respectively. Due to its size a Flood Risk Assessment will be required at application stage for this site.</p> <p>However, consideration would need to be given to the control/management of surface and groundwater having regard to factors such as local topography.</p> <p>There is a need for separate surface water outfalls as pre-requisite. There are downstream properties subject to sewer flood risk. Foul water system in the area is subject to groundwater induced sewer flooding.</p>
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
<p>SUMMARY OF SA OBJECTIVE 5b</p> <p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. However the site is approximately 40m west of the Flood Zone 2/3 associated with the River Till at the closest point. There is also an area of Flood Zone 2/3 60m north of the site. Site investigations and monitoring will be required prior to devising appropriate solutions for surface water management given the underlying geology and topography of the site to protect people and properties from flooding, including lower-lying areas. Potential mitigation measures may include storm water tanks. There is a need for separate surface water outfalls as pre-requisite. There are downstream properties subject to sewer flood risk. Foul water system in the area is subject to groundwater induced sewer flooding. On the basis of the available evidence mitigation measures can be developed to address potentially significant effects on the objective arising from this site option but the topography of the site, especially in the areas closer to the village may make this more problematic, so overall the effects on this objective are considered to be moderate adverse.</p>	
<p>SA objective 6. Protect, maintain and enhance the historic environment</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	Development at the site would not directly/physically affect heritage assets or designations such as listed buildings, World Heritage Site or Scheduled Monuments. Shrewton does not have a conservation area.
2. Ensure appropriate archaeological	A high level Historic Landscape Character appraisal has been carried out which considers the site to have a low sensitivity

assessment prior to development?	rating. As a (large) greenfield site, there may be potential for archaeological assets below ground. The archaeological potential of the site is medium/high and as a result an archaeological assessment will be required. On the basis of available evidence, any future planning applications on the site should be supported by an assessment to determine archaeological significance within the site.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	In accordance with national policy/local policy, the development of the site for housing would deliver housing that could maintain and enhance local distinctiveness through high quality design. There is no Conservation Area at Shrewton.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	There are no heritage sites identified being at risk.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not in proximity to these designations.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 6	
<p>Development at the site would not directly/physically affect heritage assets or designations such as listed buildings, WHSs, Scheduled Monuments or conservation areas.</p> <p>As a large greenfield site, there may be potential for archaeological assets below ground. The archaeological potential to be medium/high, and an archaeological assessment will be required. A high level Historic Landscape Character appraisal has been carried out which considers the site to have a low sensitivity rating.</p> <p>Overall the evidence suggests a minor adverse effect on this objective.</p>	
SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place	

Decision Aiding Questions. Will the development site...	
1. Protect and enhance the landscape character and scenic quality of the countryside?	<p>Based on the Landscape Character Assessment this site can be described as High Chalk Plain in good condition with strong strength of character. The strategy is to conserve the landscape character. The site falls into a Special Landscape Area. The site is sloping, with hedgerows and ecological destinations nearby. Development of the site would avoid some of the more highly valued designations such as AONBs but would lead towards some urbanisation of the settlement and the loss of green space.</p> <p>Inter-visibility is high and the site is visually sensitive (skyline). It is suggested to restrict housing to lower slopes closest to settlement and requirement for green infrastructure within housing layout to mitigate potential visual impacts.</p> <p>It is considered that housing development at this site would result in potential landscape and visual impacts. However they could be successfully mitigated with robust mitigation and enhancement strategies. If the site were to be developed, housing should be restricted to the lower slopes closest to the settlement and requirement for Green Infrastructure within housing layout to mitigate potential visual impacts.</p>
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	If the site were to be developed, housing should be restricted to the lower slopes closest to the settlement and requirement for Green Infrastructure within housing layout to mitigate potential visual impacts.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	Development of the site would avoid some of the more highly valued designations such as AONBs but would lead towards some urbanisation of the settlement and the loss of green space.
4. Conserve and enhance areas with landscape designations and take account of their management	The site falls into a Special Landscape Area. Development of the site would avoid some of the more highly valued designations such as AONBs but would lead towards some urbanisation of the settlement and the loss of green space.

objectives, in particular for the three local AONBs ² ?	
5. Protect rights of way, open space and common land?	A PRoW runs through the site which should be protected from development.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site does not fall into or impact onto the West Wiltshire Green Belt.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 7	
<p>Development of the site would avoid some of the more highly valued designations such as AONBs but would lead towards some urbanisation of the settlement and the loss of green space. Inter-visibility is high and the site is visually sensitive (skyline). Housing should be concentrated on the lower slopes closest to settlement with a requirement for green infrastructure within housing layout to mitigate potential visual impacts. A PRoW runs through the site which should be protected from development.</p> <p>It is considered that housing development at this site would result in potential landscape and visual impacts. However they could be successfully mitigated with robust mitigation and enhancement strategies but this may ultimately require concentration of development in less sensitive sections of the site. On that basis, potentially significant effects could be mitigated in landscape terms and therefore the site option is considered to have minor adverse effects on this objective.</p>	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	The whole SHLAA site provides capacity for up to approximately 289 residential units which contributes towards Wiltshire's housing targets. The site would be subject to an affordable housing requirement in line with local and national requirements.
2. Support the provision of a range of	In accordance with local plan policy and national standards, the development of the site would need to deliver high quality,

house types and sizes to meet the needs of all sectors of the community?	sustainable homes across all types and tenures which could contribute to affordable housing need identified in the local needs survey.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and housing market area (HMA) targeted needs given the site size and notional capacity which purely in land provision terms would provide sufficient flexibility.
4. Have regard to the settlement hierarchy?	The whole SHLAA site provides capacity for up to approximately 289 residential units. In accordance with local plan policy, the allocation and development of the site should appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations. A lower number of units may have to be derived to account for mitigation measures identified in this assessment.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment through short-term construction contracts and a longer-term boost to the local population/workforce.
6. Consider the emerging Neighbourhood Plans?	On the basis of evidence provided by the Qualifying Body, it is unlikely that the emerging Neighbourhood Plan / Neighbourhood Development Order will deliver certainty of supply in the local area to meet needs as the plan has been in abeyance up until very recently.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy/local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities that is not being met by neighbourhood planning initiatives. The western part of the site would be remote from the village.
Assessment outcome (on balance) + + +	
SUMMARY OF SA OBJECTIVE 8	
The whole SHLAA site provides capacity for up to approximately 289 residential units (though this may be reduced through the mitigation set out in this assessment), which contributes towards Wiltshire's housing targets, including affordable homes. Due to its overall capacity there remains sufficient flexibility to provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures. Overall the site would have a major positive effect on this objective; however mitigation measures identified in this assessment may result in a reduction of the overall site size and capacity.	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime. Design of the scheme would have to consider the layout and design of neighbouring residential areas to achieve physical integration and create spaces which do

	not pose a potential danger for residents and visitors during day/night-time.
2. Promote design of buildings and spaces to reduce obesity?	Additional space would be required to integrate schemes for example which encourage walking and cycling; residential areas with shared spaces between vehicles and pedestrians/cyclists; and adequately designed landscape areas. The low density nature of neighbouring development may support this type of development on site and would need to be considered more holistically as part of a development proposal. The site is within 200-1,100m of village facilities which generally would encourage walking and cycling and a healthier lifestyle.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	Core Policy 45 and 46 in the Core Strategy require development to respond to the changing needs of the population locally, including the needs of the elderly. Lifetime Homes for example could be integrated into the development alongside other types of properties needed locally as evidenced through the local housing needs survey. Overall the development could also consider appropriate integration with existing development. There is no evidence that this could not be achieved on this site.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	In accordance with national policy/local plan policy, the site is sustainably located as there are 2 doctor's surgeries in Shrewton. However NHS data suggests that there is a capacity gap at the local surgeries and would unlikely support development of 289 homes. Mitigation would be required to support additional patient demand.
5. Maximise opportunities within the most deprived areas?	The site falls into LSOA 045D which is amongst the 20% least deprived neighbourhoods in the country. Development at this site is not likely to have adverse impacts on deprivation in the local area but has the potential to have a positive impact by providing affordable housing where it is needed.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The village is serviced by a regular bus service to Salisbury. Part of the site lies adjacent to existing residential areas and if a reduced development was concentrated there it would not be isolated from the rest of the community. The western part of the site would be remote from the village and poorly accessible by walking/cycling so the eastern part would be better connected to the village. Proximity to the village centre would also enable people without access to the car to reach local services and bus stops on foot.
7. Support the development of community campuses?	Development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	<p>Shrewton Primary School is currently full and forecast to remain so. The school site is small so it would not be possible to expand the school on its current site. However there is currently a nursery located into the school building. If this could be relocated the school could grow by one class (max 30 pupils). A maximum of 100 houses would be required in order for this solution to work. Evidence therefore suggests that additional development in the village would place significant burden on the local school/nursery. However, development may have the potential to assist in addressing existing infrastructure constraints. As such, by virtue of its size, the site may have the potential to accommodate more than just housing. If allocated, consideration could be given to the potential for co-locating a new nursery on part of the site.</p> <p>Amesbury Stonehenge School (Secondary) currently has some surplus places but the school will require expansion to cater for Military Basing, housing at Kings Gate and a rising demographic. The school could therefore be expanded further if</p>

	necessary.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 9	
<p>The development itself could integrate measures to improve walking and cycling opportunities and promote design of buildings to meet the needs of the population. The development would also positively contribute to the low level of deprivation and could contribute to the extension of the school/relocation of the nursery. However, mitigation would be required in order to accommodate the increase in patient demand for health services. Overall, it is considered that the site option would have a minor adverse effect on this objective.</p>	
SA objective 10. Reduce the need to travel and promote more sustainable transport choices	
Decision Aiding Questions. Will the development site...	
1. Increase walking and cycling accessibility through the use of developer contributions and site design?	Additional internal space would be required to integrate schemes for example which encourage walking and cycling, and residential areas with shared spaces between vehicles and pedestrians/cyclists. The low density nature of neighbouring development may support this type of development on site and would need to be considered more holistically as part of a development proposal. The centre of Shrewton is unsuitable to cater for significant residential development having very few footways, and poor roads for pedestrians to use.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Additional internal space would be required to integrate schemes for example which encourage walking and cycling, and residential areas with shared spaces between vehicles and pedestrians/cyclists.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	Development of the site may provide opportunities in general to improve cycling and walking routes to local services/facilities; but roads in Shrewton centre are generally not conducive to walking and cycling. While there is a regular bus service it is considered that residents will predominantly rely on the car.
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 10	
<p>The allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. School and GPs are within walking distance. Due to the size of the site it could facilitate walking/cycling infrastructure; however in general the centre of Shrewton is considered to be non-conducive to pedestrian traffic due to poor roads and few footways. The size of the development will generate minor additional vehicle movements on the local road network, especially through private car use. On balance the effects on the objective are considered to be moderately adverse since some aspects of mitigation</p>	

could be problematic.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.
2. Support the rural economy?	The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of rural services and facilities.

Assessment outcome (on balance) + + +

SUMMARY OF SA OBJECTIVE 11

Development will increase the local population significantly and contribute to the local economy through use of local shops and services. By providing an increase in workforce in the medium-long term, it is expected that development in this location would support the viability of local services, facilities and businesses of Shrewton and in the wider area.

On balance it is considered that the effects on the objective would be major positive on this objective.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. In addition, there are no employment areas in Shrewton whose vitality and viability could be protected and enhanced by development. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the wider community area.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away.

Assessment outcome (on balance) +

SUMMARY OF SA OBJECTIVE 12

The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would have a minor positive effect on SA Objective 12.

Site S150 – Land north of the A360, Shrewton

Site context

Site size: 10.3 ha Site capacity: approximately 156 dwellings

This is an agricultural field to the south east of the settlement bordered by the A360 to the south, and open countryside on the other borders of the site. The site is located to the south east of the village from which it is separated by SHLAA site S151.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	The site is on agricultural land, which generally has limited ecological value due to the nature of the land use, though the features at the boundaries such as hedgerows and trees may support protected species and should be retained. There are mature trees on the southern boundary and within the centre of the site. Ecological assessment and further details on the proposals will be required to accurately assess likely impacts. There is potential to create or enhance habitats through development of the site.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	<p>The site falls within the visitor catchment of the Salisbury Plain SPA and an appropriate assessment would be needed to understand the potential effects of recreational disturbance.</p> <p>The site falls within the River Avon catchment area. The River Avon/Till SSSI/SAC is approximately 200m south west of the site. The HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the River Avon SAC through increased water abstraction, particularly with regards to flow targets at the River Till. Mitigation is not considered possible, therefore it is not possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process. Consequently, this option should be rejected on these grounds.</p>
3. Result in greater community engagement with biodiversity?	The development of the site for housing would have the potential to increase public access to designated and non-designated biodiversity features. The site is in proximity to PRow to the south-east which provides access to the countryside.
4. Require protection and provision of green corridors and river corridors,	The site is on agricultural land, which generally has limited ecological value due to the nature of the land use, though the features at the boundaries such as hedgerows and trees may support protected species and should be retained. There are

with use of buffer strips, where necessary?	mature trees on the southern boundary and within the centre of the site. Ecological assessments and further details on the proposals will be required to accurately assess likely impacts and advise on corridors to be protected.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure.
6. Ensure all new developments have regard to and protect BAP habitats/species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of delivering biodiversity improvements as it is currently of relatively limited ecological value; taking into account some of the higher value features such as trees and hedgerows.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the River Avon SAC through increased water abstraction. Mitigation is not considered possible, consequently it will not be possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process; therefore it is recommended that options at the village are removed from the plan at this stage of the process.
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland features.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	The site falls within the 6.4km buffer zone of the Salisbury Plain SPA. An appropriate assessment of the potential effects of recreational disturbance is required should the site be taken forward to the next stage of the site selection process.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	The site does not fall within one of the Council's current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).

Assessment outcome (on balance) - - -

SUMMARY OF SA OBJECTIVE 1

The site is on agricultural land, which generally has limited ecological value due to the nature of the land use, though the features such as hedgerows and trees may support protected species And should be retained There are mature trees on the southern boundary and within the centre of the site.

The site falls within the visitor catchment of the Salisbury Plain SPA, appropriate assessment would be required in order to assess potential effects from recreational disturbance.

The site is closely located to and within the catchment of the River Avon/Till SAC/SSSI and the HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the SAC through increased water abstraction, particularly with regards flow targets at the River Till. It is not considered possible to mitigate this, and it will not be possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process.

In the light of the adverse effects considered likely on the River Avon SAC through water abstraction and the inability to mitigate for this, a major adverse effect is envisaged on this objective for this site and for all sites in Shrewton.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site...

<p>1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?</p>	<p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. However the edge of village location may require sensitive design to accommodate for the village/countryside transition as the land rises in north-south direction which would result in part of the development being in a prominent position at the approach to the village. In addition, the site is detached from the village and be comparatively isolated in the south-eastern part of Shrewton, with undeveloped fields to the north and east. At its closest point the post office and village shop are within 900m of the site and the school approximately 1,100m. The recreation ground and surgery are located further away. The nearest bus stop on Salisbury Road is approximately 600m away which provides access to Salisbury and Shrewton village centre.</p>
<p>2. Maximise reuse of previously developed land where possible/appropriate?</p>	<p>This is a greenfield site and therefore maximising reuse of previous developed land is not achievable.</p>
<p>3. Encourage remediation of contaminated land?</p>	<p>At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation.</p> <p>The site is located on greenfield land and it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.</p>
<p>5. Ensure the design and layout of new development supports sustainable waste management?</p>	<p>The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team</p>
<p>6. Protect and enhance soil quality?</p>	<p>In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage of potential soil contamination.</p>
<p>7. Protect the best and most versatile agricultural land?</p>	<p>There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.</p>

8. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	<p>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources.</p> <p>The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>
Assessment outcome (on balance) - -	
<p>SUMMARY OF SA OBJECTIVE 2</p> <p>There is no evidence to suggest that appropriate density levels could not be achieved at this site although the topography will have to be considered when designing development. The site is not located on previously developed land; the site is greenfield and therefore would not require remediation. There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site however given the size of the site the impact on BMV, if present, is considered minor to negligible; and the site does not fall within a Mineral Safeguarding Area or safeguarding zone associated with waste developments.</p> <p>However the site is relatively isolated due to its location in the extreme south-east of Shrewton which reduces the site's physical connectivity to the village and its facilities/services, and public transport, and would result in a relatively isolated development surrounded by undeveloped land. Overall there would be a moderate adverse effect on this objective, given mitigation would be problematic.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	Capacity appraisals need to be undertaken by Wessex Water in relation to both the supply of water as well as foul drainage for which there is currently limited capacity. Additional development flows will exceed capacity at the treatment works. This is not likely to hinder the delivery of the site by 2026.
2. Ensure that essential water infrastructure is co-ordinated with all new development?	In the light of capacity issues, suitable and timely investment would need to be agreed between the developer(s) and Wessex Water, particularly in relation to foul drainage. Investment into foul water infrastructure is likely to be required. There is limited capacity in local fresh water distribution mains. A capacity appraisal will be necessary to determine the scope of network reinforcements.
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. Alternative harvesting systems such as underground tanks need to be explored in order to proactively manage surface water runoff from developments.
4. Consider the need for adequate provision of surface water and foul drainage?	Investigation of on-site and off-site capacity to manage surface water/discharge to sewerage systems would need to be undertaken. There is limited capacity in local foul water systems which will require a capacity appraisal, and offsite connecting sewer.

	<p>The site is within sensitive groundwater area so will require testing and monitoring for at least 12 months to determine the level of ground water. While no absolute constraints have been identified it is important to note that the underlying chalk may be susceptible to seasonal groundwater levels. Monitoring of groundwater levels will be required to determine a suitable storm water disposal system which may have an impact on the size and area of development. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25.</p>
<p>5. Protect, and where possible, improve surface, ground and drinking water quality?</p>	<p>The site is not within a Source Protection Zone but is within a sensitive groundwater area. Monitoring of groundwater levels will be required to determine a suitable storm water disposal system which may have an impact on the size and area of development. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25.</p> <p>In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality.</p> <p>The site is in 220m proximity (at its closest point) to the River Till, which drains into the River Avon, so there is potential for surface water pollution caused by surface water runoff as the land slopes into that direction.</p>
<p>6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?</p>	<p>The site falls within the River Avon (Hampshire) catchment and lies within 220m of the River Till SAC. The site falls within the catchment of the Hampshire Avon. Current public water abstraction at Shrewton is known to impact on flows in the River Till.</p>
<p>Assessment outcome (on balance) - - -</p>	
<p>SUMMARY OF SA OBJECTIVE 3</p> <p>The site is not within a Source Protection Zone but is within a sensitive groundwater area. Groundwater monitoring and devising a suitable storm water disposal system would be required. Detailed site investigations and capacity appraisals for sewerage and fresh water connection to determine the required investment into network and treatment capacity improvements will also be required. There is potential for surface water pollution caused by surface water runoff into the River Till. As the evidence currently does not rule out adverse effects on the River Avon/Till SAC due to water abstraction, major adverse effects are envisaged on the aim of SA Objective 3.</p>	
<p>SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution</p> <p>Decision Aiding Questions. Will the development site...</p>	
<p>1. Maintain and improve local air quality?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air</p>

	<p>quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development is likely to increase local traffic, which may impact on local air quality. The development is within 900-1,100m of key services and facilities (bus stop: 600m).</p> <p>Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable transport modes and landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?	Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. A noise assessment should be carried out with respect to car traffic.
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMA ³ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with Wiltshire Core Strategy Core Policy 55 to address environmental impacts.

6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on the SAC. Where necessary, air quality strategies will be developed and implemented in accordance with Wiltshire Core Strategy Core Policy 55 to address environmental impacts.
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 4</p> <p>The site does not fall within a designated AQMA. Development at this site would likely generate noise and light pollution during construction (short term / temporary effect). Noise pollution may be an issue to a lesser extent during operation through the generation of car trips but a noise assessment should be carried out due to the impacts from car traffic. The fact that the site is relatively isolated and within approximately 1,000m to key services may not assist in reducing car traffic from the site. On balance it is considered that the potential effects on this objective are minor adverse.</p>	
<p>SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.
Assessment outcome (on balance) -	

SUMMARY OF SA OBJECTIVE 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.

However, the effect of the development of this site will be to increase greenhouse gas emissions overall. On balance a minor adverse effect is envisaged on the objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects

Decision Aiding Questions. Will the development site...

1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?

The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. The site is some 150m north of the Flood Zone 2/3 associated with the River Till but the land rises towards the candidate site. While the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses an investigation of off-site connection arrangements may need to be undertaken, particularly if such connections are identified as lying within critical flood zones.

However, any proposals for development of this site should be informed by a site specific flood risk assessment (FRA) as the site is greater than 1ha in size. As part of any assessment and drainage strategy for development, groundwater levels should be monitored in accordance with the Council's Groundwater Strategy. In addition, any drainage strategy for the development of the site should have regard to CIRIA guidance, Part E, Chapter 25.

The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape.

2. Ensure that development can adapt to the predicted future impacts of climate change?

As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:

- hotter summers;
- milder winters;
- increased periods without rain;
- increased intensity in rainfall; and
- more extreme weather events.

Development would need to include climate change adaptation measures such as designing to prevent overheating, for heat resistant landscaping, for more resilient foundations, for drought resistant planting and for generally more resilient buildings and

	spaces (general design and robust materials)
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	The ability of any development to accommodate SuDS on site is currently unknown at this time in the light of geological conditions and the need for groundwater monitoring Mitigation could be problematic.
4. Minimise the risk of flooding to people and property (new and existing development)?	<p>The site falls within Flood Zone 1 but Flood Zones 2&3 lie within 40 and 60m respectively. Due to its size a Flood Risk Assessment will be required at application stage for this site.</p> <p>However, consideration would need to be given to the control/management of surface and groundwater having regard to factors such as local topography.</p> <p>There are downstream properties subject to sewer flood risk. Foul water system in the area is subject to groundwater induced sewer flooding.</p>
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 5b	
<p>The site is located within Flood Zone 1 but while flooding from watercourse is deemed unlikely investment into surface water mitigation measures will be required. The site would require planning application for comprehensive development to be supported by a Flood Risk Assessment. Investigation of off-site connection arrangements may need to be undertaken, particularly if such connections are identified as lying within critical flood zones. The topography of the site may also play a role in this – the land slopes and the potential of surface water run-off to lower-lying areas would have to be investigated. There is a need for separate surface water outfalls as pre-requisite. There are downstream properties subject to sewer flood risk. Foul water system in the area is subject to groundwater induced sewer flooding.</p> <p>On balance the effects on the objective would be moderate adverse since some aspects of mitigation could be problematic.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	Development at the site would not directly/physically affect heritage assets or designations such as listed buildings, World Heritage Site and Scheduled Monuments. There is no conservation area in Shrewton. However, there are a number of listed buildings to the south west of the site and there may be an adverse impact on the setting of existing listed buildings such as a Grade II church. Subject to more detailed Heritage Impact Assessment this may reduce the extent and/or density of development.
2. Ensure appropriate archaeological	As a greenfield site, there may be potential for archaeological assets below ground which may require further evaluation and

assessment prior to development?	mitigation. A high level archaeological assessment has been carried out which considers the archaeological potential to be low/medium, and that an archaeological assessment will be required at any subsequent planning application stage. A high level Historic Landscape Character appraisal has been carried out which considers the site to have a low sensitivity rating.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	There are no relevant buildings on site which could be re-used.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	In accordance with national policy/local policy, the development of the site for housing would deliver housing that could maintain and enhance local distinctiveness through high quality design. There is no Conservation Area at Shrewton.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	There are no such buildings on site. However the impacts of development on the setting of existing listed buildings such as a Grade II church are considered to be significant.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not in proximity to the Stonehenge and Avebury WHS.
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 6	
<p>Development at the site would not directly/physically affect heritage assets or designations such as listed buildings, World Heritage Site, Scheduled Monuments or conservation areas.</p> <p>However, development will have significant impact on rural setting of several listed buildings including a Grade II church and a Heritage Impact Assessment would need to be undertaken in support of any planning application.</p> <p>There may be potential for archaeological assets below ground, the potential is low/medium. An archaeological assessment will be required at any subsequent planning application stage.</p> <p>On balance, the effects of the development on the objective would be moderate adverse as mitigation may be problematic.</p>	
SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local	

distinctiveness and sense of place

Decision Aiding Questions. Will the development site...

1. Protect and enhance the landscape character and scenic quality of the countryside?	The landscape character is described as High Chalk Plain – in good condition, with strong strength of character, and the strategy is to conserve the landscape character. The site falls into a Special Landscape Area. The site is described as sloping and highly visible in the landscape with mature trees covering parts of the site. Development of the site would avoid some of the more highly valued designations such as AONBs but would lead towards some urbanisation of the settlement and the loss of green space. Inter-visibility is described as 'high' with sensitive receptors present (residential). Overall it is considered that development at this site would result in irreversible landscape and visual impacts that could not be successfully mitigated.
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure. If the site were to be developed then there should be a requirement for Green Infrastructure within the housing layout to mitigate potential visual impacts.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	The site is abutted by private land with no PRoW. This would prevent access to the wider countryside.
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ⁴ ?	The site falls into a Special Landscape Area. The site would avoid higher value landscape designations such as the AONB.
5. Protect rights of way, open space and common land?	There are no such designations at this location.

6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site does not affect the Green Belt.
Assessment outcome (on balance) - - -	
SUMMARY OF SA OBJECTIVE 7 While the site is not within the AONB and could deliver green infrastructure It is considered that development at this site would result in irreversible landscape and visual impacts due to its prominence in the landscape and the presence of mature trees on site. It is considered that these impacts could not be successfully mitigated. Access to the wider countryside is considered poor. On that basis the development would likely result in a major adverse effect against SA Objective 7 since no satisfactory mitigation is possible.	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	The whole SHLAA site has capacity for up to approximately 156 residential units which contributes towards Wiltshire's housing targets. However, it should be noted that this number of dwellings could be reduced through the necessary mitigation set out in this assessment. The site would be subject to affordable housing requirements in local and national policy. Depending on the total number of dwellings agreed for the site it can be assumed that the site would provide an adequate supply of affordable housing.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	In accordance with local plan policy and national standards, the development of the site would need to deliver high quality, sustainable homes across all types and tenures. In 2013, a Housing Needs Survey identified a minimum need over the next three years (to July 2016) for 12 subsidised rented dwellings and 4 shared ownership dwellings
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs given the site size and notional capacity which purely in land provision terms would provide sufficient flexibility. However the total developable area could be reduced given the constraints identified under other SA Objectives.
4. Have regard to the settlement hierarchy?	The whole SHLAA site provides capacity for up to approximately 156 residential units. In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations. A lower number of units may have to be derived to account for mitigation measures identified in this assessment.
5. Ensure an adequate provision of housing in settlements to accommodate employment	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment through short-term construction contracts and a longer-term boost to the local population/workforce.

expansion?	
6. Consider the emerging Neighbourhood Plans?	On the basis of evidence provided by the Qualifying Body, it is unlikely that the emerging Neighbourhood Plan / Neighbourhood Development Order will deliver certainty of supply in the local area to meet needs as the plan has been in abeyance up until very recently.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	While an adequate number of dwellings could be achieved by considering various mitigation measures the site is considered to be detached from the village especially if the SHLAA site to the north west remained undeveloped.
Assessment outcome (on balance) + + +	
SUMMARY OF SA OBJECTIVE 8	
The whole SHLAA site provides capacity for up to approximately 156 residential units (though this could be reduced through the mitigation set out in this assessment), which contributes towards Wiltshire's housing unit targets and affordable housing provision. Overall the site's effects are considered to be major positive against the aim of this objective.	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime. Design of the scheme would have to consider the layout and design of neighbouring residential areas especially to the east to achieve physical integration and create spaces which do not pose a potential danger for residents and visitors during day/night-time.
2. Promote design of buildings and spaces to reduce obesity?	Additional space would be required to integrate schemes internally for example which encourage walking and cycling; residential areas with shared spaces between vehicles and pedestrians/cyclists; and adequately designed landscape areas. This would need to be considered more holistically as part of a development proposal. Externally, the site is within 1,000m of village facilities such as the shop/post office, and the school, and within approx. 1,800m of the recreation ground. This may increase the likelihood that residents use the private car.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy the allocation and development of the site would provide flexibly designed accommodation to meet the changing demands of an ageing population in Wiltshire. Core Policy 45 and 46 in the Core Strategy require development to respond to the changing needs of the population locally, including the needs of the elderly. Lifetime Homes for example could be integrated into the development alongside other types of properties needed locally as evidenced through the local housing needs survey. Overall the development could also consider appropriate integration with existing development. There is no evidence that this could not be achieved on this site.
4. Ensure that new development will be accessible to health facilities, and	In accordance with national policy/local plan policy, the site is sustainably located as there are 2 doctor's surgeries in Shrewton. However NHS data suggests that there is a capacity gap at the local surgeries and mitigation will be required to increase

that they are able to cope with the additional demand?	patient demand.
5. Maximise opportunities within the most deprived areas?	The site falls into LSOA 045D which is amongst the 20% least deprived neighbourhoods in the country. Development at this site is not likely to have adverse impacts on deprivation in the local area but has the potential to have a positive impact by providing affordable housing where it is needed.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The development of the site would provide housing in a sustainable location in line with the settlement strategy. However, the site does is not within safe walking distance of the village centre or bus stop. Accordingly, there is the potential for future occupiers to feel isolated if they do not have access to a car.
7. Support the development of community campuses?	Development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	<p>Shrewton Primary School is currently full and forecast to remain so. The school site is small so it would not be possible to expand the school on its current site. However there is currently a nursery located into the school building. If this could be relocated the school could grow by one class (max 30 pupils). A maximum of 100 houses would be required in order for this solution to work. Evidence therefore suggests that additional development in the village would place significant burden on the local school/nursery. However, an appropriate level of development may have the potential to assist in addressing existing infrastructure constraints. As such, by virtue of its size, the site may have the potential to accommodate more than just housing. If allocated, consideration could be given to the potential for co-locating a new nursery on part of the site.</p> <p>Amesbury Stonehenge School (Secondary) currently has some surplus places but the school will require expansion to cater for Military Basing, housing at Kings Gate and a rising demographic. The school could therefore be expanded further if necessary.</p>
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 9	
<p>Due to the isolated nature of the site some 1,000m outside the village core would not aid in creating inclusive and self-contained communities. The development has the potential to meet educational and health requirements. However mitigation would be required in relation to the primary school expansion/nursery relocation. Overall, due to its location and mitigation requirements, the effects are considered to be moderate adverse on this objective.</p>	
SA objective 10. Reduce the need to travel and promote more sustainable transport choices	
Decision Aiding Questions. Will the development site...	
1. Increase walking and cycling accessibility through the use of developer contributions and site design?	While internally the development could accommodate measures such as shared space and adequate provision for walking and cycling there are no footways on the A360 which would not increase safe walking accessibility. Cyclists would have to share the road with cars. In addition the distance to facilities such as schools and the recreation ground may discourage walking and cycling. The proposed development is likely to generate an increase in pedestrian traffic on a busy Class 1 road lacking adequate footways with consequent additional hazards to all users of the road. A footpath/cycle path could be provided on site

	to link the site with the village but third party consent would be required as the site is bordered by private land toward the village centre.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Additional space would be required to integrate schemes for example which encourage walking and cycling such as residential areas with shared spaces between vehicles and pedestrians/cyclists. As there are no footways on the A360 developer contributions would be required to connect the site with the village via third party land (S151) and potentially on the opposite site of the A360 via a crossing.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	The site is located to the south east of Shrewton. The site is 1,000m from the services and amenities in Shrewton, and is isolated from the existing built form with no adequate footways on the A360. A bus service is available at the village centre which would enable access to Salisbury City Centre within approx. 40 minutes but the distance (600m) to the bus stop and the lack of footways could discourage potential users.
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 10	
The site is located to the south east of Shrewton. The site is some distance (1,000m +) from the services and amenities in Shrewton, and is isolated from the existing built form. The site would access directly onto the A360 which has no footways something which would increase its poor connectivity for non-car users. The village is serviced by the Salisbury Reds Bus (2) route but this would not be within safe walking distance of the site. Mitigation such as provision of footways via third party land may prove problematic. For those reasons the effects of the site option on the objective are considered to be moderate adverse.	
SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth	
Decision Aiding Questions. Will the development site...	
1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.
2. Support the rural economy?	Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Shrewton.
Assessment outcome (on balance) + + +	

SUMMARY OF SA OBJECTIVE 11

Development will increase the local population, could contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term it is expected that development in this location would support the viability of local services, facilities and businesses of Shrewton and the wider area. Overall it is considered that there are major benefits on this objective.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. In addition, there are no employment areas in Shrewton whose vitality and viability could be protected and enhanced by development. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the wider community area.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away.

Assessment outcome (on balance) +**SUMMARY OF SA OBJECTIVE 12**

The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would have a minor positive effect on SA Objective 12.

Site S151 – Land South of Nettley Farm, Shrewton**Site context**

Site size: 4.85 ha Site capacity: approximately 109 dwellings.

This is an agricultural, greenfield site immediately south east of Shrewton. The A360 runs along the southern boundary of the site.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...	
1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	The development of the site for housing would have the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation. There is no evidence that the site hosts habitats which would be fragmented by development. The site is on agricultural land, which generally has limited ecological value due to the nature of the land use, though the features at the boundaries such as hedgerows and trees may support protected species and should be retained. An ecological assessment and further details on the proposals will be required however to accurately assess likely impacts. There is potential to create or enhance habitats through development of the site.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	<p>The site falls within the visitor catchment of the Salisbury Plain SPA and an appropriate assessment would be needed to understand the potential effects of recreational disturbance.</p> <p>The site also falls within the River Avon catchment area. The River Avon/Till SSSI/SAC is approximately 285m away from the site, separated from the site by development. The HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the River Avon SAC through increased water abstraction, particularly with regards to flow targets at the River Till. Mitigation is not considered possible, therefore it is not possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process. Consequently, this option should be rejected on these grounds.</p>
3. Result in greater community engagement with biodiversity?	The development of the site for housing would have the potential to increase public access to designated and non-designated biodiversity features. The site is in proximity to a PRoW to the south-east which provides access to the countryside.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	The site is on agricultural land, which generally has limited ecological value due to the nature of the land use, though the features at the boundaries such as hedgerows and trees may support protected species and should be retained. Full ecological assessments and further details on the proposals will be required to accurately assess likely impacts.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure. The development of the site for housing would have the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation.
6. Ensure all new developments have regard to and protect BAP habitats/ species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of delivering biodiversity improvements as it is currently of relatively limited ecological value.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the River Avon SAC through increased water abstraction. Mitigation is not considered possible, consequently it will not be possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process; therefore it is

	recommended that options at the village are removed from the plan at this stage of the process.
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland features.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	The site falls within 6.4km of the Salisbury Plain SPA. Appropriate assessment of the potential effects of recreational disturbance is required should the site be taken forward to the next stage of the site selection process.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	The site does not fall within one of the Council's current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).

Assessment outcome (on balance) - - -

SUMMARY OF SA OBJECTIVE 1

The site is on agricultural land, which generally has limited ecological value due to the nature of the land use, though the features at the boundaries such as hedgerows and trees may support protected species and should be retained. An ecological assessment and further details on the proposals will be required to accurately assess likely impacts. There is potential to create or enhance habitats through development of the site.

The site falls within the visitor catchment of the Salisbury Plain SPA, appropriate assessment would be required in order to assess potential effects from recreational disturbance.

The site is closely located to and within the catchment of the River Avon/Till SAC/SSSI and the HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the SAC through increased water abstraction, particularly with regards flow targets at the River Till. It is not considered possible to mitigate this, and it will not be possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process.

In the light of the adverse effects considered likely on the River Avon SAC through water abstraction and the inability to mitigate for this, a major adverse effect is envisaged on this objective for this site and for all sites in Shrewton.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site...

<p>1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?</p>	<p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. However the edge of village location may require sensitive design to accommodate for the village/countryside transition as the slopes which may result in part of the development being in a prominent position at the approach to the village. At its closest point the post office and village shop are within 600m of the site and the school approximately 700m. The recreation ground and surgery are located further away. The nearest bus stop on Salisbury Road is approximately 300m away which provides access by bus to Salisbury and Shrewton village centre.</p>
<p>2. Maximise reuse of previously developed land where possible/appropriate?</p>	<p>This is a greenfield site and therefore maximising reuse of previously developed land is not achievable.</p>
<p>3. Encourage remediation of contaminated land?</p>	<p>At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation.</p> <p>The site is located on greenfield land, and it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.</p>
<p>4. Ensure the design and layout of new development supports sustainable waste management?</p>	<p>The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team</p>
<p>5. Protect and enhance soil quality?</p>	<p>In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage of potential soil contamination.</p>
<p>6. Protect the best and most versatile agricultural land?</p>	<p>There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.</p>
<p>7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?</p>	<p>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources.</p> <p>The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 2

The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. However the edge of village location may require sensitive design to accommodate for the village/countryside transition. The site is on the edge of the village adjacent to residential areas. It lies within 600m of the village core including the school which is a reasonable distance. There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible. The site is not located on previously developed land; the site is greenfield and therefore would not require remediation. On balance the site option would have a minor adverse effect on the objective as it would result in development of a greenfield site for housing.

SA objective 3. Use and manage water resources in a sustainable manner

Decision Aiding Questions. Will the development site...

1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	Capacity appraisals need to be undertaken by Wessex Water in relation to both the supply of water as well as foul drainage for which there is currently limited capacity. Additional development flows will exceed capacity at the treatment works. This is not likely to hinder the delivery of the site by 2026.
2. Ensure that essential water infrastructure is co-ordinated with all new development?	In the light of capacity issues, suitable and timely investment would need to be agreed between the developer(s) and Wessex Water, particularly in relation to foul drainage. Investment into foul water infrastructure is likely to be required. There is limited capacity in local fresh water distribution mains. A capacity appraisal will be necessary to determine the scope of network reinforcements.
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. Alternative harvesting systems such as underground tanks need to be explored in order to proactively manage surface water runoff from developments.
4. Consider the need for adequate provision of surface water and foul drainage?	Investigation of on-site and off-site capacity to manage surface water/discharge to sewerage systems would need to be undertaken. There is limited capacity in local foul water systems which will require a capacity appraisal, and offsite connecting sewer. Highway drainage is at capacity so no connections are available. The site is within a sensitive groundwater area so will require testing and monitoring for at least 12 months to determine the level of ground water. While no absolute constraints have been identified it is important to note that the underlying chalk may be susceptible to seasonal groundwater levels. Monitoring of groundwater levels will be required to determine a suitable storm water disposal system which may be problematic to mitigate and have an impact on the size and area of development. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25.
5. Protect, and where possible, improve surface, ground and	The site not within a Source Protection Zone but is within a sensitive groundwater area. Monitoring of groundwater levels will be required to determine a suitable storm water disposal system which may be problematic to mitigate and have an impact on

drinking water quality?	<p>the size and area of development. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25.</p> <p>In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality.</p> <p>The site is in 285m proximity (at its closest point) to the River Till, which drains into the River Avon, so there is potential for surface water pollution caused by surface water runoff as the land slopes into that direction.</p>
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	The site falls within the River Avon (Hampshire) catchment and lies within 220m of the River Till SAC. The site falls within the catchment of the Hampshire Avon. According to the HRA Screening current public water abstraction at Shrewton is known to impact on flows in the River Till.
Assessment outcome (on balance) - - -	
<p>SUMMARY OF SA OBJECTIVE 3</p> <p>The site is not within a Source Protection Zone; therefore it is unlikely that there would be any significant effect. The site falls within the River Avon (Hampshire) catchment and lies within 285m of the River Till SAC. Given the notional site capacity development careful consideration would need to be given to impact of water usage and discharge on biodiversity. Given the capacity of the site, development would lead to a limited increase in demand for water. Overall the evidence suggests that investments in water infrastructure/sewerage/storage are necessary, subject to agreement/consent with relevant undertakers, to develop the site some of which could be problematic. The site falls also within the River Avon (Hampshire) catchment. According to the HRA Screening current public water abstraction at Shrewton is known to impact on flows in the River Till. Development of the site would therefore have a major adverse effect on SA Objective 3.</p>	
<p>SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Maintain and improve local air quality?	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development is likely to increase local commuter traffic, which may impact on local air quality. It is recognised that the development is within 700m of key services and facilities. A bus stop exists and can be reached within 300m. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable transport modes and may also</p>

	include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.
2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?	Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. A noise assessment of road traffic will be required.
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAs ⁵ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on the SAC. Where necessary, air quality strategies will be developed and implemented in accordance with Wiltshire Core Strategy Core Policy 55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.

7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on the SAC. Where necessary, air quality strategies will be developed and implemented in accordance with Wiltshire Core Strategy Core Policy 55 to address environmental impacts.
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 4</p> <p>The site does not fall within a designated AQMA. The site is located on the edge of the village but within 700m/300m of services and bus stop which could encourage residents to walk/cycle. Development at this site would likely generate noise and light pollution during construction (short term / temporary effect). Noise pollution may be an issue to a lesser extent during operation through the generation of car trips and a noise assessment will be required in regard to road traffic. Development is likely to increase local traffic, which may adversely affect air quality. Measures must be implemented to mitigate emission levels in line with the council's policies and Air Quality Strategy, such as landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Overall the effects on the objective are considered to be minor adverse mainly due to the overall increase in local traffic and noise/air pollution but measures can be taken to mitigate emission levels.</p>	
<p>SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.
Assessment outcome (on balance) -	

SUMMARY OF SA OBJECTIVE 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in ‘Delivering strategic objective 2: to address climate change’ and the related ‘Core Policy 41: Sustainable construction and low carbon energy’ of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.

However, the effect of the development of this site will be to increase greenhouse gas emissions overall resulting in a minor adverse effect on this objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects

Decision Aiding Questions. Will the development site...

<p>1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?</p>	<p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. While the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses an investigation of off-site connection arrangements may need to be undertaken, particularly if such connections are identified as lying within critical flood zones.</p> <p>However, any proposals for development of this site should be informed by a site specific flood risk assessment (FRA) as the site is greater than 1ha in size. As part of any assessment and drainage strategy for development, groundwater levels should be monitored in accordance with the Council’s Groundwater Strategy. In addition, any drainage strategy for the development of the site should have regard to CIRIA guidance, Part E, Chapter 25.</p> <p>The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape.</p>
<p>2. Ensure that development can adapt to the predicted future impacts of climate change?</p>	<p>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as designing to prevent overheating, for heat resistant landscaping, for more resilient foundations, for drought resistant planting and for generally more resilient buildings and spaces (general design and robust materials)</p>
<p>3. Promote provision of surface</p>	<p>The ability of any development to accommodate SuDS on site is currently unknown at this time in the light of geological</p>

water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	conditions and the need for groundwater monitoring. Mitigation could be problematic.
4. Minimise the risk of flooding to people and property (new and existing development)?	<p>The site falls within Flood Zone 1. Due to its size a Flood Risk Assessment will be required at application stage for this site.</p> <p>However, consideration would need to be given to the control/management of surface and groundwater having regard to factors such as local topography. There are downstream properties subject to sewer flood risk. Foul water system in the area is subject to groundwater induced sewer flooding.</p>
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
<p>SUMMARY OF SA OBJECTIVE 5b</p> <p>The site is located within Flood Zone 1 but while flooding from watercourse is deemed unlikely, investment into surface water mitigation measures will be required as the underlying geology is likely to prevent the implementation of SuDS. Investigation of off-site connection arrangements may need to be undertaken, particularly if such connections are identified as lying within critical flood zones. The topography of the site may also play a role – the land slopes and the potential of surface water run-off to lower-lying areas would have to be investigated. There are downstream properties subject to sewer flood risk. Foul water system in the area is subject to groundwater induced sewer flooding. The site would require planning application for comprehensive development to be supported by a Flood Risk Assessment. On balance it is considered that mitigation measures could potentially be problematic to mitigate. Overall the development would likely result in moderate adverse effects on this objective.</p>	
<p>SA objective 6. Protect, maintain and enhance the historic environment</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	There are a number of listed buildings to the south west of the site, separated by the A360. Development of the site may affect the setting of these assets and their significance. Subject to more detailed Heritage Impact Assessment this may reduce the extent and/or density of development. Adverse effects are unlikely but in the event they arise, they would seem capable of mitigation. There is no conservation area in Shrewton.
2. Ensure appropriate archaeological assessment prior to development?	A high level Historic Landscape Character appraisal has been carried out which considers the site to have a low sensitivity rating. As a greenfield site, there may be potential for archaeological assets below ground which may require further evaluation and mitigation. A high level archaeological assessment has been carried out which considers the archaeological potential to be medium/high, but that further archaeological assessment will be required at application stage.

3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented. In accordance with legislation and national policy/local plan policy, the development of the site would promote the re-use of historical / locally significant buildings.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	In accordance with national policy/local policy, the development of the site for housing would deliver housing that could maintain and enhance local distinctiveness through high quality design. There is no Conservation Area at Shrewton.
5. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not in proximity to the Stonehenge and Avebury WHS
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 6</p> <p>A high level Historic Landscape Character appraisal has been carried out which considers the site to have a low sensitivity rating. Development at the site would not directly/physically affect heritage assets or designations such as listed buildings, World Heritage Site, Scheduled Monuments or conservation areas. However, there are a number of listed buildings to the south west of the site – the setting and significance of which may be affected by development at this site, hence a Heritage Impact Assessment would need to be undertaken in support of any planning application. As a greenfield site, there may be potential for archaeological assets below ground. The archaeological potential is medium/high, and therefore an archaeological assessment will be required at any subsequent planning application stage. On balance it is considered that the site would likely have a minor adverse effect on this objective and mitigation is achievable.</p>	
<p>SA objective 7. Conserve and enhance the character and quality of Wiltshire’s rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Protect and enhance the landscape character and scenic quality of the countryside?	The Landscape Character Assessment defines this area as High Chalk Plain in good condition, with strong strength of character. The strategy is to conserve the landscape character. The site falls into a Special Landscape Area. Development of the site would avoid some of the more highly valued designations such as AONBs but would lead towards some urbanisation of the settlement and the loss of green space. The site is located at the urban fringe, is sloping, and has a medium inter-visibility. It is considered that housing development at this site would result in potential landscape and visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies. If the site were to be developed then there should be a requirement for Green Infrastructure within the housing layout to mitigate potential visual impacts.
2. Aid in the delivery of a network of	In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a

multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	comprehensive network of Green Infrastructure. If the site were to be developed then there should be a requirement for Green Infrastructure within the housing layout to mitigate potential visual impacts.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	The site is abutted by private land with no PRoW which would prevent access to the wider countryside.
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ⁶ ?	The site falls into a Special Landscape Area. The site does not fall within higher value designations such as the AONB.
5. Protect rights of way, open space and common land?	There are no such designations at this location.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	In accordance with national policy/local plan policy, the development of the site would not lead to a reduction in the openness of the Western Wiltshire Green Belt.

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 7

Development of the site would avoid some of the more highly valued designations such as AONBs but would lead towards some urbanisation of the settlement and the loss of green space. The site is located at the urban fringe, is sloping, and has a medium inter-visibility. It is considered that housing development at this site would result in potential landscape and visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies. If the site were to be developed then there should be a requirement for Green Infrastructure within the housing layout to mitigate potential visual impacts. The site development would not affect rights of way, open space and common land but the site is abutted by private land with no PRoW which would prevent access to the wider countryside. Overall

the effects of the site option on this objective are considered to be minor adverse.

SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures

Decision Aiding Questions. Will the development site...

1. Provide an adequate supply of affordable housing?	The whole SHLAA site has capacity for up to approximately 109 residential units which contributes towards Wiltshire's housing targets. However, it should be noted that this number of dwellings could be reduced through mitigation set out in this assessment. The development would be subject to affordable housing requirements based on local and national policy requirements. Depending on the total number of dwellings agreed for the site it can be assumed that the site would provide an adequate supply of affordable housing.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	In accordance with local plan policy and national standards, the development of the site would need to deliver high quality, sustainable homes across all types and tenures. In 2013, a Housing Needs Survey identified a minimum need over the next three years (to July 2016) for 12 subsidised rented dwellings and 4 shared ownership dwellings.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs given the site size and notional capacity which purely in land provision terms would provide sufficient flexibility.
4. Have regard to the settlement hierarchy?	The whole SHLAA site provides capacity for up to approximately 109 residential units (though this could be reduced through mitigation set out in this assessment), which contributes towards Wiltshire's housing targets.
5. Ensure an adequate provision of housing to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment through short-term construction contracts and a longer-term boost to the local population/workforce.
6. Consider the emerging Neighbourhood Plans?	On the basis of evidence provided by the Qualifying Body, it is unlikely that the emerging Neighbourhood Plan / Neighbourhood Development Order will deliver certainty of supply in the local area to meet needs as the plan has been in abeyance up until very recently.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	The land lies adjacent to residential areas so development would result in a natural extension to the existing built form. The site lies within 700m of the village core which could encourage walking and cycling.

Assessment outcome (on balance) + + +

SUMMARY OF SA OBJECTIVE 8

The whole SHLAA site provides capacity for up to approximately 109 residential units (though this may be reduced through the mitigation set out in this assessment),

which contributes towards Wiltshire's housing unit targets. The site option would have a major positive effect on this objective.

SA objective 9. Reduce poverty and deprivation and promote more inclusive and self-contained communities

Decision Aiding Questions. Will the development site...

<p>1. Promote design of buildings and spaces to reduce crime and the fear of crime?</p>	<p>In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime. Design of the scheme would have to consider the layout and design of neighbouring residential areas especially to the east to achieve physical integration and create spaces which do not pose a potential danger for residents and visitors during day/night-time.</p>
<p>2. Promote design of buildings and spaces to reduce obesity?</p>	<p>Additional space would be required to integrate schemes for example which encourage walking and cycling; residential areas with shared spaces between vehicles and pedestrians/cyclists; and adequately designed landscape areas. This would need to be considered more holistically as part of a development proposal. The site is within 700m of village facilities such as the shop/post office, and the school.</p>
<p>3. Promote the design of buildings and spaces to meet the changing needs of the population?</p>	<p>In accordance with national policy/local plan policy the allocation and development of the site would provide flexibly designed accommodation to meet the changing demands of an ageing population in Wiltshire. Core Policy 45 and 46 in the Core Strategy require development to respond to the changing needs of the population locally, including the needs of the elderly. Lifetime Homes for example could be integrated into the development alongside other types of properties needed locally as evidenced through the local housing needs survey. Overall the development could also consider appropriate integration with existing development. There is no evidence that this could not be achieved on this site.</p>
<p>4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?</p>	<p>In accordance with national policy/local plan policy, the site is sustainably located as there are two doctor's surgeries in Shrewton. However NHS data suggests that there is a capacity gap at the local surgeries and mitigation will be required to increase patient demand.</p>
<p>5. Maximise opportunities within the most deprived areas?</p>	<p>The site falls into LSOA 045D which is amongst the 20% least deprived neighbourhoods in the country. Development at this site is not likely to have adverse impacts on deprivation in the local area but has the potential to have a positive impact by providing affordable housing where it is needed.</p>
<p>6. Reduce rural isolation, including access to services for those without a car in rural areas?</p>	<p>The site is considered to be situated at the south-eastern edge of the village with facilities located within 700m. The village is serviced by a regular bus service to Salisbury and the nearest bus stop is approximately 300m away on Salisbury Road.</p>
<p>7. Support the development of community campuses?</p>	<p>Development of community campuses is directed to the town level and therefore this is not appropriate for this site.</p>
<p>8. Is the site accessible to local schools and is there capacity to cope with the additional demand</p>	<p>Shrewton Primary School is located approximately 700m away from the site. The school is currently full and forecast to remain so. The school site is small so it would not be possible to expand the school on its current site. However there is currently a nursery located into the school building. If this could be relocated the school could grow by one class (max 30 pupils). A</p>

generated from the site?	<p>maximum of 100 houses would be required in order for this solution to work. Evidence therefore suggests that additional development in the village would place significant burden on the local school/nursery. However, an appropriate level of development may have the potential to assist in addressing existing infrastructure constraints. As such, by virtue of its size, the site may have the potential to accommodate more than just housing. If allocated, consideration could be given to the potential for co-locating a new nursery on part of the site.</p> <p>Amesbury Stonehenge School (Secondary) currently has some surplus places but the school will require expansion to cater for Military Basing, housing at Kings Gate and a rising demographic. The school could therefore be expanded further if necessary.</p>
--------------------------	---

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 9

The site could assist in mitigating demands in respect of primary education through facilitating the relocation of the nursery. Mitigation could also be required in respect of health facilities in order to respond to an increase in patient demand. On balance the site option is considered to have a minor adverse effect on this objective.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site could potentially provide opportunities to improve cycling and walking routes to local services/facilities/employment.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	In accordance with local plan/Local Transport Plan policies, the site would have the potential to incorporate new cycling infrastructure as well as create links to existing cycling infrastructure.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	The site is located to the south east of the Large Village of Shrewton. The site is 700m from the services and amenities in Shrewton, and would abut residential areas at its northern boundary. There is limited probability of reducing out-commuting given the limited employment offer at Shrewton and the need to travel to other higher order settlements to access employment. A bus service is available on Salisbury Road (300m) which would enable access to Salisbury City Centre within approx. 40 minutes. A bus service is available at the village centre which would enable access to Salisbury City Centre within approx. 40 minutes but no footways/crossings exist to enable residents to access the bus stops for example at Salisbury Road.

Assessment outcome (on balance) - -

SUMMARY OF SA OBJECTIVE 10

The site is located to the south east of the Large Village of Shrewton. The site is within 700m from the services and amenities in Shrewton, and lies adjacent to existing residential areas. The site would access directly onto the A360 which has no footways in this sector something which would result in poor connectivity for non-car users. A crossing may have to be provided. The village is serviced by the Salisbury Reds Bus (2) route but this is hard to reach from the site. Mitigation measures to improve walking and cycling opportunities may prove problematic. For those reasons the effects on this objective would be moderate adverse.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.
2. Support the rural economy?	Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Shrewton.

Assessment outcome (on balance) + + +

SUMMARY OF SA OBJECTIVE 11

Development will increase the local population, could contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. It is expected that development in this location would support the viability of local services, facilities and businesses of Shrewton. Overall it is considered that it is likely that there would be no adverse effect and development will have major benefits against this objective.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. In addition, there are no employment areas in Shrewton whose vitality and viability could be protected and enhanced by development. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the wider community area.
2. Provide a focus for development in	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal

Salisbury and Trowbridge?	Settlements located some distance away.
---------------------------	---

Assessment outcome (on balance) +

SUMMARY OF SA OBJECTIVE 12

The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would have a minor positive effect on SA Objective 12.

Site S152 – Land at Rolleston Manor Farm, Shrewton

Site context

Site size: 0.28ha Site capacity: approximately 8 dwellings

Small site on edge of the settlement. Immediately adjacent to listed building so likely to be significant historic impact concerns. Good vehicular access directly onto A360 but site is relatively isolated from amenities in the village.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	This is a small grassed / hard standing site, which is unlikely to have any ecological value. The evidence base indicates there are few or no ecological issues in relation to this site. However, the precautionary principle must be applied and an ecological assessment at site level to support individual planning applications will be required.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in	The development of the site for housing would be unlikely to lead to adverse impacts on designated and non-designated biodiversity interests within the local area, though ecological assessment would be required. The site also falls within the River Avon catchment area. The River Avon/Till SSSI/SAC is also close by. The HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the River Avon SAC through increased water abstraction, particularly with regards to flow targets at the River Till. Mitigation is not considered possible, therefore it is not possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process. Consequently, this option should be rejected on these grounds.

a net gain?	
3. Result in greater community engagement with biodiversity?	The site is very small and once developed there would be no or very little potential for this on site. However the site is in proximity to PRowS to the south-east which provide access to the countryside.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	The site is very small and once developed there would be no or very little potential for this on site.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	The site is very small and once developed there would be no or very little potential for this on site.
6. Ensure all new developments have regard to and protect BAP habitats/ species?	This is a small grassed / hard standing site, which is unlikely to have any ecological value.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the River Avon SAC through increased water abstraction. Mitigation is not considered possible, consequently it will not be possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process; therefore it is recommended that options at the village are removed from the plan at this stage of the process.
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland features.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	The site falls within the visitor catchment of Salisbury Plain SPA. Further assessment of the potential effects of recreational disturbance is required.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	The site does not fall within one of the Council's current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).

Assessment outcome (on balance) - - -

SUMMARY OF SA OBJECTIVE 1

The site falls within the visitor catchment of the Salisbury Plain SPA, appropriate assessment would be required in order to assess potential effects from recreational disturbance.

The site is closely located to and within the catchment of the River Avon/Till SAC/SSSI and the HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the SAC through increased water abstraction, particularly with regards flow targets at the River Till. It is not considered possible to mitigate this, and it will not be possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process.

In the light of the adverse effects considered likely on the River Avon SAC through water abstraction and the inability to mitigate for this, a major adverse effect is envisaged on this objective for this site and for all sites in Shrewton.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site...

1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	The site is very small and has capacity for 8 dwellings. Development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. However the site is located approx. 1,000m away from the village core (including school, shop, post office) and 600m from the bus stop.
2. Maximise reuse of previously developed land where possible/appropriate?	The site constitutes grassland with some hard standing. The development of the site for housing would not maximise the potential of previously developed land in line with local plan and national policy.
3. Encourage remediation of contaminated land?	At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. The site is located on greenfield land and it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.
5. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
6. Protect and enhance soil quality?	In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence of soil contamination on this site.

7. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
8. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	<p>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources.</p> <p>The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 2</p> <p>The site is not located on previously developed land; the site is greenfield and therefore would be unlikely to require remediation. The site is unlikely to comprise high quality agricultural land, however in the event it was based on the scale and location of the site any loss would be minor to negligible. The site is not located within a Mineral Safeguarding Area so not sterilisation of viable mineral resources will occur. The distance to local services and public transport may discourage residents to walk/cycle although alternative (safe) routes are available in principle. Hence the effects of this site option would be minor adverse on this objective.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	Capacity appraisals need to be undertaken by Wessex Water in relation to both the supply of water as well as foul drainage for which there is currently limited capacity. Additional development flows will exceed capacity at the treatment works. This is not likely to hinder the delivery of the site by 2026.
2. Ensure that essential water infrastructure is co-ordinated with all new development?	In the light of capacity issues, suitable and timely investment would need to be agreed between the developer(s) and Wessex Water, particularly in relation to foul drainage. Investment into foul water infrastructure is likely to be required. There is limited capacity in local fresh water distribution mains. A capacity appraisal will be necessary to determine the scope of network reinforcements.
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. Alternative harvesting systems such as underground tanks need to be explored in order to proactively manage surface water runoff from developments.
4. Consider the need for adequate provision of surface water and foul drainage?	Investigation of on-site and off-site capacity to manage surface water/discharge to sewerage systems would need to be undertaken. There is limited capacity in local foul water systems which will require a capacity appraisal, and offsite connecting sewer.

	<p>The site is within a sensitive groundwater area so will require testing and monitoring for at least 12 months to determine the level of ground water. While no absolute constraints have been identified it is important to note that the underlying chalk may be susceptible to seasonal groundwater levels. Monitoring of groundwater levels will be required to determine a suitable storm water disposal system which may be problematic to mitigate and have an impact on the size and area of development. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25.</p>
<p>5. Protect, and where possible, improve surface, ground and drinking water quality?</p>	<p>The site is not within a Source Protection Zone but is within a sensitive groundwater area so will require testing and monitoring. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25.</p> <p>The site is in 175m proximity to the River Till which drains into the River Avon, so there is potential for surface water pollution caused by surface water runoff. In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality.</p>
<p>6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?</p>	<p>The site falls within the River Avon (Hampshire) catchment. The site is in 175m proximity to the River Till which drains into the River Avon. According to the HRA Screening current public water abstraction at Shrewton is known to impact on flows in the River Till.</p>
<p>Assessment outcome (on balance) - - -</p>	
<p>SUMMARY OF SA OBJECTIVE 3</p> <p>Impacts on local fresh water supply and foul water infrastructure could be mitigated through targeted investment proportionate to the level of development which is very modest (8 units). The site is not within a Source Protection Zone; therefore it is unlikely that there would be any significant effect. The site falls within the River Avon (Hampshire) catchment and the HRA Screening concluded that abstraction would affect flows in the River Till. On balance the likely effects of the development on this objective would be major adverse.</p>	
<p>SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution</p> <p>Decision Aiding Questions. Will the development site...</p>	
<p>1. Maintain and improve local air quality?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development is likely to result in a limited increase in local commuter traffic, which may impact on local air quality. However, it</p>

	<p>is recognised that the development is within approx. 1,000m of key services and facilities and therefore not easily accessible by foot and bicycle. A bus stop exists within approx. 600m (Salisbury Rd). This could help limit the extent of additional traffic emanating from the site but residents may feel discouraged by the distance to the bus stop.</p> <p>Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable transport modes and may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?	Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. A road traffic noise assessment will be required.
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMA ⁷ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on the SAC. Where necessary, air quality strategies will be developed and implemented in accordance with Wiltshire Core Strategy Core Policy 55 to address environmental impacts.
6. Seek to contribute to air quality	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air

improvements by locating new development so as to reduce the need to travel by private car?	quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on the SAC. Where necessary, air quality strategies will be developed and implemented in accordance with Wiltshire Core Strategy Core Policy 55 to address environmental impacts.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 4	
The site does not fall within a designated AQMA. Development at this site would likely generate noise and light pollution during construction (short term / temporary effect). Noise pollution may be an issue to a lesser extent during operation through the generation of car trips but the level of development is very modest so effects are not considered to be significant based on the available evidence. A road traffic noise assessment will be required. Overall it is considered that the effects of the development on the objective are minor adverse as mitigation measures can be developed to limit the effects on air quality from the development.	
SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions	
Decision Aiding Questions. Will the development site...	
1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.
Assessment outcome (on balance) -	

SUMMARY OF SA OBJECTIVE 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in ‘Delivering strategic objective 2: to address climate change’ and the related ‘Core Policy 41: Sustainable construction and low carbon energy’ of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.

However, the effect of the development of this site will be to increase greenhouse gas emissions overall resulting a minor adverse effect on this objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects

Decision Aiding Questions. Will the development site...

<p>1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?</p>	<p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. While the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses an investigation of off-site connection arrangements may need to be undertaken, particularly if such connections are identified as lying within critical flood zones.</p> <p>However, any proposals for development of this site should be informed by a site specific flood risk assessment (FRA) as the site is greater than 1ha in size. As part of any assessment and drainage strategy for development, groundwater levels should be monitored in accordance with the Council’s Groundwater Strategy. In addition, any drainage strategy for the development of the site should have regard to CIRIA guidance, Part E, Chapter 25.</p> <p>The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape.</p>
<p>2. Ensure that development can adapt to the predicted future impacts of climate change?</p>	<p>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as designing to prevent overheating, for heat resistant landscaping, for more resilient foundations, for drought resistant planting and for generally more resilient buildings and spaces (general design and robust materials)</p>
<p>3. Promote provision of surface</p>	<p>The ability of any development to accommodate SuDS on site is currently unknown at this time in the light of geological</p>

water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	conditions and the need for groundwater monitoring, mitigation could be problematic
4. Minimise the risk of flooding to people and property (new and existing development)?	The site falls within Flood Zone 1. However, consideration would need to be given to the control/management of surface and groundwater. There are downstream properties subject to sewer flood risk. Foul water system in the area is subject to groundwater induced sewer flooding.
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 5b	
<p>The site is located within Flood Zone 1. Site investigations and monitoring should determine the risk of groundwater flooding. The risk of surface water flooding can be addressed through mitigation measures to ensure the surface runoff from the site is not increased. Consideration would need to be given to the control/management of surface and groundwater. There are downstream properties subject to sewer flood risk. Foul water system in the area is subject to groundwater induced sewer flooding. Mitigation measures will be required to address sewer flood risk, to the satisfaction of Wessex Water. On that basis the site option would have a moderate adverse effect on the objective as surface water mitigation could be problematic.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The site forms part of the curtilage to Rollestone Manor which is a listed building. The loss of this part of the curtilage would harm the setting and significance of the listed building which could not be mitigated against. There is no Conservation Area at Shrewton.
2. Ensure appropriate archaeological assessment prior to development?	A high level Historic Landscape Character appraisal has been carried out which considers the site to have a high sensitivity rating. As a greenfield site, there may be potential for archaeological assets below ground which may require further evaluation and mitigation. The archaeological potential of the site is identified as medium, therefore an archaeological assessment will be required at any subsequent planning application stage.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	There are no such buildings present on the site itself.

4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	In accordance with national policy/local policy, the development of the site for housing would deliver housing that could maintain and enhance local distinctiveness through high quality design. There is no Conservation Area at Shrewton.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	There are no such buildings present on the site itself.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site does not affect the WHS.
Assessment outcome (on balance) - - -	
<p>SUMMARY OF SA OBJECTIVE 6</p> <p>A high level Historic Landscape Character appraisal has been carried out which considers the site to have a high sensitivity rating. As a greenfield site, there may be potential for archaeological assets below ground which may require further assessment and mitigation. A high level archaeological assessment has been carried out which considers the archaeological potential to be medium, and that an archaeological assessment will be required for any subsequent planning application stage. Development of the site would have an adverse effect the setting and significance of the listed Rollestone Manor which could not be mitigated. Overall, there would be a major adverse effect on this objective.</p>	
<p>SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Protect and enhance the landscape character and scenic quality of the countryside?	<p>The landscape character is described as High Chalk Plain and in good condition, with strong strength of character. The strategy is to conserve the landscape character. The site falls into a Special Landscape Area. Development of the site would avoid some of the more highly valued designations such as AONBs but would lead towards some urbanisation of the settlement and the loss of green space.</p> <p>It is considered that housing development at this site would result in potential landscape and visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies.</p>
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green	The site is very small and once developed there would be no or very little potential for this on site.

Infrastructure Strategy?	
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	The site is located near public footpaths into the wider countryside to the south-east which would enable access to the countryside.
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ⁸ ?	The site falls into a Special Landscape Area. The site is not located within higher value landscape designations such as the AONB.
5. Protect rights of way, open space and common land?	There would be no effect on PRoWs, open space and common land. The site lies adjacent to a listed building which is covered under Objective 6.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site is not in or adjacent to the Green Belt.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 7	
Development of the site would avoid some of the more highly valued designations such as AONBs but would lead towards some urbanisation of the settlement and the loss of green space. It is considered that housing development at this site would result in potential landscape and visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies. On that basis it is considered that the site option would have a minor adverse effect on this objective.	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	

Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply housing in accordance with national policy and local plan policy requirements but due to the site capacity the contribution would be relatively modest and affordable housing provision will be unlikely given the confirmed government policy and guidance.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	In accordance with local plan policy and national standards, the development of the site could deliver high quality, sustainable homes but affordable housing is unlikely to be provided.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would boost housing supply to meet local and HMA targeted needs but overall capacity is relatively modest. The site could notionally make a modest contribution to meeting the requirements in the community area; but affordable housing is unlikely to come forward on this site.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment through short-term construction contracts and a longer-term boost to the local population/workforce.
6. Consider the emerging Neighbourhood Plans?	On the basis of evidence provided by the Qualifying Body, it is unlikely that the emerging Neighbourhood Plan / Neighbourhood Development Order will deliver certainty of supply in the local area to meet needs as the plan has been in abeyance up until very recently.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with local plan policy and national standards, the development of the site would need to deliver high quality, sustainable homes although affordable housing is unlikely to be provided. The site is close to existing residential development on the edge of Shrewton. However the distance to local facilities (1,000m) may discourage residents to walk/cycle.
Assessment outcome (on balance) +	
SUMMARY OF SA OBJECTIVE 8	
The site could provide approximately 8 residential dwellings which would aid in delivering Wiltshire's housing targets, but the development would unlikely deliver affordable housing. The contribution to housing supply is therefore limited and the positive effect of this is also somewhat diminished by the distance of the site to local services/facilities. On that basis the effects on this objective are considered to be minor positive.	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	

Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime. Design of the scheme would have to consider the layout and design of neighbouring residential areas especially to the east to achieve physical integration and create spaces which do not pose a potential danger for residents and visitors during day/night-time.
2. Promote design of buildings and spaces to reduce obesity?	Additional space would be required to integrate schemes for example which encourage walking and cycling; residential areas with shared spaces between vehicles and pedestrians/cyclists; and adequately designed landscape areas. This would need to be considered more holistically as part of a development proposal. The site is within 1,000m of village facilities such as the shop/post office, and the school. This may not result in trips undertaken on foot or by bicycle and increase the likelihood that residents use the private car.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy the allocation and development of the site would provide flexibly designed accommodation to meet the changing demands of an ageing population in Wiltshire. Core Policy 45 and 46 in the Core Strategy require development to respond to the changing needs of the population locally, including the needs of the elderly. Lifetime Homes for example could be integrated into the development alongside other types of properties needed locally as evidenced through the local housing needs survey. Overall the development could also consider appropriate integration with existing development. There is no evidence that this could not be achieved on this site.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	In accordance with national policy/local plan policy, the site is within 1,200m of two doctor's surgeries which are most likely to be accessed by car. NHS data suggests that there is a capacity gap at the local surgeries and mitigation measures will be required to increase patient demand.
5. Maximise opportunities within the most deprived areas?	The site falls into LSOA 045D which is amongst the 20% least deprived neighbourhoods in the country. Development at this site is not likely to have adverse impacts on deprivation in the local area.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The site is considered to be detached from the village centre and has poor connectivity to the rest of the settlement including services and facilities, which would likely to be reached by car. The village is serviced by a regular bus service to Salisbury but the nearest bus stop is approximately 600m away.
7. Support the development of community campuses?	Development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	Shrewton Primary School is located approximately 1,000m away from the site. The school is currently full and forecast to remain so. The school site is small so it would not be possible to expand the school on its current site. However there is currently a nursery located into the school building. If this could be relocated the school could grow by one class (max 30 pupils). A maximum of 100 houses would be required in order for this solution to work. Evidence suggests that additional development in the village would place significant burden on the local school/nursery. However, an appropriate level of development may have the potential to assist in addressing existing infrastructure constraints. As such, by virtue of its size, the site may not have the potential to accommodate more than just housing. If allocated, consideration could therefore not be

	<p>given to the potential for co-locating a new nursery on part of the site.</p> <p>On the other hand the demand for new places from this relatively small development (8 dwellings) would be very low.</p> <p>Amesbury Stonehenge School (Secondary) currently has some surplus places but the school will require expansion to cater for Military Basing, housing at Kings Gate and a rising demographic. The school could therefore be expanded further if necessary.</p>
<p>Assessment outcome (on balance) - - -</p>	
<p>SUMMARY OF SA OBJECTIVE 9</p> <p>The site can notionally contribute to meeting the changing needs of the population and design options could generally devised to consider the requirements for reducing crime or healthy lifestyles. However the site is within 1,000m to the services and facilities provided by the village as well as the recreation ground which may be of disadvantage for residents with no access to the private car. The local bus stops are within 600m distance which may prove discouraging for residents. Mitigation would be required to accommodate patient demand for the doctor's surgery. The primary school is full and does not have capacity to expand without the relocation of the nursery to a site much larger than this one. On balance the effects are considered to be major adverse against the aim of this objective.</p>	
<p>SA objective 10. Reduce the need to travel and promote more sustainable transport choices</p> <p>Decision Aiding Questions. Will the development site...</p>	
<p>1. Increase walking and cycling accessibility through the use of developer contributions and site design?</p>	<p>In accordance with national policy/local plan policy and best practice, the allocation and development of the site could provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site has an existing link onto the A360 but the A360 has no dedicated footway in this sector and alternative routes would have to be used for example via Rollestone Road. The centre of Shrewton is unsuitable to cater for significant residential development having very few footways, and poor roads for pedestrians to use; however, this development is relatively minor and would generate only a limited amount of pedestrian traffic.</p>
<p>2. Ensure new development incorporates facilities and infrastructure for cyclists?</p>	<p>Additional space would be required to integrate schemes for example which encourage walking and cycling such as residential areas with shared spaces between vehicles and pedestrians/cyclists. The size of the site may prove to be too restricted to enable this. The adjacent A360 would require improvements to enable residents to safely access the village on foot/by bike or alternative routes would have to be used for example via Rollestone Road.</p>
<p>3. Improve the jobs/homes balance, to reduce out-commuting?</p>	<p>The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.</p>
<p>4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?</p>	<p>The village is serviced by the Salisbury Reds Bus (2) route. The nearest bus stop lies within 600m. Given the limited services within Shrewton it is however likely that residents would be reliant on the use of a private vehicle to access higher order settlements and their services/facilities.</p>

Assessment outcome (on balance) - -

SUMMARY OF SA OBJECTIVE 10

The site is located on the south eastern fringe of the large village of Shrewton and is considered to be remote from the village core including services and facilities. The site would likely access onto Rolleston Road which has an existing link onto the A360. The overall effects are considered to be moderate adverse on this objective due to the general location of the site in relation to essential services and facilities in the village.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?

Not relevant to this location.

2. Support the rural economy?

Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Shrewton.

Assessment outcome (on balance) +

SUMMARY OF SA OBJECTIVE 11

Development of the site would increase the local population and could make a minor positive contribution to the local economy through use of local facilities and services. Minor benefits are likely against the aim of this objective.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?

The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. In addition, there are no employment areas in Shrewton whose vitality and viability could be protected and enhanced by development. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the wider community area.

2. Provide a focus for development in Salisbury and Trowbridge?

The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away.

Assessment outcome (on balance) +**SUMMARY OF SA OBJECTIVE 12**

The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would have a minor positive effect on SA Objective 12.

Site S154 – Land to the south of London Road, Shrewton**Site context**

Site size: 13.35 ha Site capacity: approximately 200 dwellings

Site consists of one large agricultural green field and part of an adjoining large agricultural greenfield. The site is located to the north east of the settlement. The site is bordered by London Road (B3086) to the north, some housing to the north east, open countryside to the south and surroundings and the main settlement of Shrewton to the west.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	The site is on agricultural land, which generally has limited ecological value due to the nature of the land use. Local species records include badger, bat species and bird accordingly an ecological assessment and further details on the proposals will be required to accurately assess likely impacts. There is potential to create or enhance habitats through development of the site.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	The site falls within the visitor catchment of the Salisbury Plain SPA and an appropriate assessment would be needed to understand the potential effects of recreational disturbance. The site also falls within the River Avon catchment area. The River Avon/Till SSSI/SAC is approximately 300m west of the site. The HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the River Avon SAC through increased water abstraction, particularly with regards to flow targets at the River Till. Mitigation is not considered possible, therefore it is not possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process. Consequently, this option should be rejected on these grounds.

3. Result in greater community engagement with biodiversity?	The development of the site for housing would have the potential to increase public access to designated and non-designated biodiversity features. The site lies adjacent to Nett Road which is a secondary wildlife corridor and should be enhanced.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	In line with national policy, local plan policy and standing advice from relevant bodies, the development of the site for housing would have the potential to make suitable provision for buffers to recognised green/water course corridors. The site lies adjacent to Nett Road which is a secondary wildlife corridor and this feature should be enhanced.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure.
6. Ensure all new developments have regard to and protect BAP habitats/species?	Based on the findings of ecological assessments and in accordance with local plan policy and biodiversity targets, the development of the site for housing would need to be capable of delivering biodiversity improvements.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the River Avon SAC through increased water abstraction. Mitigation is not considered possible, consequently it will not be possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process; therefore it is recommended that options at the village are removed from the plan at this stage of the process.
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland features but there is potentially deciduous woodland at the northern boundary.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	The site falls within the visitor catchment of Salisbury Plain SPA. Appropriate assessment of the potential effects of recreational disturbance is required should the site be taken forward to the next stage of the selection process.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	The site does not fall within one of the Council's current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).
Assessment outcome (on balance) - - -	

SUMMARY OF SA OBJECTIVE 1

The site is on agricultural land, which generally has limited ecological value due to the nature of the land use, protected species may be present on site.

The site falls within the visitor catchment of the Salisbury Plain SPA, appropriate assessment would be required in order to assess potential effects from recreational disturbance.

The site is closely located to and within the catchment of the River Avon/Till SAC/SSSI and the HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the SAC through increased water abstraction, particularly with regards flow targets at the River Till. It is not considered possible to mitigate this, and it will not be possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process.

In the light of the adverse effects considered likely on the River Avon SAC through water abstraction and the inability to mitigate for this, a major adverse effect is envisaged on this objective for this site and for all sites in Shrewton.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site...

1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?

The site occupies a large track of land on the north-western edge of Shrewton which in principle is a sustainable location for development in line with Core Policy 1 of the Wiltshire Core Strategy. The centre of the village is approx. 1,000m away from the site but distances vary due to site size. Residents may predominantly rely upon use of the private car to reach higher order services and facilities there is also a regular (hourly) bus service available to Salisbury from the centre of the village (40 min travel time).

This is an extensive site and development would be capable of delivering appropriate housing densities in line with local planning policy and available evidence.

2. Maximise reuse of previously developed land where possible/appropriate?

The site is not located on previously developed land; the site is greenfield.

3. Encourage remediation of contaminated land?

At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation.

The site is located on greenfield land and it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.

4. Ensure the design and layout of new development supports sustainable waste management?

The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team

5. Protect and enhance soil quality?	In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation.
6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	<p>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources.</p> <p>The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>
Assessment outcome (on balance) - -	
<p>SUMMARY OF SA OBJECTIVE 2</p> <p>The site is located on the north-eastern fringe of Shrewton. Local services in the village centre can be reached within approx. 1,000m of the site but not via a safe walking route. Shrewton has an hourly bus service to Salisbury from the centre of the village. The site is not located on previously developed land; the site is greenfield and therefore unlikely to require remediation. The loss of potential high quality agricultural land is likely to be minor to negligible. On balance the site is considered to have a minor adverse effect on the objective.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	Capacity appraisals need to be undertaken by Wessex Water in relation to both the supply of water and foul drainage for which there is currently limited capacity. Additional development flows will exceed capacity at the treatment works. This is not likely to hinder the delivery of the site by 2026.
2. Ensure that essential water infrastructure is co-ordinated with all new development?	In the light of capacity issues, suitable and timely investment would need to be agreed between the developer(s) and Wessex Water, particularly in relation to foul drainage. Investment into foul water infrastructure is likely to be required. There is limited capacity in local fresh water distribution mains. A capacity appraisal will be necessary to determine the scope of network reinforcements.
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. Alternative harvesting systems such as underground tanks need to be explored in order to proactively manage

	surface water runoff from developments.
4. Consider the need for adequate provision of surface water and foul drainage?	<p>Investigation of on-site and off-site capacity to manage surface water/discharge to sewerage systems would need to be undertaken. There is limited capacity in local foul water systems which will require a capacity appraisal, and offsite connecting sewer. Highway drainage is at capacity so no connections are available.</p> <p>The site is within a sensitive groundwater area so will require testing and monitoring for at least 12 months to determine the level of ground water. While no absolute constraints have been identified it is important to note that the underlying chalk may be susceptible to seasonal groundwater levels. Monitoring of groundwater levels will be required to determine a suitable storm water disposal system which may be problematic to mitigate and could have an impact on the size and area of development. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25.</p>
5. Protect, and where possible, improve surface, ground and drinking water quality?	<p>The site is not within a Source Protection Zone but is within an area with groundwater sensitivities. Monitoring of groundwater levels will be required to determine a suitable storm water disposal system which may have an impact on the size and area of development. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25.</p> <p>In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality.</p> <p>The site is in 330m proximity (at its closest point) to the River Till, which drains into the River Avon, so there may be potential for surface water pollution caused by surface water runoff as the land slopes into that direction.</p>
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	The site falls within the catchment of the Hampshire Avon. Current public water abstraction at Shrewton is known to impact on flows in the River Till.
Assessment outcome (on balance) - - -	
SUMMARY OF SA OBJECTIVE 3	
<p>This is a very large site on the north eastern edge of Shrewton. Groundwater monitoring will be required in addition to detailed site investigations and capacity appraisals for sewerage and fresh water connection to determine the required investment into network and treatment capacity improvements, to the satisfaction of Wessex Water. There is potential for surface water pollution caused by surface water runoff. The HRA Screening determined that current public water abstraction at Shrewton is known to impact on flows in the River Till. Overall, there would be major adverse effects on this objective given the absence of satisfactory mitigation measures.</p>	

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

<p>1. Maintain and improve local air quality?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development is likely to increase local commuter traffic, which may impact on local air quality. The Packway (B3086) is a known diversion route ('rat run') which suffers from peak hour diversionary flow from Stonehenge via single carriageway. It could be argued that development of the site would encourage further use of this rat run as opposed to via the A360. On the other hand, a benefit would be that journeys travelling east from the site via the Packway would not need to travel through the village. The centre of the village is approx. 1,000m away from the site but distances vary due to site size. Residents may predominantly rely upon use of the private car to reach higher order services and facilities there is also a regular (hourly) bus service available to Salisbury from the centre of the village (40 min travel time).</p> <p>Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable transport modes and may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>A traffic noise assessment as noise from MOD activity is likely to be relevant issue.</p> <p>Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. Due to the site size and overall number of dwellings which could be constructed a significant amount of traffic could be generated.</p>
<p>3. Mitigate the impacts from uses</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air</p>

that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAs ⁹ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on the SAC. Where necessary, air quality strategies will be developed and implemented in accordance with Wiltshire Core Strategy Core Policy 55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Due to the site size and overall number of dwellings which could be constructed a significant amount of traffic could be generated. The centre of the village is approx. 1,000m away from the site but distances vary due to site size. Residents may predominantly rely upon use of the private car to reach higher order services and facilities there is also a regular (hourly) bus service available to Salisbury from the centre of the village (40 min travel time).
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on the SAC. Where necessary, air quality strategies will be developed and implemented in accordance with Wiltshire Core Strategy Core Policy 55 to address environmental impacts.

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 4

The site does not fall within a designated AQMA. Development of up to 200 dwellings is likely to increase local traffic, which may adversely affect air quality. The Packway (B3086) is a known diversion route ('rat run') which suffers from peak hour diversionary flow from Stonehenge via single carriageway. Measures must be implemented to mitigate emission levels in line with the council's policies and Air Quality Strategy Development at this site would likely generate noise and light pollution during construction (short term / temporary effect). Noise pollution may be an issue to a lesser extent during operation through the generation of car trips. In addition, noise from MOD activity is likely to be a relevant issue therefore a noise assessment will be required. The centre of the village is approx. 1,000m away from the site but distances vary due to site size. Residents may predominantly rely upon use of the private car to reach higher order services and facilities there is also a

regular (hourly) bus service available to Salisbury from the centre of the village (40 min travel time). Mitigation measures can be devised such as engineering solutions; and traffic management, so the effects on the objective are considered to be minor adverse against the aim of this objective.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.

However, the effect of the development of this site will be to increase greenhouse gas emissions overall resulting in a minor adverse effect on this objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects

Decision Aiding Questions. Will the development site...

1. Take into account the predicted future impacts of climate change in the location and design of	The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. The site is some 250m east of the Flood Zone 2/3 associated
---	--

<p>development, ensuring that development can adapt to any future flood risk scenarios?</p>	<p>with the River Till. An FRA will be required for this site.</p> <p>As part of any assessment and drainage strategy for development, groundwater levels should be monitored in accordance with the Council's Groundwater Strategy. In addition, any drainage strategy for the development of the site should have regard to CIRIA guidance, Part E, Chapter 25.</p> <p>The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape.</p>
<p>2. Ensure that development can adapt to the predicted future impacts of climate change?</p>	<p>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as designing to prevent overheating, for heat resistant landscaping, for more resilient foundations, for drought resistant planting and for generally more resilient buildings and spaces (general design and robust materials)</p>
<p>3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?</p>	<p>The ability of any development to accommodate SuDS on site is currently unknown at this time in the light of geological conditions and the need for groundwater monitoring. Mitigation could be problematic</p>
<p>4. Minimise the risk of flooding to people and property (new and existing development)?</p>	<p>The site falls within Flood Zone 1. However, consideration would need to be given to the control/management of surface and groundwater. There are downstream properties subject to sewer flood risk. Foul water system in the area is subject to groundwater induced sewer flooding. Highway sewers are at capacity and there are no connections available.</p>
<p>5. Protect and enhance the natural function of floodplains?</p>	<p>In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.</p>
<p>Assessment outcome (on balance) - -</p>	
<p>SUMMARY OF SA OBJECTIVE 5b</p> <p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. However the site is approximately 250m east of Flood Zone 2/3 associated with the River Till. There are downstream properties subject to</p>	

sewer flood risk. Foul water system in the area is subject to groundwater induced sewer flooding and highway connections are at capacity. On the basis of the available evidence mitigation measures could be problematic given ground conditions. Overall the effects would be moderate adverse against this objective.

SA objective 6. Protect, maintain and enhance the historic environment

Decision Aiding Questions. Will the development site...

<p>1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?</p>	<p>To the east of the site, beyond Middle Farm, lie a number of Scheduled Monuments and further to the east lies to the western boundary of the Stonehenge component of the Stonehenge, Avebury & Associated Sites World Heritage Site (WHS). All of these assets have the potential to be visually impacted by development at the site, which in some cases could result in harm to the significance of a designated asset by diminishing its setting. Accordingly a Heritage Impact Assessment would be required to be undertaken to determine any impacts and mitigation measures that may be required. A high level historic landscape assessment has been carried out which concluded that the site has medium sensitivity and that there are no direct impacts on built heritage, but potentially significant impacts on the important historic landscape at the verge of World Heritage Site.</p>
<p>2. Ensure appropriate archaeological assessment prior to development?</p>	<p>This site is of archaeological interest with medium/high potential. Records in the vicinity include a probable Bronze Age barrow. Additionally, from a brief review of Historic England records it appears that the site may contain undesignated archaeology of some significance, including potential prehistoric burial sites. On the basis of available evidence, there would be a need to undertake further archaeological assessment at any subsequent planning application stage.</p>
<p>3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?</p>	<p>The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.</p>
<p>4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?</p>	<p>In accordance with national policy/local policy, the development of the site for housing would deliver housing that could maintain and enhance local distinctiveness through high quality design.</p>
<p>5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?</p>	<p>There are no heritage sites identified being at risk but the potential to visually affect heritage assets in the vicinity is noted.</p>
<p>6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?</p>	<p>While the site is outside of the World Heritage Site (WHS) there is, however, the potential for the scheme to impact on the setting of the WHS and its attributes of Outstanding Universal Value (OUV). An application would need to demonstrate that development of the site would not result in harm to the setting of the WHS and its attributes of the OUV – including minimising light pollution. Development of the site could facilitate improved pedestrian access to the WHS.</p>

Assessment outcome (on balance) - -

SUMMARY OF SA OBJECTIVE 6

A high level Historic Landscape Character appraisal has been carried out which considers the site to have a medium sensitivity rating. Development at the site could affect heritage assets (there is no conservation area in Shrewton). A Heritage Impact Assessment should be undertaken to determine any impacts and inform development proposals. The World Heritage Site is located approximately 2km east of the site with open countryside in between and so there may be potential for significant visual impacts – though there may be scope for mitigation measures. As a greenfield site, there may be potential for archaeological assets below ground. The archaeological potential is considered to be low/medium. An archaeological assessment will be required at application stage given the anecdotal evidence regarding the potential for prehistoric/bronze age assets under the site. In addition the site is extensive and there remains the potential for appropriate buffer zones. Overall the site option would have a moderate adverse effect on this objective.

SA objective 7. Conserve and enhance the character and quality of Wiltshire’s rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place

Decision Aiding Questions. Will the development site...

<p>1. Protect and enhance the landscape character and scenic quality of the countryside?</p>	<p>The landscape character is described as High Chalk Plain and in good condition, with strong strength of character. The strategy is to conserve the landscape character. The site falls into a Special Landscape Area. The northern site boundary is defined by London Road (B3086) and the road is on a slightly lower level than the site. The eastern boundary is defined by a narrow buffer of vegetation, with some detached properties behind. Along the southern edge of the site is an open boundary with Nett Road: a byway (SHRE32) linking an eastern section of London Road to Shrewton. The western site boundary passes across an arable field and has no physical definition. A public right of way (PRoW – SHRE1) passes across the site linking Nett Road with London Road, while also forming a boundary between the two fields. The central part of the site is on relatively level ground with the northern part sloping down towards London Road. There are telegraph poles crossing the site.</p> <p>Overall the site is afforded ‘medium’ sensitivity rating with ‘medium’ inter-visibility and sensitive receptors present such as residential uses.</p> <p>Development of the site would avoid some of the more highly valued designations such as AONBs but would lead towards some urbanisation of the settlement and the loss of green space.</p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p>In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure.</p>
<p>3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?</p>	<p>The PRoW would have to be appropriately protected in order to provide access to the landscape to the south of the site including the Nett Road.</p>

4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ¹⁰ ?	The site falls into a Special Landscape Area. The site avoids higher value landscape designations such as the AONB.
5. Protect rights of way, open space and common land?	The PRoW would have to be appropriately protected in order to provide access to the landscape to the south of the site including the Nett Road.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site is not located within or adjacent to the Green Belt.
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 7</p> <p>A byway (SHRE32) exists linking an eastern section of London Road to Shrewton. A public right of way (PRoW – SHRE1) passes across the site linking Nett Road with London Road, while also forming a boundary between the two fields. The central part of the site is on relatively level ground with the northern part sloping down towards London Road. There are telegraph poles crossing the site. Overall the site is afforded ‘medium’ sensitivity rating with ‘medium’ inter-visibility and sensitive receptors present such as residential uses. Development of the site would avoid some of the more highly valued designations such as AONBs but would lead towards some urbanisation of the settlement and the loss of green space. The PRoW would have to be appropriately protected in order to provide access to the landscape to the south of the site including the Nett Road. Overall there is no evidence to suggest that potentially adverse effects in landscape terms could not be avoided or mitigated and therefore the site option would have a minor adverse effect on this objective.</p>	
<p>SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Provide an adequate supply of	The whole SHLAA site has capacity for up to approximately 200 residential units which contributes towards Wiltshire’s housing

affordable housing?	targets. However, mitigation set out in this assessment could result in adjusting the sites' capacity. The development would be subject to affordable housing requirements in local and national policy. The site would provide an adequate supply of affordable housing.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	In accordance with local plan policy and national standards, the development of the site would need to deliver high quality, sustainable homes across all types and tenures. A housing survey for Shrewton identified a minimum need over the next three years (to July 2016) for 12 subsidised rented dwellings and 4 shared ownership dwellings.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs given the site size and notional capacity which purely in land provision terms would provide sufficient flexibility.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment through short-term construction contracts and a longer-term boost to the local population/workforce.
6. Consider the emerging Neighbourhood Plans?	On the basis of evidence provided by the Qualifying Body, it is unlikely that the emerging Neighbourhood Plan / Neighbourhood Development Order will deliver certainty of supply in the local area to meet needs as the plan has been in abeyance up until very recently.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	This extensive site is situated on the eastern fringe of Shrewton. While physically it may be able to fill a gap between isolated residential areas to the east and the fringe of the village due to its poor connectivity in terms of walking and cycling the site would, overall, not be adequately connected to the village.
Assessment outcome (on balance) + + +	
SUMMARY OF SA OBJECTIVE 8	
<p>The whole SHLAA site provides capacity for up to approximately 200 residential units which contributes towards Wiltshire's housing targets. The total number of dwellings could change given site constraints and mitigation measures required to accommodate development as established in the assessment against other SA objectives. The location of the site may result in a development isolated from Shrewton and predominantly accessible by car. The sites capacity to provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures is somewhat diminished by the site's general location. However, on balance the site would have a major positive effect against this objective.</p>	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	

Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime. Design of the scheme would have to consider the layout and design of neighbouring residential areas to achieve physical integration and create spaces which do not pose a potential danger for residents and visitors during day/night-time.
2. Promote design of buildings and spaces to reduce obesity?	Additional space would be required to integrate schemes for example which encourage walking and cycling; residential areas with shared spaces between vehicles and pedestrians/cyclists; and adequately designed landscape areas. The low density nature of neighbouring development may support this type of development on site but would need to be considered more holistically as part of a development proposal. The site is within 1,000m of village facilities and lacks a safe walking route which together with its elevated location may reduce the potential for walking. The distance and topography might also discourage cycling from the site.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	Core Policy 45 and 46 in the Core Strategy require development to respond to the changing needs of the population locally, including the needs of the elderly. Lifetime Homes for example could be integrated into the development alongside other types of properties needed locally as evidenced through the local housing needs survey. Overall the development could also consider appropriate integration with existing development. There is no evidence that this could not be achieved on this site.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	In accordance with national policy/local plan policy, the site is sustainably located as there are 2 doctor's surgeries in Shrewton. However NHS data suggests that there is a capacity gap at the local surgeries and would unlikely support development of 200 homes. Mitigation would nonetheless be required to accommodate the increase in patient demand.
5. Maximise opportunities within the most deprived areas?	The site falls into LSOA 045F which is amongst the 50% least deprived neighbourhoods in the country. Development at this site is not likely to have adverse impacts on deprivation in the local area.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The site is located on the edge of Shrewton adjacent to residential areas to the east and west. Given the limited services within Shrewton, the distance to the village (1,000m) and the lack of higher order services it is however likely that residents would be reliant on the use of a private vehicle. On the other hand such a significant amount of development may deliver public transport improvements although this benefit would have to be weighed up against potential harm caused by developing the site in full. While physically it may be able to fill a gap between isolated residential areas to the east and the fringe of the village, due to its poor connectivity in terms of walking and cycling the site would, overall, not be adequately connected to the village. Non-car travel, on that basis, would therefore be problematic.
7. Support the development of community campuses?	Development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand?	Shrewton Primary School is located approximately 700m away from the site. The school is currently full and forecast to remain so. The school site is small so it would not be possible to expand the school on its current site. However there is currently a nursery located into the school building. If this could be relocated the school could grow by one class (max 30 pupils). A maximum of 100 houses would be required in order for this solution to work. Evidence therefore suggests that additional

generated from the site?	<p>development in the village would place significant burden on the local school/nursery. However, an appropriate level of development may have the potential to assist in addressing existing infrastructure constraints. As such, by virtue of its size, the site may have the potential to accommodate more than just housing. If allocated, consideration could be given to the potential for co-locating a new nursery on part of the site.</p> <p>Amesbury Stonehenge School (Secondary) currently has some surplus places but the school will require expansion to cater for Military Basing, housing at Kings Gate and a rising demographic. The school could therefore be expanded further if necessary.</p>
--------------------------	---

Assessment outcome (on balance) - -

SUMMARY OF SA OBJECTIVE 9

While internally the development could be designed to reduce fear of crime, increase its attractiveness for walking and cycling and provide for the changing needs of the population and primary/nursery school requirements, its isolated location 1,000m outside the village core without footways would not aid in creating inclusive and self-contained communities. Overall, due to its location and the level of development proposed the effects would be moderate adverse against this objective.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	<p>The potential to connect with the village by other means than the private car is poor given the narrow width of London Road and the lack of footways. Alternative pedestrian access could be established via the Nett Road and the PRow but this would lead to very long isolated distances in walking terms to reach the village. Alternative connections would require third party land.</p> <p>Additional internal space would be required to integrate schemes for example which encourage walking and cycling, and residential areas with shared spaces between vehicles and pedestrians/cyclists. The low density nature of neighbouring development may support this type of development on site but it would need to be considered more holistically as part of a development proposal. A footway could be provided along the site frontage but this would do little to increase walking from the site.</p>
2. Ensure new development incorporates facilities and infrastructure for cyclists?	<p>Additional internal space would be required to integrate schemes for example which encourage walking and cycling, and residential areas with shared spaces between vehicles and pedestrians/cyclists this would need to be considered more holistically as part of a development proposal.</p>
3. Improve the jobs/homes balance, to reduce out-commuting?	<p>The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.</p>
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	<p>The site is within 1,000m to the services and facilities provided by the village as well as open space, and poorly connected in terms of walking and cycling due to the lack of footways on London Road and the lack of suitable alternatives to reach the village on foot/by bicycle. Such links could be provided on the site itself but connecting them with the village core itself would require third party consent. The development could integrate suitable design solutions to promote walking and cycling, but beyond the development itself the potential to connect with the village by other means than the private car is poor.</p>

Assessment outcome (on balance) - -

SUMMARY OF SA OBJECTIVE 10

The site is located on the eastern edge of the large village of Shrewton. The site is within 1,000m to the services and facilities provided by the village as well as open space and but is poorly connected in terms of safe walking and cycling due to the lack of footways on London Road and the lack of suitable alternatives to reach the village on foot/by bicycle. Third party land would have to be used to establish a link with footways closer to the village and off London Road. Mitigation of these adverse effects is therefore considered to be problematic. A new bus stop may provide additional access to sustainable modes of travel. On balance the effects on this objective would be moderate adverse.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?

Not relevant to this location.

2. Support the rural economy?

Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Shrewton

Assessment outcome (on balance) + + +

SUMMARY OF SA OBJECTIVE 11

Development will increase the local population significantly and could contribute to the local economy through use of local shops and services by providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Shrewton and the wider area. On balance it is considered that the effects on this objective would be major positive.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?

The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. In addition, there are no employment areas in Shrewton whose vitality and viability could be protected and enhanced by development. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the wider community area.

2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away.
---	---

Assessment outcome (on balance) +

SUMMARY OF SA OBJECTIVE 12

The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would have a minor positive effect on SA Objective 12.

Site S1067 – Land off Maddington Street, Shrewton

Site context

Site size: 1.12 ha Site capacity: approximately 27 dwellings

This is a greenfield site to the west of Shrewton village. The site is bordered by the A360 to the north (dwellings on the other side of the road), the B390 to the west, open countryside to the south (higher land), and an existing property to the east.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	The site constitutes pasture on chalk, with appearance of some improvement, sheep grazing and supplementary feeding There is a moderate risk that the site could support calcareous grassland (Biodiversity Action Plan Habitat), albeit this is unlikely to be in good condition. Development of the site would result in removal of land potentially capable of supporting calcareous grassland.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new	The site may be calcareous grassland (Biodiversity Action Plan Habitat) which would have to be established at application level through an ecological assessment. Features at the boundaries such as hedgerows and trees may support protected species and should be retained. The site falls within the visitor catchment of the Salisbury Plain SPA and an appropriate assessment would be needed to understand the potential effects of recreational disturbance. The site also falls within the River Avon catchment area. The River Avon/Till SSSI/SAC is approximately approximately 300m. The HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the River Avon SAC through increased water abstraction, particularly with regards to flow targets at the River Till.

development resulting in a net gain?	Mitigation is not considered possible, therefore it is not possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process. Consequently, this option should be rejected on these grounds.
3. Result in greater community engagement with biodiversity?	The development of the site for housing would have the potential to increase public access to designated and non-designated biodiversity features such as the Salisbury Plain SPA and the River Till. Development of the site could facilitate habitat enhancement on site.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	River Till SSSI/SAC is approximately 300m south east of the site. Hedgerows and trees at the boundary should be protected from development.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure but it is acknowledged that developing the site would result in removal of existing pasture.
6. Ensure all new developments have regard to and protect BAP habitats/species?	There is a moderate risk that the entire site could support calcareous grassland (Biodiversity Action Plan Habitat), albeit this is unlikely to be in good condition. Features at the boundaries such as hedgerows and trees may support protected species and should be retained.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the River Avon SAC through increased water abstraction. Mitigation is not considered possible, consequently it will not be possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process; therefore it is recommended that options at the village are removed from the plan at this stage of the process.
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland features as there are none in the area.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	The site falls within the visitor catchment of the Salisbury Plain SPA. Appropriate assessment of the potential effects of recreational disturbance is required should the site be taken forward to the next stage of the site selection process.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	The site does not fall within one of the Council's current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs)	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).

from development?	
Assessment outcome (on balance) - - -	
SUMMARY OF SA OBJECTIVE 1	
<p>There is a moderate risk that the entire site could support calcareous grassland (BAP habitat), albeit this is unlikely to be in good condition. The site is on farmland (rough grazing), which generally has limited ecological value due to the nature of the land use, though the features at the boundaries such as hedgerows and trees may support protected species and should be retained.</p> <p>The site falls within the visitor catchment of the Salisbury Plain SPA, appropriate assessment would be required in order to assess potential effects from recreational disturbance.</p> <p>The site is closely located to and within the catchment of the River Avon/Till SAC/SSSI and the HRA screening assessment has identified that development at the settlement would contribute towards impacts upon the SAC through increased water abstraction, particularly with regards flow targets at the River Till. It is not considered possible to mitigate this, and it will not be possible to exclude the potential for an adverse effect upon the integrity of the SAC through the HRA process.</p> <p>In the light of the adverse effects considered likely on the River Avon SAC through water abstraction and the inability to mitigate for this, a major adverse effect is envisaged on this objective for this site and for all sites in Shrewton.</p>	
SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings	
Decision Aiding Questions. Will the development site...	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	<p>The site is situated on the edge of the large village of Shrewton which is a sustainable location for development in line with Core Policy 1 of the Wiltshire Core Strategy. The site is within a reasonable walking/cycling distance to the centre of the village (300m) where the post office/food store is located. The school is approx. 400m away from the site. While residents may rely upon use of the private car to reach higher order services and facilities there is also a regular (hourly) bus service available to Salisbury from the centre of the village (40 min travel time).</p> <p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence.</p>
2. Maximise reuse of previously developed land where possible/appropriate?	The development of the site for housing would take up greenfield land so re-use of previously developed land is not achievable.
3. Encourage remediation of contaminated land?	An assessment of contaminated land should be undertaken for this site. There is a contaminated land record for a strip of land at the southern site boundary.

4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team
5. Protect and enhance soil quality?	In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. An assessment of contaminated land should be undertaken for this site. There is a contaminated land record for a strip of land at the southern site boundary.
6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	<p>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources.</p> <p>The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 2</p> <p>The site is situated on the edge of the large village of Shrewton which is a sustainable location for development in accordance with the Core Strategy. Local services and facilities, including public transport, are available within walking/cycling distance and a footpath leads into the village. The site is not located on previously developed land; the site is greenfield but a contamination assessment will be required which may result in remediation of parts of the site due to evidence of contamination. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. No up to date information is held as to the grade of agricultural land on site, however if found to be of high quality, the loss would be minor to negligible. The site is not located within a Mineral Safeguarding Area so no sterilisation of viable mineral resources will occur. Effects could be mitigated through remediation where required. Overall, minor adverse effects are envisaged on this objective.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	Capacity appraisals need to be undertaken by Wessex Water in relation to both the supply of water and foul drainage for which there is currently limited capacity. Additional development flows will exceed capacity at the treatment works. This is not likely to hinder the delivery of the site by 2026.

<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>In the light of capacity issues, suitable and timely investment would need to be agreed between the developer(s) and Wessex Water, particularly in relation to foul drainage. Investment into foul water infrastructure is likely to be required. There is limited capacity in local fresh water distribution mains. A capacity appraisal will be necessary to determine the scope of network reinforcements.</p>
<p>3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?</p>	<p>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. Alternative harvesting systems such as underground tanks need to be explored in order to proactively manage surface water runoff from developments.</p>
<p>4. Consider the need for adequate provision of surface water and foul drainage?</p>	<p>Investigation of on-site and off-site capacity to manage surface water/discharge to sewerage systems would need to be undertaken. There is limited capacity in local foul water systems which will require a capacity appraisal, and offsite connecting sewer.</p> <p>Given underlying chalk, the site is within a sensitive groundwater area so will require testing and monitoring for at least 12 months to determine the level of ground water and in order to determine a suitable storm water disposal system which may have an impact on the size and area of development. Mitigation could be problematic. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25.</p>
<p>5. Protect, and where possible, improve surface, ground and drinking water quality?</p>	<p>Monitoring of groundwater levels will be required to determine a suitable storm water disposal system which may have an impact on the size and area of development. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25.</p> <p>In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality.</p> <p>The site is in 300m proximity (at its closest point) to the River Till, which drains into the River Avon, so there may be potential for surface water pollution caused by surface water runoff as the land slopes into that direction.</p> <p>The site falls within Source Protection Zones (SPZ) 1, 2 and 3. The Environment Agency will need to be consulted in respect to SPZs. Detailed risk assessment at the planning stage and specific mitigation measures in the design will be required at application stage.</p>
<p>6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?</p>	<p>The site falls within the catchment of the Hampshire Avon. Current public water abstraction at Shrewton is known to impact on flows in the River Till.</p>

Assessment outcome (on balance) - - -

SUMMARY OF SA OBJECTIVE 3

The site falls within SPZ 1, 2 and 3 and the Environment Agency would need to be consulted as part of any development proposals. It also within a sensitive groundwater area due to underlying chalk and is likely to hold groundwater and the site would require 12 months monitoring of groundwater levels. SuDS are unlikely to be feasible in groundwater areas. A Flood Risk Assessment will be required for this site. Reinforcements and improvements to fresh water/foul water infrastructure are required subject to capacity appraisals and there is the risk of sewer flooding. According to the HRA Screening current public water abstraction at Shrewton is known to impact on flows in the River Till. Overall, major adverse effects are envisaged on this objective given the absence of satisfactory mitigation measures.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

<p>1. Maintain and improve local air quality?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development is likely to increase local commuter traffic, which may impact on local air quality. The site is situated on the edge of the large village of Shrewton which is a sustainable location for development in line with Core Policy 1 of the Wiltshire Core Strategy. The site is within a reasonable walking/cycling distance to the centre of the village (300m) and the school (400m). While residents may rely upon use of the private car to reach higher order services and facilities there is also a regular (hourly) bus service available to Salisbury from the centre of the village (40 min travel time).</p> <p>Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable transport modes and Such may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. A traffic noise assessment will be required.</p>
<p>3. Mitigate the impacts from uses that generate NO₂, SO₂ and PM₁₀ or other particulates?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p>

4. Seek to reduce development in or near to AQMAs ¹¹ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on the SAC. Where necessary, air quality strategies will be developed and implemented in accordance with Wiltshire Core Strategy Core Policy 55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on the SAC. Where necessary, air quality strategies will be developed and implemented in accordance with Wiltshire Core Strategy Core Policy 55 to address environmental impacts.
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 4</p> <p>The site does not fall within a designated AQMA. Development at this site would likely generate noise and light pollution during construction (short term / temporary effect). Noise pollution may be an issue to a lesser extent during operation through the generation of car trips. A contaminated land assessment and noise assessment for road traffic should be undertaken at application level. The site lies within 300m of village services and bus stops which may reduce car traffic from the site. On balance the site option would have a minor adverse effect on the objective as development would result in an increase in car traffic; however the evidence suggests that mitigation measures could be identified and agreed through further assessments at application stage. Overall, minor adverse effects are envisaged on the objective.</p>	
SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions	

Decision Aiding Questions. Will the development site...	
1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 5a	
<p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices. However, the effect of the development of this site will be to increase greenhouse gas emissions overall resulting in a minor adverse effect on this objective.</p>	
SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects	
Decision Aiding Questions. Will the development site...	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. The site is some 80m away from Flood Zone 2/3 associated with the River Till. An FRA will be required for this site.</p> <p>As part of any assessment and drainage strategy for development, groundwater levels should be monitored in accordance with the Council's Groundwater Strategy. In addition, any drainage strategy for the development of the site should have regard to CIRIA guidance, Part E, Chapter 25.</p>

	The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape.
2. Ensure that development can adapt to the predicted future impacts of climate change?	<p>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as designing to prevent overheating, for heat resistant landscaping, for more resilient foundations, for drought resistant planting and for generally more resilient buildings and spaces (general design and robust materials)</p>
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	The ability of any development to accommodate SuDS on site is currently unknown at this time in the light of geological conditions and the need for groundwater monitoring. Mitigation could be problematic.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site falls within Flood Zone 1. However, consideration would need to be given to the control/management of surface and groundwater. There are downstream properties subject to sewer flood risk. Foul water system in the area is subject to groundwater induced sewer flooding.
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 5b	
<p>The site is located within Flood Zone 1 and approximately 80m north west of the Flood Zone 2/3 associated with the River Till. Development proposals would be required to be supported by a Flood Risk Assessment. Ground conditions require careful assessment of possible drainage solutions and a site investigation would be required to determine the feasibility of surface water attenuation/disposal on and off-site. Such investigations would need to consider whether a surface water attenuation/ disposal scheme could be accommodated within the site. There are downstream properties subject to sewer flood risk, and the foul water system in general is subject to groundwater induced sewer flooding. Mitigation could be problematic to provide. Overall, likely moderate adverse effects are envisaged on this objective.</p>	

SA objective 6. Protect, maintain and enhance the historic environment

Decision Aiding Questions. Will the development site...

1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	Development at the site would not directly/physically affect heritage assets or designations such as listed buildings, World Heritage Site, Scheduled Monuments or conservation areas. The nearest listed buildings are 180m and 250m away, with no or little inter-visibility.
2. Ensure appropriate archaeological assessment prior to development?	A high level Historic Landscape Character appraisal has been carried out which considers the site to have a low sensitivity rating. There may be potential for archaeological assets below ground which may require further evaluation and mitigation. The archaeological potential of the site is medium, and would require an archaeological assessment in support of any planning application.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	In accordance with national policy/local policy, the development of the site for housing could deliver housing that maintains and enhances the distinctiveness of settlements through high quality design. There is no conservation area in Shrewton.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	There are no such buildings on this site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not within proximity to result in impacts to the Stonehenge and Avebury WHS and its setting.

Assessment outcome (on balance) -**SUMMARY OF SA OBJECTIVE 6**

A high level Historic Landscape Character appraisal has been carried out which considers the site to have a low sensitivity rating and development would not result in

direct impacts on built heritage. Development at the site would not directly/physically affect heritage assets or designations such as listed buildings, World Heritage Site, Scheduled Monuments or conservation areas. The nearest listed buildings are 180m and 250m away, with no or little inter-visibility.

As a greenfield site, there may be potential for archaeological assets below ground. A high level Archaeological assessment has been carried out which considers the archaeological potential to be medium, and that an archaeological assessment will be required. There is no evidence to suggest mitigation could not be achievable. On balance it is considered that this site option would have a minor adverse effect on this objective.

SA objective 7. Conserve and enhance the character and quality of Wiltshire’s rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place

Decision Aiding Questions. Will the development site...

<p>1. Protect and enhance the landscape character and scenic quality of the countryside?</p>	<p>The Landscape Character Assessment states for this area: Rolling Clay Lowland – good condition, moderate strength of character. The strategy is to conserve and strengthen the landscape character. The site falls into a Special Landscape Area. The site is not well screened from the road, though there are some mature trees / hedgerows on the site which should be retained. From a landscape perspective it is considered that housing development at this site would result in very few/ negligible landscape and visual impacts. Inter-visibility is low and sensitive receptors are residential development. It is advised to retain a Green Infrastructure buffer to mature trees.</p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p>In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver Green Infrastructure. It is considered that housing development at this site would result in very few/ negligible landscape and visual impacts. However it is advised to retain a Green Infrastructure buffer to mature trees and hedgerows at the site boundary which should be retained.</p>
<p>3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?</p>	<p>In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver additional access to and availability of urban greenspaces. The site is located at the edge of the village and retention of the PRoW would enable access to the wider countryside to the west.</p>
<p>4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs?</p>	<p>The site falls into a Special Landscape Area. The site is not located within an AONB.</p>
<p>5. Protect rights of way, open space and common land?</p>	<p>A PRoW cuts through the site from north to south and should be retained to enable access to the countryside.</p>
<p>6. Protect the Western Wiltshire Green Belt from inappropriate development?</p>	<p>The site is not located within the Green Belt.</p>

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 7

The site is not well screened from the road, though there are some mature trees / hedgerows on the site which should be retained. From a landscape perspective it is considered that housing development at this site would result in very few/ negligible landscape and visual impacts. It is advised to integrate a Green Infrastructure buffer to mature trees. Development of the site would avoid some of the more highly valued designations such as AONBs but would lead towards some urbanisation of the settlement and the loss of green space. The PRoW (SHRE16) should be retained. On balance the site would have a minor adverse effect on this objective since green infrastructure and buffers could mitigate some of the effects the development might have on the landscape.

SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures

Decision Aiding Questions. Will the development site...

1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements. However, mitigation set out in this assessment could result in adjusting the site's capacity. Through other policies in the Core Strategy there will be a mix of housing by affordability, tenure and size. A development on this site could therefore help to meet local housing needs in according with the policies of the Core Strategy.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver affordable units alongside open market units. The Housing Needs Survey identified a minimum need over the next three years (to July 2016) for 12 subsidised rented dwellings and 4 shared ownership dwellings.
3. Ensure adequate provision of land to meet housing needs?	The site is capable of supporting the delivery of 27 units which would contribute to meeting housing needs in the community and the wider HMA.
4. Have regard to the settlement hierarchy?	The site is situated on the edge of the large village of Shrewton which in principle is a sustainable location for development in line with Core Policy 1 of the Wiltshire Core Strategy. In accordance with local plan policy, the allocation and development of the site would hence appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment through short-term construction contracts and a longer-term boost to the local population/workforce.
6. Consider the emerging Neighbourhood Plans?	On the basis of evidence provided by the Qualifying Body, it is unlikely that the emerging Neighbourhood Plan / Neighbourhood Development Order will deliver certainty of supply in the local area to meet needs as the plan has been in abeyance up until very recently.

7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy/local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities that is not being met by neighbourhood planning initiatives. The site is located on the edge of the village and not in an isolated part of the area.
---	--

Assessment outcome (on balance) + +

SUMMARY OF SA OBJECTIVE 8

The site is located on the edge of Shrewton within walking distance of local services (school, post office, shop) and public transport. It could provide capacity for up to approximately 27 residential dwellings, including affordable housing, which would make a significant contribution towards Wiltshire’s housing targets. The site would primarily address housing needs as the employment offer at Shrewton is limited. Furthermore the site capacity may be reduced to accommodate mitigation measures identified elsewhere in this assessment. Due to its capability of increasing housing supply the site is considered to have a moderate positive effect against the aim of the objective. However, the overall number of homes which could be delivered may decrease to account for mitigation measures required.

SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities

Decision Aiding Questions. Will the development site...

1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime. Design of the scheme would have to consider the layout and design of neighbouring residential areas especially to the east to achieve physical integration and create spaces which do not pose a potential danger for residents and visitors during day/night-time.
2. Promote design of buildings and spaces to reduce obesity?	Additional space would be required to integrate schemes for example which encourage walking and cycling; residential areas with shared spaces between vehicles and pedestrians/cyclists; and adequately designed landscape areas. This would need to be considered more holistically as part of a development proposal. The site is within 300m of village facilities such as the shop/post office, and the school is approximately 400m away. The recreation ground lies in approximately 900m. This, generally, could encourage walking and cycling and a healthier lifestyle.
3. Promote the design of buildings and spaces to meet the changing	In accordance with national policy/local plan policy the allocation and development of the site would provide flexibly designed accommodation to meet the changing demands of an ageing population in Wiltshire. Core Policy 45 and 46 in the Core Strategy require development to respond to the changing needs of the population locally, including the needs of the elderly.

needs of the population?	Lifetime Homes for example could be integrated into the development alongside other types of properties needed locally as evidenced through the local housing needs survey. Overall the development could also consider appropriate integration with existing development. There is no evidence that this could not be achieved on this site.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	In accordance with national policy/local plan policy, the site is sustainably located as there are 2 doctor's surgeries in Shrewton. However NHS data suggests that there is a capacity gap at the local surgeries and additional funding will be required to provide for capacity increase.
5. Maximise opportunities within the most deprived areas?	The site falls into LSOA 045D ¹² which is amongst the 20% least deprived neighbourhoods in the country. In accordance with national policy/local plan policy, the allocation of the site would increase opportunities for the local community to access a decent home. Development at this site is not likely to have adverse impacts on deprivation in the local area.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The development of the site would provide housing in a sustainable location in line with the settlement strategy, with a reasonable level of access (300-400m) to the local services and facilities within the village. The village is serviced by a regular bus service to Salisbury.
7. Support the development of community campuses?	Development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	Shrewton Primary School is located approximately 300m away from the site. The school is currently full and forecast to remain so. The school site is small so it would not be possible to expand the school on its current site. However there is currently a nursery located into the school building. If this could be relocated the school could grow by one class (max 30 pupils). A maximum of 100 houses would be required in order for this solution to work. Evidence therefore suggests that additional development in the village would place significant burden on the local school/nursery. However, an appropriate level of development may have the potential to assist in addressing existing infrastructure constraints. As such, by virtue of its size and capacity, the site may not have the potential to accommodate more than just housing. If allocated, consideration could be given to the potential for co-locating a new nursery on part of the site. Amesbury Stonehenge School (Secondary) currently has some surplus places but the school will require expansion to cater for

	Military Basing, housing at Kings Gate and a rising demographic. The school could therefore be expanded further if necessary.
--	---

Assessment outcome (on balance) - -

SUMMARY OF SA OBJECTIVE 9

The site is within reasonable proximity (300-400m) to the services and facilities provided by the village which could encourage non car-travel, especially to the local school. Site design may consider shared space as a means to support walking and cycling and connection to existing footpaths is possible. Given the site is located in a village, there is more limited access to the types of facilities found in higher order settlements such as hospitals or colleges but a bus service to Salisbury provides an alternative to the car. However the site may not be able to meet the educational requirements due to its limited capacity. Additional housing would not impact upon deprivation levels in this area. Overall the site option would have a moderate adverse effect on the objective as some of the positive aspects in terms of housing provision are diminished by deficits in terms of primary/nursery education which are problematic to mitigate.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. A food path leads into the village which could be linked with the development and internal access roads. Public footpath SHRE16 runs north-south through the centre of the site and should be retained / enhanced.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	In accordance with local plan/Transport Plan policies, the site would have the potential to create links to existing cycling infrastructure. Additional space would be required to integrate schemes for example which encourage walking and cycling such as residential areas with shared spaces between vehicles and pedestrians/cyclists. However the adjacent A360 may not be conducive to cycling.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	Development of the site would provide opportunities to access cycling and walking routes to local services/facilities and village facilities such as the school and post office/shop are within 300-400m. There is limited probability of reducing out-commuting given the limited employment offer at Shrewton and the need to travel to other higher order settlements to access employment. A bus service is available at the village centre which would enable access to Salisbury City Centre within approx. 40 minutes. However overall it is considered that the limited public transport offer and distance to bus stops, and the limited offer of services and facilities locally will effectively result in reliance on the private car.

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 10

The site is located on the western fringe of Shrewton. Development of the site would provide opportunities to link up with walking routes to local services/facilities.

There is a public footpath (SHRE16) running north-south through the centre of the site which should be retained / enhanced. The footpath adjacent to the A360 would link the site with the village and could enable residents to access Shrewton on foot. A bus service is available at the village centre which would enable access to Salisbury City Centre. However overall the limited public transport offer and distance to bus stops, and the limited offer of services and facilities locally will result in reliance on the private car. On balance the site option is considered to have a minor adverse effect on this objective. Alternative modes of travel are possible in principle due to the presence of footpaths and opportunities to cycle but trips are likely to remain focussed on the locality. Overall a minor adverse effect is envisaged against this objective.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.
2. Support the rural economy?	Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Shrewton.

Assessment outcome (on balance) +

SUMMARY OF SA OBJECTIVE 11

Development will increase the local population, could contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term it is expected that development in this location would support the viability of local services, facilities and businesses of Shrewton. Overall it considered that the likely effects on this objective would be minor positive.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. In addition, there are no employment areas in Shrewton whose vitality and viability could be protected and enhanced by development. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the wider community area.
2. Provide a focus for development in	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal

Salisbury and Trowbridge?	Settlements located some distance away.
---------------------------	---

Assessment outcome (on balance) +

SUMMARY OF SA OBJECTIVE 12

The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would have a minor positive effect on SA Objective 12.

The Winterbournes

Site S90 - Land between Winterbourne Earls Village School and the Railway Line, The Winterbournes

Site context	
Site size: 4.56 ha Site capacity: approximately 103 dwellings	
This is a large greenfield site at Winterbourne Earls. The site bordered by the screened railway line (and open countryside) to the east and existing properties and Winterbourne Earls Primary School to the west.	
SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses	
Decision Aiding Questions. Will the development site...	
1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	The evidence base indicates there are few or no ecological issues in relation to this site. The features at the boundaries such as hedgerows and trees may support protected species which should be retained. The precautionary principle must be applied and an ecological assessment at site level to support individual planning applications will be required.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new	The River Avon SSSI/SAC is approximately 200m west of the site but is separated from the candidate site by development. The Winterbourne Earls County Wildlife Site is within 500m of the site but also separated by development and the River Bourne. The site is also located within 2km of the Salisbury Plain SAC and the Porton Down SSSI/SPA; and falls within the 6.4km buffer of Salisbury Plain SPA. It also falls within 1.2km of the Figsbury Ring SSSI. The features at the boundaries such as hedgerows and trees may support protected species and should be retained.

development resulting in a net gain?	
3. Result in greater community engagement with biodiversity?	The development of the site for housing would have the potential to increase public access to designated and non-designated biodiversity features via public footpaths (for example to CWS - Meadows).
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	The features at the boundaries such as hedgerows and trees may support protected species and should be retained. In line with national policy, local plan policy and standing advice from relevant bodies, the development of the site for housing would have the potential to make suitable provision for buffers to recognised green/water course corridors.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure. The railway line to the south contributes to connectivity of the wider landscape.
6. Ensure all new developments have regard to and protect BAP habitats/species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of delivering biodiversity improvements. There is no evidence of BAP habitats on site but the features at the boundaries such as hedgerows and trees may support protected species and should be retained.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased water abstraction and habitat loss / damage. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland features.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the village does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).
Assessment outcome (on balance) -	

SUMMARY OF SA OBJECTIVE 1

This is an agricultural site, which generally has limited ecological value due to the nature of the land use, though the features at the boundaries such as hedgerows and trees may support protected species and should be retained. An ecological assessment and further details on the proposals will be required to accurately assess likely impacts. There is potential to create or enhance habitats through development of the site. The River Avon SSSI/SAC is approximately 200m west of the site, and the Winterbourne Earls Meadows County Wildlife Site is approximately 500m away, but both are separated from the candidate site by development. The site is also located within 2km of the Salisbury Plain SAC and the Porton Down SSSI/SPA; and falls within the 6.4km buffer of Salisbury Plain SPA. It also falls within 1.2km of the Figsbury Ring SSSI.

The site falls within the River Avon (Hampshire) catchment which may result in water resource implications. The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased water abstraction and habitat loss / damage. An appropriate assessment would be required if the site is taken forward into any subsequent stage of the selection process. On the basis of the available evidence and the HRA screening, the site option would have a minor adverse effect on the objective.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site...

1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	The site is undeveloped and located on the edge of a large village which is generally a sustainable location for limited growth in accordance with the Core Strategy. In general the development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence having regard to its prominence in the landscape and the need to reflect the village and to reflect local built vernacular. The Winterbourne's local facilities and services, and local bus services, are dotted along the A338 between Winterbourne Earls in the south (school) and Winterbourne Gunner in the north, where the post office and shop are located; however the nearest surgery is at Porton (3km). Trip lengths could therefore vary and may for some residents result in regular car trips. The shop and post office are approximately 700m away and may therefore be within a distance which is walkable. The school is adjacent to the site and there is a bus stop outside the school enabling access to hourly services to Porton and Salisbury (20 min travel time).
2. Maximise reuse of previously developed land where possible/appropriate?	This is a greenfield site and therefore maximising reuse of previously developed land is not achievable.
3. Encourage remediation of contaminated land?	There is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. It is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team

5. Protect and enhance soil quality?	In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage of potential soil contamination.
6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	<p>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources.</p> <p>The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 2</p> <p>The site is undeveloped and located on the edge of a large village which is generally a sustainable location for limited growth in accordance with the Core Strategy. Facilities within Winterbourne (shop/post office) are approximately 700m away however the nearest surgery is at Porton (3km). There is regular public transport available at A338 bus stops (bus connection to Salisbury/Porton).</p> <p>In general the development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. The site is not located on previously developed land; the site is greenfield and therefore unlikely to require remediation. No up to date information is held as to the grade of agricultural land on site but if found to be high quality its loss would be minor to negligible. The site is not located within a Mineral Safeguarding Area so not sterilisation of viable mineral resources will occur. On the basis of the available evidence the site option would have a minor adverse effect on this objective.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	Capacity appraisals need to be undertaken by Wessex Water in relation to both the supply of water as well as foul drainage for which there is currently limited capacity. These are not likely to hinder the delivery of the site by 2026.
2. Ensure that essential water infrastructure is co-ordinated with all new development?	<p>In the light of capacity issues, suitable and timely investment would need to be agreed between the developer(s) and Wessex Water, particularly in relation to foul drainage.</p> <p>Evidence suggests that investment would be needed given the distance of the site to trunk mains. Further as the site is adjacent to the railway additional consents under planning will be required from Network Rail which could limit the area</p>

	available for development.
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. Alternative harvesting systems such as underground tanks need to be explored in order to proactively manage surface water runoff from developments.
4. Consider the need for adequate provision of surface water and foul drainage?	Investigation of on-site and off-site capacity to manage surface water/discharge to sewerage systems would need to be undertaken. There is limited capacity in local foul water systems which will require a capacity appraisal, and offsite connecting sewer. Given underlying chalk, the site is within a sensitive groundwater area so will require testing and monitoring for at least 12 months to determine the level of ground water and in order to determine a suitable storm water disposal system which may have an impact on the size and area of development. Mitigation could be problematic. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25. No public surface water systems at this location and flows to land drainage system. The site would need outfall to the river Bourne and require third party land works and consent.
5. Protect, and where possible, improve surface, ground and drinking water quality?	Development would lead to a limited increase in demand for water. The site does not fall within a Source Protection Zone. In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. Groundwater levels will require testing and monitoring for at least 12 months, further guidance can be found in the Council's Groundwater Strategy.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	The site falls within the catchment of the Hampshire Avon. Potential impacts of increased water abstraction will need to be considered further through appropriate assessment if the site is taken forward into any subsequent stage of the site selection process.
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 3	
The site is not within a Source Protection Zone. The site falls within 200m of the River Avon SAC but is separated by development. Given the notional site capacity development careful consideration would need to be given to impact of water usage and discharge on biodiversity. Due to the relationship of the site with SACs, likely significant effects are triggered based on a settlement level HRA screening. Appropriate assessment would be required if the site is taken forward into any subsequent	

stage of the selection process. Groundwater monitoring is required for this site and engineering solutions may be required to manage surface water. There is no surface water outfall as water discharges into land drainage systems. This would have to be provided to ensure outfall to River Bourne and may require third party consent. There is limited capacity in the fresh water supply system and investment into network reinforcements is required. In terms of sewerage, there is also limited capacity in the sewerage systems with off-site connecting sewer required.

Therefore potentially significant investment is required to secure water infrastructure, foul water disposal and surface water management solutions for this site which may be problematic to achieve; mitigation is likely to be problematic. On the basis of the available evidence the site would have a moderate adverse effect on this objective.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

<p>1. Maintain and improve local air quality?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development is likely to increase local commuter traffic, which may impact on local air quality. However, it is recognised that the development is within 700m of key services and facilities and the school lies adjacent to the site. Therefore some facilities such as the post office/shop, and the school are accessible by foot and cycle. In addition, a bus stop at the A338 enables access to a regular bus service to Salisbury (20 minutes journey time). This should help limit the extent of additional traffic emanating from the site.</p> <p>Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable transport modes and may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site is located within Winterbourne adjacent to the A338 so there may be effects from pollution.</p>
<p>3. Mitigate the impacts from uses that generate NO₂, SO₂ and PM₁₀ or other particulates?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Locations adjacent to rail lines are liable to suffer from unacceptable levels of noise and vibration. Railways are exempt from</p>

	<p>statutory nuisance action. It is difficult to recommend an exclusion zone as line use varies. However, caution should be exercised at potential development against mainline railway boundaries. Noise and vibration assessments would need to be provided to support development at this site.</p> <p>In addition the site is within proximity to high intensity pig farm permitted by the Environment Agency (EA) causing issues with strong odour. These issues would have to be assessed and potentially mitigated against. Residential dwellings being closer to the farm (within 400m) may impact on the EA permit and subsequently the business. The area closest to the rail line lies within 350m of the farm.</p> <p>The pig farm has historically attracted odour complaints and is the sort of operation that is likely to give rise to such complaints. The site does have an odour management plan for compliance with their Environmental Permit. However, despite these measures on the site it is likely that odour will remain and potentially impact on this development and harm the living conditions of future residents. In addition, there have been odour complaints from further away (around SHLAA site s1055).</p>
4. Seek to reduce development in or near to AQMAS ¹³ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
7. Ensure that potential impacts from air quality on relevant SACs are	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and

¹³ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

avoided?	implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) - - -	
<p>SUMMARY OF SA OBJECTIVE 4</p> <p>The site does not fall within a designated AQMA. Development is likely to increase local traffic, which may adversely affect air quality. Measures must be implemented to mitigate emission levels in line with the council's policies and Air Quality Strategy, such as landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Development at this site would likely generate noise and light pollution during construction (short term / temporary effect). Noise pollution may be an issue to a lesser extent during operation through the generation of car trips.</p> <p>There are considerations with regard to the proximity of the site to the railway and pig farming and associated noise and odour nuisance. Odour from the farm cannot be mitigated against. Accordingly the major adverse effects are envisaged on this objective.</p>	
<p>SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources will be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.
Assessment outcome (on balance) -	

SUMMARY OF SA OBJECTIVE 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices. However, the effect of the development of this site will be to increase greenhouse gas emissions. Overall the effects on the objective are considered to be minor adverse.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects

Decision Aiding Questions. Will the development site...

1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?

The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. The site is some 200m east of the Flood Zone 2/3 associated with the River Bourne. There are no public surface water systems at this location and surface water flows to land drainage system. The site would need outfall to the River Bourne which would require third party land works and consent. Underlying chalk may be susceptible to seasonal groundwater levels. 12 months monitoring will be required to determine groundwater levels. Investigations will be required in accordance with the Council's Groundwater Strategy to determine a suitable storm water disposal system which may have an impact on the size and area of development.

2. Ensure that development can adapt to the predicted future impacts of climate change?

Wiltshire will experience:

- hotter summers;
- milder winters;
- increased periods without rain;
- increased intensity in rainfall; and
- more extreme weather events.

Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).

3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	There are no public surface water systems at this location and surface water flows to land drainage system. The site would need outfall to the river Bourne which would require third party land works and consent. There is a potential risk from groundwater and surface water flooding. Monitoring and site investigations in respect of groundwater levels will be required to devise appropriate engineering solutions to mitigate this, including suitable storm water disposal. Attenuation measures may have an impact on the size and area of development.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. The site is approximately 200m south east of an area of flood risk (Flood Zone 2/3). However due to its size the site would require Flood Risk Assessment. There is a risk from groundwater and surface water flooding and monitoring and site investigations will be required to devise appropriate engineering solutions to mitigate this. Site investigation would be required to determine the feasibility of surface water attenuation/disposal on and off-site.
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 5b	
<p>The site is located within Flood Zone 1 and risk of flooding created by impermeable surfaces on the site due to residential development can be addressed through mitigation measures to ensure the surface runoff from the site is not increased. The site is some 200m east of an area of flood risk (Flood Zone 2/3). A Flood Risk Assessment is required to support any planning applications. Potential adverse effects from surface water flooding could be mitigated through engineering solutions. Third party consent may be required to deliver adequate outfall to the River Bourne. Overall technical solutions are available which can mitigate the effects from development but may reduce the developable land available. The effects on the objective are considered to be moderate adverse given mitigation may prove problematic.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The site lies outside but adjacent to the Winterbourne Earls Conservation Area (running along the north east boundary) and so there is potential for adverse effects on the setting of this asset and its significance of this designation. Subject to more detailed Heritage Impact Assessment this may reduce the extent and/or density of development. Adverse effects are likely but in the event they arise, they would seem capable of mitigation.
2. Ensure appropriate archaeological	A high level Historic Landscape Character appraisal has been carried out which considers the site to have a low sensitivity

assessment prior to development?	rating. There may be potential for archaeological assets below ground which may require further evaluation and mitigation. The archaeological potential of the site is considered to be low; nevertheless an archaeological assessment at planning application stage will be required.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site does not host historical buildings and buildings of significant local interest that could be re-used.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	In accordance with national policy/local policy, the development of the site for housing would deliver housing that maintains and enhances the distinctiveness of settlements through high quality design. In accordance with legislation and national policy/local plan policy, having been informed by a Heritage Impact Assessment. There are no published management objectives for the Winterbourne Earls Conservation Area which is located adjacent to the site.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	No heritage sites have been identified being at risk in connection with this site or the wider area.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site does not lie within proximity of the World Heritage sites.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 6	
<p>A high level Historic Landscape Character appraisal has been carried out which considers the site to have a low sensitivity rating. Development at the site would not directly/physically affect listed buildings, World Heritage Site or Scheduled Monuments. The Winterbourne Earls Conservation Area is immediately adjacent to the site (running along the north east boundary) and so there is potential for adverse effects on the setting of this designation. Subject to more detailed Heritage Impact Assessment this may reduce the extent and/or density of development. Adverse effects are likely but in the event they arise, they would seem capable of being mitigated.</p> <p>There is the potential for archaeological assets below ground; archaeological assessment would be required.</p> <p>Overall, the effects on the objective are considered to be minor adverse.</p>	
SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local	

distinctiveness and sense of place

Decision Aiding Questions. Will the development site...

1. Protect and enhance the landscape character and scenic quality of the countryside?	The general description of the area in the Landscape Character Assessment is “Chalk River Valley – good condition, strong strength of character.” The strategy is to conserve the landscape character. The site falls into a Special Landscape Area. Development of the site would avoid some of the more highly valued designations such as AONBs. There are hedgerows present on site which should be retained. The site has a medium inter-visibility with residential areas nearby. It is considered that housing development at this site would result in very few/ negligible landscape and visual impacts.
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver additional access to and availability of urban greenspaces. Two PRoW run alongside the north-western boundary (WINT1 and WINT6). They would have to be maintained to continue to ensure connectivity and access of the wider countryside and Winterbourne Gunner to the north.
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs?	The site falls into a Special Landscape Area. Development of the site would avoid some of the more highly valued designations such as AONBs.
5. Protect rights of way, open space and common land?	Two PRoW run alongside the north-western boundary (WINT1 and WINT6). They would have to be maintained to continue to ensure connectivity and access of the wider countryside and Winterbourne Gunner to the north.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	Development of the site would not affect the Green Belt.

Assessment outcome (on balance) -**SUMMARY OF SA OBJECTIVE 7**

Development of the site would avoid some of the more highly valued designations such as AONBs. It is considered that housing development at this site would result in very few/ negligible landscape and visual impacts. In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure and offer the potential to deliver additional access to and availability of urban greenspaces. Two PRoW run alongside the north-western boundary (WINT1 and WINT6). They would have to be maintained to continue to ensure connectivity and access of the wider countryside and Winterbourne Gunner to the north. The site offers opportunities to include mitigation measures such as green infrastructure. Overall, the effects on the

objective are considered to be minor adverse.

SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures

Decision Aiding Questions. Will the development site...

1. Provide an adequate supply of affordable housing?	The whole SHLAA site has capacity for up to approximately 103 residential units which contributes towards Wiltshire's housing targets and the development would be subject to an affordable housing requirement based on local and national policy requirements. Depending on the total number of dwellings agreed for the site based on mitigation set out in this assessment, it can be assumed that the site would provide an adequate supply of affordable housing.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	In accordance with local plan policy and national standards, the development of the site would need to deliver high quality, sustainable homes across all types and tenures. As the site has capacity for up to 103 dwellings there remains flexibility to include units which meet the need identified in the local needs survey (January 2016).
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy. Large villages are identified in the WCS as sustainable settlements for limited level of development in order to help retain the vitality of these communities. This can reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	At this stage, and on the basis of evidence provided by the Qualifying Body, it is unlikely that the emerging Neighbourhood Plan / Neighbourhood Development Order will deliver certainty of supply in the local area. The Winterbourne NP is at a very early stage in its development.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	The site would be adjacent to developed areas in Winterbourne so it would not generate an isolated development. The adequacy of proposed units would have to be determined at application stage taking into account evidence on local needs. The site has adequate access to village facilities and to Salisbury by bus.

Assessment outcome (on balance) + + +

SUMMARY OF SA OBJECTIVE 8

The whole SHLAA site provides capacity for up to approximately 103 residential units, which contributes towards Wiltshire's housing unit targets and could deliver a substantial number of affordable housing depending on the final number of dwellings overall. The site is in a sustainable location within Winterbourne Earls due to the

accessibility of bus services, and therefore offers opportunities to reach services/facilities by non-car modes of travel. On balance the site is considered to have a major positive effect on this objective.

SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities

Decision Aiding Questions. Will the development site...

<p>1. Promote design of buildings and spaces to reduce crime and the fear of crime?</p>	<p>In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime. Design of the scheme would have to create spaces which do not pose a potential danger for residents and visitors during day/night-time. There is no evidence that this could not be achieved although details would have to be provided at detailed proposals stage.</p>
<p>2. Promote design of buildings and spaces to reduce obesity?</p>	<p>Additional space would be required to integrate schemes for example which encourage walking and cycling; residential areas with shared spaces between vehicles and pedestrians/cyclists; and adequately designed landscape areas. This would need to be considered more holistically as part of a development proposal. The site is within up to 700m of village facilities which generally would encourage walking and cycling and a healthier lifestyle.</p>
<p>3. Promote the design of buildings and spaces to meet the changing needs of the population?</p>	<p>Core Policy 45 and 46 in the Core Strategy require development to respond to the changing needs of the population locally, including the needs of the elderly. Lifetime Homes for example could be integrated into the development alongside other types of properties needed locally as evidenced through the local housing needs survey; and the site would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements. Overall the development should also consider appropriate integration with existing development. There is no evidence that this could not be achieved on this site.</p>
<p>4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?</p>	<p>The nearest health facility is at Porton, approx. 4km away. There is a regular bus service enabling The Winterbournes residents to get to Porton in approx. 12 minutes. Development of the site would result in additional demand on the local health service which would require mitigation in the light of capacity constraints.</p>
<p>5. Maximise opportunities within the most deprived areas?</p>	<p>This site falls within 049D LSOA which is amongst the 20% least deprived neighbourhoods in the country. In accordance with national policy/local plan policy, the allocation of the site would increase opportunities for the local community to access a decent home. Development at this site is not likely to have adverse impacts on deprivation in the local area.</p>
<p>6. Reduce rural isolation, including access to services for those without a car in rural areas?</p>	<p>In accordance with national policy/local plan policy, the allocation and development of the site would improve rural cohesion and reduce the need to travel to local service/facilities by private car. The site abuts existing residential areas so its development would not result in an isolated development. The limited distance to essential village facilities would assist those without a car. Winterbourne has a regular bus service to the local school and further on to Salisbury where higher order facilities and services could be accessed within 20min.</p> <p>Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. In supporting local services, the</p>

	need to travel would be reduced as would the potential for isolation and social exclusion.
7. Support the development of community campuses?	The development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	<p>Winterbourne Earls Primary School, located adjacent to the site, is almost full and forecast to remain so. The school site is not sufficient to further expand the school. The school is popular and as a result takes a number of pupils from outside of the catchment area. Housing development on the site would reduce the potential of this and pupils would have to return to their local schools. In the short term a large development may mean that residents moving in with older children would be unlikely to gain a place at the school. The school is however likely to be able to admit pupils arising from a small level of development e.g. 30 units or less.</p> <p>Gomeldon School is full and forecast to remain so; it is also not capable of expansion. It experiences similar issues to the Winterbourne Earls School. Anyone moving in with a child below school age would be able to gain a reception place at the school however the school would not be able to admit any children already of school age as those year groups are already full.</p> <p>In relation to secondary education, Sarum Academy is proposed to be expanded. Mitigation will be required from this development.</p>
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 9	
<p>The site is within reasonable proximity to the services and facilities provided by the village as well as open space. The site itself offers opportunities to integrate measures that encourage healthy lifestyles, design solutions to reduce the fear of crime and consider the changing needs of the population. Given the site is located in a village, there is more limited access to the types of facilities found in higher order settlements such as hospitals or colleges. The village is serviced by a regular bus service to Salisbury which increases the possibility for those without a car to access higher order settlement services and facilities. Mitigation would be required to cater for additional patient demand at Porton surgery. Adverse effects on primary education could be mitigated through limiting the scale of development on the site to no more than 30 dwellings. Overall the effects are likely to be moderate adverse on this objective.</p>	
SA objective 10. Reduce the need to travel and promote more sustainable transport choices	
Decision Aiding Questions. Will the development site...	
1. Increase walking and cycling accessibility through the use of developer contributions and site design?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to walking routes to local services/facilities/employment. The site is close to footpaths (PRoW) and within 500m of village facilities which should discourage some use of the car. The primary school lies directly adjacent to the site. Cycling opportunities are limited as the A338 is a national primary route and busy.
2. Ensure new development incorporates facilities and	The site could provide shared space internally. In accordance with local plan/Transport Plan policies, the site would have the potential to create links to existing cycling infrastructure although it must be noted that there is no dedicated cycle lane on the

infrastructure for cyclists?	A338 the proposal could link up with.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	The site is close to footpaths and within 700m of village facilities which should discourage the use of the car. The village is serviced by a regular bus service to Salisbury which increases the possibility to access higher order settlement services and facilities by public transport. Nonetheless, due to the general location and limited facilities and services within the village the majority of trips will be undertaken by the private car. Cycling opportunities are limited as the A338 is a busy national primary route.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 10	
The site is well related to the existing facilities of Winterbourne, including the adjacent primary school. The availability of public transport, and accessibility of schools and local services may encourage travelling by non-car modes. However cycling opportunities are limited as the A338 is a busy national primary route. Due to the general location and limited facilities and services within the village the majority of trips will be undertaken by the private car. On that basis the effects on the objective are considered to be minor adverse.	
SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth	
Decision Aiding Questions. Will the development site...	
1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.
2. Support the rural economy?	Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of The Winterbournes.
Assessment outcome (on balance) + + +	
SUMMARY OF SA OBJECTIVE 11	
Development will increase the local population, could contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term it is expected that development in this location would support the viability of local	

services, facilities and businesses of The Winterbournes. Overall if it considered that the likely effects on this objective would be major positive.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. In addition, there are no employment areas in the Winterbournes whose vitality and viability could be protected and enhanced by development. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the wider community area.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away.

Assessment outcome (on balance) +

SUMMARY OF SA OBJECTIVE 12

The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would have a minor positive effect on SA Objective 12.

Site S91 - Land by Summerlug Estate and Railway, Winterbourne Earls

Site context

Site size: 2.9 ha Site capacity: approximately 65 dwellings

This is a greenfield, agricultural site of 2.9ha to the south of Winterbourne Earls. The site is bordered by the A338 to the west and mainline railway to the east. There are existing residential properties in the vicinity of the site.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	This is an agricultural site, which generally has limited ecological value due to the nature of the land use, though the features at the boundaries such as hedgerows and trees may support protected species and should be retained. The site lies adjacent to railway line which is a primary habitat corridor. It is advised to limit housing density to ensure large buffer can be left next to railway in order to offset lost arable habitats and enhance wildlife corridors. Furthermore existing hedgerows should be retained
---	---

	<p>and enhanced. Boundary features should be excluded from curtilage of properties.</p> <p>Ecological assessment and further details on the proposals will be required to accurately assess likely impacts. There is potential to create or enhance habitats through development of the site.</p>
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	The site falls within 6.4km buffer zone of the Salisbury Plain SPA and 2km of the Porton Down SPA. It also lies in 250m proximity to the River Avon/Bourne SAC. The Figsbury Ring SSSI lies approximately 1.2km away to the south east. Features at the site's boundaries such as hedgerows and trees may support protected species and should be retained. The site lies adjacent to railway line which is a primary habitat corridor. It is advised to limit housing density to ensure large buffer can be left next to railway in order to offset lost arable habitats and enhance wildlife corridors. Furthermore existing hedgerows should be retained and enhanced. Boundary features should be excluded from curtilage of properties.
3. Result in greater community engagement with biodiversity?	The development of the site for housing would have the potential to increase public access to designated features such as the SAC which lies in approximately 250m to the west, and Figsbury Ring SSSI to the east.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	The site lies adjacent to railway line which is a primary habitat corridor. It is advised to limit housing density to ensure large buffer can be left next to railway in order to offset lost arable habitats and enhance wildlife corridors. Furthermore existing hedgerows should be retained and enhanced. Boundary features should be excluded from curtilage of properties.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
6. Ensure all new developments have regard to and protect BAP habitats/ species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of delivering biodiversity improvements Ecological assessments would be required.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased water abstraction and habitat loss / damage. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland features.
9. Require that disturbance impacts of proposed development are	Not applicable – Winterbourne Earls does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.

assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 1	
<p>The site lies in proximity to the River Avon SAC and within the buffer zones of the Porton and Salisbury SPA. The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased water abstraction and habitat loss / damage. Because of the relationship of the site with SACs, likely significant effects are triggered based on a settlement level HRA screening. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process. There are local habitats which should be protected through appropriate buffer zones and excluded from the curtilage of properties, such as boundary hedgerows; and it is advised to limit housing density to ensure large buffer can be left next to railway in order to offset lost arable habitats and enhance wildlife corridors. This could be integrated into green infrastructure schemes the site can, generally, accommodate. Overall, on the basis of the HRA screening it is considered that this site option has minor adverse effects on this objective.</p>	
SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings	
Decision Aiding Questions. Will the development site...	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	Some facilities such as the post office/shop, and the school are accessible by foot and cycle. A bus stop at the A338 enables access to a regular bus service to the Winterbournes, Salisbury and Porton (20 minutes journey time). The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence.
2. Maximise reuse of previously developed land where possible/appropriate?	This is a greenfield site so reuse of previous developed land is not achievable.

3. Encourage remediation of contaminated land?	There is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. It is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.
5. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team
6. Protect and enhance soil quality?	In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation.
7. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
8. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	<p>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources.</p> <p>The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 2</p> <p>Appropriate densities could be achieved on this site in line with national and local planning policy. The site is not located on previously developed land; the site is greenfield and therefore would be unlikely to require remediation.</p> <p>It is within 600m of village services and facilities and a regular bus service is available on the A338 (to Salisbury and Porton). No up to date information is available on the grade of agricultural land on site, but if found to be high quality its loss would be minor to negligible given the size of development. The site is not located within a Mineral Safeguarding Area so not sterilisation of viable mineral resources will occur. Overall the site option would have a minor adverse effect on this objective.</p>	
SA objective 3. Use and manage water resources in a sustainable manner	
Decision Aiding Questions. Will the development site...	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	Capacity appraisals need to be undertaken by Wessex Water in relation to both the supply of water as well as foul drainage for which there is currently limited capacity. Offsite connecting sewer is likely to be needed. These are not likely to hinder the delivery of the site by 2026.

<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>In the light of capacity issues, suitable and timely investment would need to be agreed between the developer(s) and Wessex Water, particularly in relation to foul drainage.</p> <p>Evidence suggests that investment would be needed given the distance of the site to trunk mains. Further as the site is adjacent to the railway additional consents under planning will be required from Network Rail which could limit the area available for development.</p>
<p>3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?</p>	<p>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. Alternative harvesting systems such as underground tanks need to be explored in order to proactively manage surface water runoff from developments.</p>
<p>4. Consider the need for adequate provision of surface water and foul drainage?</p>	<p>Investigation of on-site and off-site capacity to manage surface water/discharge to sewerage systems would need to be undertaken. There is limited capacity in local foul water systems which will require a capacity appraisal and offsite connecting sewer with downstream upsizing works. In addition there are no public surface water systems at this location.</p> <p>Given underlying chalk, the site is within a sensitive groundwater area so will require testing and monitoring for at least 12 months to determine the level of ground water and in order to determine a suitable storm water disposal system which may have an impact on the size and area of development. Mitigation could be problematic. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25.</p>
<p>5. Protect, and where possible, improve surface, ground and drinking water quality?</p>	<p>Development would lead to a limited increase in demand for water. The site does not fall within a Source Protection Zone. In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. The site is within an identified 'Groundwater area' so will require testing and monitoring for at least 12 months to determine the level of ground water. Further guidance can be found in the Council's Groundwater Strategy.</p>
<p>6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?</p>	<p>The site falls within the catchment of the Hampshire Avon. Potential impacts of increased water abstraction will need to be considered further. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.</p>

Assessment outcome (on balance) - -

SUMMARY OF SA OBJECTIVE 3

The site is not within a Source Protection Zone; therefore it is unlikely that there would be any significant effect on groundwater quality. Given the capacity of the site, development would lead to a limited increase in demand for water so early engagement with relevant bodies will be required to ensure that there is sufficient capacity within abstraction licensing arrangements. Due the relationship of the site with SAC, likely significant effects are triggered based on a settlement level HRA screening.

An appropriate assessment would be required if the site is taken forward into any subsequent stage of the selection process. Also, foul water and surface water infrastructure deficits will need to be addressed before the site can go ahead. The underlying geology may not permit the implementation of SuDS and groundwater levels may be an issue. 12 months monitoring and site investigations will be required to determine groundwater levels and groundwater related flood risk. Technical solutions may have to be agreed, and investment into infrastructure may be required. On the basis of the available evidence the site would have a moderate adverse effect on this objective.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

<p>1. Maintain and improve local air quality?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development is likely to increase local commuter traffic, which may impact on local air quality. However, it is recognised that the development is within 600m of key services and facilities and the school lies adjacent to the site. A bus stop at the A338 enables access to a regular bus service to Salisbury (20 minutes journey time). This should help limit the extent of additional traffic emanating from the site.</p> <p>Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable transport modes and may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site is located within Winterbourne adjacent to the A338 so there may be effects from pollution.</p>
<p>3. Mitigate the impacts from uses that generate NO₂, SO₂ and PM₁₀ or other particulates?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Locations adjacent to rail lines are liable to suffer from unacceptable levels of noise and vibration. Railways are exempt from statutory nuisance action. It is difficult to recommend an exclusion zone as line use varies. However, caution should be exercised at potential development against mainline railway boundaries. Noise and vibration assessments would need to be provided to support development at this site.</p>

	<p>In addition the site is within proximity to high intensity pig farm permitted by the causing residential amenity issues with strong odour. These issues would have to be assessed and potentially mitigated against. Residential dwellings being closer to the farm (within 400m) may impact on the Environment Agency (EA) permit and subsequently the business. The area closest to the rail line lies within 325m of the farm.</p> <p>The pig farm has historically attracted odour complaints and is the sort of operation that is likely to give rise to such complaints. The site does have an odour management plan for compliance with their Environmental Permit. However, despite these measures on the site it is likely that odour will remain and potentially impact on this development and harm the living conditions of future residents. In addition, there have been odour complaints from further away (around SHLAA site s1055).</p>
4. Seek to reduce development in or near to AQMAs ¹⁴ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) - - -	

¹⁴ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

SUMMARY OF SA OBJECTIVE 4

The site does not fall within a designated AQMA. Development is likely to increase local traffic, which may adversely affect air quality. Measures must be implemented to mitigate emission levels in line with the council's policies and Air Quality Strategy, such as landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Development at this site would likely generate noise and light pollution during construction (short term / temporary effect). Noise pollution may be an issue to a lesser extent during operation through the generation of car trips. Good accessibility of bus services may reduce the amount of car traffic emanating from the site.

There are considerations with regard to the proximity of the site to the railway and pig farm and associated noise and odour nuisance. Odour from the farm cannot be mitigated against. Accordingly the major adverse effects are envisaged on this objective.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources will be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices. However, the effect of the development of this site will be to increase greenhouse gas emissions.

Overall a minor adverse effect is envisaged on this objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects

Decision Aiding Questions. Will the development site...

<p>1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?</p>	<p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. The site is some 250m east of the Flood Zone 2/3 associated with the River Bourne. There are no public surface water systems at this location. Surface water systems must be sealed as per sewers. While no insurmountable constraints have been identified underlying chalk may be susceptible to seasonal groundwater levels. 12 months monitoring will be required to determine groundwater levels. Investigations will be required to determine a suitable storm water disposal system which may be problematic to mitigate and could have an impact on the size and area of development.</p>
<p>2. Ensure that development can adapt to the predicted future impacts of climate change?</p>	<p>Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).</p>
<p>3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?</p>	<p>There is a potential risk from groundwater and surface water flooding. Monitoring and site investigations in respect of groundwater levels will be required to devise appropriate engineering solutions to mitigate this, including suitable storm water disposal. Attenuation measures may have an impact on the size and area of development.</p>
<p>4. Minimise the risk of flooding to people and property (new and existing development)?</p>	<p>The site is located within Flood Zone 1. The site is some 250m east of an area of flood risk (Flood Zone 2/3). As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. However due to its size the site would require Flood Risk Assessment. There is a risk from groundwater and surface water flooding and monitoring and site investigations will be required to devise appropriate engineering solutions to mitigate this. Site investigation would be required to determine the feasibility of surface water attenuation/disposal on and off-site.</p>
<p>5. Protect and enhance the natural</p>	<p>In accordance with national and local policy provisions, the development of the site would not affect the areal extent and</p>

function of floodplains?	function of the floodplain.
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 5b	
<p>The site is located within Flood Zone 1 and some 250m east of an area of flood risk but surface water management will be in an issue due to ground conditions. The site would require a Flood Risk Assessment and site investigations/monitoring. Engineering solutions may be required to address flood risk from surface water and groundwater flooding. Overall it is considered that the site option would have moderate adverse effects on this objective as mitigation measures are likely to be problematic.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The site would not affect any heritage assets since there are none on, immediately adjacent or in the vicinity of the site.
2. Ensure appropriate archaeological assessment prior to development?	The archaeological potential to be low nevertheless an archaeological assessment will be required at application stage. A high level Historic Landscape Character appraisal has been carried out which considers the site to have a low sensitivity rating and having no direct impacts on built heritage.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	There are no relevant buildings on site which could be reused.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	Notwithstanding that the site would not affect any heritage assets, development would be required to be in keeping with the character and appearance of the area.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	There are no relevant buildings on site.

6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	There is no evidence that the WHS would be impacted on by the development.
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 6</p> <p>A high level Historic Landscape Character appraisal has been carried out which considers the site to have a low sensitivity rating. Development at the site would not directly/physically affect heritage assets or designations such as listed buildings, World Heritage Site, SAMs or conservation areas. The archaeological potential of the site is low; an archaeological assessment will be required nevertheless. Mitigation is likely to be achievable. Overall, minor adverse effects are envisaged on this objective.</p>	
<p>SA objective 7. Conserve and enhance the character and quality of Wiltshire’s rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Protect and enhance the landscape character and scenic quality of the countryside?	<p>The landscape character is described as Chalk River Valley and in good condition, with strong strength of character. The strategy is to conserve the landscape character. The site falls into a Special Landscape Area. It is considered that housing development at this site would result in very few/ negligible landscape and visual impacts. Development of the site would avoid some of the more highly valued designations such as AONBs but would lead towards some urbanisation of the settlement and the loss of green space. There are hedgerows present on site which should be retained.</p> <p>However, as the site is located to the south of the Winterbournes there are some concerns regarding coalescence with Hurdcott (a small hamlet not identified in the settlement hierarchy).</p>
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	The site lies adjacent to the railway and existing residential development. The site has limited potential to deliver net improvements in terms of the quality and quantity urban green space and countryside access for recreational purpose. Internal greenspace forming part of the green infrastructure may deliver some improvements but this would be deemed to be relatively limited.
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three	The site falls into a Special Landscape Area. Development of the site would avoid some of the more highly valued designations such as AONBs.

local AONBs?	
5. Protect rights of way, open space and common land?	None of these designations/categories would be affected by development.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site is not located within or adjacent to the Green Belt.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 7	
It is considered that housing development at this site would result in very few/ negligible landscape and visual impacts. Development of the site would avoid some of the more highly valued designations such as AONBs but would lead towards some urbanisation of the settlement and the loss of green space. There are some concerns regarding coalescence with Hurdcott and it is considered that the site has limited potential to deliver net improvements in terms of the quality and quantity urban green space and countryside access for recreational purpose. Overall, likely effects are considered to be minor adverse against this objective.	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	In accordance with local plan policy and national standards, the development of the site would need to deliver high quality, sustainable homes across all types and tenures. As the site has capacity for up to 65 dwellings there remains flexibility to include units which meet the need identified in the local needs survey (January 2016) ¹⁵ . However other requirements/mitigation measures identified in the SA may reduce the overall capacity.
3. Ensure adequate provision of land	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet

¹⁵ Wiltshire Council, January 2016: The Winterbournes, Parish Housing Needs Survey

to meet housing needs?	local and HMA targeted needs. However other requirements/mitigation measures identified in the SA may reduce the overall capacity.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy. Large villages are identified in the WCS as sustainable settlements for limited level of development in order to help retain the vitality of these communities. This can reduce the risk of speculative development in unsustainable locations. While the total number of dwellings would have to be determined through a detailed proposal it is considered that up to 65 dwellings would form a substantial level of growth for a large village. However, the overall site capacity may have to be reduced to account for mitigation measures identified elsewhere in this assessment.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	At this stage, and on the basis of evidence provided by the Qualifying Body, it is unlikely that the emerging Neighbourhood Plan / Neighbourhood Development Order will deliver certainty of supply in the local area to meet needs as the plan is at an early stage in its development.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	The site abuts an existing residential area so it would not generate an isolated development. However the site is situated at the extreme southern end of The Winterbournes which may lead to a degree of isolation. The adequacy of proposed units would have to be determined at application stage taking into account evidence on local needs.
Assessment outcome (on balance) + + +	
SUMMARY OF SA OBJECTIVE 8	
<p>The whole SHLAA site provides capacity for up to approximately 65 residential units though this may be reduced through the mitigation set out in this assessment. This would contribute towards Wiltshire's housing unit targets, including affordable housing. The site is located close to the local school but the site is situated at the very southern end of the village with other services/facilities such as the post office and shop being over 900m away which is considered to be adequate but may result in longer trips for residents. A regular bus service can be accessed on the A338 at various points which would enable residents to access other local services at The Winterbournes, Porton or Salisbury in 20 minutes or less. Overall there is no evidence to suggest that the site could not deliver quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures. Therefore it is considered that this site option has a major positive effect on the objective.</p>	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of	In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime. Individual design aspects which enable creation of inclusive and 'safe' neighbourhoods can be integrated at detailed proposals stage and the overall site size

crime?	should provide sufficient flexibility to accommodate this.
2. Promote design of buildings and spaces to reduce obesity?	Additional space would be required to integrate schemes for example which encourage walking and cycling; residential areas with shared spaces between vehicles and pedestrians/cyclists; and adequately designed landscape areas. This would need to be considered more holistically as part of a development proposal. The distance to some village facilities such as the shop/post office at Winterbourne Gunner (900m) may discourage residents to walk or cycle; but there remains potential to link up with existing footpaths off the A338.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	Core Policy 45 and 46 in the Core Strategy require development to respond to the changing needs of the population locally, including the needs of the elderly. Lifetime Homes for example could be integrated into the development alongside other types of properties needed locally as evidenced through the local housing needs survey; and the site could deliver affordable housing in line with local and national policy requirements. Overall the development should also consider appropriate integration with existing development.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	The nearest health facility is at Porton, approx. 4km away. There is a regular bus service enabling The Winterbournes residents to get to Porton in approx. 12 minutes. Development of the site would result in additional demand on the local health service which would require mitigation in the light of capacity constraints.
5. Maximise opportunities within the most deprived areas?	This site falls within 049D LSOA which is amongst the 20% least deprived neighbourhoods in the country. In accordance with national policy/local plan policy, the allocation of the site would increase opportunities for the local community to access a decent home. Development at this site is not likely to have adverse impacts on deprivation in the local area.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	<p>Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. In supporting local services, the need to travel would be reduced as would the potential for isolation and social exclusion.</p> <p>The site would be developed on the southern edge of The Winterbournes but adjoining existing residential areas to the north. The Winterbourne's local facilities and services, and local bus services, are dotted along the A338 between Winterbourne Earls in the south and Winterbourne Gunner in the north, where the post office and shop are located. Trip lengths could therefore vary. The school is approximately 100m away from the site and could be accessed by walking or cycling. The shop and post office are approximately 900m away and may therefore be beyond a distance which is walkable. On the other hand there is a regular bus service linking Salisbury with Porton via The Winterbournes, and bus stops are accessible at various points along the A338.</p>
7. Support the development of community campuses?	The development of community campuses is directed to the higher order settlements and therefore is not relevant to this site
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated	Winterbourne Earls Primary School is within walking distance of the site but is almost full and forecast to remain so. The school site is not sufficient to further expand the school. The school is popular and as a result takes a number of pupils from outside of the catchment area. Housing development on the site would reduce the potential of this and pupils would have to return to their local schools. In the short term a large development may mean that residents moving in with older children

from the site?	<p>would be unlikely to gain at place at the school. The school is however likely to be able to admit pupils arising from a small level of development e.g. 30 units or less.</p> <p>Gomeldon School is full and forecast to remain so; it is also not capable of expansion. It experiences similar issues to the Winterbourne Earls School. Anyone moving in with a child below school age would be able to gain a reception place at the school however the school would not be able to admit any children already of school age as those year groups are already full.</p> <p>In relation to secondary education, Sarum Academy is proposed to be expanded. Mitigation will be required from this development.</p>
----------------	---

Assessment outcome (on balance) - -

SUMMARY OF SA OBJECTIVE 9

The site is within varying distance to the services and facilities provided by the village. Given the site is located in a village, there is more limited access to the types of facilities found in higher order settlements such as hospitals or colleges; however a regular bus service is available to Salisbury and Porton. There is some flexibility to accommodate design solutions thereby increasing the potential for walking and cycling, to accommodate the changing needs of the local population and to create safe neighbourhoods. The site has potential to be integrated into the existing village fabric and would not become an isolated development in itself – however the development would be located at the southern edge of Winterbourne Earls. Potentially adverse effects on local health facilities could be mitigated. Growth within the village of up to 30 units could be accommodated by the local primary school. Therefore, development of this site should not exceed 30 dwellings as mitigation. Overall, moderate adverse effects are envisaged on this objective.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	Additional space would be required to integrate schemes for example which encourage walking and cycling; residential areas with shared spaces between vehicles and pedestrians/cyclists; and adequately designed landscape areas. This would need to be considered more holistically as part of a development proposal. Cycling opportunities are limited as the A338 is a national primary route and busy. The A338 has footways hereabouts.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	The site could accommodate concepts such as shared space for example but this would have to be confirmed through detailed design of a scheme. There is limited potential for safe cycling in either direction on the A338 as this is a busy national primary route.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the	The location of this site on the edge of the village in comparatively longer distance from village facilities makes the use of sustainable transport modes less likely. A regular bus service is available at stops on the A338 which connects the Winterbournes with Salisbury and Porton, and there is potential for the development to link up with footpaths on and off the

private car?	A338. Nonetheless, due to the general location and limited facilities and services within the village the majority of trips will be undertaken by the private car.
--------------	--

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 10

The development itself could notionally accommodate design solutions to encourage the use of walking and cycling and linking the site with the A338, which is the main access road into the village and to Salisbury further south. The A338 has footways but no cycle lane, and is a national primary route. The location of this site on the edge of the village in comparatively longer distance from village facilities (bar the primary school) which makes the use of sustainable transport modes less likely, but a regular bus service is available at stops on the A338 which connects The Winterbournes with Salisbury and Porton on a regular basis. While non-car travel is possible in principle, the site's general location will result in trips undertaken predominantly with the private car. On balance the site option would have a minor adverse effect on this objective.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.
--	--------------------------------

2. Support the rural economy?	Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of The Winterbournes.
-------------------------------	---

Assessment outcome (on balance) + +

SUMMARY OF SA OBJECTIVE 11

Development will increase the local population, could contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term it is expected that development in this location would support the viability of local services, facilities and businesses of The Winterbournes. Overall if it considered that the likely effects on this objective would be moderate positive.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...	
1. Protect and enhance the vitality and viability of existing employment areas?	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. In addition, there are no employment areas in the Winterbournes whose vitality and viability could be protected and enhanced by development. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the wider community area.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away.
Assessment outcome (on balance) +	
SUMMARY OF SA OBJECTIVE 12	
The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would have a minor positive effect on SA Objective 12.	

Site S92 - Land by Railway Line and Vicarage, The Winterbournes

Site context	
Site size: 0.46 ha Site capacity: approximately 11 dwellings	
Small site of 0.46 ha adjacent to Winterbourne Earls with capacity for 11 dwellings. Mainline railway runs along eastern boundary of site.	
SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses	
Decision Aiding Questions. Will the development site...	
1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	The evidence base indicates there are few or no ecological issues in relation to this site. However, the precautionary principle must be applied and an ecological assessment at site level to support individual planning applications will be required. This is an agricultural site, which generally has limited ecological value due to the nature of the land use, though the features at the boundaries such as hedgerows and trees may support protected species and should be retained. While in theory there is

	potential to create or enhance habitats through development of the site it remains questionable if the site capacity would actually enable this to happen.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	The site falls within the 6.4km buffer zone of the Salisbury Plain SPA and 2km of the Porton Down SPA. It also lies in 500m proximity to the River Avon/Bourne SAC. The Figsbury Ring SSSI lies approximately 1.2km away to the south east. The features at the boundaries such as hedgerows and trees may support protected species so assessments and further details on the proposals will be required to accurately assess likely impacts and derive appropriate mitigation measures; i.e. buffer zones.
3. Result in greater community engagement with biodiversity?	The development of the site for housing would have the potential to increase public access to designated features such as the SAC which lies in approximately 500m to the west, and the Figsbury Ring SSSI to the east. Two public footpaths run past the site which could enable residents to access the wider countryside to the east.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	The site lies adjacent to railway line which is a primary habitat corridor. Furthermore existing hedgerows should be retained and enhanced.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	The site is very small and therefore its capability of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain is very limited.
6. Ensure all new developments have regard to and protect BAP habitats/species?	An ecological assessment will be required to investigate effects on local habitats and species. In accordance with local plan policy and biodiversity targets, the development of the site for housing may not be capable of delivering biodiversity improvements alongside a viable number of housing units.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased water abstraction and habitat loss / damage. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland features.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury	Not applicable – the site does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.

Plain and New Forest SPAs?	
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 1	
<p>An ecological assessment would be required to support a planning application to ascertain the effects on local habitats and species. The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased water abstraction and habitat loss / damage. Due to the relationship of the site with SACs, likely significant effects are triggered based on a settlement level HRA screening. An appropriate assessment would be required if the site is taken forward into any subsequent stage of the selection process. In addition the site is small and there is, practically, little potential to create or enhance habitats and green infrastructure through development of the site alongside a viable number of housing units, due to the site’s small size. Public footpaths in the vicinity could enable access to the wider countryside and designated areas. On balance and based on the HRA screening, the site option would have a minor adverse effect on the objective.</p>	
SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings	
Decision Aiding Questions. Will the development site...	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	The site is located on the edge of a large village which is generally a sustainable location for limited growth in accordance with the Core Strategy. The site is well located to the centre of the village. The primary school lies approximately 500m away. A regular bus service is available on the A338 (to Salisbury and Porton). The Winterbourne’s local facilities and services, and local bus services, are dotted along the A338 between Winterbourne Earls in the south and Winterbourne Gunner in the north, where the post office and shop are located. Trip lengths could therefore vary and may for some residents result in regular car trips. The school is approximately 300m away from the site and could be accessed by walking or cycling. The shop and post office are approximately 800m away and may therefore be beyond a distance which is walkable. On the other hand there is a regular bus service linking Salisbury with Porton via The Winterbournes, and bus stops are accessible at various points along the A338. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence.
2. Maximise reuse of previously developed land where possible/appropriate?	This is a greenfield site so reuse of previous developed land is not achievable.

3. Encourage remediation of contaminated land?	There is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. It is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.
5. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team
6. Protect and enhance soil quality?	In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation.
7. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
8. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	<p>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources.</p> <p>The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 2</p> <p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. The site lies within 300m of the primary school but post offices and shops are further away (800m). A regular bus service can be accessed on the A338. The site is not located on previously developed land; the site is greenfield and therefore would not require remediation. No up to date information is held as to the grade of agricultural land on site but if found to be high quality its loss would be minor to negligible given the size of proposed development. The site is not located within a Mineral Safeguarding Area so not sterilisation of viable mineral resources will occur. On balance the site option would have a minor adverse effect on this objective.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased	Capacity appraisals need to be undertaken by Wessex Water in relation to both the supply of water as well as foul drainage for which there is currently limited capacity. However it is considered that given the site capacity of up to 11 units, no insurmountable issues exist which would prevent the site from being connected to foul water disposal mains/water supply.

pressure on the sewerage network?	These are not likely to hinder the delivery of the site by 2026.
2. Ensure that essential water infrastructure is co-ordinated with all new development?	<p>In the light of capacity issues, suitable and timely investment would need to be agreed between the developer(s) and Wessex Water, particularly in relation to foul drainage.</p> <p>Evidence suggests that investment would be needed given the distance of the site to trunk mains. Further as the site is adjacent to the railway additional consents under planning will be required from Network Rail which could limit the area available for development.</p>
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. Alternative harvesting systems such as underground tanks need to be explored in order to proactively manage surface water runoff from developments.
4. Consider the need for adequate provision of surface water and foul drainage?	<p>Investigation of on-site and off-site capacity to manage surface water/discharge to sewerage systems would need to be undertaken. There is limited capacity in local foul water systems which will require a capacity appraisal.</p> <p>Given underlying chalk, the site is within a sensitive groundwater area so will require testing and monitoring for at least 12 months to determine the level of ground water and in order to determine a suitable storm water disposal system which may have an impact on the size and area of development. Mitigation could be problematic. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25.</p>
5. Protect, and where possible, improve surface, ground and drinking water quality?	Development would lead to a limited increase in demand for water. The site does not fall within a Source Protection Zone. In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. The site is within an identified 'Groundwater area' so will require testing and monitoring for at least 12 months to determine the level of ground water. Further guidance can be found in the Council's Groundwater Strategy.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	The site falls within the catchment of the Hampshire Avon. Potential impacts of increased water abstraction will need to be considered further. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 3	
The evidence shows that investment will be required in terms of connecting the site to foul water discharge and fresh water supply. Surface water management remains an issue due to the prevailing unfavourable ground conditions. Due to the relationship of the site with SAC, likely significant effects are also triggered based on	

a settlement level HRA screening. An appropriate assessment would be required if the site is taken forward into any subsequent stage of the selection process. In combination these issues are considered to be problematical. Overall, the site option is considered to have a moderate adverse effect on this objective.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

<p>1. Maintain and improve local air quality?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development is likely to increase local commuter traffic, which may impact on local air quality. The development is within 300m-900m of key services and facilities and some of these may therefore accessible by foot and cycle; there are footpaths on the A338 in this sector. In addition there is a regular bus service available on the A338 which connects the site with Porton and Salisbury. This should help limit the extent of additional traffic emanating from the site. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable transport modes and may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. In general, the site is located on the edge of Winterbourne and there are residential areas in the immediate vicinity. Therefore the area is already affected by some noise and light pollution from development and traffic and the limited increase in dwelling numbers in the area (11) is unlikely to lead to unacceptable levels of pollution for residents.</p>
<p>3. Mitigate the impacts from uses that generate NO₂, SO₂ and PM₁₀ or other particulates?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The availability of walking and cycling opportunities, and bus services nearby may decrease the number of car trips from this site.</p> <p>However locations adjacent to rail lines are liable to suffer from unacceptable levels of noise and vibration. Railways are exempt from statutory nuisance action. It is difficult to recommend an exclusion zone as line use varies. However, caution should be exercised at potential development against mainline railway boundaries. Noise and vibration assessments would need to be provided to support development at this site. Due to its limited size however there appears to be little or no potential for exclusion zones/buffers to mitigate against noise/vibration from rail traffic, without significantly affecting the</p>

	<p>developability of the site for housing.</p> <p>In addition, the adjacent pig farm (to the east of the rail line) is a source of odour pollution something which would have to be further assessed through detailed studies at application stage. Site is within proximity to high intensity pig farm permitted by the Environment Agency (EA) causing issues with strong odour. These issues would have to be assessed and mitigated against. Residential dwellings being closer to the farm (within 400m) may impact on the EA permit and subsequently the business.</p> <p>The pig farm has historically attracted odour complaints and is the sort of operation that is likely to give rise to such complaints. The site does have an odour management plan for compliance with their Environmental Permit. However, despite these measures on the site it is likely that odour will remain and potentially impact on this development and harm the living conditions of future residents. In addition, there have been odour complaints from further away (around SHLAA site s1055)</p>
4. Seek to reduce development in or near to AQMAS ¹⁶ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.

¹⁶ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

Assessment outcome (on balance) - - -

SUMMARY OF SA OBJECTIVE 4

The site does not fall within a designated AQMA. Development at this site would likely generate noise and light pollution during construction (short term / temporary effect). Noise pollution may be an issue to a lesser extent during operation through the generation of car trips. There are considerations with regard to the proximity of the site to the railway line to the east. At this small site there are very limited opportunities, if any, for buffer zones to mitigate against the pollution from rail traffic.

There are considerations with regard to the proximity of the site to the railway and pig farm and associated noise and odour nuisance. Odour from the farm cannot be mitigated against. Accordingly the major adverse effects are envisaged on this objective.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources will be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices. However, the effect of the development of this site will be to increase greenhouse gas emissions.

Overall a minor adverse effect is envisaged on this objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects

Decision Aiding Questions. Will the development site...

<p>1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?</p>	<p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. The site is some 400m east of the Flood Zone 2/3 associated with the River Bourne. While no absolute constraints have been identified it is important to note that the underlying chalk may be susceptible to seasonal groundwater levels. 12 months monitoring will be required to determine groundwater levels. Investigations will be required in accordance with the Council's Groundwater Strategy and to determine a suitable storm water disposal system which may be problematic to mitigate and could have an impact on the size and area of development.</p>
<p>2. Ensure that development can adapt to the predicted future impacts of climate change?</p>	<p>Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).</p>
<p>3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?</p>	<p>There is a potential risk from groundwater and surface water flooding. Monitoring and site investigations in respect of groundwater levels will be required to devise appropriate engineering solutions to mitigate this, including suitable storm water disposal. Attenuation measures may have an impact on the size and area of development.</p>
<p>4. Minimise the risk of flooding to people and property (new and existing development)?</p>	<p>The site is located within Flood Zone 1. The site is some 400m east of an area of flood risk (Flood Zone 2/3). As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. There is a risk from groundwater and surface water flooding and monitoring and site investigations will be required to devise appropriate engineering solutions to mitigate this. Site investigation would be required to determine the feasibility of surface water attenuation/disposal on and off-site.</p>
<p>5. Protect and enhance the natural</p>	<p>In accordance with national and local policy provisions, the development of the site would not affect the areal extent and</p>

function of floodplains?	function of the floodplain.
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 5b	
The site is located within Flood Zone 1. However surface water management will be in an issue due to ground conditions. Overall it is considered that this site would have moderate adverse effects on this objective as mitigation measures are likely to be problematic.	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	<p>The Winterbourne Earls Conservation Area is immediately adjacent to the site (running along the western boundary) and so there is potential for adverse effects on the setting and significant of this asset. Subject to more detailed Heritage Impact Assessment this may reduce the extent and/or density of development. Adverse effects are unlikely but in the event they arise, they would seem capable of being mitigated.</p> <p>A high level Historic Landscape Character appraisal has been carried out which considers the site to have a low sensitivity rating and having no direct impacts on built heritage.</p>
2. Ensure appropriate archaeological assessment prior to development?	As a greenfield site, there may be potential for archaeological assets below ground which may require further evaluation and mitigation. The archaeological potential is low, nevertheless an archaeological assessment will be required at any subsequent planning application stage.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	This is not applicable as no such buildings are present on this site.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	The Winterbourne Earls Conservation Area is immediately adjacent to the site (running along the western boundary) and so there is potential for adverse effects on the setting of this designation. There are no management objectives for this heritage asset but development would be capable of being in keeping with the conservation area, informed by the evidence contained within the Heritage Impact Assessment.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	There are no relevant buildings on site.
6. Protect, manage and present the	There is no evidence that the WHS would be impacted on by the development.

Stonehenge and Avebury WHS in accordance with international obligations?	
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 6</p> <p>A high level Historic Landscape Character appraisal has been carried out which considers the site to have a low sensitivity rating. Development at the site would not directly/physically affect heritage assets or designations such as listed buildings, World Heritage Site and Scheduled Monuments. The Winterbourne Earls Conservation Area is immediately adjacent to the site (running along the western boundary) and so there is potential for adverse effects on the setting of this designation. Accordingly a Heritage Impact Assessment would be required to determine any impacts for any subsequent planning application stage. Notwithstanding that the archaeological potential is low, an archaeological assessment will be required at application stage. Overall the site option is considered to have minor adverse effects on this objective and mitigation is considered achievable.</p>	
<p>SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Protect and enhance the landscape character and scenic quality of the countryside?	The landscape character is described as Chalk River Valley and in good condition, with strong strength of character. The strategy is to conserve the landscape character. The site falls into a Special Landscape Area. It is considered that housing development at this site would result in very few/ negligible landscape and visual impacts. Development of the site would avoid some of the more highly valued designations such as AONBs but would lead towards some urbanisation of the settlement and the loss of green space.
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	The site is small and may be reduced further to account for other mitigation measures within this assessment so the delivery of green infrastructure is very limited.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	The site lies adjacent to two PRoWs which lead into the countryside outside The Winterbournes which would enable residents to access those areas.
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs?	The site falls into a Special Landscape Area. Development of the site would avoid some of the more highly valued designations such as AONBs.

5. Protect rights of way, open space and common land?	The development would need to take account of the adjacent PRoW and seek to protect it.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site does not fall within the West Wiltshire Green Belt nor would it impact on its openness.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 7	
While local greenspace would be lost to development this would not result in harm to the local landscape. The PRoW adjacent to the site would have to be protected from development and remain open to the public to access the local countryside. Overall the site option is considered to have minor adverse effects on this objective.	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	Due to its scale, the site would make a limited contribution to the supply of affordable houses in accordance with national and local plan policy requirements; and could contribute to meeting the local housing needs survey requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	In accordance with local plan policy and national standards, the development of the site would need to deliver high quality, sustainable homes across all types and tenures. The provision of affordable housing to meet local needs is unlikely.
3. Ensure adequate provision of land to meet housing needs?	Depending on densities proposed the site could provide adequate provision of land to meet housing needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	At this stage, and on the basis of evidence provided by the Qualifying Body, it is unlikely that the emerging Neighbourhood Plan / Neighbourhood Development Order will deliver certainty of supply in the local area to meet needs as the plan is at a very early stage.
7. Provide for an adequate range of housing in rural areas, whilst avoiding	The site falls within an existing residential area so it would not generate an isolated development. The adequacy of proposed

isolated dwellings?	units would have to be determined at application stage taking into account evidence on local needs.
Assessment outcome (on balance) + +	
SUMMARY OF SA OBJECTIVE 8	
The site could provide capacity for up to approximately 11 residential dwellings (though this may be reduced by the mitigation set out in this assessment), which would make a minor positive contribution towards Wiltshire's housing targets, including affordable housing. The site could be developed adjacent to residential areas and therefore would not become an isolated development. On balance, moderate positive effects are envisaged on this objective.	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime. Design of the scheme would have to consider the layout and design of neighbouring residential areas to achieve physical integration and create spaces which do not pose a potential danger for residents and visitors during day/night-time.
2. Promote design of buildings and spaces to reduce obesity?	Given the relatively small site, additional space to integrate schemes for example which encourage walking and cycling may not be deliverable/necessary, such as residential areas with shared spaces between vehicles and pedestrians/cyclists; and adequately designed landscape areas. The low density nature of neighbouring development may support this type of development on site but would need to be considered more holistically as part of a development proposal. The site is within 300-900m of village facilities which generally would encourage walking and cycling and a healthier lifestyle. The shop and post office may be too far away in terms of walking/cycling but a bus service is available at the A338.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	Core Policy 45 and 46 in the Core Strategy require development to respond to the changing needs of the population locally, including the needs of the elderly. Lifetime Homes for example could be integrated into the development alongside other types of properties needed locally as evidenced through the local housing needs survey. Overall the development should also consider appropriate integration with existing development. There is no evidence that this could not be achieved on this site.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	The nearest health facility is at Porton, approx. 4km away. There is a regular bus service enabling The Winterbournes residents to get to Porton in approx. 12 minutes. Up to 11 dwellings would result in limited demand on the local health service but according to the evidence available to date there is a capacity gap at the local surgeries. The development will have a limited impact on the small Porton branch surgery. Mitigation would be required to support additional patient capacity.
5. Maximise opportunities within the most deprived areas?	This part of The Winterbournes is within 049D LSOA which is amongst the 20% least deprived neighbourhoods in the country. In accordance with national policy/local plan policy, the allocation of the site would increase opportunities for the local community to access a decent home. Development at this site is not likely to have adverse impacts on deprivation in the local area.
6. Reduce rural isolation, including	In accordance with national policy/local plan policy, the allocation and development of the site would improve rural cohesion

<p>access to services for those without a car in rural areas?</p>	<p>and reduce the need to travel to local service/facilities by private car. The site falls within an existing residential area so it would not generate an isolated development. The adequate distance to essential village facilities would assist those without a car. Salisbury has a regular bus service to Salisbury where higher order facilities and services could be accessed, and village facilities outside walking distance could also be accessed by bus. Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. In supporting local services, the need to travel would be reduced as would the potential for isolation and social exclusion.</p>
<p>7. Support the development of community campuses?</p>	<p>In accordance with the council's Business Plan objectives, the allocation and development of the site would potentially assist in the delivery of a local community campus. However there are no plans at this stage for a community campus at The Winterbournes. The development of community campuses is directed to the town level and therefore this is not appropriate for this site.</p>
<p>8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?</p>	<p>Winterbourne Earls Primary School is located within walking distance of the site. However it is almost full and forecast to remain so. The school site is not sufficient to further expand the school. The school is popular and as a result takes a number of pupils from outside of the catchment area. Housing development on the site would reduce the potential of this and pupils would have to return to their local schools. In the short term a large development may mean that residents moving in with older children would be unlikely to gain a place at the school. The school is however likely to be able to admit pupils arising from a small level of development e.g. 30 units or less.</p> <p>Gomeldon School is full and forecast to remain so, it is also not capable of expansion. It experiences similar issues to the Winterbourne Earls School. Anyone moving in with a child below school age would be able to gain a reception place at the school however the school would not be able to admit any children already of school age as those year groups are already full.</p> <p>In relation to secondary education, Sarum Academy is proposed to be expanded. Mitigation will be required from this development.</p>
<p>Assessment outcome (on balance) -</p>	
<p>SUMMARY OF SA OBJECTIVE 9</p> <p>The site is within reasonable proximity to the services and facilities provided by the village which could encourage walking and cycling. While being of limited capacity the site could contribute to meeting the changing needs of the local population. Given the site is located in a village, there is limited access to the types of facilities found in higher order settlements such as hospitals or colleges but a bus service to Salisbury is available. Mitigation would be required to accommodate additional patient demand at Porton surgery. The effects on educational infrastructure are considered to be limited as the school would have capacity to accommodate education requirements from the development of this site since it would be less than 30 units.</p> <p>On balance this site option is considered to have a minor adverse effect on this objective.</p>	
<p>SA objective 10. Reduce the need to travel and promote more sustainable transport choices</p>	

Decision Aiding Questions. Will the development site...	
1. Increase walking and cycling accessibility through the use of developer contributions and site design?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site could provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site is within 300-900m of village facilities which generally would encourage walking and cycling but the shop and post office may fall outside appropriate distances for those modes of travel. Alternatively internal footpaths could be developed linking up with public footpaths into The Winterbournes off the A338. The A338 is not suitable for cycling as it is a national primary route.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development can provide additional space within the internal estate roads in the form of shared space etc. The low density nature of neighbouring development may support shared space on site but this would need to be considered more holistically as part of a development proposal. The A338 is not suitable for cycling as it is a national primary route.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	The site is within 300-900m of village facilities which generally would encourage walking and cycling. The Winterbournes have a regular bus service which links the centre of the village with Salisbury, and Winterbourne Gunner and Porton for the purpose of accessing local services. The A338 is not suitable for cycling as it is a national primary route, but it has footways. Alternatively the development could be linked with public footpaths in the vicinity. Nonetheless, due to the general location and limited facilities and services within the village the majority of trips will be undertaken by the private car.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 10	
<p>The site is located on the eastern edge of the large village of Winterbourne within 300-900m proximity to village facilities something which generally could encourage walking and cycling and there are footways in this section of the village. The A338 is not suitable for cycling as it is a national primary route. The site lies in proximity to bus stops on the A338 which provide access to a regular bus service which links the centre of the village with Salisbury, Porton and Winterbourne Gunner. There may be some limited potential for shared space and walking/cycling accessibility on site but this would depend on the detailed design and layout of a development proposal. While the presence of alternative modes of travel is positive this is somewhat diminished by the unsuitability of the A338 for cycling; and due to the general location and limited facilities and services within the village the majority of trips will be undertaken by the private car. On balance it is considered that there would be minor adverse effects on this objective.</p>	
SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth	
Decision Aiding Questions. Will the development site...	
1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.

2. Support the rural economy?	Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of the Winterbournes.
Assessment outcome (on balance) +	
<p>SUMMARY OF SA OBJECTIVE 11</p> <p>The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of rural services and facilities but due its scale this would be limited. On balance the site option would have a minor positive effect on this objective.</p>	
<p>SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Protect and enhance the vitality and viability of existing employment areas?	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. In addition, there are no employment areas in the Winterbournes whose vitality and viability could be protected and enhanced by development. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the wider community area.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away.
Assessment outcome (on balance) +	
<p>SUMMARY OF SA OBJECTIVE 12</p> <p>The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would have a minor positive effect on SA Objective 12.</p>	

Site 3528 - Land adjacent and including Winterbourne Motors, The Winterbournes

Site context

Site size: 0.36 ha Site capacity: approximately 10 dwellings

The site located between Winterbourne Gunner and Winterbourne Dauntsey. Part of the site is occupied by a garage. The remainder of the site is greenfield, abutting the River Bourne in the north.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	The site forms part of a County Wildlife Site (Winterbourne Earls Meadow) which is dominated by large herbs, species rich flora and historical records of crayfish. Hedgerows and trees on the boundaries may also support protected species and should be retained.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	The predominant part of the site (except the garage) is designated as a County Wildlife Site – the loss of which would be contrary to CP50 of the WCS. The site lies 40m south of the River Bourne.
3. Result in greater community engagement with biodiversity?	The site is crossed by a PRoW so subject to retaining this access to the countryside (water meadows) could be maintained and improved.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	Green Infrastructure will be required as part of the development and the site has sufficient capacity to deliver this. Green Infrastructure could aid in delivering buffer strips to habitats.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	Green Infrastructure will be required as part of the development and the site has sufficient capacity to deliver this.
6. Ensure all new developments have regard to and protect BAP habitats/ species?	Mature tree line is identified as a habitat and they should be protected through a buffer within the site.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased water abstraction and habitat loss / damage. An appropriate assessment is required if the

	site is taken forward into any subsequent stage of the selection process.
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland features. Again, the presence of mature trees at the site is a consideration and the development should adequately consider including a buffer for their protection, something which is deemed possible at this stage.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the site does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	Not applicable.
Assessment outcome (on balance) - - -	
SUMMARY OF SA OBJECTIVE 1	
<p>The predominant part of the site is designated as a County Wildlife Site. There are hedgerows and mature trees on site which will have to be retained and buffered. Further, development at the site would contribute to water abstraction affecting the River Bourne. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process. On the balance of evidence available, it is considered that development of this predominantly greenfield site would have a major adverse effects on the existing habitats of this designated site which would preclude allocation of this site. Overall, major adverse effects are likely on this objective.</p>	
SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings	
Decision Aiding Questions. Will the development site...	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence having regard to its prominence in the landscape and the need to reflect village and to reflect local built vernacular. The Winterbourne’s local facilities and services, and local bus services, are dotted along the A338 between Winterbourne Earls in the south (school) and Winterbourne Gunner in the north, where the post office and shop are located. Trip lengths could therefore vary and may for some residents result in regular car trips. The shop and post office are approximately 200m away and may therefore be within a distance which is walkable. The school is approximately 1,100m

	away from the site and may therefore not be accessible by walking or cycling. However the site is within 200m of a bus stop at the post office where a regular bus service to Salisbury enables access to higher order services within 20min. The bus also stops outside the school.
2. Maximise reuse of previously developed land where possible/appropriate?	The site is predominantly greenfield but the garage forms previously developed land and could be re-developed.
3. Encourage remediation of contaminated land?	There is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. It is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.
5. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team
6. Protect and enhance soil quality?	In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected.
7. Protect the best and most versatile agricultural land?	The site is partially covered by previous developed land which would not constitute best and most versatile agricultural land. Even if the remainder of the land was found to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
8. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 2	
The site is located within the village of Winterbourne Gunner and services and facilities can be accessed by public transport locally. There is no evidence of contaminated land or best and versatile agricultural land, if found to be of high quality its loss would be minor to negligible given the size of proposed development. On the basis of the available evidence the effects on the objective are considered to be minor adverse.	
SA objective 3. Use and manage water resources in a sustainable manner	
Decision Aiding Questions. Will the development site...	

<p>1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?</p>	<p>Capacity appraisals need to be undertaken by Wessex Water in relation to both the supply of water as well as foul drainage for which there is currently limited capacity. These are not likely to hinder the delivery of the site by 2026. Offsite connecting sewer is required with downstream upsizing works.</p>
<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>In the light of capacity issues, suitable and timely investment would need to be agreed between the developer(s) and Wessex Water, particularly in relation to foul drainage. There is a need to resolve any foul water disposal which may require offsite storage.</p> <p>Evidence suggests that investment would be needed given the distance of the site to trunk mains.</p>
<p>3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?</p>	<p>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. Alternative harvesting systems such as underground tanks need to be explored in order to proactively manage surface water runoff from developments.</p>
<p>4. Consider the need for adequate provision of surface water and foul drainage?</p>	<p>There is limited capacity in local foul water systems. Offsite connecting sewer is required with downstream upsizing works. A capacity appraisal would be necessary to determine the scope of network reinforcement.</p> <p>There are no public surface water systems at this location. The site would be unable to proceed without satisfactory surface water outfall. Investigation of on-site and off-site capacity to manage surface water/discharge to sewerage systems would need to be undertaken.</p> <p>Given underlying chalk, the site is within a sensitive groundwater area so will require testing and monitoring for at least 12 months to determine the level of ground water and in order to determine a suitable storm water disposal system which may have an impact on the size and area of development. Mitigation could be problematic. Guidance is available in the Council's Groundwater Strategy and CIRIA guidance, part E chapter 25.</p>
<p>5. Protect, and where possible, improve surface, ground and drinking water quality?</p>	<p>Development would lead to a limited increase in demand for water. The site does not fall within a Ground Water Protection Zone. In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. The site is within an identified 'Groundwater area' so will require testing and monitoring for at least 12 months to determine the level of ground water. Further guidance can be found in the Council's Groundwater Strategy.</p>
<p>6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?</p>	<p>The site falls within the catchment of the Hampshire Avon. Potential impacts of increased water abstraction will need to be considered further. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.</p>

Assessment outcome (on balance) - -

SUMMARY OF SA OBJECTIVE 3

There is limited capacity in water supply mains. In addition there is limited capacity in local foul water systems. Appraisal work is needed to confirm the scope of improvements. An offsite connecting sewer is required with downstream upsizing works. There are no public surface water systems at this location. The site would be unable to proceed without a satisfactory surface water outfall. Due to the relationship of the site with SACs, likely significant effects are triggered based on a settlement level HRA screening. An appropriate assessment would be required if the site is taken forward into any subsequent stage of the selection process. Investment into water infrastructure would be required to mitigate deficits and surface water mitigation could be problematic.

Overall it is considered that the effects would be moderate adverse against this objective since mitigation could be problematic.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

1. Maintain and improve local air quality?	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development is likely to increase local commuter traffic, which may impact on local air quality. However, it is recognised that the development is within a varying distance of key services and facilities but they are in principle accessible by foot or public transport. This should help limit the extent of additional traffic emanating from the site.</p> <p>Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable transport modes and Such may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?	<p>Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site is located on the edge of Winterbourne, adjacent to the A338 and there are residential areas nearby. Therefore the area is already affected by some noise and light pollution from development and traffic. Nonetheless the effects of an additional 10 dwellings at this site would need to be further assessed at application stage.</p>
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air</p>

particulates?	<p>quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>The pig farm at Manor Farm to the south east lies within 1,000m of this site. The pig farm has historically attracted odour complaints and is the sort of operation that is likely to give rise to such complaints. The site does have an odour management plan for compliance with their Environmental Permit. However, despite these measures on the site it is likely that odour will remain and potentially impact on this development and harm the living conditions of future residents. In addition, there have been odour complaints from further away (around SHLAA site s1055)</p>
4. Seek to reduce development in or near to AQMAs ¹⁷ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). The site's adequate connectivity by non-car modes may aid in reducing car traffic from the site.</p> <p>Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site is adequately connected to services and facilities for non-car users. There are connecting footways on the A338 and a regular bus service can be accessed.</p>
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	This site is located within 40m away from the River Avon/Bourne SSSI/SAC. While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to

¹⁷ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

address environmental impacts.

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 4

Air quality will be impacted through construction and operation of the development but mitigation measures are available to reduce the impacts. In addition, there may be odour impacts from a local pig farm approx. 1,000m to the south which has resulted in complaints near this candidate site. However, there is no evidence that this site would be directly affected to an extent that development would be precluded. On balance the effects on the objective are considered to be minor adverse.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources will be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices. However, the effect of the development of this site will be to increase greenhouse gas emissions. Overall a minor adverse effect is considered likely against this objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects

Decision Aiding Questions. Will the development site...

<p>1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?</p>	<p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. The site is some 40m south of the Flood Zone 2/3 associated with the River Bourne. The site would be unable to proceed without satisfactory surface water outfall. While no insurmountable constraints have been identified underlying chalk may be susceptible to seasonal groundwater levels. 12 months monitoring will be required to determine groundwater levels. This location is also subject to groundwater induced sewer flooding. Investigations will be required in accordance with the Council's Groundwater Strategy and to determine a suitable storm water disposal system which may have an impact on the size and area of development.</p>
<p>2. Ensure that development can adapt to the predicted future impacts of climate change?</p>	<p>Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).</p>
<p>3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?</p>	<p>There is a potential risk from groundwater and surface water flooding. Monitoring and site investigations in respect of groundwater levels will be required to devise appropriate engineering solutions to mitigate this, including suitable storm water disposal. Mitigation could be problematic. Attenuation measures may have an impact on the size and area of development.</p>
<p>4. Minimise the risk of flooding to people and property (new and existing development)?</p>	<p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. The site is approximately 40m south of an area of flood risk (Flood Zone 2/3). There is a risk from groundwater and surface water flooding and monitoring and site investigations will be required to devise appropriate engineering solutions to mitigate this. Site investigation would be required to determine the feasibility of surface water attenuation/disposal on and off-site. A Flood Risk Assessment would be required.</p>
<p>5. Protect and enhance the natural function of floodplains?</p>	<p>In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.</p>

Assessment outcome (on balance) - -

SUMMARY OF SA OBJECTIVE 5b

The site is located within Flood Zone 1. The site is approximately 40m south of an area of flood risk (Flood Zone 2/3). There is a risk from groundwater and surface water flooding and monitoring and site investigations will be required to devise appropriate engineering solutions to mitigate this. Site investigation would be required to determine the feasibility of surface water attenuation/disposal on and off-site. A Flood Risk Assessment would be required.

The site would be unable to proceed without satisfactory surface water outfall. While no insurmountable constraints have been identified underlying chalk may be susceptible to seasonal groundwater levels. 12 months monitoring will be required to determine groundwater levels. This location is also subject to groundwater induced sewer flooding. Investigations will be required in accordance with the Council's Groundwater Strategy and to determine a suitable storm water disposal system which may have an impact on the size and area of development.

Overall, the site would likely have a moderate adverse effect on this objective.

SA objective 6. Protect, maintain and enhance the historic environment

Decision Aiding Questions. Will the development site...

1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The site falls within the Winterbourne Conservation Area. There are no listed buildings on or directly adjacent to the site. However, there are two Grade II listed buildings north and south of the site. It would be likely that development on this site would impact on the setting of these designated heritage assets. Subject to more detailed Heritage Impact Assessment this may reduce the extent and/or density of development.
2. Ensure appropriate archaeological assessment prior to development?	A high level Historic Landscape Character appraisal has been carried out which considers the site to have a medium sensitivity. The site constitutes land adjacent to surviving post medieval water meadows. Water meadows are rare and can be locally significant contributors to character. Mitigation is unlikely to be possible. The archaeology potential here is High/Medium as there are remnant earthwork remains of Medieval and Post-Medieval water meadows south of the river. The area has not been subject to any previous investigation so an archaeological assessment would be required as part of a planning application.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	This is not applicable for this site.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate	There are no management objectives for this conservation area. Development would be within the conservation area and may affect the setting and significance of this designation. Development would reduce the sense of rural connectivity which is an important feature of this part of the conservation area. Subject to more detailed Heritage Impact Assessment this may

design, taking into account the management objectives of Conservation Areas?	reduce the extent and/or density of development. There may be adverse effects and mitigation does not appear possible.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	On the basis of the available evidence there is no potential for development to save heritage sites identified being at risk.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site does not fall within the proximity of the Stonehenge an Avebury World Heritage Site.
Assessment outcome (on balance) - - -	
SUMMARY OF SA OBJECTIVE 6	
<p>The site constitutes land adjacent to surviving post medieval water meadows. Water meadows are rare and can be locally significant contributors to character. On the basis of the available evidence, development would most likely have an adverse effect on the conservation area since it would result in the loss of land which provides a sense of rural connectivity and is an important feature of the conservation area. Mitigation of these effects is unlikely. On balance the effect is considered to be major adverse against this objective.</p>	
SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place	
Decision Aiding Questions. Will the development site...	
1. Protect and enhance the landscape character and scenic quality of the countryside?	The area falls within the Chalk River Valley and is considered to be in good condition, with strong strength of character. The strategy is to conserve the landscape character. The site falls into a Special Landscape Area. The majority of the site is a County Wildlife Site (Winterbourne Gunner Meadows) and falls into the Conservation Area. There is a tree belt to roadside and boundary trees. Green infrastructure will be required.
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	There is a tree belt to roadside and boundary trees. Green infrastructure will be required.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	A PRoW runs across the site connecting it with the Meadows further to the north. This could enable access to the wider countryside for residents.

4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs?	The site falls into a Special Landscape Area. Development of the site would avoid some of the more highly valued designations such as AONBs.
5. Protect rights of way, open space and common land?	Public footpath WINT19 runs across the site and development would have to consider mitigation measures to retain the footpath.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site would not adversely affect the Green Belt.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 7	
The site falls into the Special Landscape Area and forms part of the Conservation Area. Measures are possible to mitigate potentially adverse effects on the local landscape, for instance by implementing green infrastructure and retaining the local footpath and boundary features. On the basis of the available evidence, the effects on the objective would be minor adverse.	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	The site has capacity for 10 units which would be unlikely to provide any affordable housing.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	While additional market housing could be provided, it is unlikely that affordable housing would be provided, which could otherwise improve the local offer of types and sizes meeting the needs of the community.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs. Mitigation measures identified in this assessment may reduce the overall capacity however.
4. Have regard to the settlement hierarchy?	The development would contribute to housing growth in a large village which is a sustainable location in accordance with the Wiltshire Core Strategy, and prevent development coming forward in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.

expansion?	
6. Consider the emerging Neighbourhood Plans?	At this stage, and on the basis of evidence provided by the Qualifying Body, it is unlikely that the emerging Neighbourhood Plan / Neighbourhood Development Order will deliver certainty of supply in the local area. The Winterbourne NP is at a very early stage in its development.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	The site would fill a gap between developed areas in Winterbourne so it would not generate an isolated development. The adequacy of proposed units would have to be determined at application stage taking into account evidence on local needs; but the site would not deliver affordable housing.
Assessment outcome (on balance) + +	
SUMMARY OF SA OBJECTIVE 8	
While overall 10 dwellings could be realised the site would fail to deliver affordable housing which could address local need. However, given the provision of housing within the village this site could have up to moderate positive effects on this objective.	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime. Design of the scheme would have to create spaces which do not pose a potential danger for residents and visitors during day/night-time. There is no evidence that this could not be achieved although details would have to be provided at detailed proposals stage.
2. Promote design of buildings and spaces to reduce obesity?	Additional space would be required to integrate schemes for example which encourage walking and cycling; residential areas with shared spaces between vehicles and pedestrians/cyclists; and adequately designed landscape areas. This would need to be considered more holistically as part of a development proposal. The site is within up to 300-1,200m of village facilities including cricket ground and school which generally would encourage walking and cycling and a healthier lifestyle.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	Core Policy 45 and 46 in the Core Strategy require development to respond to the changing needs of the population locally, including the needs of the elderly. Lifetime Homes for example could be integrated into the development alongside other types of properties needed; however the site would not yield affordable housing. Overall the development should also consider appropriate integration with existing development. There is no evidence that this could not be achieved on this site.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	The evidence available to date suggests that there is a GP surgery capacity deficit locally. Developing the site to its approximate capacity would result in additional demand on the local health service and according to the evidence available to date there is a capacity gap at the local surgeries. The development will impact on small Porton branch surgery which has capacity issues. Mitigation would be required to support additional patient capacity.
5. Maximise opportunities within the	The site falls within LSOA 049D which is amongst the 20% least deprived neighbourhoods in the country. Development at this

most deprived areas?	site is not likely to have adverse impacts on deprivation in the local area.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	In accordance with national policy/local plan policy, the allocation and development of the site would improve rural cohesion and reduce the need to travel to local service/facilities by private car. The site abuts existing residential areas so its development would not result in an isolated development. The limited distance to essential village facilities would assist those without a car. Winterbourne has a regular bus service to the local school and further on to Salisbury where higher order facilities and services could be accessed within 20min.
7. Support the development of community campuses?	The campus initiative is directed towards the towns so this is not applicable for The Winterbournes.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	<p>Winterbourne Earls Primary School is within walking distance of the site but would involve crossing the main road. It is almost full and forecast to remain so. The school site is not sufficient to further expand the school. They are popular and take a number of pupils from outside of their catchment area. So new homes would eventually effectively push children back to their local schools. However in the short term a large development may mean that people moving in with older children could be unable to gain a place at the school. The school is however likely to be able to admit pupils arising from a small level of development e.g. 30 units or less.</p> <p>Gomeldon School is full and forecast to remain so; it is also not capable of expansion. It experiences similar issues to the Winterbourne Earls School. Anyone moving in with a child below school age would be able to gain a reception place at the school however the school would not be able to admit any children already of school age as those year groups are already full.</p> <p>In relation to secondary education, Sarum Academy is proposed to be expanded. Mitigation will be required from this development.</p>

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 9

The site is within reasonable proximity to the services and facilities provided by the village. Given the site is located in a village, there is more limited access to the types of facilities found in higher order settlements such as hospitals or colleges, but the principal settlement of Salisbury can be reached by bus within 20min on a regular basis. The site has potential to integrate measures to encourage healthier lifestyles, and its proximity to the village centre providing key facilities and public transport may result in fewer trips by private car. Mitigation would be required to accommodate additional patient demand at Porton surgery. The effects on educational infrastructure are considered to be limited as the school would have capacity to accommodate education requirements from the development of this site since it would be less than 30 units.

On balance this site option is considered to have a minor adverse effect on this objective.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	There are public footpaths in the vicinity of the site which lead into either Winterbourne Gunner or Earls/Dauntsey. The shop and post office are approximately 200m away and may therefore be within a distance which is walkable. The school at Winterbourne Earls is approximately 1,100m away from the site and may therefore not be accessible by walking or cycling. However the site is within 200m of a bus stop on the A338 at the post office where a regular bus service to Salisbury enables access to higher order services within 20min. The bus also stops outside the school. Alternatively Gomeldon Primary School is within 800m to the east. However the A338 is not conducive to cycling as it is a national primary road.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development can provide additional space within the internal estate roads in the form of shared space etc. This would need to be considered more holistically as part of a development proposal.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	There are public footpaths in the vicinity of the site which lead into either Winterbourne Gunner or Earls/Dauntsey. The shop and post office are approximately 200m away and may therefore be within a distance which is walkable. The school is approximately 1,100m away from the site and may therefore not be accessible by walking or cycling. However the site is within 200m of a bus stop on the A338 at the post office where a regular bus service to Salisbury enables access to higher order services within 20min. The bus also stops outside the school. Gomeldon Primary School is within 800m to the east. On the other hand the A338 is not conducive to cycling as it is a national primary road. Overall the majority of trips would be undertaken by the private car due to the site's general location and the limited availability of services and facilities within the village.
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 10</p> <p>The site lies in close proximity to bus stops and there are opportunities for walking to nearby facilities as footways exist either side of the A338. This could reduce the need to travel by car. Higher order settlements such as Salisbury could also be accessed by bus within 20 minutes. However due to the general location of the site and the limited availability of services and facilities the majority of trips would be undertaken by the private car. In addition the A338 is not conducive to cycling. On balance it is considered that there would be minor adverse effects on this objective.</p>	
<p>SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.

2. Support the rural economy?	The site is located close to the centre of the village and is in part used currently as a garage, the loss of which would be contrary to the aims and objectives of Wiltshire Core Strategy. It could be retained but placing residential development in such close proximity could be problematic in terms of future business needs and the living conditions of future occupiers. New housing could contribute the local economy through the use of shops and services, however given the scale of development this would be limited in comparison to the loss of the garage and associated employment and role it provides in the village and wider area.
-------------------------------	--

Assessment outcome (on balance) - - -

SUMMARY OF SA OBJECTIVE 11

The site includes a garage in active use. Development of the site for housing would result in the loss of employment / economy from the village, thus failing to support the local rural economy. The loss of employment land is contrary to Wiltshire Core Strategy. Overall it is considered that it is likely that there would be a major adverse effect should this site be considered further for housing development. Development of the site for housing would fail to meet the aim of SA Objective 11 and a major adverse effect is therefore likely.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?	Development of the site for housing would result in the loss of this employment land which would fail to support the vitality and viability of existing employment within the village and wider community area contrary to the aims and objectives of Wiltshire Core Strategy.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away.

Assessment outcome (on balance) - - -

SUMMARY OF SA OBJECTIVE 12

The site is currently used, in part, for employment use. Development of the site for housing would result in the loss of existing employment, thus failing to support the vitality and viability of existing employment within the village and wider community area. Although a housing site allocation in itself will generate direct and indirect construction employment in the short term and would help stimulate the local economy once built, in this instance development of the site for housing would result in the loss of employment opportunities within the village and loss of employment land, contrary to the requirements of Wiltshire Core Strategy. Overall it is considered that it is likely that there would be major adverse effect on employment opportunities and local businesses. A major adverse effect is predicted as development of the site for housing would fail to meet the aim of SA Objective 12.

A.2. Amesbury (Including Bulford and Durrington)

Amesbury, Bulford and Durrington - Stage 3 Site Assessment Tables

Sites considered in this Area of Search

Site S98 – Land to the rear of Durrington Manor, Durrington	Site 3179 – Land to the south of Larkhill Rd, Durrington
Site 3154 – Piece Meadow, Durrington	Site 3379 – Land to the north of London Rd, Amesbury

Sites being taken forward by Wiltshire Council from this stage to Stage 4

Site S98 – Land to the rear of Durrington Manor, Durrington	Site 3179 – Land to the south of Larkhill Rd, Durrington
Site 3154 – Piece Meadow, Durrington	Site 3379 – Land to the north of London Rd, Amesbury

Durrington

Site S98 – Land to rear of Durrington Manor, Durrington

Site context	
Site size: 4.64 ha. Site capacity: approximately 103 dwellings.	
Site S98 is a large, greenfield site to the north west of Durrington. The site is well screened by mature vegetation around the boundary, both from Hackthorne Road to the north and Netheravon Road to the west. To the south of the site is recent residential development and to the north and east is the older part of the village of Durrington. The site is currently used for equestrian and stabling purposes.	
SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses	
Decision Aiding Questions. Will the development site ...	
1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	Development at this greenfield site has potential for fragmentation of existing wildlife habitats, such as the hedgerows and trees. The development of the site for housing would have the potential to make appropriate provision for green infrastructure to reduce the risk of habitat fragmentation.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate	The site is within the 6.4km buffer of Salisbury Plain Special Protection Area (SPA).

<p>mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?</p>	<p>The development of the site for housing would be unlikely to lead to major adverse impacts on designated and non-designated biodiversity interests within the local area. However, because of the proximity to the Salisbury Plain SPA housing development may trigger contributions to Salisbury Plain SPA HRA Mitigation Strategy (Stone Curlew Project).</p> <p>The site comprises pasture land. Significant ecological constraints are unlikely though the mature trees on the field boundaries, which form secondary wildlife corridors, should be retained. The trees on the south, west and northern boundaries of the site are protected by Tree Preservation Orders.</p> <p>Existing trees should be retained and planting should be integrated throughout the development. Housing density should be limited to ensure that an adequate buffer can be left adjacent to tree planting. Boundary features to be excluded from curtilage of properties. Ecological assessment will be required to accurately assess likely impacts in support of any planning application. There may be potential to create or enhance habitat through the development of this site.</p>
<p>3. Result in greater community engagement with biodiversity?</p>	<p>The development of the site for housing would have the potential to increase public access to designated and non-designated biodiversity features, such as the Salisbury Plain SPA, the River Avon SAC and the wider countryside.</p>
<p>4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?</p>	<p>In line with national policy, local plan policy and standing advice from relevant bodies, the development of the site for housing would have the potential to make suitable provision for buffers to recognised green/water course corridors.</p> <p>Site comprises pasture with mature tree planting on perimeter field boundaries, which forms secondary wildlife corridors. Ecological assessment will be required to assess likely impacts and determine the extent of provision and protection that maybe required.</p>
<p>5. Aid in the delivery of a network of multifunctional Green Infrastructure?</p>	<p>In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure.</p>
<p>6. Ensure all new developments have regard to and protect BAP habitats/ species?</p>	<p>In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of delivering biodiversity improvements.</p> <p>The site does not contain UK BAP priority habitats.</p>
<p>7. Consider the findings of the HRA in site selection and design?</p>	<p>The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the Salisbury Plain SPA through increased recreational disturbance. It has also identified potential for impacts on the River Avon SAC through increased water abstraction and habitat loss / damage. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.</p>
<p>8. Maintain the existing extent of ancient woodland sites?</p>	<p>The development of the site would not affect ancient woodland features. However, mature trees on the site should be protected.</p>

9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	The site falls within the visitor catchment of Salisbury Plain SPA. An appropriate assessment of the potential effects of recreational disturbance is required if the site is taken forward into any subsequent stage of the selection process.		
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.		
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).		
Assessment outcome (on balance) - -			
<p>Summary of SA Objective 1</p> <p>The site comprises pasture land. Significant ecological constraints are unlikely though the mature trees on the field boundaries, which form secondary wildlife corridors, should be retained. The trees on the south, west and northern boundaries of the site are protected by Tree Preservation Orders.</p> <p>Ecological assessment will be required at site level to support individual planning applications. At this site there is a specific requirement to retain tree planting and integrate planting throughout new development. Housing density may need to be limited to ensure an adequate buffer can be left adjacent to tree planting to ensure it does not interfere with the amenity of dwellings. Boundary features to be excluded from curtilage of properties. There may be potential to create or enhance habitat through the development of this site.</p> <p>However, due to the relationship of the site with the River Avon SAC, likely significant effects are triggered based on a settlement level HRA screening. An appropriate assessment would be required if the site is taken forward into any subsequent stage of the selection process. Allocation of housing sites in Durrington in combination with effects of the army basing programme could make mitigation of these effects problematic.</p> <p>On balance it is considered that this site has moderate adverse effects and that mitigation may be problematic.</p>			
SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings			
<p>Decision Aiding Questions. Will the development site ...</p> <table border="1"> <tr> <td data-bbox="174 1241 660 1388">1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?</td> <td data-bbox="660 1241 2168 1388"> <p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence.</p> <p>The site is located at the edge of Durrington just outside the settlement boundary. It has good access to services at the town and public transport. However residents are likely to rely on the use of private car to access a wider range of services and</p> </td> </tr> </table>		1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	<p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence.</p> <p>The site is located at the edge of Durrington just outside the settlement boundary. It has good access to services at the town and public transport. However residents are likely to rely on the use of private car to access a wider range of services and</p>
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	<p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence.</p> <p>The site is located at the edge of Durrington just outside the settlement boundary. It has good access to services at the town and public transport. However residents are likely to rely on the use of private car to access a wider range of services and</p>		

	employment further afield.
2. Maximise reuse of previously developed land where possible/appropriate?	This is a greenfield site and there is no potential for maximising the reuse of previously developed land.
3. Encourage remediation of contaminated land?	<p>There is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation.</p> <p>The greenfield use of the site renders it unlikely that remediation measures would be required in order to facilitate development of the land for housing. However, all sites should be screened for any contaminated land potential.</p>
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team
5. Protect and enhance soil quality?	The quality of the land is not known at this stage, but development would lead to the permanent loss of greenfield land. In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil contamination at this site.
6. Protect the best and most versatile agricultural land?	The site is currently in use as a paddock in equestrian use. It is not currently classed as agricultural land. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	<p>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources.</p> <p>The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>
Assessment outcome (on balance) -	
Summary of SA Objective 2	
<p>The site is not located on previously developed land so would not contribute positively with respect to this objective. The site would not involve the loss of BMV land. The site is not located within a Mineral Safeguarding Area so no sterilisation of viable mineral resources will occur.</p> <p>On balance, minor adverse effects are envisaged on this SA Objective and mitigation measures are considered to be achievable.</p>	
SA objective 3. Use and manage water resources in a sustainable manner	

Decision Aiding Questions. Will the development site ...	
<p>1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?</p>	<p>The capacity of the existing or planned water supply network would be capable of supporting the development of the site.</p> <p>There are some limitations to sewer services as there is limited capacity available for foul water flows only. A limit of 20-30 dwellings in Durrington have been identified. Connection would be subject to downstream capacity improvements.</p> <p>In light of the predicted future impacts of climate change, particular consideration must be given to the potential for surface water to be managed on site, as ground conditions indicate that soakaways/infiltration techniques are not likely to be successful at this site. Further technical work will be necessary in order to find an alternative drainage strategy, without which the site would pose an unacceptable impact on local or downstream flooding as well as impact on the ecology of the River Avon.</p>
<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. Given the constraints in respect of foul drainage suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.</p> <p>In Durrington there are no public surface water sewers and the developer, utilities company (Wessex Water), Environment Agency and Wiltshire Council as the Local Lead Flooding Authority (LLFA) would need to agree outfall arrangements.</p>
<p>3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?</p>	<p>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company.</p>
<p>4. Consider the need for adequate provision of surface water and foul drainage?</p>	<p>Where appropriate, the development of the site would need to make provision for on-site surface and potentially foul water drainage. According to current evidence there are some limitations to sewer services as there is limited capacity available for foul water flows only and connection is subject to downstream capacity improvements. Capacity is limited to 20-30 new dwellings in Durrington. There are no public surface water systems at this location. Surface water flows to local land drainage</p>

	<p>systems.</p> <p>The site is within an identified groundwater sensitive area so will require testing and monitoring for at least 12 months to determine level of ground water in line with Wiltshire Council Groundwater Strategy and CIRIA SuDS Manual (C753)¹⁸ – part E - chapter 25. Surface water systems must be sealed as per sewers. Due to the ground conditions soakaways/infiltration are unlikely to work. Any discharge into the local watercourses must be at a controlled rate, replicating the existing greenfield runoff rate for this site. Therefore particular consideration must be given to the strategy for drainage of surface water.</p>
5. Protect, and where possible, improve surface, ground and drinking water quality?	<p>In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality.</p> <p>The site is within a Groundwater Source Protection Zone (Zone 2), therefore any subsequent planning application would need to be informed by specialist advice from the Environment Agency and their Groundwater Protection Policy – GP3. Infiltration techniques should not be used due to the need to protect potable water quality.</p> <p>The site is within the catchment of the River Avon and direct and indirect discharges from the site have the potential to affect water quality of the river.</p>
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	<p>The site falls within the Upper Avon sub-catchment of the Hampshire Avon. Potential impacts of increased water abstraction will need to be considered. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.</p>
Assessment outcome (on balance) - -	
Summary of SA Objective 3	

¹⁸ The SuDS Manual (C753), CIRIA, December 2015.

The site is within a Groundwater Source Protection Zone (Zone 2), therefore any subsequent planning application would need to be informed by specialist advice from the Environment Agency and their Groundwater Protection Policy – GP3.

Given the capacity of the site, development would lead to a significant increase in demand for water. There are some issues regarding connection to foul water and surface water drainage systems at this site. There would only be foul drainage capacity to accommodate 20-30 dwellings in Durrington.

The site is in proximity to the River Avon, so there is potential for surface water pollution caused by surface water runoff, with a potential impact on the integrity of the SAC as well as flooding. A detailed FRA would be required to support an application at the site.

Due to the relationship of the site with the River Avon SAC, likely significant effects are triggered based on a settlement level HRA screening. An appropriate assessment would be required if this site is taken forward into any subsequent stage of the site selection process. Allocation of housing sites in Durrington, in combination with effects of the army basing programme, could make mitigation of these effects problematic.

The site is within an identified groundwater sensitive area so will require extensive testing and monitoring in order to determine an appropriate drainage strategy in support of a planning application. Any discharge into the local watercourses must be at a controlled rate. Ground conditions may mean that soakaways/infiltration are unlikely to work.

Due to the potential issues regarding foul water and surface water, impacts on water resources, and due to the potential impact of surface water drainage and the fact that finding an appropriate drainage strategy could be problematic, this site is scored as moderate adverse for this objective.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site ...

<p>1. Maintain and improve local air quality?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development is likely to increase local commuter traffic, which may impact on local air quality. However, it is recognised that the development is within 1.5m of key services and facilities and therefore accessible by foot and cycle. This should help limit the extent of additional traffic emanating from the site. Nevertheless, measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and</p>	<p>Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p>

vibration through the layout, design and/or location of development?	Housing development at the site may be subject to noise pollution from the adjacent road and assessment should be undertaken in support of any planning application.
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAS ¹⁹ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site is located within a distance of Durrington town centre and local services that are potentially accessible by foot, bicycle or bus. However, private car usage is likely to be the preferred option for many journeys, particularly to access employment and further services and facilities in other towns and the surrounding area.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55.
Assessment outcome (on balance) -	

¹⁹ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

Summary of SA Objective 4

Measures must be implemented as necessary to mitigate emission levels in line with the council’s policies and Air Quality Strategy. In turn the developable area of the site might be reduced. In addition, developers of the site could assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.

Development at this site would likely generate noise and light pollution during construction (short term / temporary effect). Noise pollution may be an issue to a lesser extent during operation through the generation of car trips. Nevertheless a Noise Impact Assessment should be undertaken and submitted with any development proposals. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.

Housing development at the site may be subject to noise pollution from road traffic and a noise impact assessment should be undertaken in support of any planning application.

On balance, minor adverse effects are envisaged on this SA Objective and mitigation measures are considered to be achievable.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site ...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in ‘Delivering strategic objective 2: to address climate change’ and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.

Assessment outcome (on balance) -

Summary of SA Objective 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in ‘Delivering strategic objective 2: to address climate change’ and the related ‘Core Policy 41: Sustainable construction and low carbon energy’ of the Wiltshire Core Strategy.

These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.

However, the effect of the development of this site will be to increase greenhouse gas emissions overall and on balance this site is considered to have a minor adverse effect in relation this SA objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects

Decision Aiding Questions. Will the development site ...

1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?

The site is located within Flood Zone 1.

However, the site is approximately 30m south west of the Flood Zone 2/3 associated with the River Avon. There has been surface water flooding at Hackthorne Road / Church Street.

As such, the development of the site may contribute to an exacerbation of flood risk from fluvial sources. In such circumstances consideration should be given to sequentially planning the development of the site to ensure that the risk of flooding is alleviated. Any proposals for development of this site should be informed by a site specific flood risk assessment as the site is greater than 1ha in size.

This site is underlain by chalk and may be susceptible to seasonal groundwater levels, with implications for surface water. Monitoring will be required in accordance with the Council's Drainage Strategy and CIRIA guidance, part E, Chapter 25 to determine a suitable surface/storm water disposal system which may have an impact on the size and area of development. The design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk.

2. Ensure that development can adapt to the predicted future impacts of climate change?

As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:

- hotter summers;
- milder winters;
- increased periods without rain;
- increased intensity in rainfall; and
- more extreme weather events.

Development would need to include climate change adaptation measures such as designing to prevent overheating, for heat resistant landscaping, for more resilient foundations, for drought resistant planting and for generally more resilient buildings

	and spaces (general design and robust materials).
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	<p>Consideration should be given to the inclusion of Sustainable Drainage Systems (SuDS) within any development scheme to control the risk of surface water flooding from impermeable surfaces. However, ground conditions appear to dictate that the site would be unlikely to be capable of accommodating certain SuDS measures:</p> <p>This site is in a groundwater sensitive area. Surface water systems must be sealed as per sewers. Soakaways/infiltration unlikely to work. Any discharge into the local watercourses must be at a controlled rate. Further evidence of soil permeability and groundwater levels should be obtained prior to any development which should include testing and monitoring for at least 12 months to determine level of ground water in line with the Wiltshire Groundwater Strategy and CIRIA SuDS Manual (C753)²⁰.</p>
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within Flood Zone 1 and is not affected by other sources of flood risk. However there is a nearby area of Flood Zone 2/3 some 30m north east of the site associated with the River Avon. Risk of flooding from the development of the site may be addressed through mitigation measures to ensure the surface runoff from the site is not increased. However, it is unlikely that some surface drainage techniques will work (soakaways / infiltration) due to ground conditions. The site would require planning applications for development to be supported by a Flood Risk Assessment.
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
Summary of SA Objective 5b	
The site is predominantly greenfield land and therefore there is the potential to increase flood risk elsewhere and contribute to the surface water runoff of pollution. The site is located within Flood Zone 1 and is not affected by other sources of flood risk. However there is a nearby area of Flood Zone 2/3 some 30m north east of the site associated with the River Avon. Risk of flooding created by impermeable surfaces on the site due to residential development may in be addressed through mitigation measures to ensure the surface runoff from the site is not increased in relation to current greenfield rates. However, it is unlikely that soakaways / infiltration will be	

²⁰ The SuDS Manual (C753), CIRIA, December 2015.

successful due to ground conditions. The site would require a Flood Risk Assessment to support any planning applications.

The development has the potential to reduce vulnerability to climate change by incorporating building design and on site mitigation measures that take into account potentially hotter summers, water shortages and higher precipitation.²¹

Any proposals for development at this site should be informed by Wiltshire Council's Groundwater Strategy.

Due to potential exacerbation of flood risk and difficulty in mitigating due to ground conditions and capacity of drainage a moderate adverse score against this objective is given.

SA objective 6. Protect, maintain and enhance the historic environment

Decision Aiding Questions. Will the development site ...

<p>1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?</p>	<p>Parts of the site to the north and east are within the Durrington Conservation Area and there are Grade II listed buildings in close proximity to these parts of the site also (Durrington Manor House and Hackthorne Cottage). Knighton Farm settlement and moat (a Scheduled Monument) is located north of the site separated by a cul de sac of modern housing north of the B3085.</p> <p>Development of the site may affect the setting of the Conservation Area and/or Listed Buildings and their significance. Subject to a more detailed Heritage Impact Assessment, prepared to support any planning application, this may reduce the extent and/or density of development.</p>
<p>2. Ensure appropriate archaeological assessment prior to development?</p>	<p>Significant archaeology has been found adjacent to the site and running onto the site. As a greenfield site, there may be potential for archaeological assets below ground which may require further evaluation and mitigation. This is particularly relevant in this area given the proximity to the World Heritage Site. A high level Archaeological assessment has been carried out which considers the archaeological potential to be high, and that an archaeological assessment will be required in support of a planning application. This is considered a significant effect for which mitigation could be problematic.</p> <p>A high level Historic Landscape Character appraisal has been carried out which considers the site to have a medium</p>

²¹ Wiltshire Council Climate Change Adaptation Plan 2012-2016.

	sensitivity rating.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site does not contain any historical buildings and does not have potential to promote sensitive re-use of historic buildings.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	<p>In accordance with national policy/local policy, the development of the site for housing may be able to deliver housing that maintains and enhances the distinctiveness of settlements through high quality design.</p> <p>The site is located adjacent to the Hackthorne Road character area as identified in the Durrington Conservation Area Appraisal and Management Plan (CAAMP)²². The CAAMP recognises that with significant sites for development adjacent to the conservation area, the overall quality and character could be enhanced or seriously eroded by planned future development. Accordingly the CAAMP requires careful analysis of the context of these sites to be undertaken with any development needing to relate to the form, grain, spatial qualities, building line or materials of the traditional development in the village. Mitigation by means of well-designed and laid out development is not considered to be problematic.</p>
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	The site and adjoining area does not contain any heritage assets identified as 'at risk'.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	<p>In accordance with legislation and national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the Stonehenge and Avebury WHS and its setting.</p> <p>The Stonehenge World Heritage Site is located approximately 800m south west of the site. The WHS is separated from the site by built development and so the site is unlikely to have a significant effect on its setting.</p>
Assessment outcome (on balance) - -	

²² Dated January 2009

Summary of SA Objective 6

Development at this site has the potential to affect the setting of Grade II listed Buildings and the Durrington Conservation Area. A Heritage Impact Assessment would be required as part of any future planning applications to determine any impact of development; to avoid harm to the significance of heritage assets from adverse impacts on their settings and in particular to maintain as much as possible of the rural character to this side of Durrington.

Significant archaeology has been found adjacent to the site and running onto the site. A high level Archaeological assessment has been carried out which considers the archaeological potential to be high, and that an archaeological assessment will be required in support of a planning application at this site. This is considered a significant effect for which mitigation could be problematic.

A high level Historic Landscape Character appraisal has been carried out which considers the site to have a medium sensitivity rating. The historic country house Durrington Manor House is Grade II listed and there are issues relating to the historic character and layout of the former manor house.

Overall it is considered that this site has significant moderate adverse effects on the historic environment which would be problematic to mitigate.

SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place

Decision Aiding Questions. Will the development site ...

1. Protect and enhance the landscape character and scenic quality of the countryside?	<p>The landscape character is part of the Upper Chalk Valley classification (5D) and as such the opportunities for protecting and enhancing the landscape character are replanting hedgerows, woodland, conserve and restore remnant water meadows, reconnect and recreate wetland habitat.</p> <p>The site is at the rural fringe with roads on its northern and western boundaries. Housing located to the north and east of the site are within the older part of Durrington village and within the Conservation Area, with open countryside to the west. A mature belt of trees, protected by a group Tree Preservation Order enclose the site on its northern, western and southern boundaries. This mature tree belt is an important feature of the site and this part of Durrington and the wider landscape. Accordingly these trees would need to be retained and protected through the provision of a landscape buffer. Their presence renders creating a suitable vehicular access into the site difficult without causing significant harm to the landscape character hereabouts.</p>
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure. A GI buffer should be provided to the TPO'd trees.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	Development of this site has the potential to incorporate new public open space within the site and could potentially lead to improved access to urban green spaces and the wider countryside for recreation for new and existing residents.

4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ²³ ?	The site lies outside of the AONB and is not subject to any other landscape designations.
5. Protect rights of way, open space and common land?	In accordance with local plan policy, the development of the site could protect and add to the existing rights of way network, open spaces and common land assets. There are currently no rights of way on the site and it is not public open space. There is potential to link paths within the site to existing rights of way.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site is not within a location which is likely to result in impacts to the Western Wiltshire Green Belt.
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 7</p> <p>The site is at the rural fringe at the edge of Durrington and a green infrastructure buffer to the protected trees would be likely to be required. The presence and retention of the trees is paramount given their importance in both the immediate and wider landscape notwithstanding that there are no landscape designations that relate to the site.</p> <p>The loss of trees in order to accommodate a potential vehicular access to the site would be likely to result in potential landscape and visual impacts that could be problematic to mitigate. As such the site is scored as having a moderate adverse effect against this objective.</p>	
<p>SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures</p> <p>Decision Aiding Questions. Will the development site ...</p>	
1. Provide an adequate supply of	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements. A site of this capacity (103 dwellings) can contribute significantly towards this

²³ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

affordable housing?	objective.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	In accordance with local plan policy and national standards, the development of the site would need to deliver high quality, sustainable homes across all types and tenures.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	On the basis of evidence provided by the Qualifying Body, it is unlikely that the emerging Neighbourhood Plan / Neighbourhood Development Order will deliver certainty of supply in the local area to meet needs. Consequently, there would appear to be justification for allocating 'quick-win' sites to boost the supply of housing in line with evidence of need.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	Development of this site would be helping to meet the housing needs of Durrington town primarily, and surrounding areas. As such it may help to meet rural housing needs and avoids isolated dwellings.
Assessment outcome (on balance) + +	
Summary of SA Objective 8	
<p>The site provides capacity for up to 103 residential units (though this may be reduced through the mitigation set out in this assessment), which would contribute significantly towards Wiltshire's housing unit targets. A site of this size would be expected to deliver 30% affordable housing units according to the Wiltshire Core Strategy and it would be expected that it could deliver a range of housing types and tenures to meet local need.</p> <p>It is therefore considered that this site has a moderate positive effect in relation to this objective.</p>	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site ...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime.

2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy the allocation and development of the site would provide flexibly designed accommodation to meet the changing demands of an ageing population in Wiltshire.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	In accordance with national policy/local plan policy, the site would be sustainably located with opportunities to access local health facilities. The site is within the catchment of St Melor and Barcroft surgeries in Amesbury, and the Cross Plain surgery in Durrington. On the basis of current evidence the health facilities in Amesbury and Durrington Plain are at capacity. There are likely to be capacity issues at these surgeries as the population increases which would need to be resolved. This site is less than 1km distance the Cross Plain surgery and could be reached by foot or bicycle from the site.
5. Maximise opportunities within the most deprived areas?	In accordance with national policy/local plan policy, the allocation of the site would increase opportunities for the local community to access a decent home and thereby help reduce deprivation. This site is within Wiltshire 046D LSOA which is amongst the 20% least deprived areas of England. ²⁴ Development at this site is not likely to have adverse impacts on deprivation in the local area but has the potential to have a positive impact by providing affordable housing where it is needed.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	Development of this site at Durrington will be meeting the housing needs of Amesbury, Bulford and Durrington primarily. The site is adjacent to an existing residential area so it would not generate an isolated development in a rural area.
7. Support the development of community campuses?	In accordance with the council's Business Plan objectives, the allocation and development of the site would potentially assist in the delivery of a local community campus.
8. Is the site accessible to local schools and is there capacity to cope	There are two primary schools in this area, All Saint's Infants and Durrington Junior. The current primary school capacity

²⁴ DCLG, 2015. <http://dclgapps.communities.gov.uk/imd/idmap.html>

with the additional demand generated from the site?	<p>could accommodate additional pupils from a maximum of 60 additional houses in Durrington.</p> <p>In relation to secondary education, there are existing plans to expand Avon Valley College by 300 places as required by the army basing project. The school could be expanded further if necessary.</p>
---	---

Assessment outcome (on balance) -

Summary of SA Objective 9

The site is within a reasonable proximity of services and facilities provided by Durrington as well as open space. Therefore future residents would be able to access facilities by walking and cycling and bus. However, given the scale of facilities at Durrington, there is nevertheless expected to be private car traffic generated as residents travel further afield.

Residential development may cause adverse effects relating to pressure on local facilities. There would need to be mitigation to address the additional pressure on health facilities. It is considered possible to accommodate the additional pupils generated by a maximum of 60 new houses in Durrington. As such the proposed number of houses at this site could not be accommodated and it may be possible to mitigate this by reducing the number of dwellings so that there is maximum of 60 additional houses in the town. On balance, minor adverse effects are envisaged on this SA Objective and mitigation measures are considered to be achievable.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site ...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	Limited food retail (Sainsbury Local), primary school and college are within 1 km of the site. Given the absence of any rights of way, the route to these would be via Netheravon Road and through the new housing development or Hackthorne Road (which has no footways). There is a GP surgery within 1km. Amesbury Town and Solstice Park (within 5km) are considered accessible by cycle, though there would need to be substantial upgrades to the cycle route.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	In accordance with local plan/Transport Plan policies, the site would have the potential to create links to existing cycling infrastructure and provide cycle storage.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments, in accessible locations, that reduce the need to travel and reliance on the private car?	The site is in a relatively sustainable location in that it is in walking or distance of services and facilities offered by Durrington. There is a regular bus service on Netheravon Road close to the site that connects Durrington to Amesbury, Salisbury and Pewsey for further services and employment.

Assessment outcome (on balance) -

Summary of SA Objective 10

The site is located on the edge of Durrington. Whilst it would be possible to access services in Durrington through walking and cycling, it is expected to be private car traffic generated as residents travel further afield.

There are bus stops that are well located to the site within walking distance on Netheravon Road providing services which serves a bus route to the town centre as well as surrounding areas and towns, including Amesbury, Pewsey, and Salisbury. However, if employment is not situated on this route, commuting is likely to be by private car.

The development would not be expected to have a significant effect on national trails, national cycle network, public footpaths or the Public Rights of Way network. There are no formal Public Rights of Way on or adjacent to the site.

As a result of the unavoidable increase in private car traffic generated from the development of this site, a minor adverse effect is assessed.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site ...

1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?

The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of viable local retail, leisure and/or employment centres.

2. Support the rural economy?

The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of rural services and facilities.

Assessment outcome (on balance) +

Summary of SA Objective 11

The development offers the potential to support the local economy through use of local shops and services.

The site is scored as having a moderate positive effect due to the potential 103 dwellings have to boost the economy at the town by providing additional population to support the local economy and workforce.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site ...

1. Protect and enhance the vitality and

In accordance with local plan policy, the development of the site for housing would have the potential to support the viability of

viability of existing employment areas?	existing employment areas.
2. Provide a focus for development in Salisbury and Trowbridge?	In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations and thereby improve self-containment/reduce out-commuting.
Assessment outcome (on balance) +	
<p>Summary of SA Objective 12</p> <p>Development of the site would not lead to the loss of designated employment land.</p> <p>Development of the site for housing would not provide new employment land however it would support existing employment areas and would provide jobs directly and indirectly through construction.</p> <p>On balance, minor positive effects are envisaged on this SA Objective.</p>	

Site 3154 - Piece Meadow, Durrington

<p>Site context</p> <p>Site size: 0.59 ha. Site capacity: approximately 14</p> <p>The site is flat but predominantly consists of a house and associated garden together with part of a paddock. It is located adjacent to the existing built up edge of Durrington and to the south of S98. New housing has been constructed to the south east of the site, with allotments immediately to the south. The site does appear to be well screened in views from the Netheravon Road (A345) from which it also has an existing access.</p>	
<p>SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses</p> <p>Decision Aiding Questions. Will the development site ...</p>	
<p>1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?</p>	<p>Development at this site has potential for fragmentation of existing wildlife habitats, such as the hedgerows and roadside trees. The development of the site for additional housing would have the potential to make appropriate provision for green infrastructure to reduce the risk of habitat fragmentation. There is potential to create or enhance habitats through developing the site.</p>
<p>2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?</p>	<p>The site is within the 6.4km buffer of Salisbury Plain Special Protection Area (SPA); parts of which lie to the east and west at a distance of approx. 2.5km at the closest points.</p> <p>The River Avon SSSI/SAC approximately 250m north east of site at its closest point.</p> <p>The development of the site for housing would be unlikely to lead to major adverse impacts on designated and non-designated biodiversity interests within the local area. However, because of the proximity to the Salisbury Plain SPA housing development may trigger contributions to Salisbury Plain SPA HRA Mitigation Strategy (Stone Curlew Project).</p> <p>The site comprises a residential plot with gardens. The remainder of the site appears to be used as a paddock which extends eastwards. Significant ecological constraints are unlikely though on-site hedgerows/trees should be retained (indeed there are Tree Preservation Orders at the northern boundary of this site). Ecological assessment and further details on the proposals will be required to accurately assess likely impacts. There is potential to create or enhance habitats through developing the site.</p>
<p>3. Result in greater community engagement with biodiversity?</p>	<p>The development of the site for housing would have the potential to increase public access to designated and non-designated biodiversity features, such as the Salisbury Plain SPA, the River Avon SAC and the wider countryside.</p>
<p>4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?</p>	<p>In line with national policy, local plan policy and standing advice from relevant bodies, the development of the site for housing would have the potential to make suitable provision for buffers to recognised green/water course corridors.</p>

5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure.
6. Ensure all new developments have regard to and protect BAP habitats/species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of delivering biodiversity improvements. The site contains BAP Priority Habitat (hedgerows) and wooded land adjacent to east of site, which must be retained or replaced. The site has low to moderate potential for protected species and significant ecological constraints on site are unlikely.
7. Consider the findings of the HRA in site selection and design?	The River Avon SSSI/SAC is approximately 250m to the north east of the site at its closest point. The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the Salisbury Plain SPA through increased recreational disturbance. It has also identified potential for impacts on the River Avon SAC through increased water abstraction and habitat loss / damage. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland features. However, mature trees on and adjacent to the site should be protected. The development of the site would offer opportunity to protect designated ancient woodland features.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	The site falls within the visitor catchment of Salisbury Plain SPA. An appropriate assessment of the potential effects of recreational disturbance is required if the site is taken forward into any subsequent stage of the selection process.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council's current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).
Assessment outcome (on balance) - -	
Summary of SA objective 1	
The site is a residential plot with garden with part of a paddock.	
The site contains UK BAP priority habitat in the form of hedgerows. Significant ecological constraints are unlikely though on-site hedgerows/trees should be retained	

(there are Tree Preservation Orders on or adjacent to this site). Ecological assessment and further details on the proposals will be required to accurately assess likely impacts.

Due to the relationship of the site with the River Avon SAC and Salisbury Plain SAC likely significant effects are triggered based on a settlement level HRA screening. An appropriate assessment would be required if this site is taken forward into any subsequent stage of the selection process. Allocation of housing sites in Durrington in combination with effects of the army basing programme could make mitigation of these effects problematic.

On balance it is considered that this site has moderate adverse effects against this objective and that mitigation may be problematic.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site ...

<p>1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?</p>	<p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence.</p> <p>The site is located at the edge of Durrington. It has good access to services at the town and public transport. However residents are likely to rely on the use of private car to access a wider range of services and employment further afield.</p>
<p>2. Maximise reuse of Previously Developed Land where possible/appropriate?</p>	<p>The site is currently occupied by a single dwelling and its gardens together with part of a paddock. It does not fall within the definition of previously developed land.</p>
<p>3. Encourage remediation of contaminated land?</p>	<p>At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation.</p> <p>On the basis of available evidence, it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing. However, all sites should be screened for the any contaminated land potential.</p>
<p>4. Ensure the design and layout of new development supports sustainable waste management?</p>	<p>The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.</p>
<p>5. Protect and enhance soil quality?</p>	<p>There is no evidence to confirm the current soil quality. However given the existing use of the site, even if found to be high quality soil suitable for agricultural production, its loss would be negligible. In the unlikely event contaminants were found, then the development would provide the opportunity to enhance soil quality in line with national and local planning policy.</p>
<p>6. Protect the best and most versatile agricultural land?</p>	<p>The site is currently in use as a single residential property surrounded by gardens and a part of a paddock, it is therefore considered that the land is not in any agricultural use. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.</p>

7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	<p>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources.</p> <p>The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>
Assessment outcome (on balance) 0	
<p>Summary of SA objective 2</p> <p>The site is currently occupied by a single dwelling in its gardens together with part of a paddock. The site is not located within a Mineral Safeguarding Area so no sterilisation of viable mineral resources will occur. On balance, the effects are considered neutral against this objective.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner</p> <p>Decision Aiding Questions. Will the development site ...</p>	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	<p>The capacity of the existing or planned water supply network would be capable of supporting the development of the site.</p> <p>There are some limitations to surface water and foul water drainage. A limit of 20-30 dwellings in Durrington have been identified</p> <p>In light of the predicted future impacts of climate change, particular consideration must be given to the potential for surface water to be managed on site, as ground conditions indicate that soakaways/infiltration techniques are likely to be problematic given ground conditions. Further technical work will be necessary in order to find an alternative drainage strategy, without which the site would pose an unacceptable impact on local or downstream flooding as well as impact on the ecology of the River Avon.</p>
2. Ensure that essential water infrastructure is co-ordinated with all new development?	<p>In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. Given the constraints in respect of foul drainage suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.</p> <p>In Durrington there are no public surface water sewers and the developer, utilities company (Wessex Water), EA and Wiltshire Council as the Local Lead Flooding Authority (LLFA) would need to agree outfall arrangements.</p>
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	<p>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company.</p>
4. Consider the need for adequate provision of surface water and foul	<p>Where appropriate, the development of the site may need to make provision for on-site surface and foul water drainage. Consideration should be given to the inclusion of Sustainable Drainage Systems within any development scheme to control</p>

<p>drainage?</p>	<p>the risk of surface water flooding from impermeable surfaces.</p> <p>The site is within an identified groundwater sensitive area so will require testing and monitoring for at least 12 months to determine level of ground water in line with CIRIA SuDS Manual (C753)²⁵ – part E - chapter 25, so that an appropriate drainage strategy can be devised. Surface water systems must be sealed as per sewers. Soakaways/infiltration are unlikely to work. Any discharge into the local watercourses must be at a controlled rate.</p> <p>There would be an offsite connecting sewer – point of connection to be determined subject to sewer status. There are no public surface water systems at this location and surface water flows to local land drainage systems. Capacity is limited to 20-30 new dwellings in Durrington.</p>
<p>5. Protect, and where possible, improve surface, ground and drinking water quality?</p>	<p>In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality.</p> <p>The site is within a Groundwater Source Protection Zone (Zone 2), therefore any subsequent planning application would need to be informed by specialist advice from the Environment Agency and their Groundwater Protection Policy – GP3. The site is within the catchment of the River Avon and direct and indirect discharges from the site have the potential to affect water quality of the river.</p>
<p>6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?</p>	<p>The site falls within the Upper Avon sub-catchment of the Hampshire Avon. Potential impacts of increased water abstraction will need to be considered. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.</p>
<p>Assessment outcome (on balance) - -</p>	

²⁵ The SuDS Manual (C753), CIRIA, December 2015.

Summary of SA objective 3

The site is within a Groundwater Source Protection Zone (Zone 2), therefore any subsequent planning application would need to be informed by specialist advice from the Environment Agency and their Groundwater Protection Policy – GP3.

There are potential issues with connection to public sewers at this site and this would need to be resolved. Capacity is limited to 20-30 new dwellings in Durrington.

The site is within an identified groundwater sensitive area so will require extensive testing and monitoring in order to determine an appropriate drainage strategy in support of a planning application. Any discharge into the local watercourses must be at a controlled rate. Ground conditions may mean that soakaways/infiltration are unlikely to work.

Due to the relationship of the site with the SAC, likely significant effects are triggered based on a settlement level HRA screening. An appropriate assessment would be required if this site is taken forward into any subsequent stage of the selection process. Allocation of housing sites in Durrington in combination with effects of the army basing programme could make mitigation of these effects problematic.

Due to the ground conditions making mitigation of surface water problematic and the potential impacts on water resources, this site is considered as having a moderate adverse effect in relation to this objective.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site ...

1. Maintain and improve local air quality?

Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.

Development is likely to increase local commuter traffic, which may impact on local air quality. However, it is recognised that the development is within 1km of key services and facilities and therefore accessible by foot and cycle. This should help limit the extent of additional traffic emanating from the site. Nevertheless, measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable transport modes in the local area and measures may also include landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.

2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?

Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.

Housing development at the site may be subject to noise pollution from road traffic and assessment should be undertaken.

3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMA ²⁶ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site is located within a distance of Durrington town centre and local services that are potentially accessible by foot, bicycle or bus. However, private car usage is likely to be the preferred option for many journeys, particularly to access employment and further services and facilities in other towns and the surrounding area.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) -	
Summary of SA objective 4	
Measures must be implemented as necessary to mitigate emission levels in line with the council's policies and Air Quality Strategy. In turn the developable area of the site might be reduced. In addition, developers of the site could assist in providing opportunities to improve local air quality through making purchaser/future occupiers	

²⁶ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

aware of Car Share Wiltshire as well as the ability to charge electric cars at home.

Development at this site would likely generate noise and light pollution during construction (short term / temporary effect). Noise pollution may be an issue to a lesser extent during operation through the generation of car trips. Nevertheless a Noise Impact Assessment should be undertaken and submitted with any development proposals. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.

Housing development at the site may be subject to noise pollution from road traffic and assessment should be undertaken.

On balance, minor adverse effects are envisaged on this SA Objective and mitigation measures are considered to be achievable.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site ...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.

Assessment outcome (on balance) -

Summary of SA objective 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.

However, the effect of the development of this site will be to increase greenhouse gas emissions overall and on balance this site is considered to have a minor adverse

effect in relation this SA objective.	
SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects	
Decision Aiding Questions. Will the development site ...	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<p>The site is located within Flood Zone 1. However, the site is approximately 250m south west of the Flood Zone 2/3 associated with the River Avon and there are known surface water flooding problems at Hackthorne Road/Church Street. As such, the development of the site would need to ensure that surface water run-off would not contribute to an exacerbation of flood risk from fluvial sources within Flood Zone 2/3.</p> <p>This site is underlain by chalk and may be susceptible to seasonal groundwater levels, with implications for surface water. Monitoring will be required in accordance with the Council's Drainage Strategy and CIRIA guidance, part E, Chapter 25 to determine a suitable surface/storm water disposal system which may have an impact on the size and area of development. The design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk.</p>
2. Ensure that development can adapt to the predicted future impacts of climate change?	<p>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as designing to prevent overheating, for heat resistant landscaping, for more resilient foundations, for drought resistant planting and for generally more resilient buildings and spaces (general design and robust materials).</p>
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	<p>Consideration should be given to the inclusion of SuDS within any development scheme to control the risk of surface water flooding from impermeable surfaces. However, ground conditions appear to dictate that the site would be unlikely to be capable of accommodating certain SuDS measures:</p> <p>This site is in a groundwater sensitive area. Surface water systems must be sealed as per sewers. Soakaways/infiltration unlikely to work. Any discharge into the local watercourses must be at a controlled rate. Further evidence of soil permeability and groundwater levels should be obtained prior to any development which should include testing and monitoring for at least 12 months to determine level of ground water in line with the Wiltshire Groundwater Strategy and CIRIA SuDS Manual</p>

	(C753) ²⁷ .
4. Minimise the risk of flooding to people and property (new and existing development)?	<p>The site is located within Flood Zone 1.</p> <p>However, the site is approximately 250m south west of the Flood Zone 2/3 associated with the River Avon. As such, the development of the site has the potential to lead to an exacerbation of flood risk from fluvial sources. In such circumstances consideration should be given to sequentially planning the development of the site to ensure that the risk of flooding is alleviated.</p>
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
Summary of SA objective 5b	
<p>The site is located within Flood Zone 1, however there is a nearby area of Flood Zone 2/3 some 250m north east of the site. The potential risk of flooding created by new residential development would need to be addressed through mitigation measures to ensure the surface runoff from the site is not increased. However soakaways and infiltration measures to mitigate surface water run-off are unlikely to be achievable at this site due to the ground conditions.</p> <p>The development has the potential to reduce vulnerability to climate change by incorporating building design and on site mitigation measures that take into account potentially hotter summers, water shortages and higher precipitation.²⁸</p> <p>Any proposals for development of this site should be informed by the Councils Groundwater Strategy.</p> <p>Due to potential exacerbation of flood risk and difficulty in mitigating due to ground conditions and capacity of drainage a moderate adverse score is given against this objective.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	

²⁷ The SuDS Manual (C753), CIRIA, December 2015.

²⁸ Wiltshire Council Climate Change Adaptation Plan 2012-2016.

Decision Aiding Questions. Will the development site ...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The eastern edge of the site is some 138m of the Durrington Conservation Area which contains a number of listed buildings. The site is adjacent to other recent housing development and development of this site. Consequently, development of this site is achievable without visual impact on the conservation area.
2. Ensure appropriate archaeological assessment prior to development?	<p>On the basis of available evidence, there would be a need to undertake further archaeological assessments in support of any application and subsequent development of the site. There is significant archaeology on an adjacent site, running into this area. Evaluation and probably mitigation will be required for example excavation/preservation in situ. It is considered that mitigation would be problematic.</p> <p>A high level Historic Landscape Character appraisal has been carried out which considers the site to have a low sensitivity rating. The landscape character is defined by modern houses built on post medieval fields that replaced medieval one. The existing housing respects former field parcels, and this should be a consideration in layout of the development.</p>
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	In accordance with legislation and national policy/local plan policy, the development of the site would promote the re-use of historical / locally significant buildings.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	<p>In accordance with national policy/local policy, the development of the site for housing would deliver housing that maintains and enhances the distinctiveness of settlements through high quality design.</p> <p>Given its distance from the Conservation Area and permitted residential development immediately to the east, the site would not affect the Durrington Conservation Area. Notwithstanding this it is noted that the Durrington Conservation Area Appraisal and Management Plan (CAAMP)²⁹ recognises that with significant sites for development adjacent to the conservation area, the overall quality and character could be enhanced or seriously eroded by planned future development. Accordingly the CAAMP requires careful analysis of the context of these sites to be undertaken with any development needing to relate to the</p>

²⁹ Dated January 2009

	form, grain, spatial qualities, building line or materials of the traditional development in the village. Well-design and laid out development on this site is not considered to be problematic.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	In accordance with legislation and national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance designated heritage assets according to their significance.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	In accordance with legislation and national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the Stonehenge and Avebury WHS and its setting. The Stonehenge World Heritage Site is located approximately 700m south west of the site. The WHS is separated from the site by built development and so the site is unlikely to have a significant effect on its setting.
Assessment outcome (on balance) - -	
Summary of SA objective 6	
Development at this site will not affect the character or appearance of the Durrington Conservation Area.	
A high level Archaeological assessment has been carried out which considers the archaeological potential to be high, and that an archaeological assessment will be required un support of any planning application. This is considered a significant effect for which mitigation could be problematic.	
A high level Historic Landscape Character appraisal has been carried out which considers the site to have a low sensitivity rating. The landscape character is defined by modern houses built on post medieval fields that replaced medieval one. The existing housing respects former field parcels, and this should be a consideration in layout of the development.	
On balance it is considered that the site could have a moderate adverse effect in relation to this objective.	
SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place	
Decision Aiding Questions. Will the development site ...	
1. Protect and enhance the landscape character and scenic quality of the countryside?	The landscape character is part of the Upper Chalk Valley classification (5D) and as such the general opportunities for protecting and enhancing the landscape character are replanting hedgerows, woodland, conserve and restore remnant water meadows, reconnect and recreate wetland habitat. The site is at the edge of Durrington and currently bordered with a road to the west and an undeveloped paddock to the north and allotments to the south. Land adjacent, to the east is an existing local plan allocation yet to be developed. Semi-detached houses front the road opposite the site. The site features some woodland/veteran trees (those along the northern boundary are subject to TPOs) and hedgerows

	<p>which should be retained and protected via a landscape buffer.</p> <p>Development of the site would appear as infill given the prominence of new development to the east and south of the site. It would need to have regard to the pattern of development on this side of the road, which is generally set back from the road.</p>
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of green infrastructure through public open space, connections to existing footpath networks and green corridors etc. Protected trees should be retained and protected through the provision of a GI buffer. This could reduce the capacity of the site and the layout of development.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	Due to the size of this site it is unlikely that development of this site would have the potential to incorporate new public open space within the site however it could potentially lead to improved access to urban green spaces and the wider countryside for recreation for new and existing residents.
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ³⁰ ?	The site lies outside of the AONB and is not subject to any other landscape designations.
5. Protect rights of way, open space and common land?	In accordance with local plan policy, the development of the site could protect and add to the existing rights of way network. There are existing open spaces to the south of the site and an intensifying of development at this site would have an impact on these open spaces.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	In accordance with national policy/local plan policy, the development of the site would not lead to a reduction in the openness of the Western Wiltshire Green Belt.
Assessment outcome (on balance) -	

³⁰ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

Summary of SA objective 7

The site is at the rural fringe and currently bordered with a road to the west and green space to the north, south and east. The site currently contains a single house and gardens with part of a paddock. It is not in the AONB.

There are hedgerows and woodland/ veteran trees on or adjacent to the site and there would be a requirement for green infrastructure buffer to TPOs, which is likely to result in a reduction in capacity of the site.

Due to the location and relationship with existing recent development, development of this site is not considered to have a significant additional landscape impact.

On balance, it is considered that housing development at this site would result in potential landscape and visual impacts that could be successfully mitigated and therefore minor adverse effects are envisaged on this SA Objective.

SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures

Decision Aiding Questions. Will the development site ...

1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	In accordance with local plan policy and national standards, the development of the site would need to deliver high quality, sustainable homes across all types and tenures.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	On the basis of evidence provided by the Qualifying Body, it is unlikely that the emerging Neighbourhood Plan / Neighbourhood Development Order will deliver certainty of supply in the local area to meet needs. Consequently, there would appear to be justification for allocating 'quick-win' sites to boost the supply of housing in line with evidence of need.
7. Provide for an adequate range of housing in rural areas, whilst avoiding	Development of this site would be helping to meet the housing needs of Durrington town primarily, and surrounding areas. As such it may help to meet rural housing needs.

isolated dwellings?	
Assessment outcome (on balance) +	
Summary of SA objective 8	
The site could provide capacity for up to 14 residential dwellings (though this may be reduced through the mitigation set out in this assessment), which contributes towards Wiltshire's housing targets. It would be expected that a development of this size would include 30% affordable housing units. It is therefore considered that this site has a minor positive effect in relation to this objective.	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site ...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy the allocation and development of the site would provide flexibly designed accommodation to meet the changing demands of an ageing population in Wiltshire.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	In accordance with national policy/local plan policy, the site would be sustainably located with opportunities to access local health facilities. The site is within the catchment of St Melor and Barcroft surgeries in Amesbury, and the Cross Plain surgery in Durrington. On the basis of current evidence the health facilities in Amesbury and Durrington Plain are at capacity. There are likely to be capacity issues at these surgeries as the population increases and this would need to be resolved. This site is less than 1km

	distance from the Cross Plain surgery and could be reached by foot or bicycle from the site.
5. Maximise opportunities within the most deprived areas?	<p>In accordance with national policy/local plan policy, the allocation of the site would increase opportunities for the local community to access a decent home and thereby help reduce deprivation.</p> <p>This site is within Wiltshire 046D LSOA which is amongst the 20% least deprived areas of England.³¹ Development at this site is not likely to have adverse impacts on deprivation in the local area but has the potential to have a positive impact by providing affordable housing where it is needed.</p>
6. Reduce rural isolation, including access to services for those without a car in rural areas?	Development of this site at Durrington will be meeting the housing needs of Amesbury, Bulford and Durrington primarily. The site is adjacent to an existing residential area so it would not generate an isolated development in a rural area.
7. Support the development of community campuses?	In accordance with the council's Business Plan objectives, the allocation and development of the site would potentially assist in the delivery of a local community campus.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	<p>There are two primary schools in this area, All Saint's Infants and Durrington Junior. The current primary school capacity could accommodate additional pupils from a maximum of 60 additional houses in Durrington.</p> <p>In relation to secondary education, there are existing plans to expand Avon Valley College by 300 places as required by the army basing project. The school could be expanded further if necessary.</p>
Assessment outcome (on balance) -	
Summary of SA objective 9	
<p>The site is within a reasonable proximity of services and facilities provided by Durrington as well as open space, therefore residents would be able to access facilities by walking and cycling. However, given the scale of facilities at Durrington, there is nevertheless expected to be private car traffic generated as residents travel further afield. Further services at Amesbury are accessible by bus and private car.</p> <p>Residential development may cause adverse effects relating to pressure on local facilities. There would need to be mitigation to address the additional pressure on</p>	

³¹ DCLG, 2015. <http://dclgapps.communities.gov.uk/imd/idmap.html>

health facilities. It is considered possible to accommodate the additional pupils generated by the proposed number of new dwellings at this site.

On balance minor adverse effects are envisaged on this SA Objective as it is considered possible to mitigate against the pressure on local facilities.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site ...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment: There is fair / good access to limited food retail, primary school, doctor and college within 1 km and further retail within 2km. Amesbury Town and Solstice Park (within 5km) are considered accessible by cycle, though there would need to be substantial upgrades to the cycle route.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	In accordance with local plan/Transport Plan policies, the site would have the potential to create links to existing cycling infrastructure and provide cycle storage.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments, in accessible locations, that reduce the need to travel and reliance on the private car?	The site is in a relatively sustainable location in that it is in walking or distance of services and facilities offered by Durrington. There is a bus service that connects Durrington to Salisbury, Amesbury and Pewsey for further services and employment.

Assessment outcome (on balance) -

Summary of SA objective 10

The site is located on the edge of Durrington, with good access to its facilities by walking and cycling. The site is accessible by foot, cycle and public transport to a variety of services including employment, schools, GP, town centre and food store. However, given the scale of facilities at Durrington, there is nevertheless expected to be private car traffic generated as residents travel further afield.

There is a bus stop within a 6 minute walk of the site, which serves a bus route to the town centre as well as surrounding areas and towns, including Amesbury, Pewsey, and Salisbury. However, if employment is not situated on this route, commuting is likely to be by private car.

The development would not be expected to have a significant effect on national trails, national cycle network, public footpaths or the Public Rights of Way network. There are no formal Public Rights of Way on or adjacent to the site.

The unavoidable increase in private car traffic generated from development would result in a minor adverse effect.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth	
Decision Aiding Questions. Will the development site ...	
1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of viable local retail, leisure and/or employment centres.
2. Support the rural economy?	The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of rural services and facilities.
Assessment outcome (on balance) +	
Summary of SA objective 11	
Development would increase the local population and could contribute to the local economy through use of local shops and services, though the capacity of the site is relatively small.	
The site is scored as having a minor positive effect in relation to this objective.	
SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce	
Decision Aiding Questions. Will the development site ...	
1. Protect and enhance the vitality and viability of existing employment areas?	In accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas and would create jobs through construction.
2. Provide a focus for development in Salisbury and Trowbridge?	In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations and thereby improve self-containment/reduce out-commuting.
Assessment outcome (on balance) +	
Summary of SA objective 12	
Development of the site would not lead to the loss of designated employment land.	
Development of the site for housing would not provide new employment land however it would support existing employment areas and would provide jobs directly and indirectly through construction.	

On balance, the effect is considered to be minor positive in relation to this objective.

Site 3179 – Land off Larkhill Rd, Durrington

Site context

Site size: 10.66ha. Site capacity: approximately 143 dwellings.

The site is set in open countryside, with Larkhill Road (A3028) forming the northern boundary with Durrington beyond. The River Avon is located to the south of the site.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site ...

1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	Development at this site has potential for fragmentation of existing wildlife habitats, such as the hedgerows and trees at the site. However, the development of the site for housing would have the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	<p>The River Avon SSSI/SAC is directly adjacent to the site at its south-eastern boundary. The development of the site for housing would be likely to lead to impacts on the River Avon SAC / SSSI and BAP Priority Habitat as well as other species supported by hedgerows and trees at the site.</p> <p>The site is agricultural land, which generally has limited ecological value due to the nature of the land use. However, features at the boundaries such as hedgerows and trees may support protected species. The site contains mixed deciduous woodlands which is a priority habitat. Coastal and Floodplain Grazing Marsh BAP Priority Habitat is located on the southern boundary of the site.</p> <p>An ecological assessment and further details on the proposals will be required to accurately assess likely impacts. There is potential to create or enhance habitats. Proximity to designated ecological sites may constrain the deliverability of the site if appropriate mitigation is not implemented.</p> <p>Adjacent woodland will need to be buffered. The existing building is likely to support bat roosts, given the proximity to woodland.</p>
3. Result in greater community engagement with biodiversity?	The development of the site for housing would have the potential to increase public access to designated and non-designated biodiversity features.
4. Require protection and provision of green corridors and river corridors,	The site is adjacent to the River Avon and partly within the floodplain (FZ 2/3). Development would be required to be located outside of the floodplain. No direct discharge to the river would be permitted and a Construction Environmental Management

with use of buffer strips, where necessary?	Plan would be required in order to protect the river and its floodplain during the construction phase of the development.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure for example; adjacent woodland will need to be buffered.
6. Ensure all new developments have regard to and protect BAP habitats/species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of delivering biodiversity improvements. The site contains priority habitats: mixed deciduous woodland and Coastal and Floodplain Grazing Marsh BAP Priority Habitat is located on the southern boundary of the site.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the Salisbury Plain SPA through increased recreational disturbance. It has also identified potential for impacts on the River Avon SAC through increased water abstraction and habitat loss / damage.
8. Maintain the existing extent of ancient woodland sites?	The adjacent woodland would need to be buffered and development of the site would offer opportunity to protect designated ancient woodland features.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	The site falls within the visitor catchment of Salisbury Plain SPA. An appropriate assessment of the potential effects of recreational disturbance is required if the site is taken forward into any subsequent stage of the selection process.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council's current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).
Assessment outcome (on balance) - -	
Summary of SA objective 1	
The River Avon SSSI/SAC approximately runs along the southern boundary of the site.	
The site is agricultural land, which generally has limited ecological value due to the nature of the land use. However, features at the boundaries such as hedgerows and trees may support protected species. The site contains mixed deciduous woodlands which is a priority habitat. Coastal and Floodplain Grazing Marsh BAP Priority	

Habitat is located on the southern boundary of the site.

An ecological assessment and further details on the proposals will be required to accurately assess likely impacts. There is potential to create or enhance habitats. Proximity to designated ecological sites may constrain the deliverability of the site if appropriate mitigation is not implemented.

Adjacent woodland will need to be buffered. The existing building is likely to support bat roosts, given the proximity to woodland.

The evidence indicates that as the site is adjacent to the River Avon and partly within the floodplain, no development would be allowed within the floodplain or within 20m of the channel. A Construction Environmental Management Plan would be required in order to protect the river corridor and its floodplain during the construction phase of the development.

Due to the relationship of the site with the SAC, likely significant effects are triggered based on a settlement level HRA screening. An appropriate assessment would be required if this site is taken forward into any subsequent stage of the selection process. Allocation of housing sites in Durrington in combination with effects of the army basing programme could make mitigation of these effects problematic.

It is considered that there are potential significant ecological issues at this site and mitigation may be problematic, and therefore this site score a moderate adverse effect against this objective.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site ...

<p>1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?</p>	<p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence.</p> <p>The site is located just outside the settlement boundary of Durrington with access directly off Larkhill Road. The site is an accessible distance from the services and facilities at Durrington and bus stops that serve bus routes to Larkhill, Pewsey, Amesbury and Salisbury. However, residents are likely to rely on the use of private care to access a wider range of services and employment further afield. The southern part of the site would be less accessible due to its distance from the main road.</p>
<p>2. Maximise reuse of Previously Developed Land where possible/appropriate?</p>	<p>This is a greenfield site and there is no potential for maximising the reuse of previously developed land.</p>
<p>3. Encourage remediation of contaminated land?</p>	<p>Given the greenfield use of the land it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing. Notwithstanding this the site should be screened for the any contaminated land potential.</p>

4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil contamination at this site.
6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	<p>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources.</p> <p>The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>
Assessment outcome (on balance) -	
<p>Summary of SA objective 2</p> <p>The site is not located on previously developed land so would not contribute positively to this objective. It is unlikely to require remediation.</p> <p>No up to date information is held as to the grade of agricultural land on site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development such a loss would be minor to negligible.</p> <p>The site is not located within a Mineral Safeguarding Area so no sterilisation of viable mineral resources will occur.</p> <p>On balance, the effects are minor adverse against this objective.</p>	
SA objective 3. Use and manage water resources in a sustainable manner	
Decision Aiding Questions. Will the development site ...	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	<p>The development of the site for housing would be capable of being supported by existing and planned water supply.</p> <p>No local sewers are available – long off site connecting sewer to foul water system.</p> <p>Surface water to local land drainage system subject to flood risk measures. Capacity is limited to 20-30 new dwellings in Durrington.</p>

	In light of predicted future impacts of climate change, particular consideration must be given to the potential for surface water to be managed on site, as ground conditions indicate that soakaways/infiltration techniques are not likely to be successful at this site. Further technical work will be necessary in order to find an alternative drainage strategy, without which development of the site would pose an unacceptable impact on local or downstream flooding as well as impact on the ecology of the River Avon.
2. Ensure that essential water infrastructure is co-ordinated with all new development?	<p>In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. Given the constraints in respect of foul drainage suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.</p> <p>In Durrington there are no public surface water sewers and the developer, utilities company, Environment Agency and Wiltshire Council as the Local Lead Flooding Authority (LLFA) would need to agree outfall arrangements.</p>
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company.
4. Consider the need for adequate provision of surface water and foul drainage?	<p>Where appropriate, the development of the site may need to make provision for on-site surface and foul water drainage. Consideration should be given to the inclusion of Sustainable Drainage Systems within any development scheme to control the risk of surface water flooding from impermeable surfaces. Current evidence indicates that there are limitations to sewer services as there are no local sewers available – long off site connecting sewer to foul water system. Capacity is limited to 20-30 new dwellings in Durrington.</p> <p>The site is within an identified groundwater sensitive area so will require testing and monitoring for at least 12 months to determine level of ground water in line with Wiltshire Council Groundwater Strategy and CIRIA SuDS Manual (C753)³² – part E - chapter 25 in order to determine an appropriate drainage strategy. Surface water systems must be sealed as per sewers. Soakaways/infiltration are unlikely to work. Any discharge into the local watercourses must be at a controlled rate.</p> <p>Surface water disposal may be an issue: surface water would drain to local land drainage system subject to flood risk measures, and infiltration / soakaways may not be possible at this site. Part of site is within Flood Zone 3 and development at any part of the site would be in close proximity to the river, and therefore surface water disposal may be an issue. If surface</p>

³² The SuDS Manual (C753), CIRIA, December 2015.

	water cannot be adequately controlled, development at this site is likely to lead to an unacceptable impact on flooding and the River Avon SAC/SSSI. A detailed FRA would be required to support an application at the site.
5. Protect, and where possible, improve surface, ground and drinking water quality?	<p>In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality.</p> <p>Most of the site is within a Groundwater Source Protection Zone (Zone 1), therefore any subsequent planning application would need to be informed by specialist advice from the Environment Agency and their Groundwater Protection Policy – GP3.</p> <p>Infiltration techniques should not be used due to the need to protect potable water quality. The site is within the catchment of the River Avon and direct and indirect discharges from the site have the potential to affect water quality of the river.</p>
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	<p>The site is within the Hampshire Avon catchment and as such there are potential implications for the River Avon SAC from surface water discharges during the construction phase as well as through the overall design of the site and its post-occupation impacts.</p> <p>The site falls within the Upper Avon sub-catchment of the Hampshire Avon. Potential impacts of increased water abstraction will need to be considered. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.</p>
Assessment outcome (on balance) - -	
Summary of SA objective 3	
<p>The site lies within Groundwater Source Protection Zone 1, therefore any subsequent planning application would need to be informed by specialist advice from the Environment Agency and their Groundwater Protection Policy – GP3.</p> <p>The site is in proximity to a watercourse which drains into the River Avon, so there is potential for surface water pollution caused by surface water runoff.</p> <p>The site is within an identified groundwater sensitive area so will require extensive testing and monitoring in order to determine an appropriate drainage strategy in support of a planning application. Any discharge into the local watercourses must be at a controlled rate. Ground conditions may mean that soakaways/infiltration are unlikely to work.</p> <p>Flood Risk Assessment and drainage strategy will need to inform an appropriate solution for surface drainage especially given that the southern part of the site is within FZ2/3.</p> <p>Because of the relationship of the site with SAC, likely significant effects are triggered based on a settlement level HRA screening. An appropriate assessment would be required if this option is taken forward into any subsequent stage of the selection process. Allocation of housing sites in Durrington in combination with effects of the army basing programme could make mitigation of these effects problematic.</p> <p>The available evidence indicates that there are no local sewers available and there would need to be a long connection to off-site sewers. Surface water would have to</p>	

drain to a local land drainage system subject to flood risk measures. The developer must make arrangements for surface and foul water drainage in discussion with the utilities company, EA and Local Lead Flooding Authority (LLFA). Capacity is limited to 20-30 new dwellings in Durrington.

On balance it is considered that the site has a moderate adverse effect in relation to this objective due to the likely difficulties of managing surface water and connecting to sewage systems as well as the impacts on water resources.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site ...

<p>1. Maintain and improve local air quality?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development is likely to increase local commuter traffic, which may impact on local air quality. However, it is recognised that the development is within 1km of key services and facilities and therefore accessible by foot and cycle. This should help limit the extent of additional traffic emanating from the site. Nevertheless, measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable transport modes in the local area and measures may also include landscaping bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>This site may be impacted by noise pollution from an adjacent industrial use and pump house. A noise assessment would be required.</p>

3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMA ³³ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site is located within a distance of Durrington town centre and local services that are potentially accessible by foot, bicycle or bus and Amesbury may be accessible by cycle if cycle route upgrades are carried out. However, private car usage is likely to be the preferred option for many journeys, particularly to access employment and further services and facilities in other towns and the surrounding area.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) -	
Summary of SA objective 4	
Measures must be implemented as necessary to mitigate emission levels in line with the council's policies and Air Quality Strategy. In turn the developable area of the	

³³ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

site might be reduced. In addition, developers of the site could assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.

Development at this site would likely generate noise and light pollution during construction (short term / temporary effect). Noise pollution may be an issue to a lesser extent during operation through the generation of car trips. Nevertheless a Noise Impact Assessment should be undertaken and submitted with any development proposals. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.

A noise assessment would be required to assess the noise from the adjacent industrial use and pump house.

On balance, minor adverse effects are envisaged on this SA Objective and mitigation measures are considered to be achievable.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site ...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.

Assessment outcome (on balance) -

Summary of SA objective 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.

However, the effect of the development of this site will be to increase greenhouse gas emissions overall and on balance this site is considered to have a minor adverse

effect in relation this SA objective.	
SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects	
Decision Aiding Questions. Will the development site ...	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<p>The northern part of the site is located within Flood Zone 1. The southern portion of the site (approx. 6.5ha) is within an area of Flood Zone 2/3 associated with the River Avon and should be sequentially excluded from development so as to limit the potential to exacerbate flood risk from fluvial sources. Any planning application would need to be supported by a Flood Risk Assessment.</p> <p>This site is underlain by chalk and may be susceptible to seasonal groundwater levels, with implications for surface water. Monitoring will be required in accordance with the Council's Drainage Strategy and CIRIA guidance, part E, Chapter 25 to determine a suitable surface/storm water disposal system which may have an impact on the size and area of development. The design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk.</p>
2. Ensure that development can adapt to the predicted future impacts of climate change?	<p>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • More extreme weather events. <p>Development would need to include climate change adaptation measures such as designing to prevent overheating, for heat resistant landscaping, for more resilient foundations, for drought resistant planting and for generally more resilient buildings</p>

	and spaces (general design and robust materials.
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	<p>Consideration should be given to the inclusion of Sustainable Drainage Systems (SuDS) within any development scheme to control the risk of surface water flooding from impermeable surfaces. However, ground conditions appear to dictate that the site would not be technically capable of accommodating certain SuDS measures:</p> <p>This site is in a groundwater sensitive area. Surface water systems must be sealed as per sewers. Soakaways/infiltration unlikely to work. Any discharge into the local watercourses must be at a controlled rate. Further evidence of soil permeability and groundwater levels should be obtained prior to any development which should include testing and monitoring for at least 12 months to determine level of ground water in line with the Wiltshire Groundwater Strategy and CIRIA SuDS Manual (C753)³⁴.</p>
4. Minimise the risk of flooding to people and property (new and existing development)?	Whilst development would not be located within the floodplain, discharge of water to the River Avon could result in flooding further downstream.
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site should avoid that part located within flood zone 3.
Assessment outcome (on balance) - -	
<p>Summary of SA objective 5b</p> <p>The northern portion of the site (approx. 6.5ha) is located within Flood Zone 1. However, the southern portion of the site is within an area of Flood Zone 2/3 associated with the River Avon and should be excluded from any development. Notwithstanding this, there is still potential to increase flood risk off the developed area of the site and contribute to surface water runoff to the River Avon close to the site. A further buffer may be required as mitigation.</p> <p>The site is within a groundwater sensitive area surface water attenuation may be difficult to achieve. Any development at this site should be informed by Wiltshire Council's Groundwater Strategy. In addition, the site would require any planning application for development to be supported by a Flood Risk Assessment/ Drainage</p>	

³⁴ The SuDS Manual (C753), CIRIA, December 2015.

Strategy in line with the Council's guidance.

Any development on the site has the potential to reduce vulnerability to climate change by incorporating building design and on-site mitigation measures that take into account potentially hotter summers, water shortages and higher precipitation.³⁵

Due to potential exacerbation of flood risk and difficulty in mitigating due to ground conditions a moderate adverse score against this objective is given.

SA objective 6. Protect, maintain and enhance the historic environment

Decision Aiding Questions. Will the development site ...

<p>1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?</p>	<p>Durrington Walls and Woodhenge Scheduled Monument lie approximately 450m west of site – includes henge monuments, a round barrow cemetery, two additional round barrows and four settlements. Grade II listed buildings (the Dovecote (formerly with Watergate Farm) and Watergate House are situated to the east of the southern part of the site, separated by a field and the River Avon.</p> <p>Development of the site may affect the setting of the scheduled monuments and their significance. Subject to more detailed Heritage Impact Assessment this may reduce the extent and/or density of development. There may be adverse effects but some aspect would seem capable of mitigation</p>
<p>2. Ensure appropriate archaeological assessment prior to development?</p>	<p>On the basis of available evidence, there would be a need to undertake further archaeological assessments in support of any application and subsequent development of the site. The site has a high archaeological potential and mitigation is considered to be problematic. An assessment of the historic landscape has been carried out and the sensitivity of this site has been assessed as 'high'. The site is described as 'post medieval water meadows' with the southern part of the site intact. Such landscapes are uncommon and area locally distinctive, as such mitigation could be problematic.</p>
<p>3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?</p>	<p>The site does not contain any historical buildings and does not have potential to promote sensitive re-use of historic buildings.</p>

³⁵ Wiltshire Council Climate Change Adaptation Plan 2012-2016.

4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	The site is at southern edge of Durrington Conservation Area some distance from the conservation area which is predominantly focused around the northern part of Durrington. Accordingly, any development on the site would not impact upon this designation.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	The site and adjoining area does not contain any heritage assets identified as 'at risk'.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	Although some 450m east of the World Heritage Site and Durrington Walls and Woodhenge Scheduled Monument, development of the site may have an impact on the setting of these designations due to the openness of the landscape in between.
Assessment outcome (on balance) - -	
<p>Summary of SA objective 6</p> <p>The World Heritage Site, Durrington Walls and Woodhenge Scheduled Monument are approximately 450m west of the site. This comprises henge monuments, a round barrow cemetery, two additional round barrows and four settlements. Development at this site may have an impact on the setting of these scheduled monuments.</p> <p>The historic landscape sensitivity is considered to be high with post-medieval water meadows intact. The archaeological potential is considered to be high and potentially problematic to mitigate.</p> <p>A Historic Impact Assessment would be required as part of any future planning applications to determine any impact of development; to avoid harm to the significance of heritage assets from adverse impacts on their settings and in particular to maintain as much as possible of the post-medieval water meadows in this part of Durrington.</p> <p>Overall it is considered that this site has significant moderate adverse effects on the historic environment which would be problematic to mitigate.</p>	
<p>SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place</p> <p>Decision Aiding Questions. Will the development site ...</p>	
1. Protect and enhance the landscape character and scenic quality of the countryside?	The landscape character is part of the Upper Chalk Valley classification (5D) and as such the opportunities for protecting and enhancing the landscape character are replanting hedgerows, woodland, conserve and restore remnant water meadows, reconnect and recreate wetland habitat and maintain rural character.

	<p>The site is at the rural fringe with residential properties to the north on the opposite side of Larkhill Rd and sporadic limited development along the southern side of the road in the vicinity of the site.</p> <p>There are some hedgerows that should be retained and enhanced through buffer planting.</p> <p>The southern part of the sites is particularly open forming water meadows to the River Avon. Any development which extended southwards of existing development would be visible and detract from the landscape character hereabouts.</p>
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure and retention of hedgerows and an associated green infrastructure buffer would be required. Provision of this may result in a reduced capacity for the site.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	Development of this site has the potential to incorporate new public open space within the site and could potentially lead to improved access to urban green spaces and the wider countryside for recreation for new and existing residents.
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ³⁶ ?	The site lies outside of the AONB and is not subject to any other landscape designations.
5. Protect rights of way, open space and common land?	In accordance with local plan policy, the development of the site would protect and add to the existing rights of way network, open spaces and common land assets. There are no Public Rights of Way on or adjacent to the site.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site is not within a location which is likely to result in impacts to the Western Wiltshire Green Belt.

³⁶ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

Assessment outcome (on balance) -

Summary of SA objective 7

The site is located at the southern edge of Durrington, on the rural fringe. The site contains hedgerows which would need to be retained and protected with a green infrastructure buffer. The site is not in the AONB.

Development of the whole site would be likely to result in the uncharacteristic southerly extension of development south of Larkhill Road and significantly urbanise the appearance of the countryside hereabouts. The effects could be mitigated through focusing development close to the road and, with robust mitigation and enhancement strategies, the site boundaries. The effect against this objective is therefore considered minor adverse.

SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures

Decision Aiding Questions. Will the development site ...

1. Provide an adequate supply of affordable housing?	The development of the site for housing (143 units) would significantly boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	In accordance with local plan policy and national standards, the development of the site would need to deliver high quality, sustainable homes across all types and tenures.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	On the basis of evidence provided by the Qualifying Body, it is unlikely that the emerging Neighbourhood Plan / Neighbourhood Development Order will deliver certainty of supply in the local area to meet needs.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	Development of this site would be helping to meet the housing needs of Durrington town primarily, and surrounding areas. As such it may help to meet rural housing needs.

Assessment outcome (on balance) + +

Summary of SA objective 8

The whole SHLAA site provides capacity for up to 143 residential units (though this may be reduced by the necessary mitigation set out in this assessment), which contributes towards Wiltshire’s housing unit targets. A site of this size would be expected to delivery 30% affordable housing units according to the Wiltshire Core Strategy and it would be expected that it could deliver a range of housing types and tenures to meet local need. It is therefore considered that this site has a moderate positive effect in relation to this objective.

SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities

Decision Aiding Questions. Will the development site ...

1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy the allocation and development of the site would provide flexibly designed accommodation to meet the changing demands of an ageing population in Wiltshire.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	<p>In accordance with national policy/local plan policy, the site is relatively sustainably located with opportunities to access local health facilities. The northern part of the site is potentially more accessible to Durrington town than the southern part of the site. The site is within the catchment of St Melor and Barcroft surgeries in Amesbury, and the Cross Plain surgery in Durrington.</p> <p>On the basis of current evidence the health facilities in Amesbury and Durrington Plain are at capacity. There are likely to be capacity issues at these surgeries as the population increases and this would need to be resolved. This site is approx. 500m distant from the Cross Plain surgery and could be reached by foot or bicycle from the site.</p>
5. Maximise opportunities within the	In accordance with national policy/local plan policy, the allocation of the site would increase opportunities for the local

most deprived areas?	<p>community to access a decent home and thereby help reduce deprivation.</p> <p>This site is within Wiltshire 046B LSOA which is amongst the 50% least deprived areas of England.³⁷ Development at this site is not likely to have adverse impacts on deprivation in the local area but has the potential to have a positive impact by providing affordable housing where it is needed.</p>
6. Reduce rural isolation, including access to services for those without a car in rural areas?	Development of this site at Durrington will be meeting the housing needs of Amesbury, Bulford and Durrington primarily. The site is adjacent to an existing residential area so it would not generate an isolated development in a rural area.
7. Support the development of community campuses?	In accordance with the council's Business Plan objectives, the allocation and development of the site would potentially assist in the delivery of a local community campus.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	<p>There are two primary schools in this area, All Saint's Infants and Durrington Junior. The current primary school capacity could accommodate additional pupils from a maximum of 60 additional houses in Durrington.</p> <p>In relation to secondary education, there are existing plans to expand Avon Valley College by 300 places as required by the army basing project. The school could be expanded further if necessary.</p>
Assessment outcome (on balance) -	
Summary of SA objective 9	
<p>The site is well located to the centre of Durrington and is within reasonable access to facilities such as shops, health centres and schools located on Bulford Road. The southern portion of the site would be less accessible. However, given the scale of facilities at Durrington, there is nevertheless expected to be private car traffic generated as residents travel further afield.</p> <p>Residential development may cause adverse effects relating to pressure on local facilities. There would need to be mitigation to address the additional pressure on health facilities. It is considered possible to accommodate the additional pupils generated by a maximum of 60 new houses in Durrington. As such the proposed number of houses at this site could not be accommodated and it may be possible to mitigate this by reducing the number of dwellings so that there is maximum of 60 additional houses in the town. On balance therefore this site is considered to have a minor adverse effects on this SA objective and mitigation measures are</p>	

³⁷ DCLG, 2015. <http://dclgapps.communities.gov.uk/imd/idmap.html>

considered achievable.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site ...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. This site is considered to have cycling and walking access to local doctor, primary school, college and some food retail. The cycling distance to Amesbury is considered reasonable however there would need to be substantial upgrades to the cycle route.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	In accordance with local plan/Transport Plan policies, the site would have the potential to create links to existing cycling infrastructure and provide cycle storage.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments, in accessible locations, that reduce the need to travel and reliance on the private car?	The site is in a relatively sustainable location in that it is in walking or cycling distance of services and facilities offered by Durrington. There is a bus service that connects Durrington to Salisbury, Amesbury and Pewsey for further services and employment.

Assessment outcome (on balance) -

Summary of SA objective 10

The site is located on the edge of Durrington, and therefore can readily access facilities by walking and cycling. However, given the scale of facilities at Durrington, there is nevertheless expected to be private car traffic generated as residents travel further afield.

There is a bus stop within a 6 minute walk of the site, which serves a bus route to the town centre as well as surrounding areas and towns, including Amesbury, Pewsey, and Salisbury. However, if employment is not situated on this route, commuting is likely to be by private car.

The development would not be expected to have a significant effect on national trails, national cycle network, public footpaths or the Public Rights of Way network.

Unavoidable increase in private car traffic generation from the development of this site for up to 143 dwellings would result in a minor adverse effect.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site ...

1. Support appropriate retail, leisure	The site would boost the number of homes and thereby increase the population of the area. This would potentially directly
--	---

and/or employment opportunities in town centre locations to aid urban regeneration?	assist in the support of viable local retail, leisure and/or employment centres.
2. Support the rural economy?	The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of rural services and facilities.
Assessment outcome (on balance) +	
Summary of SA objective 11	
<p>Development would not result in the loss of designated employment land. However, development will also increase the local population and could contribute to the local economy through use of local shops and services.</p> <p>The site is scored as having a minor positive effect due to its potential to boost the economy at the town by providing additional population to support the local economy and workforce.</p>	
SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce	
Decision Aiding Questions. Will the development site ...	
1. Protect and enhance the vitality and viability of existing employment areas?	In accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas and to create jobs directly and indirectly.
2. Provide a focus for development in Salisbury and Trowbridge?	In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations and thereby improve self-containment/reduce out-commuting.
Assessment outcome (on balance) +	
Summary of SA objective 12	
<p>Development of the site would not lead to the loss of designated employment land.</p> <p>Development of the site for housing would not provide new employment land however it would support existing employment areas and would provide jobs directly and indirectly through construction.</p> <p>On balance, the effect is considered minor positive in relation to this objective.</p>	

Amesbury

Site 3379 - Land north of London Rd, Amesbury

<p>Site context</p> <p>Site size: 4.48 ha. Site capacity: approximately 101 dwellings.</p> <p>The site is a sloping, triangular field and there is screen planting next to the A303. To the north of the site is the A303 and the open countryside of Salisbury Plain but with some overhead lines and communication mast infrastructure on higher ground. The site is severed from this landscape by the A303. On lower ground there are some copses and woodland belts. To the north west is the River Avon. The main town of Amesbury is located to the south of the site.</p>	
<p>SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses</p> <p>Decision Aiding Questions. Will the development site ...</p>	
<p>1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?</p>	<p>Development at this greenfield site has potential for fragmentation of existing wildlife habitats, such as the hedgerows and roadside trees. However, the development of the site for housing would have the potential to make appropriate provision for green infrastructure to reduce the risk of habitat fragmentation.</p>
<p>2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?</p>	<p>The site is within the 6.4km buffer of Salisbury Plain Special Protection Area (SPA); and approx. 2 km from the east of the site at its nearest point. The site comprises pasture/arable field surrounded by hedgerows and roadside tree planting.</p> <p>The development of the site for housing would be unlikely to lead to major adverse impacts on designated and non-designated biodiversity interests within the local area. However, because of the proximity to the Salisbury Plain Special Protection Area (SPA) housing development may trigger contributions to Salisbury Plain SPA HRA Mitigation Strategy (Stone Curlew Project).</p> <p>Development at the site must incorporate mitigation measures in relation to green infrastructure to protect existing habitats and biodiversity. The site is within the catchment of the River Avon SAC and as such there are potential implications for water resources and surface water discharges. The hedgerows surrounding the site are priority habitats and should be retained and green infrastructure incorporated to protect the habitats. Ecological assessment with further details on proposals will be required in order to assess likely impacts.</p> <p>Development at the site has potential to enhance biodiversity resulting in a net gain.</p>

3. Result in greater community engagement with biodiversity?	The development of the site for housing would have the potential to increase public access to designated and non-designated biodiversity features, such as the Salisbury Plain SPA, the Countess Farm Swamp County Wildlife Area, the River Avon SAC and the wider countryside.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	<p>In line with national policy, local plan policy and standing advice from relevant bodies, the development of the site for housing would have the potential to make suitable provision for buffers to recognised green/water course corridors, specifically, the hedgerows and roadside tree planting at this site which forms secondary wildlife corridors, as well as the woodland to the east of the site.</p> <p>The site falls within the catchment of the Hampshire Avon with a drainage ditch at the northern (downslope) edge of the site flowing directly into the main river. As such there are potential implications for habitats/biodiversity from surface water discharges. Surface water and pollution must be attenuated at the site so that pollution does not impact the River Avon SAC/SSSI.</p>
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure.
6. Ensure all new developments have regard to and protect BAP habitats/species?	<p>In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of delivering biodiversity improvements.</p> <p>The site contains BAP Priority Habitat (hedgerows) and wooded land adjacent to the east of site, which must be retained.</p>
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the Salisbury Plain SPA through increased recreational disturbance and displacement of stone curlew from known nesting sites near the settlement. It has also identified potential for impacts on the River Avon SAC through increased water abstraction and habitat loss / damage.
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodlands as there are no areas of ancient woodlands in close proximity to the site. Protection should be given to mature trees within the site and at site boundaries, including the woodland area to the east of the site.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury	The site falls within the visitor catchment of Salisbury Plain SPA. An appropriate assessment of the potential effects of recreational disturbance is required should the site progress into any subsequent stage of the selection process.

Plain and New Forest SPAs?	
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).
Assessment outcome (on balance) - -	
<p>Summary of SA objective 1</p> <p>The site comprises pasture/arable field surrounded by hedgerows and roadside tree planting. It generally has limited ecological value due to the nature of the land use, though the features at the boundaries such as hedgerows and trees may support protected species and form secondary wildlife corridors. An ecological assessment and further details on the proposals will be required to accurately assess likely impacts.</p> <p>The high level ecological assessment shows that the site contains priority habitat (hedgerows), which should be retained. There is potential to create or enhance habitats through developing the site. Proximity to designated ecological sites may constrain the deliverability of the site if appropriate mitigation is not implemented.</p> <p>Hedgerows must be retained as a BAP priority habitat and housing density must be limited to ensure there can be an adequate buffer to the hedgerows. Green infrastructure must be incorporated to act as a buffer to the existing wildlife corridors (roadside trees, hedgerows) and wooded land to the east of the site. The site is within 6.4km buffer zone for Salisbury Plain SPA (approximately 2km east of site at closet point) and housing development may trigger contributions to the Salisbury Plain Stone Curlew Project.</p> <p>The site falls within the catchment of the Hampshire Avon with a drainage ditch at the northern (downslope) edge of the site flowing directly into the main river. As such there are potential implications for habitats/biodiversity from surface water discharges. Surface water and pollution must be attenuated at the site so that pollution does not impact the River Avon SAC/SSSI.</p> <p>Due to the relationship of the site with the SAC, likely significant effects are triggered based on a settlement level HRA screening. An appropriate assessment would be required if site is taken forward into any subsequent stage of the selection process. Allocation of housing sites in Amesbury in combination with effects of the army basing programme could make mitigation of these effects problematic.</p> <p>It is considered that there are potential significant ecological issues at this site and mitigation may be problematic and therefore a moderate adverse effect is considered likely on this objective.</p>	

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings	
Decision Aiding Questions. Will the development site ...	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	<p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence.</p> <p>The site is within good proximity of a wide range of services at Amesbury town centre and at the edge of town where an employment area is located near to the site. These services are accessible by foot, cycle and public transport.</p>
2. Maximise reuse of Previously Developed Land where possible/appropriate?	This is a greenfield site and there is no potential for maximising the reuse of previously developed land.
3. Encourage remediation of contaminated land?	Notwithstanding its greenfield use, there is evidence to suggest that a proportion of the site is contaminated. The presence of contamination should be assessed fully prior to any development taking place at this site.
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected.
6. Protect the best and most versatile agricultural land?	There is no evidence to confirm whether the site is BMV land. However, the site is surrounded by development which might limit the extent of its agricultural use as well as potentially hinder its quality/classification. Accordingly, in this context the land is not assumed to be BMV. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	<p>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources.</p> <p>The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>
Assessment outcome (on balance) -	

Summary of SA objective 2

The site is not located on previously developed land; the site is greenfield and there is some evidence of contamination and presence of contamination should be fully assessed before development takes place.

No up to date information is held as to the grade of agricultural land on site. However, the land is surrounded by development, separated from open countryside and any other agricultural activity. In this context, its loss, even if BMV, is considered to be minor to negligible.

The site is not located within a Mineral Safeguarding Area so no sterilisation of viable mineral resources will occur.

On balance the site is scored as having a minor adverse effect against this SA objective and mitigation measures are considered to be achievable.

SA objective 3. Use and manage water resources in a sustainable manner

Decision Aiding Questions. Will the development site ...

1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?

The existing or planned water supply network would be capable of supporting the development of the site, subject to agreement on connection point. There are existing trunk mains located within the site boundaries. Statutory easements apply and would be subject to diversion if affected by site layout.

In line with national and local planning policy / practice, the development of the site for housing would be capable of incorporating measures to respond to the predicted effects of climate change. This site has possible surface water issues as surface water flows to a watercourse and a culvert under the roads do give rise to localised flooding therefore specific attention should be given to possible increased precipitation and surface water drainage and the impact on local flooding. In light of the predicted future impacts of climate change, particular consideration must be given to the potential for surface water to be managed on site, as ground conditions indicate that soakaways/infiltration techniques are not likely to be successful at this site. Further technical work will be necessary in order to find an alternative drainage strategy, without which the site would pose an unacceptable impact on local or downstream flooding as well as impact on ecology of the River Avon.

Foul water may require a pumped connection to a satisfactory point of disposal. Consideration should be given to incorporating water saving measures and appropriate pollution prevention and control into the design and layout of any new development.

2. Ensure that essential water infrastructure is co-ordinated with all new development?

In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.

3. Ensure the installation of water

In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g.

saving measures such as rainwater harvesting and water metering?	water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company.
4. Consider the need for adequate provision of surface water and foul drainage?	<p>Development of this site will need to consider provision of on-site and/or off-site surface and foul water drainage. This site is in a groundwater sensitive. Surface water systems must be sealed as per sewers. Any discharge into the local watercourses must be at a controlled rate. Further evidence of soil permeability and groundwater levels should be obtained prior to any development which should include testing and monitoring for at least 12 months to determine level of ground water, in line with the Wiltshire Council Groundwater Strategy and CIRIA SuDS Manual (C753)³⁸ – part E - chapter 25.</p> <p>Consideration should be given to the inclusion of Sustainable Drainage Systems within any development scheme to control the risk of surface water flooding from impermeable surfaces.</p> <p>There are possible surface water issues at this site – the culvert under the roads do give rise to localised flooding.</p> <p>Foul water flows may require a pumped connection to a satisfactory point of disposal.</p>
5. Protect, and where possible, improve surface, ground and drinking water quality?	<p>In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality.</p> <p>The site is not within a groundwater source protection zone.</p> <p>The site is within the catchment of the River Avon and direct and indirect discharges from the site have the potential to affect water quality of the river.</p>
6. Encourage sustainable and efficient	The site falls within the Upper Avon sub-catchment of the Hampshire Avon. Potential impacts of increased water abstraction

³⁸ The SuDS Manual (C753), CIRIA, December 2015.

<p>management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?</p>	<p>will need to be considered. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.</p>
<p>Assessment outcome (on balance) - -</p>	
<p>Summary of SA objective 3</p>	
<p>The site is not within a Groundwater Source Protection Zone. However, the site is within the River Avon catchment with implications for water resources and surface water discharges: The site drains to a watercourse which drains into the River Avon, so there is potential for pollution caused by surface water runoff. Further technical work will need to be done to determine whether a successful SuDs scheme is possible, as potential groundwater issues and chalk substrate may mean some drainage measures are unlikely to be successful. Housing numbers may need to be limited in order to mitigate against this issue. A detailed FRA would be required to support an application at the site as it is in close proximity to an area of Flood Zone 3 and there is known localised flooding. Extended ground water monitoring is required due to seasonal variations in line with Wiltshire Council Groundwater Strategy and CIRIA guidelines – part E - chapter 25.</p> <p>Due to the relationship of the site with SAC, likely significant effects are triggered based on a settlement level HRA screening. An appropriate assessment would be required if this site is taken forward into any subsequent stage in the selection process. Allocation of housing sites in Durrington in combination with effects of the army basing programme could make mitigation of these effects problematic.</p> <p>Due to the ground conditions, control of surface water may be problematic to mitigate. This site is therefore scored as a moderate adverse effect against the objective, though impacts are not necessarily considered to be absolutely insurmountable based on current evidence. Substantial technical work will be required to support an application to demonstrate that drainage and flooding can be satisfactorily controlled for this site to be successful.</p>	
<p>SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution</p>	
<p>Decision Aiding Questions. Will the development site ...</p>	
<p>1. Maintain and improve local air quality?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site is not within an Air Quality Management Area.</p> <p>Development is likely to increase local commuter traffic, which may impact on local air quality. However, it is recognised that the development is within 1km of key services at the town centre, with facilities such as GP surgeries, shops, school, sports</p>

	<p>centre, with additional services in closer proximity to the site, such as supermarket and employment areas. These key services are therefore accessible by foot and cycle, which should help limit the extent of additional traffic emanating from the site. Nevertheless, measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>The A303 is likely to be a source of ambient noise and air pollution for this site and is recognised as an issue at this site. Further noise assessment would be required to provide detail on this issue. An acoustic buffer could be used to reduce the impact, however because of the implications of topography on the success of the mitigation, there may be implications for the layout and capacity of the site.</p>
<p>3. Mitigate the impacts from uses that generate NO₂, SO₂ and PM₁₀ or other particulates</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>The impacts on the development from traffic on the A303 generating NO₂, SO₂ and PM₁₀ and other particulates should be assessed and appropriate mitigation implemented.</p>

4. Seek to reduce development in or near to AQMAS ³⁹ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). The site is located within a distance of Amesbury town centre and local services that are accessible by foot, bicycle or bus. Therefore, development of the site has the potential to reduce the need to travel by private car by making optimum use of its location and proximity to services and sustainable transport options. Opportunities for bicycle storage and linking walking and cycling routes should be considered in order to maximise this opportunity.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) - -	
<p>Summary of SA objective 4</p> <p>Measures must be implemented as necessary to mitigate emission levels in line with the council's policies and Air Quality Strategy. In turn the developable area of the site might be reduced. In addition, developers of the site could assist in providing opportunities to improve local air quality through making purchaser/future occupiers</p>	

³⁹ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

aware of Car Share Wiltshire as well as the ability to charge electric cars at home. The development also has the potential to maximise the opportunities presented by the close proximity to sustainable transport options, employment and services and should incorporate design features such as cycle storage.

Development at this site would likely generate noise and light pollution during construction (short term / temporary effect). Noise pollution may be an issue to a lesser extent during operation through the generation of car trips. Nevertheless a Noise Impact Assessment should be undertaken and submitted with any development proposals. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.

Residential development at this site could be significantly impacted by noise on all three sides; traffic on the A303 and the industrial uses to the south east and south west.

The busy A303 is likely to be a source of ambient noise and air pollution for this site and is recognised as an issue at this site. Further noise assessment would be required to provide detail on this issue. An acoustic buffer could be used to attenuate noise for the road, however, the topography of the site is likely to have implications on the success of any such buffer, which may have implications for the layout and capacity of the site.

There would also need to be buffer zones/barriers between the business uses to the south east and south west and any residential properties.

When all decision-aiding questions are considered, moderate adverse effects are envisaged on SA Objective 4 and mitigation measures are considered to be potentially problematic.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site ...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design

change through sustainable building practices?	measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.
Assessment outcome (on balance) -	
<p>Summary of SA objective 5a</p> <p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.</p> <p>However, the effect of the development of this site will be to increase greenhouse gas emissions overall and on balance this site is considered to have a minor adverse effect in relation this SA objective.</p>	
SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects	
Decision Aiding Questions. Will the development site ...	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<p>The site is located within Flood Zone 1.</p> <p>However, the site slopes down to the north, and land 20m to the north of the site is within Flood Zone 2/3. The site is also approximately 110m east of the Flood Zone 2/3 associated with the River Avon.</p> <p>As such, the development of the site is likely to lead to an exacerbation of flood risk from fluvial sources. In such circumstances consideration should be given to sequentially planning the development of the site to ensure that the risk of flooding is alleviated. If this is not possible, the site should be immediately removed from any further assessments.</p> <p>There is known localised flooding in close proximity to the site and parts of the site area affected by surface water flood risk for 1 in 30/100 events. As well as the impact on flood risk from fluvial sources, the risk of flooding from increased surface runoff should be assessed and mitigated. A Flood Risk Assessment would be required in support of an application.</p> <p>This site is underlain by chalk and may be susceptible to seasonal groundwater levels, with implications for surface water. Monitoring will be required in accordance with the Council's Drainage Strategy and CIRIA guidance, part E, Chapter 25 to determine a suitable surface/storm water disposal system which may have an impact on the size and area of development.</p> <p>The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and</p>

	landscape.
2. Ensure that development can adapt to the predicted future impacts of climate change?	<p>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as designing to prevent overheating, for heat resistant landscaping, for more resilient foundations, for drought resistant planting and for generally more resilient buildings and spaces (general design and robust materials).</p>
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	<p>Consideration should be given to the inclusion of SuDS within any development scheme to control the risk of surface water flooding from impermeable surfaces. However, ground conditions appear to dictate that the site would not be technically capable of accommodating certain SuDS measures.</p> <p>This site is in a groundwater sensitive area. Surface water systems must be sealed as per sewers. Soakaways/infiltration unlikely to work. Any discharge into the local watercourses must be at a controlled rate. Further evidence of soil permeability and groundwater levels should be obtained prior to any development which should include testing and monitoring for at least</p>

	12 months to determine level of ground water in line with the Wiltshire Groundwater Strategy and CIRIA SuDS Manual (C753) ^[1] .
4. Minimise the risk of flooding to people and property (new and existing development)?	<p>The site is located within Flood Zone 1. However, land north of the A303 (up to 20m distance from the site), is within Flood Zone 2/3. The site is also approximately 110m east of the Flood Zone 2/3 associated with the River Avon.</p> <p>As such, the development of the site is likely to lead to an exacerbation of flood risk from fluvial sources. In such circumstances consideration should be given to sequentially planning the development of the site to ensure that the risk of flooding is alleviated. If this is not possible, the site should be immediately removed from any further assessments.</p> <p>There is known localised flooding in close proximity to the site and parts of the site area affected by surface water flood risk for 1 in 30/100 events. As well as the impact on flood risk from fluvial sources, the risk of flooding from increased surface runoff should be assessed and mitigated. A Flood Risk Assessment would be required in support of an application.</p>
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
<p>Summary of SA objective 5b</p> <p>The site is located within Flood Zone 1. However, land 20m downslope and to the north of the site is within Flood Zone 2/3. The site is also approximately 110m east of the Flood Zone 2/3 associated with the River Avon.</p> <p>There is potential to increase flood risk off site through increased surface water runoff development. Due to ground conditions certain SuDS techniques are unlikely to work. Other techniques may be required which may result in a reduction in the number of dwellings that can be delivered at the site. Any development at this site</p>	

^[1] The SuDS Manual (C753), CIRIA, December 2015.

should be informed by Wiltshire Council’s Groundwater Strategy.

The site would require planning application for development to be supported by a Flood Risk Assessment/drainage strategy in line with the Council’s guidance.

Any development has the potential to reduce vulnerability to climate change by incorporating building design and on site mitigation measures that take into account potentially hotter summers, water shortages and higher precipitation.⁴⁰

Due to its potential to exacerbate flooding and given that mitigation is likely to be problematic because of ground conditions, this site is considered to have a moderate adverse effect in relation to this objective.

SA objective 6. Protect, maintain and enhance the historic environment

Decision Aiding Questions. Will the development site ...

<p>1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?</p>	<p>There are no listed buildings in the vicinity of the site and the Amesbury Conservation Area is to the western side of town.</p> <p>The site is to the east of a scheduled barrow on Ratfyn Road. However, this is separated from the site by more modern development and would be unlikely to be significantly impacted by housing development at this site.</p> <p>Accordingly development would not affect any heritage assets.</p>
<p>2. Ensure appropriate archaeological assessment prior to development?</p>	<p>There are known barrows and burials on the site and adjacent to the site. The site is in Amesbury which is an area of high archaeological potential. There would be a need to undertake further archaeological assessments in support of any application and subsequent development of the site. Development at this site is considered to have a significant potential impact on archaeology that could be problematic to mitigate.</p>

⁴⁰ Wiltshire Council Climate Change Adaptation Plan 2012-2016.

<p>3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?</p>	<p>The site does not contain any buildings and does not have potential to promote sensitive re-use of historic buildings.</p>
<p>4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?</p>	<p>In accordance with national policy/local policy, the development of the site for housing has the potential to deliver housing that maintains and enhances the distinctiveness of settlements through high quality design.</p> <p>The site is not in close proximity to the Amesbury conservation area and development at the site is unlikely to affect the setting of the conservation area or nearby heritage assets.</p> <p>In accordance with legislation and national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance designated heritage assets according to their significance.</p>
<p>5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?</p>	<p>There are no 'at risk' heritage sites associated with the site.</p>
<p>6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?</p>	<p>In accordance with legislation and national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the Stonehenge and Avebury WHS and its setting.</p> <p>The Stonehenge World Heritage Site is located approximately 700m west of the site, and is unlikely to be affected by development of the site.</p>
<p>Assessment outcome (on balance) - -</p>	
<p>Summary of SA objective 6</p> <p>There are known barrows and burials on the site and adjacent to the site. The site has high archaeological potential. An archaeological assessment would be required for any planning application at this site. It is considered that potential impacts on archaeology would be significant and that mitigation could be problematic.</p> <p>Development of the site would not affect any other heritage assets.</p> <p>The site is considered to have a moderate negative effect because of the potential impact on archaeology.</p>	
<p>SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place</p>	

Decision Aiding Questions. Will the development site ...	
1. Protect and enhance the landscape character and scenic quality of the countryside?	<p>The landscape character assessment indicates that the site is part of the Salisbury Plain East (3B) classification and it is considered that opportunities to protect and enhance the landscape are associated with conserving chalk grassland and biodiversity and woodland. The site also has character associated with the Upper Chalk Valley (5D) classification and opportunities for landscape protection and enhancement are associated with replanting hedgerows, woodland, conserving and restoring remnant water meadows and reconnecting and recreating wetland habitat. There is residential development to the west of the site as well as some industrial units. Industrial units and landscaping partially screen views of the site from existing residential properties.</p> <p>The site is prominently located on the approach to Amesbury and provides a transition between urban and rural to the south of the A303. The topography of the site would be an important factor influencing development at the site.</p>
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	<p>In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to contribute to a comprehensive network of Green Infrastructure.</p> <p>The development would have the potential to make suitable provision for buffers to recognised green/water course corridors, specifically, roadside tree planting which forms secondary wildlife corridors. This is likely to lead to a reduction in capacity of the site.</p> <p>Hedgerows and mature trees on site should be retained and a green infrastructure used to protect them.</p>
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	<p>Development of this site has the potential to incorporate new public open space within the site and could potentially lead to improved access to urban green spaces and the wider countryside for recreation for new and existing residents.</p>

4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ⁴¹ ?	There are no landscape designations that affect this site.
5. Protect rights of way, open space and common land?	Development of this site would lead to a net loss of green space at the rural fringe. Evidence to date is not clear on whether this land is currently classed as public open space, so it is not possible to determine whether there would be a net loss in accessible green space. If the site is developed it is likely to be expected to provide onsite public open space.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site is not within a location which is likely to result in impacts to the Western Wiltshire Green Belt.
Assessment outcome (on balance) -	
<p>Summary of SA objective 7</p> <p>The site is rural fringe and in an area of transition between urban and countryside. It is partially screened from residential development to the west of the site. The landform is a sloping site with hedgerows. It has substantial screening at its boundary with the A303 but would be visible from the open countryside sloping to the north.</p> <p>The site is within close proximity to the Salisbury Plain SPA and would require green infrastructure buffer to protect hedgerows and mature trees / woodland.</p> <p>Development would lead to the increased urbanisation of this north eastern side of Amesbury. However, depending on the design of the development and use of appropriate mitigation such as the retention of hedgerows and mature vegetation where possible, the development could contribute positively rather than necessarily</p>	

⁴¹ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

adversely. Development of the site would avoid some of the more highly valued designations such as AONBs.

It is considered that housing development at this site would result in very few/negligible landscape and visual impacts. On balance the site is scored as having a minor adverse effect in relation to this objective and mitigation measures are considered to be achievable.

SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures

Decision Aiding Questions. Will the development site ...

1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	In accordance with local plan policy and national standards, the development of the site would need to deliver high quality, sustainable homes across all types and tenures.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations. The site is located at Amesbury which is a Market Town as defined by the Wiltshire Core Strategy and has a good level of services and potential for development. The site is at the edge of the town with potential for good access to employment, services and recreation.
5. Ensure an adequate provision of housing to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	On the basis of evidence provided by the Qualifying Body, it is unlikely that the emerging Neighbourhood Plan / Neighbourhood Development Order will deliver certainty of supply in the local area to meet needs. Consequently, there would appear to be justification for allocating 'quick-win' sites to boost the supply of housing in line with evidence of need.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	Development of this site would be helping to meet the housing needs of Amesbury town. It is not intended that this site will meet rural housing needs.

Assessment outcome (on balance) + +

Summary of SA objective 8

The site is in a sustainable location and has capacity for up to 101 residential units (though this may be reduced through the mitigation set out in this assessment) which contributes towards Wiltshire’s housing unit targets. A site of this size would be expected to deliver 30% affordable housing units according to the Wiltshire Core Strategy and it would be expected that it could deliver a range of housing types and tenures to meet local need. It is therefore considered that this site has a moderate positive effect in relation to this objective.

SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities

Decision Aiding Questions. Will the development site ...

1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and it will also provide opportunities for informal surveillance of a business park, thereby reduce crime/the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. Linkages to existing footpaths and cycle ways would need to be maximised.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy the allocation and development of the site could provide flexibly designed accommodation to meet the changing demands of an ageing population in Wiltshire.
4. Ensure that new development will be accessible to health facilities, and	In accordance with national policy/local plan policy, the site would be sustainably located with opportunities to access local

<p>that they are able to cope with the additional demand?</p>	<p>health facilities without breaching their existing capacity.</p> <p>On the basis of current evidence the health facilities in Amesbury are at capacity. There are likely to be capacity issues at both Barcroft and St Melor surgeries as the population increases and this would need to be resolved. This site is within the catchment area of both surgeries and at less than 1km distance the surgeries could be reached by foot, bicycle or bus from the site.</p>
<p>5. Maximise opportunities within the most deprived areas?</p>	<p>In accordance with national policy/local plan policy, the allocation of the site would increase opportunities for the local community to access a decent home and thereby help reduce deprivation.</p> <p>This site is within Wiltshire 048A LSOA which is amongst the 40% least deprived areas of England. However, the site is very close to an area which is amongst the 30% most deprived areas in England.⁴² Development at this site is not likely to have adverse impacts on deprivation in the local area but has the potential to have a positive impact by providing affordable housing where it is needed.</p>
<p>6. Reduce rural isolation, including access to services for those without a car in rural areas?</p>	<p>Development of this site at Durrington will be meeting the housing needs of Amesbury, Bulford and Durrington primarily. The site is adjacent to an existing residential area so it would not generate an isolated development in a rural area.</p>
<p>7. Support the development of community campuses?</p>	<p>In accordance with the council's Business Plan objectives, the allocation and development of the site could potentially assist in the delivery of a local community campus.</p>
<p>8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated</p>	<p>Some of the primary schools in this area are currently being expanded as numbers are rising fast. A feasibility study would be required to investigate whether the existing local school can be expanded. The site size suggests that potential for this may be limited. The proposed development at King's Gate is likely to generate the need to deliver a new school and if this site were to proceed there is potential to consider making the new school larger. If the school is permitted, it would be able to</p>

⁴² DCLG, 2015. <http://dclgapps.communities.gov.uk/imd/idmap.html>

from the site?	<p>accept pupils no sooner than Sept 2019.</p> <p>In relation to secondary education, Amesbury Stonehenge School currently has some surplus places but the school will require expansion to cater for Military Basing, housing at Kings Gate and a rising demographic. The school could therefore be expanded further if necessary.</p>
<p>Assessment outcome (on balance) -</p>	
<p>Summary of SA objective 9</p> <p>The site is within a good proximity of services and facilities provided by Amesbury as well as open space, which can potentially be reached by foot, bicycle or bus.</p> <p>In accordance with national policy/local plan policy, the allocation of the site would increase opportunities for the local community to access a decent home and thereby help reduce deprivation.</p> <p>There may be limited potential to expand the current local primary school, however there is potential to consider making a new school larger if the site goes ahead. The secondary provision is currently being expanded and would need to be expanded further if this site goes ahead.</p> <p>There would need to mitigation to address the additional pressure on health facilities and schools, which is considered possible. For that reason the site is considered to have a minor negative effect, despite the potential provision of affordable housing and accessibility to services.</p>	
<p>SA objective 10. Reduce the need to travel and promote more sustainable transport choices</p>	
<p>Decision Aiding Questions. Will the development site ...</p>	
<p>1. Increase walking and cycling accessibility through the use of developer contributions and site design?</p>	<p>In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment, both directly by linking the site to existing footpaths and cycleways and indirectly through contributions to improve links to the town from the area of the site. The site is well located to the retail outlets in the London Road Principal Employment Area, and is within reasonable walking distance of the Amesbury sports centre, schools and other facilities. There is also a continuous pedestrian link from London Road (on the site's southern boundary) to Amesbury town centre. There are several pedestrian crossings of London Road between the site and town centre.</p>
<p>2. Ensure new development incorporates facilities and infrastructure for cyclists?</p>	<p>In accordance with local plan/Transport Plan policies, the site would have the potential to provide cycle storage and create links to existing cycling infrastructure, on London Road and potential links at the western end of the site with the footpath / cycleway at the northern end of Ratfyn Rd.</p>
<p>3. Improve the jobs/homes balance, to</p>	<p>The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on</p>

reduce out-commuting?	jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments, in accessible locations, that reduce the need to travel and reliance on the private car?	<p>The site is adjacent to employment and retail uses and is within accessible distance from the town centre. There are bus routes that serve the town centre, and the surrounding area, including Bulford, Durrington, Pewsey, Salisbury and Andover. These bus routes can be accessed from bus stops adjacent to the site on London Rd.</p> <p>This site has a good location with regards to sustainable transport options, however in order to maximise this potential the development must be designed to incorporate features such as cycle storage and on-site paths that link to off-site pedestrian, cycle and bus routes.</p>
Assessment outcome (on balance) +	
<p>Summary of SA objective 10</p> <p>The site is well located on the edge of Amesbury. The site is accessible by foot and public transport to a variety of services including employment, schools, GP, foodstore and leisure centre, which could help to reduce the need to travel and out-commuting.</p> <p>The development would not be expected to have a significant negative effect on national trails, national cycle network, public footpaths or the Public Rights of Way network. There is a Public Right of Way close to the site and cycle routes and it would be beneficial to explore how the site may be linked to it.</p> <p>This site has a good location with regards to sustainable transport options, however in order to maximise this potential the development must be designed to incorporate features such as cycle storage and on-site paths that link to off-site pedestrian, cycle and bus routes.</p> <p>On balance this site is scored as having a minor positive effect in relation to this objective.</p>	
<p>SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth</p> <p>Decision Aiding Questions. Will the development site ...</p>	
1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of viable local retail, leisure and/or employment centres.
2. Support the rural economy?	The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of rural services and facilities.

Assessment outcome (on balance) +

Summary of SA objective 11

Development of this site will create construction jobs in the short-term and provide an increased workforce for local businesses in the medium-long term.

The site is well located to the London Road and Solstice Park Principal Employment Areas, and so has good potential for the residents to access local employment opportunities.

On balance the site is scored as having a minor positive effect due to its potential to boost the economy at the town by providing additional population to support the local economy and workforce.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site ...

1. Protect and enhance the vitality and viability of existing employment areas?	<p>In accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas.</p> <p>The local employment areas are considered full and there have been comments that the proposed site would be better suited to employment rather than housing.</p>
2. Provide a focus for development in Salisbury and Trowbridge?	<p>In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations and thereby improve self-containment/reduce out-commuting.</p>

Assessment outcome (on balance) +

Summary of SA objective 12

Development of the site would not lead to the loss of designated employment land or provide such land. However it would support existing employment areas and would provide jobs directly and indirectly through construction.

On balance, the effect is considered to be minor positive in relation to this objective.

A.3. Chippenham Community Area Remainder

Chippenham Community Area - Stage 3 Site Assessment Tables

Sites considered in this Area of Search

Site 689 - Land directly behind Gardeners Drive, Hullavington
Site 690 - The Street, Hullavington
Site 1112 - Land to rear of Newton, Hullavington
Site 3162 - Rear of Darley House, The Street, Hullavington
Site 3377 - Land at Green Lane, Hullavington
<u>Site 3129 – The Street, Hullavington</u>
<u>Site OM011 - Land at Hullavington airfield, Hullavington</u>
Site 797 - Manor Farm, Kington St Michael
Site 474b - Land adjacent to The Old Forge, The Street, Yatton Keynell
Site 482 - Land East of Farrells Field, Yatton Keynell
Site 643 - Land at Littlemead Farm, Yatton Keynell
<u>Site OM015 - Land east of Yatton Keynell off B4039, Yatton Keynell</u>

Sites being taken forward by Wiltshire Council from this stage to Stage 4

Site 482 - Land East of Farrells Field, Yatton Keynell
Site 689 - Land directly behind Gardeners Drive, Hullavington
Site 690 - The Street, Hullavington
Site 1112 - Land to rear of Newtown, Hullavington
Site 3377 - Land at Green Lane, Hullavington
<u>Site 3129 – The Street, Hullavington</u>

Site 689 - Land directly behind Gardeners Drive, Hullavington

Site context	
Site size: 1.49 ha Site capacity: approximately 36 dwellings	
The site is flat, rough grazing with open countryside on two sides, residential to the north and west. There are some mature trees present on the perimeter. There is an agricultural track, which extends across the southern part of the site, providing a connection between a residential access road (Gardeners Drive) off The Street to the west, with a further field of grassland, which connects with the airfield. In the southwest part of the site, to the immediate east of houses on Gardners Drive, there is a cow shed and area of hardstanding, and there is also a dilapidated timber post and rail fence across part of the field. The western and northern site boundaries are formed by garden fences and vegetation to adjacent two storey modern housing development arranged around modest sized cul-de-sac estates. The site’s western and southern boundaries are defined by tall dense and continuous hedgerows, with grassland fields beyond.	
SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses	
Decision Aiding Questions. Will the development site...	
1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	Development of this greenfield site may have some limited adverse effects regarding fragmentation of existing habitats, such as hedgerows on the field boundary. However, the site is currently in arable use and is large enough for the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.

2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	The development of the site for housing would be unlikely to lead to adverse impacts on designated and non-designated biodiversity interests within the local area. There are no biodiversity designations within or in close proximity to this site (UK BAP Priority Habitat hedgerows present on site). Grasslands appear to be semi or improved agriculturally. The hedgerows along eastern and southern boundary are main features of interest, providing suitable terrestrial habitat for nearby population of great crested newts (Hullavington Barracks). There is potential for great crested newts to be breeding in nearby ponds to the south, southeast and northeast of the site and would need to be surveyed to inform a future planning application. Also the potential for reptiles, nesting birds and badgers. As a result an ecological assessment at site level would be required to support individual planning applications.
3. Result in greater community engagement with biodiversity?	There are no designated or non-designated biodiversity features within or adjacent to this site. The site could lead to greater community engagement with biodiversity through connectivity with PRow network.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	There are no river corridors within or adjacent to this site. Protection should be given to mature hedgerows on site. Development of the site for housing would have the potential to make suitable provision for buffers to protect any biodiversity features.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
6. Ensure all new developments have regard to and protect BAP habitats/ species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitat (hedgerows). Need to ensure permeability through this site for wildlife to connect SuDS ponds to the south, southeast and northeast of the site (including great crested newts) and protection of existing hedgerows.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland sites. There are no areas of ancient woodland in proximity to this site. Protection should be given to any mature trees and at site boundaries in the interest of visual amenity.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury	Not applicable – the site does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.

Plain and New Forest SPAs?	
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to adverse impacts on designated Local Geological Sites (LGS). There are no LGS within or in close proximity to this site.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 1</p> <p>The site is greenfield bordered by hedgerows. There are no biodiversity or geological designations within or in immediate proximity to the site and potential adverse effects are considered to be minor with potential for mitigation. There potential for potential for reptiles, nesting birds, badgers and an ecological assessment would be required to inform a future planning application. Permeability through the site for wildlife to connect with nearby ponds, and the retention of the existing hedgerows (UK BAP Habitat Priority) are the key ecological issues. The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement.</p> <p>Overall, effects are considered likely to be minor adverse against this objective.</p>	
<p>SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	The site is situated on the edge of the large village of Hullavington which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site location is within a reasonable walking/cycling distance to the centre of the village (only minor areas where footways are absent) and a bus stop is present on The Street providing connectivity to the public transport network. Overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel to Chippenham or Malmesbury for larger convenience shopping. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Given the site’s prominence in the landscape setting on the rural fringe of the village and to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site. There would also need to be a degree of landscape mitigation and sensitive design due to the site’s location and relationship with its surrounds.
2. Maximise reuse of previously developed land where possible/appropriate?	This is a greenfield site and there is little or no potential for maximising the reuse of previously developed land.

3. Encourage remediation of contaminated land?	At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. The site is located on greenfield arable land, as opposed to brownfield (i.e. previously developed land). On the basis of available evidence, it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil contamination at this site.
6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 2</p> <p>The site is greenfield and is not located on previously developed land. There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Minerals Safeguarding Area. The site is not located within, or likely to be affect a designated safeguarding zone associated with an active safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation. The agricultural quality of the land is not known, but if found to be best and most versatile its loss would be minor to negligible. Overall effects are considered likely to be minor adverse against this objective.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Take into account predicted future	In line with national and local plan policy / practice, the development of the site for housing would be capable of

<p>impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?</p>	<p>positively responding to the predicted effects of climate change.</p> <p>There is limited capacity available within local mains for water supply. Storm/surface water flows are currently managed through existing land drainage systems. Connection is possible to off-site connecting sewer with capacity for foul water flows only which may require the installation of a pumped connection.</p> <p>There is no capacity at the Hullavington sewage treatment works (STW) due to work at Grittleton adding to network. Capacity appraisals would be needed in respect of both water supply and sewage infrastructure. There are no planned investment works up to 2020.</p>
<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company. There is no evidence to suggest that development of this site for housing could not be supported by additional water and sewage infrastructure to cope with demand notwithstanding current capacity issues and no planned investment works until after 2020 (see Q1 above). Surface water systems provide no design capacity for new site and flows to land drainage systems.</p>
<p>3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?</p>	<p>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures / technologies and no adverse effects are foreseen.</p>
<p>4. Consider the need for adequate provision of surface water and foul drainage?</p>	<p>It is considered that due to soil/geological conditions, soakaways/infiltration systems will not work and that positive outfall only may require crossing of third party land. Consideration should be given to the inclusion of Sustainable Drainage Systems (SuDS) within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces, again these could be problematic to provide. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</p>
<p>5. Protect, and where possible, improve surface, ground and drinking water quality?</p>	<p>In line with the provisions of local plan policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. It is considered that this is possible on this site. The site is within Groundwater Source Protection Zone 2 and further advice would need to be sought from the Environment Agency to support any subsequent planning application process.</p>
<p>6. Encourage sustainable and efficient management of water resources,</p>	<p>Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.</p>

<p>including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?</p>	
<p>Assessment outcome (on balance) - -</p>	
<p>Summary of SA Objective 3 The site is within Groundwater Source Protection Zone 2 therefore there may be a significant effect which would need mitigation; further advice would need to be sought from the Environment Agency. There is no evidence to suggest that development of the site for housing could not be supported by suitable and timely investment into water supply infrastructure as well as sewage infrastructure to cope with demand given current capacity issues which need to be appraised further by Wessex Water. There is potential to introduce pollution prevention measures, including sustainable drainage measures (SuDS), though this could be difficult due to ground conditions. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. Consideration should be given to the inclusion of SuDS to control the risk of surface water flooding from impermeable surfaces. Such matters can be addressed appropriately at the detailed design stage in consultation with the Environment agency and water utility companies. It is noted that mitigating surface water could be problematic due to ground conditions.</p> <p>Overall it is considered that moderate effects are likely against this objective.</p>	
<p>SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution Decision Aiding Questions. Will the development site...</p>	
<p>1. Maintain and improve local air quality?</p>	<p>The site is not located within an Air Quality Management Area (AQMA) and currently Hullavington does not have any specific air quality issues. No significant effects on air quality are foreseen with development at this location but housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage/local commuter traffic). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies as well as the council's Air Quality Strategy.</p> <p>Such measures may, where appropriate and feasible, include maximising opportunities for use of sustainable transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>

<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for housing would inevitably lead to increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site does not fall within or in close proximity to any other likely significant sources of environmental pollution (air, noise, odour and light).</p>
<p>3. Mitigate the impacts from uses that generate NO₂, SO₂ and PM₁₀ or other particulates?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p>
<p>4. Seek to reduce development in or near to AQMAS⁴³?</p>	<p>The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.</p>
<p>5. Ensure that air quality impacts on local biodiversity sites are avoided?</p>	<p>While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</p>
<p>6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies, such as good access from the site to local services, facilities and public transport.</p>

⁴³ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 4</p> <p>The site is situated to the south of the village of Hullavington and is well located in relation to the services offered at the village level which can be accessed on foot or cycle. Notwithstanding this as well as the availability of bus services from the village development is likely to increase local commuter traffic, and rely on the use of the private car for larger services and facilities, which may impact on local air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy.</p> <p>The site does not fall within a designated AQMA and it is unlikely that local air quality will be denigrated to the extent that this would impact on local biodiversity sites and SACs. The site does not fall within or in close proximity to any likely significant sources of environmental pollution (air, noise, odour and light). The development at this site would likely generate increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. This may have some adverse effects for residents of neighbouring properties that adjoin or are in close proximity to the site. However these are not considered likely to be significant. Mitigation measures would need to be developed in accordance with national and local plan policy.</p> <p>Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 4 which would otherwise preclude the allocation of this site. Effects are considered likely to be minor adverse against this objective.</p>	
<p>SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design

buildings and new development?	measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.
Assessment outcome (on balance) -	
Summary of SA Objective 5a	
<p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices. However, the effect of the development of this site will be to increase greenhouse gas emissions overall. Effects are considered likely to be minor adverse against this objective.</p>	
SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects	
Decision Aiding Questions. Will the development site...	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. Any proposals for development of this site should be informed by a site specific flood risk assessment as the site is greater than 1ha in size. No specific vulnerabilities are known with regards this particular site. The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape.
2. Ensure that development can adapt to the predicted future impacts of climate change?	<p>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).</p>

3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	The site may have the potential to accommodate appropriate SuDS measures to manage surface water run-off from built form. Soakaways/infiltration systems are unlikely to work due to ground conditions and may require crossing of third party land. The Environment Agency through the council's drainage team have commented that flooding from when the ordinary watercourse cannot discharge when water levels on the Avon are high - also flood from the Bourne Brook. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. (Also see comments in response to 5.1 & 5.3 above).
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 5b</p> <p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. There is the potential to increase flood risk elsewhere and contribute to surface water runoff of pollution. Planning applications for comprehensive development would need to be supported by a Flood Risk Assessment. The site may have the potential to accommodate appropriate SuDS measures to manage surface water run-off from built form however soakaways/infiltration systems are unlikely to work due to ground conditions and may require crossing of third party land. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</p> <p>Overall effects are considered likely to be minor adverse against this objective.</p>	
<p>SA objective 6. Protect, maintain and enhance the historic environment Decision Aiding Questions. Will the development site...</p>	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The site is separated from listed buildings some 50m and 90m distance by vegetation and existing development. Accordingly development would be unlikely to have an effect on the setting of these asset and their significance. The south east corner of the site is situated adjacent to the designated Hullavington Airbase Conservation Area. Development should be sympathetically designed in order to reduce the impact on the setting of the conservation area, informed through a Heritage Impact Assessment which should also be submitted to support development at this site. There are no scheduled Monuments within close proximity to the site.

2. Ensure appropriate archaeological assessment prior to development?	The archaeological potential of the site has been evaluated as low/medium and further archaeological assessments would need to be undertaken to support any subsequent development of the site. An assessment of the potential historic landscape has been carried out and the sensitivity of this site has been assessed as low. The site is described as post medieval fields. This is described as common/frequent landscape character.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	The south east corner of the site is situated adjacent to the designated Hullavington Airbase Conservation Area. There are no published management objectives specific to this asset. Development should be sympathetically designed in order to reduce the impact on the setting of the conservation area and supported by a Heritage Impact Assessment.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	No heritage asset at risk present on site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not within proximity to result in impacts to the Stonehenge and Avebury WHS and its setting.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 6</p> <p>Development on this site is unlikely to give rise to significant negative impacts on the historic environment of Hullavington. The Hullavington Airfield Conservation Area boundary extends west and coincides with the southeast corner of the site. It is advised that development should be sympathetically designed in order to reduce the impact on the setting of the conservation area, having been informed by a Heritage Impact Assessment. The archaeological potential of the site has been evaluated as low/medium and there would be a need to undertake further archaeological assessments to support any subsequent development of the site.</p> <p>Overall effects are considered likely to be minor adverse against this objective.</p>	
SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place	

Decision Aiding Questions. Will the development site...	
1. Protect and enhance the landscape character and scenic quality of the countryside?	The Landscape Character of this site falls within the limestone lowland typology. It is of moderate character, in good condition. The County Landscape Character Assessment defines the strategy for this type of land as conserve and strengthen. The planning application process would need to make provision for strengthening the character and appearance in this area. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside. While development would have an effect on Hullavington, the site is of a size whereby landscape mitigation could be employed at the site boundaries to reduce the effect using a landscape buffer of trees shields the development contained within. It is recommended that there a requirement for Green Infrastructure buffer to the mature hedgerows and tress. There are sensitive visual receptors (residential) and low intervisibility on the rural fringe of the village. A detailed landscape assessment should be undertaken to assess impacts and identify suitable mitigation to mitigate / enhanced visual impact as edge of village onto open countryside which could include sensitive planting, use of materials to reflect local built vernacular and buffers to screen view point from site.
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure through public open space, connections to existing footpath networks and green corridors etc.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	The development of the site for housing may offer the potential to deliver additional access to and availability of green spaces within the site.
4. Conserve and enhance areas with landscape designations and take account of their management	The site lies outside of the AONB. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside and designated landscape assets.

objectives, in particular for the three local AONBs ⁴⁴ ?	
5. Protect rights of way, open space and common land?	In accordance with local plan policy, the development of the site would protect and add to the existing rights of way network, open spaces and common land assets. Development in this location would not result in loss of amenity greenspace. PRow (HUL9) passes the site in the southern tip of the site which may affect the amenity value of the path. Assuming these rights of ways remain open during construction and operation, no adverse effects are likely. It is likely that development in this location would therefore have an impact on views from various public rights of way. Given the size of the site additional connectivity to existing networks could be achieved.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site would not result in impacts to the Western Wiltshire Green Belt.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 7</p> <p>The site adjoins the built edge of southern edge of Hullavington and is in agricultural use. There are views into the site from a number of locations from residential properties to the north and west, and open countryside to the east and south. The adjoining land to the west has been relatively recently built as residential dwellings. The level of effect would depend on the design of developments and employment of appropriate mitigation such as the retention of hedgerows and mature vegetation where possible. Development in this location would have a minor adverse impact on the visual amenity of this part of the village. The site is of a size which could deliver areas of public open space or green infrastructure within the site.</p> <p>Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 7 which would otherwise preclude the allocation of this site. Effects are considered likely to be minor adverse against this objective.</p> <p>SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes,</p>	

⁴⁴ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

types and tenures Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	The Neighbourhood Plan is at its infancy stage but is minded to allocate sites for the delivery of local housing targets. However at this time the plan is not considered sufficiently advanced.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy / local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities.
Assessment outcome (on balance) + + +	
Summary of SA Objective 8 The whole SHLAA site provides capacity for approximately 36 residential units (though this may be reduced through the mitigation set out in this assessment), which contributes towards Wiltshire's housing supply. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units. Overall it is considered that allocation of this site would have a major positive effect in meeting SA Objective 8.	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities Decision Aiding Questions. Will the development site...	

1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities through high quality design and access for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site has the potential space to provide open /green space or children’s play area and other landscaping to improve facilities and amenity. High quality design and good access of the site should take into account the design and layout of the dwellings (access to and contact with nature), walking / cycle ways to promote healthy lifestyles.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design would include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	There is no doctor’s surgery located within Hullavington however the site falls within the catchments of Jubilee Field Surgery, (approximately 5.8 miles) Hathway Surgery in Chippenham (approximately 6.5 miles), Tolsey Practice Area in Sherston (approximately 8.5 miles) and Malmesbury Primary Area Centre (approximately 5.5 miles). The latter being the nearest has capacity to cater for additional patient demand.
5. Maximise opportunities within the most deprived areas?	In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation in the area. There would be some social and economic benefits for the Hullavington area through housing provision, short-term construction jobs and a larger workforce for local businesses. This site is not within one of Wiltshire’s most deprived quintile group of Lower Layer Super Output Areas (LSOAs), as set out in the English Indices of Deprivation 2015:

	Wiltshire Report. This site is within Wiltshire 005D LSOA, which is amongst the 30% least deprived neighbourhoods in the country ⁴⁵ . Development of this site is likely to contribute to improving poverty and deprivation in this area.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The development of the site would provide housing in a sustainable location in line with the settlement strategy, with a reasonable level of access to the local services and facilities within the village. Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. The village is served by the 37 and 92 bus service, although services are not regular. Accordingly, there is the potential to reduce rural isolation.
7. Support the development of community campuses?	Development of community campuses is directed to the town level and therefore this is not appropriate for this site
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	Hullavington Primary School is full but the building could be expanded on the existing site. Malmesbury Secondary School is also full but capable of expansion. Mitigation would be required to cater for additional pupil demand.
Assessment outcome (on balance) -	
Summary of SA Objective 9	
The provision of housing should reduce poverty, deprivation and promote more inclusive and self-contained communities. The sites are within reasonable proximity to the limited services and facilities in the village however there is more limited access to the types of facilities found in larger settlements such as hospitals or colleges and this would lead to a reliance of the private vehicle. Both primary and secondary are schools are full but capable of expansion for which mitigation would be required. The surgery at Malmesbury can meet additional patient demand. Overall, effects are considered likely to be minor adverse against this objective.	
SA objective 10. Reduce the need to travel and promote more sustainable transport choices	

⁴⁵ English indices of deprivation (DCLG, 2015)

Decision Aiding Questions. Will the development site...	
1. Increase walking and cycling accessibility through the use of developer contributions and site design?	In accordance with national policy/local plan policy and best practice, the development of this site is capable of incorporating infrastructure to provide opportunities to improve cycling and walking routes to local services / facilities/employment, given its size. Footways are present along Gardners Drive and for much of The Street, however, it would need to be crossed further northwards. There are opportunities to increase cycling the village as well as connect to nearby PRoW HULL9.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of this site is capable of incorporating infrastructure in the form of garages, sheds and secure bike stands to provide opportunities to improve cycling.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations, that reduce the need to travel and reliance on the private car?	The site is well located in terms of access to the primary school, post office/food shop, public house, village hall and church. The village is served by 2 bus services which run to Chippenham and Malmesbury (nos 37 and 92) with stops along The Street within walking distance of the site. There is no peak morning service to Malmesbury but there are regular services throughout the remainder of the day to both locations until early evening. Chippenham railway station is beyond walking/cycling distance. Given the limited services within Hullavington it is however likely that residents would be reliant on the use of a private vehicle. The site offers the benefits of providing housing to meet need, including affordable housing, and improved viability of local services and facilities.
Assessment outcome (on balance) -	
Summary of SA Objective 10	
<p>The site is located in the south of the large village of Hullavington. The site is within safe walking distance of the services and facilities within the settlement. The types of facilities found in higher order settlements such as Chippenham and Malmesbury mean that overall residents are still likely to rely upon use of the private car. Public footpaths whilst in the vicinity and having the potential to be connected to are unlikely to materially increase walking accessibility to the centre of the village.</p> <p>Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 10 which would otherwise preclude the allocation of this site. Effects are considered likely to be minor adverse against this objective.</p>	
SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth	
Decision Aiding Questions. Will the development site...	

1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.
2. Support the rural economy?	The site would boost the number of homes and thereby increase the population of the village and wider community area. This would potentially directly assist in the support of rural services and facilities.
Assessment outcome (on balance) + +	
<p>Summary of SA Objective 11 Development will also increase the local population resulting in a contribution to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Hullavington village. Overall it is considered that it is likely that there would be no adverse effect and whilst there no known specific regeneration benefits of the site for housing development, the allocation of this site would be likely to have a moderate positive effect against the aim of SA Objective 11.</p>	
<p>SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce Decision Aiding Questions. Will the development site...</p>	
1. Protect and enhance the vitality and viability of existing employment areas?	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the community area.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away. In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations.
Assessment outcome (on balance) +	
<p>Summary of SA Objective 12 The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is</p>	

considered that allocation of this site would positively meet the aim of SA Objective 12.

Site 690 - The Street, Hullavington

Site context

Site size: 3.81 ha Site capacity: approximately 86 dwellings

The site is rough grazing, with a slope towards the north that steepens in the far north. The site has a field boundary dividing the site towards the north with hedgerow. The field slopes down to a watercourse (a tributary of Gauze Brook) which runs along its northwest boundary. Trees form the boundary along the western boundary with the primary school. There is the school field to the south west of the site and a row of terrace housing to the northwest of the site, otherwise backs on to open countryside. The site's western boundary is adjacent to 19th century properties to the northwest of 'Newtown' road. PRow connects with the wider PRow network extending to the north, south and west. Access comes from the main road through village or from a narrow road alongside the western boundary. Drainage ditch along field boundary in the north.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

<p>1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?</p>	<p>Development of this greenfield site may have some limited adverse effects regarding fragmentation of existing habitats, such as hedgerows on the field boundary. There is a slope towards the north that steepens in the far north with a field boundary dividing the site sloping down to a watercourse (a tributary of Gauze Brook). Mature trees and hedgerow form the boundaries. However, the site is currently in arable use and is large enough for the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.</p>
<p>2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?</p>	<p>The development of the site for housing would be unlikely to lead to adverse impacts on designated and non-designated biodiversity interests within the local area. There are no environmental designations within or in immediate proximity to the site. However, the protection and enhancement of protected and notable species recorded in this area will need consideration through appropriate mitigation measures. The site is adjacent to the primary school at edge of village settlement, which contains hedgerows, trees and there are records of barberry carpet moths hereabouts. The western boundary of site is formed by a ditch/watercourse that connects to railway line in the north and eventually the Gauze Brook. Hedgerows (UK BAP Priority Habitat) should be retained where possible. Barberry should be planted to enhance the site for the barberry carpet moth protected species. The ditch may be suitable for great crested newts and linked to pond to the south. Accordingly, an ecological assessment would be required to support any planning applications.</p>

3. Result in greater community engagement with biodiversity?	Given the location of the site next to the local primary school and its connectivity with the local PRoW is could be possible that development of this site could lead to greater community engagement with biodiversity.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	There is a watercourse that runs cross the northern boundary. A sufficient buffer should be provided for this corridor and the provision of Public Open Space associated with this may give opportunities for biodiversity enhancement. The site is large enough for the potential to make suitable provision to protect any biodiversity features.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
6. Ensure all new developments have regard to and protect BAP habitats/species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species - hedgerows. Need to ensure permeability through this site for wildlife to connect SuDS ponds to the north of the site (including great crested newts).
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland sites. There are no areas of ancient woodland in proximity to this site. Protection should be given to any mature trees within the site at the site boundaries.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the site does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).
Assessment outcome (on balance) -	
Summary of SA Objective 1	
The site is made up of arable fields bordered by mature trees and hedgerows (UK BAP Priority Habitat). The site contains hedgerows, trees and the protected species	

barberry carpet moth of which there are records hereabouts. There is a slope towards the north to a watercourse (a tributary of Gauze Brook) which may be suitable for great crested newts. Barberrry should be planted to enhance the site for the barberry carpet moth. An ecological assessment will be required to support any planning application.

Overall effects are considered likely to be minor adverse against this objective.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site...

<p>1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?</p>	<p>The site is situated on the northern edge of the large village of Hullavington which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site location is within a reasonable walking/cycling distance to the centre (only minor areas where footways are absent) of the village and bus stops for are situated along The Street providing services to Malmesbury and Chippenham. Overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel to Chippenham or Malmesbury for larger convenience shopping. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Given the site's prominence in the landscape setting on the rural fringe of the village and the need to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site. Further, there would also need to be a degree of landscape mitigation and sensitive design due to the site's location.</p>
<p>2. Maximise reuse of previously developed land where possible/appropriate?</p>	<p>This is a greenfield site and there is little or no potential for maximising the reuse of previously developed land.</p>
<p>3. Encourage remediation of contaminated land?</p>	<p>On the basis of available evidence, it is considered unlikely that the land would be contaminated and remediation measures required in order to facilitate housing development on the site.</p>
<p>4. Ensure the design and layout of new development supports sustainable waste management?</p>	<p>The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.</p>
<p>5. Protect and enhance soil quality?</p>	<p>In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil contamination at this site.</p>
<p>6. Protect the best and most versatile agricultural land?</p>	<p>There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.</p>

<p>7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?</p>	<p>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>
<p>Assessment outcome (on balance) -</p>	
<p>Summary of SA Objective 2</p> <p>The site is greenfield and is not located on previously developed land. There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Minerals Safeguarding Area. The site is not located within, or likely to be affect a designated safeguarding zone associated with an active safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation. The agricultural quality of the land is not known, but if found to be best and most versatile its loss would be minor to negligible.</p> <p>Overall effects are considered likely to be minor adverse against this objective.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner Decision Aiding Questions. Will the development site...</p>	
<p>1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?</p>	<p>In line with national and local plan policy / practice, the development of the site for housing would be capable of positively responding to the predicted effects of climate change.</p> <p>There are existing mains located within site boundaries and therefore statutory easements will apply and subject to diversion if affected by development layout. There is limited supply capacity in local distribution mains and a capacity appraisal necessary to determine the scope of network reinforcement. In relation to the sewerage network, there is no capacity at the Hullavington sewage treatment works (STW) due to work at Grittleton adding to network. A capacity appraisal would also be required in respect of this. There are no planned investment works up 2020. However there is no evidence to suggest that development of the site for housing could not be capable of being supported by planned water and sewerage infrastructure capacity.</p> <p>An off-site foul water connecting sewer to agreed point of connection to public sewer system exists. There are no public surface water systems at this location and storm/surface water flows are managed in land drainage systems.</p>
<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company. (See above Q1). There is no evidence to suggest that development of this site for housing could not be supported by additional water and sewage infrastructure to cope with demand notwithstanding current capacity issues and no planned investment works until after 2020 (see Q1 above).</p>

	Surface water systems provide no design capacity for new site and flows to land drainage systems.
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures / technologies and no adverse effects are foreseen.
4. Consider the need for adequate provision of surface water and foul drainage?	Where appropriate, the development of the site may need to make provision for on-site surface and foul water drainage. Consideration should be given to the inclusion of Sustainable Drainage Systems (SuDS) within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces. Parts of site are affected by groundwater and surface water flows, particularly along the railway and long watercourse on northwest boundary. Ground conditions could render soakaways/infiltration systems problematic to provide. Surface water and foul drainage disposal may be an issue that would need to be addressed through any subsequent planning application process. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.
5. Protect, and where possible, improve surface, ground and drinking water quality?	In line with the provisions of local plan policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. The site is within Groundwater Source Protection Zone 2 and further advice would need to be sought from the Environment Agency in order to support any subsequent planning application.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 3</p> <p>The site is within Groundwater Source Protection Zone 2 therefore any subsequent detailed development proposals would need to provide mitigation. Further advice would need to be sought from the Environment Agency. There is no evidence to suggest that development of the site for housing could not be supported by suitable and timely investment of additional water supply and sewerage infrastructure to cope with demand, nonetheless both will require capacity appraisals to ensure adequate infrastructure can be provided. No details of drainage exist as yet but there is potential to introduce pollution prevention measures, including sustainable drainage measures (SuDS) to control the risk of surface water flooding. However, mitigation could be problematic due to ground conditions. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. Overall it is considered that there are likely moderate effects against</p>	

this objective.	
SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution	
Decision Aiding Questions. Will the development site...	
1. Maintain and improve local air quality?	<p>The site is not located within an Air Quality Management Area (AQMA) and currently Hullavington does not have any specific air quality issues. No significant effects on air quality are foreseen with development at this location but housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage/local commuter traffic). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies as well as the council's Air Quality Strategy.</p> <p>Such measures may, where appropriate and feasible, include maximising opportunities for use of sustainable transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?	<p>Development of the site for housing would inevitably lead to increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site does not fall within or in close proximity to any other likely significant sources of environmental pollution (air, noise and light).</p> <p>The sewage treatment works are approximately 220m north of the site and therefore an odour assessment will be necessary</p>

	to ensure that properties are not vulnerable to odour nuisance.
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAs ⁴⁶ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies, such as good access from the site to local services, facilities and public transport.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) -	
Summary of SA Objective 4	

⁴⁶ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

The site is situated to the north of the village of Hullavington and is well located in relation to the services offered at the village level which can be accessed on foot or cycle. Notwithstanding this as well as the availability of bus services from the village development is likely to increase local commuter traffic, and rely on the use of the private car for larger services and facilities, which may impact on local air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy.

The site does not fall within a designated AQMA and is unlikely that local air quality will be denigrated to the extent that this would impact on local biodiversity sites and SACs. The site does not fall within or in close proximity to any likely significant sources of environmental pollution (air, noise and light). However, an odour assessment will be required due to the proximity of the sewage treatment works to the north of the site. The development at this site would likely generate increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. This may have some adverse effects for residents of neighbouring properties that adjoin or are in close proximity to the site. However these are not considered likely to be significant. Mitigation measures would need to be developed in accordance with national and local plan policy. The sewage treatment works are approximately 220m north of the site and therefore an odour assessment will be necessary to ensure that properties are not vulnerable to odour nuisance.

Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 4 which would otherwise preclude the allocation of this site. Effects are considered likely to be minor adverse against this objective.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for

practices?	the construction phase could also encourage sustainable building practices.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 5a</p> <p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices. However, the effect of the development of this site will be to increase greenhouse gas emissions overall. Likely effects are considered to be minor adverse against this objective.</p>	
<p>SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. However the field slopes down to a watercourse (a tributary of Gauze Brook) which runs along its northwest boundary. Parts of site are affected by groundwater and surface water flows, particularly along the railway and long watercourse on northwest boundary. Surface water and foul drainage disposal may be an issue that would need to be addressed through any subsequent planning application process. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. Any proposals for development of this site should be informed by a site specific flood risk assessment as the site is greater than 1ha in size. The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape.
2. Ensure that development can adapt to the predicted future impacts of climate change?	<p>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).</p>
3. Promote provision of surface water	The site has the potential to accommodate appropriate SuDS measures to manage surface water run-off from built form.

attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	Consideration should therefore be given to the inclusion of Sustainable Drainage Systems within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces. Surface water and foul drainage disposal may be problematic to mitigate due to ground conditions. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. (Also see comments in response to 5.1 and 5.3 above).
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 5b</p> <p>The site is located within Flood Zone 1. Parts of site are affected by groundwater and surface water flows, particularly along the railway and long watercourse on northwest boundary. Surface water and foul drainage disposal may be an issue that would need to be addressed through any subsequent planning application process. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. As such, the development of this part of the site is likely to lead to an exacerbation of flood risk from fluvial sources. Development of the site may not be suited near the north west boundary of the site. No details of drainage exist as yet but there is potential to introduce pollution prevention measures. Any planning application for development of the site should be supported by a Flood Risk Assessment.</p> <p>Overall effects are considered likely to be moderate adverse against this objective overall since mitigation could be problematic.</p>	
<p>SA objective 6. Protect, maintain and enhance the historic environment Decision Aiding Questions. Will the development site...</p>	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The site is not located in close proximity to any Listed Building. The site is approximately 275m from the Hullavington Airbase Conservation Area and it would be unlikely that development at this site will have a significant effect on the Conservation Area. There are no Scheduled Monuments in close proximity of the site. There is a historic footpath running diagonally across the site and the layout of any development could incorporate the retention of the historic footpath. The site layout and positions of any dwellings, together with landscaping should try to retain the rural character currently seen along the roadside.
2. Ensure appropriate archaeological assessment prior to development?	Assessments of the archaeological potential and potential historic landscape have been undertaken and the sensitivity of this site is medium. On the basis of available evidence, there may be a need to undertake further archaeological assessments to support any subsequent development of the site. The site is described as modern fields which consolidated earlier post

	medieval fields and medieval fields. This is described as once medieval open field which are uncommon across the county.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	Through the application of national policy/local policy, the development of the site for housing would deliver housing that maintains and enhances the distinctiveness of settlements through high quality design. Through the application of legislation and national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance designated heritage assets according to their significance. There is a conservation area south east of the site, east of the main village itself. At a distance of some 275m it is not considered that development would affect the significance or setting of the conservation area, for which there are no management objectives.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	No heritage asset at risk present on site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not within proximity to result in impacts to the Stonehenge and Avebury WHS and its setting.
Assessment outcome (on balance) -	
Summary of SA Objective 6	
The impact of the site on the historic environment is likely to be minimal and capable of mitigation through appropriate design and siting in the event an Historic Impact Assessment reveals it's necessary to do so. Archaeological sensitivity of the site is medium therefore an archaeological assessment would be required. Overall likely effects are considered to be minor adverse against this objective.	
SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place	
Decision Aiding Questions. Will the development site...	
1. Protect and enhance the landscape character and scenic quality of the countryside?	The Landscape Character of this site falls within the limestone lowland typology. It is of moderate character, in good condition. The County Landscape Character Assessment defines the strategy for this type of land as conserve and strengthen. The planning application process would need to make provision for strengthening the character and appearance in this area. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside. While development would

	<p>have an effect on Hullavington, the site is of a size whereby landscape mitigation could be employed at the site boundaries to reduce the effect using a landscape buffer of trees to shield the development contained within. Hedgerows are present on site, with medium intervisibility and sensitive visual receptors (residential). Requirement for Green Infrastructure buffer to mature hedgerows and trees. A detailed landscape assessment should be undertaken to assess impacts and identify suitable mitigation to mitigate / enhanced visual impact as edge of village onto open countryside which could include sensitive planting, use of materials to reflect local built vernacular and buffers to screen view point from site.</p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p>In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure through public open space, connections to existing footpath networks and green corridors etc.</p>
<p>3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?</p>	<p>The development of the site for housing may offer the potential to deliver additional access to and availability of green spaces within the site.</p>
<p>4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs⁴⁷?</p>	<p>The site lies outside of the AONB. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside and designated landscape assets.</p>
<p>5. Protect rights of way, open space and common land?</p>	<p>In accordance with local plan policy, the development of the site would protect and add to the existing rights of way network, open spaces and common land assets. Development in this location would not result in loss of amenity greenspace. PRow(HUL29) pass through the site in the north part of the site from east to west and south western part of the site which may require diversion, which may add to travel times and affect the amenity value of the path. PRow (HULL1) passes to the north of the site alongside the north western boundary. Assuming these rights of ways remain open during construction and</p>

⁴⁷ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

	operation, no adverse effects are likely. It is likely that development in this location would therefore have an impact on views from various public rights of way, although these footpaths could be retained as part of the development. The site is of a size where additional connectivity through the site to existing networks could be achieved.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site would not result in impacts to the Western Wiltshire Green Belt.
Assessment outcome (on balance) -	
Summary of SA Objective 7	
<p>The site adjoins the built edge of northern edge of Hullavington and is agricultural land with boundary planting. Housing development at this site would result in a minor adverse impact on the visual amenity of this part of the village. The level of effect would depend on the design of the development and employment of appropriate mitigation measures such as hedgerow and mature vegetation where possible. There are no landscape designations in this area. Development of this site is not considered likely to have significant adverse effects on existing areas of green infrastructure, publicly accessible open space or other recreational facilities. Assuming that the rights of ways remain open during construction and operation, no adverse effects are likely. The site is of a size which could deliver areas of public open space or green infrastructure within the site.</p> <p>Overall likely effects are considered to be minor adverse against this objective.</p>	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements..
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for

housing in settlements to accommodate employment expansion?	accessing employment.
6. Consider the emerging Neighbourhood Plans?	The Neighbourhood Plan is at its infancy stage but is minded to allocate sites for the delivery of local housing targets. However at this time the plan is not considered sufficiently advanced.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy / local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities.
Assessment outcome (on balance) + + +	
Summary of SA Objective 8	
The whole SHLAA site provides capacity for approximately 86 residential units (though this may be reduced through the mitigation set out in this assessment), which contributes towards Wiltshire's housing supply. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units. Overall it is considered that allocation of this site would have a major positive benefit in terms of meeting the aim of SA Objective 8.	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities through high quality design and access for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site has the potential space to provide open /green space or children's play area and other landscaping to improve facilities and amenity. High quality design and good access of the site should take into account the design and layout of the dwellings (access to and contact with nature), walking / cycle ways to promote healthy lifestyles.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design would include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the	There is no doctor's surgery located within Hullavington however the site falls within the catchments of Jubilee Field Surgery, (approximately 5.8 miles) Hathway Surgery in Chippenham (approximately 6.5 miles), Tolsey Practice Area in Sherston (approximately 8.5 miles) and Malmesbury Primary Area Centre (approximately 5.5 miles). The latter being the nearest has

additional demand?	capacity to cater for additional patient demand.
5. Maximise opportunities within the most deprived areas?	In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation in the area. There would be some social and economic benefits for the Hullavington area through housing provision, short-term construction jobs and a larger workforce for local businesses. This site is not within one of Wiltshire's most deprived quintile group of Lower Layer Super Output Areas (LSOAs), as set out in the English Indices of Deprivation 2015: Wiltshire Report. This site is within Wiltshire 005D LSOA, which is amongst the 30% least deprived neighbourhoods in the country ⁴⁸ . Development of this site is likely to contribute to improving poverty and deprivation in this area.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The development of the site would provide housing in a sustainable location in line with the settlement strategy, with a reasonable level of access to the local services and facilities within the village. Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. The village is served by the 37 and 92 bus services to Malmesbury and Chippenham. Accordingly, there is the potential to reduce rural isolation.
7. Support the development of community campuses?	Development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	Hullavington Primary School is full but the building could be expanded on the existing site. Malmesbury Secondary School is also full but capable of expansion. Mitigation would be required to cater for additional pupil demand.
Assessment outcome (on balance) -	
Summary of SA Objective 9	
The provision of housing should reduce poverty, deprivation and promotes more inclusive and self-contained communities. The sites are within reasonable proximity to	

⁴⁸ English indices of deprivation (DCLG, 2015)

the limited services and facilities in the village however there is more limited access to the types of facilities found in larger settlements such as hospitals or colleges and this would lead to a reliance of the private vehicle. Both primary and secondary schools are full but capable of expansion for which mitigation would be required. The surgery at Malmesbury can meet additional patient demand. Overall, effects are considered likely to be minor adverse against this objective.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	In accordance with national policy/local plan policy and best practice, the development of this site is capable of incorporating infrastructure to provide opportunities to improve cycling and walking routes to local services / facilities/employment, There is a footway along the Street that ends at the southern tip of the site and there seems no logical reason why this footway cannot be extended. Further walking and cycling routes would be possible, and could be extended, through the PRoW's that cross and that are adjoining the site.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of this site is capable of incorporating infrastructure in the form of garages, sheds and secure bike stands to provide opportunities to improve cycling. Further cycling routes would be possible, and could be extended, through the PRoW's that cross and that are adjoining the site.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations, that reduce the need to travel and reliance on the private car?	The site is particularly well located in terms of access to the primary school, being only a very short walking distance. The post office/food shop, public house, village hall and church are further southwards but still within walking distance. The village is served by 2 bus services which run to Chippenham and Malmesbury (nos 37 and 92) with stops along The Street within walking distance of the site. There is no peak morning service to Malmesbury but there are regular services throughout the remainder of the day to both locations until early evening. Chippenham railway station is beyond walking/cycling distance. Given the limited services within Hullavington it is however likely that residents would be reliant on the use of a private vehicle. The site offers the benefits of providing housing to meet need, including affordable housing, and improved viability of local services and facilities.

Assessment outcome (on balance) -

Summary of SA Objective 10

The site is located in the north of the large village of Hullavington. There is a footway along The Street that ends at the adjacent primary school site but this could be extended across the site frontage. Further walking and cycling routes would be possible, and could be extended, through the PRoW's that cross and that are adjoining the site. The site is closely related to the village and is within walking distance of the services and facilities within the settlement. The types of facilities found in higher order settlements such as Chippenham mean that overall residents are still likely to rely upon use of the private car. Public footpath (HULL29) passes through the site

<p>twice to the north and south and would require diversion, which may add to travel times and affect the amenity value of the path. There could be the possibility of the extend of this footpath to the wider network.</p> <p>Overall likely effects are considered to be minor adverse against this objective.</p>	
<p>SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth Decision Aiding Questions. Will the development site...</p>	
<p>1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?</p>	<p>Not relevant to this location.</p>
<p>2. Support the rural economy?</p>	<p>The site would boost the number of homes and thereby increase the population of the village and wider community area. This would potentially directly assist in the support of rural services and facilities.</p>
<p>Assessment outcome (on balance) + +</p>	
<p>Summary of SA Objective 11 Development will also increase the local population, could contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Hullavington village. Overall it is considered that it is likely that there would be no adverse effect and whilst there no known specific regeneration benefits of the site for housing development, the allocation of this site would have a moderate positive effect against the aim of SA Objective 11.</p>	
<p>SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce Decision Aiding Questions. Will the development site...</p>	
<p>1. Protect and enhance the vitality and viability of existing employment areas?</p>	<p>The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the community area.</p>
<p>2. Provide a focus for development in Salisbury and Trowbridge?</p>	<p>The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away. In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations.</p>

Assessment outcome (on balance) +

Summary of SA Objective 12

The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would positively meet the aim of SA Objective 12.

Site 1112 - Land to rear of Newtown, Hullavington

Site context

Site size: 1.01ha Site capacity: approximately 24 dwellings

The site is arable, with a slope towards the north that steepens in the far north. The field slopes down to a watercourse (a tributary of Gauze Brook) which runs along its northwest boundary. It appears that the housing along the eastern / south boundary have no back / front gardens with access directly to the site. PRow runs along the southern boundary of the site. The main access is off Newtown which comes through residential off the main road through village in the south of the site which passes the listed Old Baptist church or from a single track, off Newtown to the north east of the site where several PRow's converge.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	Development of this greenfield site may have some limited adverse effects regarding fragmentation of existing habitats, such as hedgerows on the field boundary. However, the site is currently in arable use and is large enough for the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	The development of the site for housing would be unlikely to lead to adverse impacts on designated and non-designated biodiversity interests within the local area. There are no environmental designations within or in immediate proximity to the site. However, the protection and enhancement of protected and notable species recorded in this area will need consideration through appropriate mitigation measures. Hedgerows (UK BAP Priority Habitat) should be retained, where possible, protected and enhanced in the public realm to ensure longevity and appropriate management. There is potential for Barberry carpet moth in hedgerows and Barberry should be incorporated within planting scheme. Accordingly, an ecological assessment at site level to support planning applications will be required.

3. Result in greater community engagement with biodiversity?	Given the location of the site in close proximity to the local primary school and its connectivity with the local PRoW network it could be possible that development of this site could lead to greater community engagement with biodiversity.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	There is a watercourse (a tributary of Gauze Brook) that runs to the north of the site. A sufficient buffer should be provided for this corridor and the provision of Public Open Space associated with this may give opportunities for biodiversity enhancement. The site is large enough for the potential to make suitable provision to protect any biodiversity features.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
6. Ensure all new developments have regard to and protect BAP habitats/species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species - hedgerows.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland sites. There are no areas of ancient woodland in proximity to this site. Protection should be given to any mature trees at site boundaries.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the site does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).
Assessment outcome (on balance) -	
Summary of SA Objective 1	
The site is on flat arable field bordered by hedgerows, which generally has limited ecological value due to the nature of the land use. The features at the boundaries such as hedgerows and trees may support protected species with potential for Barberry carpet moth in hedgerows and therefore barberry should be incorporated within planting scheme. An ecological assessment would be required to support individual planning applications. Minor adverse effects likely with potential for	

<p>mitigation in the retention and enhancement of hedgerows - potential for additional hedgerow planting and other habitat creation. Overall likely effects are considered to be minor adverse against this objective.</p>	
<p>SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings Decision Aiding Questions. Will the development site...</p>	
<p>1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?</p>	<p>The site is situated on the north western edge of the large village of Hullavington which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site location is within a reasonable walking/cycling distance to the centre (only minor areas where footways are absent) of the village and bus stops for are situated along The Street providing services to Malmesbury and Chippenham. Overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel to Chippenham or Malmesbury for larger convenience shopping. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Given the site's prominence in the landscape setting on the rural fringe of the village and the need to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site. Further, there would also need to be a degree of landscape mitigation and sensitive design due to the site's location and nearby listed building.</p>
<p>2. Maximise reuse of previously developed land where possible/appropriate?</p>	<p>This is a greenfield site and there is little or no potential for maximising the reuse of previously developed land.</p>
<p>3. Encourage remediation of contaminated land?</p>	<p>On the basis of available evidence, it is considered unlikely that the land would be contaminated and remediation measures required in order to facilitate housing development on the site.</p>
<p>4. Ensure the design and layout of new development supports sustainable waste management?</p>	<p>The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.</p>
<p>5. Protect and enhance soil quality?</p>	<p>In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil contamination at this site.</p>
<p>6. Protect the best and most versatile agricultural land?</p>	<p>There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.</p>

<p>7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?</p>	<p>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>
<p>Assessment outcome (on balance) -</p>	
<p>Summary of SA Objective 2</p> <p>The site is greenfield and is not located on previously developed land. There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Minerals Safeguarding Area. The site is not located within, or likely to be affect a designated safeguarding zone associated with an active safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation. The agricultural quality of the land is not known, but if found to be best and most versatile its loss would be minor to negligible. Overall likely effects are considered to be minor adverse against this objective.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner Decision Aiding Questions. Will the development site...</p>	
<p>1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?</p>	<p>In line with national and local plan policy / practice, the development of the site for housing would be capable of positively responding to the predicted effects of climate change.</p> <p>There are existing mains located within site boundaries and therefore statutory easements will apply and subject to diversion if affected by development layout. There is limited supply capacity in local distribution mains and a capacity appraisal necessary to determine the scope of network reinforcement.. In relation to the sewerage network, there is no capacity at the Hullavington sewage treatment works (STW) due to work at Grittleton adding to network. A capacity appraisal would also be required in respect of this. There are no planned investment works up 2020. However there is no evidence to suggest that development of the site for housing could not be capable of being supported by planned water and sewerage infrastructure capacity.</p> <p>An off-site foul water connecting sewer to agreed point of connection to public sewer system exists. There are no public surface water systems at this location and storm/surface water flows are managed through land drainage systems.</p>
<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company. (See above Q1). There is no evidence to suggest that development of this site for housing could not be supported by additional water and sewage infrastructure to cope with demand notwithstanding current capacity issues and no planned investment works until after 2020 (see Q1 above).</p>

	Surface water systems provide no design capacity for new site and flows to land drainage systems.
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures / technologies and no adverse effects are foreseen.
4. Consider the need for adequate provision of surface water and foul drainage?	Where appropriate, the development of the site may need to make provision for on-site surface and foul water drainage. Surface water systems must be sealed as per sewers. Conventional soakaways/infiltration systems may not be effective due to underlying geology/soil conditions. Surface water disposal may be an issue as next to a watercourse therefore potential flood risk that would need to be addressed through any planning application process. If storm water discharge would be proposed to the watercourse then a Local Discharge Consent would be required, with restricted flow rates and storage which will reduce the developable area. Consideration should be given to the inclusion of Sustainable Drainage Systems within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces. (Also see response to Q1). Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.
5. Protect, and where possible, improve surface, ground and drinking water quality?	In line with the provisions of local plan policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. It is considered that this is possible on this site. The site is within Groundwater Source Protection Zone 2 and further advice would need to be sought from the Environment Agency to support any subsequent planning application.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.
Assessment outcome (on balance) - -	
Summary of SA Objective 3	
The site is within Groundwater Source Protection Zone 2 therefore any subsequent detailed development proposals would need to provide mitigation. Further advice would need to be sought from the Environment Agency. There is no evidence to suggest that development of the site for housing could not be supported by suitable and timely investment of additional water supply and sewerage infrastructure to cope with demand, nonetheless both will require capacity appraisals to ensure adequate infrastructure can be provided. No details of drainage exist as yet but there is potential to introduce pollution prevention measures, including sustainable	

<p>drainage measures (SuDS) to control the risk of surface water flooding. However, mitigation could be problematic due to ground conditions. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. Overall it is considered that there are likely moderate effects against this objective.</p>	
<p>SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution Decision Aiding Questions. Will the development site...</p>	
<p>1. Maintain and improve local air quality?</p>	<p>The site is not located within an Air Quality Management Area (AQMA) and currently Hullavington does not have any specific air quality issues. No significant effects on air quality are foreseen with development at this location but housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage/local commuter traffic). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies as well as the council's Air Quality Strategy.</p> <p>Such measures may, where appropriate and feasible, include maximising opportunities for use of sustainable transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for housing would inevitably lead to increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>The site does not fall within or in close proximity to any other likely significant sources of environmental pollution (air, noise,</p>

	odour and light).
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAs ⁴⁹ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies, such as good access from the site to local services, facilities and public transport.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) -	
Summary of SA Objective 4	

⁴⁹ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

The site is situated to the north west of the village of Hullavington and is well located in relation to the services offered at the village level which can be accessed on foot or cycle. Notwithstanding this as well as the availability of bus services from the village development is likely to increase local commuter traffic, and rely on the use of the private car for larger services and facilities, which may impact on local air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy.

The site does not fall within a designated AQMA. It is unlikely that local air quality will be denigrated to the extent that this would impact on local biodiversity sites and SACs. The site does not fall within or in close proximity to any likely significant sources of environmental pollution (air, noise, odour and light). The development at this site would likely generate increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. This may have some adverse effects for residents of neighbouring properties that adjoin or are in close proximity to the site. However these are not considered likely to be significant. Mitigation measures would need to be developed in accordance with national and local plan policy.

Overall likely effects are considered to be minor adverse against this objective.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.

Assessment outcome (on balance) -

Summary of SA Objective 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices. However, the effect of the development of this site will be to increase greenhouse gas emissions overall. Likely effects are considered to be minor adverse against this objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects

Decision Aiding Questions. Will the development site...

<p>1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?</p>	<p>The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. Surface water disposal will be problematic given the adjacent watercourse which could cause a potential flood risk. If storm water discharge is proposed to the watercourse then Local Discharge Consent would be required with restricted flow rates and storage which will reduce the developable area. Any proposals for development of this site should be informed by a site specific flood risk assessment as the site is greater than 1ha in size. Soakaways/infiltration systems may also be problematic and a piped outfall could be required. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</p>
<p>2. Ensure that development can adapt to the predicted future impacts of climate change?</p>	<p>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).</p>
<p>3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?</p>	<p>The site has the potential to accommodate appropriate SuDS measures to manage surface water run-off from built form. Surface water systems must be sealed as per sewers. Soakaways/infiltration may not work effectively and a piped outfall may be required. Surface water disposal will likely be an issue as next to a watercourse therefore potential flood risk. If storm water discharge is proposed to the off-site watercourse then a Local Discharge Consent would be required with restricted flow rates and storage. This may have the effect of reducing the developable area. Consideration should be given to the inclusion</p>

	of Sustainable Drainage Systems within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses, particularly if a suitable surface water management scheme can be devised. (Also see comments in response to 5.1 & 5.3 above).
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
Summary of SA Objective 5b	
<p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river. However, surface water disposal could be an issue given the adjacent watercourse which could result in a potential flood risk. There is also the potential to increase flood risk elsewhere and contribute to surface water runoff of pollution. No details of drainage exist as yet but there is potential to introduce pollution prevention/attenuation measures. Planning applications for the development of the site will require a Flood Risk Assessment. Guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</p> <p>Overall likely effects are considered to be moderate adverse against this objective given mitigation could be problematic.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The site is located approximately within 28m from Grade II Listed Building – Baptist Chapel which dates back to c.1821. Development of the site may have an effect on the setting of this asset and its significance. Subject to more detailed Heritage Impact Assessment this may reduce the extent and/or density of development. Adverse effects are likely but in the event they arise, they would seem capable of mitigation.
2. Ensure appropriate archaeological assessment prior to development?	The archaeological potential of the site has been evaluated as low/medium and is there is a need to undertake further archaeological assessments to support subsequent development of the site. An assessment of the potential historic landscape has been carried out and the sensitivity of this site has been assessed as medium. The site is described as modern fields which consolidated earlier post medieval fields and medieval fields. This is described as possibly once

	medieval open fields which are uncommon survivors.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	Through the application of national policy/local policy, the development of the site for housing would deliver housing that maintains and enhances the distinctiveness of settlements through high quality design. Through the application of legislation and national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance designated heritage assets according to their significance. There is no conservation area within the village and the site is approximately 450m from the Hullavington Airbase Conservation Area to the east of the village.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	No heritage asset at risk present on site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not within proximity to result in impacts to the Stonehenge and Avebury WHS and its setting.
Assessment outcome (on balance) - -	
Summary of SA Objective 6	
The site is located approximately within 28m from Grade II Listed Building – Baptist Chapel which dates back to c.1821. Development of the site may have an effect on the setting of this asset and its significance. A Heritage Impact Assessment would be required. The archaeological potential of the site has been evaluated as low/medium and is there is a need to undertake further archaeological assessment to support subsequent development of the site. Overall it is considered that there would be a moderate adverse effect on SA Objective 6.	
SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place	
Decision Aiding Questions. Will the development site...	
1. Protect and enhance the landscape character and scenic quality of the countryside?	The Landscape Character of this site falls within the limestone lowland typology. It is of moderate character, in good condition. The County Landscape Character Assessment defines the strategy for this type of land as conserve and strengthen. The planning application process would need to make provision for strengthening the character and appearance in this area. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside. While development would

	<p>have an effect on Hullavington, the site is of a size whereby landscape mitigation could be employed at the site boundaries to reduce the effect using a landscape buffer of trees shields the development contained within. There are sensitive visual receptors (PRoW and residential) and low intervisibility. A detailed landscape assessment should be undertaken to assess impacts and identify suitable mitigation to mitigate / enhanced visual impact as edge of village onto open countryside which could include sensitive planting, use of materials to reflect local built vernacular and buffers to screen view point from site.</p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p>In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure through public open space, connections to existing footpath networks and green corridors etc.</p>
<p>3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?</p>	<p>The development of the site for housing may offer the potential to deliver additional access to and availability of green spaces within the site.</p>
<p>4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs⁵⁰?</p>	<p>The site lies outside of the AONB. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside and designated landscape assets.</p>
<p>5. Protect rights of way, open space and common land?</p>	<p>In accordance with local plan policy, the development of the site would protect and add to the existing rights of way network, open spaces and common land assets. Development in this location would not result in loss of amenity greenspace. PRoW (HULL1) passes through the site and along the south / western boundary, which may require diversion and may add to travel times and affect the amenity value of the path. Assuming these rights of ways remain open during construction and operation, no adverse effects are likely. It is likely that development in this location would therefore have an impact on views from</p>

⁵⁰ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

	various public rights of way, although these footpaths could be retained as part of the development.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site would not result in impacts to the Western Wiltshire Green Belt.
Assessment outcome (on balance) -	
Summary of SA Objective 7	
<p>The site adjoins the built edge of northern edge of Hullavington and is agricultural land with hedgerow boundary planting. There are no landscape designations in this area. Development of this site is not considered likely to have significant adverse effects on existing areas of green infrastructure, publicly accessible open space or other recreational facilities. Assuming that the rights of ways remain open during construction and operation, no adverse effects are likely. The site is of a size which could deliver areas of public open space or green infrastructure within the site.</p> <p>Overall likely effects are considered to be minor adverse against this objective.</p>	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging	The Neighbourhood Plan is at its infancy stage but is minded to allocate sites for the delivery of local housing targets.

Neighbourhood Plans?	However at this time the plan is not considered sufficiently advanced.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy / local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities.
Assessment outcome (on balance) + +	
Summary of SA Objective 8	
The whole SHLAA site provides capacity for approximately 24 residential units (though this may be reduced through the mitigation set out in this assessment), which contributes towards Wiltshire's housing supply. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units. Overall it is considered that allocation of this site would have a moderate positive effect on the aim of SA Objective 8.	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities through high quality design and access for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site has the potential space to provide open /green space or children's play area and other landscaping to improve facilities and amenity. High quality design and good access of the site should take into account the design and layout of the dwellings (access to and contact with nature), walking / cycle ways to promote healthy lifestyles.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design would include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	There is no doctor's surgery located within Hullavington however the site falls within the catchments of Jubilee Field Surgery, (approximately 5.8 miles) Hathway Surgery in Chippenham (approximately 6.5 miles), Tolsey Practice Area in Sherston (approximately 8.5 miles) and Malmesbury Primary Area Centre (approximately 5.5 miles). The latter being the nearest has capacity to cater for additional patient demand.
5. Maximise opportunities within the most deprived areas?	In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation in the area. There would be some

	social and economic benefits for the Hullavington area through housing provision, short-term construction jobs and a larger workforce for local businesses. This site is not within one of Wiltshire's most deprived quintile group of Lower Layer Super Output Areas (LSOAs), as set out in the English Indices of Deprivation 2015: Wiltshire Report. This site is within Wiltshire 005D LSOA, which is amongst the 30% least deprived neighbourhoods in the country ⁵¹ . Development of this site is likely to contribute to improving poverty and deprivation in this area.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The development of the site would provide housing in a sustainable location in line with the settlement strategy, with a reasonable level of access to the local services and facilities within the village. Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. The village is served by the 92 bus service. Accordingly, there is the potential to reduce rural isolation.
7. Support the development of community campuses?	Development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	Hullavington Primary School is full but the building could be expanded on the existing site. Malmesbury Secondary School is also full but capable of expansion. Mitigation would be required to cater for additional pupil demand.
Assessment outcome (on balance) -	
Summary of SA Objective 9	
The provision of housing should reduce poverty, deprivation and promotes more inclusive and self-contained communities. The sites are within reasonable proximity to the limited services and facilities in the village however there is more limited access to the types of facilities found in larger settlements such as hospitals or colleges and this would lead to a reliance of the private vehicle. Both primary and secondary are schools are full but capable of expansion for which mitigation would be	

⁵¹ English indices of deprivation (DCLG, 2015)

required. The surgery at Malmesbury can meet additional patient demand. Overall, effects are considered likely to be minor adverse against this objective.	
SA objective 10. Reduce the need to travel and promote more sustainable transport choices Decision Aiding Questions. Will the development site...	
1. Increase walking and cycling accessibility through the use of developer contributions and site design?	In accordance with national policy/local plan policy and best practice, the development of this site is capable of incorporating infrastructure to provide opportunities to improve cycling and walking routes. The site is well served by footways which provide safe walking routes to the village centre as well as the nearby primary school.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of this site is capable of incorporating infrastructure in the form of garages, sheds and secure bike stands to provide opportunities to improve cycling. There is no evidence to suggest that this site could not incorporate such infrastructure.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations, that reduce the need to travel and reliance on the private car?	The site is well located in terms of access to the primary school, post office/food shop, public house, village hall and church, all within safe walking and cycling distance. There is a bus stop on Mere Avenue some 200m from the site which is served by 37 and 92 services. The 37 has one AM service per week calling at Malmesbury, Marshfield and Bath. The 92 service serves Chippenham and Malmesbury - no AM bus service but an interpeak and PM peak services. Chippenham railway station is beyond walking/cycling distance. The site offers the benefits of providing housing to meet need, including affordable housing, and improved viability of local services and facilities.
Assessment outcome (on balance) -	
Summary of SA Objective 10	
The site is located in the north of the large village of Hullavington. There are footways present in Latimer Gardens. The site is well related to the village centre and the primary school, which can safely be accessed on foot or cycle. The types of facilities found in higher order settlements such as Chippenham mean that overall residents are still likely to rely upon use of the private car. Public footpaths whilst in the vicinity and having the potential to be connected to are unlikely to materially increase walking accessibility to the centre of the village. PRow (HULL1) passes through the site and along the south / western boundary, which may require diversion and may add to travel times and affect the amenity value of the path which may add to travel times and affect the amenity value of the path. Overall likely effects are considered to be minor adverse against this objective.	
SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth Decision Aiding Questions. Will the development site...	

1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.
2. Support the rural economy?	The site would boost the number of homes and thereby increase the population of the village and wider community area. This would potentially directly assist in the support of rural services and facilities.
Assessment outcome (on balance) +	
Summary of SA Objective 11	
Development of the site would increase the local population, could contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Hullavington village. Overall it is considered that it is likely that there would be no adverse effect and whilst there no known specific regeneration benefits of the site for housing development, the allocation of this site would have a minor positive effect against the aim of SA Objective 11.	
SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce	
Decision Aiding Questions. Will the development site...	
1. Protect and enhance the vitality and viability of existing employment areas?	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the community area.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away. In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations.
Assessment outcome (on balance) +	
Summary of SA Objective 12	
The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is	

considered that allocation of this site would positively meet the aim of SA Objective 12.

Site 3162 - Rear of Darley House, The Street, Hullavington

Site context

Site size: 2 ha Site capacity: approximately 45 dwellings

The site consists of gardens with some residential outbuildings / stables and rough grazing, which appears to be made up of several residential gardens and small fields. Mature trees on the boundaries of fields and along whole of northern boundary running alongside PRow, which also crosses the site from east to west. Some stone walling divides the areas within the site with mature trees scattered within site along dividing field boundaries. Some residential buildings form the southern boundary (The Parklands). Unsure of access from the main road of village. There is a church adjacent to site in the north east, possible listed building.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?

The site is made up of several different plots comprising of garden, grazing and fallow land with stone walling, mature trees and hedgerows forming the current boundaries. Development of this greenfield site may have some adverse effects regarding fragmentation of existing habitats. However, the site is large enough for the potential to make appropriate provision for Green Infrastructure to reduce some of the risk of habitat fragmentation and allow appropriate restoration.

2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?

The development of the site for housing would lead to a medium adverse impact on designated and non-designated biodiversity interests within the local area. There is a ditch/watercourse runs alongside western boundary hedgerow and links to the Gauze Brook in the north. There is a large pond to the north of site where has potential for great crested newts. Although there are no records from this side of the village there is a cluster of ponds in the wider countryside to the west of Hullavington. There is a record of a Natterer's bat roost in the church to the north of the site; these bats are likely to be using the hedgerow (UK BAP Priority Habitat) network upon emerging from the church and are a light sensitive species. Great crested newt survey of the pond to the north and bat activity surveys from the church would be required to identify presence and important terrestrial habitat and flight lines. Buildings on site should also be assessed for roosting bats and nesting birds. Hedgerows should be retained as much as possible and should not form domestic curtilages given potential usage by protected species. Barberry carpet moth is a UK BAP priority species, existing barberry bushes should be retained and protected, and barberry should be planted as part of landscaping of the site. The hedgerows within or immediately adjacent to the site contribute to connectivity in the wider landscape. The evidence base indicates that there are significant ecological issues for habitats or species protected under European or domestic legislation, or could be contradictory to CP50. An ecological assessment together with appropriate, robust mitigation and enhancement strategies are likely to be required for these sites in order to support individual planning applications.

3. Result in greater community engagement with biodiversity?	Given the location of the site and its connectivity with the local PRoW is could be possible that development of this site could lead to greater community engagement with biodiversity.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	There is a ditch/watercourse that runs alongside western boundary hedgerow and links to the Gauze Brook in the north and a large pond to north of site has potential for great crested newts. The hedgerows within and immediately adjacent to the site contribute to connectivity in the wider landscape. Natterer's bats are likely to be using the hedgerow. Great crested newt survey of the pond to the north and bat activity surveys from the church would be required to identify presence and important terrestrial habitat and flight lines. Hedgerows should be retained as much as possible and should not form domestic curtilages. Existing barberry bushes should be retained and protected, and barberry should be planted as part of landscaping of the site due to the presence of Barberry carpet moth. Development of the site for housing would have to make suitable provision for buffers to protect these biodiversity features.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
6. Ensure all new developments have regard to and protect BAP habitats/ species?	Development of the site for housing would need to be capable of protecting BAP habitats/species. High regard should be given to the existing BAP habitats/ species, including great crested newts, a Natterer's bat, Barberry carpet moth and hedgerows. Need to ensure the appropriate surveys are undertaken and correct mitigation requirements are in place.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland sites. There are no areas of ancient woodland in proximity to this site. Protection should be given to any mature trees within the site and at site boundaries.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the site does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council's current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to adverse impacts on designated Local Geological Sites (LGS). There are no LGS within or in close proximity to this site.

Assessment outcome (on balance) - -

Summary of SA Objective 1

The site is made up of several different plots comprising of garden, grazing and fallow land with stone walling, mature trees and hedgerows forming the current boundaries. Development of this greenfield site would have adverse effects regarding fragmentation of existing habitats, although it is acknowledged that the site is large enough to provide adequate green infrastructure to mitigate this. The allocation of this site would raise significant concerns due to presence of great crested newts, Natterer's bats and Barberry carpet moth nearby. An ecological assessment should inform the extent of mitigation required for any development proposals. The retention of hedgerows will likely be necessary. The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement.

On the balance of evidence available, it is considered that development of this site could have a moderate adverse effect on this SA Objective.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site...

<p>1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?</p>	<p>The site is situated on the edge of the large village of Hullavington which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site is located within a reasonable walking/cycling distance to the centre of the village and a bus stop is present on The Street providing connectivity to the public transport network. Overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel to Chippenham or Malmesbury for larger convenience shopping. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Given the site's prominence in the landscape setting on the rural fringe of the village and to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site. There would also need to be a degree of landscape mitigation and sensitive design due to the site's location and relationship with nearby Listed buildings.</p>
<p>2. Maximise reuse of previously developed land where possible/appropriate?</p>	<p>This is a greenfield site and there is little or no potential for maximising the reuse of previously developed land.</p>
<p>3. Encourage remediation of contaminated land?</p>	<p>At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination. On the basis of available evidence, it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.</p>
<p>4. Ensure the design and layout of new development supports sustainable waste management?</p>	<p>The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.</p>

5. Protect and enhance soil quality?	In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil contamination at this site.
6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 2</p> <p>The site is greenfield and is not located on previously developed land. There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Minerals Safeguarding Area. The site is not located within, or likely to be affect a designated safeguarding zone associated with an active safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation. The agricultural quality of the land is not known, but if found to be best and most versatile its loss would be minor to negligible.</p> <p>Overall likely effects are considered to be minor adverse against this objective.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	In line with national and local plan policy / practice, the development of the site for housing would need to be capable of positively responding to the predicted effects of climate change. There is limited capacity available from local mains and may require network. As a whole there is no capacity at the Hullavington treatment works due to work at Grittleton adding to network. There are no planned investment works up 2020. However there is no evidence to suggest that development of the site for housing could not be capable of being supported by planned water and sewerage infrastructure capacity. An off-site foul water connecting sewer with an agreed point of connection to public sewer system exists. Due to soil and geological conditions it is likely that surface water disposal will be an issue. However there is no evidence to suggest that development of the site for housing could not be capable of being supported by planned water and sewerage infrastructure capacity. There is no evidence to suggest that development of the site for housing could not be capable of being supported by existing and planned water and sewerage infrastructure capacity. Consideration should be given to incorporating water saving

	measures and appropriate pollution prevention and control into the design and layout of any new development.
2. Ensure that essential water infrastructure is co-ordinated with all new development?	Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company. (See above Q1). There is no evidence to suggest that development of this site for housing could not be supported by additional water and sewage infrastructure to cope with demand notwithstanding current capacity issues and no planned investment works until after 2020 (see Q1 above). Surface water systems provide no design capacity for new site and flows to land drainage systems.
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures / technologies and no adverse effects are foreseen.
4. Consider the need for adequate provision of surface water and foul drainage?	Where appropriate, the development of the site may need to make provision for on-site surface and foul water drainage. Surface water systems must be sealed as per sewers. Conventional soakaways/infiltration systems may not work efficiently due to underlying soil/geological conditions. Evidence of pluvial flooding for a 1:30 event and this is considered to be a major issue on part of the site. Consideration should be given to the inclusion of Sustainable Drainage Systems (SuDS) within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.
5. Protect, and where possible, improve surface, ground and drinking water quality?	In line with the provisions of local plan policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. It is considered that this is possible on this site. The site is within Groundwater Source Protection Zone 2 and further advice would need to be sought from the Environment Agency in relation to the need for potential pollution prevention measures.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.
Assessment outcome (on balance) - -	
Summary of SA Objective 3	

The site is within Groundwater Source Protection Zone 2 therefore detailed consideration of the potential effects of development on groundwater resources would need to be undertaken to support any subsequent planning application. Where necessary, appropriate mitigation measures may need to be factored into the design of any housing scheme. Further advice on these matters would need to be sought from the Environment Agency at the detailed planning application stage. There is no evidence to suggest that development of the site for housing could not be supported by suitable and timely investment of additional sewerage infrastructure to cope with demand, nonetheless consideration will need to be given to capacity issues in relation to drinking water and sewage infrastructure in the form of a detailed assessment, to be agreed between the developer(s) and the relevant utilities company. Pluvial flooding for 1:30 event thus considered to be a major issue on part of the site. As such, surface water disposal would likely be an issue as next to a watercourse therefore raising the potential for flood risk. Consideration should be given to the inclusion of SuDS within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. As a whole there is no capacity for additional treatment works due to work at Grittleton adding to the network at Hullavington. Overall it is considered that there are likely moderate effects against this objective.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

<p>1. Maintain and improve local air quality?</p>	<p>The site is not located within an Air Quality Management Area (AQMA) and currently Hullavington does not have any specific air quality issues. No significant effects on air quality are foreseen with development at this location but housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage/local commuter traffic). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies as well as the council's Air Quality Strategy.</p> <p>Such measures may, where appropriate and feasible, include maximising opportunities for use of sustainable transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for housing would inevitably lead to increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site does not fall within or in close proximity to any other likely significant sources of environmental pollution (air, noise, odour and light).</p>
<p>3. Mitigate the impacts from uses that generate NO₂, SO₂ and PM₁₀ or other</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air</p>

particulates?	quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAS ⁵² ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies, such as good access from the site to local services, facilities and public transport.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) -	
Summary of SA Objective 4	
The site is situated in a central location to the village of Hullavington and well located in relation to the services offered at the village level which can be accessed on foot or cycle. Development is likely to increase local commuter traffic, and rely on the use of the private car for larger services and facilities, which may impact on local air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy.	

⁵² Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

The site does not fall within a designated AQMA and is unlikely to adversely affect any AQMA elsewhere within the county. It is unlikely that local air quality will be denigrated to the extent that this would impact on local biodiversity sites and SACs. The site does not fall within or in close proximity to any likely significant sources of environmental pollution (air, noise, odour and light). The development at this site would likely generate increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. This may have some adverse effects for residents of neighbouring properties that adjoin or are in close proximity to the site. However these are not considered likely to be significant. Mitigation measures would need to be developed in accordance with national and local plan policy. Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 4 which would otherwise preclude the allocation of this site. Likely effects are considered to be minor adverse against this objective.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.

Assessment outcome (on balance) -

Summary of SA Objective 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon

energy sources and encouragement of sustainable building practices.

However, the effect of the development of this site will be to increase greenhouse gas emissions overall. Likely effects are considered to be minor adverse against this objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects
 Decision Aiding Questions. Will the development site...

<p>1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?</p>	<p>The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. Any proposals for development of this site should be informed by a site specific flood risk assessment as the site is greater than 1ha in size. The site is within a pluvial flooding (1:30 year event) thus considered to be a major issue on part of the site. Groundwater will require testing and monitoring for at least 12 months to determine summer and winter water levels. Surface water systems must be sealed as per sewers and conventional soakaways/infiltration may not work effectively and may be problematic to provide. Further guidance can be found in the Wiltshire Council’s Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</p>
<p>2. Ensure that development can adapt to the predicted future impacts of climate change?</p>	<p>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).</p>
<p>3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?</p>	<p>Whilst soil and geological conditions would make conventional soakaway/infiltration measures difficult to implement, the site has the potential to accommodate alternative and thereby appropriate SuDS measures to manage surface water run-off from built form. Pluvial flooding on a 1:30 year event basis is recorded to affect part of the site and this would need to be assessed and addressed through any subsequent planning application process. Further guidance can be found in the Wiltshire Council’s Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</p>
<p>4. Minimise the risk of flooding to people and property (new and existing development)?</p>	<p>The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses particularly if a suitable surface water management scheme can be devised. (Also see comments in response to 5.1 and 5.3 above).</p>

5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 5b The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. However pluvial flooding on a 1:30 year event basis affects part of the site and would need to be addressed through any subsequent planning application process, informed by a flood risk assessment. Development of the site may lead to localised surface water flooding. There is the potential to increase flood risk elsewhere and contribute to surface water runoff of pollution. No details of drainage exist as yet but there is potential to introduce pollution prevention measures. Groundwater levels would need to be monitored and the provision of SuDS, soakaways and infiltration systems could be problematic. Likely effects are considered to be moderate adverse against this objective.</p>	
<p>SA objective 6. Protect, maintain and enhance the historic environment Decision Aiding Questions. Will the development site...</p>	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The site is located approximately within 20m of many Grade II listed buildings, including Church of St. Mary, The Old Rectory, The Courthouse and Beanfield. The site is separated from these listed buildings by vegetation however it would be likely that development on this site would have some moderate effect on these designated heritage assets. Subject to more detailed Heritage Impact Assessment this may reduce the extent and/or density of development. Adverse effects are unlikely but in the event they arise, they would seem capable of mitigation. There are no Scheduled Monuments within close proximity to this site.
2. Ensure appropriate archaeological assessment prior to development?	Assessments of the archaeological potential and potential historic landscape have been undertaken and the sensitivity of this site is high. The archaeological description of the site is that the site is part of medieval village and there would be a requirement to undertake further archaeological assessments to support any subsequent development of the site. The potential historic landscape has been described as an historic core of village. This is described as issues relating to the historic character and layout of the settlement. An Historic Landscape Characterisation Assessment will be required to be undertaken to support development at this site.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site is greenfield but does have some existing buildings on site. It is uncertain whether these are of historic interest and assessment will be subject to more detailed Heritage Impact Assessment.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate	Through the application of national policy/local policy, the development of the site for housing would deliver housing that maintains and enhances the distinctiveness of settlements through high quality design. Through the application of legislation and national policy/local plan policy, the development of the site would have the potential to appropriately protect and

design, taking into account the management objectives of Conservation Areas?	enhance designated heritage assets according to their significance. There is no conservation area within the village. However to the east of the village is the Hullavington Airbase Conservation Area.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	No heritage asset at risk present on site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not within proximity to result in impacts to the Stonehenge and Avebury WHS and its setting.
Assessment outcome (on balance) - -	
Summary of SA Objective 6	
<p>The impact of the site on the historic environment is likely to be moderate but capable of mitigation through appropriate design and siting through investigations from an Historic Impact Assessment. Assessments of the archaeological potential and potential historic landscape have been undertaken and the sensitivity of this site is high. An archaeological assessment would be required to determine the archaeological potential of the site and an Historic Landscape Characterisation Assessment will be required to be undertaken to support development at this site. Overall it is considered that there would be a moderate adverse effect on SA Objective 6.</p>	
SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place	
Decision Aiding Questions. Will the development site...	
1. Protect and enhance the landscape character and scenic quality of the countryside?	The Landscape Character of this site falls within the limestone lowland typology. It is of moderate character, in good condition. The County Landscape Character Assessment defines the strategy for this type of land as conserve and strengthen. The planning application process would need to make provision for strengthening the character and appearance in this area. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside. While development would have an effect on Hullavington, the site is of a size whereby landscape mitigation could be employed at the site boundaries to reduce the effect using a landscape buffer of trees shields the development contained within. There is a ditch/watercourse on the boundary with woodland / veteran tree land cover and hedgerow present on site. The site is on the rural fringe on the village with low intervisibility and sensitive receptors (residential). The site is adjacent to Listed Buildings and the Church of St Mary's. A detailed landscape assessment should be undertaken to assess impacts and identify suitable mitigation to mitigate / enhanced visual impact as edge of village onto open countryside which could include sensitive planting, use of materials to reflect local built vernacular and buffers to screen view point from site. There would be a requirement for Green Infrastructure buffer to mature trees.

2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure through public open space, connections to existing footpath networks and green corridors etc.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	The development of the site for housing may offer the potential to deliver additional access to and availability of green spaces within the site.
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ⁵³ ?	The site is not within close proximity to the AONB. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside and designated landscape assets.
5. Protect rights of way, open space and common land?	In accordance with local plan policy, the development of the site would protect and add to the existing rights of way network, open spaces and common land assets. Development in this location would not result in loss of amenity greenspace. PRoW (HULL13) passes through the site, which would diversion, which may add to travel times and affect the amenity value of the path. Also another footpath (HULL12) runs adjacent to the northern boundary of the site. Assuming this right of way remains open during construction and operation, no adverse effects are likely. It is likely that development in this location would therefore have an impact on views from various public rights of way, although these footpaths could be retained as part of the development.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site would not result in impacts to the Western Wiltshire Green Belt.
Assessment outcome (on balance) -	

⁵³ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

Summary of SA Objective 7

The site adjoins the built edge of western edge of Hullavington and is made up of several different plots comprising of garden, grazing and fallow land with stone walling, mature trees and hedgerows forming the current boundaries. There are views into the site from a number of locations from residential properties and open countryside to the west. The level of effect would depend on the design of developments and employment of appropriate mitigation such as the retention of hedgerows and mature vegetation where possible.

Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 7 which would otherwise preclude the allocation of this site. Likely effects are considered to be minor adverse against this objective.

SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures

Decision Aiding Questions. Will the development site...

1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	The Neighbourhood Plan is at its infancy stage but is minded to allocate sites for the delivery of local housing targets. However at this time the plan is not considered sufficiently advanced.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy / local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities.

Assessment outcome (on balance) + + +

Summary of SA Objective 8

The whole SHLAA site provides capacity for approximately 45 residential units (though this may be reduced through the mitigation set out in this assessment), which contributes towards Wiltshire’s housing supply. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units. Overall it is considered that allocation of this site would have a major benefit in terms of meeting the aim of SA Objective 8.

SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities

Decision Aiding Questions. Will the development site...

1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities through high quality design and access for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site has the potential space to provide open /green space or children’s play area and other landscaping to improve facilities and amenity. High quality design and good access of the site should take into account the design and layout of the dwellings (access to and contact with nature), walking / cycle ways to promote healthy lifestyles.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design would include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the	There is no doctor’s surgery located within Hullavington however the site falls within the catchments of Jubilee Field Surgery, (approximately 5.8 miles) Hathway Surgery in Chippenham (approximately 6.5 miles), Tolsey Practice Area in Sherston (approximately 8.5 miles) and Malmesbury Primary Area Centre (approximately 5.5 miles). The latter being the nearest has

additional demand?	capacity to cater for additional patient demand.
5. Maximise opportunities within the most deprived areas?	In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation in the area. There would be some social and economic benefits for the Hullavington area through housing provision, short-term construction jobs and a larger workforce for local businesses. This site is not within one of Wiltshire's most deprived quintile group of Lower Layer Super Output Areas (LSOAs), as set out in the English Indices of Deprivation 2015: Wiltshire Report. This site is within Wiltshire 005D LSOA, which is amongst the 30% least deprived neighbourhoods in the country ⁵⁴ . Development of this site is likely to contribute to improving poverty and deprivation in this area.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The development of the site would provide housing in a sustainable location in line with the settlement strategy, with a reasonable level of access to the local services and facilities within the village. Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. The village is served by the 92 bus service. Accordingly, there is the potential to reduce rural isolation.
7. Support the development of community campuses?	Development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	Hullavington Primary School is full but the building could be expanded on the existing site. Malmesbury Secondary School is also full but capable of expansion. Mitigation would be required to cater for additional pupil demand.
Assessment outcome (on balance) -	
Summary of SA Objective 9	

⁵⁴ English indices of deprivation (DCLG, 2015)

The provision of housing should reduce poverty, deprivation and promotes more inclusive and self-contained communities. The sites are within reasonable proximity to the limited services and facilities in the village however there is more limited access to the types of facilities found in larger settlements such as hospitals or colleges and this would lead to a reliance of the private vehicle. Both primary and secondary are schools are full but capable of expansion for which mitigation would be required. The surgery at Malmesbury can meet additional patient demand. Overall, effects are considered likely to be minor adverse against this objective.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	In accordance with national policy/local plan policy and best practice, the development of this site is capable of incorporating infrastructure to provide opportunities to improve cycling and walking routes to local services / facilities/employment, given its size. The site is well served by footways which provide safe walking routes to the village centre as well as the nearby primary school.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of this site is capable of incorporating infrastructure in the form of garages, sheds and secure bike stands to provide opportunities to improve cycling.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations, that reduce the need to travel and reliance on the private car?	The site is well located in terms of access to the primary school, post office/food shop, public house, village hall and church, all of which are within safe walking and cycling distance. There is a bus stop at The Star Inn, which is served by 92 which serves Chippenham and Malmesbury. There is no AM peak bus service but an interpeak and PM peak bus service. Chippenham railway station is beyond walking/cycling distance. Given the limited services within Hullavington it is however likely that residents would be reliant on the use of a private vehicle. Overall, this level of new dwellings is likely to increase travel movements in the area.

Assessment outcome (on balance) -

Summary of SA Objective 10

The site is located in the west of the large village of Hullavington. There is a footway at this access point along The Street. The site is within safe walking distance of the services and facilities within the settlement. The types of facilities found in higher order settlements such as Chippenham mean that overall residents are still likely to rely upon use of the private car. Public footpaths whilst in the vicinity and having the potential to be connected to are unlikely to materially increase walking accessibility to the centre of the village. PRoW (HULL13) passes through the site, which would require diversion, which may add to travel times and affect the amenity value of the path. Also another footpath (HULL12) runs adjacent to the northern boundary of the site. Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 10 which would otherwise preclude the allocation of this site. Likely effects are considered to be minor adverse against this

objective.	
SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth Decision Aiding Questions. Will the development site...	
1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.
2. Support the rural economy?	The site would boost the number of homes and thereby increase the population of the village and wider community area. This would potentially directly assist in the support of rural services and facilities.
Assessment outcome (on balance) + +	
Summary of SA Objective 11 Development of the site would increase the local population, could contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Hullavington village. Overall it is considered that it is likely that there would be no adverse effect and whilst there no known specific regeneration benefits of the site for housing development, the allocation of this site would have a moderate positive effect against the aim of SA Objective 11.	
SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce Decision Aiding Questions. Will the development site...	
1. Protect and enhance the vitality and viability of existing employment areas?	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the community area.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away. In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations.

Assessment outcome (on balance) +

Summary of SA Objective 12

The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would have a minor positive effect against the aim of SA Objective 12.

Site 3377 - Land at Green Lane, Hullavington

Site context

Site size: 6.95 ha Site capacity: approximately 156 dwellings

Rough grazing and some areas have currently pig grazing. Relatively flat with some field boundaries within the site of hedgerows. Backs on to mainly open countryside as on edge of settlement with the exception of the south western corner of the site which is adjacent to residential housing. The north western boundary abuts the village cemetery and the far north western boundary lies next to utility site. Access from main road into Hullavington and through a lane (track) residential to south west of site. PRoW runs along eastern boundary and western side of site which then cuts across to link up with network on the eastern boundary of site.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?

The site currently comprises large fields of grazing with some hedgerows dividing the large site. Development of the site for housing would have the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation.

2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?

The development of the site for housing would be unlikely to lead to adverse impacts on designated and non-designated biodiversity interests within the local area. There are no environmental designations within or in immediate proximity to the site. However, the protection and enhancement of protected and notable species recorded in this area will need consideration through appropriate mitigation measures. There is a ditch/watercourse along eastern boundary links to railway line wildlife corridor and Gauze Brook. The site contains a pond and there is a pond adjacent to southern boundary. There is potential for great crested newt would need to be assessed. The majority of site comprises agricultural grassland. Hedgerows (UK BAP Priority Habitat) with mature trees are main features of ecological interest and there is potential terrestrial habitat for great crested newts and other protected species. The site would need to retain hedgerows where possible and develop the site sensitively. May be a need to provide compensation for protected species - e.g. great crested newt habitat may need to be retained. The habitats within and immediately adjacent to the site contribute to connectivity in the wider landscape. The

	precautionary principle must be applied and an ecological assessment at site level to support individual planning applications will be required.
3. Result in greater community engagement with biodiversity?	Given the connectivity with the local PRoW it could be possible that development of this site could lead to greater community engagement with biodiversity.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	There is a watercourse that runs along the eastern boundary links to railway line wildlife corridor and Gauze Brook. Site contains a pond and there is a pond adjacent to southern boundary. A sufficient buffer should be provided for this corridor with connectivity to the wider landscape. Provision of Public Open Space associated with this may give opportunities for biodiversity enhancement. The site is large enough for the potential to make suitable provision to protect any biodiversity features. Protection should be given to existing mature trees and hedgerows along boundaries. Development of the site for housing would have the potential to make suitable provision for buffers to protect any biodiversity features.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multifunctional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
6. Ensure all new developments have regard to and protect BAP habitats/species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species (hedgerows and pond). Need to ensure permeability through this site for wildlife to connect SuDS ponds adjacent to southern boundary (including great crested newts).
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland sites. There are no areas of ancient woodland in proximity to this site. Protection should be given to any mature trees and hedgerows within the site.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the site does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs)	The development of the site would be unlikely to lead to adverse impacts on designated Local Geological Sites (LGS). There

from development?	are no LGS within or in close proximity to this site.
Assessment outcome (on balance) -	
Summary of SA Objective 1	
<p>The site is a large area made up of flat agricultural fields with hedgerows and pond (UK BAP Priority Habitat) forming current boundaries within the site. There are no significant records (or other relevant information) for protected species within or immediately adjacent to the site however there is potential for great crested newt which would need to be assessed. The site would need to retain hedgerows and develop site sensitively. The precautionary principle must be applied and an ecological assessment at site level to support individual planning applications will be required. Habitats within or immediately adjacent to the site contribute to connectivity in the wider landscape.</p> <p>Overall likely effects are considered to be minor adverse against this objective.</p>	
SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings	
Decision Aiding Questions. Will the development site...	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	The site is situated on the north-eastern edge of the large village of Hullavington which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site location is within a reasonable walking/cycling distance to the centre of the village and a bus stop is present on The Street providing connectivity to the public transport network. Overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel to Chippenham or Malmesbury for larger convenience shopping. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Given the site's prominence in the landscape setting on the rural fringe of the village and to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site. There would also need to be a degree of landscape mitigation and sensitive design due to the site's location.
2. Maximise reuse of previously developed land where possible/appropriate?	This is a greenfield site and there is little or no potential for maximising the reuse of previously developed land.
3. Encourage remediation of contaminated land?	At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. On the basis of available evidence, it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.

5. Protect and enhance soil quality?	In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil contamination at this site.
6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 2</p> <p>The site is greenfield and is not located on previously developed land. There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Minerals Safeguarding Area. The site is not located within, or likely to be affect a designated safeguarding zone associated with an active safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation. The agricultural quality of the land is not known, but if found to be best and most versatile its loss would be minor to negligible.</p> <p>Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 2 which would otherwise preclude the allocation of this site. Likely effects are considered to be minor adverse against this objective.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner Decision Aiding Questions. Will the development site...</p>	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	In line with national and local plan policy / practice, the development of the site for housing would be capable of positively responding to the predicted effects of climate change. There is limited capacity available within local mains for water supply. Storm/surface water flows are currently managed through existing land drainage systems. Connection is possible to off-site connecting sewer with capacity for foul water flows only which may require the installation of a pumped connection. As a whole there is no capacity at the Hullavington treatment works due to work at Grittleton adding to network. There are no planned investment works up to 2020. Due to geological and soil conditions conventional soakaways/infiltration systems may not work effectively; and positive outfall only which may require crossing of third party land with agreement. There are no planned works by Wessex Water until after 2020. There is no evidence to suggest that development of the site

	for housing would not be capable of being supported by planned water and sewerage infrastructure capacity provided significant investment is brought forward.
2. Ensure that essential water infrastructure is co-ordinated with all new development?	In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. There is no evidence to suggest that development of this site for housing could not be supported by additional water and sewerage infrastructure to cope with demand. Also see Q1 above). There are no planned further investment works up 2020. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures / technologies and no adverse effects are foreseen.
4. Consider the need for adequate provision of surface water and foul drainage?	Where appropriate, the development of the site may need to make provision for on-site surface and foul water drainage. It is considered that due to soil/geological conditions, conventional soakaways/infiltration systems may not work and that positive outfall only may require crossing of third party land. Consideration should be given to the inclusion of Sustainable Drainage Systems (SuDS) within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.
5. Protect, and where possible, improve surface, ground and drinking water quality?	In line with the provisions of local plan policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. It is considered that this is possible on this site. The site is within Groundwater Source Protection Zone 2 and further advice would need to be sought from the Environment Agency.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.
Assessment outcome (on balance) - -	
Summary of SA Objective 3	

The site is within Groundwater Source Protection Zone 2 therefore there may be a significant effect which would need mitigation; further advice would need to be sought from the Environment Agency. There is no evidence to suggest that development of the site for housing could not be supported by suitable and timely investment of additional sewerage infrastructure to cope with demand, nonetheless consideration will need to be given to capacity issues in relation to drinking water and sewage infrastructure in the form of a detailed assessment, to be agreed between the developer(s) and the relevant utilities company. Development at this site would be capable of incorporating measures to positively respond to the predicted effects of climate change. No details of drainage exist as yet but there is potential to introduce pollution prevention measures, including SuDS). The development of the site may need to make provision for on-site surface and foul water drainage. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. Consideration should be given to the inclusion of SuDS to control the risk of surface water flooding from impermeable surfaces. Such matters can be addressed appropriately at the detailed design stage in consultation with the Environment agency and water utility companies.

As a whole there is no capacity at the Hullavington treatment works due to work at Grittleton adding to network. Overall it is considered that there are likely moderate adverse effects against this objective.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

<p>1. Maintain and improve local air quality?</p>	<p>The site is not located within an Air Quality Management Area (AQMA) and currently Hullavington does not have any specific air quality issues. No significant effects on air quality are foreseen with development at this location but housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage/local commuter traffic). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies as well as the council's Air Quality Strategy.</p> <p>Such measures may, where appropriate and feasible, include maximising opportunities for use of sustainable transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for housing would inevitably lead to increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site does not fall within or in close proximity to any other likely significant sources of environmental pollution (air, noise, odour and light).</p>

3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAs ⁵⁵ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies, such as good access from the site to local services, facilities and public transport.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) -	
Summary of SA Objective 4	

⁵⁵ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

The site is situated in the north eastern part of the village of Hullavington and is well related in relation to the services offered at the village level which can be accessed on foot or cycle. Development is likely to lead to increases in traffic on local roads which may adversely affect air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy.

The site does not fall within a designated AQMA and is unlikely to adversely affect any AQMA elsewhere within the county. It is unlikely that local air quality will be denigrated to the extent that this would impact on local biodiversity sites and SACs. The site does not fall within or in close proximity to any likely significant sources of environmental pollution (air, noise, odour and light). The development at this site would likely generate increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. This may have some adverse effects for residents of neighbouring properties that adjoin or are in close proximity to the site. However these are not considered likely to be significant. Mitigation measures would need to be developed in accordance with national and local plan policy. Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 4 which would otherwise preclude the allocation of this site. Likely effects are considered to be minor adverse against this objective.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.

Assessment outcome (on balance) -

Summary of SA Objective 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices. However, the effect of the development of this site will be to increase greenhouse gas emissions overall. Likely effects are considered to be minor adverse against this objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects

Decision Aiding Questions. Will the development site...

<p>1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?</p>	<p>The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. Any proposals for development of this site should be informed by a site specific flood risk assessment as the site is greater than 1ha in size. Groundwater will require testing and monitoring for at least 12 months to determine summer and winter water levels. Surface water drainage systems would need to be sealed as per sewers; and conventional soakaways/infiltration may not work effectively and may be problematic to provide due to soil/geological conditions. Any discharge into the local watercourses would need to be at a controlled rate, and public surface water systems are already at capacity in this location. Part of site vulnerable to SW flooding 1:30 which would be an issue. Should a proposed connection be proposed a Local Discharge Consent would be required. The site may have the potential to accommodate appropriate Sustainable Drainage System measures to manage surface water run-off from built form. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</p>
<p>2. Ensure that development can adapt to the predicted future impacts of climate change?</p>	<p>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).</p>
<p>3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?</p>	<p>The site has the potential to accommodate appropriate Sustainable Drainage System measures to manage surface water run-off from built form. It is advised that soakaways will not work and that positive outfall only which may require crossing of third party land. The Environment Agency through the council's drainage team have commented that flooding from when the ordinary watercourse cannot discharge when water levels on the Avon are high - also flood from the Bourne Brook. Further</p>

	guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. (Also see comments in response to 5.1 & 5.3 above).
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
Summary of SA Objective 5b	
<p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. The site may have the potential to accommodate appropriate SuDS to manage surface water run-off from built form and should be included within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces, but provision could be problematic due to ground conditions. A flood risk assessment should be undertaken. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. There is the potential to increase flood risk elsewhere and contribute to surface water runoff of pollution. No details of drainage exist as yet but there is potential to introduce pollution prevention measures. The sites will require planning applications for comprehensive development to be supported by a Flood Risk Assessment.</p> <p>Overall likely effects are considered to be moderate adverse against this objective.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The site is located approximately 115m to the north of Listed Buildings Holly House, and Barn and cowsheds which is to the northeast of Mays Farmhouse. The site is separated from these listed buildings by vegetation and existing development and it would be unlikely that development on this site would have a significance effect of the designated heritage asset. The site is adjacent to the Hullavington Airbase conservation area. The site is of sufficient size for a buffer to be placed between the conservation area and development. The site is adjacent to the cemetery which whilst has no designated status there would be a communal heritage value added to the land. There are no Scheduled Monuments within close proximity of the site. A Heritage Impact Assessment would need to be undertaken to support development at this site.
2. Ensure appropriate archaeological assessment prior to development?	Assessments of the archaeological potential and the potential historic landscape has been undertaken and the sensitivity of this site is medium. The site is made up of modern fields created by altering post medieval and medieval fields which were possibly once medieval open fields which are uncommon survivals. On the basis of available evidence, there may be a need

	to undertake further archaeological assessments to support subsequent development of the site.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	Through the application of national policy/local policy, the development of the site for housing would deliver housing that maintains and enhances the distinctiveness of settlements through high quality design. Through the application of legislation and national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance designated heritage assets according to their significance. Site is adjacent to the Hullavington Airbase Conservation Area.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	No heritage asset at risk present on site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not within proximity to result in impacts to the Stonehenge and Avebury WHS and its setting.
Assessment outcome (on balance) -	
Summary of SA Objective 6	
<p>Development on this site is unlikely to give rise to significant impacts on the historic environment of Hullavington. Development at this site would be unlikely to cause harmful impact on the adjoining Conservation Area but would need to consider the effects on its setting. Accordingly, a Heritage Impact Assessment would need to be undertaken to support development at this site. An archaeological assessment would also be required to determine the archaeological potential of the site. Although not designated as a heritage asset, the cemetery adjacent to the site is likely to be adversely affected by the development of multiple sites around it, which may affect its tranquillity and visual quality.</p> <p>Overall likely effects are considered to be minor adverse against this objective.</p>	
SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place	
Decision Aiding Questions. Will the development site...	
1. Protect and enhance the landscape character and scenic quality of the	The Landscape Character of this site falls within the limestone lowland typology. It is of moderate character, in good condition. The County Landscape Character Assessment defines the strategy for this type of land as conserve and

countryside?	strengthen. The planning application process would need to make provision for strengthening the character and appearance in this area. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside. While development would have an effect on Hullavington, the site is of a size whereby landscape mitigation could be employed at the site boundaries to reduce the effect using a landscape buffer of trees shields the development contained within. There are woodland cover/veteran trees on site, medium intervisibility and sensitive visual receptors (residential). There would be a requirement for Green Infrastructure buffer to mature hedgerows and trees. A detailed landscape assessment should be undertaken to assess impacts and identify suitable mitigation to mitigate / enhanced visual impact as edge of village onto open countryside which could include sensitive planting, use of materials to reflect local built vernacular and buffers to screen view point from site.
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure through public open space, connections to existing footpath networks and green corridors etc.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	The development of the site for housing may offer the potential to deliver additional access to and availability of green spaces within the site.
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ⁵⁶ ?	The site is not within close proximity to AONB. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside and designated landscape assets..
5. Protect rights of way, open space	In accordance with local plan policy, the development of the site would protect and add to the existing rights of way network,

⁵⁶ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

and common land?	open spaces and common land assets. Development in this location would not result in loss of amenity greenspace. A byway passes through the site in the southern part of the site and along the boundary of the eastern boundary of the site which may require diversion, which may add to travel times and affect the amenity value of the path. PRoWs (HULL9 and HULL10) meet the byways to the south of the site. Assuming these rights of ways remain open during construction and operation, no adverse effects are likely. It is likely that development in this location would therefore have an impact on views from various public rights of way, although these footpaths could be retained as part of the development. The site is of a size where additional connectivity through the site to existing networks could be achieved. The site is currently accessible to the public.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site would not result in impacts to the Western Wiltshire Green Belt.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 7</p> <p>The site adjoins the built edge of northern edge of Hullavington and is made up of agricultural land. There are views into the site from a number of locations from residential properties to the south west, and open countryside to the north and east. The level of effect would depend on the design of developments and employment of appropriate mitigation such as the retention of hedgerows and mature vegetation where possible. The site is of a size which could deliver areas of public open space or green infrastructure within the site. The development of the site would not affect publicly accessible open space, green infrastructure or recreation facilities. There is a public right of way to the south of the site which would need to be diverted during the construction phase of development.</p> <p>Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 7 which would otherwise preclude the allocation of this site. Likely effects are considered to be minor adverse against this objective.</p>	
<p>SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in accordance with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.

4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	The Neighbourhood Plan is at its infancy stage but is minded to allocate sites for the delivery of local housing targets. However at this time the plan is not considered sufficiently advanced.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy / local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities.
Assessment outcome (on balance) + + +	
Summary of SA Objective 8	
<p>The whole SHLAA site provides capacity for approximately 156 residential units (though this may be reduced through the mitigation set out in this assessment), which contributes towards Wiltshire’s housing supply. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units. Overall it is considered that allocation of this site would have a major positive effect in terms of meeting the aim of SA Objective 8.</p>	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities through high quality design and access for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site has the potential space to provide open /green space or children’s play area and other landscaping to improve facilities and amenity. High quality design and good access of the site should take into account the design and layout of the dwellings (access to and contact with nature), walking / cycle ways to promote healthy lifestyles.
3. Promote the design of buildings and spaces to meet the changing needs of	In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design would include buildings and spaces to meet

the population?	the needs of an ageing population as well as disabled people, families and young people.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	There is no doctor's surgery located within Hullavington however the site falls within the catchments of Jubilee Field Surgery, (approximately 5.8 miles) Hathway Surgery in Chippenham (approximately 6.5 miles), Tolsey Practice Area in Sherston (approximately 8.5 miles) and Malmesbury Primary Area Centre (approximately 5.5 miles). The latter being the nearest has capacity to cater for additional patient demand.
5. Maximise opportunities within the most deprived areas?	In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation in the area. There would be some social and economic benefits for the Hullavington area through housing provision, short-term construction jobs and a larger workforce for local businesses. This site is not within one of Wiltshire's most deprived quintile group of Lower Layer Super Output Areas (LSOAs), as set out in the English Indices of Deprivation 2015: Wiltshire Report. This site is within Wiltshire 005D LSOA, which is amongst the 30% least deprived neighbourhoods in the country ⁵⁷ . Development of this site is likely to contribute to improving poverty and deprivation in this area.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The development of the site would provide housing in a sustainable location in line with the settlement strategy, with a reasonable level of access to the local services and facilities within the village. Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. The village is served by the 92 bus service. Accordingly, there is the potential to reduce rural isolation.
7. Support the development of community campuses?	Development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated	Hullavington Primary School is full but the building could be expanded on the existing site. Malmesbury Secondary School is also full but capable of expansion. Mitigation would be required to cater for additional pupil demand.

⁵⁷ English indices of deprivation (DCLG, 2015)

from the site?	
Assessment outcome (on balance) -	
Summary of SA Objective 9	
<p>The provision of housing should reduce poverty, deprivation and promotes more inclusive and self-contained communities. The sites are within reasonable proximity to the limited services and facilities in the village however there is more limited access to the types of facilities found in larger settlements such as hospitals or colleges and this would lead to a reliance of the private vehicle. Both primary and secondary are schools are full but capable of expansion for which mitigation would be required. The surgery at Malmesbury can meet additional patient demand. Overall, effects are considered likely to be minor adverse against this objective.</p>	
SA objective 10. Reduce the need to travel and promote more sustainable transport choices	
Decision Aiding Questions. Will the development site...	
1. Increase walking and cycling accessibility through the use of developer contributions and site design?	There is no footway or lighting on the Hullavington C1 road to the north of the village. There is a footway that has the access points to the site through Watts Lane but appears to be unlit. Walking and cycling to the village appears unsafe and problematic. PRoWs (HULL9 and HULL10) meet the byways to the south of the site. Additional connectivity could possibly be created by using this network also.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of this site is capable of incorporating infrastructure in the form of garages, sheds and secure bike stands to provide opportunities to improve cycling .
5. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations, that reduce the need to travel and reliance on the private car?	The site is well located in terms of access to the primary school, post office, public house, garage and church but walking from the site to access these facilities is for some of the journey by foot, unsafe. There is a bus stop approximately 200m from site at Mere Avenue and at the Telephone Exchange which are served by 92 and 37 services. The 92 serves Chippenham and Malmesbury. There are no AM bus service but an interpeak and PM peak services. The 37 has one AM service per week calling at Malmesbury, Marshfield and Bath. Chippenham railway station is beyond walking/cycling distance. However given the limited services within Hullavington it is however likely that residents would be reliant on the use of a private vehicle.
Assessment outcome (on balance) - -	
Summary of SA Objective 10	
<p>The site is located in the north east of the large village of Hullavington. The site is well related to the village and its facilities, however part of the route is without a</p>	

<p>footpath with lighting (C1 or Watts Lane) which would make walking into the village dangerous. The types of facilities found in higher order settlements such as Malmesbury mean that overall residents are likely to rely upon use of the private car. On the balance of evidence currently available, the effects are considered to be moderate adverse.</p>	
<p>SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth Decision Aiding Questions. Will the development site...</p>	
<p>1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?</p>	<p>Not relevant to this location.</p>
<p>2. Support the rural economy?</p>	<p>The site would boost the number of homes and thereby increase the population of the village and wider community area. This would potentially directly assist in the support of rural services and facilities.</p>
<p>Assessment outcome (on balance) + + +</p>	
<p>Summary of SA Objective 11</p> <p>Development of the site would increase the local population, could contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Hullavington village. Overall it is considered that the allocation of this site would have a major positive effect against the aim of SA Objective 11.</p>	
<p>SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce Decision Aiding Questions. Will the development site...</p>	
<p>1. Protect and enhance the vitality and viability of existing employment areas?</p>	<p>The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the community area.</p>
<p>2. Provide a focus for development in Salisbury and Trowbridge?</p>	<p>The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away. In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations.</p>

Assessment outcome (on balance) +

Summary of SA Objective 12

The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would have a minor positive effect against the aim of SA Objective 12.

Site 3129 – The Street, Hullavington

Site context

Site size: 1.48 ha Site capacity: approximately 36 dwellings

Rough grazing with some horse stables in the far southern corner of the site. Relatively flat with field boundaries within the site of hedgerows with a few mature trees. Backs on to mainly open countryside as on edge of settlement with the exception of the southern and western edges of the site which are adjacent to residential housing. The northern boundary abuts the village. Access from main road into Hullavington and through a lane (track) residential to south west of site. A byway runs along southern boundary of site.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?

The site currently comprises fields of grazing with hedgerow, incorporating some trees, dividing the large site. Development of the site for housing would have the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation.

2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new

The development of the site for housing would be unlikely to lead to adverse impacts on designated and non-designated biodiversity interests within the local area. There are no environmental designations within or in immediate proximity to the site. However, the protection and enhancement of protected and notable species recorded in this area will need consideration through appropriate mitigation measures. The habitats within and immediately adjacent to the site contribute to connectivity in the wider landscape. The hedgerows contribute to primary connectivity for a variety of wildlife species and should be retained with a reasonable buffer strip of at least 5m to enable this function to continue. The precautionary principle must be applied and an ecological assessment at site level to support individual planning applications will be required.

development resulting in a net gain?	
3. Result in greater community engagement with biodiversity?	<u>Given the connectivity with the PRoW on the southern boundary it could be possible that development of this site would lead to greater community engagement with biodiversity.</u>
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	<u>There are no river corridors within or adjacent to this site. Development of the site for housing would have the potential to make suitable provision for buffers to protect any biodiversity features.</u>
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	<u>In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.</u>
6. Ensure all new developments have regard to and protect BAP habitats/species?	<u>In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species.</u>
7. Consider the findings of the HRA in site selection and design?	<u>The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement</u>
8. Maintain the existing extent of ancient woodland sites?	<u>The development of the site would not affect ancient woodland sites. There are no areas of ancient woodland in proximity to this site. Protection should be given to any mature trees and hedgerows within the site.</u>
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	<u>Not applicable – the site does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.</u>
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	<u>Not applicable – the site does not fall within one of the Council’s current guidance areas.</u>
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	<u>The development of the site would be unlikely to lead to adverse impacts on designated Local Geological Sites (LGS). There are no LGS within or in close proximity to this site.</u>

Assessment outcome (on balance) -

Summary of SA Objective 1

The site is an area made up of flat rough grazing fields with hedgerows forming current boundaries within the site. There are no significant records (or other relevant information) for protected species within or immediately adjacent to the site. The site would need to retain hedgerows and develop site sensitively. The precautionary principle must be applied and an ecological assessment at site level to support individual planning applications will be required. Habitats within or immediately adjacent to the site contribute to connectivity in the wider landscape. Overall likely effects are considered to be minor adverse against this objective.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site...

1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?

The site is situated on the north-eastern edge of the large village of Hullavington which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site location is within a reasonable walking/cycling distance to the centre of the village and a bus stop is present on The Street providing connectivity to the public transport network. Overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel to Chippenham or Malmesbury for larger convenience shopping. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Given the site's prominence in the landscape setting on the rural fringe of the village and to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site. There would also need to be a degree of landscape mitigation and sensitive design due to the site's location.

2. Maximise reuse of previously developed land where possible/appropriate?

This is a greenfield site and there is little or no potential for maximising the reuse of previously developed land.

3. Encourage remediation of contaminated land?

At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. On the basis of available evidence, it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.

4. Ensure the design and layout of new development supports sustainable waste management?

The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.

5. Protect and enhance soil quality?

In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any

	<u>specific soil contamination at this site.</u>
6. Protect the best and most versatile agricultural land?	<u>There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.</u>
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	<u>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</u>
Assessment outcome (on balance) -	
Summary of SA Objective 2	
<u>The site is greenfield and is not located on previously developed land. There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Minerals Safeguarding Area. The site is not located within, or likely to be affect a designated safeguarding zone associated with an active safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation. The agricultural quality of the land is not known, but if found to be best and most versatile its loss would be minor to negligible. Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 2 which would otherwise preclude the allocation of this site. Likely effects are considered to be minor adverse against this objective.</u>	
SA objective 3. Use and manage water resources in a sustainable manner	
Decision Aiding Questions. Will the development site...	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	<u>In line with national and local plan policy / practice, the development of the site for housing would be capable of positively responding to the predicted effects of climate change. As a whole there is no capacity at the Hullavington treatment works due to work at Grittleton adding to network. There are no planned investment works up to 2020. Due to geological and soil conditions conventional soakaways/infiltration systems may not work effectively. There is no evidence to suggest that development of the site for housing would not be capable of being supported by planned water and sewerage infrastructure capacity provided significant investment is brought forward.</u>
2. Ensure that essential water infrastructure is co-ordinated with all new development?	<u>In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. There is no evidence to suggest that development of this site for housing could not be supported by additional water and sewage infrastructure to cope with demand. Also see Q1 above). There are no planned further investment works up 2020. Where the pressure exerted by new housing</u>

	<u>development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.</u>
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	<u>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures / technologies and no adverse effects are foreseen.</u>
4. Consider the need for adequate provision of surface water and foul drainage?	<u>Where appropriate, the development of the site may need to make provision for on-site surface and foul water drainage. It is considered that due to soil/geological conditions, conventional soakaways/infiltration systems may not work. Consideration should be given to the inclusion of Sustainable Drainage Systems (SuDS) within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</u>
5. Protect, and where possible, improve surface, ground and drinking water quality?	<u>In line with the provisions of local plan policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. It is considered that this is possible on this site. The site is within Groundwater Source Protection Zone 2 and further advice would need to be sought from the Environment Agency.</u>
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	<u>Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.</u>
Assessment outcome (on balance) - -	
Summary of SA Objective 3	
<u>The site is within Groundwater Source Protection Zone 2 therefore there may be a significant effect which would need mitigation; further advice would need to be sought from the Environment Agency. There is no evidence to suggest that development of the site for housing could not be supported by suitable and timely investment of additional sewerage infrastructure to cope with demand, nonetheless consideration will need to be given to capacity issues in relation to drinking water and sewage infrastructure in the form of a detailed assessment, to be agreed between the developer(s) and the relevant utilities company. Development at this site would be capable of incorporating measures to positively respond to the predicted effects of climate change. No details of drainage exist as yet but there is potential to introduce pollution prevention measures, including SuDS). The development of the site may need to make provision for on-site surface and foul water drainage. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and</u>	

CIRIA Guidance, Part E, Chapter 25. Consideration should be given to the inclusion of SuDS to control the risk of surface water flooding from impermeable surfaces. Such matters can be addressed appropriately at the detailed design stage in consultation with the Environment agency and water utility companies.

As a whole there is no capacity at the Hullavington treatment works due to work at Grittleton adding to network. Overall it is considered that there are likely moderate adverse effects against this objective.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

<p>1. Maintain and improve local air quality?</p>	<p><u>The site is not located within an Air Quality Management Area (AQMA) and currently Hullavington does not have any specific air quality issues. No significant effects on air quality are foreseen with development at this location but housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage/local commuter traffic). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies as well as the council's Air Quality Strategy.</u></p> <p><u>Such measures may, where appropriate and feasible, include maximising opportunities for use of sustainable transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</u></p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p><u>Development of the site for housing would inevitably lead to increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</u></p> <p><u>The site does not fall within or in close proximity to any other likely significant sources of environmental pollution (air, noise, odour and light).</u></p>
<p>3. Mitigate the impacts from uses that generate NO₂, SO₂ and PM₁₀ or other particulates?</p>	<p><u>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy</u></p>

	<u>and advice from relevant bodies.</u>
4. Seek to reduce development in or near to AQMAS ⁵⁸ ?	<u>The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.</u>
5. Ensure that air quality impacts on local biodiversity sites are avoided?	<u>While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</u>
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	<u>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies, such as good access from the site to local services, facilities and public transport.</u>
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	<u>While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</u>
Assessment outcome (on balance) -	
Summary of SA Objective 4	
<u>The site is situated in the north eastern part of the village of Hullavington and is well related in relation to the services offered at the village level which can be accessed on foot or cycle. Development is likely to lead to increases in traffic on local roads which may adversely affect air quality. Measures will need</u>	

⁵⁸ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

<p><u>to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy.</u></p> <p><u>The site does not fall within a designated AQMA and is unlikely to adversely affect any AQMA elsewhere within the county. It is unlikely that local air quality will be denigrated to the extent that this would impact on local biodiversity sites and SACs. The site does not fall within or in close proximity to any likely significant sources of environmental pollution (air, noise, odour and light). The development at this site would likely generate increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. This may have some adverse effects for residents of neighbouring properties that adjoin or are in close proximity to the site. However these are not considered likely to be significant. Mitigation measures would need to be developed in accordance with national and local plan policy.</u></p> <p><u>Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 4 which would otherwise preclude the allocation of this site. Likely effects are considered to be minor adverse against this objective.</u></p>	
<p>SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions Decision Aiding Questions. Will the development site...</p>	
<p>1. Minimise emissions of greenhouse gases and ozone depleting substances?</p>	<p><u>Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.</u></p>
<p>2. Promote the development of renewable and low carbon sources of energy?</p>	<p><u>Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.</u></p>
<p>3. Promote energy efficiency in buildings and new development?</p>	<p><u>Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.</u></p>
<p>4. Minimise contributions to climate change through sustainable building practices?</p>	<p><u>Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.</u></p>
<p>Assessment outcome (on balance) -</p>	

Summary of SA Objective 5a	
<u>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices. However, the effect of the development of this site will be to increase greenhouse gas emissions overall. Likely effects are considered to be minor adverse against this objective.</u>	
SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects Decision Aiding Questions. Will the development site...	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<u>The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. Any proposals for development of this site should be informed by a site specific flood risk assessment as the site is greater than 1ha in size. Groundwater may require testing and monitoring for at least 12 months to determine summer and winter water levels. Surface water drainage systems would need to be sealed as per sewers; and conventional soakaways/infiltration may not work effectively and may be problematic. Any discharge into the local watercourses would need to be at a controlled rate. The site may have the potential to accommodate appropriate Sustainable Drainage System measures to manage surface water run-off from built form. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</u>
2. Ensure that development can adapt to the predicted future impacts of climate change?	<u>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</u> <ul style="list-style-type: none"> <u>• hotter summers;</u> <u>• milder winters;</u> <u>• increased periods without rain;</u> <u>• increased intensity in rainfall; and</u> <u>• more extreme weather events.</u> <u>Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).</u>
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	<u>The site has the potential to accommodate appropriate Sustainable Drainage System measures to manage surface water run-off from built form. It is advised that soakaways may not work. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25</u>
4. Minimise the risk of flooding to	<u>The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an</u>

people and property (new and existing development)?	<u>increased risk of fluvial flooding from main river and/or ordinary watercourses. (Also see comments in response to 5.1 & 5.3 above).</u>
5. Protect and enhance the natural function of floodplains?	<u>In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.</u>
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 5b</p> <p><u>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. The site may have the potential to accommodate appropriate SuDS to manage surface water run-off from built form and should be included within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces, but provision could be problematic due to ground conditions. A flood risk assessment should be undertaken. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. There is the potential to increase flood risk elsewhere and contribute to surface water runoff of pollution. No details of drainage exist as yet but there is potential to introduce pollution prevention measures. Groundwater may require testing and monitoring for at least 12 months to determine summer and winter water levels. Surface water drainage systems would need to be sealed as per sewers; and conventional soakaways/infiltration may not work effectively and may be problematic.</u></p> <p><u>Overall likely effects are considered to be moderate adverse against this objective.</u></p>	
<p>SA objective 6. Protect, maintain and enhance the historic environment Decision Aiding Questions. Will the development site...</p>	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	<u>The site is not located in close proximity to any Listed Buildings and it would be unlikely that development on this site would have a significance effect of the designated heritage asset. The site is approximately 165m from the Hullavington Airbase conservation area and separated by greenfields and hedgerow, but would need to consider the effects on its setting. Accordingly, a Heritage Assessment would need to be undertaken to support development at this site. The northern site boundary abuts the cemetery which whilst has no designated status there would be a communal heritage value added to the land. There are no Scheduled Monuments within close proximity of the site.</u>
2. Ensure appropriate archaeological assessment prior to development?	<u>Assessments of the archaeological potential has been undertaken and the sensitivity of this site is low. The site is made up of modern fields which consolidated earlier post medieval fields and medieval fields which possibly once medieval open fields which are uncommon survivals. The potential historic landscape has been undertaken and the sensitivity of this site is medium. On the basis of available evidence, there may be a need to undertake further archaeological assessments to support subsequent development of the site.</u>

3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	<u>The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.</u>
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	<u>Through the application of national policy/local policy, the development of the site for housing would deliver housing that maintains and enhances the distinctiveness of settlements through high quality design. Through the application of legislation and national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance designated heritage assets according to their significance. Site is in close proximity to the Hullavington Airbase Conservation Area although separated by green fields and hedgerow.</u>
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	<u>No heritage asset at risk present on site.</u>
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	<u>The site is not within proximity to result in impacts to the Stonehenge and Avebury WHS and its setting.</u>
Assessment outcome (on balance) -	
<p>Summary of SA Objective 6</p> <p><u>Development on this site is unlikely to give rise to significant impacts on the historic environment of Hullavington. Development at this site would be unlikely to cause harmful impact on the nearby Conservation Area but would need to consider the effects on its setting. Accordingly, a Heritage Assessment would need to be undertaken to support development at this site. The archaeological sensitivity of the site is considered to be low but an archaeological assessment would still be required to determine the archaeological potential of the site. Although not designated as a heritage asset, the cemetery adjacent to the site is likely to be adversely affected by the development of multiple sites around it, which may affect its tranquillity and visual quality.</u></p> <p><u>Overall likely effects are considered to be minor adverse against this objective.</u></p>	
<p>SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place Decision Aiding Questions. Will the development site...</p>	
1. Protect and enhance the landscape character and scenic quality of the countryside?	<u>The Landscape Character of this site falls within the limestone lowland typology. It is of moderate character, in good condition. The County Landscape Character Assessment defines the strategy for this type of land as conserve and strengthen. The planning application process would need to make provision for strengthening the character and</u>

	<u>appearance in this area. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside. While development would have an effect on Hullavington, the site is of a size whereby landscape mitigation could be employed at the site boundaries to reduce the effect using a landscape buffer of trees shields the development contained within. There are sensitive visual receptors (residential). There would be a requirement for Green Infrastructure buffer to mature hedgerows and trees. A detailed landscape assessment should be undertaken to assess impacts and identify suitable mitigation to mitigate / enhanced visual impact as edge of village onto open countryside which could include sensitive planting, use of materials to reflect local built vernacular and buffers to screen view point from site.</u>
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	<u>In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure through public open space, connections to existing footpath networks and green corridors etc.</u>
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	<u>The development of the site for housing may offer the potential to deliver additional access to and availability of green spaces within the site.</u>
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ⁵⁹ ?	<u>The site is not within close proximity to AONB. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside and designated landscape assets.</u>
5. Protect rights of way, open space and common land?	<u>In accordance with local plan policy, the development of the site would protect and add to the existing rights of way network, open spaces and common land assets. Development in this location would not result in loss of amenity</u>

⁵⁹ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

	<u>greenspace. A byway passes on the southern boundary of the site (HULL32). Assuming these rights of ways remain open during construction and operation, no adverse effects are likely. It is likely that development in this location would therefore have an impact on views from the byway. The site is of a size where additional connectivity through the site to existing networks could be achieved.</u>
6. Protect the Western Wiltshire Green Belt from inappropriate development?	<u>The site would not result in impacts to the Western Wiltshire Green Belt.</u>
Assessment outcome (on balance) -	
Summary of SA Objective 7	
<u>The site adjoins the built edge of northern edge of Hullavington and is made up of agricultural land. There are views into the site from a number of locations from residential properties to the south and west, and open countryside to the north and east. The level of effect would depend on the design of developments and employment of appropriate mitigation such as the retention of hedgerows and mature vegetation where possible. The site is of a size which could deliver areas of public open space or green infrastructure within the site. The development of the site would not affect publicly accessible open space, green infrastructure or recreation facilities.</u>	
<u>Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 7 which would otherwise preclude the allocation of this site. Likely effects are considered to be minor adverse against this objective.</u>	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	<u>The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.</u>
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	<u>Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in accordance with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units.</u>
3. Ensure adequate provision of land to meet housing needs?	<u>In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.</u>
4. Have regard to the settlement hierarchy?	<u>In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.</u>

5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	<u>In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.</u>
6. Consider the emerging Neighbourhood Plans?	<u>The Neighbourhood Plan is at its infancy stage but is minded to allocate sites for the delivery of local housing targets. However at this time the plan is not considered sufficiently advanced.</u>
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	<u>In accordance with national policy / local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities.</u>
Assessment outcome (on balance) + + +	
<p>Summary of SA Objective 8</p> <p><u>The whole SHLAA site provides capacity for approximately 36 residential units (though this may be reduced through the mitigation set out in this assessment), which contributes towards Wiltshire’s housing supply. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a level of affordable units alongside open market units. Overall it is considered that allocation of this site would have a major positive effect in terms of meeting the aim of SA Objective 8.</u></p>	
<p>SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities Decision Aiding Questions. Will the development site...</p>	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	<u>In accordance with national policy/local plan policy, the development of the site would provide opportunities through high quality design and access for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime.</u>
2. Promote design of buildings and spaces to reduce obesity?	<u>In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site has the potential space to provide open /green space or children’s play area and other landscaping to improve facilities and amenity. High quality design and good access of the site should take into account the design and layout of the dwellings (access to and contact with nature), walking / cycle ways to promote healthy lifestyles.</u>
3. Promote the design of buildings and spaces to meet the changing needs of the population?	<u>In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design would include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young</u>

	<u>people.</u>
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	<u>There is no doctor's surgery located within Hullavington however the site falls within the catchments of Jubilee Field Surgery, (approximately 5.8 miles) Hathway Surgery in Chippenham (approximately 6.5 miles), Tolsey Practice Area in Sherston (approximately 8.5 miles) and Malmesbury Primary Area Centre (approximately 5.5 miles). The latter being the nearest has capacity to cater for additional patient demand.</u>
5. Maximise opportunities within the most deprived areas?	<u>In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation in the area. There would be some social and economic benefits for the Hullavington area through housing provision, short-term construction jobs and a larger workforce for local businesses. This site is not within one of Wiltshire's most deprived quintile group of Lower Layer Super Output Areas (LSOAs), as set out in the English Indices of Deprivation 2015: Wiltshire Report. This site is within Wiltshire 005D LSOA, which is amongst the 30% least deprived neighbourhoods in the country⁶⁰. Development of this site is likely to contribute to improving poverty and deprivation in this area.</u>
6. Reduce rural isolation, including access to services for those without a car in rural areas?	<u>The development of the site would provide housing in a sustainable location in line with the settlement strategy, with a reasonable level of access to the local services and facilities within the village. Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. The village is served by the 92 bus service. Accordingly, there is the potential to reduce rural isolation.</u>
7. Support the development of community campuses?	<u>Development of community campuses is directed to the town level and therefore this is not appropriate for this site.</u>
8. Is the site accessible to local schools and is there capacity to cope	<u>Hullavington Primary School is full but the building could be expanded on the existing site. Malmesbury Secondary</u>

⁶⁰ English indices of deprivation (DCLG, 2015)

with the additional demand generated from the site?	<u>School is also full but capable of expansion. Mitigation would be required to cater for additional pupil demand.</u>
Assessment outcome (on balance) -	
Summary of SA Objective 9	
<u>The provision of housing should reduce poverty, deprivation and promotes more inclusive and self-contained communities. The sites are within reasonable proximity to the limited services and facilities in the village however there is more limited access to the types of facilities found in larger settlements such as hospitals or colleges and this would lead to a reliance of the private vehicle. Both primary and secondary are schools are full but capable of expansion for which mitigation would be required. The surgery at Malmesbury can meet additional patient demand. Overall, effects are considered likely to be minor adverse against this objective.</u>	
SA objective 10. Reduce the need to travel and promote more sustainable transport choices Decision Aiding Questions. Will the development site...	
1. Increase walking and cycling accessibility through the use of developer contributions and site design?	<u>There is no footway or lighting on the Hullavington C1 road to the north of the village. There is a public right of way on southern boundary of the site through Watts Lane but appears to be unlit. There is a footway opposite the entrance the site. To facilitate good walking/ cycling connections the road will need to be crossed safely to access the village as there is currently no crossing. Additional connectivity could possibly be created by using this network also.</u>
2. Ensure new development incorporates facilities and infrastructure for cyclists?	<u>Development of this site is capable of incorporating infrastructure in the form of garages, sheds and secure bike stands to provide opportunities to improve cycling.</u>
5. Improve the jobs/homes balance, to reduce out-commuting?	<u>The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.</u>
4. Promote developments in accessible locations, that reduce the need to travel and reliance on the private car?	<u>The site is well located in terms of access to the primary school, post office, public house and garage. There is a bus stop approximately 200m from site at Mere Avenue and at the Telephone Exchange which are served by 92 and 37 services. The 92 serves Chippenham and Malmesbury. There are no AM bus service but an interpeak and PM peak services. The 37 has one AM service per week calling at Malmesbury, Marshfield and Bath. Chippenham railway station is beyond walking/cycling distance. However given the limited services within Hullavington it is however likely that residents would be reliant on the use of a private vehicle.</u>
Assessment outcome (on balance) - -	

Summary of SA Objective 10

The site is located in the north east of the large village of Hullavington. The site is well related to the village and its facilities. There is a footway opposite the entrance the site. To facilitate good walking/ cycling connections the road will need to be crossed safely to access the village as there is currently no crossing. The types of facilities found in higher order settlements such as Malmesbury mean that overall residents are likely to rely upon use of the private car. On the balance of evidence currently available, the effects are considered to be moderate adverse.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?

Not relevant to this location.

2. Support the rural economy?

The site would boost the number of homes and thereby increase the population of the village and wider community area. This would potentially directly assist in the support of rural services and facilities.

Assessment outcome (on balance) + + +

Summary of SA Objective 11

Development of the site would increase the local population, could contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Hullavington village. Overall it is considered that the allocation of this site would have a major positive effect against the aim of SA Objective 11.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?

The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the community area.

2. Provide a focus for development in

The development of the site for housing would not focus development in Salisbury or Trowbridge which are both

Salisbury and Trowbridge?	<u>Principal Settlements located some distance away. In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations.</u>
Assessment outcome (on balance) +	
Summary of SA Objective 12	
<u>The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would have a minor positive effect against the aim of SA Objective 12.</u>	

Site OM011 - Land at Hullavington airfield, Hullavington

Site context	
Site size: 72 ha Site capacity: approximately 1200 - 1500 dwellings	
<u>The site is a mixed use of rough grazing, agricultural field and a small industrial unit area with residential properties. The site has several field boundary dividing the site. The railway line runs along its northern boundary. It is isolated from the village of Hullavington and mainly to open countryside. The site abuts the Hullavington Airfield conservation area. Access comes from the main road towards the village (C1), the A429 or from several narrow roads through the site.</u>	
SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses	
Decision Aiding Questions. Will the development site...	
1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	<u>The site is predominately a greenfield site and would have some adverse effects regarding fragmentation of existing habitats, such as hedgerows on the field boundary. Mature trees and hedgerow form the boundaries to the site and divide up the site into several fields. However, the site is currently in arable use and is large enough for the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.</u>
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including	<u>The site is predominately a greenfield site. There are no statutory or non-statutory designations for nature conservation covering the site. the site level the grassland will need to be surveyed for assemblage diversity and type. The hedgerows within the site contribute to primary connectivity for a range of wildlife within the wider</u>

buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	<u>surrounding landscape and the slightly denser area of trees to the northern end may be important for bats, dormice and nesting birds. The protection and enhancement of protected and notable species recorded in this area will need consideration through appropriate mitigation measures. Buildings on the adjacent airfield support Annex II bat species, therefore it is vital that connectivity of habitat is retained and maintained within any adjacent development to ensure no change in the functionality of the landscape for these bats. Lighting may also be an issue as it will be necessary to create/retain/maintain dark corridors which may need to be up to 15m within the site, if surveys show key flight lines for bats. Accordingly, an ecological assessment would be required to support any planning applications.</u>
3. Result in greater community engagement with biodiversity?	<u>It is unlikely that development of this site would lead to greater community engagement with biodiversity.</u>
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	<u>There are no river corridors within or adjacent to this site. Protection should be given to mature existing hedgerows, provide habitat connectivity to the wider countryside and are potentially suitable for use by bats, badger, reptiles, and amphibians. Green corridors would be required as part of design of the site.</u>
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	<u>In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.</u>
6. Ensure all new developments have regard to and protect BAP habitats/species?	<u>In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species.</u>
7. Consider the findings of the HRA in site selection and design?	<u>The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement</u>
8. Maintain the existing extent of ancient woodland sites?	<u>The development of the site would not affect ancient woodland sites. There are no areas of ancient woodland in proximity to this site. Protection should be given to any mature trees within the site and at the site boundaries.</u>
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	<u>Not applicable – the site does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.</u>
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	<u>Not applicable – the site does not fall within one of the Council’s current guidance areas.</u>

11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	<u>The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).</u>
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 1</p> <p><u>The site is predominately a greenfield site. There are no statutory or non-statutory designations for nature conservation covering the site. the site level the grassland will need to be surveyed for assemblage diversity and type. The hedgerows should be retained, where possible, and protected and enhanced within the public realm to ensure longevity and management. The protection and enhancement of protected and notable species recorded in this area will need consideration through appropriate mitigation measures. Buildings on the adjacent airfield support Annex II bat species, therefore it is vital that connectivity of habitat is retained and maintained within any adjacent development to ensure no change in the functionality of the landscape for these bats. Ecological assessment, together with appropriate, robust mitigation and enhancement strategies will be required for this site. Overall likely effects are considered to be moderate adverse against this objective.</u></p>	
<p>SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings Decision Aiding Questions. Will the development site...</p>	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	<u>The site is situated on the northern edge of the large village of Hullavington which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site is isolated from the village and not connected by a footway and it is uncertain how this would be achievable. Overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel to Chippenham or Malmesbury for larger convenience shopping. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Given the site's prominence in the landscape setting on the rural fringe of the village and the need to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site. Further, there would also need to be a degree of landscape mitigation and sensitive design due to the site's location.</u>
2. Maximise reuse of previously developed land where possible/appropriate?	<u>This is primarily a greenfield site and there is little or no potential for maximising the reuse of previously developed land.</u>
3. Encourage remediation of contaminated land?	<u>On the basis of available evidence, it is considered unlikely that the land would be contaminated and remediation measures required in order to facilitate housing development on the site.</u>
4. Ensure the design and layout of new development supports	<u>The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.</u>

sustainable waste management?	
5. Protect and enhance soil quality?	<u>In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil contamination at this site.</u>
6. Protect the best and most versatile agricultural land?	<u>There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.</u>
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	<u>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</u>
Assessment outcome (on balance) - -	
Summary of SA Objective 2	
<u>The site is predominately greenfield and is not located on previously developed land. The site is isolated from the village and not connected by a footway and it is uncertain how this would be achievable. There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Minerals Safeguarding Area. The site is not located within, or likely to be affect a designated safeguarding zone associated with an active safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation. The agricultural quality of the land is not known, but if found to be best and most versatile its loss would be minor to negligible. Overall effects are therefore judged to be moderate adverse.</u>	
SA objective 3. Use and manage water resources in a sustainable manner	
Decision Aiding Questions. Will the development site...	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	<u>In line with national and local plan policy / practice, the development of the site for housing would be capable of positively responding to the predicted effects of climate change. There is limited supply capacity in local distribution mains and a capacity appraisal necessary to determine the scope of network reinforcement. There are no public surface water systems at this location and storm/surface water flows are managed in land drainage systems. In relation to the sewerage network, there is no capacity at the Hullavington sewage treatment works (STW) due to work at Grittleton adding to network. A capacity appraisal would also be required in respect of this. There are no planned investment works up 2020. However there is no evidence to suggest that development of the site for</u>

	<u>housing could not be capable of being supported by planned water and sewerage infrastructure capacity.</u>
2. Ensure that essential water infrastructure is co-ordinated with all new development?	<u>Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company. (See above Q1). There is no evidence to suggest that development of this site for housing could not be supported by additional water and sewerage infrastructure to cope with demand notwithstanding current capacity issues and no planned investment works until after 2020 (see Q1 above). Surface water systems provide no design capacity for new site and flows to land drainage systems.</u>
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	<u>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures / technologies and no adverse effects are foreseen.</u>
4. Consider the need for adequate provision of surface water and foul drainage?	<u>Site falls within a groundwater vulnerability area. There are known surface water disposal issues and conventional surface water systems may not work effectively due to soil/geological conditions. Surface water drainage systems must be sealed as per sewers. Where appropriate, the development of the site may need to make provision for on-site surface and foul water drainage. Consideration should be given to the inclusion of Sustainable Drainage Systems (SuDS) within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces. Ground conditions could render soakaways/infiltration systems problematic to provide. Surface water and foul drainage disposal may be an issue that would need to be addressed through any subsequent planning application process. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</u>
5. Protect, and where possible, improve surface, ground and drinking water quality?	<u>In line with the provisions of local plan policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality The site is within Groundwater Source Protection Zone 2 and further advice would need to be sought from the Environment Agency in order to support any subsequent planning application.</u>
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	<u>Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.</u>

Assessment outcome (on balance) - -

Summary of SA Objective 3

The site is within Groundwater Source Protection Zone 2 therefore any subsequent detailed development proposals would need to provide mitigation. Further advice would need to be sought from the Environment Agency. There is no evidence to suggest that development of the site for housing could not be supported by suitable and timely investment of additional water supply and sewerage infrastructure to cope with demand, nonetheless both will require capacity appraisals to ensure adequate infrastructure can be provided. No details of drainage exist as yet but there is potential to introduce pollution prevention measures, including sustainable drainage measures (SuDS) to control the risk of surface water flooding. However, mitigation could be problematic due to ground conditions. Further guidance can be found in the Wiltshire Council’s Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. Overall it is considered that there are likely moderate adverse effects against this objective.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

1. Maintain and improve local air quality?

The site is not located within an Air Quality Management Area (AQMA) and currently Hullavington does not have any specific air quality issues. No significant effects on air quality are foreseen with development at this location but housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage/local commuter traffic). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies as well as the council’s Air Quality Strategy. Such measures may, where appropriate and feasible, include maximising opportunities for use of sustainable transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.

2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?

Development of the site for housing would inevitably lead to increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.

The site does not fall within or in close proximity to any other likely significant sources of environmental pollution (air, noise and light).

	<p><u>The sewage treatment works are approximately 20m west of the site and therefore an odour assessment will be necessary to ensure that properties are not vulnerable to odour nuisance.</u></p> <p><u>The railway line is on the northern boundary of the site and is elevated on an embankment at this location. There is also a karting facility to the south eastern corner of the site and activities take place at Hullavington Airfield. Therefore would require noise and vibration assessments to ensure that properties are not vulnerable to noise and vibration nuisance.</u></p>
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	<u>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</u>
4. Seek to reduce development in or near to AQMAS ⁶¹ ?	<u>The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.</u>
5. Ensure that air quality impacts on local biodiversity sites are avoided?	<u>While development of the site may to lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</u>
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	<u>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy</u>

⁶¹ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

	<u>and advice from relevant bodies, such as good access from the site to local services, facilities and public transport.</u>
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	<u>While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</u>
Assessment outcome (on balance) - -	
Summary of SA Objective 4	
<u>The site is situated to the north of the village of Hullavington however it is not well related to the services offered at the village level which cannot be access on foot or cycle. Development is likely to increase local car and commuter traffic, and rely on the use of the private car for services and facilities, which may impact on local air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy.</u>	
<u>The site does not fall within a designated AQMA and it is unlikely that local air quality will be denigrated to the extent that this would impact on local biodiversity sites and SACs. The site is within close proximity to the sewerage works and railway line (air, noise and light pollution). An odour assessment will be required due to the proximity of the sewage treatment works to the west of the site, and a noise and vibration assessment will be required also. The development at this site would likely generate increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. This may have some adverse effects for residents of properties within the site and properties that adjoin or are in close proximity to the site. However these are not considered likely to be significant. Mitigation measures would need to be developed in accordance with national and local plan policy.</u>	
<u>Overall due to the size of the site and therefore likely car movements and air emissions, effects are considered likely to be moderate adverse against this objective.</u>	
SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions	
Decision Aiding Questions. Will the development site...	
1. Minimise emissions of greenhouse gases and ozone depleting substances?	<u>Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.</u>
2. Promote the development of	<u>Promotion and development of low carbon sources could be brought about through the design and planning</u>

renewable and low carbon sources of energy?	<u>process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.</u>
3. Promote energy efficiency in buildings and new development?	<u>Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.</u>
4. Minimise contributions to climate change through sustainable building practices?	<u>Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.</u>
Assessment outcome (on balance) -	
Summary of SA Objective 5a	
<u>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in ‘Delivering strategic objective 2: to address climate change’ and the related ‘Core Policy 41: Sustainable construction and low carbon energy’ of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices. However, the effect of the development of this site will be to increase greenhouse gas emissions overall. Likely effects are considered to be minor adverse against this objective.</u>	
SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects	
Decision Aiding Questions. Will the development site...	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<u>The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. Surface water and foul drainage disposal may be an issue that would need to be addressed through any subsequent planning application process. Localised flooding is known to occur if the stream below the railway bridge at Kingway bridge becomes blocked, the road dip under the bridge floods for several feet in depth and closes the A429. Further guidance can be found in the Wiltshire Council’s Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. Any proposals for development of this site should be informed by a site specific flood risk assessment as the site is greater than 1ha in size. The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape.</u>
2. Ensure that development can adapt	<u>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</u>

<p>to the predicted future impacts of climate change?</p>	<ul style="list-style-type: none"> • <u>hotter summers;</u> • <u>milder winters;</u> • <u>increased periods without rain;</u> • <u>increased intensity in rainfall; and</u> • <u>more extreme weather events.</u> <p><u>Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).</u></p>
<p>3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?</p>	<p><u>The site has the potential to accommodate appropriate SuDS measures to manage surface water run-off from built form. Consideration should therefore be given to the inclusion of Sustainable Drainage Systems within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces. Surface water and foul drainage disposal may be problematic to mitigate due to ground conditions. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</u></p>
<p>4. Minimise the risk of flooding to people and property (new and existing development)?</p>	<p><u>The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. (Also see comments in response to 5.1 and 5.3 above).</u></p>
<p>5. Protect and enhance the natural function of floodplains?</p>	<p><u>In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.</u></p>
<p>Assessment outcome (on balance) - -</p>	
<p>Summary of SA Objective 5b</p> <p><u>The site is located within Flood Zone 1. Surface water and foul drainage disposal may be an issue that would need to be addressed through any subsequent planning application process. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. As such, the development of this part of the site is likely to lead to an exacerbation of flood risk from fluvial sources. No details of drainage exist as yet but there is potential to introduce pollution prevention measures. Any planning application for development of the site should be supported by a Flood Risk Assessment.</u></p> <p><u>Overall effects are considered to be moderate adverse against this objective.</u></p>	
<p>SA objective 6. Protect, maintain and enhance the historic environment</p>	

Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	<u>There are no Listed Buildings or Schedule Monuments in close proximity of the site. The site is adjacent to the conservation area, with two non-listed hangars adjacent to the southern boundary of the site. It would be likely that development on this site would have an effect on the significance of the designated heritage asset.</u>
2. Ensure appropriate archaeological assessment prior to development?	<u>Assessments of the archaeological potential has been undertaken and the sensitivity of this site is low. On the basis of available evidence, there may be a need to undertake further archaeological assessments to support any subsequent development of the site. Assessments of the potential historic landscape have been undertaken and the sensitivity of this site is medium. The site is described as modern fields which consolidated earlier post medieval fields and medieval fields. This is described as possibly once medieval open fields which are uncommon survivals.</u>
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	<u>The site is predominantly greenfield and contains some existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.</u>
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	<u>Through the application of national policy/local policy, the development of the site for housing would deliver housing that maintains and enhances the distinctiveness of settlements through high quality design. Through the application of legislation and national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance designated heritage assets according to their significance. The site is adjacent to the conservation area, with two non-listed hangars adjacent to the southern boundary of the site. It would be likely that development on this site would have an effect the significance of the designated heritage asset.</u>
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	<u>No heritage asset at risk present on site.</u>
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	<u>The site is not within proximity to result in impacts to the Stonehenge and Avebury WHS and its setting.</u>
Assessment outcome (on balance) -	

Summary of SA Objective 6

The closer development is located to the conservation area and hangars, the more harm would be caused to the setting of the heritage. Development towards the western part of the site away from the conservation area would be capable of mitigation through appropriate design and siting in the event an Historic Impact Assessment reveals it's necessary to do so. Archaeological sensitivity of the site is medium therefore an archaeological assessment would be required.

Overall likely effects are considered to be minor adverse against this objective.

SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place

Decision Aiding Questions. Will the development site...

1. Protect and enhance the landscape character and scenic quality of the countryside?

The Landscape Character of this site falls within the limestone lowland typology. It is of moderate character, in good condition. The County Landscape Character Assessment defines the strategy for this type of land as conserve and strengthen. The planning application process would need to make provision for strengthening the character and appearance in this area. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside. A detailed landscape assessment should be undertaken to assess impacts and identify suitable mitigation to mitigate / enhanced visual impact as edge of village onto open countryside which could include sensitive planting, incorporating green infrastructure buffers to hedges, use of materials to reflect local built vernacular and buffers to screen view point from site.

2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?

In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure through public open space, connections to existing footpath networks and green corridors etc.

3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	<u>The development of the site for housing may offer the potential to deliver additional access to and availability of green spaces within the site.</u>
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ⁶² ?	<u>The site lies outside of the AONB. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside and designated landscape assets.</u>
5. Protect rights of way, open space and common land?	<u>In accordance with local plan policy, the development of the site would protect and add to the existing rights of way network, open spaces and common land assets. Development in this location would not result in loss of amenity greenspace. PRoW (HUL8) passes through the middle of the site from north to south which may require diversion, which may add to travel times and affect the amenity value of the path. Assuming these rights of ways remain open during construction and operation, no adverse effects are likely. It is likely that development in this location would therefore have an impact on views from the public rights of way, although this footpath could be retained as part of the development. It would be hoped that additional connectivity from the site to existing networks could be achieved.</u>
6. Protect the Western Wiltshire Green Belt from inappropriate development?	<u>The site would not result in impacts to the Western Wiltshire Green Belt.</u>
Assessment outcome (on balance) - -	
Summary of SA Objective 7 <u>The site is isolated and in open countryside to the northern of the built edge of Hullavington and is predominately agricultural land. Housing development</u>	

⁶² Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

at this site would result in housing being extruded out into the countryside, with a large presentation to the A429 and a moderate adverse impact on the visual amenity of this part of the village. The level of effect would depend on the design of the development and employment of appropriate mitigation measures such as hedgerow and mature vegetation where possible. There are no landscape designations in this area. Development of this site is not considered likely to have significant adverse effects on existing areas of green infrastructure, publicly accessible open space or other recreational facilities. Assuming that the rights of ways remain open during construction and operation, no adverse effects are likely. The site is of a size which could deliver areas of public open space or green infrastructure within the site.

Overall likely effects are considered to be moderate adverse against this objective.

SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures

Decision Aiding Questions. Will the development site...

1. Provide an adequate supply of affordable housing?	<u>The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements..</u>
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	<u>Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units.</u>
3. Ensure adequate provision of land to meet housing needs?	<u>In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.</u>
4. Have regard to the settlement hierarchy?	<u>In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.</u>
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	<u>In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.</u>
6. Consider the emerging Neighbourhood Plans?	<u>The Neighbourhood Plan is at its infancy stage but is minded to allocate sites for the delivery of local housing targets. However at this time the plan is not considered sufficiently advanced.</u>
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	<u>In accordance with national policy / local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities.</u>

Assessment outcome (on balance) + + +

Summary of SA Objective 8

The whole SHLAA site provides capacity for approximately 1200 - 1500 residential units (though this may be reduced through the mitigation set out in this assessment), which contributes towards Wiltshire’s housing supply. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units. Overall it is considered that allocation of this site would have a major positive benefit in terms of meeting the aim of SA Objective 8.

SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities
Decision Aiding Questions. Will the development site...

1. Promote design of buildings and spaces to reduce crime and the fear of crime?	<u>In accordance with national policy/local plan policy, the development of the site would provide opportunities through high quality design and access for social integration and thereby reduce crime/the fear of crime.</u>
2. Promote design of buildings and spaces to reduce obesity?	<u>In accordance with national policy/local plan policy and best practice. The site has the potential space to provide open /green space or children’s play area and other landscaping to improve facilities and amenity. High quality design and good access of the site should take into account the design and layout of the dwellings (access to and contact with nature), walking / cycle ways to promote healthy lifestyles.</u>
3. Promote the design of buildings and spaces to meet the changing needs of the population?	<u>In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design would include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.</u>
4. Ensure that new development will be accessible to health facilities, and	<u>There is no doctor’s surgery located within Hullavington however the site falls within the catchments of Jubilee Field Surgery, (approximately 5 miles) Hathway Surgery in Chippenham (approximately 6 miles), Tolsey Practice Area in</u>

that they are able to cope with the additional demand?	<u>Sherston (approximately 8 miles) and Malmesbury Primary Area Centre (approximately 5 miles). Mitigation would be required to cater for additional patient demand.</u>
5. Maximise opportunities within the most deprived areas?	<u>In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation in the area. There would be some social and economic benefits for the Hullavington area through housing provision, short-term construction jobs and a larger workforce for local businesses. This site is not within one of Wiltshire's most deprived quintile group of Lower Layer Super Output Areas (LSOAs), as set out in the English Indices of Deprivation 2015: Wiltshire Report. This site is within Wiltshire 005D LSOA, which is amongst the 30% least deprived neighbourhoods in the country⁶³. Development of this site is likely to contribute to improving poverty and deprivation in this area.</u>
6. Reduce rural isolation, including access to services for those without a car in rural areas?	<u>The development of the site would provide housing in a sustainable location in line with the settlement strategy. The site is isolated from the village and not connected by a footway and it is uncertain how this would be achievable. Accordingly, there is lessened potential to reduce rural isolation.</u>
7. Support the development of community campuses?	<u>Development of community campuses is directed to the town level and therefore this is not appropriate for this site.</u>
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	<u>A development of this size would need to be supported by a new primary school. Malmesbury Secondary School is also full but capable of expansion. Mitigation would be required to cater for additional pupil demand.</u>
Assessment outcome (on balance) - -	
Summary of SA Objective 9	

⁶³ English indices of deprivation (DCLG, 2015)

The provision of housing should reduce poverty, deprivation and promotes more inclusive and self-contained communities. The site is not within reasonable walking or cycling proximity to the limited services and facilities in the village however there is more limited access to the types of facilities found in larger settlements such as hospitals or colleges and this would lead to a reliance of the private vehicle. A development of this size would need to be supported by a new primary school. Mitigation would be required to cater for additional secondary school pupil demand and patient demand in the health services. Overall, effects are considered likely to be moderate adverse against this objective.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	<u>In accordance with national policy/local plan policy and best practice, the development of this site is capable of incorporating infrastructure to provide opportunities to improve cycling and walking routes to local services / facilities/employment. The site is isolated from the village and not connected by a footway and it is uncertain how this would be achievable.</u>
2. Ensure new development incorporates facilities and infrastructure for cyclists?	<u>Development of this site is capable of incorporating infrastructure in the form of garages, sheds and secure bike stands to provide opportunities to improve cycling.</u>
3. Improve the jobs/homes balance, to reduce out-commuting?	<u>The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site. it is likely that residents would be reliant on the use of a private vehicle. Development of this scale would need to address transport issues relating to Junction 17 of M4.</u>
4. Promote developments in accessible locations, that reduce the need to travel and reliance on the private car?	<u>The site is isolated from the village and not connected by a footway and it is uncertain how this would be achievable. Village services and connection to the bus network are not within walking distance and it is likely that residents would be reliant on the use of a private vehicle. The village is served by 2 bus services which run to Chippenham and Malmesbury (nos 37 and 92) with stops along The Street. There is no peak morning service to Malmesbury but there are regular services throughout the remainder of the day to both locations until early evening. Chippenham railway station is beyond walking/cycling distance. Given the limited services within Hullavington it is however likely that residents would be reliant on the use of a private vehicle.</u>

Assessment outcome (on balance) - -

Summary of SA Objective 10

The site is located in the north of the large village of Hullavington. The site is isolated from the village and not connected by a footway and it is uncertain

how this would be achievable. Village services and connection to the bus network are not within walking distance and it is likely that residents would be reliant on the use of a private vehicle.

Overall effects are therefore judged to be moderate adverse.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?

Not relevant to this location.

2. Support the rural economy?

The site would significantly boost the number of homes and thereby increase the population of the village and wider community area. This would potentially directly assist in the support of rural services and facilities.

Assessment outcome (on balance) + + +

Summary of SA Objective 11

Development will also increase the local population, could contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Hullavington village. Overall it is considered that it is likely that there would be no adverse effect and whilst there no known specific regeneration benefits of the site for housing development, the allocation of this site would have a major positive effect against the aim of SA Objective 11.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?

The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the community area.

2. Provide a focus for development in Salisbury and Trowbridge?

The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away. In accordance with local plan policy, the development of the site

	<u>for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations.</u>
Assessment outcome (on balance) + +	
Summary of SA Objective 12	
<u>The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would positively meet the aim of SA Objective 12.</u>	

Site 797 - Manor Farm, Kington St Michael

Site context	
Site size: 1.74ha Site capacity: approximately 42 dwellings The site is flat pasture fields, in use for poultry rearing. Area is characterised by open countryside to the west. Residential to the south and east overlook the site in various places. There is the primary school to the north. Hedgerows and some mature trees on boundaries. To the south of the site is situated Kingston Manor and associated buildings. There is a well used PRow running the length of the eastern boundary and a spur in the south to the west also.	
SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses	
Decision Aiding Questions. Will the development site...	
1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	Development of this greenfield site may have some limited adverse effects regarding fragmentation of existing habitats, such as hedgerows on the field boundary. However, the site is large enough for the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	The development of the site for housing would be unlikely to lead to adverse impacts on designated and non-designated biodiversity interests within the local area. There are no environmental designations within or in immediate proximity to the site. However, the protection and enhancement of protected and notable species recorded in this area will need consideration through appropriate mitigation measures. Agricultural fields bordered by hedgerow on eastern boundary. Hedgerow (UK BAP Priority Habitat) should be retained where possible and enhanced, and should not form domestic curtilage to ensure its long term protection and viability. Potential for roosting bats, barn owls and nesting birds in buildings and would need to be assessed. The precautionary principle must be applied and ecological assessment at site level to support individual planning applications will be required.

3. Result in greater community engagement with biodiversity?	There are no designated or non-designated biodiversity features within or adjacent to this site. Development of this site could lead to greater community engagement with biodiversity through connectivity with the PRoW network.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	There are no river corridors within or adjacent to this site. Protection should be given to mature hedgerows and trees along the boundaries. Development of the site for housing would have the potential to make suitable provision for buffers to protect any biodiversity features.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
6. Ensure all new developments have regard to and protect BAP habitats/species?	The site is bordered by hedgerow on eastern boundary. Hedgerow (UK BAP Priority Habitat) should be retained and enhanced, and should not form domestic curtilage to ensure its long term protection and viability. The development of the site for housing would be capable of delivering biodiversity improvements.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland sites. There are no areas of ancient woodland in proximity to this site. Protection should be given to any mature trees within the site and at site boundaries in the interest of visual amenity.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the site does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGS) from development?	The development of the site would be unlikely to lead to adverse impacts on designated Local Geological Sites (LGS). There are no LGS within or in close proximity to this site.
Assessment outcome (on balance) -	
Summary of SA Objective 1	
The site is on flat farmland / grazing fields in use for poultry rearing. Hedgerow (UK BAP Priority Habitat) should be retained and enhanced, and should not form	

domestic curtilage to ensure its long term protection and viability. Potential for roosting bats, barn owls and nesting birds in buildings would need to be assessed. The precautionary principle must be applied and ecological assessment at site level to support individual planning applications will be required. Minor adverse effects likely with potential for mitigation.

Overall likely effects are considered to be minor adverse against this objective.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site...

<p>1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?</p>	<p>The site is situated on the edge of the large village of Kingston St Michael which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site is located within a reasonable walking/cycling distance to the centre of the village and bus stops are present at several locations along the main road of the village (Honey Knob Hill) providing connectivity to the public transport network. Overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel to Chippenham or Malmesbury for larger convenience shopping. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Given the site's prominence in the landscape setting on the rural fringe of the village and to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site. There would also need to be a degree of landscape mitigation and sensitive design due to the site's location and relationship within the Conservation Area and nearby Listed buildings.</p>
<p>2. Maximise reuse of previously developed land where possible/appropriate?</p>	<p>This is a greenfield site and there is little or no potential for maximising the reuse of previously developed land.</p>
<p>3. Encourage remediation of contaminated land?</p>	<p>At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. The site is located on greenfield arable land, as opposed to brownfield (i.e. previously developed land). On the basis of available evidence, it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.</p>
<p>4. Ensure the design and layout of new development supports sustainable waste management?</p>	<p>The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team</p>
<p>5. Protect and enhance soil quality?</p>	<p>In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil contamination at this site.</p>

6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 2</p> <p>The site is greenfield and is not located on previously developed land. There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Minerals Safeguarding Area. The site is not located within, or likely to be affect a designated safeguarding zone associated with an active safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p> <p>Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 2 which would otherwise preclude the allocation of this site. Likely effects are considered to be minor adverse against this objective.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner Decision Aiding Questions. Will the development site...</p>	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	In line with national and local plan policy / practice, the development of the site for housing would need to be capable of positively responding to the predicted effects of climate change. There is capacity from local mains for water supply. For foul water connecting flows may require upsizing works to bolster downstream network. There is no design capacity available in existing sewerage water system. Development of the site would be unable to proceed without satisfactory outfall for surface water flows. No planned investment works are scheduled until after 2020. However, there is no evidence to suggest that development of the site for housing could not be capable of being supported by planned water and sewerage infrastructure capacity.
2. Ensure that essential water infrastructure is co-ordinated with all new development?	In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. (Also see response to Q1).
3. Ensure the installation of water saving measures such as rainwater	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water

harvesting and water metering?	utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures / technologies and no adverse effects are foreseen.
4. Consider the need for adequate provision of surface water and foul drainage?	Where appropriate, the development of the site may need to make provision for on-site surface and foul water drainage. Disposal of surface water is likely to be an issue and may require crossing of third party land, and may require pumping to obtain an outfall. The catchment is above Sutton Benger where there are reported flood risk issues when the River Avon is high. There is particular issue relating to capacity of the bridge - housing estate in a low spot. Consideration should be given to the inclusion of SuDS within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. (Also see response to Q1).
5. Protect, and where possible, improve surface, ground and drinking water quality?	In line with the provisions of local plan policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. It is considered that this is possible on this site. The site is within Groundwater Source Protection Zone 2 and further advice would need to be sought from the Environment Agency at any subsequent planning application stage.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 3</p> <p>There is capacity from local mains for water supply. For foul water, connecting flows may require upsizing works to bolster the downstream network. There is currently no capacity available in the existing sewerage water system. Site unable to proceed without satisfactory outfall for surface water flows. Disposal of surface water could be an issue and may require crossing of third party land and may require pumping to obtain an outfall. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</p> <p>The site is within Groundwater Source Protection Zone 2 and further advice would need to be sought from the Environment Agency at any subsequent planning application stage. Consideration would need to be given to the inclusion of SuDS to control the risk of surface water flooding from impermeable surfaces. Overall it is considered that there are likely significant moderate adverse effects against this objective.</p>	
SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution	

Decision Aiding Questions. Will the development site...	
<p>1. Maintain and improve local air quality?</p>	<p>The site is not located within an Air Quality Management Area (AQMA) and currently Kington St. Michael does not have any specific air quality issues. No significant effects on air quality are foreseen with development at this location but housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage/local commuter traffic). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies as well as the council's Air Quality Strategy.</p> <p>Such measures may, where appropriate and feasible, include maximising opportunities for use of sustainable transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for housing would inevitably lead to increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site does not fall within or in close proximity to any other likely significant sources of environmental pollution (air, noise, odour and light).</p>
<p>3. Mitigate the impacts from uses that generate NO₂, SO₂ and PM₁₀ or other particulates?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p>

4. Seek to reduce development in or near to AQMAS ⁶⁴ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies, such as good access from the site to local services, facilities and public transport.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 4</p> <p>The site is in a central location to the village of Kington St Michael and is within an accessible location to the services offered at the village level. Development is likely to increase local commuter traffic, and rely on the use of the private car for larger services and facilities, which may impact on local air quality although the site is within a central location and village services could be accessed by cycle or by foot. Development is likely to lead to increases in traffic on local roads which may adversely affect air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality</p>	

⁶⁴ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

<p>Strategy. The site does not fall within a designated AQMA and is unlikely to adversely affect any AQMA elsewhere within the count. It is unlikely that local air quality will be denigrated to the extent that this would impact on local biodiversity sites and SACs. The site does not fall within or in close proximity to any likely significant sources of environmental pollution (air, noise, odour, light). The development at this site would likely generate increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. This may have some adverse effects for residents of neighbouring properties that adjoin or are in close proximity to the site. However these are not considered likely to be significant. Mitigation measures would need to be developed in accordance with national and local plan. Overall likely effects are considered to be minor adverse against this objective.</p>	
<p>SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions Decision Aiding Questions. Will the development site...</p>	
<p>1. Minimise emissions of greenhouse gases and ozone depleting substances?</p>	<p>Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.</p>
<p>2. Promote the development of renewable and low carbon sources of energy?</p>	<p>Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.</p>
<p>3. Promote energy efficiency in buildings and new development?</p>	<p>Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.</p>
<p>4. Minimise contributions to climate change through sustainable building practices?</p>	<p>Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.</p>
<p>Assessment outcome (on balance) -</p>	
<p>Summary of SA Objective 5a</p> <p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon</p>	

energy sources and encouragement of sustainable building practices. However, the effect of the development of this site will be to increase greenhouse gas emissions overall. Likely effects are considered to be minor adverse against this objective.	
SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects	
Decision Aiding Questions. Will the development site...	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. Any proposals for development of this site should be informed by a site specific flood risk assessment as the site is greater than 1ha in size. Disposal of surface water is likely to be an issue and may require crossing of third party land, as well as pumping to obtain a suitable outfall. Consideration should be given to the inclusion of SuDS within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape.
2. Ensure that development can adapt to the predicted future impacts of climate change?	As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience: <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	Disposal of surface water likely to be an issue and may require crossing of third party land and may require pumping to obtain an outfall. Whilst conventional soakaways/infiltration measures may not be effective, the site has the potential to accommodate some appropriate SuDS measures to manage surface water run-off from built form. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. (Also see comments in response to 5.1 & 5.3 above).
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.

Assessment outcome (on balance) - -

Summary of SA Objective 5b

The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. Disposal of surface water likely to be an issue and may require crossing of third party land and may require pumping to obtain an outfall. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. Development of the site may lead to localised surface water flooding. There is the potential to increase flood risk elsewhere and contribute to surface water runoff of pollution. A planning application would need to be supported by a comprehensive Flood Risk Assessment.

Overall likely effects are considered to be moderate adverse against this objective.

SA objective 6. Protect, maintain and enhance the historic environment
Decision Aiding Questions. Will the development site...

1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The site lies wholly within the designated Kington St Michael Conservation Area. This part of the Conservation Area is characterised by Manor Farm and its grounds. The farmhouse is set back from the road with an attractive paddock to the front. Land to the rear of the farm comprises a number of buildings but is predominantly open in character and provides a distinct visual and physical separation of more modern estate housing to the north and the historic Kington Manor House to the south.. The site is in close proximity to the Listed Buildings and spreads back beyond the historic building line which is principally ribbon development. There are no scheduled Monuments within close proximity of the site. Development at this site is likely to have a significant effect on the Conservation Area, listed buildings and their settings. It would not seem capable of mitigation.
2. Ensure appropriate archaeological assessment prior to development?	On the basis of available evidence, there would be a need to undertake further archaeological assessments to support any subsequent development of the site. Assessments of the archaeological potential and the potential historic landscape have been undertaken and the sensitivity of this site is medium. The site is described as modern settlement on site of historic farmstead. Some elements of the post medieval (or earlier) farmstead still exist in this area and remain a legible reminder of the past character.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate	The site is within the heart of the Kington St Michael Conservation Area. The nucleus of the village has developed eastwards of the Medieval Church and Manor Grounds. This older core of the village is characterised by its fairly wide Market Street flanked by an irregular building line, sometimes continuous but with a variety of building styles and rooflines. The variety of

<p>design, taking into account the management objectives of Conservation Areas?</p>	<p>past development gives a very compact and distinctly Cotswold character to the village. The Conservation Area also encompasses the back boundaries of gardens. This part of the Conservation Area is characterised by Manor Farm and its grounds. The farmhouse is set back from the road with an attractive paddock to the front. Land to the rear of the farm comprises a number of buildings but is predominantly open in character and provides a distinct visual and physical separation of more modern estate housing to the north and the historic Kington Manor House to the south.</p> <p>It is considered likely that development on this site would have an effect on the significance of the conservation area of Kington St Michael.</p>
<p>5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?</p>	<p>No known heritage asset at risk present on site.</p>
<p>6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?</p>	<p>The site is not within proximity to result in impacts to the Stonehenge and Avebury WHS and its setting.</p>
<p>Assessment outcome (on balance) - - -</p>	
<p>Summary of SA Objective 6</p>	
<p>The site falls inside of the Kington St Michael Conservation Area. The development here would be unacceptable due to the location and impact on the Conservation Area and on the historic building line which is principally ribbon development; the site development would harm the setting of the heritage assets and the Conservation Area. Overall it is considered that there are significant barriers in regard to SA Objective 6, in relation to potential harmful impact on the Conservation Area which would preclude allocation of this site. Likely effects are considered to be major adverse against this objective.</p>	
<p>SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place</p>	
<p>Decision Aiding Questions. Will the development site...</p>	
<p>1. Protect and enhance the landscape character and scenic quality of the countryside?</p>	<p>The Landscape Character of this site falls within the limestone lowland typology. It is of moderate character, in good condition. The County Landscape Character Assessment defines the strategy for this type of land as conserve and strengthen. The planning application process would need to make provision for strengthening the character and appearance in this area. While development would have an effect on Kington St Michael, the site is of a size whereby landscape mitigation could be employed to offset the potential landscape & visual impacts of the site by robust mitigation and enhancement strategies including boundaries to reduce the effect using a landscape buffer of trees shields the development contained within. The site has woodland cover/veteran trees and hedgerow on site, within heritage designation. There is low intervisibility and sensitive visual receptor (residential). The site is within Kington St Michael Conservation Area. There would</p>

	<p>be a requirement for Green Infrastructure buffer to mature hedgerows and trees. A detailed landscape assessment should be undertaken to assess impacts and identify suitable mitigation to mitigate / enhance visual impact as edge of village onto open countryside which could include sensitive planting, use of materials to reflect local built vernacular and buffers to screen view point from site. Housing development at this site would result in potential landscape & visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies.</p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p>In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure through public open space, connections to existing footpath networks and green corridors etc.</p>
<p>3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?</p>	<p>The development of the site for housing may offer the potential to deliver additional access to and availability of green spaces within the site.</p>
<p>4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs⁶⁵?</p>	<p>The site lies outside of the AONB. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance through robust mitigation measures the intrinsic character and scenic beauty of the countryside and designated landscape assets.</p>
<p>5. Protect rights of way, open space and common land?</p>	<p>In accordance with local plan policy, the development of the site would protect and add to the existing rights of way network, open spaces and common land assets. Development in this location would not result in loss of amenity greenspace. PRowS (KSTM12 and KSTM21) pass through the site which would require diversion, which may add to travel times and affect the amenity value of the path. Assuming these rights of ways remain open during construction and operation, no adverse effects are likely. It is likely that development in this location would therefore have an impact on views from various public rights of way, although these footpaths could be retained as part of the development. The site is of a size where additional connectivity</p>

⁶⁵ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

	through the site to existing networks could be achieved.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site would not result in impacts to the Western Wiltshire Green Belt.
Assessment outcome (on balance) -	
Summary of SA Objective 7	
<p>The site is on the rural fringe of Kington St Michael and within Kington St Michael Conservation Area and in close proximity to Listed Buildings, and comprises of flat agricultural land. There are views into the site from a number of locations from residential properties. The level of effect would depend on the design of developments and employment of appropriate mitigation. The site is of a size which could deliver areas of public open space or green infrastructure within the site. Housing development at this site would result in potential landscape & visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies including requirement for GI buffer to mature hedgerows and trees.</p> <p>On the balance of evidence currently available the effects are considered to be minor adverse against this objective.</p>	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.

6. Consider the emerging Neighbourhood Plans?	Neighbourhood Plan is seeking to allocate sites for the delivery of local housing targets. However at this time the plan is not considered sufficiently advanced.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy / local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities.
Assessment outcome (on balance) + + +	
<p>Summary of SA Objective 8</p> <p>The whole SHLAA site provides capacity for approximately 42 residential units, which contributes towards Wiltshire’s housing supply. The Core Strategy also requires a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units. Overall it is considered that allocation of this site would have a major benefit in terms of meeting the aim of SA Objective 8.</p>	
<p>SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities through high quality design and access for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site has the potential space to provide open /green space or children’s play area and other landscaping to improve facilities and amenity. High quality design and good access of the site should take into account the design and layout of the dwellings (access to and contact with nature), walking / cycle ways to promote healthy lifestyles.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	<p>In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design would include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.</p> <p>In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design and good access of the site should take into account the design and layout of the mixed type dwellings, walking / cycle ways to attempt to future proof the development and meet the changing needs of the population. This would include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.</p>

<p>4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?</p>	<p>There is no doctor's surgery located with Kington St Michael however the village does fall within the catchments of Sutton Benger (approximately 3.7 miles), Yatton Keynell (approximately 3.6 miles) and Rowden Surgery, Hathaway Surgery and Jubilee Field Surgery in Chippenham (approximately 3 miles). Mitigation would be required to support additional patient capacity.</p>
<p>5. Maximise opportunities within the most deprived areas?</p>	<p>In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation in the area. There would be some social and economic benefits for the Kington St Michael area through housing provision, short-term construction jobs and a larger workforce for local businesses. This site is not within one of Wiltshire's most deprived quintile group of Lower Layer Super Output Areas (LSOAs), as set out in the English Indices of Deprivation 2015: Wiltshire Report. This site is within Wiltshire 008B LSOA, which is amongst the 30% least deprived neighbourhoods in the country⁶⁶. Development of this site is likely to contribute to improving poverty and deprivation in this area.</p>
<p>6. Reduce rural isolation, including access to services for those without a car in rural areas?</p>	<p>The development of the site would provide housing in a sustainable location in line with the settlement strategy, with a reasonable level of access to the local services and facilities within the village. Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. The village is serviced by the 92 bus route. Given the limited services within Kington St Michael it is however likely that residents would be reliant on the use of a private vehicle. The site offers the benefits of providing housing to meet need, including affordable housing, and improved viability of local services and facilities. In supporting local services, the need to travel would be reduced as would the potential for isolation and social exclusion.</p>
<p>7. Support the development of community campuses?</p>	<p>Development of community campuses is directed to the town level and therefore this is not appropriate for this site.</p>

⁶⁶ English indices of deprivation (DCLG, 2015)

8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	The site falls in the Kington St Michael Church of England Primary School and Chippenham Secondary Schools catchment area. Kington St Michael Primary School has some surplus places. For secondary school provision, the expansion of one or more of the Chippenham Secondary Schools will be required to cater for all of the proposed housing in and around Chippenham and mitigation to support additional capacity to cater for pupils arising from development would be sought.
Assessment outcome (on balance) -	
Summary of SA Objective 9 The provision of housing should reduce poverty, deprivation and promote more inclusive and self-contained communities. The sites are within reasonable proximity to the limited services and facilities in the village however there is more limited access to the types of facilities found in larger settlements such as hospitals or colleges and this would lead to a reliance of the private vehicle. The primary school has some surplus places. Mitigation would be required to support additional patient capacity within the relevant doctors surgery. Overall it is considered that allocation of this site would have a minor adverse effect on SA objective 9.	
SA objective 10. Reduce the need to travel and promote more sustainable transport choices Decision Aiding Questions. Will the development site...	
1. Increase walking and cycling accessibility through the use of developer contributions and site design?	The eastern boundary of the site included access from the main road that runs through Kington St Michael. There is scope to extend footpath provision to within the site to connect to the existing PRoW network. Opportunities for increasing walking accessibility to facilities are therefore limited.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of this site is capable of incorporating infrastructure in the form of garages, sheds and secure bike stands to provide opportunities to improve cycling.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations, that reduce the need to travel and reliance on the private car?	The site is well located in terms of access to the local primary school, community shop, café and pub. There is a bus stop at the Ham 120m from site, which is served by 92 service. The 92 serves Chippenham and Malmesbury - no AM bus service but an interpeak and PM peak services. Chippenham railway station is beyond walking/cycling distance. Given the limited services within Kington St Michael it is likely that residents would be reliant on the use of a private vehicle.
Assessment outcome (on balance) -	
Summary of SA Objective 10	

The site is located on the western fringe of the Large Village of Kington St Michael. Direct vehicular access to this site is considered to be achievable off the main road through the village which has a footway. The site is closely related to the village and is within walking distance of the services and facilities within the settlement. There is more limited access to the types of facilities found in higher order settlements such as Chippenham which means residents are likely to rely upon use of the private car to reach larger services and facilities. Public footpaths whilst in the vicinity and having the potential to be connected to are unlikely to materially increase walking accessibility to the centre of the village.

Overall likely effects are considered to be minor adverse against this objective.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.
2. Support the rural economy?	The site would boost the number of homes and thereby increase the population of the village and wider community area. This would potentially directly assist in the support of rural services and facilities.

Assessment outcome (on balance) + +

Summary of SA Objective 11
 Development will also increase the local population resulting in a contribution to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Kington St Michael village. Overall it is considered that it is likely that there would be no adverse effect and whilst there no known specific regeneration benefits of the site for housing development, the allocation of this site would be likely to have a positive effect against the aim of SA Objective 11.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the community area.
---	---

2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away. In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations.
Assessment outcome (on balance) +	
<p>Summary of SA Objective 12</p> <p>The option does not lead to the loss of designated employment land, although it will lead to a loss of land in agricultural use. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. On balance, the effects are considered mixed/neutral. Overall it is considered that allocation of this site would positively meet the aim of SA Objective 12.</p>	

Yatton Keynell

Site 474b - Land adjacent to The Old Forge, The Street

<p>Site context Site size: 0.27 ha Site capacity: approximately 7 dwellings</p> <p>The site is on flat land which is a residential dwelling (the Old Forge) and garden. It has mature trees on edge / the boundaries. It is surrounded by open countryside with the exception of residential properties to the immediate west and south of the site. The main road into the village is the southern boundary. There is a single land access track to the countryside to the north of the site on the north western boundary of the site.</p>	
<p>SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses Decision Aiding Questions. Will the development site...</p>	
1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	Development of this greenfield site may have some adverse effects regarding fragmentation of existing habitats such as hedgerows on the field boundary. The site is currently in domestic use and it is unlikely that the site is large enough for the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate	The development of the site for housing would be unlikely to lead to adverse impacts on designated and non-designated biodiversity interests within the local area. There are no biodiversity designations within or in close proximity to this site. It is a small site of domestic use with hedgerows and trees. Some potential for great crested newt terrestrial habitat. The evidence

mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	base indicates there are few or no ecological issues in relation to this site. However, the precautionary principle must be applied and ecological assessment at site level to support individual planning applications will be required.
3. Result in greater community engagement with biodiversity?	It is unlikely that development of this site would lead to greater community engagement with biodiversity.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	There are no river corridors within or adjacent to this site. Development of the site for housing would have the potential to make suitable provision for buffers to protect any biodiversity features.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	The site is currently in domestic use and it is unlikely that the site is large enough for the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.
6. Ensure all new developments have regard to and protect BAP habitats/species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland sites. There are no areas of ancient woodland in proximity to this site. Protection should be given to any mature trees within the site and at site boundaries.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the site does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to adverse impacts on designated Local Geological Sites (LGS). There are no LGS within or in close proximity to this site.

Assessment outcome (on balance) -

Summary of SA Objective 1

The site is a domestic house and garden, which generally has limited ecological value due to the nature of the land use. At the boundaries there is a mixture of low level fencing and hedgerows with few trees that may support protected species. There is potential to create or enhance habitats. The precautionary principle must be applied and ecological assessment at site level to support individual planning applications will be required. The likely effects are considered to be minor adverse against this objective.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site...

<p>1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?</p>	<p>The site is situated on the edge of the large village of Yatton Keynell which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site is located within a reasonable walking/cycling distance to the centre of the village (only minor area where footway is absent and several bus stops are present within the village providing connectivity to the public transport network. Overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel for larger convenience shopping. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Given the site's prominence in the landscape setting on the rural fringe of the village and to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site. There would also need to be a degree of landscape mitigation and sensitive design due to the site's location.</p>
<p>2. Maximise reuse of previously developed land where possible/appropriate?</p>	<p>This is a greenfield site and there is little or no potential for maximising the reuse of previously developed land.</p>
<p>3. Encourage remediation of contaminated land?</p>	<p>At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. The site is located on greenfield arable land, as opposed to brownfield (i.e. previously developed land). On the basis of available evidence, it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.</p>
<p>4. Ensure the design and layout of new development supports sustainable waste management?</p>	<p>The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.</p>
<p>5. Protect and enhance soil quality?</p>	<p>In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil</p>

	contamination at this site.
6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.
Assessment outcome (on balance) -	
Summary of SA Objective 2	
<p>The site is greenfield and is not located on previously developed land. There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Minerals Safeguarding Area. The site is not located within, or likely to be affect a designated safeguarding zone associated with an active safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p> <p>Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 2 which would otherwise preclude the allocation of this site. The likely effects are considered to be minor adverse against this objective.</p>	
SA objective 3. Use and manage water resources in a sustainable manner	
Decision Aiding Questions. Will the development site...	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	<p>In line with national and local plan policy / practice, the development of the site for housing would need to be capable of positively responding to the predicted effects of climate change.</p> <p>There is limited capacity available from local mains which may require network reinforcement if additional capacity is required to serve other development sites in the village. An off-site foul water connecting sewer exists with capacity for foul water flows only (and not storm water). There is no design capacity available in existing storm water system. Development of the site would be unable to proceed without satisfactory outfall for an agreed surface water discharge. There are no programmed investment works until 2020. However, there is no evidence to suggest that development of the site for housing could not be capable of being supported by planned water and sewerage infrastructure capacity.</p>
2. Ensure that essential water infrastructure is co-ordinated with all	In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. There is no evidence to suggest that development of this site for housing could not

new development?	be supported by additional water and sewage infrastructure to cope with demand. (see Q1 above). Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures / technologies and no adverse effects are foreseen.
4. Consider the need for adequate provision of surface water and foul drainage?	Site falls within a groundwater vulnerability area. There are known surface water disposal issues and conventional surface water systems may not work effectively due to soil/geological conditions. Surface water drainage systems must be sealed as per sewers. There are numerous ponds in the general area indicate a high standing water level and to reach ponds would for the purpose of managing surface water discharge could involve crossing third party land. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.
5. Protect, and where possible, improve surface, ground and drinking water quality?	In line with the provisions of local plan policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. It is considered that this is possible on this site. The site is within Groundwater Source Protection Zone 2 and further advice would need to be sought from the Environment Agency at any subsequent planning application stage.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 3</p> <p>There is no evidence to suggest that development of the site for housing could not be supported by additional water and sewerage infrastructure to cope with demand, nonetheless consideration will need to be given to capacity issues in relation to drinking water and sewerage infrastructure in the form of a detailed assessment to support a planning application. The site falls within groundwater vulnerability. Further advice on these matters would need to be sought from the Environment Agency at the detailed planning application stage.</p> <p>There is limited capacity available from local mains which may require network reinforcement if additional capacity is required to serve other development sites in the</p>	

village. An off-site foul water connecting sewer exists with capacity for foul water flows only.

Conventional soakaways/infiltration systems may not work effectively due to soil/geological conditions. Numerous ponds in the general area indicating a high standing water level and to reach ponds would involve crossing third party land. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. No details of drainage exist as yet but there is potential to introduce pollution prevention measures, including sustainable drainage measures (SuDS). Such matters can be addressed appropriately at the detailed design stage in consultation with the Environment agency and water utility companies. Overall it is considered that the effects are considered likely to be moderate adverse against this objective overall.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

<p>1. Maintain and improve local air quality?</p>	<p>The site is not located within an Air Quality Management Area (AQMA) and currently Yatton Keynell does not have any specific air quality issues. No significant effects on air quality are foreseen with development at this location but housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage/local commuter traffic). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies as well as the council's Air Quality Strategy.</p> <p>Such measures may, where appropriate and feasible, include maximising opportunities for use of sustainable transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing.</p> <p>Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and</p>	<p>Development of the site for housing would inevitably lead to increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts</p>

vibration through the layout, design and/or location of development?	would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site does not fall within or in close proximity to any other likely significant sources of environmental pollution (air, noise, odour and light).
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAS ⁶⁷ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies, such as good access from the site to local services, facilities and public transport.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.

⁶⁷ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

Assessment outcome (on balance) -

Summary of SA Objective 4

The site is in a south location to the village of Yatton Keynell and is within an accessible location to the services offered at the village level. Development is likely to increase local commuter traffic, and rely on the use of the private car for larger services and facilities, which may impact on local air quality although the site is within a central location and village services could be accessed by cycle or by foot. Development is likely to lead to increases in traffic on local roads which may adversely affect air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy, such as landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.

The site does not fall within a designated AQM and is unlikely to adversely affect any AQM elsewhere within the county. It is unlikely that local air quality will be denigrated to the extent that this would impact on local biodiversity sites and SACs. The site does not fall within or in close proximity to any likely significant sources of environmental pollution (air, noise, odour and light). The development at this site would likely generate increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. This may have some adverse effects for residents of neighbouring properties that adjoin or are in close proximity to the site. However these are not considered likely to be significant. Mitigation measures would need to be developed in accordance with national and local plan policy, for example an acoustic buffer could be required to reduce the impact of the development and pedestrian and cycle linkages can be made with adjoining residential area but likely that car use will increase. A new bus stop could be created and improvements to cycle/walking linkages.

Overall it likely effects are considered to be minor adverse against this objective.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

<p>1. Minimise emissions of greenhouse gases and ozone depleting substances?</p>	<p>Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.</p>
<p>2. Promote the development of renewable and low carbon sources of energy?</p>	<p>Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement</p>

	that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.
Assessment outcome (on balance) -	
Summary of SA Objective 5a	
<p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices. However, the effect of the development of this site will be to increase greenhouse gas emissions overall. However, the effect of the development of this site will be to increase greenhouse gas emissions overall. Effects are considered to be minor adverse against this objective.</p>	
SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects	
Decision Aiding Questions. Will the development site...	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. Any proposals for development of this site should be informed by a site specific flood risk assessment as the site is greater than 1ha in size. The site falls within a groundwater vulnerability area, which will require testing and monitoring for at least 12 months to determine summer and winter water levels. There are known surface water disposal issues and conventional soakaways/infiltration systems may not work effectively.
2. Ensure that development can adapt to the predicted future impacts of climate change?	<p>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat</p>

	resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	The site falls within groundwater vulnerability. Conventional soakways/infiltration systems may not work effectively. There are numerous ponds in the general area indicate a high standing water level; and to reach ponds for the purpose of discharging surface waters may involve crossing third party land. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. (Also see response to Q5:1 & 3).
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
Summary of SA Objective 5b	
<p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. The site falls within groundwater vulnerability. There are numerous ponds in the general area indicating a high standing water level and to reach ponds for the purposes of discharging surface water may involve crossing third party land. No details of drainage exist as yet but there is potential to introduce pollution prevention measures. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</p> <p>Overall likely effects are considered to be moderate adverse against this objective.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The site is located approximately 90m north from the grade II Listed Building, The School House and School. The Yatton Keynell Conservation Area is approximately 230m to the north of the site. The site is separated from these listed buildings by vegetation and existing development and it would be unlikely that development on this site would have an effect the significance of the designated heritage asset. The site appears to potentially contain the remains of a smithy according to the late 19 th Century Mapping, its road side position would appear to indicate little impact on the setting of the Conservation Area or listed building (the Old School House) as existing development already surrounds this building. The site would not be in keeping with the historic building line of the southern end of the village. There are no Schedule Monuments in close proximity of the site.

2. Ensure appropriate archaeological assessment prior to development?	The archaeological potential of the site has been evaluated as low and it is noted that there is no need to undertake further archaeological assessments to support any subsequent development of the site. An assessment of the potential historic landscape has been carried out and the sensitivity of this site has been assessed as 'high'. The site is described as an historic core of village' with issues relating to the historic character and layout of the settlement. An Historic Landscape Characterisation Assessment will be required to be undertaken to support development at this site.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	The Yatton Keynell Conservation Area is approximately 230m to the north of the site. The site appears to potentially contain the remains of a smithy according to the late 19 th Century Mapping its road side position would appear to indicate little impact on the setting of the Conservation Area or listed building (the Old School House Grade II) as existing development already surrounds this building.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	No heritage asset at risk present on site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not within proximity to result in impacts to the Stonehenge and Avebury WHS and its setting.
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 6</p> <p>Development on this site is likely to give rise to negative impacts on the historic environment of Yatton Keynell. It is likely that there would be little impact on the settings on nearby Conservation Area but would need to be considered in the design and layout of any future development. The site would not be in keeping with the historic building line of the southern end of the village. An Historic Landscape Characterisation Assessment will be required to be undertaken to support development at this site. Overall it is considered that there are moderate adverse effects in regard to SA Objective 6.</p>	
<p>SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Protect and enhance the landscape	The Landscape Character of this site falls within the limestone lowland typology. It is of moderate character, in good

<p>character and scenic quality of the countryside?</p>	<p>condition. The County Landscape Character Assessment defines the strategy for this type of land as conserve and strengthen. The planning application process would need to make provision for strengthening the character and appearance in this area. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside. The site adjacent to Cotswold AONB, which has the highest status of protection in relation to landscape and scenic beauty and would have a requirement for Green Infrastructure buffer to mature trees, with low intervisibility and sensitive visual receptors (residential). The site is reasonably well enclosed from the wider landscape, but occupies a prominent position in relation to the historic linear building line of the village. A detailed landscape assessment should be undertaken to assess impacts and identify suitable mitigation to mitigate / enhanced visual impact as edge of village onto open countryside which could include sensitive planting, use of materials to reflect local built vernacular and buffers to screen view point from site. Housing development at this site would result in potential landscape & visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies however this would reduce the amount of development at this location.</p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p>Given the size of the site development for housing would not offer the potential to deliver a comprehensive network of Green Infrastructure.</p>
<p>3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?</p>	<p>The development of the site for housing may offer the potential to deliver additional access to and availability of green spaces within the site.</p>
<p>4. Conserve and enhance areas with landscape designations and take account of their management</p>	<p>The site is adjacent to the Cotswold AONB, which has the highest status of protection in relation to landscape and scenic beauty. The site is reasonably well enclosed from the wider landscape, but occupies a prominent position in relation to the rest of the village which has an historic linear building line. It is likely that significant landscaping would be required to ensure</p>

objectives, in particular for the three local AONBs ⁶⁸ ?	appropriate protection and enhancement of the area, which may not be feasible.
5. Protect rights of way, open space and common land?	Development in this location would not result in loss of amenity greenspace or common land. PRoW (YKEY12) lies to the north west on the site along the track. If access is required for the site through this track then consideration will have to be given to the PRoW, both during construction phase and once completed. It is likely that development in this location would therefore have an impact on views from the PRoW to the north of the site. The site is of a size where additional connectivity through the site to existing networks could not be achieved.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site would not result in impacts to the Western Wiltshire Green Belt.
Assessment outcome (on balance) - -	
Summary of SA Objective 7	
<p>The site is adjacent to the Cotswold AONB, which has the highest status of protection in relation to landscape and scenic beauty. Mitigation of effects from development of this site on the AONB would likely be problematic to mitigate. The site adjoins the built edge of southern edge of Yatton Keynell and is in domestic use. The site is reasonably well enclosed from the wider landscape, but occupies a prominent position in relation to the historic linear building line of the village. The site would have a requirement for GI buffer to mature trees. Housing development at this site would result in potential landscape & visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies. There are views into the site from a number of locations from residential properties, the Cotswold AONB to the west and open countryside to the north and east. The level of effect would depend on the design of developments and employment of appropriate mitigation such as the retention of hedgerows and mature vegetation where possible. The site is not of a size which could deliver areas of public open space or green infrastructure within the site. The development of the site would not affect publicly accessible open space, green infrastructure, or recreation facilities. PRoW (YKEY12) lies to the north west on the site along the track. If access is required for the site through this track then consideration will have to be given to the PRoW, both during construction phase and once completed.</p>	

⁶⁸ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

On the balance of evidence currently available the effects are considered to be moderate adverse against this objective.	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	The development of the site would help boost the local supply of housing. However, as the capacity of the site is only 7 dwellings opportunities to deliver affordable housing are likely to be limited, in accordance with national policy requirements then at this point in time.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	There is no known emerging Neighbourhood Plan.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy / local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities.
Assessment outcome (on balance) +	
Summary of SA Objective 8	
The whole SHLAA site provides capacity for up to approximately 7 residential units (though this may be reduced through the mitigation set out in this assessment), which contributes towards Wiltshire's housing supply. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy. Overall it is considered that there would be a minor positive effect on SA Objective 8.	

SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities through high quality design and access for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site has the potential space to provide open /green space or children’s play area and other landscaping to improve facilities and amenity. High quality design and good access of the site should take into account the design and layout of the dwellings (access to and contact with nature), walking / cycle ways to promote healthy lifestyles.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design and good access of the site should take into account the design and layout of the mixed type dwellings, walking / cycle ways to attempt to future proof the development and meet the changing needs of the population. This would include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	There is a doctor’s surgery, Jubilee Field Surgery located in Yatton Keynell (0.2 miles). Mitigation would be required to support additional patient capacity.
5. Maximise opportunities within the most deprived areas?	In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation in the area. There would be some social and economic benefits for the Yatton Keynell area through housing provision, short-term construction jobs and a larger workforce for local businesses. This site is not within one of Wiltshire’s most deprived quintile group of Lower Layer Super

	Output Areas (LSOAs), as set out in the English Indices of Deprivation 2015: Wiltshire Report. This site is within Wiltshire 008B LSOA, which is amongst the 30% least deprived neighbourhoods in the country ⁶⁹ . Development of this site is likely to contribute to improving poverty and deprivation in this area.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The development of the site would provide housing in a sustainable location in line with the settlement strategy, with a reasonable level of access to the local services and facilities within the village. Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. The village is serviced by the 35 and 635 bus routes. Accordingly, there is the potential to reduce rural isolation.
7. Support the development of community campuses?	Development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	The site falls in the Brook Valley Church of England Primary School and Chippenham Secondary Schools catchment area. The primary school is almost full and forecast to remain so. They are on a large site however so expansion should be possible. The numbers of houses are low therefore expansion of the school wouldn't be necessary. Mitigation would be required to support additional pupil capacity. Expansion of one or more of the Chippenham Secondary Schools will be required to cater for all of the proposed housing in and around Chippenham and mitigation to support additional capacity to cater for pupils arising from development would be sought.
Assessment outcome (on balance) -	
Summary of SA Objective 9	
The provision of housing should reduce poverty, deprivation and promotes more inclusive and self-contained communities. The sites are within reasonable proximity to the limited services and facilities in the village however there is more limited access to the types of facilities found in larger settlements such as hospitals or colleges and this would lead to a reliance of the private vehicle. The primary school has some surplus places and given the low capacity of the site this would not need an	

⁶⁹ English indices of deprivation (DCLG, 2015)

expansion of the school however mitigation would be required to support additional capacity for secondary school places. The village has a doctor's surgery although capacity would need to be investigated.

Overall, likely effects are considered to be minor adverse against this objective.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	There is a footway opposite the entrance the site. To facilitate good walking/ cycling connections the road will need to be crossed safely to access the village as there is currently no crossing. PRow (YKEY12) lies to the north west on the site along the track and this could be used to facilitate connectivity to the site.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of this site is capable of incorporating infrastructure in the form of garages, sheds and secure bike stands to provide opportunities to improve cycling.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations, that reduce the need to travel and reliance on the private car?	This site is considered to be in an accessible location being approximately 550m from a post office; surgery and the primary school are in close proximity to the site. The site is close to Farrells Field bus stop which serves Chippenham (Service 35) on the AM and PM peak and in the interpeak period. Services 74/75 from this bus stop are school services. Chippenham railway station is beyond walking/cycling distance. However, overall, this level of new dwellings is likely to increase travel movements in the area.

Assessment outcome (on balance) -

Summary of SA Objective 10

The site is located on the southern fringe of the Large Village of Yatton Keynell. There is a footway opposite the entrance to the site and to facilitate good walking/ cycling connections the road will need to be crossed safely to access the village as there is currently no crossing. The site is related to the village and is within walking distance of the services and facilities within the settlement. There is more limited access to the types of facilities found in higher order settlements such as Chippenham and overall residents are likely to rely upon use of the private car. Public footpaths whilst in the vicinity and having the potential to be connected to are unlikely to materially increase walking accessibility to the centre of the village. On the balance of evidence currently available, the effects are considered to be minor adverse against this objective.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...	
1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.
2. Support the rural economy?	The site would boost the number of homes and thereby increase the population of the village and wider community area. This would potentially directly assist in the support of rural services and facilities.
Assessment outcome (on balance) +	
Summary of SA Objective 11	
Development will marginally increase the local population, which would contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. Overall it is considered that it is likely that there would be no adverse effect and whilst there no known specific regeneration benefits of the site for housing development, the allocation of this site would be likely to have a minor positive effect against the aim of SA Objective 11.	
SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce	
Decision Aiding Questions. Will the development site...	
1. Protect and enhance the vitality and viability of existing employment areas?	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the community area.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away. In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations.
Assessment outcome (on balance) +	
Summary of SA Objective 12	
The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is	

considered that allocation of this site would positively meet the aim of SA Objective 12.

Site 482 - Land East of Farrells Field, Yatton Keynell

Site context

Site size: 1.32 ha Site capacity: approximately 31 dwellings

The site is flat rough grazing in an L shape with access from a track from the north which accesses the site to the north western boundary. To the east the main road into the Yatton Keynell (B4039) runs parallel to the site. Some mature trees and hedgerows on the boundaries. Small group of houses to the immediate north of site (Farrell Field), a recreational field (school use) to the west of the site, with open countryside on the remaining boundaries. There is a GPSS pipeline that runs across the site.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	Development of this greenfield site may have some limited adverse effects regarding fragmentation of existing habitats, such as hedgerows on the field boundary. However, the site is currently in rough grazing / arable use and is large enough for the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	The development of the site for housing would be unlikely to lead to adverse impacts on designated and non-designated biodiversity interests within the local area. Where possible hedgerows should be retained, protected and enhanced within the public realm to ensure their longevity and appropriate management. There is a woodland corridor along western boundary and spur should be retained as a wildlife corridor. This wooded track provides habitat connectivity to the open countryside. Grassland habitat type needs to be confirmed. The precautionary principle must be applied and ecological assessment at site level to support individual planning applications will be required.
3. Result in greater community engagement with biodiversity?	It is unlikely that development of this site would lead to greater community engagement with biodiversity.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where	There are no river corridors within or adjacent to this site. Protection should be given to mature hedgerows and trees along boundaries particularly in the south and west. Development of the site for housing would have the potential to make suitable provision for buffers to protect any biodiversity features. Woodland corridor along western boundary and spur should be

necessary?	retained as a wildlife corridor. This wooded track provides habitat connectivity to the open countryside from the urban/residential area and connects with the school (potential bat roost).
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
6. Ensure all new developments have regard to and protect BAP habitats/species?	The site is approximately 1.2 km to the east of BBOA (Lesser Horseshoe Bat Buffer) consultation Zone. In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species (hedgerows and woodland). Whilst no existing records of protected species there is a potential for reptiles, badger and nesting birds, ecological assessment would be required.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland sites. There are no areas of ancient woodland in proximity to this site. Protection should be given to any mature trees within the site and at site boundaries in the interest of visual amenity. There are trees which may be worthy of tree preservation orders (TPO).
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the site does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to adverse impacts on designated Local Geological Sites (LGS). There are no LGS within or in close proximity to this site.
Assessment outcome (on balance) -	
Summary of SA Objective 1	
There are no significant records for protected species within or immediately adjacent to the site although there is a potential and an ecological assessment would be required. Hedgerows should be retained, where possible, protected and enhanced within the public realm to ensure their longevity and appropriate management. The woodland corridor along western boundary and spur should be retained as a wildlife corridor. The precautionary principle must be applied and ecological assessment	

required informing development design, mitigation and enhancement measures. It is advised that there should be a limit to housing densities to ensure adequate buffer adjacent to hedgerows.

Overall likely effects are considered to be minor adverse against this objective.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site...

<p>1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?</p>	<p>The site is situated on the southern edge of the large village of Yatton Keynell which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site is within a reasonable walking/cycling distance to the centre of the village and several bus stops are present within the village providing connectivity to the public transport network. Overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel to higher order settlements for larger convenience shopping. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Given the site's prominence in the landscape setting on the rural fringe of the village and to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site.</p>
<p>2. Maximise reuse of previously developed land where possible/appropriate?</p>	<p>This is a greenfield site and there is little or no potential for maximising the reuse of previously developed land.</p>
<p>3. Encourage remediation of contaminated land?</p>	<p>There is a GPS pipeline that crosses the site, which consideration would need to be given to in developing the layout of the site but it is not considered insurmountable at this stage. Overall, it is considered unlikely that the land would be contaminated and remediation measures required in order to facilitate housing development on the site.</p>
<p>4. Ensure the design and layout of new development supports sustainable waste management?</p>	<p>The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team</p>
<p>5. Protect and enhance soil quality?</p>	<p>In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil contamination at this site.</p>
<p>6. Protect the best and most versatile agricultural land?</p>	<p>There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be to minor negligible.</p>

7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 2</p> <p>The site is greenfield and is not located on previously developed land. There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Minerals Safeguarding Area. The site is not located within, or likely to be affect a designated safeguarding zone associated with an active safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation. There is a GPS pipeline that crosses the site, which consideration would need to be given to in developing the layout of the site but it is not considered insurmountable at this stage. The agricultural quality of the land is not know, but if found to be best and most versatile its loss would be minor to negligible.</p> <p>Overall likely effects are considered to be minor adverse against this objective.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner Decision Aiding Questions. Will the development site...</p>	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	In line with national and local plan policy / practice, the development of the site for housing would need to be capable of positively responding to the predicted effects of climate change. There is limited capacity available from local mains which may require network reinforcement which could lead to current capacity for approximately 15 dwellings. Foul water off-site connecting sewer with capacity for foul water (rather than storm water). As such the site may need to be served by a pumped connection. The site is unable to proceed without satisfactory outfall for agreed surface water discharge. There are no programmed investment works until 2020. However there is no evidence to suggest that development of the site for housing would not be capable of being supported by water and sewerage infrastructure capacity. Consideration should be given to incorporating water saving measures and appropriate pollution prevention and control into the design and layout of any new development.
2. Ensure that essential water infrastructure is co-ordinated with all new development?	In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company. (Also see response to Q1).
3. Ensure the installation of water saving measures such as rainwater	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water

harvesting and water metering?	utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures / technologies and no adverse effects are foreseen.
4. Consider the need for adequate provision of surface water and foul drainage?	Consideration should be given to the inclusion of SuDS within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces. Site falls within a groundwater vulnerability area. There are known surface water disposal issues and conventional surface water systems may not work effectively due to soil/geological conditions. Storm water disposal could be a major issue which may involve crossing third party land, boreholes etc.
5. Protect, and where possible, improve surface, ground and drinking water quality?	In line with the provisions of local plan policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. It is considered that this is possible on this site. The site falls within a groundwater vulnerability area, and further advice would need to be sought from the Environment Agency at any subsequent planning application stage.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 3</p> <p>The site falls within groundwater vulnerability therefore detailed consideration of the potential effects of development on groundwater resources would need to be undertaken to support any subsequent planning application. Further advice on these matters would need to be sought from the Environment Agency at the detailed planning application stage.</p> <p>There is limited capacity available from local mains which may require network reinforcement which could reduce the development potential of the site. In any event, development of the site would be unable to proceed without satisfactory outfall for an agreed level of surface water discharge. Any development at this site would need to check with the relevant statutory undertaker regarding foul drainage disposal. No details of drainage exist as yet but there is potential to introduce pollution prevention measures, including sustainable drainage measures (SuDS). Such matters can be addressed appropriately at the detailed design stage in consultation with the Environment agency and water utility companies.</p> <p>Overall effects are considered likely to be moderate adverse against this objective overall.</p>	
SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution	

Decision Aiding Questions. Will the development site...	
<p>1. Maintain and improve local air quality?</p>	<p>The site is not located within an Air Quality Management Area (AQMA) and currently Yatton Keynell does not have any specific air quality issues. No significant effects on air quality are foreseen with development at this location but housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage/local commuter traffic). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies as well as the council's Air Quality Strategy.</p> <p>Such measures may, where appropriate and feasible, include maximising opportunities for use of sustainable transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing.</p> <p>Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for housing would inevitably lead to increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>The site does not fall within or in close proximity to any other likely significant sources of environmental pollution (air, noise, odour and light).</p>
<p>3. Mitigate the impacts from uses that generate NO₂, SO₂ and PM₁₀ or other particulates?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p>

4. Seek to reduce development in or near to AQMAS ⁷⁰ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies, such as good access from the site to local services, facilities and public transport.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 4</p> <p>The site is in a southern location to the village of Yatton Keynell and is within an accessible location to the services offered at the village level. Development is likely to increase local commuter traffic, and rely on the use of the private car for larger services and facilities, which may impact on local air quality although the site is within a central location and village services could be accessed by cycle or by foot. Development is likely to lead to increases in traffic on local roads which may adversely affect air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality</p>	

⁷⁰ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

Strategy, such as landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.

The site does not fall within a designated AQM and is unlikely to adversely affect any AQM elsewhere within the county. It is unlikely that local air quality will be denigrated to the extent that this would impact on local biodiversity sites and SACs. The site does not fall within or in close proximity to any likely significant sources of environmental pollution (air, noise, odour, light). The development at this site would likely generate increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. This may have some adverse effects for residents of neighbouring properties that adjoin or are in close proximity to the site. However these are not considered likely to be significant. Mitigation measures would need to be developed in accordance with national and local plan policy, for example an acoustic buffer could be required to reduce the impact of the development and pedestrian and cycle linkages can be made with adjoining residential area but likely that car use will increase. A new bus stop could be created and improvements to cycle/walking linkages.

Overall likely effects are considered to be minor adverse against this objective.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.

Assessment outcome (on balance) -

Summary of SA Objective 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in ‘Delivering strategic objective 2: to address climate change’ and the related ‘Core Policy 41: Sustainable construction and low carbon energy’ of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices. However, the effect of the development of this site will be to increase greenhouse gas emissions overall. Likely effects are considered to be minor adverse against this objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects
Decision Aiding Questions. Will the development site...

1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. Any proposals for development of this site should be informed by a site specific flood risk assessment as the site is greater than 1ha in size. The site falls within a groundwater vulnerability area. There are known surface water disposal issues and conventional soakaways/infiltration systems may not work effectively.
2. Ensure that development can adapt to the predicted future impacts of climate change?	As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience: <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	The site falls within groundwater vulnerability. There are known storm water disposal issues and conventional soakways/infiltration systems may not work effectively. Consideration should be given to the inclusion of Sustainable Drainage Systems (SuDS) within any development scheme to control the risk of surface water flooding from impermeable surfaces. Further guidance can be found in the Wiltshire Council’s Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.
4. Minimise the risk of flooding to people and property (new and existing	The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased

development)?	risk of fluvial flooding from main river and/or ordinary watercourses. (Also see comments in response to 5.1 & 5.3 above).
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
Summary of SA Objective 5b	
<p>The site is located within Flood Zone 1. Site falls within groundwater vulnerability and conventional soakaways/infiltration systems for managing storm/surface water may not work effectively. Alternative methods would need to be explored through any subsequent planning application process. Consideration should be given to the inclusion of SuDS within any development scheme to control the risk of surface water flooding from impermeable surfaces. Further guidance can be found in Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</p> <p>Overall likely effects are considered to be moderate adverse against this objective.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	Development in this location is unlikely to cause harm to heritage assets or designations such as listed buildings. Though there are a large number of listed buildings in Yatton Keynell the development should not adversely impact on the setting of these buildings. Quality design should be promoted to ensure that the developments fit in with the character of the area. There are no Scheduled Monuments within close proximity to the site. The Yatton Keynell Conservation Area is approximately 350m to the north of the site. The site is shown on the historic maps as open fields and has been altered in layout from the late 19 th Century Field layout via the encroachment of 20 th Century Housing. These do not appear to have a direct impact on the setting of the Conservation Area or listed buildings.
2. Ensure appropriate archaeological assessment prior to development?	The archaeological potential of the site has been evaluated as medium and further archaeological assessments would be needed to support any subsequent development of the site. An assessment of the potential historic landscape has been carried out and the potential sensitivity of this site is medium. The site is made from modern fields created by altering post medieval and medieval fields, possibly once medieval open fields which are uncommon survivals.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.
4. Maintain and enhance the character	The Yatton Keynell Conservation Area is approximately 350m to the north of the site. The site is shown on the historic maps

and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	as open fields and has been altered in layout from the late 19 th Century Field layout via the encroachment of 20 th Century Housing. These do not appear to have a direct impact on the setting of the Conservation Area or listed buildings.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	No heritage asset at risk present on site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not within proximity to result in impacts to the Stonehenge and Avebury WHS and its setting.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 6</p> <p>Development on this site is unlikely to give rise to negative impacts on the historic environment of Yatton Keynell. It is in keeping with the historic building lines of development and at such a scale that would be likely to be sympathetic to the rest of the village. It is unlikely that there would be an impact on the settings on nearby Conservation Area however quality design should be promoted to ensure that the developments fit in with the character of the area. An archaeological assessment would be required to determine the archaeological potential of the site at the planning application stage.</p> <p>Overall likely effects are considered to be minor adverse against this objective.</p>	
<p>SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Protect and enhance the landscape character and scenic quality of the countryside?	The Landscape Character of this site falls within the limestone lowland typology. It is of moderate character, in good condition. The County Landscape Character Assessment defines the strategy for this type of land as conserve and strengthen. The planning application process would need to make provision for strengthening the character and appearance in this area. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside. While development would have an effect on Yatton Keynell the site is of a size whereby landscape mitigation could be employed at the site boundaries to reduce the effect using a landscape buffer of trees shields the development contained within. The site lies outside of the AONB. The majority of the site is set further from the AONB and is approximately 350m to the north of the site from Cotswold AONB. There are a woodland cover/veteran trees and hedgerows on site, with low intervisibility and sensitive visual receptors (residential). There would be a requirement for Green Infrastructure buffer to mature hedgerows and trees. A detailed

	landscape assessment should be undertaken to assess impacts and identify suitable mitigation to mitigate / enhanced visual impact as edge of village onto open countryside which could include sensitive planting, use of materials to reflect local built vernacular and buffers to screen view point from site. Housing development at this site would result in potential landscape & visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies.
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure through public open space, connections to existing footpath networks and green corridors etc.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	The development of the site for housing may offer the potential to deliver additional access to and availability of green spaces within the site.
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ⁷¹ ?	In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside and designated landscape assets. The site lies outside of the AONB. The access strip to the north of the site is approximately 10m from Cotswold AONB. However the majority of the site is set further from the AONB and is approximately 350m from Cotswold AONB. Consideration of the Cotswold AONB Management Plan should be taken into account when considering future development of the site.
5. Protect rights of way, open space and common land?	In accordance with local plan policy, the development of the site would protect and add to the existing rights of way network, open spaces and common land assets. Development in this location would not result in loss of amenity greenspace.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site would not result in impacts to the Western Wiltshire Green Belt.

⁷¹ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

Assessment outcome (on balance) -

Summary of SA Objective 7

The site is located adjacent to the existing settlement boundary adjoins the built edge of southern edge of Yatton Keynell. Development within this village area avoids some of the most highly valued designations. Yatton Keynell is predominately within the AONB to the north of the site. The site lies outside of the AONB. The majority of the site is set further from the AONB and is approximately 350m from Cotswold AONB. It will be particularly important to employ appropriate mitigation such as landscaping as the site is located on the edge of the settlement. Consideration of the Cotswold AONB Management Plan should be taken into account when considering future development of the site. The development of the site would not affect publicly accessible open space, green infrastructure, recreation facilities or public right of way. The site would require a buffer to mature hedgerows and trees. Housing development at this site would result in potential landscape & visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies. There are views into the site from a number of locations from residential properties to the north, and open countryside to the remaining boundaries. The level of effect would depend on the design of developments and employment of appropriate mitigation such as the retention of hedgerows and mature vegetation where possible. The site is of a size which could deliver areas of public open space or green infrastructure within the site.

Overall likely effects are considered to be minor adverse against this objective.

SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures

Decision Aiding Questions. Will the development site...

1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.

expansion?	
6. Consider the emerging Neighbourhood Plans?	There is no known emerging Neighbourhood Plan at this stage.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy / local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities.
Assessment outcome (on balance) + + +	
Summary of SA Objective 8	
The whole SHLAA site provides capacity for up to approximately 31 residential units (though this may be reduced through the mitigation set out in this assessment), which contributes towards Wiltshire's housing supply. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units. Overall it is considered that allocation of this site would have a major benefit in terms of meeting the aim of SA Objective 8.	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities through high quality design and access for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site has the potential space to provide open /green space or children's play area and other landscaping to improve facilities and amenity. High quality design and good access of the site should take into account the design and layout of the dwellings (access to and contact with nature), walking / cycle ways to promote healthy lifestyles.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design would include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	There is a doctor's surgery, Jubilee Field Surgery located in Yatton Keynell (approximately 0.1 miles). Mitigation would be required to support additional patient capacity.
5. Maximise opportunities within the most deprived areas?	In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation in the area. There would be some

	social and economic benefits for the Yatton Keynell area through housing provision, short-term construction jobs and a larger workforce for local businesses. This site is not within one of Wiltshire's most deprived quintile group of Lower Layer Super Output Areas (LSOAs), as set out in the English Indices of Deprivation 2015: Wiltshire Report. This site is within Wiltshire 008B LSOA, which is amongst the 30% least deprived neighbourhoods in the country ⁷² . Development of this site is likely to contribute to the low levels of deprivation experienced in this area. Development of this site is likely to contribute to improving poverty and deprivation in this area.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The development of the site would provide housing in a sustainable location in line with the settlement strategy, with a reasonable level of access to the local services and facilities within the village. Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. The village is serviced by the 35 and 635 bus routes. Given the limited services within Yatton Keynell it is however likely that residents would be reliant on the use of a private vehicle. The site offers the benefits of providing housing to meet need, including affordable housing, and improved viability of local services and facilities. In supporting local services, the need to travel would be reduced as would the potential for isolation and social exclusion.
7. Support the development of community campuses?	Development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	The site falls in the Brook Valley Church of England Primary School and Chippenham Secondary Schools catchment area. The primary school is almost full and forecast to remain so. It is on a large site however so expansion should be possible. As the numbers of houses are reasonably low expansion of the school wouldn't be necessary.. Mitigation would be required to support additional pupil capacity. Expansion of one or more of the Chippenham Secondary Schools will be required to cater for all of the proposed housing in and around Chippenham and mitigation to support additional capacity to cater for pupils arising from development would be sought.

⁷² English indices of deprivation (DCLG, 2015)

Assessment outcome (on balance) -

Summary of SA Objective 9

The provision of housing should reduce poverty, deprivation and promotes more inclusive and self-contained communities. The sites are within reasonable proximity to the limited services and facilities in the village however there is more limited access to the types of facilities found in larger settlements such as hospitals or colleges and this would lead to a reliance of the private vehicle. The primary school has some surplus places and given the low capacity of the site this would not need an expansion of the school however mitigation would be required to support additional capacity for secondary school places. The village has a doctor's surgery although capacity would need to be investigated. Effects are considered likely to be minor adverse against this objective overall.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices
Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	In accordance with national policy/local plan policy and best practice, the development of this site is capable of incorporating infrastructure to provide opportunities to improve cycling and walking. Direct vehicular access to this site is considered to be achievable either from the B4039 or through Farrell fields, which has a footway.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of this site is capable of incorporating infrastructure in the form of garages, sheds and secure bike stands to provide opportunities to improve cycling.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations, that reduce the need to travel and reliance on the private car?	This site is considered to be in an accessible location. It will be possible to walk and cycle to a number of significant trip generators in the immediate area (post office, doctor's surgery and school close by but lack of other essential services for food shopping). The site is close to Farrells Field bus stop which serves Chippenham (Service 35) on the AM and PM peak and in the interpeak period. Also served by school services 74 and 75. Chippenham railway station is beyond walking/cycling distance. However given the limited services within Crudwell it is however likely that residents would be reliant on the use of a private vehicle.

Assessment outcome (on balance) -

Summary of SA Objective 10

The site is located on the southern fringe of the Large Village of Yatton Keynell. Direct vehicular access to this site is considered to be achievable either from the B4039 or through Farrell fields, which has a footway. The site is closely related to the village and is within walking distance of the services and facilities within the settlement. Types of facilities found in higher order settlements such as Chippenham mean that overall residents are likely to rely upon use of the private car.

Overall likely effects are considered to be minor adverse against this objective.	
SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth Decision Aiding Questions. Will the development site...	
1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.
2. Support the rural economy?	The site would boost the number of homes and thereby increase the population of the village and wider community area. This would potentially directly assist in the support of rural services and facilities.
Assessment outcome (on balance) + +	
Summary of SA Objective 11 Development will increase the local population, could contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Yatton Keynell village. Overall it is considered that it is likely that there would be no adverse effect and whilst there no known specific regeneration benefits of the site for housing development, the allocation of this site would have a moderate positive effect against the aim of SA Objective 11.	
SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce Decision Aiding Questions. Will the development site...	
1. Protect and enhance the vitality and viability of existing employment areas?	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the community area.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away. In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations.
Assessment outcome (on balance) +	

Summary of SA Objective 12

The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would positively meet the aim of SA Objective 12.

Site 643 - Land at Littlemead Farm, Yatton Keynell

Site context

Site size: 0.75 ha Site capacity: approximately 18 dwellings

The site is on flat grazing/paddock/extended garden from existing farmhouse which is surrounded by outbuildings. It has mature trees and hedgerows on the boundaries. It is surrounded by open countryside with the exception of one residential property to the north of the site. The main road into the village is the eastern boundary of the site. GPSS Pipeline running through the site from north to south.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

<p>1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?</p>	<p>Development of this greenfield site may have some limited adverse effects regarding fragmentation of existing habitats, such as hedgerows on the field boundary. However, the site is large enough for the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.</p>
<p>2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?</p>	<p>The development of the site for housing would be unlikely to lead to significant adverse impacts on designated biodiversity interests within the local area. The field and farmstead are bordered by trees and hedgerows. The existing farm buildings are potential bat roosts and may be used by nesting birds such as Barn Owl and Swallow. Hedgerows should be retained, where possible, protected and enhanced within the public realm to ensure longevity and management. Hedgerows (UK BAP Priority Habitat) provide habitat connectivity to the wider countryside and are potentially suitable for use by bats, badger, reptiles, amphibians (including great crested newt). The potential for great crested newt needs to be established. Existing farm access should be used for site entrance to minimise loss of hedgerow. The site is approximately 1.2km to the east of BBOA (Lesser horseshoe bat buffer) consultation zone. Grassland habitat likely to be agriculturally improved or semi-improved, but would need to be confirmed. The evidence base indicates that there could be significant ecological issues for habitats or species protected under European or domestic legislation, or could be contradictory to CP50. Ecological assessment, together with appropriate, robust mitigation and enhancement strategies is likely to be required for this site.</p>

3. Result in greater community engagement with biodiversity?	It is unlikely that development of this site would lead to greater community engagement with biodiversity.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	There are no river corridors within or adjacent to this site. Protection should be given to mature existing hedgerows. Hedgerows (UK BAP Priority Habitat) provide habitat connectivity to the wider countryside and are potentially suitable for use by bats, badger, reptiles, and amphibians. Green corridors would be required as part of design of the site.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multifunctional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
6. Ensure all new developments have regard to and protect BAP habitats/species?	The site is approximately 1.2 km to the east of BBOA (Lesser Horseshoe Bat Buffer) consultation Zone. In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species (hedgerows and woodland). Whilst no existing records of protected species there is a potential for reptiles, badger and nesting birds, ecological assessment would be required.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland sites. There are no areas of ancient woodland in proximity to this site. Protection should be given to any mature trees within the site and at site boundaries in the interest of visual amenity.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the site does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council's current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to adverse impacts on designated Local Geological Sites (LGS). There are no LGS within or in close proximity to this site.
Assessment outcome (on balance) - -	
Summary of SA Objective 1	
The site is on flat grazing/paddock/extended garden from existing farmhouse which is surrounded by outbuildings which have the potential to support bat roosts and	

may be used by nesting birds such as Barn owl and Swallow. Hedgerows should be retained, where possible, and protected and enhanced within the public realm to ensure longevity and management. Hedgerows (UK BAP Priority Habitat) provide habitat connectivity to the wider countryside and are potentially suitable for use by bats, badger, reptiles, and amphibians. Ecological assessment required to inform development design, mitigation and enhancements. The existing farm access should be used for site entrance to minimise loss of hedgerow. Grassland habitat likely to be agriculturally improved or semi-improved, and would need to be confirmed. The evidence base indicates that there are significant ecological issues for habitats or species protected under European or domestic legislation, or could be contradictory to CP50. Ecological assessment, together with appropriate, robust mitigation and enhancement strategies will be required for this site. Overall likely effects are considered to be moderate adverse against this objective.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site...

1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	The site is situated on the southern edge of the large village of Yatton Keynell which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site is not connected to the village by a footway. Overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel to Chippenham or Malmesbury for larger convenience shopping. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Given the site's prominence in the landscape setting on the rural fringe of the village and to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site. There would also need to be a degree of landscape mitigation and sensitive design due to the site's location.
2. Maximise reuse of previously developed land where possible/appropriate?	This is a greenfield site and there is little or no potential for maximising the reuse of previously developed land.
3. Encourage remediation of contaminated land?	At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. The site is located on greenfield arable land, as opposed to brownfield (i.e. previously developed land). On the basis of available evidence, it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil contamination at this site.

6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 2</p> <p>The site is greenfield. There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Minerals Safeguarding Area. The site is not located within, or likely to be affect a designated safeguarding zone associated with an active safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p> <p>Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 2 which would otherwise preclude the allocation of this site. Likely effects are considered to be minor adverse against this objective.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner Decision Aiding Questions. Will the development site...</p>	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	In line with national and local plan policy / practice, the development of the site for housing would be capable of positively responding to the predicted effects of climate change. There is limited capacity available from local mains which may require network reinforcement if additional capacity is required to serve other development sites in the village. An off-site connecting sewer with capacity for foul water flows (rather than storm water) only exists. There is no design capacity available in existing storm water system. Development of the site would be unable to proceed without a satisfactory outfall for an agreed surface water discharge is provided. There are no programmed investment works until 2020. However, there is no evidence to suggest that development of the site for housing would not be capable of being supported by planned water and sewerage infrastructure capacity.
2. Ensure that essential water infrastructure is co-ordinated with all new development?	In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.

	(Also see response to Q1 above).
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures / technologies and no adverse effects are foreseen.
4. Consider the need for adequate provision of surface water and foul drainage?	Consideration should be given to the inclusion of SuDS within any subsequent planning process to control the risk of surface water flooding from impermeable surfaces. The site falls within groundwater vulnerability area. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. The developer would need to check with the relevant statutory undertaker regarding foul drainage disposal.
5. Protect, and where possible, improve surface, ground and drinking water quality?	In line with the provisions of local plan policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. It is considered that this is possible on this site. The site is within Groundwater Source Protection Zone 2 and further advice would need to be sought from the Environment Agency at any subsequent planning application stage.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 3</p> <p>The site falls within a groundwater vulnerability area therefore detailed consideration of the potential effects of development on groundwater resources would need to be undertaken to support any subsequent planning application. Further advice on these matters would need to be sought from the Environment Agency at the detailed planning application stage.</p> <p>There is limited capacity available from local mains which may require network reinforcement if additional capacity is required to serve other development sites in the village. An off-site connecting sewer with capacity for foul water flows (rather than storm water) only exists. There is no evidence to suggest that development of the site for housing could not be supported by additional water and sewerage infrastructure to cope with demand, nonetheless consideration will need to be given to capacity issues in relation to drinking water and sewerage infrastructure in the form of a detailed assessment to support any subsequent planning application. The developer would need to check with undertaker regarding foul drainage disposal. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and</p>	

<p>CIRIA Guidance, Part E, Chapter 25. No details of drainage exist as yet but there is potential to introduce pollution prevention measures, including sustainable drainage measures (SuDS). Overall the effects are considered likely to be moderate adverse against this objective overall.</p>	
<p>SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution Decision Aiding Questions. Will the development site...</p>	
<p>1. Maintain and improve local air quality?</p>	<p>The site is not located within an Air Quality Management Area (AQMA) and currently Yatton Keynell does not have any specific air quality issues. No significant effects on air quality are foreseen with development at this location but housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage/local commuter traffic). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies as well as the council's Air Quality Strategy.</p> <p>Such measures may, where appropriate and feasible, include maximising opportunities for use of sustainable transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing.</p> <p>Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for housing would inevitably lead to increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>The site does not fall within or in close proximity to any other likely significant sources of environmental pollution (air, noise, odour and light).</p>
<p>3. Mitigate the impacts from uses that</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local</p>

generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAs ⁷³ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies, such as good access from the site to local services, facilities and public transport.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) -	
Summary of SA Objective 4	
The site is to the south of the village of Yatton Keynell. Development is likely to increase local commuter traffic, and rely on the use of the private car for larger services	

⁷³ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

and facilities, which may impact on local air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. The site does not fall within a designated AQM and is unlikely that local air quality will be denigrated to the extent that this would impact on local biodiversity sites and SACs. The site does not fall within or in close proximity to any likely significant sources of environmental pollution (air, noise, odour and light). The development at this site would likely generate increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. This may have some adverse effects for residents of neighbouring properties that adjoin or are in close proximity to the site. However these are not considered likely to be significant. Mitigation measures would need to be developed in accordance with national and local plan policy, for example an acoustic buffer could be required to reduce the impact of the development and pedestrian and cycle linkages can be made with adjoining residential area but likely that car use will increase. A new bus stop could be created and improvements to cycle/walking linkages.

Overall likely effects are considered to be minor adverse against this objective.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.

Assessment outcome (on balance) -

Summary of SA Objective 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.

However, the effect of the development of this site will be to increase greenhouse gas emissions overall. Likely effects are considered to be minor adverse overall against this objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects

Decision Aiding Questions. Will the development site...

1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. The site falls within a groundwater vulnerability area. There are known surface water disposal issues and conventional soakaways/infiltration systems may not work effectively.
2. Ensure that development can adapt to the predicted future impacts of climate change?	As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience: <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	The site falls within groundwater vulnerability. There are known storm water disposal issues and conventional soakways/infiltration systems may not work effectively. Consideration should be given to the inclusion of SuDS within any development scheme to control the risk of surface water flooding from impermeable surfaces. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. (Also see comments in response to 5 above).
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.

Assessment outcome (on balance) - -

Summary of SA Objective 5b

The site is located within Flood Zone 1. The site falls within the groundwater vulnerability area and conventional soakaways/infiltration systems for managing storm/surface water may not work effectively. Alternative methods would need to be explored through any subsequent planning application process. Consideration should be given to the inclusion of SuDS within any development scheme to control the risk of surface water flooding from impermeable surfaces.

Further guidance can be found in Wiltshire Council’s Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. Overall likely effects are considered to be moderate adverse against this objective.

SA objective 6. Protect, maintain and enhance the historic environment
Decision Aiding Questions. Will the development site...

1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	Development is unlikely to cause harm to heritage assets or designations such as listed buildings. Though there are a number of listed buildings in Yatton Keynell the development should not adversely impact on the setting of these buildings. There are no Scheduled Monuments within close proximity to the site. The Yatton Keynell Conservation Area is approximately 460m to the north of the site. The site is shown on the historic maps as open fields and retains evidence of a field size that has not changed in excess of 150 years and remains un-subdivided. These do not appear to have a direct impact on the setting of the Conservation Area or listed buildings.
2. Ensure appropriate archaeological assessment prior to development?	The archaeological potential of the site has been evaluated as low and there is no need to undertake further archaeological assessments. An assessment of the historic landscape has been carried out and the sensitivity of this site has been assessed as medium. The site is described as modern fields created by altering post medieval and medieval fields, possibly once medieval open fields which are uncommon survivals.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	The Yatton Keynell Conservation Area is approximately 460m to the north of the site. The site is shown on the historic maps as open fields. And retains evidence of a field size that has not changed in excess of a 150 years and remains un-subdivided which does not appear to have a direct impact on the setting of the Conservation Area.

5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	No heritage asset at risk present on site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not within proximity to result in impacts to the Stonehenge and Avebury WHS and its setting.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 6</p> <p>Development on this site is unlikely to give rise to negative impacts on the historic environment of Yatton Keynell. It is unlikely that there would be an impact on the settings on nearby Conservation Area however quality design should be promoted to ensure that the developments fit in with the character of the area. Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 6 which would otherwise preclude the allocation of this site. Likely effects are considered to be minor adverse against this objective.</p>	
<p>SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place Decision Aiding Questions. Will the development site...</p>	
1. Protect and enhance the landscape character and scenic quality of the countryside?	The Landscape Character of this site falls within the limestone lowland typology. It is of moderate character, in good condition. The County Landscape Character Assessment defines the strategy for this type of land as conserve and strengthen. The planning application process would need to make provision for strengthening the character and appearance in this area. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside. While development would have an effect on Yatton Keynell, the site is of a size whereby landscape mitigation could be employed at the site boundaries to reduce the effect using a landscape buffer of trees shields the development contained within. There are a woodland cover/veteran trees and hedgerows on site, with low intervisibility and sensitive visual receptors (residential). There would be a requirement for Green Infrastructure buffer to mature hedgerows and trees. A detailed landscape assessment should be undertaken to assess impacts and identify suitable mitigation to mitigate / enhanced visual impact as edge of village onto open countryside which could include sensitive planting, use of materials to reflect local built vernacular and buffers to screen view point from site. Housing development at this site would result in potential landscape & visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies.
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green	In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure through public open space, connections to existing footpath networks and

Infrastructure Strategy?	green corridors etc.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	The development of the site for housing may offer the potential to deliver additional access to and availability of green spaces within the site.
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ⁷⁴ ?	In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside and designated landscape assets.
5. Protect rights of way, open space and common land?	In accordance with local plan policy, the development of the site would protect and add to the existing rights of way network, open spaces and common land assets. Development in this location would not result in loss of amenity greenspace.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site would not result in impacts to the Western Wiltshire Green Belt.
Assessment outcome (on balance) -	
Summary of SA Objective 7	
<p>The site adjoins the built edge of southern edge of Yatton Keynell. The site is surrounded by open countryside with the exception of a residential property to the north. It would be likely that the site would have to come forward with the adjoining site to the north otherwise it would be an isolated development in open countryside. The level of effect would depend on the design of developments and employment of appropriate mitigation such as the retention of hedgerows and mature vegetation where possible. The development of the site would not affect publicly accessible open space, green infrastructure, recreation facilities or a public right of way.</p>	

⁷⁴ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

Overall likely effects are considered to be minor adverse against this objective.	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	There is no known emerging Neighbourhood Plan.
78. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy / local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities.
Assessment outcome (on balance) + +	
Summary of SA Objective 8	
The whole SHLAA site provides capacity for up to approximately 18 residential units (though this may be reduced through the mitigation set out in this assessment), which contributes towards Wiltshire's housing supply. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units. Overall it is considered that allocation of this site would have a moderate positive effect on SA Objective 8.	

SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities through high quality design and access for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site has the potential space to provide open /green space or children’s play area and other landscaping to improve facilities and amenity. High quality design and good access of the site should take into account the design and layout of the dwellings (access to and contact with nature), walking / cycle ways to promote healthy lifestyles.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design would include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	There is a doctor’s surgery, Jubilee Field Surgery located in Yatton Keynell. Mitigation would be required to support additional patient capacity.
5. Maximise opportunities within the most deprived areas?	In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation in the area. There would be some social and economic benefits for the Yatton Keynell area through housing provision, short-term construction jobs and a larger workforce for local businesses. This site is not within one of Wiltshire’s most deprived quintile group of Lower Layer Super

	Output Areas (LSOAs), as set out in the English Indices of Deprivation 2015: Wiltshire Report. This site is within Wiltshire 008B LSOA, which is amongst the 30% least deprived neighbourhoods in the country ⁷⁵ . Development of this site is likely to contribute to improving poverty and deprivation in this area.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The development of the site would provide housing in a sustainable location in line with the settlement strategy, with a reasonable level of access to the local services and facilities within the village. Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. The village is serviced by the 35 and 635 bus routes. Accordingly, there is the potential to reduce rural isolation.
7. Support the development of community campuses?	Development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	The primary school is almost full and forecast to remain so. It is on a large site so expansion should be possible. As the numbers of houses are reasonably low expansion of the school wouldn't be necessary. Mitigation would be required to support additional pupil capacity. Expansion of one or more of the Chippenham Secondary Schools will be required to cater for all of the proposed housing in and around Chippenham and mitigation to support additional capacity to cater for pupils arising from development would be sought.
Assessment outcome (on balance) -	
Summary of SA Objective 9	
The provision of housing should reduce poverty, deprivation and promotes more inclusive and self-contained communities. The sites are within reasonable proximity to the limited services and facilities in the village however there is more limited access to the types of facilities found in larger settlements such as hospitals or colleges and this would lead to a reliance of the private vehicle. The primary school has some surplus places and given the low capacity of the site this would not need an expansion of the school and that the village has a doctor's surgery although capacity would need to be investigated. There may be some adverse effects on the	

⁷⁵ English indices of deprivation (DCLG, 2015)

amenity for existing residents through increased urbanisation and population numbers and may provide some pressure on local facilities such as schools and doctors surgeries. Overall, likely effects are considered to be minor adverse against this objective.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	There is no footway along the B4039 therefore walking into the village would be dangerous. There would be no opportunities for increasing walking accessibility to facilities. Cycling along the B4039 is less dangerous but not for any considerable distance.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of this site is capable of incorporating infrastructure in the form of garages, sheds and secure bike stands to provide opportunities to improve cycling.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations, that reduce the need to travel and reliance on the private car?	This site is not considered to be in an accessible location and is poorly related to the settlement. Without a footway it would not be possible to walk to village services. The site is close to Farrells Field bus stop (140m) which serves Chippenham (Service 35) on the AM and PM peak and in the interpeak period. Services 74/75 from this bus stop are school services but again no footway present. Chippenham railway station (beyond walking/cycling distance). Given the limited services within Yatton Keynell it is likely that residents would be reliant on the use of a private vehicle.

Assessment outcome (on balance) - - -

Summary of SA Objective 10

The site is located to the south of the Large Village of Yatton Keynell. Direct vehicular access to this site is considered to be achievable off the B4039 however there is no footway which would make walking into the village dangerous. Accessibility in general is poor for this site. The site is not well related to the village and a significant walking distance to the services and facilities within the settlement without a current footpath. Types of facilities found in higher order settlements such as Chippenham mean that overall residents are likely to rely upon use of the private car.

Overall it is considered that there would be significant major adverse effects on this objective.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.
2. Support the rural economy?	The site would boost the number of homes and thereby increase the population of the village and wider community area. This would potentially directly assist in the support of rural services and facilities.
Assessment outcome (on balance) +	
<p>Summary of SA Objective 11</p> <p>Development will increase the local population, could contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Yatton Keynell village. Overall it is considered that it is likely that there would be no adverse effect and whilst there no known specific regeneration benefits of the site for housing development, the allocation of this site would have a minor positive effect against the aim of SA Objective 11.</p>	
<p>SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce Decision Aiding Questions. Will the development site...</p>	
1. Protect and enhance the vitality and viability of existing employment areas?	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the community area.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away. In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations.
Assessment outcome (on balance) +	
<p>Summary of SA Objective 12</p> <p>The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is</p>	

considered that allocation of this site would positively meet the aim of SA Objective 12.

Site OM015 - Land east of Yatton Keynell off B4039, Yatton Keynell

<p>Site context Site size: 1.6 ha Site capacity: approximately 40 dwellings</p> <p><u>The site is on flat rough grazing land. It has hedgerows and mature trees on edge / the boundaries to the east. It is surrounded by open countryside with the exception of residential properties to the immediate west and south of the site. The site can be accessed by a public right of way (single track access) on the western boundary which leads into open countryside and an informal corridor along the eastern boundary.</u></p>	
<p>SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses Decision Aiding Questions. Will the development site...</p>	
<p>1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?</p>	<p><u>The site is currently flat rough grazing land/ arable land and is large enough for the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration. There is an opportunity for habitat creation / enhancement of biodiversity on the boundaries of the site.</u></p>
<p>2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?</p>	<p><u>The development of the site for housing would be unlikely to lead to adverse impacts on designated and non-designated biodiversity interests within the local area. There are no biodiversity designations within or in close proximity to this site. Some potential for great crested newt terrestrial habitat. The evidence base indicates there are few or no ecological issues in relation to this site. However, the precautionary principle must be applied and ecological assessment at site level to support individual planning applications will be required.</u></p>
<p>3. Result in greater community engagement with biodiversity?</p>	<p><u>It is unlikely that development of this site would lead to greater community engagement with biodiversity.</u></p>
<p>4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?</p>	<p><u>There are no river corridors within or adjacent to this site. Development of the site for housing would have the potential to make suitable provision for buffers to protect any biodiversity features.</u></p>

5. Aid in the delivery of a network of multifunctional Green Infrastructure?	<u>In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.</u>
6. Ensure all new developments have regard to and protect BAP habitats/species?	<u>In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species.</u>
7. Consider the findings of the HRA in site selection and design?	<u>The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement</u>
8. Maintain the existing extent of ancient woodland sites?	<u>The development of the site would not affect ancient woodland sites. There are no areas of ancient woodland in proximity to this site. Protection should be given to any mature trees within the site and at site boundaries.</u>
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	<u>Not applicable – the site does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.</u>
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	<u>Not applicable – the site does not fall within one of the Council’s current guidance areas.</u>
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	<u>The development of the site would be unlikely to lead to adverse impacts on designated Local Geological Sites (LGS). There are no LGS within or in close proximity to this site.</u>
Assessment outcome (on balance) -	
Summary of SA Objective 1	
<u>There are no significant records for protected species within or immediately adjacent to the site although there is a potential and an ecological assessment would be required. Hedgerows where present should be retained, where possible, protected and enhanced within the public realm to ensure their longevity and appropriate management. The precautionary principle must be applied and ecological assessment required informing development design, mitigation and enhancement measures.</u>	
SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings	
Decision Aiding Questions. Will the development site...	

<p>1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?</p>	<p><u>The site is situated on the edge of the large village of Yatton Keynell which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site is located within a reasonable walking/cycling distance to the centre of the village (only minor area where footway is absent and several bus stops are present within the village providing connectivity to the public transport network. Overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel for larger convenience shopping. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Given the site's prominence in the landscape setting on the rural fringe of the village and to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site. There would also need to be a degree of landscape mitigation and sensitive design due to the site's location.</u></p>
<p>2. Maximise reuse of previously developed land where possible/appropriate?</p>	<p><u>This is a greenfield site and there is little or no potential for maximising the reuse of previously developed land.</u></p>
<p>3. Encourage remediation of contaminated land?</p>	<p><u>At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. The site is located on greenfield arable land, as opposed to brownfield (i.e. previously developed land). On the basis of available evidence, it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.</u></p>
<p>4. Ensure the design and layout of new development supports sustainable waste management?</p>	<p><u>The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.</u></p>
<p>5. Protect and enhance soil quality?</p>	<p><u>In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil contamination at this site.</u></p>
<p>6. Protect the best and most versatile agricultural land?</p>	<p><u>There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be negligible.</u></p>
<p>7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?</p>	<p><u>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</u></p>

Assessment outcome (on balance) -	
Summary of SA Objective 2	
<p><u>The site is greenfield and is not located on previously developed land. There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Minerals Safeguarding Area. The site is not located within, or likely to be affect a designated safeguarding zone associated with an active safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation. Overall it is considered that there are no barriers that could not be overcome in regard to SA Objective 2 which would otherwise preclude the allocation of this site. The likely effects are considered to be minor adverse against this objective.</u></p>	
SA objective 3. Use and manage water resources in a sustainable manner	
Decision Aiding Questions. Will the development site...	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	<p><u>In line with national and local plan policy / practice, the development of the site for housing would need to be capable of positively responding to the predicted effects of climate change. There is no design capacity available in existing storm water system. Development of the site would be unable to proceed without satisfactory outfall for an agreed surface water discharge. There are no programmed investment works until 2020. However, there is no evidence to suggest that development of the site for housing could not be capable of being supported by planned water and sewerage infrastructure capacity.</u></p>
2. Ensure that essential water infrastructure is co-ordinated with all new development?	<p><u>In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. There is no evidence to suggest that development of this site for housing could not be supported by additional water and sewage infrastructure to cope with demand. (see Q1 above). Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.</u></p>
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	<p><u>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures / technologies and no adverse effects are foreseen.</u></p>
4. Consider the need for adequate provision of surface water and foul drainage?	<p><u>Site falls within a groundwater vulnerability area. There are known surface water disposal issues and conventional surface water systems may not work effectively due to soil/geological conditions. Surface water drainage systems must be sealed as per sewers. There are numerous ponds in the general area indicate a high standing water level and to reach ponds would for the purpose of managing surface water discharge could involve crossing third party land. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E.</u></p>

	<u>Chapter 25.</u>
5. Protect, and where possible, improve surface, ground and drinking water quality?	<u>In line with the provisions of local plan policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. It is considered that this is possible on this site. The site is within Groundwater Source Protection Zone 2 and further advice would need to be sought from the Environment Agency at any subsequent planning application stage.</u>
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	<u>Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.</u>
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 3</p> <p><u>There is no evidence to suggest that development of the site for housing could not be supported by additional water and sewerage infrastructure to cope with demand, nonetheless consideration will need to be given to capacity issues in relation to drinking water and sewerage infrastructure in the form of a detailed assessment to support a planning application. The site falls within groundwater vulnerability. Further advice on these matters would need to be sought from the Environment Agency at the detailed planning application stage. Conventional soakaways/infiltration systems may not work effectively due to soil/geological conditions. Numerous ponds in the general area indicating a high standing water level and to reach ponds could involve crossing third party land. Further guidance can be found in the Wiltshire Council’s Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. No details of drainage exist as yet but there is potential to introduce pollution prevention measures, including sustainable drainage measures (SuDS). Such matters can be addressed appropriately at the detailed design stage in consultation with the Environment agency and water utility companies.</u></p> <p><u>Overall it is considered that the effects are considered likely to be moderate adverse against this objective overall.</u></p> <p><u>The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. Any proposals for development of this site should be informed by a site specific flood risk assessment as the site is greater than 1ha in size. The site falls within a groundwater vulnerability area, which will require testing and monitoring for at least 12 months to determine summer and winter water levels. There are known surface water disposal issues and conventional soakaways/infiltration systems may not work effectively.</u></p>	
SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution	

Decision Aiding Questions. Will the development site...	
1. Maintain and improve local air quality?	<p><u>The site is not located within an Air Quality Management Area (AQMA) and currently Yatton Keynell does not have any specific air quality issues. No significant effects on air quality are foreseen with development at this location but housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage/local commuter traffic). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies as well as the council's Air Quality Strategy. Such measures may, where appropriate and feasible, include maximising opportunities for use of sustainable transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</u></p>
2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?	<p><u>Development of the site for housing would inevitably lead to increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site does not fall within or in close proximity to any other likely significant sources of environmental pollution (air, noise, odour and light).</u></p>
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	<p><u>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy</u></p>

	<u>and advice from relevant bodies.</u>
4. Seek to reduce development in or near to AQMAS ⁷⁶ ?	<u>The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.</u>
5. Ensure that air quality impacts on local biodiversity sites are avoided?	<u>While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</u>
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	<u>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies, such as good access from the site to local services, facilities and public transport.</u>
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	<u>While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</u>
Assessment outcome (on balance) -	
Summary of SA Objective 4	
<u>The site is in a south location to the village of Yatton Keynell and is within an accessible location to the services offered at the village level. Development is likely to increase local commuter traffic, and rely on the use of the private car for larger services and facilities, which may impact on local air quality</u>	

⁷⁶ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

although the site is within a central location and village services could be accessed by cycle or by foot. Development is likely to lead to increases in traffic on local roads which may adversely affect air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council’s Air Quality Strategy, such as landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.

The site does not fall within a designated AQMA and is unlikely to adversely affect any AQMA elsewhere within the county. It is unlikely that local air quality will be denigrated to the extent that this would impact on local biodiversity sites and SACs. The site does not fall within or in close proximity to any likely significant sources of environmental pollution (air, noise, odour and light). The development at this site would likely generate increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. This may have some adverse effects for residents of neighbouring properties that adjoin or are in close proximity to the site. However these are not considered likely to be significant. Mitigation measures would need to be developed in accordance with national and local plan policy, for example an acoustic buffer could be required to reduce the impact of the development and pedestrian and cycle linkages can be made with adjoining residential area but likely that car use will increase. A new bus stop could be created and improvements to cycle/walking linkages.

Overall it likely effects are considered to be minor adverse against this objective.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

<p>1. Minimise emissions of greenhouse gases and ozone depleting substances?</p>	<p><u>Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in ‘Delivering strategic objective 2: to address climate change’ and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.</u></p>
<p>2. Promote the development of renewable and low carbon sources of energy?</p>	<p><u>Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.</u></p>
<p>3. Promote energy efficiency in buildings and new development?</p>	<p><u>Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.</u></p>

4. Minimise contributions to climate change through sustainable building practices?	<u>Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.</u>
Assessment outcome (on balance) -	
<p>Summary of SA Objective 5a</p> <p><u>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices. However, the effect of the development of this site will be to increase greenhouse gas emissions overall. However, the effect of the development of this site will be to increase greenhouse gas emissions overall. Effects are considered to be minor adverse against this objective.</u></p>	
<p>SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects Decision Aiding Questions. Will the development site...</p>	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<u>The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. Any proposals for development of this site should be informed by a site specific flood risk assessment as the site is greater than 1ha in size. The site falls within a groundwater vulnerability area, which will require testing and monitoring for at least 12 months to determine summer and winter water levels. There are known surface water disposal issues and conventional soakaways/infiltration systems may not work effectively.</u>
2. Ensure that development can adapt to the predicted future impacts of climate change?	<p><u>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</u></p> <ul style="list-style-type: none"> <u>• hotter summers;</u> <u>• milder winters;</u> <u>• increased periods without rain;</u> <u>• increased intensity in rainfall; and</u> <u>• more extreme weather events.</u> <p><u>Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).</u></p>
3. Promote provision of surface water attenuation measures to reduce the	<u>The site falls within groundwater vulnerability. Conventional soakways/infiltration systems may not work effectively and surface water disposal may be an issue. There are numerous ponds in the general area indicate a high standing</u>

risk of flooding including: Sustainable Drainage Systems?	<u>water level; and to reach ponds for the purpose of discharging surface waters may involve crossing third party land. There is a possibility of flooding from storm water running off road and pavement. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</u>
4. Minimise the risk of flooding to people and property (new and existing development)?	<u>The site is located within flood zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. (Also see response to Q5:1 & 3).</u>
5. Protect and enhance the natural function of floodplains?	<u>In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.</u>
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 5b</p> <p><u>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. The site falls within groundwater vulnerability. There are numerous ponds in the general area indicating a high standing water level and to reach ponds for the purposes of discharging surface water may involve crossing third party land. No details of drainage exist as yet but there is potential to introduce pollution prevention measures. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</u></p> <p><u>Overall likely effects are considered to be moderate adverse against this objective.</u></p>	
<p>SA objective 6. Protect, maintain and enhance the historic environment Decision Aiding Questions. Will the development site...</p>	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	<u>The site is located approximately 95m to the north east from the grade II Listed Building, The School House and School. The Yatton Keynell Conservation Area is approximately 215m to the north west of the site. The site is separated from these listed buildings by vegetation and existing development and it would be unlikely that development on this site would have an effect the significance of the designated heritage asset. The site is to the north of the residential properties including the old smithy/forge and a couple of cottages (non-designated heritage assets) according to the late 19th Century Mapping. Its location would appear to indicate little impact on the setting of the Conservation Area or listed building (the Old School House) as existing development already surrounds this building. The site would not be in keeping with the historic building line of the southern end of the village. There are no Schedule Monuments in close proximity of the site.</u>
2. Ensure appropriate archaeological	<u>The archaeological potential of the site has been evaluated as low and it is noted that there is need to undertake further archaeological assessments to support any subsequent development of the site. An assessment of the</u>

assessment prior to development?	<u>potential historic landscape has been carried out and the sensitivity of this site has been assessed as 'medium'. The site is described as Post medieval fields which likely consolidated earlier medieval fields with possibly once medieval open fields which are uncommon survivals. An Historic Landscape Characterisation Assessment will be required to be undertaken to support development at this site.</u>
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	<u>The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.</u>
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	<u>The Yatton Keynell Conservation Area is approximately 215m to the north of the site. There would be little impact on the setting of the Conservation Area or listed building (the Old School House Grade II) as existing development already surrounds this building.</u>
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	<u>No heritage asset at risk present on site.</u>
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	<u>The site is not within proximity to result in impacts to the Stonehenge and Avebury WHS and its setting.</u>
Assessment outcome (on balance) - -	
Summary of SA Objective 6	
<u>Development on this site is likely to give rise to negative impacts on the historic environment of Yatton Keynell. It is likely that there would be little impact on the settings on nearby Conservation Area but would need to be considered in the design and layout of any future development. The site would not be in keeping with the historic building line of the southern end of the village. An Historic Landscape Characterisation Assessment will be required to be undertaken to support development at this site. Overall it is considered that there are moderate adverse effects in regard to SA Objective 6.</u>	
SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place Decision Aiding Questions. Will the development site...	
1. Protect and enhance the landscape character and scenic quality of the	<u>The Landscape Character of this site falls within the limestone lowland typology. It is of moderate character, in good condition. The County Landscape Character Assessment defines the strategy for this type of land as conserve and</u>

<p>countryside?</p>	<p><u>strengthen. The planning application process would need to make provision for strengthening the character and appearance in this area. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside. The site adjacent to Cotswold AONB, which has the highest status of protection in relation to landscape and scenic beauty and would have a requirement for Green Infrastructure buffer to mature trees, with low intervisibility and sensitive visual receptors (residential).</u> <u>The site occupies a prominent position in relation to the historic linear building line of the village. A detailed landscape assessment should be undertaken to assess impacts and identify suitable mitigation to mitigate / enhanced visual impact as edge of village onto open countryside which could include sensitive planting, use of materials to reflect local built vernacular and buffers to screen view point from site. Housing development at this site would result in potential landscape & visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies however this could reduce the amount of development at this location.</u></p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p><u>Given the size of the site development for housing would not offer the potential to deliver a comprehensive network of Green Infrastructure.</u></p>
<p>3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?</p>	<p><u>The development of the site for housing may offer the potential to deliver additional access to and availability of green spaces within the site.</u></p>
<p>4. Conserve and enhance areas with landscape designations and take account of their management</p>	<p><u>The site is adjacent to the Cotswold AONB, which has the highest status of protection in relation to landscape and scenic beauty. The site occupies a prominent position in relation to the rest of the village which has an historic linear building line. It is likely that significant landscaping would be required to ensure appropriate protection and</u></p>

objectives, in particular for the three local AONBs ⁷⁷ ?	<u>enhancement of the area, which may not be feasible.</u>
5. Protect rights of way, open space and common land?	<u>Development in this location would not result in loss of amenity greenspace or common land. PRow (YKEY12) lies to the north west on the site along the track. It is likely that development in this location would have an impact on views from the PRow to the north of the site. The site is of a size where additional connectivity through the site to existing networks could be achieved.</u>
6. Protect the Western Wiltshire Green Belt from inappropriate development?	<u>The site would not result in impacts to the Western Wiltshire Green Belt.</u>
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 7</p> <p><u>The site is adjacent to the Cotswold AONB, which has the highest status of protection in relation to landscape and scenic beauty. Mitigation of effects from development of this site on the AONB would likely be problematic to mitigate. The site adjoins the built edge of southern edge of Yatton Keynell. The occupies a prominent position in relation to the historic linear building line of the village. The site would have a requirement for GI buffer to mature trees. Housing development at this site would result in potential landscape & visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies. There are views into the site from a number of locations from residential properties, the Cotswold AONB to the west and open countryside to the north and east. The level of effect would depend on the design of developments and employment of appropriate mitigation such as the retention of hedgerows and mature vegetation where possible. The site is of a size which could deliver areas of public open space or green infrastructure within the site. The development of the site would not affect publicly accessible open space, green infrastructure, or recreation facilities. PRow (YKEY12) lies to the north west on the site along the track.</u></p> <p><u>On the balance of evidence currently available the effects are considered to be moderate adverse against this objective.</u></p>	

⁷⁷ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	<u>The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.</u>
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	<u>Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units.</u>
3. Ensure adequate provision of land to meet housing needs?	<u>In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.</u>
4. Have regard to the settlement hierarchy?	<u>In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.</u>
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	<u>In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.</u>
6. Consider the emerging Neighbourhood Plans?	<u>There is no known emerging Neighbourhood Plan.</u>
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	<u>In accordance with national policy / local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities.</u>
Assessment outcome (on balance) + +	
Summary of SA Objective 8	
<u>The whole SHLAA site provides capacity for up to approximately 40 residential units (though this may be reduced through the mitigation set out in this assessment), which contributes towards Wiltshire's housing supply. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units. Overall it is considered that allocation of this site would have a moderate positive effect on SA Objective 8.</u>	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	

Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	<u>In accordance with national policy/local plan policy, the development of the site would provide opportunities through high quality design and access for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime.</u>
2. Promote design of buildings and spaces to reduce obesity?	<u>In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site has the potential space to provide open /green space or children's play area and other landscaping to improve facilities and amenity. High quality design and good access of the site should take into account the design and layout of the dwellings (access to and contact with nature), walking / cycle ways to promote healthy lifestyles.</u>
3. Promote the design of buildings and spaces to meet the changing needs of the population?	<u>In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design and good access of the site should take into account the design and layout of the mixed type dwellings, walking / cycle ways to attempt to future proof the development and meet the changing needs of the population. This would include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.</u>
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	<u>There is a doctor's surgery, Jubilee Field Surgery located in Yatton Keynell (120m). Mitigation would be required to support additional patient capacity.</u>
5. Maximise opportunities within the most deprived areas?	<u>In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation in the area. There would be some social and economic benefits for the Yatton Keynell area through housing provision, short-term construction jobs and a larger workforce for local businesses. This site is not within one of Wiltshire's most</u>

	<u>deprived quintile group of Lower Layer Super Output Areas (LSOAs), as set out in the English Indices of Deprivation 2015: Wiltshire Report. This site is within Wiltshire 008B LSOA, which is amongst the 30% least deprived neighbourhoods in the country⁷⁸. Development of this site is likely to contribute to improving poverty and deprivation in this area.</u>
6. Reduce rural isolation, including access to services for those without a car in rural areas?	<u>The development of the site would provide housing in a sustainable location in line with the settlement strategy, with a reasonable level of access to the local services and facilities within the village. Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. The village is serviced by the 35 and 635 bus routes. Accordingly, there is the potential to reduce rural isolation.</u>
7. Support the development of community campuses?	<u>Development of community campuses is directed to the town level and therefore this is not appropriate for this site.</u>
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	<u>The site falls in the Brook Valley Church of England Primary School and Chippenham Secondary Schools catchment area.</u> <u>The primary school is almost full and forecast to remain so. They are on a large site however so expansion should be possible. The numbers of houses are low therefore expansion of the school wouldn't be necessary. Mitigation would be required to support additional pupil capacity. Expansion of one or more of the Chippenham Secondary Schools will be required to cater for all of the proposed housing in and around Chippenham and mitigation to support additional capacity to cater for pupils arising from development would be sought.</u>
Assessment outcome (on balance) -	
Summary of SA Objective 9	

⁷⁸ English indices of deprivation (DCLG, 2015)

The provision of housing should reduce poverty, deprivation and promotes more inclusive and self-contained communities. The sites are within reasonable proximity to the limited services and facilities in the village however there is more limited access to the types of facilities found in larger settlements such as hospitals or colleges and this would lead to a reliance of the private vehicle. The primary school has some surplus places and given the low capacity of the site this would not need an expansion of the school however mitigation would be required to support additional capacity for secondary school places. The village has a doctor's surgery although capacity would need to be investigated.

Overall, likely effects are considered to be minor adverse against this objective.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	<u>There is a footway opposite one of the possible entrances the site however there is no footway present at the other proposed access. To facilitate good walking/ cycling connections the road will need to be crossed safely to access the village as there is currently no crossing. PRow (YKEY12) lies to the north west on the site along the track and this could be used to facilitate connectivity to the site.</u>
2. Ensure new development incorporates facilities and infrastructure for cyclists?	<u>Development of this site is capable of incorporating infrastructure in the form of garages, sheds and secure bike stands to provide opportunities to improve cycling.</u>
3. Improve the jobs/homes balance, to reduce out-commuting?	<u>The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.</u>
4. Promote developments in accessible locations, that reduce the need to travel and reliance on the private car?	<u>This site is considered to be in an accessible location being approximately 550m from a post office; surgery and the primary school are in close proximity to the site. The site is close to Farrells Field bus stop which serves Chippenham (Service 35) on the AM and PM peak and in the interpeak period. Services 74/75 from this bus stop are school services. Chippenham railway station is beyond walking/cycling distance. However, overall, this level of new dwellings is likely to increase travel movements in the area.</u>

Assessment outcome (on balance) - -

Summary of SA Objective 10

The site is located on the southern fringe of the Large Village of Yatton Keynell. There is a footway opposite one of the possible entrances the site however there is no footway present at the other proposed access. To facilitate good walking/ cycling connections the road will need to be crossed safely to access the village as there is currently no crossing. The site is related to the village and is within walking distance of the services and facilities within the settlement. There is more limited access to the types of facilities found in higher order settlements such as Chippenham and overall residents are

<u>likely to rely upon use of the private car</u> Public footpaths whilst in the vicinity and having the potential to be connected to are unlikely to materially increase walking accessibility to the centre of the village. On the balance of evidence currently available, the effects are considered to be moderate adverse against this objective.	
SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth Decision Aiding Questions. Will the development site...	
1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	<u>Not relevant to this location.</u>
2. Support the rural economy?	<u>The site would boost the number of homes and thereby increase the population of the village and wider community area. This would potentially directly assist in the support of rural services and facilities.</u>
Assessment outcome (on balance) + +	
Summary of SA Objective 11 <u>Development will increase the local population, which would contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. Overall it is considered that it is likely that there would be no adverse effect and whilst there no known specific regeneration benefits of the site for housing development, the allocation of this site would be likely to have a moderate positive effect against the aim of SA Objective 11.</u>	
SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce Decision Aiding Questions. Will the development site...	
1. Protect and enhance the vitality and viability of existing employment areas?	<u>The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the community area.</u>
2. Provide a focus for development in Salisbury and Trowbridge?	<u>The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away. In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations.</u>

Assessment outcome (on balance) +

Summary of SA Objective 12

The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would positively meet the aim of SA Objective 12.

A.4. Devizes Community Area Remainder

Devizes Community Area Remainder - Stage 3 Assessment Tables

Site 529 – Land at Southcliffe Road, Market Lavington	

Sites being taken forward by Wiltshire Council from this stage to Stage 4

Site 530 – Fiddington Hill, Market Lavington	Site 374 – R/O 37 White Street, Market Lavington
Site 2055 – Underhill Nursery, Market Lavington	Site 1089 – Southcliffe, Market Lavington
Site 529 – Land at Southcliffe Road, Market Lavington	Site 3443 – Land to the east of Lavington School, Market Lavington
<u>Site 3268</u> – Land at the Spring, Market Lavington	

Market Lavington

Site 529 – Land at Southcliffe Road, Market Lavington

<p>Site context</p> <p>Site size: 4.09ha Site capacity: approximately 92 dwellings</p> <p>The area is characterised by open countryside to the south and south east, allotment gardens, paddocks and arable farmland dominate the site. Existing residential development and High Street frontages to the north and west. The site is predominantly flat to the north but rises uphill to the south.</p>	
<p>SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses</p> <p>Decision Aiding Questions. Will the development site...</p>	
<p>1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?</p>	<p>The site is on farmland/amenity space, which generally has limited ecological value due to the nature of the land use, the features at the boundaries such as hedgerows and trees may support protected species. Ecological assessment would be required to support a planning application and further details on the proposals would be required to accurately assess likely impacts. There would be limited potential to create or enhance habitats at a landscape scale and make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation in the local area.</p> <p>Domestic scale outbuildings and arable/semi-improved grassland (allotment land) features are present on site. These features would also need to be subject to ecological assessment at planning application stage to ascertain whether they support protected species and wider biodiversity.</p>
<p>2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?</p>	<p>The site is located approx. 860m north-west of the Salisbury Plain SAC/SPA/SSSI. The Market Lavington East County Wildlife Site is situated approximately 650m east of the site.</p> <p>As the site lies within the 6.4km buffer zone for Salisbury Plain SPA mitigation measures would be required in-line with the Management Plan/Habitats Regulations to maintain the integrity of the designated features of the Plain.</p>

3. Result in greater community engagement with biodiversity?	The development of the site for housing would have the potential to increase public access to designated/non-designated biodiversity features. The site lies within 1km of the Salisbury Plain SAC/SPA/SSSI (protected Stone Curlew) and hence increased recreational pressure associated with new development would need to be assessed as part of an appropriate assessment for the purposes of designing mitigation to meet the requirements of the Habitats Regulations if the site is taken forward into any subsequent stage of the selection process. With suitable and robust mitigation measures, including setting aside land for habitat creation/bolstering, allocating the site for housing development would be potentially acceptable.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	The development of the site for housing would have the potential to make suitable provision for buffers to recognised green corridors. Further planting would significantly improve local Green Infrastructure.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	The development of the site would appear to be capable of delivering some multi-functional Green Infrastructure and improve habitat connectivity.
6. Ensure all new developments have regard to and protect BAP habitats/species?	<p>The site hosts a Traditional Orchard which is identified in the BAP as a priority habitat. In addition a Deciduous Woodland BAP priority habitat is located approximately 100m to the south-west of the site.</p> <p>Therefore, in accordance with local plan policy and biodiversity targets, the development of the site for housing would need to maintain and enhance local habitats through additional planting and wider biodiversity improvements.</p>
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement could contribute towards recreational impacts on the Salisbury Plain SPA through increased recreational pressure. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.
8. Maintain the existing extent of ancient woodland sites?	There are no ancient woodland features on, or adjacent to the site. However, the presence of Traditional Orchard priority BAP habitat on site and Deciduous Woodland priority BAP habitat approximately 100m to the south-west would need to be carefully assessed/protected and enhanced. Whilst development of the site may not directly affect the woods, consideration should nonetheless be given to potential impacts associated with construction activity and longer-term recreational pressure.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	The site falls within the visitor catchment of Salisbury Plain SPA. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.
10. Consider Wiltshire Council guidance to maintain SAC integrity in	Not applicable – the site does not fall within one of the Council’s current guidance areas.

relevant areas?	
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).
Assessment outcome (on balance) -	
<p>Summary of SA Objective 1</p> <p>The site lies within the Council's buffer zones for Salisbury Plain SPA and further assessment would therefore be needed to mitigate potential recreational pressure on protected Stone Curlew. The HRA screening assessment has identified that development at the settlement could contribute towards recreational impacts on the Salisbury Plain SPA through increased recreational pressure. An appropriate assessment would be required if options at this settlement are taken forward into any subsequent stage of the selection process. A mitigation strategy for recreational pressure on Salisbury Plain SPA has been agreed with Natural England.</p> <p>The presence of priority BAP habitats on-site (Traditional Orchard) and approximately 100m to the south-west (Deciduous Woodland) would necessitate ecological assessment work to be undertaken to support a planning application. Further planting and wider mitigation measures may be required to address any impacts associated with the development of the site, which while considered possible are likely to reduce the capacity of the site. Again, such measures would need to be identified and appropriately designed as part of the planning application process.</p> <p>On balance it is considered that the effects would be minor adverse in relation to SA objective 1 and mitigation is considered possible.</p>	
SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings	
Decision Aiding Questions. Will the development site...	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	<p>The site is situated on the edge of the local service centre of Market Lavington which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site is located close to the village core so is within a good walking/cycling distance to the shops and facilities of the village. Bus stops are present at several locations along the main road of the village providing connectivity to the public transport network. However, residents are likely to rely upon use of the private car to access employment and a wider range of services and facilities further afield.</p> <p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. The site lies to the south-east of the village on former allotment gardens/arable farmland and adjacent to the Conservation Area. Given the site's prominence in the landscape setting on the rural fringe of the village and the need to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site. There would also need to be a degree of landscape mitigation and sensitive design due to the site's location and relationship adjacent to the Conservation</p>

	Area and nearby Listed buildings.
2. Maximise reuse of previously developed land where possible/appropriate?	The site largely comprises greenfield land and hence would have no potential for significantly maximising the reuse of previously developed land.
3. Encourage remediation of contaminated land?	At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. The site is largely located on greenfield land (allotment gardens/orchard/arable farming), as opposed to brownfield (i.e. previously developed land). On the basis of available evidence, it is considered unlikely that significant remediation measures would be required in order to facilitate development of the land for housing.
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	The site comprises part of a large arable field/orchard/allotment gardens. Therefore, in line with national and local planning policy, the development of the site would need to ensure that soil quality and structure is appropriately protected.
6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a Mineral Safeguarding Area or Waste Site Safeguarding Area.
Assessment outcome (on balance) -	

Summary of SA Objective 2

The site forms part of a large agricultural field that appears to have been used for allotments/orchard/arable farming. Though at a sustainable location near to the village core of local service centre, due to the site being adjacent to the Conservation Area and Listed Buildings it is unlikely that density of housing could be maximised at this site. No detailed assessment has yet been made in terms of soil quality, but development would result in the permanent loss of such resources. The site is within walking/cycling distance of services and facilities within the centre of Market Lavington. Overall this site is considered to have a minor adverse effect in relation to SA Objective 2.

SA objective 3. Use and manage water resources in a sustainable manner

Decision Aiding Questions. Will the development site...

<p>1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?</p>	<p>The development of the site for housing would need to be capable of positively responding to the predicted effects of climate change.</p> <p>The capacity of the local sewerage network would need to be investigated further in order to support a planning application. On the basis of evidence gathered to date, there would appear to be limited capacity in local foul water sewers and this may account for recorded incidents of downstream sewer flooding. There are currently no surface water systems in situ within the site.</p>
<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. As outlined above, a capacity assessment should be undertaken to support any subsequent detailed proposals. Where the pressure exerted by new housing development would lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.</p> <p>Evidence indicates that water supply capacity and connection is available but that there are limitations in relation to foul,</p>

	storm and surface water systems.
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company.
4. Consider the need for adequate provision of surface water and foul drainage?	There are no surface water systems at this location – surface water currently flows to land drainage system. The site lies on the edge of an area underlain by chalk. As such, groundwater issues may arise that would prevent effective attenuation of surface waters. Soakaways/Sustainable Drainage Schemes may work, but soil permeability testing would need to be undertaken to inform the drainage strategy, in line with Wiltshire Council Groundwater Strategy and CIRIA Sustainable Drainage Systems (SuDS) Manual (C753) ⁷⁹ – part E - chapter 25. In addition, foul drainage may also be an issue. Further detailed investigation work would be required to support an allocation/planning application. Where technically feasible, the development of the site would need to make provision for on-site/off-site surface and foul water drainage. As outlined above, this may require statutory easements to be secured and dialogue with the relevant water utilities company would be essential at the detailed design stage.
5. Protect, and where possible, improve surface, ground and drinking water quality?	The site is not located within a Groundwater Protection Zone and hence is unlikely to impact on quality and quantity of groundwater resources.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet	Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.

⁷⁹ The SuDS Manual (C753), CIRIA, December 2015.

and Lambourn Floodplain SAC?	
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 3</p> <p>Given the potential delivery capacity of the site, development would lead to an increase in demand for water infrastructure. There is adequate capacity to ensure water supply to the site, however foul and surface water drainage may need to be improved.</p> <p>Drainage issues related to surface water and sewer flooding events have been recorded in the area. Accordingly, a drainage strategy would need to be submitted in support of any planning application. Bearing in mind the site lies on the edge of an area underlain by chalk, consideration would need to be given to infiltration rates and surface water attenuation measures, which could be problematic to achieve given the soil conditions.</p> <p>Due to the potential issues regarding foul water and surface water, and the fact that finding an appropriate drainage strategy could be problematic, this site is scored as moderate adverse for this objective.</p>	
<p>SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Maintain and improve local air quality?	<p>The site is not located within an Air Quality Management Area (AQMA). That said, housing development may lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development of the site would likely marginally increase local commuter traffic, which may impact on local air quality. However, it is recognised that the site is within 1 km of key services and facilities in Market Lavington and therefore accessible by foot and cycle. This should help limit the extent of additional traffic emanating from the site. Nevertheless, measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could assist in providing opportunities to improve local air quality through making purchasers/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
2. Minimise and, where possible, improve on unacceptable levels of	Development of the site for approximately 92 dwellings may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Bearing in mind the fact that the site borders an existing

noise, light pollution, odour and vibration through the layout, design and/or location of development?	residential area and footpaths, appropriate mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing may lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Appropriate mitigation measures to limit the impacts on local air quality associated with vehicular movements would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAS ⁸⁰ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA).
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Appropriate mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts. An assessment of the potential impacts of housing development on the Ancient Woodland to the south-east of the site, as well as on-site trees and hedgerows would need to be

⁸⁰ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

	undertaken to support any subsequent planning application.
Assessment outcome (on balance) -	
Summary of SA Objective 4	
<p>The site is situated adjacent to south-eastern boundary of the settlement on open arable/former allotment land. The site is not within a designated AQMA, but there would be a need to address impacts associated with construction (short-term) and occupation (longer-term) phases of any potential housing scheme. Measures must be implemented as necessary to mitigate emission levels in line with the council's policies and Air Quality Strategy. In turn the developable area of the site might be reduced. In addition, developers of the site could assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p> <p>A Noise Impact Assessment should be undertaken and submitted with any development proposals. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</p> <p>Overall the likely effects against this SA objective are considered to be minor adverse.</p>	
SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions	
Decision Aiding Questions. Will the development site...	
1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions through the construction and occupation phases of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources will be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency measures will be encouraged through the application/design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for

practices?	the construction phase would also encourage sustainable building practices leading to a reduction in greenhouse gases emissions.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 5a</p> <p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices to lead to a reduction in greenhouse gas emissions.</p> <p>However, the effect of the development of this site will be to increase greenhouse gas emissions overall and on balance this site is considered to have a minor adverse impact in relation this SA objective.</p>	
<p>SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<p>The site is located within Flood Zone 1 and no evidence exists at this stage to suggest it is affected by other sources of flood risk. There do not appear to be any watercourses in close proximity to the site. The risk of flooding from surface water run-off generated as a result of built development would need to be addressed through appropriate mitigation measures to ensure the surface runoff from the site is not increased beyond greenfield infiltration rates.</p> <p>Given the site's location and proximity to higher ground to the south, development may lead to potential increase in surface water flood risk elsewhere. Notwithstanding the low risk of flooding, a flood risk assessment and drainage strategy would need to be submitted at a subsequent planning application stage, particularly in terms of groundwater/surface water flood risk.</p> <p>The land is close to an area underlain by chalk and there is the potential for high groundwater levels/surface flooding due to groundwater. As such infiltration techniques may be possible, though there would be a need to investigate soil infiltration rates further. There would also be need to introduce pollution prevention measures, and determine appropriate methods of surface water attenuation through a SuDS. Based upon the size of the site, any subsequent planning application would need to be supported by a Flood Risk Assessment.</p>
2. Ensure that development can adapt to the predicted future impacts of climate change?	The long-term negative effects of housing development could potentially be offset through the delivery of low carbon dwellings and on-site renewable energy generation (e.g. solar voltaics).

3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	Post-development runoff rates should mimic or improve on existing greenfield rates so as not to exacerbate flooding. The site lies on the edge of an area underlain by chalk. Conventional soakaway measures may work, but permeability testing would be required to inform a suitable drainage strategy. The potential to accommodate appropriately scaled SuDS measures to manage surface water run-off from built form would need careful consideration. If technically feasible SuDS would need to be designed in such a manner as to allow long-term positive management of water resources.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within Flood Zone 1. Due to the sloping nature of the site, consideration would need to be given to the control/management of surface water.
5. Protect and enhance the natural function of floodplains?	Development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 5b</p> <p>The site is situated in Flood Zone 1. On site geological/soil conditions may allow conventional soakaways/SuDS to work. However, such measures would need to be investigated through any detailed planning application process, particularly in terms of groundwater/surface water flood risk.</p> <p>Due to surface water flooding issues in Market Lavington and the likely difficulty in achieving a suitable drainage strategy, likely effects are considered to be moderate adverse in relation to SA objective 5b.</p>	
<p>SASA objective 6. Protect, maintain and enhance the historic environment</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	<p>Records indicate that the land has medium archaeological potential.</p> <p>From an historic landscape character perspective the site is characterised by allotments created on former post-medieval/medieval fields with a low sensitivity to change (previous landscape character is no longer legible).</p> <p>This site is at the village centre and is adjacent to the Market Lavington Conservation Area. The setting of the Market Lavington Conservation Area would be a key consideration to address in any subsequent planning application process.</p>
2. Ensure appropriate archaeological assessment prior to development?	The land has medium archaeological potential. Records indicated that there is the potential for a Medieval settlement in the vicinity of the site. As a greenfield site, there may be potential for further archaeological assets below ground which may require further evaluation and mitigation. The development of the site would have to ensure that designated/non-designated

	<p>heritage assets are appropriately protected according to their significance.</p> <p>On the basis of available evidence, there would be a need to undertake an archaeological assessment to support any future planning application for the development of the site.</p>
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site would not utilise historical buildings, or buildings of significant local interest.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	<p>Consideration would need to be given to how housing development on greenfield land would be assimilated into the local landscape. Development of the site for housing would therefore need to maintain and enhance the distinctiveness of the existing urban fringe of the village.</p> <p>In addition, the site is adjacent to the Market Lavington Conservation Area and development would affect its setting. The site lies directly behind the row of High Street Buildings which are listed. The Market Lavington Conservation Area Statement (2002) says that the High Street Buildings are best preserved if their historic setting is maintained as undeveloped. This 'setting' is, in part, defined by the allotment land included within the site (south-east of the Conservation Area). Therefore any development at this site would be in conflict with the management objectives for the Conservation Area.</p> <p>Any proposals for development would need to be cognisant of and work with saved Core Strategy policy HH10, Area of Minimum Change (from the Kennet District Local Plan).</p> <p>A Heritage Impact Assessment would be required to inform proposals and support any subsequent planning application.</p>
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	There are no records of heritage assets at risk within the site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	Not applicable.
Assessment outcome (on balance) - -	
Summary of SA Objective 6	

The site has medium archaeological potential. There is sufficient evidence to suggest the presence of a medieval settlement and archaeological remains in the vicinity of the site. Accordingly a detailed archaeological assessment would need to be undertaken to support any planning application process.

The setting of the Market Lavington Conservation Area would need careful consideration, and it would be difficult to achieve development at this site that aligns with the management objectives for the Conservation Area. A Heritage Impact Assessment would be required to inform proposals and support any planning application.

It is considered that development at this site would have adverse impacts on the setting of the Conservation Area that would be problematic to mitigate, and likely effects are considered to be moderate adverse against this SA objective.

SA objective 7. Conserve and enhance the character and quality of Wiltshire’s rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place

Decision Aiding Questions. Will the development site...

<p>1. Protect and enhance the landscape character and scenic quality of the countryside?</p>	<p>The site is located adjacent to the edge of the existing settlement boundary. Development within this village area avoids some of the most highly valued designations. However, Market Lavington is overlooked by higher land associated with the Special Landscape Area/ Salisbury Plain SAC/SPA/SSSI to the south-east. Any development could potentially have a landscape impact and impact through potential increased use of the Salisbury Plain. Consultation with Natural England would be necessary. It will be particularly important to employ appropriate mitigation such as landscaping as the site is located on the edge of the settlement. This mitigation may reduce the capacity of the site.</p> <p>In terms of landscape character the site falls within the Vale of Pewsey (Type 15A – Greensand Vale). It is of moderate character and condition. The County Landscape Character Assessment defines the strategy for this type of land as one of maintaining/managing areas of permanent pasture, wet grassland and meadows. To this end, any subsequent planning application process would need to make provision for strengthening the character and appearance of the area through: tree/hedgerow planting and protecting the allotments to ensure the setting of the Market Lavington Conservation Area is not adversely affected. However, development of the land would lead to an inevitable loss of greenfield land and an urbanising effect when considered in the context of adjacent housing and other land-uses.</p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p>Development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure and bolstering existing habitats through tree/hedgerow planting.</p>
<p>3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside</p>	<p>Development of the site for housing would offer the potential to deliver additional access to and availability of urban greenspaces.</p>

for recreation?	
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ⁸¹ ?	The site is not located within a designated landscape area (e.g. AONB).
5. Protect rights of way, open space and common land?	Development of the site would have the potential to protect and add to the existing rights of way network, open spaces and common land assets.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	Not applicable.
Assessment outcome (on balance) -	
Summary of SA Objective 7	
Development of the site for housing would inevitably lead to a loss of greenfield land and extend the urbanising effect of the village. However, the site is relatively well contained and adjacent to existing residential stock. It is also screened, in part, by sporadic trees/hedgerows. Whilst the loss of greenfield land would alter the character and appearance of the site, such impacts would be tempered through appropriate mitigation measures designed to bolster greenspace/habitat connectivity. Overall it is considered that development at this site would likely have minor adverse impacts against this SA objective.	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	

⁸¹ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	Bearing in mind the size of the site/potential delivery capacity (approximately 92 dwellings), the development of the site for housing would help boost the local supply of affordable homes in accordance with national/local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	The development of the site would need to deliver high quality, sustainable homes across all types and tenures.
3. Ensure adequate provision of land to meet housing needs?	The allocation of the site would boost housing supply to meet local and HMA targeted needs.
5. Have regard to the settlement hierarchy?	The site would appropriately respect the settlement hierarchy (Market Lavington is designated as a Local Service Centre) and thereby reduce the risk of speculative development in unsustainable locations.
6. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	Development of the site for housing would assist in bolstering local opportunities for accessing employment through short-term construction contracts and a longer-term boost to the local population/workforce.
7. Consider the emerging Neighbourhood Plans?	A Neighbourhood Development Plan is in the early stages of preparation. As such, the Housing Site Allocations DPD is the appropriate vehicle for addressing local housing requirements at this stage.
8. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	If appropriately planned, the development of the site would provide opportunity to increase the range and availability of housing in the village.
Assessment outcome (on balance) + + +	
Summary of SA Objective 8	
<p>The whole SHLAA site provides capacity for approx. 92 residential units (though this may be reduced to accommodate mitigation requirements identified in this assessment). Development at the site would contribute to Wiltshire's housing supply as well as boost the supply of a range of homes in accordance with national and local planning policies. There is an identified need for adaptive affordable housing to address local needs. The site is sustainably located in relation to local services and facilities. Overall the effects on this objective are considered to be major positive.</p>	

SA objective 9. Reduce poverty and deprivation and promote more inclusive and self-contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	Development of the site would be capable of providing opportunities for social integration with neighbouring existing housing areas and thereby help reduce crime/the fear of crime through appropriate design.
2. Promote design of buildings and spaces to reduce obesity?	Development of the site would need to provide opportunities to improve cycling and walking routes to local services/facilities/employment.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	Development of the site would offer the opportunity to provide flexibly designed accommodation to meet the changing demands of an ageing population in the local area.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	Whilst set within a rural environment, Market Lavington nonetheless contains a GP Surgery. On the basis of evidence available at the time of assessment, capacity is available and the site would be sustainably located in relation to the facility.
5. Maximise opportunities within the most deprived areas?	Development of the site would help increase opportunities for the local community to access a decent home and thereby help reduce deprivation.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The site is located on the edge of the village. Access to village facilities by walking and cycling would be achievable. However, access to other towns in the area would be limited by the current bus timetable.
7. Support the development of community campuses?	The development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	St Barnabus Primary in Market Lavington has surplus places at present and would benefit from housing within the locality to bolster long-term numbers on roll. Lavington Secondary is the catchment school and is already full and forecasted to remain so. The school could be expanded however.
Assessment outcome (on balance) -	

Summary of SA Objective 9

The site is relatively sustainably located on the edge of the village, with access to services and facilities via cycling/walking. On the basis of evidence gathered to date, there would appear to be sufficient capacity in local health facilities at Market Lavington’s GP surgery. The local primary school has spare capacity so additional housing in the village could help support the school. Whilst the local secondary school is currently full, it could potentially be expanded. Whilst there are a number of services and facilities at the village and a regular bus service, the majority of trips to work and wider services and facilities will likely involve use of cars. Overall, the site is considered to have a minor adverse effect against SA objective 9, for which mitigation measures are considered to be achievable.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	Development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of the site would have the potential to create links to existing cycling routes.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	The site is located in an accessible location at the heart of the village with good prospects for connectivity to the village centre services and facilities. Whilst there are a number of facilities, services, schools and surgery at Market Lavington, as well as a regular, peak-time bus service, housing development at this site is likely to result in use of the private car to access employment and a wider range of retail and facilities further afield.

Assessment outcome (on balance) -

Summary of SA Objective 10

The site is within 1km of key facilities such as schools, health centres or shops and therefore should be considered as being accessible. Residents will be able to walk or cycle to the majority of local facilities without the need to go outside of Market Lavington. Whilst there are regular bus services from the village to towns further afield, it is likely that residents will make use of private car to access employment and facilities in the wider area. The likely effects of development at this site are

considered to be minor adverse against this objective and mitigation are considered to be achievable.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth
 Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities to town centre locations to aid urban regeneration?	The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of viable local retail, leisure and/or employment centres.
--	--

2. Support the rural economy?	The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of rural services and facilities.
-------------------------------	---

Assessment outcome (on balance) + +

Summary of SA Objective 11
 Development will increase the local population and could contribute to the local economy through use of local shops and services. Overall, the effects are considered moderate positive.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce
 Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?	In accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas.
---	---

2. Provide a focus for development in Salisbury and Trowbridge?	Whilst an appropriate level of development would broadly respect the settlement hierarchy and status of the village as a Local Service Centre, it would do nothing to support the role of Salisbury and Trowbridge as the primary focus for growth.
---	---

Assessment outcome (on balance) +

Summary of SA Objective 12
 Development of the site for housing would not result in new employment land. Although the site allocation is for housing, this in itself will generate direct and indirect

construction employment, and will help stimulate the local economy once built. Overall, likely effects are considered to be minor positive.

Site 530 – Fiddington Hill, Market Lavington

Site context

Site size: 1.3ha Site capacity: approximately 31 dwellings

The area is predominantly residential to the south and west. The land rises to the south-east towards Salisbury Plain. Potential for open views into the site from higher land to the south/south east. There are existing farm/nursery buildings across sites 2055/530 that would be lost if development took place on either site.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

<p>1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?</p>	<p>The site lies on the edge of the village and approximately 650m from the Salisbury Plain SSI/SAC/SPA to the south-east. The land also rises from the site towards the Salisbury Plain and is relatively open and within arable use. Field boundaries are marked by hedgerows which are a priority habitat and may support protected species. These hedgerows contribute to secondary habitat connectivity in the wider area and as such, the opportunity to improve habitat connectivity would rely upon new planting and protection/bolstering of existing hedgerows.</p>
<p>2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?</p>	<p>Whilst the land in question largely comprises greenfield, agricultural land in arable use, the existing tree belt along the northern boundary and on-site hedgerows would need to be protected and enhanced to improve habitat connectivity.</p> <p>The site is located approx. 650m north-west of the Salisbury Plain SAC/SPA/SSSI. The Market Lavington East County Wildlife Site is situated approximately 380m south-east of the site.</p> <p>The site lies within the 6.4km buffer zone for Salisbury Plain SPA. Therefore mitigation measures would be required in-line with the Management Plan/Habitats Regulations to maintain the integrity of the designated features of the Plain.</p>
<p>3. Result in greater community engagement with biodiversity?</p>	<p>The development of the site for housing would have the potential to increase public access to non-designated biodiversity features. In addition, the site lies within the 6.4km buffer zone for the Salisbury Plain SAC/SPA and the protected Stone Curlew population. Hence increased recreational pressure associated with new development would need to be assessed as</p>

	part of an appropriate assessment for the purposes of designing mitigation to meet the requirements of the Habitats Regulations. With suitable and robust mitigation measures, including setting aside land for habitat creation/bolstering, allocating the site for housing development would be potentially acceptable.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	In line with national policy, local plan policy and standing advice from relevant bodies, the development of the site for housing would have the potential to make suitable provision for buffers to recognised green corridors.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	If appropriate planting is provided to screen the site and bolster habitat connectivity, development would be capable of delivering multi-functional Green Infrastructure in line with local plan policy and planning guidance.
6. Ensure all new developments have regard to and protect BAP habitats/species?	<p>The site lies approximately 380m north-west of Lowland Calcareous Grassland BAP priority habitat associated with the Market Lavington East County Wildlife Site.</p> <p>The site forms part of a much larger set of inter-linked agricultural fields. Trees and hedgerows would, as BAP habitats in their own right, need to be protected through any subsequent planning application process.</p> <p>Therefore, in accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of delivering biodiversity improvements.</p>
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement could contribute towards recreational impacts on the Salisbury Plain SPA through increased recreational pressure. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.
8. Maintain the existing extent of ancient woodland sites?	The site is located approximately 2km from an area of Ancient Woodland (Manor House Woods County Wildlife Site) to the west of the village. Whilst development of the site may not directly affect the woods, consideration should nonetheless be given to potential impacts associated with construction activity and longer-term recreational pressure.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	The site falls within the visitor catchment of Salisbury Plain SPA. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process. A mitigation strategy for the Salisbury Plain has been agreed with Natural England.
10. Consider Wiltshire Council guidance to maintain SAC integrity in	Not applicable – the site does not fall within one of the Council’s current guidance areas.

relevant areas?	
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).
Assessment outcome (on balance) -	
Summary of SA Objective 1	
<p>The site is situated on the eastern edge of the village on agricultural land. The land is relatively open and rises to the south-east towards Salisbury Plain, with field boundaries marked by hedgerows and hedgerow trees which are a priority habitat and should be retained and enhanced. The site lies within the 6.4km buffer zone for the Salisbury Plain SPA. Due to the relationship of the site with the Salisbury Plain SPA, an appropriate assessment would be required if options at this settlement are taken forward into any subsequent stage in the selection process. A mitigation strategy for recreational pressure on Salisbury Plain SPA has been agreed with Natural England. Overall it is considered that the effects would be minor adverse in relation to SA objective 1 and mitigation is considered achievable.</p>	
SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings	
Decision Aiding Questions. Will the development site...	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	<p>The site lies on the edge of the village (local service centre) of Market Lavington which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. Whilst on the eastern extremity of the village, the site is situated in relative proximity to the centre of Market Lavington and thereby a range of services / facilities would potentially be accessible by foot, cycle and public transport. Bus stops are present at several locations along the main road of the village providing connectivity to the public transport network. However, residents are likely to rely upon use of the private car to access employment and a wider range of services and facilities further afield.</p> <p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. The site lies to the extreme east of the village in close proximity to the Salisbury Plain SPA. Given the site's prominence in the landscape setting on the rural fringe of the village, it is unlikely that housing densities could be maximised on this site since there would need to be a degree of landscape mitigation.</p>
2. Maximise reuse of previously developed land where possible/appropriate?	The site forms part of a larger farm unit. Evidence of hard-standings and isolated buildings on site would suggest that part of the site may fall into the definition of previously developed land.

3. Encourage remediation of contaminated land?	At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation.
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	The site comprises part of a set of large arable fields. Therefore, in line with national and local planning policy, the development of the site would need to ensure that soil quality and structure is appropriately protected.
6. Protect the best and most versatile agricultural land?	Notwithstanding the current land use, there is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a Mineral Safeguarding Area or Waste Site Safeguarding Area.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 2</p> <p>The site comprises part of a series of agricultural fields and as such, a detailed assessment of soil quality would need to be undertaken in line with local and national policy in order to support any subsequent planning application.</p> <p>The site is within walking/cycling distance of services and facilities within the centre of Market Lavington. However, given the site's prominence in the landscape setting on the rural fringe of the village it is unlikely to be appropriate for housing density to be maximised this site.</p> <p>Overall, likely effects are considered to be minor adverse against this objective.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Take into account predicted future	The development of the site for housing would need to be capable of positively responding to the predicted effects of climate

<p>impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?</p>	<p>change.</p> <p>The capacity of the local sewerage network would need to be investigated further in order to support a planning application. On the basis of evidence gathered to date, there would appear to be limited capacity in local foul water sewers and this may account for recorded incidents of downstream sewer flooding. There are currently no surface water systems in situ within the site.</p>
<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. As outlined above, a capacity assessment should be undertaken to support any subsequent detailed proposals. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.</p> <p>Evidence indicates that water supply capacity and connection is available but that there are limitations in relation to foul, storm and surface water systems.</p>
<p>3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?</p>	<p>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company.</p>
<p>4. Consider the need for adequate provision of surface water and foul drainage?</p>	<p>There are no surface water systems at this location – surface water currently flows to land drainage system. The site lies on the edge of an area underlain by chalk. As such, groundwater issues may arise that would prevent effective attenuation of surface waters. Soakaways/Sustainable Drainage Schemes may work, but soil permeability testing would need to be undertaken to inform the drainage strategy, in line with Wiltshire Council Groundwater Strategy and CIRIA Sustainable Drainage Systems (SuDS) Manual (C753)⁸² – part E - chapter 25. In addition, foul drainage may also be an issue. Further detailed investigation work would be required to support an allocation/planning application. Where technically feasible, the development of the site may need to make provision for on-site/off-site surface and foul water drainage. As outlined above,</p>

⁸² The SuDS Manual (C753), CIRIA, December 2015.

	this may require statutory easements to be secured and dialogue with the relevant water utilities company would be essential at the detailed design stage.
5. Protect, and where possible, improve surface, ground and drinking water quality?	The site is partially located within Groundwater Source Protection Zone 2/3. Accordingly, further dialogue with the Environment Agency/Wessex Water would need to be undertaken as part of any subsequent planning application process in order to assess the likelihood of significant effects on the groundwater within the Source Protection Zone. That said, in line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.
Assessment outcome (on balance) - -	
Summary of SA Objective 3	
<p>Development will lead to an increase in demand for water infrastructure. There is adequate capacity to ensure water supply to the site, however foul and surface water drainage may need to be improved.</p> <p>The site is partially located within Groundwater Source Protection Zone 2/3. Accordingly, further dialogue with the Environment Agency/Wessex Water would need to be undertaken as part of any planning application process.</p> <p>Drainage issues related to surface water and sewer flooding events have been recorded in the area. Accordingly, a drainage strategy would need to be submitted in support of any planning application. Bearing in mind the site lies on the edge of an area underlain by chalk, consideration would need to be given to infiltration rates and surface water attenuation measures which could be problematic to achieve given the soil conditions.</p> <p>Due to the potential issues regarding foul water and surface water, and the fact that finding an appropriate drainage strategy could be problematic, this site is scored as moderate adverse against this objective.</p>	
SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution	

Decision Aiding Questions. Will the development site...	
<p>1. Maintain and improve local air quality?</p>	<p>The site is not located within an Air Quality Management Area (AQMA). That said, development of the site for housing may lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development of the site would likely marginally increase local commuter traffic, which may impact on local air quality. However, it is recognised that the site is within 1km of key services and facilities in Market Lavington and therefore accessible by foot and cycle. This should help limit the extent of additional traffic emanating from the site. Nevertheless, measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could assist in providing opportunities to improve local air quality through making purchasers/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home. Developers of the site could assist in providing opportunities to improve local air quality through making purchasers/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for circa 31 houses may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Bearing in mind the fact that the site borders a residential area, appropriate mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p>
<p>3. Mitigate the impacts from uses that generate NO₂, SO₂ and PM₁₀ or other</p>	<p>Development of the site for housing may lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Appropriate mitigation measures to limit the impacts of vehicular movements on</p>

particulates?	local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAS ⁸³ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA).
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts. It is considered that development of this site would be unlikely to lead to adverse impacts on habitats used by protected species, or designated as a Natura 2000 site.
Assessment outcome (on balance) -	
Summary of SA Objective 4	

⁸³ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

The site is situated on agricultural land on the eastern edge of the village. Development of the site would likely introduce short-term construction and longer-term occupation (e.g. increased private car usage) disturbance in terms of air quality, noise and lighting among others.

Whilst the site does not lie within a designated AQMA, there would be a need to address impacts associated with construction (short-term) and occupation (long-term) phases of any potential housing scheme. Measures must be implemented as necessary to mitigate emission levels in line with the council's policies and Air Quality Strategy. In turn the developable area of the site might be reduced. In addition, developers of the site could assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.

A Noise Impact Assessment should be undertaken and submitted with any development proposals. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.

Overall the likely effects against this SA objective are considered to be minor adverse.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources will be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase will also encourage sustainable building practices leading to a reduction in greenhouse gases emissions.

Assessment outcome (on balance) -

Summary of SA Objective 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in ‘Delivering strategic objective 2: to address climate change’ and the related ‘Core Policy 41: Sustainable construction and low carbon energy’ of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices to lead to a reduction in greenhouse gas emissions.

However, the effect of the development of this site will be to increase greenhouse gas emissions overall and on balance this site is considered to have a minor adverse impact in relation this SA objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects

Decision Aiding Questions. Will the development site...

<p>1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?</p>	<p>The site is located within flood zone 1 and is not affected by other sources of flood risk. There do not appear to be any watercourses in close proximity to the site, but the land does slope down from the Salisbury Plain towards the village. Therefore, the risk of flooding created by impermeable surfaces on the site due to residential development must be addressed through mitigation measures to ensure the surface runoff from the site is not increased.</p> <p>Given the site’s location and the fact the land slopes towards the village, surface water could potentially increase the risk of flood risk elsewhere. An assessment would need to be carried out at a subsequent planning application stage, particularly in terms of groundwater/surface water flood risk. The land is close to an area underlain by chalk and there is the potential for high groundwater levels/surface flooding due to groundwater. As such infiltration techniques may be possible, though there would be a need to investigate soil infiltration rates further. There would also be a need to introduce pollution prevention measures, and determine appropriate methods of surface water attenuation through a SuDS. The site will require planning applications for comprehensive development to be supported by a Flood Risk Assessment.</p>
<p>2. Ensure that development can adapt to the predicted future impacts of climate change?</p>	<p>The long-term negative effects of housing development could potentially be offset through the delivery of low carbon dwellings and on-site renewable energy generation (e.g. solar voltaics).</p>
<p>3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?</p>	<p>Post-development runoff rates should mimic or improve on existing greenfield rates so as not to exacerbate flooding. The site lies on the edge of an area underlain by greensand/chalk. Conventional soakaway measures may work, but permeability testing would be required to inform a suitable drainage strategy. The potential to accommodate appropriate SuDS measures to manage surface water run-off from built form would need careful consideration. If technically feasible, SuDS would need to</p>

	be designed in such a manner as to allow long-term positive management of water resources at greenfield infiltration rates.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within Flood Zone 1. Due to the elevated position of the land and local topography, consideration would need to be given to the control/management of surface and groundwater.
5. Protect and enhance the natural function of floodplains?	There are no watercourses in the immediate vicinity of the site. As such, development would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) - -	
Summary of SA Objective 5b	
<p>The site is situated in Flood Zone 1. Geological/soil conditions may allow conventional soakaways/SuDS to work. However, such measures would need to be investigated particularly in terms of groundwater/surface water flood risk, through any planning application process and designed at greenfield infiltration rates.</p> <p>Due to surface water flooding issues in Market Lavington and the likely difficulty in achieving a suitable drainage strategy, likely effects are considered to be moderate adverse in relation to SA objective 5b.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	From an historic landscape character perspective the site is characterised by fields from post medieval parkland with low sensitivity in terms of accommodating change. That said the parkland is not a strongly legible within the landscape. Whilst the site is located in proximity to the Market Lavington Conservation Area, development would be unlikely to directly/physically affect heritage assets or designations. However, high quality design should be promoted to ensure that the development fits in with the townscape character and protects and enhances the setting of the Conservation Area.
2. Ensure appropriate archaeological assessment prior to development?	Records indicate that the land has medium archaeological potential. As a greenfield site, there may be potential for further archaeological assets below ground which may require further evaluation and mitigation. The development of the site would have to ensure that designated/non-designated heritage assets are appropriately protected according to their significance. On the basis of available evidence, there would be a need to undertake an archaeological assessment to support any subsequent planning application.
3. Promote sensitive re-use of historical buildings and buildings of	The site would not utilise historical buildings, or buildings of significant local interest.

significant local interest, where appropriate?	
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	The site does not lie within a designated Conservation Area. Consideration will need to be given to how housing development on greenfield land would be assimilated into the local landscape. In accordance with national policy/local policy, the development of the site for housing would need to maintain and enhance the distinctiveness of the existing urban fringe of Market Lavington through appropriate high quality design.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	There are no records of heritage assets at risk within the site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	Not applicable.
Assessment outcome (on balance) -	
Summary of SA Objective 6	
<p>The site has medium archaeological interest and low sensitivity in terms of historic landscape character. The landscape type is described as post-medieval/medieval fields, but the previous landscape is no longer legible. On the basis of available evidence, there would be a need to undertake an archaeological assessment to support any subsequent planning application process. Development in this location should not directly/physically affect heritage assets or designations such as listed buildings, WHS, SAMs. Though there are a large number of listed buildings in Market Lavington, these are not in close proximity to the site.</p> <p>Overall, likely effects of development at this site are considered to be minor adverse against this objective.</p>	
SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place	
Decision Aiding Questions. Will the development site...	
1. Protect and enhance the landscape character and scenic quality of the	In accordance with national policy/local plan policy, the development of the site would need to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside. This site is located to the east of the village and is in

<p>countryside?</p>	<p>close proximity to the Salisbury Plain SPA (approx. 650m distant). The site is adjacent to an existing residential area and screened, in part, by sporadic trees/hedgerows, however the topography of the surrounding area means that development here needs careful consideration in relation to its impact on the Salisbury Plain landscape. It is considered that green infrastructure buffers could be incorporated in the design to mitigate the impact. This would include appropriate planting to link with existing trees/hedgerows. This is likely to reduce the capacity of the site.</p> <p>In terms of landscape character the site falls within the Vale of Pewsey (Type 15A – Greensand Vale). It is of moderate character, but in declining condition. The County Landscape Character Assessment defines the strategy for this type of land as one of maintaining/managing areas of permanent pasture and repairing/replanting hedgerows.</p> <p>Development of the land would lead to an inevitable loss of greenfield land and a moderate urbanising effect when considered in the context of adjacent housing and industrial/business uses.</p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p>Development of the site for housing would offer the potential to contribute towards a comprehensive network of Green Infrastructure and bolstering existing habitats through tree/hedgerow planting.</p>
<p>3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?</p>	<p>Development of the site for housing would offer the potential to deliver additional access to and availability of urban greenspaces.</p>
<p>4. Conserve and enhance areas with landscape designations and take account of their management</p>	<p>The site is not located within a designated landscape area (e.g. AONB). Nonetheless, in accordance with national policy/local plan policy, the development of the site for housing would need to be appropriately designed so as to mitigate and minimise the loss of green space.</p>

objectives, in particular for the three local AONBs ⁸⁴ ?	
5. Protect rights of way, open space and common land?	No PRoW would be affected by development of the site. However, in accordance with local plan policy, the development of the site would have the potential to add to the existing rights of way network, open spaces.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	Not applicable.
Assessment outcome (on balance) -	
Summary of SA Objective 7	
Development of the site for housing would inevitably lead to a loss of greenfield land and introduce an urbanising effect, altering the character and appearance of the site, which would have an adverse impact on the Salisbury Plain landscape. Mitigation may be possible by incorporating a substantial green infrastructure buffer that would reduce the capacity of the site. On balance this site is considered to have a minor adverse impact against this objective.	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	Bearing in mind the size of the site/potential delivery capacity (up to 31 dwellings), development would help boost the local supply of affordable homes in accordance with national/local plan policy requirements.

⁸⁴ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Development of the site would need to deliver high quality, sustainable homes across all types and tenures. Bearing in mind identified local need for flexible homes of mixed tenure, there would be a need to consider the delivery of Adapted Affordable Housing.
3. Ensure adequate provision of land to meet housing needs?	Development of the site would marginally boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	Development of the site would appropriately respect the settlement hierarchy (Market Lavington is designated as a Local Service Centre) and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	Development of the site for housing would assist in bolstering local opportunities for accessing employment through short-term construction contracts and a longer-term boost to the local population/workforce.
6. Consider the emerging Neighbourhood Plans?	A Neighbourhood Development Plan is in the early stages of preparation. As such, the Housing Site Allocations DPD is the appropriate vehicle for addressing local housing requirements.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	Bearing in mind the size of the site/potential delivery capacity (approximately 31 dwellings), development would help boost the local supply of affordable homes in accordance with national/local plan policy requirements.
Assessment outcome (on balance) + +	
Summary of SA Objective 8	
The whole SHLAA site provides capacity for approximately 31 residential units (though this may be reduced through the mitigation set out in this assessment). Development of the site would contribute to Wiltshire's housing supply as well as boost the supply of a range of homes in accordance with national and local planning policies. There is an identified need for adaptive affordable housing to address local needs. The site is sustainably located in relation to local services and facilities. Overall the effects on this objective are considered to be moderate positive.	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and	Development of the site would provide opportunities for social integration with neighbouring existing housing areas and

spaces to reduce crime and the fear of crime?	thereby help reduce crime/the fear of crime through appropriate design.
2. Promote design of buildings and spaces to reduce obesity?	Development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	Development of the site would offer the opportunity to provide flexibly designed accommodation to meet local needs.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	Whilst set within a rural environment, Market Lavington nonetheless contains a GP Surgery. On the basis of evidence available at the time of assessment, capacity is available and the site would be sustainably located in relation to the facility.
5. Maximise opportunities within the most deprived areas?	Development of the site would help increase opportunities for the local community to access a decent home and thereby help reduce deprivation.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The site is located on the edge of the village. Access to village facilities by walking and cycling would be achievable. However, access to other towns in the area would be limited by the current bus timetable.
7. Support the development of community campuses?	The development of community campuses is directed to the town level and therefore not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	St Barnabus Primary in Market Lavington has surplus places at present and would benefit from housing within the locality. Lavington Secondary is the catchment school and is already full and forecasted to remain so. The school could however be expanded.
Assessment outcome (on balance) -	
Summary of SA Objective 9	
The site is relatively sustainably located on the edge of the village, with access to services and facilities via cycling/walking. On the basis of evidence gathered to date, there would appear to be sufficient capacity in local health facilities at Market Lavington's GP surgery. The local primary school has spare capacity so additional housing in the village could help support the school. Whilst the local secondary school is currently full, it could potentially be expanded. Whilst there are a number of	

services and facilities at the village and a regular bus service, the majority of trips to work and wider services and facilities will likely involve use of cars. Overall, the site is considered to have a minor adverse effect against SA objective 9, for which mitigation is achievable.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	Development of the site would need to provide opportunities to improve cycling and walking routes to local services/facilities/employment.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of the site would have the potential to create links to existing cycling routes.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	<p>The site is located in an accessible location on the edge of the village. Development of the site would be capable of connecting to local services and facilities via sustainable transport means. Whilst there are a number of facilities, services, schools and surgery at Market Lavington, as well as a regular, peak-time bus service, housing development at this site is likely to result in use of the private car to access employment and a wider range of retail and facilities further afield.</p> <p>It should be noted that access to this site is constrained and this would need to be investigated further if this site progresses to any further stage in the site selection process.</p>

Assessment outcome (on balance) -

Summary of SA Objective 10

The site is within 1km of key local facilities such as the primary school, health centre and shops and therefore accessible. Future residents would be able to walk or cycle to the local facilities without the need necessarily to go outside of Market Lavington. However, development at the village would be unlikely to create new employment opportunities in the village itself. Whilst a bus service visits the village, the majority of trips to work and wider services and facilities will likely involve use of cars. The likely effects of development at this site are considered to be minor adverse.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth	
Decision Aiding Questions. Will the development site...	
1. Support appropriate retail, leisure and/or employment opportunities to town centre locations to aid urban regeneration?	The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of viable local retail, leisure and/or employment centres.
2. Support the rural economy?	The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of rural services and facilities.
Assessment outcome (on balance) +	
Summary of SA Objective 11	
Development will increase the local population and could contribute to the local economy through use of local shops and services. Overall, the effects are considered minor positive.	
SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce	
Decision Aiding Questions. Will the development site...	

1. Protect and enhance the vitality and viability of existing employment areas?	The development of the site would lead to the loss of a nursery and hence a loss of employment space. As a result, any subsequent planning application would need to address clauses i) – v) of Core Policy 35 ⁸⁵ .
2. Provide a focus for development in Salisbury and Trowbridge?	Development of the site would have no effect on Trowbridge/Salisbury as foci for major development.
Assessment outcome (on balance) 0	
Summary of SA Objective 12	
Development of the site for housing would not result in new employment land and would remove an existing business/employment use. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall, likely effects are considered to be neutral.	

⁸⁵ Wiltshire Core Strategy

Site 374 – R/O 37 White Street, Market Lavington

<p>Site context</p> <p>Site size: 1ha Site capacity: approximately 24 dwellings</p> <p>The general area is characterised by open countryside to the south and south-east, with allotment gardens and paddocks in proximity to the site. An existing residential area lies to the immediate north and south-west that would overlook the site in various places.</p>	
<p>SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses</p> <p>Decision Aiding Questions. Will the development site...</p>	
<p>1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?</p>	<p>The site is on farmland/amenity space, which generally has limited ecological value due to the nature of the land use, the features at the boundaries such as hedgerows and trees may support protected species. The site consists of semi-improved grassland and is unlikely to contribute significantly to wider habitat connectivity in the wider area.</p> <p>Ecological assessment would be required to support a planning application.</p> <p>There would be limited potential to create or enhance habitats at a landscape scale, but opportunities would exist to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation in the local area.</p>
<p>2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?</p>	<p>The site is located approx. 890m north-west of the Salisbury Plain SAC/SPA/SSSI. The Market Lavington East County Wildlife Site is situated approximately 750m east of the site.</p> <p>The site lies within the 6.4km buffer zone for Salisbury Plain SPA. Therefore mitigation measures would be required in-line with the Management Plan/Habitats Regulations to maintain the integrity of the designated features of the Plain.</p>
<p>3. Result in greater community engagement with biodiversity?</p>	<p>The development of the site for housing would have the potential to increase public access to designated/non-designated biodiversity features. The site lies within 1km of the Salisbury Plain SAC/SPA/SSSI and the protected Stone Curlew population. Hence increased recreational pressure associated with new development would need to be assessed as part of an appropriate assessment for the purposes of designing mitigation to meet the requirements of the Habitats Regulations. With suitable and robust mitigation measures, including setting aside land for habitat creation/bolstering, allocating the site for</p>

	<p>housing development would be potentially acceptable.</p> <p>Arable/semi-improved grassland/allotments/hedgerows/trees are present on site. These features would need to be assessed at any subsequent planning application stage to ascertain whether they support protected species and wider biodiversity.</p>
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	The development of the site for housing would have the potential to make suitable provision for buffers to recognised green corridors. Further planting would help improve local Green Infrastructure.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	The development of the site would appear to be capable of delivering some multi-functional Green Infrastructure and improve habitat connectivity.
6. Ensure all new developments have regard to and protect BAP habitats/species?	<p>The site is in close proximity to Traditional Orchard and Deciduous Woodland BAP priority habitats.</p> <p>Therefore, in accordance with local plan policy and biodiversity targets, the development of the site for housing would need to maintain and enhance local habitats through additional planting and wider biodiversity improvements.</p>
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement could contribute towards recreational impacts on the Salisbury Plain SPA through increased recreational pressure. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.
8. Maintain the existing extent of ancient woodland sites?	There are no ancient woodland features on, or adjacent to the site. However, the presence of Traditional Orchard priority BAP habitat and Deciduous Woodland priority BAP habitat in close proximity would need to be carefully assessed/protected and enhanced. Whilst development of the site may not directly affect the woods, consideration should nonetheless be given to potential impacts associated with construction activity and longer-term recreational pressure.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	The site falls within the visitor catchment of Salisbury Plain SPA. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.
10. Consider Wiltshire Council guidance to maintain SAC integrity in	Not applicable – the site does not fall within one of the Council’s current guidance areas.

relevant areas?	
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).
Assessment outcome (on balance) -	
Summary of SA Objective 1	
<p>The site lies close to Salisbury Plain SAC/SPA/SSSI, including within the Council buffer zone for Salisbury Plain SPA and further assessment would be required including consideration given to mitigating potential recreational pressure on protected Stone Curlew. The HRA screening assessment has identified that development at the settlement could contribute towards recreational impacts on the Salisbury Plain SPA through increased recreational pressure. An appropriate assessment would be required if options at this settlement are taken forward into any subsequent stage in the selection process. However mitigation is considered possible since a mitigation strategy for recreational pressure on Salisbury Plain SPA has been agreed with Natural England.</p> <p>The presence of nearby priority BAP habitats (Traditional Orchard/Deciduous Woodland) to the south-west of the site would necessitate detailed ecological assessment to support a planning application. Further planting and wider mitigation measures may be required to address any residual impacts associated with the development of the site, which, while considered possible are likely to reduce the capacity of the site. Again, such measures would need to be identified and appropriately designed.</p> <p>On balance it is considered that the effects would be minor adverse in relation to SA objective 1 and mitigation is considered achievable.</p>	
SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings	
Decision Aiding Questions. Will the development site...	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	<p>The site is relatively narrow and largely greenfield in nature. The site is situated in relative proximity to the centre of Market Lavington and therefore, opportunities would exist for accessing a range of services / facilities by foot, cycle and public transport. This is therefore considered to be a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. Bus stops are present at several locations along the main road of the village providing connectivity to the public transport network. However, residents are likely to rely upon use of the private car to access employment and a wider range of services and facilities further afield.</p> <p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. The site lies to the south-east of the village adjacent to and partially within the Conservation Area. Given the site's prominence in the landscape setting on the rural fringe of the village, the need to reflect local built vernacular, and</p>

	the shape of the site and its likely access constraints it is unlikely that housing densities could be maximised on this site.
2. Maximise reuse of previously developed land where possible/appropriate?	The site largely comprises greenfield land and hence would have no potential for significantly maximising the reuse of previously developed land. The site lies to the south-east of the village on arable farmland. As such, development of the land would extend the envelope of the settlement and urbanising effect of built form. Development would not maximise the opportunity to re-use land (if available) within the centre of the village.
3. Encourage remediation of contaminated land?	At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. The site is largely located on greenfield land, as opposed to brownfield (i.e. previously developed land). On the basis of available evidence, it is considered unlikely that significant remediation measures would be required in order to facilitate development of the land for housing.
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site would need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	The site comprises part of a large arable field, adjacent to a former/orchard/allotment gardens. Therefore, in line with national and local planning policy, the development of the site would need to ensure that soil quality and structure is appropriately protected.
6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a Mineral Safeguarding Area or Waste Site Safeguarding Area.
Assessment outcome (on balance) -	

Summary of SA Objective 2

The site lies on the south-eastern edge of the village on arable farmland/former allotment gardens which would be lost if development took place. The site is relatively small and hence there would be limited opportunity to protect soils other than for gardens.

The site is at a prominent position in relation to its impact on the landscape character of the village and is partially within the Conservation Area and has access constraints because of this. It is therefore unlikely that densities could be maximised at this location.

Overall, likely effects are considered to minor adverse against SA Objective 2.

SA objective 3. Use and manage water resources in a sustainable manner

Decision Aiding Questions. Will the development site...

1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?

Development of the site for housing would need to be capable of positively responding to the predicted effects of climate change.

The site and in particular, its northern boundary, lies in an area of recorded surface water ponding/flooding/drainage issues. There are no surface or storm water systems in situ. Therefore, access to water courses for the purposes of discharging excess storm/surface water would be impracticable. There is a recorded spring source near the site in White Street. This would suggest that groundwater levels are broadly coincident with surface levels and hence development could exacerbate the risk of local flooding issues.

In addition the capacity within existing foul water sewers is limited and there is a history of downstream sewer flooding.

2. Ensure that essential water infrastructure is co-ordinated with all new development?

Given the capacity of the site, development would likely lead to a limited increase in demand for water. Consideration would need to be given to responding positively to existing/planned water infrastructure capacity in the local area. A capacity assessment should be undertaken to support any subsequent detailed proposals. Where the pressure exerted by new housing development would lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.

Evidence indicates that water supply capacity and connection is available but that there are limitations in relation to foul, storm and surface water systems.

3. Ensure the installation of water saving measures such as rainwater

In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company.

harvesting and water metering?	
4. Consider the need for adequate provision of surface water and foul drainage?	There are no surface water systems at this location – surface water currently flows to land drainage system. The site lies on the edge of an area underlain by chalk. As such, groundwater issues may arise that would prevent effective attenuation of surface waters. Soakaways/Sustainable Drainage Schemes may work, but soil permeability testing would need to be undertaken to inform the drainage strategy, in line with Wiltshire Council Groundwater Strategy and CIRIA Sustainable Drainage Systems (SuDS) Manual (C753) ⁸⁶ – part E - chapter 25. In addition, foul drainage may also be an issue. Further detailed investigation work would be required to support an allocation/planning application. Where technically feasible, the development of the site would need to make provision for on-site/off-site surface/storm and foul water drainage. As outlined above, this may require statutory easements to be secured and dialogue with the relevant water utilities company would be essential at the detailed design stage.
5. Protect, and where possible, improve surface, ground and drinking water quality?	The site is not located within a Groundwater Source Protection Zone and hence is unlikely to significantly impact on quality and quantity of groundwater resources.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.

⁸⁶ The SuDS Manual (C753), CIRIA, December 2015.

Assessment outcome (on balance) - -

Summary of SA Objective 3

Development would lead to an increase in demand for water infrastructure. There is adequate capacity to ensure water supply to the site, however foul and surface water drainage may need to be improved.

Drainage issues have been recorded and this may, in part, be due to the presence of natural springs. Accordingly, a drainage strategy would need to be submitted in support of any planning application. Bearing in mind the site lies on the edge of an area underlain by chalk, consideration would need to be given to soil infiltration rates and surface water attenuation measures, which could be problematic to achieve given the soil and groundwater conditions.

Due to the potential issues regarding foul water and surface water, and the fact that finding an appropriate drainage strategy could be problematic, this site is scored as moderate adverse for this objective.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

1. Maintain and improve local air quality?

The site is not located within an Air Quality Management Area (AQMA). That said, housing development may lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.

Development of the site would likely marginally increase local commuter traffic, which may impact on local air quality. However, it is recognised that the site is within 1 kilometre of key services and facilities in Market Lavington and therefore accessible by foot and cycle. This should help limit the extent of additional traffic emanating from the site. Nevertheless, measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could assist in providing opportunities to improve local air quality through making purchasers/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.

2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design

Development of the site for circa 24 dwellings may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Bearing in mind the fact that the site borders an existing residential area and footpaths, mitigation measures to limit such impacts would need to be developed and implemented in accordance

and/or location of development?	with local plan policy and advice from relevant bodies.
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing may lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMA ⁸⁷ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA).
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts. An assessment of impacts on the Ancient Woodland to the south-east of the site; and on-site trees and hedgerows would need to be undertaken to support the allocation/detailed planning application.

⁸⁷ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

Assessment outcome (on balance) -

Summary of SA Objective 4

The site is situated adjacent to south-eastern boundary of the settlement on open arable/former allotment land. The site is not within a designated AQMA, but there would be a need to address impacts associated with construction (short-term) and occupation (longer-term) phases of any potential housing scheme. Measures must be implemented as necessary to mitigate emission levels in line with the council's policies and Air Quality Strategy. In turn the developable area of the site might be reduced. In addition, developers of the site could assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.

A Noise Impact Assessment should be undertaken and submitted with any development proposals. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.

Overall the likely effects against this SA objective are considered to be minor adverse.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources will be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase will also encourage sustainable building practices leading to a reduction in greenhouse gases emissions.

Assessment outcome (on balance) -	
Summary of SA Objective 5a	
<p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices to lead to a reduction in greenhouse gas emissions.</p> <p>However, the effect of the development of this site will be to increase greenhouse gas emissions overall and on balance this site is considered to have a minor adverse impact in relation this SA objective.</p>	
SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects	
Decision Aiding Questions. Will the development site...	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<p>The site is located within Flood Zone 1. However, the land in question is known to experience surface water ponding/flooding issues.</p> <p>Risk of flooding created by impermeable surfaces on the site due to residential development would need to be addressed through mitigation measures to ensure the surface runoff from the site is not increased beyond greenfield infiltration rates.</p> <p>Given the site's location and proximity to higher ground to the south, development may lead to potential increase in flood risk from surface water elsewhere. Notwithstanding the relatively low risk of flooding, a flood risk assessment and drainage strategy would need to be submitted at planning application stage, particularly in terms of groundwater/surface water flood risk.</p> <p>There is potential to introduce pollution prevention measures, including SuDS, though there would be a need to investigate soil infiltration rates to determine appropriate measures, since ground conditions may mean that conventional soakaway/infiltration techniques may not work. Based upon the size of the site, any subsequent planning application would need to be supported by a Flood Risk Assessment.</p>
2. Ensure that development can adapt to the predicted future impacts of climate change?	The long-term negative effects of housing development could potentially be offset through the delivery of low carbon dwellings and on-site renewable energy generation (e.g. solar voltaics).
3. Promote provision of surface water	Post-development runoff rates should mimic or improve on existing greenfield rates so as not to exacerbate flooding. The site

attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	lies on the edge of an area underlain by chalk. Conventional soakaway measure may work, but permeability testing would be required to support any planning application and to inform a suitable drainage strategy. The potential to accommodate appropriate SuDS measures to manage surface water run-off from built form would need careful consideration. If technically feasible, SuDS will need to be designed in such a manner as to allow long-term positive management of water resources.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within Flood Zone 1. Due to the sloping nature of the site, consideration would need to be given to the control/management of surface and groundwater.
5. Protect and enhance the natural function of floodplains?	Development would therefore not affect the areal extent and function of floodplains in the local area.
Assessment outcome (on balance) - -	
Summary of SA Objective 5b	
<p>The site is situated in Flood Zone 1. The site lies on the edge of an area underlain by chalk, as such ground conditions may allow the use of conventional soakaways preclude the use of SuDS. However, such measures should be investigated through any detailed planning application process particularly in terms of groundwater/surface water flood risk.</p> <p>Due to surface water flooding issues in Market Lavington and the likely difficulty in achieving a suitable drainage strategy, likely effects are considered to be moderate adverse in relation to SA objective 5b.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	<p>Records indicate that the land has medium archaeological potential.</p> <p>The site is partly within the Market Lavington Conservation Area, and the remainder of the site is adjacent to it. The setting of the Conservation Area and Listed Buildings would be a key consideration. From an historic landscape character perspective the site lies on the edge of the historic core of the village and would therefore have a high sensitivity to change.</p> <p>A Heritage Impact Assessment would be required in support of any planning application.</p>
2. Ensure appropriate archaeological assessment prior to development?	Records indicate that the land has medium archaeological potential. There is the potential for a Medieval settlement in the vicinity of the site. As a greenfield site, there may be potential for archaeological assets below ground which may require further evaluation and mitigation at any subsequent planning application stage. Therefore in accordance with legislation and

	<p>national policy/local plan policy, the development of the site would have to ensure that designated/non-designated heritage assets are appropriately protected according to their significance.</p> <p>On the basis of available evidence, there would be a need to undertake an archaeological assessment to support any future planning application for the subsequent development of the site.</p>
<p>3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?</p>	<p>The site would not utilise historical buildings, or buildings of significant local interest.</p>
<p>4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?</p>	<p>The site lies partly within and adjacent to the designated Market Lavington Conservation Area and its setting. Development would likely have an effect on the Conservation Area and its setting. Consideration would need to be given to the significance of the heritage asset and all potentially harmful factors. The Market Lavington Conservation Area statement (2002) says that the High Street Buildings are best preserved if their historic setting is maintained as undeveloped. This 'setting' is, in part, defined by the allotment land included within the site (south-east of the Conservation Area). Accordingly, a Heritage Impact Assessment would be required to inform proposals and support any subsequent planning application.</p> <p>The access to the site would be within the Conservation Area, and may need widening. The impact of this on the Conservation Area may be difficult to mitigate.</p> <p>Any development proposals would need to be cognisant of saved Core Strategy policy HH10, Area of Minimum Change (from the Kennet District Local Plan).</p> <p>In addition, consideration would need to be given to how housing development on greenfield land would be assimilated into the local landscape. In accordance with national policy/local policy, the development of the site for housing would need to maintain and enhance the distinctiveness of the existing urban fringe of the village.</p>
<p>5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?</p>	<p>There are no records of heritage assets at risk within the site.</p>
<p>6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?</p>	<p>Not applicable.</p>

Assessment outcome (on balance) - -

Summary of SA Objective 6

The site has medium archaeological interest and high sensitivity to change in terms of historic landscape character. There is sufficient evidence to suggest the presence of a medieval settlement and archaeological remains in the vicinity of the site. Accordingly a detailed archaeological assessment would need to be undertaken to support any subsequent planning application process.

The Market Lavington Conservation Area and its setting would need careful consideration through any subsequent planning application process. An assessment of the significance of the heritage asset would need to be undertaken to ascertain the scale of harm that development of the site may exert, particularly bearing in mind the potential impact of access improvements that may be necessary. Accordingly a Heritage Impact Assessment would be required at planning application stage.

Overall it is considered that likely effects would be moderate adverse in relation to this objective.

SA objective 7. Conserve and enhance the character and quality of Wiltshire’s rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place

Decision Aiding Questions. Will the development site...

<p>1. Protect and enhance the landscape character and scenic quality of the countryside?</p>	<p>The site is located adjacent to the edge of the existing settlement boundary. Development would lead to an inevitable loss of greenfield/allotment land and an urbanising effect when considered in the context of adjacent housing and other land-uses. Market Lavington is overlooked by higher land associated with Salisbury Plan to the south-east. Any development could therefore potentially have an adverse landscape impact and impact through potential increased use of the Salisbury Plain.</p> <p>In terms of landscape character the site falls within the Vale of Pewsey (Type 15A – Greensand Vale). It is of moderate character but in a declining condition. The County Landscape Character Assessment defines the strategy for this type of land as one of maintaining/managing areas of permanent pasture/wet grassland/meadows; and hedgerow retention/repair. To this end, any subsequent planning application process would need to make provision for strengthening the character and appearance of the area through: tree/hedgerow planting with open space along the south-eastern boundary. Consideration would also need to be given to providing appropriate screening to protect/enhance the setting of the Conservation Area. To achieve these aims, the site area may need to be reduced.</p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p>Development of the site for housing would need to offer the potential to deliver a comprehensive network of Green Infrastructure and bolstering of existing habitats through tree/hedgerow planting.</p>
<p>3. Lead to a net improvement in the</p>	<p>Development of the site for housing would offer the potential to deliver additional access to and availability of urban</p>

quality and quantity of access to urban greenspace and the wider countryside for recreation?	greenspaces.
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ⁸⁸ ?	The site is not located within a designated landscape area (e.g. AONB).
5. Protect rights of way, open space and common land?	Development of the site would have the potential to protect and add to the existing rights of way network, open spaces and common land assets.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	Not applicable.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 7</p> <p>Development of the site for housing would inevitably lead to a loss of greenfield land and introduce an urbanising effect. Whilst the loss of greenfield land would alter the character and appearance of the site, such impacts would be tempered through appropriate mitigation measures designed to bolster greenspace/habitat connectivity. Potential impacts upon the Conservation Area and its setting would also need to be addressed through any subsequent planning application process.</p> <p>Overall it is considered that development at this site would likely have minor adverse impacts against this SA objective.</p>	

⁸⁸ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	Bearing in mind the size of the site/potential delivery capacity (approximately 24 dwellings), development for housing would help boost the local supply of affordable homes.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Development of the site would need to deliver high quality, sustainable homes across all types and tenures.
3. Ensure adequate provision of land to meet housing needs?	Development of the site would marginally boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	Development of the site would appropriately respect the settlement hierarchy (Market Lavington is designated as a Local Service Centre) and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	Development of the site for housing would assist in bolstering local opportunities for accessing employment through short-term construction contracts and a longer-term boost to the local population/workforce.
6. Consider the emerging Neighbourhood Plans?	A Neighbourhood Development Plan is in the early stages of preparation. As such, the Housing Site Allocations DPD is the appropriate vehicle for addressing local housing requirements at this stage.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	If appropriately planned, the development of the site for limited number of houses would provide opportunity to increase the range and availability of housing in the village.
Assessment outcome (on balance) +	
Summary of SA Objective 8	
The whole SHLAA site provides capacity for approx. 24 residential units (though this may be reduced through the mitigation set out in this assessment. Development of the site contribute to Wiltshire's housing supply as well as boost the supply of a range of homes in accordance with national and local planning policies. There is an identified need for adaptive affordable housing to address local needs. The site is sustainably located in relation to local services and facilities. Overall the effects on	

this objective are considered to be minor positive.	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	Development of the site would be capable of providing opportunities for social integration with neighbouring existing housing areas and thereby help reduce crime/the fear of crime through appropriate design.
2. Promote design of buildings and spaces to reduce obesity?	Development of the site would need to provide opportunities to improve cycling and walking routes to local services/facilities/employment.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	Development of the site would offer the opportunity to provide flexibly designed accommodation to meet the needs of the local area.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	Whilst set within a rural environment, Market Lavington nonetheless contains a GP Surgery. On the basis of evidence available at the time of assessment, capacity is available and the site would be sustainably located in relation to the facility.
5. Maximise opportunities within the most deprived areas?	Development of the site would help increase opportunities for the local community to access a decent home and thereby help reduce deprivation.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The site is located on the edge of the village. Access to village facilities by walking and cycling would be achievable. However, access to other towns in the area would be limited by the current bus timetable.
7. Support the development of community campuses?	Not applicable.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	St Barnabus Primary in Market Lavington has surplus places at present and would benefit from additional housing to boost the population within the locality. Lavington Secondary is the catchment school and is already full and forecast to remain so. However, the school could potentially be expanded.

Assessment outcome (on balance) -

Summary of SA Objective 9

The site is relatively sustainably located on the edge of the village, with access to services and facilities via cycling/walking. On the basis of evidence gathered to date, there would appear to be sufficient capacity in local health facilities at Market Lavington’s GP surgery. The local primary school has spare capacity so additional housing in the village could help support the school. Whilst the local secondary school is currently full, it could potentially be expanded. Whilst there are a number of services and facilities at the village and a regular bus service, the majority of trips to work and wider services and facilities will likely involve use of cars. Overall, the site is considered to have a minor adverse effect against SA objective 9, for which mitigation is achievable.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	Development of the site would offer the opportunity to improve cycling and walking routes to local services/facilities/employment.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of the site would have the potential to create links to existing cycling routes.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	The site is located in an accessible location close to the centre of the village with good prospects for connectivity to village centre services and facilities. Whilst there are a number of facilities, services, schools and surgery at Market Lavington, as well as a regular, peak-time bus service, housing development at this site is likely to result in use of the private car to access employment and a wider range of retail and facilities further afield.

Assessment outcome (on balance) -

Summary of SA Objective 10

The site is within 1km of key facilities such as schools, health centres or shops and therefore should be considered as being accessible. Residents will be able to walk or cycle to the majority of local facilities without the need to go outside of Market Lavington. However, development at the village would be unlikely to create new

employment opportunities in the village itself. Whilst a bus service visits the village, the majority of trips to work and wider services and facilities will likely involve use of cars. The likely effects of development at this site are considered to be minor adverse, for which mitigation is achievable.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities to town centre locations to aid urban regeneration?	The site would marginally boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of viable local retail, leisure and/or employment centres.
2. Support the rural economy?	The site would marginally boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of rural services and facilities.

Assessment outcome (on balance) +

Summary of SA Objective 11

Development will increase the local population and could contribute to the local economy through use of local shops and services. Overall, the effects are considered minor positive.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?	In accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of this site will have no effect on Trowbridge or Salisbury in terms of their ability to act as foci for major development.

Assessment outcome (on balance) +

Summary of SA Objective 12

Development of the site for housing would not provide new employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall, the effects are considered minor positive.

Site 3268 – Land at the Spring, Market Lavington

Site context

Site size: 1.06ha Site capacity: approximately 26 dwellings

The site is currently in agricultural use as grazing land. The land dips from the road (i.e. north to south) towards a stream running along the southern boundary. The site has a substantial tree belt along the southern and northern boundaries and higher land associated with Salisbury Plain is visible to the south of the site. Properties front onto the site towards the north (separated by the road), but vegetation along the northern boundary helps to minimise visual impact. Houses to the west are also separated from the site boundary by trees. A series of telegraph poles run through the centre of the site.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?

The land is currently in agricultural use and bound by hedgerows/trees and a stream to the south.

In a wider sense, the site and village moreover lie in close proximity to the Salisbury Plain SAC/SPA/SSSI. The land is within the 6.4km buffer zones for Salisbury Plain SPA, so increased recreational pressure would need to be mitigated.

The site is on farmland, which generally has limited ecological value due to the nature of the land use. However, the features at the boundaries such as hedgerows and trees as well as the stream corridor are likely to support protected species such as, nesting birds, Badger, Water voles and reptiles. Records indicate there are bat roosts for Brown long-eared, Serotine, and Pipistrelle bats to the east. Accordingly, ecological assessment and further details on the proposals will be required to accurately assess the scale of likely impacts.

Mitigation would include limiting housing density to ensure an adequate buffer to the south east boundary stream corridor.

2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including

The site lies approximately 175m to the south of the Manor House Woods Ancient Woodland/County Wildlife Site. Impacts on this designation is likely to be indirect, though habitat connectivity may need to be considered, as informed by ecological assessment.

The site lies within the 6.4km buffer zone for Salisbury Plain SPA. Therefore mitigation measures would be required in-line

buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	with the Management Plan/Habitats Regulations to maintain the integrity of the designated features of the Plain.
3. Result in greater community engagement with biodiversity?	The development of the site for housing would have the potential to increase public access to designated/non-designated biodiversity features. The site lies within 1km of the Salisbury Plain SAC/SPA/SSSI and the protected Stone Curlew population. Hence increased recreational pressure associated with new development would need to be assessed as part of an appropriate assessment for the purposes of designing mitigation to meet the requirements of the Habitats Regulations.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	Development of the site for housing would have limited potential to make suitable provision for buffers to recognised green/blue corridors. Further tree/hedgerow planting would likely be required to compensate for any losses incurred through development. The stream corridor along south eastern boundary of site should be retained, protected and enhanced as an important wildlife corridor with an adequate buffer. Ecological assessment required to inform development design and mitigation requirements.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	Development of the site would need to be capable of delivering multi-functional Green Infrastructure and improve habitat connectivity. Bearing in mind the size of the site and its relationship to the stream, it is considered unlikely that significant Green Infrastructure, other than compensation planting could be delivered.
6. Ensure all new developments have regard to and protect BAP habitats/species?	The site lies to the south of Woodpasture/Broadleaf mixed and Yew Woodland/Parkland priority habitats at Manor House Wood which is designated and protected as Ancient Woodland. Whilst development of this site would be unlikely to impact on the designated BAP habitats, consideration would nonetheless need, amongst other factors, to consider flight lines of bats using the stream for foraging and nearby woods for roosting.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement could contribute towards recreational impacts on the Salisbury Plain SPA through increased recreational pressure. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.
8. Maintain the existing extent of ancient woodland sites?	The site lies to the south of designated Ancient Woodland (Manor House Woods), but is unlikely to directly impact this feature.
9. Require that disturbance impacts of proposed development are assessed	The site falls within the visitor catchment of Salisbury Plain SPA. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.

as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?			
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.		
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).		
Assessment outcome (on balance) -			
<p>Summary of SA Objective 1</p> <p>The site lies close to the Salisbury Plain SAC/SPA/SSSI as well as within the Council buffer zone for Salisbury Plain SPA and consideration would therefore need to be given to mitigating potential recreational pressure on protected Stone Curlew. An appropriate assessment would be required if options at this settlement are taken forward into any subsequent stage in the selection process. A mitigation strategy for recreational pressure on Salisbury Plain SPA has been agreed with Natural England.</p> <p>The presence of nearby priority BAP habitats (Woodpasture/Broadleaf mixed and Yew Woodland/Parkland) and the stream to the south of the site would necessitate detailed ecological assessment to support a planning application. Additional planting and wider mitigation measures may be required to address impacts associated with the development of the site. Such measures would need to be identified and appropriately designed. Mitigation may include limiting the density of housing to achieve an adequate buffer to the stream corridor.</p> <p>On balance it is considered that the effects would be minor adverse in relation to SA objective 1 and it is likely that mitigation is possible though is likely to reduce the capacity of the site.</p>			
SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings			
<p>Decision Aiding Questions. Will the development site...</p> <table border="1" data-bbox="114 1225 2110 1358"> <tr> <td data-bbox="114 1225 600 1358">1. Maximise densities in sustainable locations that have good access to local facilities, public transport links</td> <td data-bbox="600 1225 2110 1358">The local service centre of Market Lavington is considered to be a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site is situated in close proximity to the centre of Market Lavington and therefore opportunities would exist for accessing a range of services / facilities by foot, cycle and public transport. Bus stops are present at several locations along the main road of the village providing connectivity to the public transport network. However, residents are</td> </tr> </table>		1. Maximise densities in sustainable locations that have good access to local facilities, public transport links	The local service centre of Market Lavington is considered to be a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site is situated in close proximity to the centre of Market Lavington and therefore opportunities would exist for accessing a range of services / facilities by foot, cycle and public transport. Bus stops are present at several locations along the main road of the village providing connectivity to the public transport network. However, residents are
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links	The local service centre of Market Lavington is considered to be a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site is situated in close proximity to the centre of Market Lavington and therefore opportunities would exist for accessing a range of services / facilities by foot, cycle and public transport. Bus stops are present at several locations along the main road of the village providing connectivity to the public transport network. However, residents are		

and key infrastructure?	<p>likely to rely upon use of the private car to access employment and a wider range of services and facilities further afield.</p> <p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. The site lies to the south-west of the village along the main road, close to the village centre. Given the likely need for green infrastructure buffer to protect the stream corridor, it is unlikely that housing densities could be maximised on this site.</p>
2. Maximise reuse of previously developed land where possible/appropriate?	The site largely comprises agricultural pasture land and hence would have no potential for significantly maximising the reuse of previously developed land.
3. Encourage remediation of contaminated land?	<p>At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation.</p> <p>The site is largely located on greenfield land, as opposed to brownfield (i.e. previously developed land). On the basis of available evidence, other than stand-offs to the stream, it is considered unlikely that significant site remediation measures would be required in order to facilitate development of the land for housing.</p>
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site would need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	The site comprises agricultural pasture land. Therefore, in line with national and local planning policy, the development of the land would need to ensure that soil quality and structure is appropriately protected.
6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not allocated within a Minerals Safeguarding Area or Waste Site Safeguarding Area.
Assessment outcome (on balance) -	

Summary of SA Objective 2

The site lies to the south of the village on arable pasture land with a stream running through the southern boundary. Development of the site would introduce an urbanising effect into what is open arable land and the need for a green infrastructure buffer to protect the stream would result in density being reduced.

The site is within walking/cycling distance of services and facilities within the centre of Market Lavington. Overall, likely effects are considered to be minor adverse against SA Objective 2.

SA objective 3. Use and manage water resources in a sustainable manner

Decision Aiding Questions. Will the development site...

<p>1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?</p>	<p>Development of the site for housing would need to be capable of positively responding to the predicted effects of climate change.</p> <p>Existing foul water sewers cross the site but are of limited capacity. As such a pumped connection may be required.</p> <p>The presence of the watercourse and recorded surface water drainage issues would require appropriate mitigation measures to control the risk of flooding. In addition, the site lies on the edge of chalk deposits and hence groundwater issues (i.e. flood risk exacerbation) may also be prevalent. Other than existing ditches, there are no storm water drainage systems in place.</p>
<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>Given the approximate capacity of the site, development on site would lead to a limited increase in demand for water. Evidence indicates that water supply capacity and connection is available but that there are limitations in relation to foul, storm and surface water systems. In developing the site for housing, consideration would need to be given to responding positively to existing/planned water infrastructure capacity in the local area. A capacity assessment should be undertaken to support any subsequent detailed proposals. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.</p> <p>Evidence indicates that water supply capacity and connection is available.</p>
<p>3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?</p>	<p>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company.</p>
<p>4. Consider the need for adequate provision of surface water and foul drainage?</p>	<p>There are no surface water systems at this location – surface water currently flows to land drainage system. The site lies on the edge of an area underlain by chalk and a watercourse crosses the site. As such, groundwater issues may arise that would prevent effective attenuation of surface waters. Soakaways/Sustainable Drainage Schemes may work, but soil permeability testing would need to be undertaken to inform the drainage strategy, in line with Wiltshire Council Groundwater Strategy and</p>

	CIRIA Sustainable Drainage Systems (SuDS) Manual (C753) ⁸⁹ – part E - chapter 25. In addition, foul drainage may also be an issue. Further detailed investigation work would be required to support an allocation/planning application. Where technically feasible, the development of the site may need to make provision for on-site/off-site surface and foul water drainage. This may require statutory easements to be secured and dialogue with the relevant water utilities company would be essential at the detailed design stage.
5. Protect, and where possible, improve surface, ground and drinking water quality?	The site is not located within a Groundwater Source Protection Zone and hence is unlikely to significantly impact on quality and quantity of groundwater resources.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.
Assessment outcome (on balance) - -	
Summary of SA Objective 3	
Development would lead to an increase in demand for water infrastructure. There is adequate capacity to ensure water supply to the site, however foul and surface water drainage may need to be improved.	
Drainage issues have been recorded and this may, in part, be due to the presence of springs and lack of storm water drainage systems on site. Accordingly, a	

⁸⁹ The SuDS Manual (C753), CIRIA, December 2015.

drainage strategy would need to be submitted in support of any planning application. Bearing in mind the site lies on the edge of an area underlain by chalk, consideration would need to be given to soil infiltration rates and surface water attenuation which could be problematic to achieve given the soil conditions.

Due to the potential issues regarding foul water and surface water, and the fact that finding an appropriate drainage strategy could be problematic, this site is scored as moderate adverse against this objective.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

1. Maintain and improve local air quality?

The site is not located within an Air Quality Management Area (AQMA). That said, housing development may lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.

Development of the site would likely marginally increase local commuter traffic, which may impact on local air quality. However, it is recognised that the site is within 1km of key services and facilities in Market Lavington and therefore accessible by foot and cycle. This should help limit the extent of additional traffic emanating from the site. Nevertheless, measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could assist in providing opportunities to improve local air quality through making purchasers/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.

2. Minimise and, where possible, improve on unacceptable levels of

Development of the site for approximately 26 dwellings may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Bearing in mind the fact that the site borders an existing

noise, light pollution, odour and vibration through the layout, design and/or location of development?	residential area and footpaths, mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing may lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAS ⁹⁰ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA).
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts. It is considered that development of this site would be unlikely to lead to significant adverse impacts on habitats used by

⁹⁰ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

	protected species. An assessment of the potential impact on-site trees and hedgerows would need to be undertaken to support the allocation/detailed planning application.
Assessment outcome (on balance) -	
Summary of SA Objective 4	
<p>The site is situated to the south of the settlement on arable pasture land. The site is not within a designated AQMA, but there would be a need to address the impacts associated with construction (short-term) and occupation (longer-term) phases of any potential housing scheme. Measures must be implemented as necessary to mitigate emission levels in line with the council's policies and Air Quality Strategy. In turn the developable area of the site might be reduced. In addition, developers of the site could assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p> <p>A Noise Impact Assessment should be undertaken and submitted with any development proposals. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</p> <p>Overall the likely effects against this SA objective are considered to be minor adverse against this objective.</p>	
SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions	
Decision Aiding Questions. Will the development site...	
1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions through the construction and occupation phases. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources will be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for

practices?	the construction phase will also encourage sustainable building practices leading to a reduction in greenhouse gases emissions.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 5a</p> <p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices to lead to a reduction in greenhouse gas emissions.</p> <p>However, the effect of the development of this site will be to increase greenhouse gas emissions overall and on balance this site is considered to have a minor adverse impact against this SA objective.</p>	
<p>SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<p>The site is located within Flood Zone 1, although it is noted that a watercourse borders the south of the site. Bearing in mind the need for stand-offs to the watercourse, the net developable area would likely need to be reduced.</p> <p>Risk of flooding created by impermeable surfaces associated with residential development would need to be addressed through appropriate mitigation measures to ensure surface run-off would not be increased beyond greenfield infiltration rates.</p> <p>Development would potentially require pollution prevention measures, including SuDS. Based upon the size of the site, any subsequent planning application would need to be supported by a Flood Risk Assessment. Current records indicate surface water issues and potential groundwater issues.</p>
2. Ensure that development can adapt to the predicted future impacts of climate change?	The long-term negative effects of housing development could potentially be offset through the delivery of low carbon dwellings and on-site renewable energy generation (e.g. solar voltaics).
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	<p>Records indicate the site is affected by a 1:30 probability of pluvial flooding associated with the watercourse that crosses the site.</p> <p>The site lies on the edge of an area underlain by chalk. Conventional soakaway measures may work, but permeability testing would be required to support any subsequent planning application to inform a suitable drainage strategy. The potential to</p>

	accommodate appropriate SuDS measures to manage surface water run-off from built form would need careful consideration. If technically feasible, SuDS will need to be designed in such a manner as to allow long-term positive management of water resources.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is largely located within Flood Zone 1. However, the watercourse that runs through the site, along with the recorded incidence of pluvial/groundwater flooding, mean that the net developable area would likely have to be reduced. In addition, due to the sloping nature of the site, consideration would need to be given to the control/management of surface and groundwater.
5. Protect and enhance the natural function of floodplains?	The water course running through the site and the incidence of surface flooding means that a detailed Flood Risk Assessment would need to be undertaken to precisely clarify the extent of the developable area.
Assessment outcome (on balance) - -	
Summary of SA Objective 5b	
<p>The site is largely situated in Flood Zone 1. However, the presence of the watercourse running through the site, combined with the recorded incidence/probability of surface/groundwater flooding would significantly reduce the extent of the developable area.</p> <p>Geological/soil conditions may preclude the use of SuDS. However, such measures should be investigated through any detailed planning application process.</p> <p>Due to surface water flooding issues in Market Lavington and the likely difficulty in achieving a suitable drainage strategy, likely effects are considered to be moderate adverse against SA objective 5b.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	<p>Records indicate that the land has high low archaeological potential</p> <p>The land lies outside the Market Lavington Conservation Area and some distance away from Listed Buildings within the village. Development would be unlikely to directly/physically affect heritage assets or designations, however, high quality design should be promoted to ensure that the development fits in with the townscape character and protects and enhances the setting of the Conservation Area. However, the site is in proximity to the Conservation Area and development may have an impact on its setting.</p> <p>In terms of historic landscape, the site has a medium low sensitivity, as evaluation has shown earthworks to be due to 19th century quarrying rather than medieval fish ponds as previously documented on record. due to the presence of</p>

	post-medieval meadows, which are uncommon (few surviving) and characteristic of riverine landscapes. This contributes to local distinctiveness and the loss of this historic landscape would be problematic to mitigate.
2. Ensure appropriate archaeological assessment prior to development?	<p>There is evidence indicating possible presence of Medieval fish ponds within the site. It would not be possible to mitigate their loss, which may substantially reduce the capacity of the site or result in the site being undevelopable.</p> <p><u>An archaeological assessment has been carried out. Unless further evidence comes to light, there is no requirement for further assessment.</u> As a greenfield site, there may be potential for further archaeological assets below ground which may require further evaluation and mitigation at any subsequent planning application stage. Development of the site would have to ensure that designated/non-designated heritage assets are appropriately protected according to their significance. On the basis of available evidence, it may be impossible to mitigate for the loss of the Medieval fish ponds on the site. There would be a need to undertake an archaeological assessment to support the any subsequent planning application process.</p>
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site would not utilise historical buildings, or buildings of significant local interest.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	The site lies in proximity to the boundary of the Market Lavington Conservation Area and its setting. Consideration would need to be given to the significance of proximal heritage assets and all potentially harmful factors.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	There are no records of heritage assets at risk within the site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	Not applicable.
Assessment outcome (on balance) -	

Summary of SA Objective 6

The site has ~~high~~ **low** archaeological interest and ~~medium~~ **low** sensitivity to change in terms of historic landscape character. ~~There is sufficient evidence to suggest the presence of medieval fish ponds and post-medieval meadows on site, and it is considered that mitigation would not be possible if their presence was confirmed. Accordingly a detailed archaeological assessment would need to be undertaken to support any subsequent planning application process.~~

Market Lavington Conservation Area and its setting would need careful consideration through any subsequent planning application process. A Heritage ~~Impact~~ Assessment would need to be undertaken to ascertain the scale of harm that development of the site may exert.

Overall it is considered that likely effects are ~~major~~ **minor** adverse against this SA objective.

SA objective 7. Conserve and enhance the character and quality of Wiltshire’s rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place

Decision Aiding Questions. Will the development site...

<p>1. Protect and enhance the landscape character and scenic quality of the countryside?</p>	<p>The site is located adjacent to the edge of the existing settlement boundary. Development would lead to an inevitable loss of greenfield/allotment land and an urbanising effect when considered in the context of adjacent housing and other land-uses, however it is considered that robust mitigation and enhancement strategies would be possible. Market Lavington is overlooked by higher land associated with the Salisbury Plan SAC/SPA/SSSI to the south-east. Any development could therefore potentially have an adverse landscape impact and impact through potential increased use of the Salisbury Plain.</p> <p>In terms of landscape character the site falls within the Vale of Pewsey (Type 15A – Greensand Vale). It is of moderate character but in a declining condition. The County Landscape Character Assessment defines the strategy for this type of land as one of maintaining/managing areas of permanent pasture/wet grassland/meadows; and hedgerow retention/repair. To this end, any subsequent planning application process would need to make provision for strengthening the character and appearance of the area through: tree/hedgerow planting with open space along the south-eastern boundary. Consideration would also need to be given to providing appropriate screening to protect/enhance the setting of the Conservation Area. To achieve these aims, the site area may need to be reduced in size.</p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p>Development of the site for housing would need to offer the potential to deliver a comprehensive network of Green Infrastructure and bolstering of existing habitats through tree/hedgerow planting. Such work would limit the developable area of the site.</p>
<p>3. Lead to a net improvement in the quality and quantity of access to urban</p>	<p>Development of the site for housing would potentially offer the opportunity to deliver limited additional access to and</p>

greenspace and the wider countryside for recreation?	availability of urban greenspaces.
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ⁹¹ ?	The site is not located within a designated landscape area (e.g. AONB).
5. Protect rights of way, open space and common land?	Development of the site would have the potential to protect and add to the existing rights of way network, open spaces and common land assets.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	Not applicable.
Assessment outcome (on balance) -	
Summary of SA Objective 7	
Development of the site for housing would inevitably lead to a loss of greenfield land and introduce an urbanising effect. Whilst the loss of greenfield land would alter the character and appearance of the site, such impacts could be tempered to some degree through appropriate mitigation measures designed to bolster greenspace/habitat connectivity. Overall it is considered that development at this site would likely have minor adverse impacts against this SA objective.	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	

⁹¹ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	Bearing in mind the size of the site/potential delivery capacity (approximately 26 dwellings), development for housing would help marginally boost the local supply of affordable homes.
3. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Development of the site would need to deliver high quality, sustainable homes across all types and tenures.
4. Ensure adequate provision of land to meet housing needs?	Development of the site would boost housing supply to meet local and HMA targeted needs.
5. Have regard to the settlement hierarchy?	Development of the site would appropriately respect the settlement hierarchy (Market Lavington is designated as a Local Service Centre) and thereby reduce the risk of speculative development in unsustainable locations.
6. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	Development of the site for housing would assist in bolstering local opportunities for accessing employment through short-term construction contracts and a longer-term boost to the local population/workforce.
7. Consider the emerging Neighbourhood Plans?	A Neighbourhood Development Plan is in the early stages of preparation. As such, the Housing Site Allocations DPD is the appropriate vehicle for addressing local housing requirements at this stage.
8. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	If appropriately planned, the development of the site for limited number of houses would provide opportunity to increase the range and availability of housing in the village.
Assessment outcome (on balance) +	
Summary of SA Objective 8	
<p>The whole SHLAA site provides capacity for approx. 26 residential units (though this may be reduced through the mitigation set out in this assessment). Development at the site would contribute to Wiltshire's housing supply as well as boost the supply of a range of homes in accordance with national and local planning policies. There is an identified need for adaptive Affordable Housing to address identified local needs. The site is relatively sustainably located in relation to local services and facilities. Overall the effects on this objective are considered to be minor positive.</p>	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	

Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	The site is in an area of open farmland used for grazing. Access is considered to be technically feasible. Whilst housing on the site would fill a gap in the building line, the introduction of an urbanising effect on open farmland may adversely impact on existing residential areas/residents.
2. Promote design of buildings and spaces to reduce obesity?	Development of the site would need to provide opportunities to improve cycling and walking routes to local services/facilities/employment.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	Development of the site would offer the opportunity to provide flexibly designed accommodation to meet the needs of the local area.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	Market Lavington nonetheless contains a GP Surgery. On the basis of evidence available at the time of assessment, capacity is available and the site would be sustainably located in relation to the facility.
5. Maximise opportunities within the most deprived areas?	In accordance with national policy/local plan policy, the allocation of the site would help increase opportunities for the local community to access a decent home and thereby help reduce deprivation.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The site is located on the edge of the village. Access to village facilities by walking and cycling would be achievable. However, access to other towns in the area would be limited by the current bus timetable.
7. Support the development of community campuses?	The development of community campuses is directed to the town level and therefore not appropriate for Market Lavington.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	St Barnabus Primary in Market Lavington has surplus places at present and would benefit from housing within the locality. Lavington Secondary is the catchment school and is already full and forecasted to remain so. The school could be expanded however.
Assessment outcome (on balance) -	
Summary of SA Objective 9	
The site is relatively sustainably located on the edge of the village, with access to services and facilities via cycling/walking. On the basis of evidence gathered to date,	

there would appear to be sufficient capacity in local health facilities at Market Lavington’s GP surgery. The local primary school has spare capacity so additional housing in the village could help support the school. Whilst the local secondary school is currently full, it could potentially be expanded. Whilst there are a number of services and facilities at the village and a regular bus service, the majority of trips to work and wider services and facilities will likely involve use of cars. Overall, the site is considered to have a minor adverse effect against SA objective 9, for which mitigation is achievable.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	Development of the site would offer the opportunity to improve cycling and walking routes to local services/facilities/employment.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of the site would have the potential to create links to existing cycling routes.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	The site is located in an accessible location on the edge of the village with good prospects for connectivity to local services and facilities. Whilst there are a number of facilities, services, schools and surgery at Market Lavington, as well as a regular, peak-time bus service, housing development at this site is likely to result in use of the private car to access employment and a wider range of retail and facilities further afield.

Assessment outcome (on balance) -

Summary of SA Objective 10

The site is within 1km of key facilities such as schools, health centres or shops and therefore should be considered as being accessible. Residents will be able to walk or cycle to the majority of local facilities without the need to go outside of Market Lavington. However, development at the village would be unlikely to create new employment opportunities in the village itself. Whilst a bus service visits the village, the majority of trips to work and wider services and facilities will likely involve use of cars. The likely effects of development at this site are considered to be minor adverse, for which mitigation is achievable.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...	
1. Support appropriate retail, leisure and/or employment opportunities to town centre locations to aid urban regeneration?	<p>The site is located on arable pasture land, however, the impact of loss of this land as potential agriculture / employment land is considered to be negligible.</p> <p>The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of viable local retail, leisure and/or employment centres.</p>
2. Support the rural economy?	<p>The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of rural services and facilities.</p>
Assessment outcome (on balance) +	
<p>Summary of SA Objective 11</p> <p>Development of the site would marginally increase the local population and therefore could contribute to the local economy through use of local shops and services. Overall, the effects are considered to be minor positive.</p>	
<p>SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce</p>	
Decision Aiding Questions. Will the development site...	
1. Protect and enhance the vitality and viability of existing employment areas?	<p>In accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas.</p>
2. Provide a focus for development in Salisbury and Trowbridge?	<p>The development of this site will have no effect on Trowbridge or Salisbury in terms of their ability to act as foci for major development.</p>
Assessment outcome (on balance) +	
<p>Summary of SA Objective 12</p> <p>Development of the site for housing would not provide new employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall, likely effects are considered to be minor positive.</p>	

Site 1089 – Southcliffe, Market Lavington

<p>Site context</p> <p>Site size: 0.97ha Site capacity: approximately 23 dwellings</p> <p>The land is in residential and greenfield, garden use, with an access road running through the centre of the site to serve the adjacent business park. A bungalow currently exists on site. The site appears to be divided into blocks of green space with hedgerows and a number of mature trees throughout. High land associated with Salisbury Plain is located to the south and residential areas to the north.</p>	
<p>SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses</p> <p>Decision Aiding Questions. Will the development site...</p>	
<p>1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?</p>	<p>The village lies in close proximity (approximately 660m) to the north west of the elevated Salisbury Plain SAC/SPA/SSSI designation. Any development in the settlement could have an adverse impact through increased recreational pressure.</p> <p>The site also lies approximately 380m to the west of Market Lavington East County Wildlife Site (CWS). Whilst development of the site would not directly impact on the designated features (calcareous grassland) associated with the CWS, additional planting would assist in improving habitat connectivity in the local area.</p> <p>The site is in use as garden/residential. Mature trees and hedgerows surround the site and a road to the adjacent employment use runs through the middle of the site. These features at the boundaries such as hedgerows and trees may support protected species and should be retained. Ecological assessment and further details on the proposals will be required to accurately assess likely impacts. However, there is the potential to create or enhance habitats/habitat connectivity.</p>
<p>2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSSs, SSSIs, SACs, SPAs and</p>	<p>The village lies in close proximity to the Salisbury Plain SAC/SPA/SSSI. Any development in the settlement could increase overall recreational pressure.</p> <p>The site lies within the 6.4km buffer zone for Salisbury Plain SPA. Therefore mitigation measures would be required in-line with the Management Plan/Habitats Regulations to maintain the integrity of the designated features of the Plain.</p> <p>The site also lies approximately 380m to the west of the Market Lavington East CWS.</p>

<p>locally designated sites) and creating biodiversity features within new development resulting in a net gain?</p>	<p>The site lies on the outskirts of the village and is split in half by a road to the business park. The road and the site are tree lined and provides wildlife corridor which should be protected and enhanced. The majority of the site appears to be a domestic garden with scattered, mature trees and domestic buildings ('Southcliffe'). The land is adjacent to arable fields to the south-west, business park to south-east, residential development to the north-west and arable to north-east. The garden may have wildlife value depending on types of habitats present, e.g. orchard, mature trees, compost heap, hedgerows; and building may be suitable for roosting bats. Ecological assessment is required to inform development design and mitigation requirements.</p>
<p>3. Result in greater community engagement with biodiversity?</p>	<p>The development of the site for housing would have the potential to increase public access to designated/non-designated biodiversity features.</p> <p>The site lies within 1km of the Salisbury Plain SAC/SPA/SSSI and the protected Stone Curlew population. Hence increased recreational pressure associated with new development would need to be assessed as part of an appropriate assessment for the purposes of designing mitigation to meet the requirements of the Habitats Regulations.</p>
<p>4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?</p>	<p>Development of the site for housing would need to consider leaving the avenue of trees along the eastern/southern boundary as a green corridor. The site is split in half by a road to business park - tree lined and provides wildlife corridor, which should be retained. Additional planting would help improve habitat connectivity and compensate for any losses incurred through development.</p>
<p>5. Aid in the delivery of a network of multifunctional Green Infrastructure?</p>	<p>Development of the site would need to be capable of delivering multi-functional Green Infrastructure and improve habitat connectivity. However, bearing in mind the size of the site and its relationship to the business park, it is considered unlikely that significant Green Infrastructure, other than compensation planting could be delivered.</p>
<p>6. Ensure all new developments have regard to and protect BAP habitats/species?</p>	<p>Whilst development of this site would be unlikely to impact on the designated BAP habitats in the area, consideration would nonetheless need to be given to habitat linkages.</p>
<p>7. Consider the findings of the HRA in site selection and design?</p>	<p>The HRA screening assessment has identified that development at the settlement could contribute towards recreational impacts on the Salisbury Plain SPA through increased recreational pressure. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.</p>
<p>8. Maintain the existing extent of ancient woodland sites?</p>	<p>Whilst there are designated Ancient Woodlands in the local area, the site itself is some distance away from such features. As such the likelihood that development would impact on the Ancient Woodlands is considered to be low.</p>
<p>9. Require that disturbance impacts of proposed development are assessed</p>	<p>The site falls within the visitor catchment of Salisbury Plain SPA. An appropriate assessment is required if the site is taken</p>

as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	forward into any subsequent stage of the selection process.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).
Assessment outcome (on balance) -	
<p>Summary of SA Objective 1</p> <p>The site lies in close proximity to the Salisbury Plain SAC/SPA/SSSI including within Council buffer zone for Salisbury Plain SPA and further assessment would be required, including consideration given to mitigating potential recreational pressure on protected Stone Curlew population. An appropriate assessment would be required if options at this settlement are taken forward into any subsequent stage in the selection process. A mitigation strategy for recreational pressure on Salisbury Plain SPA has been agreed with Natural England.</p> <p>Mature trees and hedgerows on and adjacent to the site should be retained, as BAP priority habitats. The tree line along the existing road through the middle of the site is a wildlife corridor and must be retained, which could result in a reduction in the capacity of the site.</p> <p>On balance it is considered that the effects would be minor adverse in relation to SA objective 1 and mitigation is considered achievable.</p>	
<p>SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	The site lies on the edge of the village (local service centre) of Market Lavington which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site is situated in relative proximity to the centre of Market Lavington and thereby a range of services / facilities would potentially be accessible by foot, cycle and public transport. Bus stops are present at several locations along the main road of the village providing connectivity to the public transport network. However, residents are likely to rely upon use of the private car to access employment and a wider range of services and facilities further afield.

	The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. The site lies between a residential area and a business park at the eastern side of the village. However, it is unlikely that housing densities could be maximised on this site since there is a wildlife corridor through the middle of the site which would need to be retained and there may be a need for further landscape buffers/screening to mitigate landscape impacts in relation to the Salisbury Plain.
2. Maximise reuse of previously developed land where possible/appropriate?	The site largely comprises garden land bifurcated by a road leading to the existing employment site. The surrounding land is in agricultural use. As such, the site would have no potential for significantly maximising the reuse of previously developed land.
3. Encourage remediation of contaminated land?	At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. The site is largely located on greenfield land, as opposed to brownfield (i.e. previously developed land). It is considered unlikely that significant site remediation measures would be required in order to facilitate development of the land for housing.
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site would need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	The site comprises agricultural/garden land. In line with national and local planning policy, the development of the land would need to ensure that soil quality and structure is appropriately protected.
6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not situated within a Mineral Safeguarding Area or Waste Site Safeguarding Area.
Assessment outcome (on balance) -	

Summary of SA Objective 2

The site lies to the south-east of the village on garden land sandwiched between a business park and residential areas. Development of the site would extend the envelope of the village and add to the urbanising effect created by the business park and as such would not be making use of previously developed land.

The site is within walking/cycling distance of services and facilities within the centre of Market Lavington and housing densities are unlikely to be maximised at this site due to the existing road and wildlife corridor on site, and the possible need to mitigate for landscape impacts. Overall, likely effects are considered to be minor adverse against SA Objective 2.

SA objective 3. Use and manage water resources in a sustainable manner

Decision Aiding Questions. Will the development site...

<p>1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?</p>	<p>Development of the site for housing would need to be capable of positively responding to the predicted effects of climate change.</p> <p>The land slopes down from south-east to north-west. Drainage issues from surface water have been recorded. There are no surface water drainage systems on site and all water flows to existing land drains.</p> <p>Existing foul water sewers cross the site, but there is limited capacity in local foul water systems. As such, a pumped connection may be required.</p> <p>Connection to existing mains water sources would be feasible.</p>
<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>Given the capacity of the site, development would lead to a limited increase in demand for water. In developing the site for housing, consideration would need to be given to responding positively to existing/planned water infrastructure capacity in the local area. A capacity assessment should be undertaken to support any subsequent detailed proposals. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.</p> <p>Evidence indicates that water supply capacity and connection is available but that there are limitations in relation to foul, storm and surface water systems.</p>
<p>3. Ensure the installation of water saving measures such as rainwater</p>	<p>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water</p>

harvesting and water metering?	utilities company.
4. Consider the need for adequate provision of surface water and foul drainage?	<p>There are no surface water systems at this location – surface water currently flows to land drainage system. The site lies on the edge of an area underlain by chalk. As such, groundwater issues may arise that would prevent effective attenuation of surface waters. Soakaways/Sustainable Drainage Schemes may work, but soil permeability testing would need to be undertaken to inform the drainage strategy, in line with Wiltshire Council Groundwater Strategy and CIRIA Sustainable Drainage Systems (SuDS) Manual (C753)⁹² – part E - chapter 25. In addition, foul drainage may also be an issue. Further detailed investigation work would be required to support an allocation/planning application.</p> <p>Where technically feasible, the development of the site would need to make provision for on-site/off-site surface and foul water drainage. This may require statutory easements to be secured and dialogue with the relevant water utilities company would be essential at the detailed design stage.</p>
5. Protect, and where possible, improve surface, ground and drinking water quality?	<p>The site is not located within a Groundwater Source Protection Zone and hence is unlikely to significantly impact on quality and quantity of groundwater resources. That said, in line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality.</p>
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	<p>Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.</p>

⁹² The SuDS Manual (C753), CIRIA, December 2015.

Assessment outcome (on balance) - -

Summary of SA Objective 3

Development would lead to an increase in demand for water infrastructure. There is adequate capacity to ensure water supply to the site, however foul and surface water drainage will need to be improved.

Drainage issues related to surface water have been recorded. Accordingly, a drainage strategy would need to be submitted in support of any planning application. Bearing in mind the site lies on the edge of an area underlain by chalk, consideration would need to be given to infiltration rates and surface water attenuation measures, which could be problematic to achieve given the soil conditions.

Due to the potential issues regarding foul water and surface water, and the fact that finding an appropriate drainage strategy could be problematic, this site is scored as moderate adverse against this objective.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

1. Maintain and improve local air quality?

The site is not located within an Air Quality Management Area (AQMA). That said, development of the site for housing may lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). In addition, noise from the business park would need to be assessed and appropriately addressed through any subsequent planning application process. Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.

Development of the site would likely marginally increase local commuter traffic, which may impact on local air quality. However, it is recognised that the site is within 1km of key services and facilities in Market Lavington and therefore accessible by foot and cycle. This should help limit the extent of additional traffic emanating from the site. Nevertheless, measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could assist in providing opportunities to improve local air quality through making purchasers/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.

2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and

Development of the site for approximately 23 dwellings may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Bearing in mind the fact that the site borders an existing residential area and a business park, mitigation measures to limit such impacts would need to be developed and implemented

vibration through the layout, design and/or location of development?	in accordance with local plan policy and advice from relevant bodies.
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing may lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAS ⁹³ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA).
5. Ensure that air quality impacts on local biodiversity sites are avoided?	The development of the site would likely to lead to a marginal increase in vehicular movements (over and above those that use the business park) which may have the potential to denigrate local air quality however it will be unlikely to denigrate local air quality to the extent that would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may to lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts. An assessment of the potential impact on on-site trees and hedgerows would need to be undertaken to support the

⁹³ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

	allocation/detailed planning application.
Assessment outcome (on balance) -	
Summary of SA Objective 4	
<p>The site is situated to the south-east of the settlement on garden land that separates the business park from existing residential areas and arable farmland. The site is not within a designated AQMA, but there would be a need to address impacts associated with construction (short-term)/occupation (longer-term) of any potential housing scheme. Measures must be implemented as necessary to mitigate emission levels in line with the council's policies and Air Quality Strategy. In turn the developable area of the site might be reduced. In addition, developers of the site could assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p> <p>A Noise Impact Assessment should be undertaken and submitted with any development proposals. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</p> <p>Overall the likely effects against this SA objective are considered to be minor adverse.</p>	
SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions	
Decision Aiding Questions. Will the development site...	
1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources will be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for

practices?	the construction phase will also encourage sustainable building practices leading to a reduction in greenhouse gases emissions.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 5a</p> <p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices to lead to a reduction in greenhouse gas emissions.</p> <p>However, the effect of the development of this site will be to increase greenhouse gas emissions overall and on balance this site is considered to have a minor adverse impact against this objective.</p>	
<p>SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<p>The site is largely located within Flood Zone 1. However, records of surface water flooding would necessitate further detailed consideration and an investigation of the potential feasibility of a SuDS to be provided through any subsequent planning application process.</p> <p>Risk of flooding associated with impermeable surfaces created through residential development would need to be addressed through mitigation measures to ensure the surface runoff from the site is not increased beyond greenfield infiltration rates.</p> <p>The land is close to an area underlain by chalk and there is the potential for high groundwater levels/surface flooding due to groundwater. As such infiltration techniques may be possible, though there would be a need to investigate soil infiltration rates and the in order to introduce pollution prevention measures, and determine appropriate methods of surface water attenuation through a SuDS. Based upon the size of the site, any subsequent planning application would likely need to be supported by a Flood Risk Assessment.</p>
2. Ensure that development can adapt to the predicted future impacts of climate change?	The long-term negative effects of housing development could potentially be offset through the delivery of low carbon dwellings and on-site renewable energy generation (e.g. solar voltaics).
3. Promote provision of surface water attenuation measures to reduce the	Post-development runoff rates should mimic or improve on existing greenfield rates so as not to exacerbate flooding. The site lies on the edge of an area underlain by chalk. Conventional soakaway measures may work, but permeability testing would

risk of flooding including: Sustainable Drainage Systems?	be required to support any subsequent planning application to inform a suitable drainage strategy. The potential to accommodate appropriate SuDS measures to manage surface water run-off from built form would need careful consideration. If technically feasible, SuDS will need to be designed in such a manner as to allow long-term positive management of water resources.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within Flood Zone 1. However, due to the sloping nature of the site and existing ground conditions, consideration would need to be given to the control/management of surface and groundwater.
5. Protect and enhance the natural function of floodplains?	The water course running through the site introduces flood zones 2/3 and therefore a detailed Flood Risk Assessment would need to be undertaken to precisely clarify the extent of the developable area.
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 5b</p> <p>The site is situated largely in Flood Zone 1. However, there are potential groundwater flooding issues due to the underlying chalk that would necessitate a detailed assessment of soil conditions, flood risk and the feasibility of utilising Sustainable Drainage Systems.</p> <p>Due to surface water flooding issues in Market Lavington and the likely difficulty in achieving a suitable drainage strategy, likely effects are considered to be moderate adverse against SA objective 5b.</p>	
<p>SA objective 6. Protect, maintain and enhance the historic environment</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	<p>Records indicate that the land has medium archaeological potential. Therefore in accordance with legislation and national policy/local plan policy, the development of the site would have to ensure that designated/non-designated heritage assets are appropriately assessed/protected according to their significance.</p> <p>In terms of historic landscape, the site is characterised as demonstrating modern housing built on Medieval fields. As such the site exhibits a low sensitivity towards change as much of the historic character is no longer legible.</p> <p>Whilst the site is located in proximity to the Market Lavington Conservation Area, development would be unlikely to directly/physically affect heritage assets or designations. However, high quality design should be promoted to ensure that the development fits in with the townscape character and protects and enhances the setting of the Conservation Area.</p>
2. Ensure appropriate archaeological	Records indicate that the site has medium archaeological potential and there would be a need to undertake an archaeological

assessment prior to development?	assessment to support any subsequent planning application process.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site would not utilise historical buildings, or buildings of significant local interest.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	The site lies in proximity to the boundary of the Market Lavington Conservation Area and its setting. Consideration would need to be given to the significance of proximal heritage assets and all potentially harmful factors. In addition, consideration would need to be given to how housing development on greenfield land would be assimilated into the local landscape. In accordance with national policy/local policy, the development of the site for housing would need to maintain and enhance the distinctiveness of the existing urban fringe of the village.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	There are no records of heritage assets at risk within the site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	Not applicable.
Assessment outcome (on balance) -	
Summary of SA Objective 6	
The site has medium archaeological interest and low sensitivity to change in terms of historic landscape character. That said, there is sufficient evidence to suggest the need for a detailed archaeological assessment to be undertaken to support any planning application process. Overall, likely effects are considered to be minor adverse against this SA objective.	
SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place	
Decision Aiding Questions. Will the development site...	
1. Protect and enhance the landscape	The site is located adjacent to the edge of the existing settlement boundary. Development would lead to an inevitable loss of

<p>character and scenic quality of the countryside?</p>	<p>garden land and an increased urbanising effect when considered in the context of adjacent housing and the business park. However, it is considered possible to employ robust mitigation strategies to mitigate landscape and visual impacts at this site.</p> <p>Market Lavington is overlooked by higher land associated with the Salisbury Plain to the south-east. Any development could therefore potentially have an adverse landscape impact and impact through potential increased use of the Salisbury Plain.</p> <p>In terms of landscape character the site falls within the Salisbury Plain (Type3 – High Chalk Plain). It is of good condition with a high visual sensitivity to change. The County Landscape Character Assessment defines the strategy for this type of land as one of conservation and preserving the remoteness/isolation of the area. To this end, any subsequent planning application process would need to make provision for strengthening the character and appearance of the area.</p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p>Development of the site for housing would need to offer the potential to deliver a comprehensive network of Green Infrastructure and bolstering of existing habitats through tree/hedgerow planting. Such work would potentially limit the developable area of the site.</p>
<p>3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?</p>	<p>Development of the site for housing would potentially offer the opportunity to deliver limited additional access to and availability of urban greenspaces.</p>
<p>4. Conserve and enhance areas with landscape designations and take account of their management</p>	<p>The site is not located within a designated landscape area (e.g. AONB).</p>

objectives, in particular for the three local AONBs ⁹⁴ ?	
5. Protect rights of way, open space and common land?	The development of the site would lead to a loss of garden space. In addition development would not lead to any significant increase in rights of way in the area.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	Not applicable.
Assessment outcome (on balance) -	
Summary of SA Objective 7	
Development of the site for housing would inevitably lead to a loss of garden land and fill a gap between the business park and existing housing stock. Whilst the loss of garden land would alter the character and appearance of the site, such impacts could be tempered to some degree through appropriate mitigation measures designed to bolster greenspace/habitat connectivity. Due to the sloping nature of the site and the presence of the Salisbury Plain to the south-east, the site would likely need to be screened to address potential landscape impacts. Overall it is considered that development at this site would likely have minor adverse impacts against this SA objective.	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of	Bearing in mind the size of the site/potential delivery capacity (approximately 23 dwellings), development for housing would

⁹⁴ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

affordable housing?	help marginally boost the local supply of affordable homes.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Development of the site would need to deliver high quality, sustainable homes across all types and tenures.
3. Ensure adequate provision of land to meet housing needs?	Development of the site would marginally boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	Development of the site would appropriately respect the settlement hierarchy (Market Lavington is designated as a Local Service Centre) and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	Development of the site for housing would assist in bolstering local opportunities for accessing employment through short-term construction contracts and a longer-term boost to the local population/workforce.
6. Consider the emerging Neighbourhood Plans?	A Neighbourhood Development Plan is in the early stages of preparation. As such, the Housing Site Allocations DPD is the appropriate vehicle for addressing local housing requirements at this stage.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	If appropriately planned, the development of the site for limited number of houses would provide opportunity to increase the range and availability of housing in the village.
Assessment outcome (on balance) +	
<p>Summary of SA Objective 8</p> <p>The whole SHLAA site provides capacity for approx. 23 residential units (though this may be reduced through the mitigation set out in this assessment). Development at this site would contribute to Wiltshire's housing supply as well as boost the supply of a range of homes in accordance with national and local planning policies. There is an identified need for adaptive Affordable Housing to address identified local needs.</p> <p>The site is relatively sustainably located in relation to local services and facilities including the primary school and GP surgery.</p> <p>Overall the effects on this objective are considered to be minor positive.</p>	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	

Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	The site comprises garden land, surrounded by arable land, a business park and existing housing. Access is considered to be technically feasible via Southcliffe Road. Housing development on the site would fill a gap between the business park and existing housing stock. This may provide opportunities to integrate the site with neighbouring land-uses, thereby reducing the fear of crime. That said, an assessment of the potential effects additional housing on existing residential areas would need to be undertaken to support any subsequent planning application.
2. Promote design of buildings and spaces to reduce obesity?	Development of the site would need to provide opportunities to improve cycling and walking routes to local services/facilities/employment.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	Development of the site would offer the opportunity to provide flexibly designed accommodation to meet the needs of the local area.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	Whilst set within a rural environment, Market Lavington nonetheless contains a GP Surgery. On the basis of evidence available at the time of assessment, capacity is available and the site would be sustainably located in relation to the facility.
5. Maximise opportunities within the most deprived areas?	Development of the site would help increase opportunities for the local community to access a decent home and thereby help reduce deprivation.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The site is located on the edge of the village. Access to village facilities by walking and cycling would be achievable. However, access to other towns in the area would be limited by the current bus timetable.
7. Support the development of community campuses?	The development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	The site is situated on the edge of the village but, is nonetheless accessible in relation to local schools. There is capacity at local schools and additional housing would add to on-roll numbers.
Assessment outcome (on balance) -	

Summary of SA Objective 9

The site is relatively sustainably located on the edge of the village, with access to services and facilities via cycling/walking. On the basis of evidence gathered to date, there would appear to be sufficient capacity in local health facilities at Market Lavington’s GP surgery. The local primary school has spare capacity so additional housing in the village could help support the school. Whilst the local secondary school is currently full, it could potentially be expanded. Whilst there are a number of services and facilities at the village and a regular bus service, the majority of trips to work and wider services and facilities will likely involve use of cars.

Overall, the site is considered to have a minor adverse effect against SA objective 9, for which mitigation is achievable.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	Development of the site for housing would have the potential to create links to existing walking and cycling routes.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of the site would be sustainably located in terms of accessing local walking/cycling routes.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	The site is located in an accessible location at the edge of the village and development of the site would offer the opportunity to improve cycling and walking routes to local services/facilities. Whilst there are a number of facilities, services, schools and surgery at Market Lavington, as well as a regular, peak-time bus service, housing development at this site is likely to result in use of the private car to access employment and a wider range of retail and facilities further afield.

Assessment outcome (on balance) -

Summary of SA Objective 10

The site is within 1km of key facilities such as the primary school, health centre and shops. As such, the site should be considered as being accessible. Residents would be able to walk or cycle to the majority of local facilities without the need to go outside of Market Lavington. Whilst there are regular bus services from the village to towns further afield, it is likely that residents will make use of private car to access employment and facilities in the wider area. The likely effects of development at

this site are considered to be minor adverse.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities to town centre locations to aid urban regeneration?	The site would marginally boost the number of homes and thereby increase the population of the area.
2. Support the rural economy?	The site would marginally boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of rural services and facilities.

Assessment outcome (on balance) +

Summary of SA Objective 11
 Development of the site would marginally increase the local population and therefore could contribute to the local economy through use of local shops and services. Overall, the effects are considered minor positive.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?	Development of the site for housing would have the potential to support the viability of existing employment areas.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of this site will have no effect on Trowbridge or Salisbury in terms of their ability to act as foci for major development.

Assessment outcome (on balance) +

Summary of SA Objective 12

Development of the site for housing would not provide new employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall, likely effects are considered to be positive.

Site 2055 – Underhill Nursery, Market Lavington

Site context

Site size: 1.90ha Site capacity: approximately 46 dwellings

The site covers approximately 1.90 hectares and forms a rectangular piece of land associated with Underhill Nursery on the eastern side of Market Lavington. The site comprises a detached 21st century red brick property, its garden and numerous poly-tunnels, enclosed by belts of coniferous trees extending to rough grassland to the north. Excluded from the site is a further detached 21st century property and its garden curtilage in the southwest corner of the field at the junction of Fiddington Clay and Fiddington Hill. To the east beyond site, the land continues to rise towards an escarpment and the Wessex Ridgeway bridleway. Fiddington Hill, a minor road, defines the southern boundary serving six properties and is bordered by grassy verges, garden hedgerows and trees. The southern part of the site comprises the front lawn and car park area of Underhill Nursery. The site's western boundary skirts around an adjacent property to join PRoW (Ref: MLAV24) and has a belt of mature trees separating the property and PRoW from poly-tunnels. There are two public rights of way (MLAV 24 & EAST22) along the western boundary of the site, with MLAV24 linking Stirling Road to the north. The site boundary with the properties on the eastern side of Stirling Road is timber post and rail with little vegetation. The site's northern boundary is a post and wire fence and hedgerow devoid of trees. The site's eastern boundary is open with no defined boundary and runs across the rear garden of the Underhill nursery property close to the coniferous boundary. The site is not within or adjacent to the village's designated Conservation Area.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?

The site lies within the 6.4km buffer zone associated with the Salisbury Plain SPA (approx. 750m to the south east).

The site is currently occupied by horticultural buildings and an associated domestic property in the southern part of the site. Potential habitats existing on site: Open grassland in northern part of site; Hedgerow on northern boundary of site connected to hedgerows to north and east; Large mature treeline/hedgerow around north-eastern corner of nursery (possibly non-native); Area of scrub vegetation on western boundary; Arable field adjacent to eastern boundary. Potential for reptiles, nesting birds, roosting bats, badger, and hedgehog - ecological assessment would be required to inform site design and mitigation requirements.

The site also lies approximately 440m to the west of Market Lavington East County Wildlife Site (CWS). Whilst development of the site would not directly impact on the designated features (calcareous grassland) associated with the CWS, additional

	<p>planting would assist in improving habitat connectivity in the local area.</p> <p>Features at the boundaries of the site, such as hedgerows and trees may support protected species. However, there would be the potential to create or enhance habitats/habitat connectivity.</p>
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	<p>The site lies within 6.4km buffer zone for Salisbury Plain SPA. Any development in the settlement could have an adverse impact due to an increase in overall recreational pressure.</p> <p>Therefore mitigation measures would be required in-line with the Management Plan/Habitats Regulations to maintain the integrity of the designated features of the Plain.</p> <p>The site also lies approximately 440m to the west of the Market Lavington East CWS.</p>
3. Result in greater community engagement with biodiversity?	<p>The development of the site for housing would have the potential to increase public access to designated/non-designated biodiversity features.</p> <p>The site lies within 1km of the Salisbury Plain SAC/SPA/SSSI and the protected Stone Curlew population. Hence increased recreational pressure associated with new development would need to be assessed as part of an appropriate assessment for the purposes of designing mitigation to meet the requirements of the Habitats Regulations.</p>
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	<p>Development of the site for housing would need to consider bolstering existing hedgerows, trees and boundary features to improve habitat connectivity and compensate for any losses incurred through development.</p>
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	<p>Development of the site would need to be capable of delivering multi-functional Green Infrastructure and improve habitat connectivity.</p>
6. Ensure all new developments have regard to and protect BAP habitats/species?	<p>Whilst development of this site would be unlikely to impact on the designated BAP habitats in the area, consideration would nonetheless need to be given to habitat linkages.</p>
7. Consider the findings of the HRA in site selection and design?	<p>The HRA screening assessment has identified that development at the settlement could contribute towards recreational impacts on the Salisbury Plain SPA through increased recreational pressure. An appropriate assessment is required if the site</p>

	is taken forward into any subsequent stage of the selection process.
8. Maintain the existing extent of ancient woodland sites?	Whilst there are designated Ancient Woodlands in the local area, the site itself is some distance away from such features. As such the likelihood that development would impact on the Ancient Woodlands is considered to be low.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	The site falls within the visitor catchment of Salisbury Plain SPA. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).
Assessment outcome (on balance) -	
<p>Summary of SA Objective 1</p> <p>The site lies in close proximity to the Salisbury Plain SAC/SPA/SSSI and within the Council buffer zone for Salisbury Plain SPA and further assessment would be required, including consideration given to mitigating potential recreational pressure on protected Stone Curlew. An appropriate assessment would be required if options at this settlement are taken forward into any subsequent stage in the selection process. A mitigation strategy for recreational pressure on Salisbury Plain SPA has been agreed with Natural England.</p> <p>Potential habitats exist on site and ecological assessment is required. Additional planting and wider mitigation measures may be required to address residual ecological impacts associated with the development of the site. Again, such measures would need to be identified and appropriately designed through a subsequent planning application process.</p> <p>On balance it is considered that the effects would be minor adverse against SA objective 1 and mitigation is considered achievable.</p>	
SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings	

Decision Aiding Questions. Will the development site...	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	<p>The site lies on the edge of the village (local service centre) of Market Lavington which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. Whilst on the eastern extremity of the village, the site is situated in relative proximity to the centre of Market Lavington and thereby a range of services / facilities would potentially be accessible by foot, cycle and public transport. Bus stops are present at several locations along the main road of the village providing connectivity to the public transport network. However, residents are likely to rely upon use of the private car to access employment and a wider range of services and facilities further afield.</p> <p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. The site lies to the extreme east of the village on greenfield land, used in part as a nursery. It is in close proximity to the Salisbury Plain SPA. Given the site's prominence in the landscape setting on the rural fringe of the village, it is unlikely that housing densities could be maximised on this site since there would need to be a degree of landscape mitigation especially in relation to impacts to the open countryside / Salisbury Plain landscape.</p>
2. Maximise reuse of previously developed land where possible/appropriate?	<p>The site largely comprises greenfield land along with buildings associated with the nursery. The land relates well to adjacent uses but would offer no potential for significantly maximising the reuse of previously developed land.</p>
3. Encourage remediation of contaminated land?	<p>At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation.</p> <p>The site is largely located on greenfield land, as opposed to brownfield (i.e. previously developed land). It is considered unlikely that significant site remediation measures would be required in order to facilitate development of the land for housing.</p>
4. Ensure the design and layout of new development supports sustainable waste management?	<p>The development of the site would need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.</p>
5. Protect and enhance soil quality?	<p>The site is largely greenfield in nature and therefore, in line with national and local planning policy, the development of the land would need to ensure that soil quality and structure is appropriately protected.</p>

6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not situated within a Mineral Safeguarding Area, or Waste Site Safeguarding Area.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 2</p> <p>The site lies to the east of the village centre on greenfield land used in part as a nursery. The land is sandwiched between a business park and residential areas. Development of the site would extend the envelope of the village and add to the urbanising effect created by the business park.</p> <p>The site is within walking/cycling distance of services and facilities within the centre of Market Lavington, however it is unlikely to be appropriate for housing density to be maximised at this site. On the balance of available evidence at this stage, likely effects are considered to be minor adverse against SA Objective 2.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	<p>Development of the site for housing would need to be capable of positively responding to the predicted effects of climate change.</p> <p>Part of the site appears to be affected by pluvial flooding on a 1:30 year basis. Drainage issues from surface water have been recorded. Indeed, There are no surface water systems on site and all water flows to existing land drains. Surface water disposal issues would need to addressed at any subsequent planning application stage and could involve third party consent.</p> <p>Existing foul water sewers cross the site, but there is limited capacity in local foul water systems.</p> <p>Connection to existing mains water sources would be feasible.</p>
2. Ensure that essential water	Given the capacity of the site, development would lead to a limited increase in demand for water. In developing the site for

<p>infrastructure is co-ordinated with all new development?</p>	<p>housing, consideration would need to be given to responding positively to existing/planned water infrastructure capacity in the local area. A capacity assessment should be undertaken to support any subsequent detailed proposals. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed.</p> <p>Evidence indicates that water supply capacity and connection is available but that there are limitations in relation to foul, storm and surface water systems.</p>
<p>3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?</p>	<p>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company.</p>
<p>4. Consider the need for adequate provision of surface water and foul drainage?</p>	<p>There are no surface water systems at this location – surface water currently flows to land drainage system. The site lies on the edge of an area underlain by chalk. As such, groundwater issues may arise that would prevent effective attenuation of surface waters. Soakaways/Sustainable Drainage Schemes may work, but soil permeability testing would need to be undertaken to inform the drainage strategy, in line with Wiltshire Council Groundwater Strategy and CIRIA Sustainable Drainage Systems (SuDS) Manual (C753)⁹⁵ – part E - chapter 25. In addition, foul drainage may also be an issue. Further detailed investigation work would be required to support an allocation/planning application. Development of the site would need to make provision for on-site/off-site surface and foul water drainage. This may require statutory easements to be secured and dialogue with the relevant water utilities company would be essential at the detailed design stage.</p>
<p>5. Protect, and where possible, improve surface, ground and drinking water quality?</p>	<p>The site is not located within a Groundwater Source Protection Zone and hence is unlikely to significantly impact on quality and quantity of groundwater resources.</p>

⁹⁵ The SuDS Manual (C753), CIRIA, December 2015.

<p>6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?</p>	<p>Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.</p>
<p>Assessment outcome (on balance) - -</p>	
<p>Summary of SA Objective 3</p> <p>Development would lead to an increase in demand for water infrastructure. There is adequate capacity to ensure water supply to the site, however, some local existing utilities infrastructure such as foul sewers and storm water drainage may need upgrading.</p> <p>Drainage issues related to surface water have been recorded. Accordingly, a drainage strategy would need to be submitted in support of any planning application. Bearing in mind the site lies on the edge of an area underlain by chalk, consideration would need to be given to infiltration rates and surface water attenuation measures, which could be problematic to achieve given the soil conditions.</p> <p>Due to the potential issues regarding foul water and surface water, and the fact that finding an appropriate drainage strategy could be problematic, this site is scored as moderate adverse against this objective.</p>	
<p>SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution</p> <p>Decision Aiding Questions. Will the development site...</p>	
<p>1. Maintain and improve local air quality?</p>	<p>The site is not located within an Air Quality Management Area (AQMA). That said, housing development may lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). In addition, noise from the business park would need to be assessed and appropriately addressed through any subsequent planning application process. Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development of the site would likely marginally increase local commuter traffic, which may impact on local air quality. However, it is recognised that the site is within 1km of key services and facilities in Market Lavington and therefore accessible by foot and cycle. This should help limit the extent of additional traffic emanating from the site. Nevertheless, measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include: landscaping, bunding or separation to increase distance from highways and</p>

	junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could assist in providing opportunities to improve local air quality through making purchasers/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.
2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?	Development of the site for approximately 46 dwellings may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Bearing in mind the fact that the site borders an existing residential area and a business park, mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing may lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAS ⁹⁶ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA).
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While the development of the site would likely to lead to a marginal increase in vehicular movements (over and above those that use the nursery/business park these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air

⁹⁶ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

to travel by private car?	quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	<p>While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts. However, it is considered unlikely that development would materially harm the Salisbury Plain SAC.</p> <p>An assessment of the potential impact on on-site trees and hedgerows would need to be undertaken to support the allocation/detailed planning application.</p>
Assessment outcome (on balance) -	
<p>Summary of SA Objective 4</p> <p>The site is situated to the east of the village centre on greenfield land associated with the nursery. Surrounding land is in agricultural/business use. The site is not within a designated AQMA, but there would be a need to address impacts associated with construction (short-term)/occupation (longer-term) of a housing scheme. Measures must be implemented as necessary to mitigate emission levels in line with the council's policies and Air Quality Strategy. In turn the developable area of the site might be reduced. In addition, developers of the site could assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p> <p>A Noise Impact Assessment should be undertaken and submitted with any development proposals. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</p> <p>Overall the likely effects against this SA objective are considered to be minor adverse.</p>	
<p>SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of	Promotion and development of low carbon sources will be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire

energy?	Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase will also encourage sustainable building practices leading to a reduction in greenhouse gases emissions.
Assessment outcome (on balance) -	
Summary of SA Objective 5a	
<p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices to lead to a reduction in greenhouse gas emissions.</p> <p>However, the effect of the development of this site will be to increase greenhouse gas emissions overall and on balance this site is considered to have a minor adverse impact against this SA objective.</p>	
SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects	
Decision Aiding Questions. Will the development site...	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<p>The site is largely located within Flood Zone 1. However, records of surface water flooding would necessitate further detailed consideration and an investigation of the potential feasibility of a Sustainable Drainage System to be provided through any subsequent planning application process.</p> <p>Risk of flooding created by impermeable surfaces associated with residential development would need to be addressed through mitigation measures to ensure the surface run-off from the site is not increased beyond greenfield infiltration rates.</p> <p>The land is close to an area underlain by chalk and there is the potential for high groundwater levels/surface flooding due to groundwater. As such infiltration techniques may be possible, though there would be a need to investigate soil infiltration rates and the potential to introduce pollution prevention measures, and determine appropriate methods of surface water attenuation through a SuDS. Based upon the size of the site, any subsequent planning application would likely need to be</p>

	supported by a Flood Risk Assessment.
2. Ensure that development can adapt to the predicted future impacts of climate change?	The long-term negative effects of housing development could potentially be offset through the delivery of low carbon dwellings and on-site renewable energy generation (e.g. solar voltaics).
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	Records indicate the site is affected by surface water flooding. The site lies on the edge of an area underlain by chalk. As such, the potential to accommodate appropriate SuDS measures to manage surface water run-off from built form will need careful consideration as ground conditions may render such measures and conventional soakaways as being ineffective. However, if technically feasible, SuDS will need to be designed in such a manner as to allow long-term positive management of water resources.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within Flood Zone 1. However, due to the sloping nature of the site and existing ground conditions, consideration would need to be given to the control/management of surface and groundwater.
5. Protect and enhance the natural function of floodplains?	Not applicable. The site is not located within proximity to watercourses or critical flood zones.
Assessment outcome (on balance) - -	
Summary of SA Objective 5b	
<p>The site is situated in Flood Zone 1. However, the recorded incidence/probability of surface/groundwater flooding would necessitate a detailed assessment of soil conditions, flood risk and the feasibility of utilising Sustainable Drainage Systems.</p> <p>Due to surface water flooding issues in Market Lavington and the likely difficulty in achieving a suitable drainage strategy, likely effects are considered to be moderate adverse against SA objective 5b.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled	Records indicate that the land has high archaeological potential. Therefore in accordance with legislation and national policy/local plan policy, the development of the site would have to ensure that designated/non-designated heritage assets are appropriately assessed/protected according to their significance.

<p>Monuments and Historic Parks & Gardens?</p>	<p>Whilst the site is located in proximity to the Market Lavington Conservation Area, development would be unlikely to directly/physically affect heritage assets or designations. However, high quality design should be promoted to ensure that the development fits in with the townscape character and protects and enhances the setting of the Conservation Area.</p> <p>In terms of historic landscape, the site is a nursery created on former post-medieval and medieval fields however the previous landscape is no longer legible and as such the site has low sensitivity to change.</p>
<p>2. Ensure appropriate archaeological assessment prior to development?</p>	<p>An archaeological assessment has been carried out that has identified medieval remains and mitigation is required. Further assessment and appraisal would be required inform proposals.</p>
<p>3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?</p>	<p>The site would not utilise historical buildings, or buildings of significant local interest.</p>
<p>4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?</p>	<p>The site lies in proximity to the boundary of the Market Lavington Conservation Area and its setting. Consideration would need to be given to the significance of proximal heritage assets and all potentially harmful factors.</p> <p>In addition, consideration would need to be given to how housing development on greenfield land would be assimilated into the local landscape. In accordance with national policy/local policy, the development of the site for housing would need to maintain and enhance the distinctiveness of the existing urban fringe of the village.</p>
<p>5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?</p>	<p>There are no records of heritage assets at risk within the site.</p>
<p>6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?</p>	<p>Not applicable.</p>
<p>Assessment outcome (on balance) - -</p>	
<p>Summary of SA Objective 6</p> <p>The site has high archaeological interest since previous archaeological assessment indicates that the site appears to contain medieval remains that would need to be further investigated and appraised through any subsequent planning application process. Proposals would also need to be informed by a Heritage Impact Assessment.</p>	

Mitigation could be problematic to achieve in a way that is compatible with development. The likely effects are considered to be moderate adverse against this objective.	
SA objective 7. Conserve and enhance the character and quality of Wiltshire’s rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place	
Decision Aiding Questions. Will the development site...	
1. Protect and enhance the landscape character and scenic quality of the countryside?	<p>The site is located adjacent to the edge of the existing settlement boundary. Development would lead to an inevitable loss of land which benefits from a business use; and an increased urbanising effect when considered in the context of adjacent housing and the business park.</p> <p>Market Lavington is overlooked by higher land associated with the Salisbury Plain to the south-east. Any development could therefore potentially have an adverse landscape impact on the Salisbury Plain. This site is located to the east of the village and is in close proximity to the Salisbury Plain SPA (approx. 750m at its closest point). The site is adjacent to existing residential stock is screened by woodland tree cover and mature hedgerows at its boundaries, however the topography of the surrounding area means that development here needs careful consideration in relation to its impact on the Salisbury Plain landscape. It is considered that green infrastructure buffers could be incorporated in the design to mitigate the impact. This would include appropriate planting to link with existing trees/hedgerows. This is likely to reduce the capacity of the site.</p> <p>There are two footpaths adjacent to the site boundary (north and west) which introduce sensitive visual receptors, albeit with low inter-visibility potential due to the nature of the existing hedgerows.</p> <p>In terms of landscape character the site falls within the Salisbury Plain (Type 15 – Greensand Vale). It is of moderate to declining condition. The County Landscape Character Assessment defines the strategy for this type of land as one of protecting pasture land which this site is not. However, any subsequent planning application process would need to make provision for strengthening the character and appearance of the area.</p>
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	Development of the site for housing would need to offer the potential to deliver a comprehensive network of Green Infrastructure and bolstering of existing habitats through tree/hedgerow planting. Such work would potentially limit the developable area of the site.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	Development of the site for housing would potentially offer the opportunity to deliver limited additional access to and availability of urban greenspaces.

4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ⁹⁷ ?	The site is not located within a designated landscape area (e.g. AONB).
5. Protect rights of way, open space and common land?	The development of the site would lead to a loss of garden space. In addition development would not lead to any significant increase in rights of way in the area.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	Not applicable.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 7</p> <p>Development of the site for housing would inevitably lead to a loss of land which benefits from a business use. Whilst the loss of greenfield land would alter the character and appearance of the site, such impacts could be tempered to some degree through appropriate mitigation measures designed to bolster greenspace/habitat connectivity. However, due to the sloping nature of the site and the presence of the Salisbury Plain Special Protection Area (SPA/SAC/SSSI) to the south-east, the site would likely need to be substantial green infrastructure buffer to address potential landscape impacts, which would reduce the capacity of the site.</p> <p>Overall it is considered that development at this site would likely have minor adverse impacts against this SA objective.</p>	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types	

⁹⁷ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	Bearing in mind the size of the site/potential delivery capacity (approximately 46 dwellings), development for housing would help boost the local supply of affordable homes.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Development of the site would need to deliver high quality, sustainable homes across all types and tenures.
3. Ensure adequate provision of land to meet housing needs?	Development of the site would boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	Development of the site would appropriately respect the settlement hierarchy (Market Lavington is designated as a Local Service Centre) and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	Development of the site for housing would assist in bolstering local opportunities for accessing employment through short-term construction contracts and a longer-term boost to the local population/workforce.
6. Consider the emerging Neighbourhood Plans?	A Neighbourhood Development Plan is in the early stages of preparation. As such, the Housing Site Allocations DPD is the appropriate vehicle for addressing local housing requirements at this stage.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	If appropriately planned, the development of the site for limited number of houses would provide opportunity to increase the range and availability of housing in the village.
Assessment outcome (on balance) + +	
Summary of SA Objective 8	
The whole SHLAA site provides capacity for approx. 46 residential units (though this may be reduced through the mitigation set out in this assessment. Development at this site would contribute to Wiltshire's housing supply as well as boost the supply of a range of homes in accordance with national and local planning policies. There is an identified need for adaptive Affordable Housing to address identified local needs.	

The site is relatively sustainably located in relation to local services and facilities such as the primary school, GP surgery and shops.

Overall the effects on this objective are considered to be moderate beneficial.

SA objective 9. Reduce poverty and deprivation and promote more inclusive and self-contained communities

Decision Aiding Questions. Will the development site...

1. Promote design of buildings and spaces to reduce crime and the fear of crime?	The site comprises greenfield land and horticultural buildings, surrounded by arable land, a business park and existing housing. Housing development on the site would fill a gap between the business park and existing housing stock. This may provide opportunities to integrate the site with neighbouring land-uses, thereby reducing the fear of crime. That said, an assessment of the potential effects additional housing on existing residential areas would need to be undertaken to support any subsequent planning application.
2. Promote design of buildings and spaces to reduce obesity?	Development of the site would need to provide opportunities to improve existing cycling and walking routes to local services/facilities/employment.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	Development of the site would offer the opportunity to provide flexibly designed accommodation to meet the needs of the local area.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	Whilst set within a rural environment, Market Lavington nonetheless contains a GP Surgery. On the basis of evidence available at the time of assessment, capacity is available and the site would be sustainably located in relation to the facility.
5. Maximise opportunities within the most deprived areas?	Development of the site would help increase opportunities for the local community to access a decent home and thereby help reduce deprivation.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The site is located on the edge of the village. Access to village facilities by walking and cycling would be achievable. However, access to other towns in the area would be limited by the current bus timetable.
7. Support the development of community campuses?	The development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope	St Barnabus Primary in Market Lavington has surplus places at present and would benefit from housing within the locality. Lavington Secondary is the catchment school and is already full and forecasted to remain so. The school could however be

with the additional demand generated from the site?	expanded.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 9</p> <p>The site is located on the eastern edge of the village and is relatively accessible to the village centre from a walking/cycling perspective. On the basis of evidence gathered to date, there would appear to be sufficient capacity in local health facilities at Market Lavington's GP surgery. The local primary school has spare capacity so additional housing in the village could help support the school. Whilst the local secondary school is currently full, it could potentially be expanded. Whilst there are a number of services and facilities at the village and a regular bus service, the majority of trips to work and wider services and facilities will likely involve use of cars. Overall, the site is considered to have a minor adverse effect against SA objective 9, for which mitigation is achievable.</p>	
<p>SA objective 10. Reduce the need to travel and promote more sustainable transport choices</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Increase walking and cycling accessibility through the use of developer contributions and site design?	Development of the site would potentially offer the opportunity to improve cycling and walking routes to local services/facilities/employment.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of the site would have the potential to create links to existing cycling routes.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	<p>The site is located in an accessible location on the edge of the village with good prospects for connectivity to local services and facilities. Whilst there are a number of facilities, services, schools and surgery at Market Lavington, as well as a regular, peak-time bus service, housing development at this site is likely to result in use of the private car to access employment and a wider range of retail and facilities further afield.</p> <p>It should be noted that access to this site is constrained and this should be investigated further if this site progresses to any further stage of the site selection process.</p>

Assessment outcome (on balance) -

Summary of SA Objective 10

The site is within 1km of key facilities such as schools, health centres or shops and therefore should be considered as being accessible. Future residents would be able to walk or cycle to the majority of local facilities without the need to go outside of Market Lavington. Whilst there are regular bus services from the village to towns further afield, it is likely that residents will make use of private car to access employment and facilities in the wider area. The likely effects of development at this site are considered to be minor adverse, for which mitigation is achievable.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities to town centre locations to aid urban regeneration?	<p>The site is located on greenfield/nursery land. Development would result in an increased urbanising effect and loss of land in a business/employment use.</p> <p>The site would boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of viable local retail, leisure and/or employment centres.</p>
2. Support the rural economy?	<p>The site would marginally boost the number of homes and thereby increase the population of the area. This would potentially directly assist in the support of rural services and facilities.</p>

Assessment outcome (on balance) +

Summary of SA Objective 11

Development would result in an increased urbanising effect and loss of land in a business/employment use. That said, development of the site would marginally increase the local population and therefore could contribute to the local economy through use of local shops and services. Overall, the effects are considered minor positive.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and	<p>The development of the site would lead to the loss of a nursery and hence a loss of employment space. As a result, any</p>
---	---

viability of existing employment areas?	subsequent planning application would need to address clauses i) – v) of Core Policy 35 ⁹⁸ .
2. Provide a focus for development in Salisbury and Trowbridge?	Development of this site will have no effect on Trowbridge or Salisbury in terms of their ability to act as foci for major development.
Assessment outcome (on balance) 0	
<p>Summary of SA Objective 12</p> <p>Development of the site for housing would not provide new employment land and would remove an existing business/employment use. However the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall, likely effects are considered to be neutral.</p>	

⁹⁸ Wiltshire Core Strategy

Site 3443 – Land to the east of Lavington School, Market Lavington

Site context	
Site size: 0.75ha Site capacity: approximately 15 dwellings	
This site is located on two green fields to the east of Lavington Secondary School. Ancient Woodland associated with Manor House Woods/Lady Wood runs along the northern boundary of the site which slopes down to a brook.	
A new build house is located within the current footprint of the site – school caretaker lives in this property. The remainder of the site is used as storage, non-designated recreation use and some greenhouse use. Existing housing fronts onto the site along the southern, and to some extent, eastern boundaries.	
SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses	
Decision Aiding Questions. Will the development site...	
1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	<p>The site comprises open grassland to the immediate east of Lavington School and north of existing residential properties on Park Road. The northern boundary of the site is marked by mature hedgerows and trees associated with Ancient Woodland/Manor House Woods County Wildlife Site (CWS) which abuts the site. The woodland would need to be buffered and adequately protected from development.</p> <p>Badger setts are recorded to be present in the adjacent Ancient Woodland associated with the Manor House Woods CWS. The site is adjacent to the school and contains a domestic dwelling and detached garage (The School House), which are both potential bat roosts. In addition, the potential for nesting birds, reptiles, hedgehogs and badgers exists on and around the site. Habitats present are unknown, but appear to be hay meadow, which would need to be confirmed by a habitat survey. Ecological assessment required to inform site design and mitigation requirements.</p> <p>Any development of the site would need to protect existing vegetation and the CWS. This could be potentially achieved through additional planting and landscaping.</p> <p>In addition, the site lies within the 6.4km buffer zone associated with the Salisbury Plain SPA (approx. 1.5km to the south-east of the site).</p>
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and	<p>The site lies within the 6.4km buffer zone for Salisbury Plain SPA. Therefore mitigation measures would be required in-line with the Management Plan/Habitats Regulations to maintain the integrity of the designated features of the Plain.</p> <p>The site also lies immediately to the south of Ancient Woodland associated with the Manor House Woods CWS. Any</p>

species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	development of the site would need to protect and buffer the Ancient Woodland to the north.
3. Result in greater community engagement with biodiversity?	<p>The development of the site for housing would have the potential to increase public access to designated/non-designated biodiversity features.</p> <p>The site lies within approximately 1.5 km of the Salisbury Plain SAC/SPA/SSSI and the protected Stone Curlew population. Hence increased recreational pressure associated with new development would need to be assessed as part of an appropriate assessment for the purposes of designing mitigation to meet the requirements of the Habitats Regulations.</p>
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	In line with national policy, local plan policy and standing advice from relevant bodies, the development of the site for housing would need to bolster existing hedgerows, trees and boundary features to improve habitat connectivity and compensate for any losses incurred through development.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	Development of the site would need to be capable of delivering multi-functional Green Infrastructure and improve habitat connectivity. This could be potentially achieved through additional planting and landscaping.
6. Ensure all new developments have regard to and protect BAP habitats/species?	Development of this site would likely impact on the designated Ancient Woodland BAP habitats in the area. As such, consideration would need to be given to creating habitat linkages through additional planting.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement could contribute towards recreational impacts on the Salisbury Plain SPA through increased recreational pressure. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.
8. Maintain the existing extent of ancient woodland sites?	The site abuts designated Ancient Woodland associated with the Manor House Woods CWS. Whilst the extent of the woodland would not be affected by development, there would nonetheless be a need to provide a buffer that would be likely to limit the overall size of the site.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals,	The site falls within the visitor catchment of Salisbury Plain SPA. An appropriate assessment is required if the site is taken forward into any subsequent stage of the selection process.

particularly in relation to Salisbury Plain and New Forest SPAs?	
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS).
Assessment outcome (on balance) -	
Summary of SA Objective 1	
<p>The site comprises an open field to the immediate east of Lavington School; and south of Ancient Woodland associated with the Manor House Woods CWS. . Development of the site for housing would need to provide screening/buffers to the Ancient Woodland. Such works could potentially help support linkages to existing habitats and thereby improve biodiversity. Ecological assessment would be required.</p> <p>The site lies within proximity to the Salisbury Plain SAC/SPA/SSSI and within the Council buffer zone for Salisbury Plain SPA and further assessment would therefore be needed to be given to mitigating potential recreational pressure on protected Stone Curlew. The HRA screening assessment has identified that development at the settlement could contribute towards recreational impacts on the Salisbury Plain SPA through increased recreational pressure. An appropriate assessment would be required if options at this settlement are taken forward into any subsequent stage in the selection process. A mitigation strategy for recreational pressure on Salisbury Plain SPA has been agreed with Natural England.</p> <p>On balance it is considered that the effects would be minor adverse against SA objective 1 and mitigation is considered achievable.</p>	
SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings	
Decision Aiding Questions. Will the development site...	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	The site is located in close proximity to Lavington School and residential development on land to the west of the village. The local service centre of Market Lavington is considered to be a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site is situated in close proximity to the centre of Market Lavington and therefore opportunities would exist for accessing a range of services / facilities by foot, cycle and public transport. Bus stops are present at several locations along the main road of the village providing connectivity to the public transport network. However, residents are likely to rely

	<p>upon use of the private car to access employment and a wider range of services and facilities further afield.</p> <p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. However, given the likely need for a green infrastructure buffer to protect the adjacent woodland and to screen the existing housing, it is unlikely that housing densities could be maximised on this site.</p>
2. Maximise reuse of previously developed land where possible/appropriate?	The site largely comprises greenfield, rather than previously developed land. Therefore, development would lead to an inevitable loss of greenfield land.
3. Encourage remediation of contaminated land?	<p>At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation.</p> <p>However, based on existing evidence, further assessment of land contamination would be required in support of a planning application.</p>
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site would need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	The site is greenfield in nature and extensive in size. In line with national and local planning policy, the development of the land would need to ensure that soil quality and structure is appropriately protected.
6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a Mineral Safeguarding Area or Waste Site Safeguarding Area.
Assessment outcome (on balance) -	

Summary of SA Objective 2

The site lies to the west of the village centre and comprises an open, greenfield area of land adjacent to Lavington School (west), Ancient Woodland (north) and residential development (south). Development of the site would lead to an urbanising effect on the area and potential impacts on the school, residential area and Ancient Woodland unless mitigated through screening/planting.

The site is within walking/cycling distance of services and facilities within the centre of Market Lavington, however due to the need for green infrastructure buffer/screening it is unlikely that housing densities can be maximised at this site.

the balance of available evidence at this stage, likely effects are considered to be minor adverse against SA Objective 2.

SA objective 3. Use and manage water resources in a sustainable manner

Decision Aiding Questions. Will the development site...

1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?

Development of the site for housing would need to be capable of positively responding to the predicted effects of climate change.

The site comprises an open field situated between the local school/housing stock and Ancient Woodland.

Drainage issues from surface water have been recorded. There are no surface water systems on site and all water flows to existing land drains. Surface water disposal issues would need to be addressed at any subsequent planning application stage and could involve third party consent.

There are no storm water systems in the area and hence managing surface water flows may be difficult to achieve. There would be limited capacity in existing foul water sewerage systems; and there have been recorded incidents of sewer flooding in the area.

Connection to existing mains water sources would be feasible.

2. Ensure that essential water infrastructure is co-ordinated with all new development?

Given the capacity of the site, development would lead to a limited increase in demand for water. In developing the site for housing, consideration would need to be given to responding positively to existing/planned water infrastructure capacity in the local area. A capacity assessment should be undertaken to support any subsequent detailed proposals. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.

Evidence indicates that water supply capacity and connection is available but that there are limitations in relation to foul,

	storm and surface water systems.
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company.
4. Consider the need for adequate provision of surface water and foul drainage?	There are no surface water systems at this location – surface water currently flows to land drainage system. The site lies on the edge of an area underlain by chalk. As such, groundwater issues may arise that would prevent effective attenuation of surface waters. Soakaways/Sustainable Drainage Schemes may work, but soil permeability testing would need to be undertaken to inform the drainage strategy, in line with Wiltshire Council Groundwater Strategy and CIRIA Sustainable Drainage Systems (SuDS) Manual (C753) ⁹⁹ – part E - chapter 25. In addition, foul drainage may also be an issue. Further detailed investigation work would be required to support an allocation/planning application. Where technically feasible, the development of the site would need to make provision for on-site/off-site surface and foul water drainage. This may require statutory easements to be secured and dialogue with the relevant water utilities company would be essential at the detailed design stage.
5. Protect, and where possible, improve surface, ground and drinking water quality?	The site is not located within a Groundwater Source Protection Zone and hence is unlikely to significantly impact on quality and quantity of groundwater resources. That said, in line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation	Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.

⁹⁹ The SuDS Manual (C753), CIRIA, December 2015.

to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 3</p> <p>Development would lead to an increase in demand for water infrastructure. There is adequate capacity to ensure water supply to the site, however foul and surface water drainage may need to be improved.</p> <p>Drainage issues related to surface water and sewer flooding events have been recorded in the area. Accordingly, a drainage strategy would need to be submitted in support of any planning application. Bearing in mind the site lies on the edge of an area underlain by chalk, consideration would need to be given to infiltration rates and surface water attenuation measures, which could be problematic to achieve given the soil conditions.</p> <p>Due to the potential issues regarding foul water and surface water, and the fact that finding an appropriate drainage strategy could be problematic, this site is scored as moderate adverse against this objective.</p>	
<p>SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Maintain and improve local air quality?	<p>The site is not located within an Air Quality Management Area (AQMA). That said, housing development may lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). In addition, noise from the school would need to be assessed and appropriately addressed through any subsequent planning application process. Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development of the site would likely marginally increase local commuter traffic, which may impact on local air quality. However, it is recognised that the site is within 1km of key services and facilities in Market Lavington and therefore potentially accessible by foot and cycle. This should help limit the extent of additional traffic emanating from the site. Nevertheless, measures would need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could assist in providing opportunities to improve local air quality through making purchasers/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>

<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for approx. 16 dwellings may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Bearing in mind the fact that the site borders and existing residential area and school, appropriate mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>A noise impact assessment would be required to assess the impact on new housing development in relation to noise from the adjacent school. A contaminated land assessment would also be required.</p>
<p>3. Mitigate the impacts from uses that generate NO₂, SO₂ and PM₁₀ or other particulates?</p>	<p>Development of the site for housing may lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p>
<p>4. Seek to reduce development in or near to AQMAS¹⁰⁰?</p>	<p>The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA).</p>
<p>5. Ensure that air quality impacts on local biodiversity sites are avoided?</p>	<p>The development of the site would likely to lead to a moderate increase in vehicular movements. While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</p>
<p>6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p>
<p>7. Ensure that potential impacts from</p>	<p>While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air</p>

¹⁰⁰ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

<p>air quality on relevant SACs are avoided?</p>	<p>quality to the extent that this would impact on SACs and it is considered unlikely that development would materially harm the Salisbury Plain SAC. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</p> <p>An assessment of impact on on-site trees and hedgerows as well as on the adjacent Ancient Woodland would need to be undertaken to support the allocation/detailed planning application.</p>
<p>Assessment outcome (on balance) -</p>	
<p>Summary of SA Objective 4</p> <p>The site is situated to the west of the village centre on open, greenfield land. The surrounding land comprises the Lavington School (west), Ancient Woodland (north) and housing stock (south). A noise impact assessment may be required to assess the impact of noise on the proposed residential development. The site is not within a designated AQMA, but there would be a need to address impacts associated with construction (short-term)/occupation (longer-term) of any potential housing scheme. Measures must be implemented as necessary to mitigate emission levels in line with the council’s policies and Air Quality Strategy. In turn the developable area of the site might be reduced. In addition, developers of the site could assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p> <p>A Noise Impact Assessment should be undertaken and submitted with any development proposals. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</p> <p>Overall the likely effects against this SA objective are considered to be minor adverse.</p>	
<p>SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions</p> <p>Decision Aiding Questions. Will the development site...</p>	
<p>1. Minimise emissions of greenhouse gases and ozone depleting substances?</p>	<p>Development of the site for housing would have the potential to increase greenhouse gas emissions generated through the construction and occupation phases. These emissions could be mitigated through the design process, as set out in ‘Delivering strategic objective 2: to address climate change’ and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.</p>
<p>2. Promote the development of renewable and low carbon sources of energy?</p>	<p>Promotion and development of low carbon sources will be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement</p>

	that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase will also encourage sustainable building practices leading to a reduction in greenhouse gases emissions.
Assessment outcome (on balance) -	
Summary of SA Objective 5a	
<p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices to lead to a reduction in greenhouse gas emissions.</p> <p>However, the effect of the development of this site will be to increase greenhouse gas emissions overall and on balance this site is considered to have a minor adverse impact against this SA objective.</p>	
SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects	
Decision Aiding Questions. Will the development site...	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<p>The site is largely located within Flood Zone 1, but the watercourse (in Flood Zones 2/3) to the north raises the risk of drainage/flood risk issues. Records of surface water flooding/sewer flooding and a lack of storm water/foul water infrastructure would necessitate further detailed consideration and an investigation of the potential feasibility of a SuDS to be provided through any subsequent planning application process.</p> <p>Risk of flooding created by impermeable surfaces associated with residential development would need to be addressed through appropriate mitigation measures to ensure the surface run-off from the site is not increased beyond greenfield infiltration rates.</p> <p>There is a need to introduce pollution prevention measures, including SuDS however the proximity to the watercourse could mean that drainage is problematic. Based upon the size of the site, any subsequent planning application would likely need to</p>

	be supported by a Flood Risk Assessment.
2. Ensure that development can adapt to the predicted future impacts of climate change?	The long-term negative effects of housing development could potentially be offset through the delivery of low carbon dwellings and on-site renewable energy generation (e.g. solar voltaics).
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	Records indicate the site/local area is affected by surface water/sewer flooding and the presence of the adjacent watercourse may mean that surface water drainage is problematic. In addition, third party consent may be needed in order to secure access to the watercourse to enable drainage. Therefore, the potential to accommodate appropriate SuDS measures to manage surface water run-off from built form will need careful consideration as ground conditions may render such measures as being ineffective. If technically feasible, SuDS will need to be designed in such a manner as to allow long-term positive management of water resources.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is largely located within Flood Zone 1, but the presence of the stream in close proximity to the northern portion of the site introduces Flood Zones 2/3, at a distance of 5 m from the site at its closest point.
5. Protect and enhance the natural function of floodplains?	The water course to the north of the site is within Flood Zones 2/3 and therefore a detailed Flood Risk Assessment would need to be undertaken to precisely understand the impacts of development at this site.
Assessment outcome (on balance) - -	
Summary of SA Objective 5b	
The site is largely situated in Flood Zone 1, although the presence of the stream to the north raises the risk of drainage/flooding issues, albeit off site. The recorded incidence/probability of surface water/sewer flooding would necessitate a detailed assessment of soil conditions, flood risk and the feasibility of utilising Sustainable Drainage Systems through any subsequent planning application process. Due to the potential of development to exacerbate flooding, and the fact that it may be problematic to achieve a suitable drainage strategy, this site is considered likely to have moderate adverse impacts against this objective.	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks &	Records indicate that the land has low archaeological potential. However, as a greenfield site, there may be potential for archaeological assets below ground which may require further evaluation and mitigation. Therefore in accordance with legislation and national policy/local plan policy, the development of the site would have to ensure that designated/non-designated heritage assets are appropriately assessed/protected according to their significance.

Gardens?	<p>Whilst the site is located in proximity to the Market Lavington Conservation Area and several Listed Buildings, development would be unlikely to directly/physically affect heritage assets or designations. However, high quality design should be promoted to ensure that the development fits in with the townscape character.</p> <p>In terms of historic landscape, the site is characterised by the modern school and housing built on post medieval piecemeal fields. Little or none of the previous character is legible, therefore the historic landscape has a low sensitivity to change.</p>
2. Ensure appropriate archaeological assessment prior to development?	An archaeological assessment of the site may need to be undertaken as part of any subsequent planning application process.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site would not utilise historical buildings, or buildings of significant local interest.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	<p>The site lies to the west of the Market Lavington Conservation Area and its setting. Consideration would nonetheless need to be given to the significance of proximal heritage assets and all potentially harmful factors.</p> <p>In addition, consideration would need to be given to how housing development on greenfield land would be assimilated into the local landscape, particularly in terms of the adjacent school and housing stock. In accordance with national policy/local policy, the development of the site for housing would need to maintain and enhance the distinctiveness of the existing urban fringe of the village.</p>
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	There are no records of heritage assets at risk within the site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	Not applicable.
Assessment outcome (on balance) -	
Summary of SA Objective 6	
The site has low archaeological interest and low sensitivity to change in terms of historic landscape character. However, as the land is greenfield, an assessment may	

need to be undertaken at any subsequent planning application stage in order to assess archaeological potential. Overall likely effects are considered to be minor adverse against this SA objective.

SA objective 7. Conserve and enhance the character and quality of Wiltshire’s rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place

Decision Aiding Questions. Will the development site...

<p>1. Protect and enhance the landscape character and scenic quality of the countryside?</p>	<p>The site is located adjacent to the western edge of the existing settlement boundary. However, development within this part of the village would avoid likely effects/impacts on designated landscape features – e.g. Salisbury Plain and the Conservation Area.</p> <p>The presence of veteran trees and Ancient Woodland to the north of the site, as well as a watercourse and ecological designations would necessitate detailed assessments to be undertaken at any subsequent planning application stage.</p> <p>Market Lavington is overlooked from the south-east by higher land associated with the Salisbury Plain. Any development in the village could therefore potentially have a landscape effect; and impact through potential increased use of the Salisbury Plain. That said, due to the fact the site is bound by the Lavington School to the west and housing to the south, it is considered unlikely that a modest scheme for 15 houses would lead to an adverse landscape impact/increased recreational pressure.</p> <p>In terms of landscape character the site falls within the Salisbury Plain (Type 15 – Greensand Vale). It is of moderate strength, but in a declining condition. The County Landscape Character Assessment defines the strategy for this type of land as one of protecting pasture land which this site appears not to be. However, any subsequent planning application process would need to make provision for strengthening the character and appearance of the area.</p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p>Development of the site for housing would need to offer the potential to deliver Green Infrastructure and bolstering of existing habitats through tree/hedgerow planting, particularly in terms of buffering the Ancient Woodland associated with the Manor House Woods CWS.</p>
<p>3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?</p>	<p>The development of the site for housing would potentially offer the opportunity to deliver limited additional access to and availability of urban greenspaces.</p>
<p>4. Conserve and enhance areas with landscape designations and take</p>	<p>The site is not located within a designated landscape area (e.g. AONB).</p>

account of their management objectives, in particular for the three local AONBs ¹⁰¹ ?	
5. Protect rights of way, open space and common land?	The development of the site would lead to a loss of agricultural land. In addition, development would not lead to any significant increase in, or degradation of rights of way in the area.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	Not applicable.
Assessment outcome (on balance) -	
Summary of SA Objective 7	
Development of the site for housing would inevitably lead to a loss of greenfield land and fill a gap between areas of Ancient Woodland (north), a school (west) and existing housing (south). Whilst the loss of greenfield land would alter the character and appearance of the site, such impacts could be tempered to some degree through appropriate mitigation measures designed to bolster greenspace/habitat connectivity and buffer the potential risk of flooding from the watercourse that runs to the north of the site. Overall it is considered that development at this site would likely have minor adverse impacts against this SA objective.	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	
Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of	Bearing in mind the size of the site/potential delivery capacity (approximately 16 dwellings) development for housing would

¹⁰¹ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

affordable housing?	only marginally boost the local supply of affordable homes.
3. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Development of the site would need to deliver high quality, sustainable homes across all types and tenures.
4. Ensure adequate provision of land to meet housing needs?	Development of the site would marginally boost housing supply to contribute towards meeting local needs.
5. Have regard to the settlement hierarchy?	The allocation and development of the site would appropriately respect the settlement hierarchy (Market Lavington is designated as a Local Service Centre) and thereby reduce the risk of speculative development in unsustainable locations.
6. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	Development of the site for housing would need to assist in bolstering local opportunities for accessing employment through short-term construction contracts and a longer-term boost to the local population/workforce.
7. Consider the emerging Neighbourhood Plans?	A Neighbourhood Development Plan is in the early stages of preparation. As such, the Housing Site Allocations DPD is the appropriate vehicle for addressing local housing requirements at this stage.
8. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	If appropriately planned, the development of the site for limited number of houses would provide opportunity to increase the range and availability of housing in the village.
Assessment outcome (on balance) +	
Summary of SA Objective 8	
<p>The whole SHLAA site provides capacity for approx. 15 residential units (though this may be reduced through the mitigation set out in this assessment. Development at this site would contribute to Wiltshire's housing supply as well as boost the supply of a range of homes in the village. There is an identified need for Adapted Affordable Housing to address identified local needs. The development of the site for housing would go some way towards meeting some of this need.</p> <p>The site is relatively contained and sustainably located in relation to local services and facilities.</p> <p>Overall the effects on this objective are considered to be minor positive.</p>	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	

Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	The site comprises an open field bound by Lavington School (west) and existing housing (south), on the western edge of the village.
2. Promote design of buildings and spaces to reduce obesity?	Development of the site would need to provide opportunities to improve cycling and walking routes to local services/facilities/employment.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	Development of the site would offer the opportunity to provide a modest number of flexibly designed accommodation to meet the needs of the local area.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	Whilst set within a rural environment, Market Lavington nonetheless contains a GP Surgery. On the basis of evidence available at the time of assessment, capacity is available and the site would be sustainably located in relation to the facility.
5. Maximise opportunities within the most deprived areas?	Development of the site would help increase opportunities for the local community to access a decent home and thereby help reduce deprivation, subject to meeting the wider provisions of the local development plan.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The site is located on the western edge of the village. Access to village facilities by walking and cycling would be achievable. However, access to other towns in the area would be potentially limited and subject to the current bus timetable.
7. Support the development of community campuses?	The development of community campuses is directed to the town level and therefore not appropriate.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	St Barnabus Primary in Market Lavington has surplus places at present and would benefit from housing within the locality. Lavington Secondary is the catchment school and is already full and forecasted to remain so. The school could be expanded however.
Assessment outcome (on balance) -	
Summary of SA Objective 9	

The site is located to the west of the village on land bound by Lavington School (west) and existing housing (south), with access to services and facilities via cycling/walking. On the basis of evidence gathered to date, there would appear to be sufficient capacity in local health facilities at Market Lavington's GP surgery. The local primary school has spare capacity so additional housing in the village could help support the school. Whilst the local secondary school is currently full, it could potentially be expanded. Whilst there are a number of services and facilities at the village and a regular bus service, the majority of trips to work and wider services and facilities will likely involve use of cars.

Overall, the site is considered to have a minor adverse effect against SA objective 9, for which mitigation is achievable.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	The allocation and development of the site would potentially offer the opportunity to improve cycling and walking routes to local services/facilities/employment, subject to the wider policy provisions of local development plan. It should be noted that the access to the site currently coincides with the access to the school. This would present safety and security issues and should be considered within any subsequent planning application.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	The site would have the potential to create links to existing cycling routes into the village.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	The site is located in a broadly accessible location on the western edge of the village with reasonable prospects for connectivity via cycling /walking to local services and facilities. Whilst there are a number of facilities, services, schools and surgery at Market Lavington, as well as a regular, peak-time bus service, housing development at this site is likely to result in use of the private car to access employment and a wider range of retail and facilities further afield.

Assessment outcome (on balance) -

Summary of SA Objective 10

The site is within 1km of key facilities such as schools, health centres or shops and therefore should be considered as being accessible. Residents would potentially be able to walk or cycle to the majority of local facilities without the need to go outside of Market Lavington. However, development at the village would be unlikely to create new employment opportunities in the village itself. Whilst a bus service visits the village, the majority of trips to work and wider services and facilities will likely involve use of cars. There are potential issues in relation to the access being through the school's land. This should be considered in any further stage of assessment

or any subsequent planning application.	
The likely effects of development at this site are considered to be minor adverse.	
SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth	
Decision Aiding Questions. Will the development site...	
1. Support appropriate retail, leisure and/or employment opportunities to town centre locations to aid urban regeneration?	The site would marginally boost the number of homes in the village and thereby increase the population of the area to a limited extent. This would potentially assist in the support of viable local retail, leisure and/or employment centres.
2. Support the rural economy?	The site would marginally boost the number of homes in the village and thereby markedly increase the population of the area. This would potentially directly assist in the support of rural services and facilities.
Assessment outcome (on balance) +	
Summary of SA Objective 11	
Development of the site would increase the local population and therefore could contribute to the local economy through use of local shops and services. Overall, likely effects are considered to be minor positive.	
SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce	
Decision Aiding Questions. Will the development site...	
1. Protect and enhance the vitality and viability of existing employment areas?	In accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas.
2. Provide a focus for development in Salisbury and Trowbridge?	Whilst an appropriate level of development would broadly respect the settlement hierarchy and status of the village as a Local Service Centre, it would do nothing to support the role of Salisbury and Trowbridge as the primary focus for growth.
Assessment outcome (on balance) +	

Summary of SA Objective 12

Development of the site for housing would not result in new employment land. The site allocation is for housing and hence will generate direct and indirect short-term construction employment, and will help stimulate the local economy once built. Overall, the effects are considered minor positive.

Site 3128 - Land off Wick Road, Oaksey

Crudwell

Site 3233 - Land at Ridgeway Farm, Crudwell

Site context

Site size: 3.58ha Site capacity: approximately 81 dwellings

There is an existing access off Tetbury Lane. The site is surrounded by open pasture land to the north with dwellings to the east and west. There are some large agricultural barns (in state of disrepair) used for storage with some smaller outbuildings and hardstanding, and agricultural equipment on the entrance to the site. Some mature trees on site.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...	
1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	Development of this greenfield site may have some limited adverse effects regarding fragmentation of existing habitats, such as hedgerows on the field boundary. Potential for bat roosts within farm buildings. However, the site is currently in agricultural use and is large enough for the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	The development of the site for housing would be unlikely to lead to adverse impacts on designated and non-designated biodiversity interests within the local area. Any development of this site should give consideration to retaining and enhancing existing hedgerows (UK BAP Priority Habitat), where possible, and trees on the site boundary, which would be beneficial to wildlife. Potential for bat roosts within farm buildings. Field margins are good for Great Crested Newts, reptiles etc. Great Crested Newts within 250m and also an unsurveyed pond within 250m. Hedgerows form secondary wildlife corridor which contribute to connectivity in the wider landscape.
3. Result in greater community engagement with biodiversity?	Given the size of the site it could be possible that development of this site could lead to greater community engagement with biodiversity through provision of open space and access to the open countryside beyond.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	In line with national policy, local plan policy and standing advice from relevant bodies, the development of the site for housing would have the potential to make suitable provision for buffers to recognised green/water course corridors. There are no river corridors within or adjacent to this site. Protection should be given to mature hedgerows and trees along the boundaries of the site where possible. Given the size of the site there would be the potential to make suitable provision for buffers to protect any biodiversity features and the provision of Public Open Space this may give opportunities for biodiversity enhancement.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multifunctional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
6. Ensure all new developments have regard to and protect BAP habitats/species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species (hedgerows). Potential for bat roosts within farm buildings. There would need to be surveys undertaken for Great Crested Newts, reptiles etc.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement.

8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland sites. There are no areas of ancient woodland in proximity to this site. Protection should be given to any mature trees within the site and at site boundaries.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the town does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to adverse impacts on designated Local Geological Sites (LGS). There are no LGS within or in close proximity to this site.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 1</p> <p>The site is in agricultural / pasture use. There are some large agricultural barns (in state of disrepair) used for storage with some smaller outbuildings and hardstanding, and agricultural equipment at the entrance to the site. There are no significant records (or other relevant information) for protected species within the site. However Great Crested Newts are recorded within 250m of the site and therefore ecological assessment and further details on the proposals will be required to accurately assess likely impacts. There is potential to create or enhance habitats. Development of this site should give consideration to retaining and enhancing existing hedgerows (UK BAP Priority Habitat) and trees on the site boundary where possible. Hedgerows form secondary wildlife corridor which contribute to connectivity in the wider landscape. The evidence base indicates there are few ecological issues in relation to this site. However, the precautionary principle must be applied and ecological assessment at site level to support individual planning applications will be required for any development. Overall, the likely effects are considered to be minor adverse against this objective and mitigation is considered achievable.</p>	
<p>SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	The site is situated on the edge of the large village of Crudwell which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site is within a reasonable walking/cycling distance to the centre of the village and a bus stop is present providing connectivity to Chippenham, Cirencester and Bath and the wider the public transport network. Overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel for larger convenience shopping. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Given the site’s prominence in the landscape setting on the rural fringe of the village and to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site. There

	would also need to be a degree of landscape mitigation and sensitive design due to the site's location.
2. Maximise reuse of previously developed land where possible/appropriate?	This is a greenfield site with some large agricultural barns (in state of disrepair) used for storage with some smaller outbuildings and hardstanding in the southern part of the site. There is little or no potential for maximising the reuse of previously developed land.
3. Encourage remediation of contaminated land?	At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. The site is located on agricultural land, as opposed to brownfield (i.e. previously developed land). On the basis of available evidence, it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil contamination at this site.
6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is partially (western part of the site) located within a designated Mineral Safeguarding Area for sand and gravel. Any development in this location will need to avoid sterilisation of the mineral resource in the ground where possible. As such, options for the extraction of this resource prior to development occurring should be considered - in line with policies MCS6 and MDC4 of the Minerals Development Framework. However, the site is located in close proximity to existing residential development which itself may constrain the feasibility of mineral extraction prior to any development taking place. This would need further consideration and assessment at the planning application stage and the real potential for resource sterilisation is reflected through the assessment scoring of minor effect. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.
Assessment outcome (on balance) -	
Summary of SA Objective 2	
The site is greenfield and is not located on previously developed land. There is no available evidence at this stage of the process to determine the agricultural grade / value of the site, however if it was found to be versatile, its loss is considered minor to negligible due to the size of the site. There are no known contamination issues	

<p>and therefore unlikely to require remediation. The site is partially located within a designated Minerals Safeguarding Area. The site is not located within, or likely to be affect a designated safeguarding zone associated with an active safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation. Overall, likely effects are considered to be minor adverse against this objective and mitigation is considered achievable.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner Decision Aiding Questions. Will the development site...</p>	
<p>1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?</p>	<p>In line with national and local plan policy / practice, the development of the site for housing would be capable of positively responding to the predicted effects of climate change.</p> <p>This part of Crudwell is constrained in relation to foul sewer capacity and a scheme for improvements would be required which is likely to be significant. There are no planned works by Wessex Water until after 2020. Notwithstanding this, evidence suggests that further development would be no more problematic than that already approved.</p> <p>Planned mitigation works will improve service levels in the short-term. There would be a requirement for an offsite connecting sewer to land drainage systems for surface water disposal. However there is no evidence to suggest that development of the site for housing would not be capable of being supported by planned water and sewerage infrastructure capacity provided significant investment is brought forward.</p>
<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. There is no evidence to suggest that development of this site for housing could not be supported by additional water and sewage infrastructure to cope with demand. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company. There are no programmed investment works for the area until after 2020. However, water supply would require off-site connections to mains with limited network reinforcement. Also see comments above Q3:1.</p>
<p>3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?</p>	<p>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures / technologies and no adverse effects are foreseen.</p>
<p>4. Consider the need for adequate provision of surface water and foul drainage?</p>	<p>This is a Groundwater area and the surface water systems are at capacity. Further guidance can be found in Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. Where appropriate, the development of the site may need to make provision for on-site surface and foul water drainage. Consideration should be given to the inclusion of Sustainable Drainage Systems (SuDS) to control the risk of surface water flooding from impermeable surfaces. There is no evidence to suggest that development of the site for housing could not be capable of being supported by planned water and</p>

	sewerage infrastructure capacity.
5. Protect, and where possible, improve surface, ground and drinking water quality?	In line with the provisions of local plan policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. It is considered that this is possible on this site. The site is within Groundwater Source Protection Zone 1 and further advice would need to be sought from the Environment Agency in order to support any subsequent planning application. The site is in a groundwater area and hence surface water systems would need to be sealed as per local sewers. Wiltshire Council's Groundwater Strategy would need to be considered in helping shape any subsequent development proposals. Any discharge into the local watercourses would need to be at a controlled rate, and surface water systems are already at capacity in this location.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.
Assessment outcome (on balance) - -	
Summary of SA Objective 3	
Development at this site would be capable of incorporating measures to positively respond to the predicted effects of climate change. There is no evidence to suggest that development of the site for housing could not be capable of being supported by planned water and sewerage infrastructure capacity. The site is within Groundwater Source Protection Zone 1. Therefore there may be a significant effect which would need mitigation; further advice would need to be sought from the Environment Agency. The development of the site may need to make provision for on-site surface and foul water drainage and it is considered possible on this site. Consideration should be given to the inclusion of SuDS to control the risk of surface water flooding from impermeable surfaces. Further guidance can be found in Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. Any subsequent proposal for development would need to be supported by a Flood Risk Assessment. Overall, it is considered that the likely effects would be moderate adverse.	
SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution	
Decision Aiding Questions. Will the development site...	
1. Maintain and improve local air quality?	The site is not located within an Air Quality Management Area (AQMA) and currently Crudwell does not have any specific air quality issues. No significant effects on air quality are foreseen with development at this location but minor effects are likely. Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air

	<p>quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. Development is likely to increase local commuter traffic, which may impact on local air quality. Development is likely to increase local commuter traffic, which may impact on local air quality although the site is within a central location and village services could be accessed by cycle or by foot. Nevertheless, measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home. Further development of the foot and cycleway should also help limit the effects of additional traffic from the development of the site.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for housing would inevitably lead to increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site does not fall within or in close proximity to any other likely significant sources of environmental pollution (air, noise, odour and light).</p>
<p>3. Mitigate the impacts from uses that generate NO₂, SO₂ and PM₁₀ or other particulates?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p>
<p>4. Seek to reduce development in or near to AQMAs^{102?}</p>	<p>The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance</p>

¹⁰² Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

	targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies, such as good access from the site to local services, facilities and public transport.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 4</p> <p>The site is in a central location to the village of Crudwell and is within an accessible location to the services offered at the village level. Development is likely to increase local commuter traffic, and rely on the use of the private car for larger services and facilities, which may impact on local air quality although village services could be accessed by cycle or by foot. Development is likely to lead to increases in traffic on local roads which may adversely affect air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p> <p>The site does not fall within a designated AQMA and is unlikely to adversely affect any AQMA elsewhere within the county. The site does not fall within or in close proximity to any likely significant sources of environmental pollution (air, noise, odour and light). The development at this site would likely generate increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. This may have some adverse effects for residents of neighbouring properties that adjoin or are in close proximity to the site. However these are not considered likely to be significant. Mitigation measures would need to be developed in accordance with national and local plan policy, for example an acoustic buffer could be required to reduce the impact of the development and pedestrian and cycle linkages can be made with adjoining residential area but likely that car use will increase. A new bus stop could be created and improvements to cycle/walking linkages.</p> <p>Overall, the likely effects are considered to be minor adverse against this objective and mitigation is considered achievable.</p>	
SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions	
Decision Aiding Questions. Will the development site...	
1. Minimise emissions of greenhouse	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions

gases and ozone depleting substances?	generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 5a</p> <p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.</p> <p>However, the effect of the development of this site will be to increase greenhouse gas emissions overall. The likely effects are considered to be minor adverse against this objective.</p>	
SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects	

Decision Aiding Questions. Will the development site...	
<p>1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?</p>	<p>The site is located within Flood Zone 1. There is flooding on local roads which are causing access/egress issues. The development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. Any proposals for development of this site should be informed by a site specific flood risk assessment as the site is greater than 1ha in size. No specific vulnerabilities are known with regards this particular site. The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape. Groundwater area and surface water systems must be sealed as per sewers. Soakaways/infiltration may not work. Any discharge into the local watercourses must be at a controlled rate. The surface water systems are at capacity. Dialogue with the sewage undertaker as foul drainage systems may be at capacity and require improvement. No details of drainage exist as yet but there is potential to introduce pollution prevention measures, including SuDs. Further guidance can be found in the Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</p>
<p>2. Ensure that development can adapt to the predicted future impacts of climate change?</p>	<p>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters; • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).</p>
<p>3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?</p>	<p>The site is located within Flood Zone 1. There is flooding on local roads which are causing access/egress issues in the local area. Groundwater area and hence surface water systems must be sealed as per local sewers. Conventional soakaways/infiltration systems may not work effectively. Nonetheless, consideration of alternative surface water drainage systems should be investigated through any subsequent planning application process. Any discharge into the local watercourses must be at a controlled rate. The surface water systems are at capacity. Dialogue with the relevant utility company may be required as foul drainage systems may be at capacity and require improvement. The site has the potential to accommodate an appropriate Sustainable Drainage System measures to manage surface water run-off from built form and</p>

	should be incorporated in to the design and layout of any development scheme. See Wiltshire Council's Ground water strategy and CIRIA Guidance Part E, Chapter 25.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. (Also see comments in response to 5 above).
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) -	
Summary of SA Objective 5b	
<p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. There are a number of watercourses in close proximity to site which may lead to localised surface water flooding. Flood Zone 2 and 3 dissect the village in the north, and there is a stream running south to the east of the village (Area of Flood Zones 2/3 125m north east of the site and Area of Flood Zone 2 130m south of site). Development of the site may lead to localised surface water flooding. There is the potential to increase flood risk elsewhere and contribute to surface water runoff of pollution. No details of drainage exist as yet but there is potential to introduce pollution prevention measures, including SuDS. Any proposals to develop the site would need to be supported by a flood risk assessment. System measures to manage surface water run-off from built form and should be incorporated in to the design and layout of any development scheme. See Wiltshire Council's Ground water strategy and CIRIA Guidance Part E, Chapter 25. Overall, the likely effects are considered to be minor adverse against this objective and mitigation achievable.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The site is located approximately 110m to the east of the Crudwell Conservation Area from which it is separated by more modern development along Tetbury Lane and The Dawneys. Development of the site may affect the setting of this asset and its significance. Subject to more detailed Heritage Impact Assessment this may reduce the extent and/or density of development. Adverse effects are unlikely but in the event they arise, it is likely that they can be mitigated.
2. Ensure appropriate archaeological assessment prior to development?	The archaeological potential of the site has been evaluated as medium (ridge and furrow earthworks) so further archaeological assessment to support development of the site is required. The potential historic landscape been evaluated as medium sensitivity. The site is made up of modern fields which consolidated earlier post medieval fields and medieval fields which would have been once medieval open field which are uncommon across the county.

3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site contains no existing historical buildings and as such no opportunity to reuse historical buildings or buildings of significance is presented.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	The Conservation Area was designated 14th January 1975 and there are no published management objectives or detailed appraisal for this Conservation Area. The Conservation Area narrowly borders the rear of properties along the main road running through the village and expands somewhat to encompass the 'old nucleus' of the village around the church. It includes most of the buildings and spaces along the main A429, as well as the historic buildings and green by All Saints church and the Tithe Barn beyond. It includes a number of fields and the two village greens maintaining a strong link with the countryside. There are some significant trees in the village and around the church a positive contribution to its ambience. Development would be capable of maintaining and enhancing the character and distinctiveness of Crudwell, whether it be through a reduced scale of development, design of dwellings and high quality materials, if a Heritage Impact Assessment considers them to be necessary.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	There are no 'at risk' heritage assets on site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not within a location which is likely to result in impacts to the Stonehenge and Avebury WHS and their settings.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 6</p> <p>The site is located approximately 110m to the east of the Crudwell Conservation Area and is separated by housing including some of it more modern in appearance. The impact of the site on the historic environment is likely to be minimal, and could be mitigated through appropriate design and siting in the event a Heritage Impact Assessment reveals it is necessary to do so. There are no listed buildings or Scheduled Monuments in close proximity to the site. An archaeological assessment would be required to determine the archaeological potential of the site. Overall it is considered that the likely effects are minor adverse against this objective and mitigation is achievable.</p>	
<p>SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Protect and enhance the landscape character and scenic quality of the countryside?	The Landscape Character of this site falls within the Limestone Lowland typology. It is of moderate character, in good condition. The County Landscape Character Assessment defines the strategy for this type of land as conserve and strengthen. The planning application process would need to make provision for strengthening the character and appearance

	<p>in this area. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside. While development would have an effect on Crudwell, the site is of a size whereby landscape mitigation could be employed at the site boundaries to reduce the effect using a landscape buffer of trees to shield the development contained within. There are hedgerows present on site which could be extended for further screening given the location of the site on the rural fringe. There are sensitive visual receptors (houses) in the vicinity of the site and part of site is brownfield/ farm sheds. Intervisibility is considered to be low. It is considered that housing development at this site would result in potential landscape and visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies.</p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p>In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure through public open space, connections to existing footpath networks and green corridors etc.</p>
<p>3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?</p>	<p>In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside and designated landscape assets. In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver additional access to and availability of urban greenspace and the wider countryside for recreation.</p>
<p>4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs¹⁰³?</p>	<p>The site lies outside of the AONB. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside and designated landscape assets.</p>
<p>5. Protect rights of way, open space</p>	<p>In accordance with local plan policy, the development of the site would protect and potentially extend the existing rights of</p>

¹⁰³ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

and common land?	way network, open spaces and common land assets. Development in this location would not result in loss of amenity greenspace. Public footpath CRUD9 is due to be extended as part of a recently permitted development on the site ¹⁰⁴ and will pass through the site, linking the existing footpath in the north eastern tip of the site to Tetbury Lane. This may require diversion, which may add to travel times and will alter the amenity value of the path. Assuming this right of way remains open during construction and operation, no adverse effects are likely.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site is not within a location which is likely to result in impacts to the Western Wiltshire Green Belt.
Assessment outcome (on balance) -	
Summary of SA Objective 7 The site is on the rural fringe of Crudwell and is made up of agricultural buildings with fields to the north. Views into the site from a number of locations from residential properties and open countryside to the north. The level of effect would depend on the design of the development and employment of appropriate mitigation. It is considered that housing development at this site would result in potential landscape and visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies. Public footpath CRUD9 is due to be extended through part of the site. Assuming this right of way remains open during construction and operation, no adverse effects are likely. The site is of a size which could deliver areas of public open space or green infrastructure within the site. Overall it is considered that the likely effects are minor adverse against this objective and mitigation would be achievable.	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of	Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help

house types and sizes to meet the needs of all sectors of the community?	to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	The Neighbourhood Plan has not advanced beyond the area designation stage therefore it is not considered sufficiently advanced.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy / local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities.
Assessment outcome (on balance) + + +	
<p>Summary of SA Objective 8 The whole SHLAA site provides capacity for approximately 81 residential units (though this may be reduced through the mitigation set out in this assessment). Development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units. Overall it is considered that allocation of this site would meet the aim of SA Objective 8 and a major beneficial effect is considered likely against this objective.</p>	
<p>SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities Decision Aiding Questions. Will the development site...</p>	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime. High quality design and good access of the site should take into account the design and layout of the dwellings, walking / cycle ways to reduce the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site has the potential space to provide open /green space or children's play area and other landscaping to improve facilities and amenity. High

	quality design and good access of the site should take into account the design and layout of the dwellings (access to and contact with nature), walking / cycle ways to promote healthy lifestyles.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design and good access of the site should take into account the design and layout of the mixed type dwellings, walking / cycle ways to attempt to future proof the development and meet the changing needs of the population. This would include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	There is no doctor's surgery located with Crudwell. The site is within the outer boundary of the catchment of the Cricklade Surgery, which has the nearest surgery to Crudwell at Ashton Keynes which is approximately 8 miles from the site. NHS Wiltshire CCG has commented that 1 modern large surgery serving town and surrounding area has capacity.
5. Maximise opportunities within the most deprived areas?	In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation in the area. There would be some social and economic benefits for the Crudwell area through housing provision, short-term construction jobs and a larger workforce for local businesses. This site is not within one of Wiltshire's most deprived quintile group of Lower Layer Super Output Areas (LSOAs), as set out in the English Indices of Deprivation 2015: Wiltshire Report. This site is within Wiltshire 002A LSOA, which is amongst the 30% least deprived neighbourhoods in the country ¹⁰⁵ . Development of this site is likely to contribute to the low levels of deprivation experienced in this area.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	The development of the site would provide housing in a sustainable location in line with the settlement strategy, with a reasonable level of access to the local services and facilities within the village. Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. The village is serviced by a bus route providing connectivity to Chippenham, Cirencester and Bath and the wider the public transport network. Given the limited services within Crudwell it is

¹⁰⁵ English indices of deprivation (DCLG, 2015)

	however likely that residents would be reliant on the use of a private vehicle. The site offers the benefits of providing housing to meet need, including affordable housing, and improved viability of local services and facilities. In supporting local services, the need to travel would be reduced as would the potential for isolation and social exclusion.
7. Support the development of community campuses?	Development of community campuses is directed to the town level and therefore this is not appropriate for this site.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	The site falls in the Crudwell Church of England Primary School catchment area. The primary school is full but expansion could be possible through mitigation to support additional capacity to cater for pupils arising from development.
Assessment outcome (on balance) -	
Summary of SA Objective 9 The provision of housing should reduce poverty, deprivation and promotes more inclusive and self-contained communities. The site is within reasonable proximity to the limited services and facilities in the village however there is more limited access to the types of facilities found in larger settlements such as hospitals or colleges and this would lead to a reliance of the private vehicle. There may be some pressure on local facilities such as schools and doctors surgeries. Overall the likely effects are considered to be minor adverse against this objective.	
SA objective 10. Reduce the need to travel and promote more sustainable transport choices Decision Aiding Questions. Will the development site...	
1. Increase walking and cycling accessibility through the use of developer contributions and site design?	There is no footway at this part of Tetbury Lane, but there is scope to create one on the site frontage notwithstanding lack of connection in the immediate vicinity. There is scope to extend footpath provision to within the site to connect to the existing PRoW network. Opportunities for increasing walking accessibility to facilities are therefore limited. Tetbury Lane is suitable for cyclists but the A429 less so for any considerable distance.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of this site is capable of incorporating infrastructure in the form of garages, sheds and secure bike stands to provide opportunities to improve cycling.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations, that reduce the need to travel and reliance on the private car?	The site is well located in terms of access to the primary school, post office, public houses, village hall and church but walking from the site to access these facilities is for some of the journey by foot, unsafe although there is scope for some limited improvement. The village is serviced by a bus route with a bus stop (Old Post Office) some 450m distance which offers a direct service to Malmesbury and Cirencester (commuter and inter-peak). The nearest train station (Kemble) is beyond walking/cycling distance. However given the limited services within Crudwell it is however likely that residents would be reliant

	on the use of a private vehicle.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 10 The site is located in the west of the Large Village of Crudwell. There is an existing access and layby off Tetbury Lane. The site is within walking distance of the services and facilities but part of the route lacks a footway, as does existing housing in the immediate vicinity of the site. The types of facilities found in higher order settlements such as Malmesbury and Cirencester mean that overall residents are still likely to rely upon use of the private car. Public footpaths, whilst in the vicinity and having the potential to be connected to, are unlikely to materially increase walking accessibility to the centre of the village. Overall the likely effects are considered to be minor adverse against this objective and mitigation is considered achievable.</p>	
<p>SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth Decision Aiding Questions. Will the development site...</p>	
1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant to this location.
2. Support the rural economy?	The site would boost the number of homes and thereby increase the population of the village and wider community area. This would potentially directly assist in the support of rural services and facilities.
Assessment outcome (on balance) +	
<p>Summary of SA Objective 11 Development will increase the local population resulting in a small contribution towards the local rural economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term (and potential use of local services such as the pubs, hotel and post office), and will help stimulate the local economy once built by providing an increase in workforce in the medium-long term for local employers. It is expected that development in this location would support the viability of local services, facilities and businesses of Crudwell village. Overall it is considered that it is likely that there would be no adverse effect and whilst there no known specific regeneration benefits of the site for housing development, the allocation of this site would be likely to have a minor positive effect on the local economy and meet the aim of SA Objective 11.</p>	
<p>SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce Decision Aiding Questions. Will the development site...</p>	
1. Protect and enhance the vitality and	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. However in

viability of existing employment areas?	accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the community area.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away. In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations.
Assessment outcome (on balance) +	
<p>Summary of SA Objective 12</p> <p>The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would have a minor positive effect on Objective 12.</p>	

Site OM014 - Land at Tuners Lane, Crudwell

<p>Site context Site size: 1.5 ha Site capacity: approximately 40 dwellings</p> <p><u>The site is located off Tuners Lane on the fringe of Crudwell. The site is predominately surrounded by open pasture land with dwellings to the south east. The site slopes gently towards the south of the site. Along the southern boundary of the site between Tuners Lane and the hedgerow is a small drainage ditch which appears quite overgrown. There is hedgerow on the boundaries to the south and east with a mature tree to the northern eastern boundary.</u></p>	
<p>SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses Decision Aiding Questions. Will the development site...</p>	
1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	<u>Development of this greenfield site may have some limited adverse effects regarding fragmentation of existing habitats, such as hedgerows on the field boundary. However, the site is currently in arable use and is large enough for the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.</u>

<p>2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?</p>	<p><u>The site is in agricultural / pasture use. The site is not within or adjacent to any site designated for nature conservation. The stream which runs to the south west of the site is UK BAP Priority Habitat because it is running water and a natural watercourse, however it is on the opposite side of the road and is unlikely to be directly affected by development of the proposed site. The habitats within the site are arable crop rotation, which is of low conservation value however the boundary hedges do contribute to primary habitat connectivity around the site and linking into the wider landscape, enabling movement of wildlife between different habitat areas. The hedgerows should not only be maintained as part of any future development but bulked up to ensure they continue to provide this function for biodiversity. There is scope to add some meaningful enhancement for wildlife within the site – this may be associated with any attenuation pond that is constructed as part of the development but could also be part of any public open space or children’s play area. The precautionary principle must be applied and ecological assessment at site level to support individual planning applications will be required for any development.</u></p>
<p>3. Result in greater community engagement with biodiversity?</p>	<p><u>Given the connectivity with the PRow on the eastern boundary it would be possible that development of this site would lead to greater community engagement with biodiversity.</u></p>
<p>4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?</p>	<p><u>In line with national policy, local plan policy and standing advice from relevant bodies, the development of the site for housing would have the potential to make suitable provision for buffers to recognised green/water course corridors. There are no river corridors within or adjacent to this site. Protection should be given to mature hedgerows and trees along the boundaries of the site where possible. Given the size of the site there would be the potential to make suitable provision for buffers to protect any biodiversity features and the provision of Public Open Space this may give opportunities for biodiversity enhancement.</u></p>
<p>5. Aid in the delivery of a network of multifunctional Green Infrastructure?</p>	<p><u>In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.</u></p>
<p>6. Ensure all new developments have regard to and protect BAP habitats/species?</p>	<p><u>In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species.</u></p>
<p>7. Consider the findings of the HRA in site selection and design?</p>	<p><u>The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement.</u></p>
<p>8. Maintain the existing extent of ancient woodland sites?</p>	<p><u>The development of the site would not affect ancient woodland sites. There are no areas of ancient woodland in proximity to this site. Protection should be given to any mature trees within the site and at site boundaries.</u></p>

9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	<u>Not applicable – the town does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.</u>
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	<u>Not applicable – the site does not fall within one of the Council’s current guidance areas.</u>
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	<u>The development of the site would be unlikely to lead to adverse impacts on designated Local Geological Sites (LGS). There are no LGS within or in close proximity to this site.</u>
Assessment outcome (on balance) -	
<p>Summary of SA Objective 1</p> <p><u>The site is in agricultural / pasture use. There is potential to create or enhance habitats. Development of this site should give consideration to retaining and enhancing existing hedgerows and the tree on the site boundary where possible. Hedgerows form secondary wildlife corridor which contribute to connectivity in the wider landscape. The evidence base indicates there are few ecological issues in relation to this site. However, the precautionary principle must be applied and ecological assessment at site level to support individual planning applications will be required for any development. Overall, the likely effects are considered to be minor adverse against this objective and mitigation is considered achievable.</u></p>	
<p>SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings Decision Aiding Questions. Will the development site...</p>	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	<u>The site is situated on the edge of the large village of Crudwell which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site is within a reasonable walking/cycling distance to the centre of the village and a bus stop is present providing connectivity to Chippenham, Cirencester and Bath and the wider the public transport network. Overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel for larger convenience shopping. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Given the site’s prominence in the landscape setting on the rural fringe of the village and to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site. There would also need to be a degree of landscape mitigation and sensitive design due to the site’s location.</u>
2. Maximise reuse of previously developed land where	<u>This is a greenfield site and there is little or no potential for maximising the reuse of previously developed land.</u>

possible/appropriate?	
3. Encourage remediation of contaminated land?	<u>At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. The site is located on greenfield arable land, as opposed to brownfield (i.e. previously developed land). On the basis of available evidence, it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing.</u>
4. Ensure the design and layout of new development supports sustainable waste management?	<u>The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.</u>
5. Protect and enhance soil quality?	<u>In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil contamination at this site.</u>
6. Protect the best and most versatile agricultural land?	<u>There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.</u>
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	<u>The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</u>
Assessment outcome (on balance) -	
Summary of SA Objective 2	
<u>The site is greenfield and is not located on previously developed land. There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Minerals Safeguarding Area. The site is not located within, or likely to be affect a designated safeguarding zone associated with an active safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation. The agricultural quality of the land is not known, but if found to be best and most versatile its loss would be minor to negligible. Overall effects are considered likely to be minor adverse against this objective.</u>	
SA objective 3. Use and manage water resources in a sustainable manner	

Decision Aiding Questions. Will the development site...	
1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	<u>In line with national and local plan policy / practice, the development of the site for housing would be capable of positively responding to the predicted effects of climate change. Crudwell is constrained in relation to foul sewer capacity and a scheme for improvements could be required which is likely to be significant. There are no planned works by Wessex Water until after 2020. Notwithstanding this, evidence suggests that further development would be no more problematic than that already approved. However there is no evidence to suggest that development of the site for housing would not be capable of being supported by planned water and sewerage infrastructure capacity provided significant investment is brought forward.</u>
2. Ensure that essential water infrastructure is co-ordinated with all new development?	<u>In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. There is no evidence to suggest that development of this site for housing could not be supported by additional water and sewage infrastructure to cope with demand. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company. There are no programmed investment works for the area until after 2020. However, water supply would require off-site connections to mains with limited network reinforcement. Also see comments above Q3:1.</u>
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	<u>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures / technologies and no adverse effects are foreseen.</u>
4. Consider the need for adequate provision of surface water and foul drainage?	<u>This is a Groundwater area and the surface water systems are at capacity. Further guidance can be found in Wiltshire Council's Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. Where appropriate, the development of the site may need to make provision for on-site surface and foul water drainage. Consideration should be given to the inclusion of Sustainable Drainage Systems (SuDS) to control the risk of surface water flooding from impermeable surfaces. There is no evidence to suggest that development of the site for housing could not be capable of being supported by planned water and sewerage infrastructure capacity.</u>
5. Protect, and where possible, improve surface, ground and drinking water quality?	<u>In line with the provisions of local plan policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. It is considered that this is possible on this site. The site is within Groundwater Source Protection Zone 1 and further advice would need to be sought from the Environment Agency in order to support any subsequent planning application. The site is in a groundwater area and hence surface water systems would need to be sealed as per local sewers. Wiltshire Council's Groundwater Strategy would need to be considered in helping shape any subsequent development proposals.</u>

<p>6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?</p>	<p><u>Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.</u></p>
<p><u>Assessment outcome (on balance) - -</u></p>	
<p>Summary of SA Objective 3</p> <p><u>Development at this site would be capable of incorporating measures to positively respond to the predicted effects of climate change. There is no evidence to suggest that development of the site for housing could not be capable of being supported by planned water and sewerage infrastructure capacity. The site is within Groundwater Source Protection Zone 1. Therefore there may be a significant effect which would need mitigation; further advice would need to be sought from the Environment Agency. The development of the site may need to make provision for on-site surface and foul water drainage and it is considered possible on this site. Consideration should be given to the inclusion of SuDS to control the risk of surface water flooding from impermeable surfaces. Further guidance can be found in Wiltshire Council’s Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25. Any subsequent proposal for development would need to be supported by a Flood Risk Assessment.</u></p> <p><u>Overall, it is considered that the likely effects would be moderate adverse.</u></p>	
<p>SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution Decision Aiding Questions. Will the development site...</p>	
<p>1. Maintain and improve local air quality?</p>	<p><u>The site is not located within an Air Quality Management Area (AQMA) and currently Crudwell does not have any specific air quality issues. No significant effects on air quality are foreseen with development at this location but minor effects are likely.</u> <u>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</u> <u>Development is likely to increase local commuter traffic, which may impact on local air quality although the site is within a central location and village services could be accessed by cycle or by foot. Nevertheless, measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council’s Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable</u></p>

	<u>transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home. Further development of the foot and cycleway should also help limit the effects of additional traffic from the development of the site.</u>
2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?	<u>Development of the site for housing would inevitably lead to increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</u> <u>The site does not fall within or in close proximity to any other likely significant sources of environmental pollution (air, noise, odour and light).</u>
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	<u>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</u>
4. Seek to reduce development in or near to AQMA ¹⁰⁶ ?	<u>The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.</u>
5. Ensure that air quality impacts on	<u>While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate</u>

¹⁰⁶ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

local biodiversity sites are avoided?	<u>local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</u>
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	<u>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies, such as good access from the site to local services, facilities and public transport.</u>
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	<u>While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</u>
Assessment outcome (on balance) -	
<p>Summary of SA Objective 4</p> <p><u>The site is situated to the north west of Crudwell and is within an accessible location to the services offered at the village level. Development is likely to increase local commuter traffic, and rely on the use of the private car for larger services and facilities, which may impact on local air quality although village services could be accessed by cycle or by foot. Development is likely to lead to increases in traffic on local roads which may adversely affect air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council’s Air Quality Strategy. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</u></p> <p><u>The site does not fall within a designated AQMA and is unlikely to adversely affect any AQMA elsewhere within the county. The site does not fall within or in close proximity to any likely significant sources of environmental pollution (air, noise, odour and light). The development at this site would likely generate increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. This may have some adverse effects for residents of neighbouring properties that adjoin or are in close proximity to the site. However these are not considered likely to be significant. Mitigation measures would need to be developed in accordance with national and local plan policy, for example an acoustic buffer could be required to reduce the impact of the development and pedestrian and cycle linkages can be made with adjoining residential area but likely that car use will increase. A new bus stop could be created and improvements to cycle/walking linkages.</u></p> <p><u>Overall, the likely effects are considered to be minor adverse against this objective and mitigation is considered achievable.</u></p>	
<p>SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions Decision Aiding Questions. Will the development site...</p>	

<p>1. Minimise emissions of greenhouse gases and ozone depleting substances?</p>	<p><u>Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.</u></p>
<p>2. Promote the development of renewable and low carbon sources of energy?</p>	<p><u>Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.</u></p>
<p>3. Promote energy efficiency in buildings and new development?</p>	<p><u>Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.</u></p>
<p>4. Minimise contributions to climate change through sustainable building practices?</p>	<p><u>Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.</u></p>
<p>Assessment outcome (on balance) -</p>	
<p>Summary of SA Objective 5a</p> <p><u>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.</u></p> <p><u>However, the effect of the development of this site will be to increase greenhouse gas emissions overall. The likely effects are considered to be minor adverse against this objective.</u></p>	

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects Decision Aiding Questions. Will the development site...	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<p><u>The site is located within Flood Zone 1, with Flood Zone 2 and 3 to the south of Turners Lane. There are flooding issues within Crudwell and future development will need to demonstrate no increase the flood risk potential to these downstream areas. The development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. Any proposals for development of this site should be informed by a site specific flood risk assessment as the site is greater than 1ha in size. The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape. Groundwater area and surface water systems must be sealed as per sewers. Soakaways/infiltration may not work. Any discharge into the local watercourses must be at a controlled rate. The surface water systems are at capacity. Dialogue with the sewage undertaker as foul drainage systems may be at capacity and require improvement. No details of drainage exist as yet but there is potential to introduce pollution prevention measures, including SuDs. Further guidance can be found in the Wiltshire Council’s Groundwater Strategy and CIRIA Guidance, Part E, Chapter 25.</u></p>
2. Ensure that development can adapt to the predicted future impacts of climate change?	<p><u>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</u></p> <ul style="list-style-type: none"> • <u>hotter summers;</u> • <u>milder winters;</u> • <u>increased periods without rain;</u> • <u>increased intensity in rainfall; and</u> • <u>more extreme weather events.</u> <p><u>Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).</u></p>
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	<p><u>The site is located within Flood Zone 1 There are flooding issues within Crudwell. The site is within a groundwater area and hence surface water systems must be sealed as per local sewers. Conventional soakaways/infiltration systems may not work effectively. Nonetheless, consideration of alternative surface water drainage systems should be investigated through any subsequent planning application process. Any discharge into the local watercourses</u></p>

	<u>must be at a controlled rate. The surface water systems are at capacity. Dialogue with the relevant utility company may be required as foul drainage systems may be at capacity and require improvement. The site has the potential to accommodate an appropriate Sustainable Drainage System measures to manage surface water run-off from built form and should be incorporated in to the design and layout of any development scheme. See Wiltshire Council's Groundwater Strategy and CIRIA Guidance Part E, Chapter 25.</u>
4. Minimise the risk of flooding to people and property (new and existing development)?	<u>The site is located within Flood Zone 1, with Flood Zone 2 and 3 to the south of Turners Lane. There are flooding issues within Crudwell and future development will need to demonstrate no increase the flood risk potential to these downstream areas. (Also see comments in response to 5 above).</u>
5. Protect and enhance the natural function of floodplains?	<u>In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.</u>
Assessment outcome (on balance) - -	
Summary of SA Objective 5b	
<u>The site is located within Flood Zone 1, with Flood Zone 2 and 3 to the south of Turners Lane. There are a number of watercourses in close proximity to site which may lead to localised surface water flooding. There are flooding issues within Crudwell and future development will need to demonstrate no increase the flood risk potential to these downstream areas. No details of drainage exist as yet but there is potential to introduce pollution prevention measures, including SuDS. Any proposals to develop the site would need to be supported by a flood risk assessment. System measures to manage surface water run-off from built form and should be incorporated in to the design and layout of any development scheme. See Wiltshire Council's Ground water strategy and CIRIA Guidance Part E, Chapter 25.</u>	
<u>Overall, the likely effects are considered to be moderate adverse against this objective with mitigation problematic.</u>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	<u>The site is located approximately 150m to the west of the Crudwell Conservation Area from which it is separated by open farm land and some residential dwelling. The current green open setting of the Heritage Asset is considered to contribute to the significance of the Conservation Area in a positive manner. Development of the site may affect the setting of the conservation area and its significance. Subject to more detailed Heritage Assessment this may reduce the extent and/or density of development. Adverse effects are unlikely but in the event they arise, it is likely that they can be mitigated. The site is not adjacent to any listed buildings nor are there any scheduled monuments in the vicinity.</u>

2. Ensure appropriate archaeological assessment prior to development?	<u>The archaeological potential of the site has been evaluated as low and further archaeological assessment to support development of the site is required. The potential historic landscape been evaluated as low sensitivity. The site is made up of modern land parcels created by altering the larger post medieval field here with previous character poorly legible and quite commonplace.</u>
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	<u>The site contains no existing historical buildings and as such no opportunity to reuse historical buildings or buildings of significance is presented.</u>
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	<u>The Conservation Area was designated 14th January 1975 and there are no published management objectives or detailed appraisal for this Conservation Area. The Conservation Area narrowly borders the rear of properties along the main road running through the village and expands somewhat to encompass the 'old nucleus' of the village around the church. It includes most of the buildings and spaces along the main A429, as well as the historic buildings and green by All Saints church and the Tithe Barn beyond. It includes a number of fields and the two village greens maintaining a strong link with the countryside. There are some significant trees in the village and around the church a positive contribution to its ambience. Development would be capable of maintaining and enhancing the character and distinctiveness of Crudwell, whether it be through a reduced scale of development, design of dwellings and high quality materials, if a Heritage Assessment considers them to be necessary.</u>
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	<u>There are no 'at risk' heritage assets on site.</u>
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	<u>The site is not within a location which is likely to result in impacts to the Stonehenge and Avebury WHS and their settings.</u>
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 6</p> <p><u>The site is located to the west of the Crudwell Conservation Area from which it is separated by open farm land to the north of Tuners Lane. The current green open setting of the Heritage Asset is considered to contribute to the significance of the Conservation Area in a positive manner. Development of the site may affect the setting of the conservation area and its significance. Subject to more detailed Heritage Assessment this may reduce the extent and/or density of development. Adverse effects are unlikely but in the event they arise, it is likely that they can be mitigated.</u></p> <p><u>The impact of the site on the historic environment is likely to be moderate, however could be mitigated through appropriate design and siting in the event a</u></p>	

<p><u>Heritage Assessment reveals it is necessary to do so. There are no listed buildings or Scheduled Monuments in close proximity to the site. An archaeological assessment would be required to determine the archaeological potential of the site.</u></p>	
<p><u>Overall it is considered that the likely effects are moderate adverse against this objective with mitigation problematic.</u></p>	
<p>SA objective 7. Conserve and enhance the character and quality of Wiltshire’s rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place Decision Aiding Questions. Will the development site...</p>	
<p>1. Protect and enhance the landscape character and scenic quality of the countryside?</p>	<p><u>The Landscape Character of this site falls within the Limestone Lowland typology. It is of moderate character, in good condition. The County Landscape Character Assessment defines the strategy for this type of land as conserve and strengthen. The planning application process would need to make provision for strengthening the character and appearance in this area. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside. While development would have an effect on Crudwell, the site is of a size whereby landscape mitigation could be employed at the site boundaries to reduce the effect. There are hedgerows present on site which could be extended for further screening given the location of the site on the rural fringe. There are sensitive visual receptors (houses) in the vicinity of the site. Intervisibility is considered to be low. It is considered that housing development at this site would result in potential landscape and visual impacts that could be successfully mitigated with robust mitigation and enhancement strategies.</u></p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p><u>In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure through public open space, connections to existing footpath networks and green corridors etc.</u></p>
<p>3. Lead to a net improvement in the quality and quantity of access to urban</p>	<p><u>In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside and designated</u></p>

greenspace and the wider countryside for recreation?	<u>landscape assets. In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver additional access to and availability of urban greenspace and the wider countryside for recreation.</u>
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ¹⁰⁷ ?	<u>The site lies outside of the AONB. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside and designated landscape assets.</u>
5. Protect rights of way, open space and common land?	<u>In accordance with local plan policy, the development of the site would protect and potentially extend the existing rights of way network, open spaces and common land assets. Development in this location would not result in loss of amenity greenspace. PRow (CRUD10) passes along the eastern boundary of the site. Assuming these rights of ways remain open during construction and operation, no adverse effects are likely. It is likely that development in this location would therefore have an impact on views from various public rights of way. Given the size of the site additional connectivity to existing networks could be achieved.</u>
6. Protect the Western Wiltshire Green Belt from inappropriate development?	<u>The site is not within a location which is likely to result in impacts to the Western Wiltshire Green Belt.</u>
Assessment outcome (on balance) -	
<p>Summary of SA Objective 7</p> <p><u>The site is on the rural fringe of Crudwell and a greenfield site Views into the site from a number of locations from residential properties and open countryside to the north, south and west. The level of effect would depend on the design of the development and employment of appropriate mitigation. It is considered that housing development at this site would result in potential landscape and visual impacts that could be successfully mitigated with robust</u></p>	

¹⁰⁷ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

mitigation and enhancement strategies. The site is of a size which could deliver areas of public open space or green infrastructure within the site. Overall it is considered that the likely effects are minor adverse against this objective and mitigation would be achievable.

SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures

Decision Aiding Questions. Will the development site...

1. Provide an adequate supply of affordable housing?	<u>The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.</u>
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	<u>Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units.</u>
3. Ensure adequate provision of land to meet housing needs?	<u>In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.</u>
4. Have regard to the settlement hierarchy?	<u>In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.</u>
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	<u>In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.</u>
6. Consider the emerging Neighbourhood Plans?	<u>The Neighbourhood Plan is at its infancy stage and at this time the plan is not considered sufficiently advanced.</u>
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	<u>In accordance with national policy / local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities.</u>

Assessment outcome (on balance) + + +

Summary of SA Objective 8

The whole SHLAA site provides capacity for approximately 40 residential units (though this may be reduced through the mitigation set out in this assessment). Development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units. Overall it is considered that allocation of this site would meet the aim of this

<u>objective and a major beneficial effect is considered likely against this objective.</u>	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	<u>In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime. High quality design and good access of the site should take into account the design and layout of the dwellings, walking / cycle ways to reduce the fear of crime.</u>
2. Promote design of buildings and spaces to reduce obesity?	<u>In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site has the potential space to provide open /green space or children’s play area and other landscaping to improve facilities and amenity. High quality design and good access of the site should take into account the design and layout of the dwellings (access to and contact with nature), walking / cycle ways to promote healthy lifestyles.</u>
3. Promote the design of buildings and spaces to meet the changing needs of the population?	<u>In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design and good access of the site should take into account the design and layout of the mixed type dwellings, walking / cycle ways to attempt to future proof the development and meet the changing needs of the population. This would include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.</u>
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	<u>There is no doctor’s surgery located with Crudwell. The site is within the outer boundary of the catchment of the Cricklade Surgery, which has the nearest surgery to Crudwell at Ashton Keynes which is approximately 8 miles from the site. NHS Wiltshire CCG has commented that 1 modern large surgery serving town and surrounding area has</u>

	<u>capacity.</u>
5. Maximise opportunities within the most deprived areas?	<u>In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation in the area. There would be some social and economic benefits for the Crudwell area through housing provision, short-term construction jobs and a larger workforce for local businesses. This site is not within one of Wiltshire's most deprived quintile group of Lower Layer Super Output Areas (LSOAs), as set out in the English Indices of Deprivation 2015: Wiltshire Report. This site is within Wiltshire 002A LSOA, which is amongst the 30% least deprived neighbourhoods in the country¹⁰⁸. Development of this site is likely to contribute to the low levels of deprivation experienced in this area.</u>
6. Reduce rural isolation, including access to services for those without a car in rural areas?	<u>The development of the site would provide housing in a sustainable location in line with the settlement strategy, with a reasonable level of access to the local services and facilities within the village. Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. The village is serviced by a bus route providing connectivity to Chippenham, Cirencester and Bath and the wider the public transport network. Given the limited services within Crudwell it is however likely that residents would be reliant on the use of a private vehicle. The site offers the benefits of providing housing to meet need, including affordable housing, and improved viability of local services and facilities. In supporting local services, the need to travel would be reduced as would the potential for isolation and social exclusion.</u>
7. Support the development of community campuses?	<u>Development of community campuses is directed to the town level and therefore this is not appropriate for this site.</u>
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated	<u>The site falls in the Crudwell Church of England Primary School catchment area. The primary school is full but expansion could be possible through mitigation to support additional capacity to cater for pupils arising from development. Malmesbury Secondary School is also full but capable of expansion. Mitigation would be required to</u>

¹⁰⁸ English indices of deprivation (DCLG, 2015)

from the site?	<u>cater for additional pupil demand.</u>
Assessment outcome (on balance) -	
<p>Summary of SA Objective 9</p> <p><u>The provision of housing should reduce poverty, deprivation and promotes more inclusive and self-contained communities. The site is within reasonable proximity to the limited services and facilities in the village however there is more limited access to the types of facilities found in larger settlements such as hospitals or colleges and this would lead to a reliance of the private vehicle. There may be some pressure on local facilities such as schools and doctors surgeries. Overall the likely effects are considered to be minor adverse against this objective.</u></p>	
<p>SA objective 10. Reduce the need to travel and promote more sustainable transport choices Decision Aiding Questions. Will the development site...</p>	
1. Increase walking and cycling accessibility through the use of developer contributions and site design?	<u>There is no footway at this part of Tuners Lane, but there is scope to create one on the site frontage. There is also possible scope to connect to the footway in the immediate vicinity. There is opportunity to link footpath provision within the site to connect to the existing PRow network to the eastern boundary of the site. Opportunities for increasing walking accessibility to facilities are therefore limited. Tuners Lane is suitable for cyclists but the A429 less so for any considerable distance.</u>
2. Ensure new development incorporates facilities and infrastructure for cyclists?	<u>Development of this site is capable of incorporating infrastructure in the form of garages, sheds and secure bike stands to provide opportunities to improve cycling.</u>
3. Improve the jobs/homes balance, to reduce out-commuting?	<u>The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.</u>
4. Promote developments in accessible locations, that reduce the need to travel and reliance on the private car?	<u>The site is well located in terms of access to the primary school, post office/food shop, public house, village hall and church, all within safe walking and cycling distance. The village is serviced by a bus route with a bus stop (Old Post Office) some 400m distance which offers a direct service to Malmesbury and Cirencester (commuter and inter-peak). The nearest train station (Kemble) is beyond walking/cycling distance. However given the limited services within Crudwell it is however likely that residents would be reliant on the use of a private vehicle.</u>
Assessment outcome (on balance) -	
<p>Summary of SA Objective 10</p> <p><u>The site is located in the north of the Large Village of Crudwell. The site is within walking distance of the services and facilities but the footway ends to the south boundary of the site. The types of facilities found in higher order settlements such as Malmesbury and Cirencester mean that overall residents are</u></p>	

<u>still likely to rely upon use of the private car. Public footpaths, whilst in the vicinity and having the potential to be connected to, are unlikely to materially increase walking accessibility to the centre of the village.</u>	
<u>Overall the likely effects are considered to be minor adverse against this objective and mitigation is considered achievable.</u>	
SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth Decision Aiding Questions. Will the development site...	
1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	<u>Not relevant to this location.</u>
2. Support the rural economy?	<u>The site would boost the number of homes and thereby increase the population of the village and wider community area. This would potentially directly assist in the support of rural services and facilities.</u>
Assessment outcome (on balance) + +	
Summary of SA Objective 11	
<u>Development will increase the local population resulting in a contribution towards the local rural economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term (and potential use of local services such as the pubs, hotel and post office), and will help stimulate the local economy once built by providing an increase in workforce in the medium-long term for local employers. It is expected that development in this location would support the viability of local services, facilities and businesses of Crudwell village. Overall it is considered that it is likely that there would be no adverse effect and whilst there no known specific regeneration benefits of the site for housing development, the allocation of this site would be likely to have a moderate positive effect on the local economy and meet the aim of SA Objective 11.</u>	
SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce Decision Aiding Questions. Will the development site...	
1. Protect and enhance the vitality and viability of existing employment areas?	<u>The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the community area.</u>
2. Provide a focus for development in	<u>The development of the site for housing would not focus development in Salisbury or Trowbridge which are both</u>

Salisbury and Trowbridge?	<u>Principal Settlements located some distance away. In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations.</u>
<u>Assessment outcome (on balance) +</u>	
<u>Summary of SA Objective 12</u>	
<u>The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would have a minor positive effect on Objective 12.</u>	

Site 3128 – Land off Wick Road, Oaksey

Site context	
Site size: 0.39ha Site capacity: approximately 11 dwellings	
Site located on fringe of Oaksey. There are dwellings to the south of the site, road to the east and open countryside to the north and west. The site is flat. There is a hedgerow along the eastern boundary of the site, and to the south. There is no existing access to the site from Wick Lane. Some cables cross the southern portion of the site.	
SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses	
Decision Aiding Questions. Will the development site...	
1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	Development of this greenfield site may have some limited adverse effects regarding fragmentation of existing habitats, such as hedgerows on the field boundary. The site is large enough for the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and	The development of the site for housing would be unlikely to lead to adverse impacts on designated and non-designated biodiversity interests within the local area. The site contains hedgerows (UK BAP Priority Habitat) which form secondary wildlife corridors which contribute to connectivity in the wider landscape which would be to be retained where possible. Great Crested Newts are recorded with the vicinity and perimeter vegetation suitable, ecological assessment at site level to support

species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	individual planning applications will be required for any development.
3. Result in greater community engagement with biodiversity?	It is unlikely that development of this site would lead to greater community engagement with biodiversity.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	In line with national policy, local plan policy and standing advice from relevant bodies, the development of the site for housing would have the potential to make suitable provision for buffers to recognised green/water course corridors. There are no river corridors within or adjacent to this site. Protection should be given to existing mature trees and hedgerows along boundaries where possible. Development of the site for housing would have the potential to make suitable provision for buffers to protect any biodiversity features.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
6. Ensure all new developments have regard to and protect BAP habitats/species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species (hedgerows).
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has not identified any likely significant effects triggered by development at the settlement.
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland sites. There are no areas of ancient woodland in proximity to this site. Protection should be given to any mature trees on the boundary of the site.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the town does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in	Not applicable – the site does not fall within one of the Council’s current guidance areas.

relevant areas?	
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to adverse impacts on designated Local Geological Sites (LGS). There are no LGS within or in close proximity to this site.
Assessment outcome (on balance) -	
Summary of SA Objective 1	
<p>The site is currently used as a paddock / grazing land. At the boundaries there is a mixture of low level fencing and hedgerows with few trees that may support protected species. There are no significant records (or other relevant information) for protected species within the site but there are Great Crested Newts in the area and perimeter vegetation would be suitable. The precautionary principle must be applied and ecological assessment at site level to support individual planning applications will be required for any development. There is potential to create or enhance habitats. Overall, the likely effects are considered to be minor adverse against this objective and mitigation is considered achievable.</p>	
SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings	
Decision Aiding Questions. Will the development site...	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	The site is situated on the edge of the large village of Oaksey which is a sustainable location in line with Core Policy 1 of the Wiltshire Core Strategy. The site location is within a reasonable walking/cycling distance to the centre of the village and a bus stop is present at the Old Post Office providing connectivity to the public transport network. Overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel to Malmesbury or Cirencester for larger convenience shopping. The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence. Given the site's prominence in the landscape setting on the rural fringe of the village and to reflect local built vernacular, it is unlikely that housing densities could be maximised on this site. There would also need to be a degree of landscape mitigation and sensitive design due to the site's location within the Oaksey Conservation Area and relationship with nearby Listed buildings.
2. Maximise reuse of previously developed land where possible/appropriate?	This is a greenfield site and there is little or no potential for maximising the reuse of previously developed land.
3. Encourage remediation of contaminated land?	At this stage of the assessment process there is no evidence to suggest that the site is affected by contamination, or formally registered as such in accordance with the provisions of relevant legislation. The site is located on greenfield land, as opposed to brownfield (i.e. previously developed land). On the basis of available evidence, it is considered unlikely that

	remediation measures would be required in order to facilitate development of the land for housing.
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	In line with national and local planning policy, the development of the site would seek to ensure that soil quality and structure is appropriately protected. There is no evidence at this stage to suggest otherwise or to suggest any specific soil contamination at this site.
6. Protect the best and most versatile agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.
Assessment outcome (on balance) -	
Summary of SA Objective 2	
<p>The site is greenfield and is not located on previously developed land. There is no available evidence at this stage of the process to determine the agricultural grade / value of the site, however if it was found to be versatile, its loss would be considered minor to negligible in any even due to its size. There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Minerals Safeguarding Area. The site is not located within, or likely to be affect a designated safeguarding zone associated with an active safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation. Overall, the likely effects are considered to be minor adverse against this objective and mitigation is considered achievable.</p>	
SA objective 3. Use and manage water resources in a sustainable manner	
Decision Aiding Questions. Will the development site...	
1. Take into account predicted future impacts of climate change, including	In line with national and local plan policy / practice, the development of the site for housing would be capable of positively responding to the predicted effects of climate change. Local water supply and foul water connection would be possible in

<p>water scarcity issues and increased pressure on the sewerage network?</p>	<p>Wick Road. There are no surface water systems at this location and storm water flows are currently managed in land drainage systems. The site would be unable to proceed without satisfactory surface water outfall arrangements being made. Infiltration testing will be required as there is no local watercourse close by. However, there is no evidence to suggest that development of the site for housing could not be capable of being supported by existing water and sewerage infrastructure capacity. Consideration should be given to incorporating appropriate pollution prevention and control into the design and layout of any new development.</p>
<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>In developing the site for housing, consideration would need to be given to responding positively to existing water infrastructure capacity in the local area. There is no evidence to suggest that development of this site for housing could not be supported by additional water and sewage infrastructure to cope with demand. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company. (See response to Q1 above also).</p>
<p>3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?</p>	<p>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures / technologies and no adverse effects are foreseen.</p>
<p>4. Consider the need for adequate provision of surface water and foul drainage?</p>	<p>Where appropriate, the development of the site would need to make provision for on-site surface and foul water drainage. Consideration should be given to the inclusion of Sustainable Drainage Systems to control the risk of surface water flooding from impermeable surfaces. (See response to Q1 above also).</p>
<p>5. Protect, and where possible, improve surface, ground and drinking water quality?</p>	<p>In line with the provisions of local plan policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. The site is within Groundwater Source Protection Zone 2 and further advice would need to be sought from the Environment Agency. (See response to Q1 above also).</p>
<p>6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?</p>	<p>Not applicable – the site does not fall within the Hampshire Avon or River Kennet catchments.</p>
<p>Assessment outcome (on balance) -</p>	

Summary of SA Objective 3

Development at this site would be capable of incorporating measures to positively respond to the predicted effects of climate change. The site is within a Groundwater Source Protection Zone (Zone 2). There may be a significant effect which would need mitigation and hence further advice would need to be sought from the Environment Agency to support any subsequent planning application. There is no evidence to suggest that development of the site for housing could not be supported by existing water and sewerage infrastructure to cope with demand. A local water supply and foul water connection would be possible in Wick Road. There are no public surface water systems at this location and surface water flows to land drainage systems. The site would be unable to proceed without satisfactory surface water outfall. Infiltration testing will be required as there is no local watercourse close by. No details of drainage exist as yet but there is potential to introduce pollution prevention measures, including SuDS. The development of the site may need to make provision for on-site surface and foul water drainage and it is considered possible on this site. Overall, the likely effects are considered to be minor adverse against this objective and mitigation is achievable.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

<p>1. Maintain and improve local air quality?</p>	<p>The site is not located within an Air Quality Management Area (AQMA) and currently Oaksey does not have any specific air quality issues. No significant effects on air quality are foreseen with development at this location but minor effects are likely.</p> <p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>Development is likely to increase local commuter traffic, which may impact on local air quality. Development is likely to increase local commuter traffic, which may impact on local air quality although the site is within a central location and village services could be accessed by cycle or by foot. Nevertheless, measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include maximising opportunities for use of sustainable transport modes in the local area and measures may also include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home. Further development of the foot and cycleway should also help limit the effects of additional traffic from the development of the site.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and</p>	<p>Development of the site for housing would inevitably lead to increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts</p>

vibration through the layout, design and/or location of development?	would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. The site does not fall within or in close proximity to any other likely significant sources of environmental pollution (air, noise, odour and light).
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAS ¹⁰⁹ ?	The site is not situated within, adjacent to, or in proximity to a designated Air Quality Management Area (AQMA). As such, the development of the site for housing is unlikely to lead to an exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies, such as good access from the site to local services, facilities and public transport.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.

¹⁰⁹ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

Assessment outcome (on balance) -

Summary of SA Objective 4

The site is in an eastern location to the village of Oaksey and is within an accessible location to the services offered at the village level. Development is likely to increase local commuter traffic, and rely on the use of the private car for larger services and facilities, which may impact on local air quality although the site is within a location where village services could be accessed by cycle or by foot. Development is likely to lead to increases in traffic on local roads which may adversely affect air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council’s Air Quality Strategy. Developers of the site could also assist in providing opportunities to improve local air quality through making purchaser/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.

The site does not fall within a designated AQMA and is unlikely to adversely affect any AQMA elsewhere within the county. The site does not fall within or in close proximity to any likely significant sources of environmental pollution (air, noise, odour and light). The development at this site would likely generate increased levels of noise and light pollution associated with housing development such as vehicle use and street lighting, which may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. This may have some adverse effects for residents of neighbouring properties that adjoin or are in close proximity to the site. However these are not considered likely to be significant. Mitigation measures would need to be developed in accordance with national and local plan policy, for example an acoustic buffer could be required to reduce the impact of the development and pedestrian and cycle linkages can be made with adjoining residential area but likely that car use will increase. A new bus stop could be created and improvements to cycle/walking linkages. Overall, the likely effects are considered to be minor adverse against this objective and mitigation is considered achievable.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

<p>1. Minimise emissions of greenhouse gases and ozone depleting substances?</p>	<p>Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in ‘Delivering strategic objective 2: to address climate change’ and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.</p>
<p>2. Promote the development of renewable and low carbon sources of energy?</p>	<p>Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.</p>

3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.
Assessment outcome (on balance) -	
<p>Summary of SA Objective 5a</p> <p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.</p> <p>However, the effect of the development of this site will be to increase greenhouse gas emissions overall. The likely effects are considered to be minor adverse against this objective.</p>	
<p>SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. No specific vulnerabilities are known with regards this particular site. However it should be noted that there are no surface water systems at this location and surface water flows to land drainage systems. The site would be unable to proceed without a satisfactory surface water outfall being installed. Infiltration testing will be required as there is no local watercourse close-by for the purposes of discharge. The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape.
2. Ensure that development can adapt to the predicted future impacts of climate change?	<p>As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience:</p> <ul style="list-style-type: none"> • hotter summers; • milder winters;

	<ul style="list-style-type: none"> • increased periods without rain; • increased intensity in rainfall; and • more extreme weather events. <p>Development would need to include climate change adaptation measures such as: designing to prevent overheating; for heat resistant landscaping; for more resilient foundations/ground floor levels; for drought resistant planting; and for generally more resilient buildings and spaces (general design and robust materials).</p>
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems?	The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. There are no surface water systems at this location and surface water flows to land drainage systems. The site would be unable to proceed without a satisfactory surface water outfall being installed. Infiltration testing will be required as there is no local watercourse close-by to manage discharges. The site has the potential to accommodate appropriate Sustainable Drainage System measures to manage surface water run-off from built form and should be incorporated in to the design and layout of any development scheme. See Wiltshire Council's Ground water strategy and CIRIA Guidance Part E, Chapter 25.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. (Also see comments in response to 5.1 and 5.3 above).
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) -	
Summary of SA Objective 5b	
<p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. Development would need to ensure that surface water run-off rates replicate and improve, where possible, greenfield run-off rates. There are no surface water systems at this location and surface water flows to land drainage systems. The site would be unable to proceed without a satisfactory surface water outfall being installed. Infiltration testing will be required as there is no local watercourse close-by to manage discharges. No details of drainage exist as yet but there is potential to introduce pollution prevention measures including SuDs. Any subsequent planning application would need to be supported by a Flood Risk Assessment. Overall, the likely effects are considered to be minor adverse against this objective and mitigation is considered achievable.</p>	

SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The site is within Oaksey Conservation Area and close to listed buildings (90m from grade II* listed building (church) and 40m from Tudor House (grade II listed building) The site is separated from these listed buildings by vegetation and existing development. However, development of the site may affect the setting to these assets and their significance. Subject to more detailed Heritage Impact Assessment this may reduce the extent and/or density of development. There may be adverse effects but some aspects would seem capable of mitigation.
2. Ensure appropriate archaeological assessment prior to development?	Assessments of the archaeological potential and historic landscape have been undertaken and the site is evaluated as 'medium'. On the basis of available evidence, there may be a need to undertake further archaeological assessment to support development of the site. The historic landscape is described as 'Post medieval field that lies within the historic core of the village' and described as 'Coherent historic fields that may have significance due to their location at the core of the historic settlement'.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	The Conservation Area was designated 11 July 1975 and there are no published management objectives or detailed appraisal for this Conservation Area. This part of the Conservation Area extends northwards and follows Wheatsheaf Lane and large fields either side. The site forms a large open space to the east of the cluster of houses on Wheatsheaf Lane with a similar sized site to the west, both of which contribute towards the rural setting of the village. Development on the site might be harmful and difficult to mitigate.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	There are no heritage assets on site identified at risk.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international	The site is not within a location which is likely to result in impacts to the Stonehenge and Avebury WHS and their settings.

obligations?	
Assessment outcome (on balance) - -	
<p>Summary of SA Objective 6</p> <p>The site forms an important open space within the Oaksey Conservation Area and is some 90m distance from Grade II* and II Listed Buildings. A Historic Impact Assessment would be required as part of any future planning application to determine the impacts of development on the heritage assets of the area; to avoid harm to the significance of heritage assets from adverse impacts on their settings and in particular to maintain as much as possible of the rural character of this location. Mitigation is considered problematic. An archaeological assessment would be required to determine the archaeological potential of the site. With regard to SA Objective 6, it is considered that given the relationship of heritage assets to the site that there is a likelihood of moderate adverse effects.</p>	
<p>SA objective 7. Conserve and enhance the character and quality of Wiltshire’s rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place</p> <p>Decision Aiding Questions. Will the development site...</p>	
<p>1. Protect and enhance the landscape character and scenic quality of the countryside?</p>	<p>The Landscape Character of this site falls within the Limestone Lowland typology. It is of moderate character, in good condition. The County Landscape Character Assessment defines the strategy for this type of land as conserve and strengthen. In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside. The site is within Oaksey Conservation Area on the rural fringe of Oaksey with is of a size whereby landscape mitigation could be employed at the site boundaries to reduce the effect using a landscape buffer of trees to shield the development contained within low intervisibility and sensitive visual receptors – residential, to the east and south. There would be a requirement for a GI buffer to mature hedgerow trees.</p>
<p>2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?</p>	<p>In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver a comprehensive network of Green Infrastructure through public open space, connections to existing footpath networks (PRoW OAKS1 to north west of the site which could provide additional connectivity through the site to existing networks could be achieved)and green corridors etc.</p>
<p>3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?</p>	<p>In accordance with national policy/local plan policy, the development of the site would have the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside and designated landscape assets. In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver additional access to and availability of urban greenspace and the wider countryside for recreation.</p>
<p>4. Conserve and enhance areas with</p>	<p>The site lies outside of the AONB. In accordance with national policy/local plan policy, the development of the site would have</p>

landscape designations and take account of their management objectives, in particular for the three local AONBs ¹¹⁰ ?	the potential to appropriately protect and enhance the intrinsic character and scenic beauty of the countryside and designated landscape assets.
5. Protect rights of way, open space and common land?	In accordance with local plan policy, the development of the site would protect and add to the existing rights of way network, open spaces and common land assets. Development in this location would not result in loss of amenity greenspace. There are no public rights of way or publicly accessible space within the site however PRow OAKS1 to north west of the site. Assuming these rights of ways remain open during construction and operation, no adverse effects are likely. It is likely that development in this location would therefore have an impact on views from various public rights of way (PRow OAKS1 public rights of way). The site is of a size where additional connectivity through the site to existing networks could be achieved. The site is largely formed of agricultural land that is not accessible to the public. Development in this location would not result in loss of amenity greenspace.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	The site is not within a location which is likely to result in impacts to the Western Wiltshire Green Belt.
Assessment outcome (on balance) -	
Summary of SA Objective 7	
The site adjoins the built edge of western edge of Oaksey, currently is used for grazing and within Oaksey Conservation Area. There are views into the site from a number of locations from residential properties to the south and PRow OAKS1 to north west of the site. The level of effect would depend on the design of developments and employment of appropriate mitigation such Green Infrastructure buffer to the hedgerows. Overall, the likely effects are considered to be minor adverse against this objective and mitigation is considered achievable.	

¹¹⁰ Cotswold AONB, Cranborne Chase and West Wiltshire AONB, North Wessex Downs AONB

SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures

Decision Aiding Questions. Will the development site...

1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	Policies in the Core Strategy require a mix of housing by affordability, tenure and size. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to meet local and HMA targeted needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations.
5. Ensure an adequate provision of housing in settlements to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	The Neighbourhood Plan is seeking to allocate sites for the delivery of local housing targets (affordable housing). However at this time the plan is not considered sufficiently advanced.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy / local plan policy, the allocation of the site would sustainably boost housing to meet the needs of rural communities.

Assessment outcome (on balance) + +

Summary of SA Objective 8

The whole SHLAA site provides capacity approximately 11 residential units (though this may be reduced through the mitigation set out in this assessment), which contributes towards Wiltshire’s housing supply. A development on this site would help to meet local housing needs in according with the policies of the Core Strategy, and has the potential to deliver a level of affordable units alongside open market units. Overall it is considered that allocation of this site would largely meet the aim of

SA Objective 8 and the likely effects against this objective are considered moderate beneficial.	
SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for social integration with neighbouring housing areas and thereby reduce crime/the fear of crime. High quality design and good access of the site should take into account the design and layout of the dwellings, walking / cycle ways to reduce the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site would provide opportunities to improve cycling and walking routes to local services/facilities/employment. The site has the potential space to provide open /green space or children's play area and other landscaping to improve facilities and amenity. High quality design and good access of the site should take into account the design and layout of the dwellings (access to and contact with nature), walking / cycle ways to promote healthy lifestyles.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy this site could provide opportunities for flexibly designed accommodation to meet the changing demands of the population in Wiltshire. High quality design and good access of the site should take into account the design and layout of the mixed type dwellings, walking / cycle ways to attempt to future proof the development and meet the changing needs of the population. This would include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	There is no doctor's surgery located with Oaksey. The site is within the outer boundary of the catchment of the Cricklade Surgery, which has the nearest surgery to Oaksey at Ashton Keynes which is approximately 4.5 miles from the site. Oaksey is also within the contractual boundary of Purton Surgery which is approximately 10 miles from the site. NHS Wiltshire CCG has commented that one modern large surgery serving town and surrounding area has capacity.

<p>5. Maximise opportunities within the most deprived areas?</p>	<p>In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation in the area. There would be some social and economic benefits for the Oaksey area through housing provision, short-term construction jobs and a larger workforce for local businesses. This site is not within one of Wiltshire's most deprived quintile group of Lower Layer Super Output Areas (LSOAs), as set out in the English Indices of Deprivation 2015: Wiltshire Report. This site is within Wiltshire 002A LSOA, which is amongst the 30% least deprived neighbourhoods in the country¹¹¹. Development of this site is likely to contribute to the low levels of deprivation experienced in this area.</p>
<p>6. Reduce rural isolation, including access to services for those without a car in rural areas?</p>	<p>The development of the site would provide housing in a sustainable location in line with the settlement strategy, with a reasonable level of access to the local services and facilities within the village. Housing development on the site would provide an opportunity for existing vital services and facilities to be supported and remain viable as well as create the potential demand for new services, such as broadband. The village is serviced by a bus route providing connectivity to Malmesbury, Cirencester and the wider public transport network. Given the limited services within Oaksey it is however likely that residents would be reliant on the use of a private vehicle. The site offers the benefits of providing housing to meet need, including affordable housing, and improved viability of local services and facilities. In supporting local services, the need to travel would be reduced as would the potential for isolation and social exclusion.</p>
<p>7. Support the development of community campuses?</p>	<p>Development of community campuses is directed to the town level and therefore this is not appropriate for this site.</p>
<p>8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?</p>	<p>The site falls in the Oaksey Church of England Primary School catchment area. The primary school has some surplus places at present and should be able to accommodate pupils from development without expansion. For secondary education the forecast is to be full but expansion could be possible through mitigation to support additional capacity to cater for pupils arising from development.</p>

¹¹¹ English indices of deprivation (DCLG, 2015)

Assessment outcome (on balance) -

Summary of SA Objective 9

The provision of housing should reduce poverty, deprivation and promotes more inclusive and self-contained communities. The site is within reasonable proximity to the limited services and facilities in the village however there is more limited access to the types of facilities found in larger settlements such as hospitals or colleges and this would lead to a reliance of the private vehicle. There may be some pressure on local facilities such as schools and doctors surgeries. Overall the likely effects are considered to be minor adverse against this objective.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	There is no footway or lighting on Wick Road which would make walking to the main road (The Street) unsafe albeit for a distance of approx. 60m. Alternatively access could be established through the use and extension of public footpath PRow OAKS1 on the western edge of the site to the village centre however this could require crossing third party land and resurfacing.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	Development of this site is capable of incorporating infrastructure in the form of garages, sheds and secure bike stands to provide opportunities to improve cycling.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations, that reduce the need to travel and reliance on the private car?	This site is considered to be in an accessible location. It will be possible to walk and cycle to a number of significant trip generators in the immediate area (primary School, general food shop and post office and place of worship). However, overall, this level of new dwellings is likely to increase travel movements in the area. The village is serviced by the 93 bus route with the bus within 400m as the crow flies. Service 93 offers a commuter to Cirencester and also an inter-peak to Malmesbury. The nearest train station (Kemble) is more than 1 or 3km from site which would offer poor pedestrian/cycle access. However given the limited services within Oaksey it is however likely that residents would be reliant on the use of a private vehicle. The site offers the benefits of providing housing to meet need, including affordable housing, and improved viability of local services and facilities.

Assessment outcome (on balance) -

Summary of SA Objective 10

The site is located on the north eastern side of the Large Village of Oaksey. Direct vehicular access to this site is considered to be achievable. The site is within walking distance of the services and facilities available within the village but the short section from the site to The Street lacks a footway, as does existing housing on this lane. Utilising, extending and upgrading PRow OAKS1 on the western edge of the site to the village centre to provide an alternative safe walking route would need to be investigated. Notwithstanding this the site is closely related to the village and is within walking distance of the services and facilities within the settlement. There is more limited access to the types of facilities found in higher order settlements and overall residents are likely to rely upon use of the private car to reach larger services and facilities. Residents are likely to travel for larger convenience shopping. The development of the site for housing is not expected to have a significant effect on national trails, public footpaths or the Public Rights of Way network PRow OAKS1 on the western edge of the site. The traffic will be generated within the village and to wider areas. The traffic will be generated within the village and to wider areas. Overall it is considered that the effects would be minor adverse against this objective.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth
Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	Not relevant in this location.
2. Support the rural economy?	The site would boost the number of homes and thereby increase the population of the village and wider community area. This would potentially directly assist in the support of rural services and facilities.

Assessment outcome (on balance) +

Summary of SA Objective 11

The site is located on a greenfield site. Development will increase the local population, could contribute to the local economy through use of local shops and services and help to vitalise the village centre. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment in the short-term, and will help stimulate the local economy once built. By providing an increase in workforce in the medium-long term. It is expected that development in this location would support the viability of local services, facilities and businesses of Oaksey village. Overall it is considered that it is likely that there would be no adverse effect and whilst there are no known specific regeneration benefits of the site for housing development, the allocation of this site would be likely to have a minor positive effect on the local economy and meet the aim of SA Objective 11.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce	
Decision Aiding Questions. Will the development site...	
1. Protect and enhance the vitality and viability of existing employment areas?	The Wiltshire Housing Sites Allocation DPD is not tasked with specifically allocating land for employment uses. However in accordance with local plan policy, the development of the site for housing would have the potential to support the viability of existing employment areas within the community area.
2. Provide a focus for development in Salisbury and Trowbridge?	The development of the site for housing would not focus development in Salisbury or Trowbridge which are both Principal Settlements located some distance away. In accordance with local plan policy, the development of the site for housing would have the potential to support the settlement hierarchy by directing an appropriate level of growth to sustainable locations.
Assessment outcome (on balance) +	
Summary of SA Objective 12	
The development site for housing does not lead to the loss of designated employment land and is not being considered for employment land. Although the site allocation is for housing, this in itself will generate direct and indirect construction employment, and will help stimulate the local economy once built. Overall it is considered that allocation of this site would have a positive effect on SA Objective 12.	

A.6. Salisbury Principal Settlement (including Wilton Town)

Salisbury and Wilton - Stage 3 Site Assessment Tables

Sites considered in this Area of Search

Site S61 - Land at Hilltop Way, Salisbury	Site 3272 – Land at Rowbarrow, Odstock Road, Salisbury
Site S80 - Land to the north of Old Sarum, Salisbury	Site 3421 - Land adjacent to A354, Harnham, Salisbury

Sites being taken forward by Wiltshire Council from this stage to Stage 4

Site S61 - Land at Hilltop Way, Salisbury	Site S1027 - North of Netherhampton Road, Salisbury
Site S1028 - Land at Netherhampton Road, Salisbury	Site 3272 – Land at Rowbarrow, Odstock Road, Salisbury
Site S1057 - Land rear of Bulbridge Road, Wilton	<u>Site OM003 - The Yard, Hampton Park</u>

Salisbury

Site S61 – Land at Hilltop Way, Salisbury

Site context	
Site size: 0.48ha Site capacity: approximately 11 dwellings	
The site is narrow and lies north of Hilltop Way. There are existing residential dwellings to the south, east and west of the site. Adjacent to the site, to the north, is a large arable field which is designated as part of a Country Park (as part of the Hampton Park strategic site). Access to the site is via Hilltop Way. A bridleway runs along the northern boundary of the site.	
SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses	
Decision Aiding Questions. Will the development site...	
1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	Development of this greenfield site may have some limited adverse effects regarding fragmentation of existing habitats, such as hedgerows on the site boundaries. The site may support priority habitat (calcareous grassland). However, the site has the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased phosphate loading and habitat loss / damage. An appropriate assessment (including further HRA consideration) would be required if the site is taken forward into any subsequent stage of the selection process.
3. Result in greater community engagement with biodiversity?	There are no designated or non-designated biodiversity features within or adjacent to this site. It is unlikely that development of this site would lead to greater community engagement with biodiversity.

4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	There are no river corridors within or adjacent to this site. Development of the site for housing would have the potential to make suitable provision for buffers to protect all biodiversity features.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
6. Ensure all new developments have regard to and protect BAP habitats/species?	<p>In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species. Hedgerows should be retained wherever possible and enhanced, and additional hedgerow planting or other habitat creation should be included in line with Para 118 of NPPF. The site may support priority habitat (calcareous grassland) and this would need to be assessed further.</p> <p>Reptile surveys have shown a high number of slow worms at this site. Before any development takes place on this site, a mitigation scheme for translocation of reptiles and enhancement of a reptile receptor should be agreed by Wiltshire Council.</p>
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased phosphate loading, and habitat loss / damage.
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland features. Protection should be given to any trees or hedgerows within the site and at site boundaries.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the settlement does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS). There are no LGS within or in close proximity to this site.

Assessment outcome (on balance) - -

SUMMARY OF SA OBJECTIVE 1

Development of this greenfield site may have some limited adverse effects regarding fragmentation of existing habitats, such as hedgerows on the site boundaries. However, the site has the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration. The site may support priority habitat (calcareous grassland). Further ecological assessment will be required.

Reptile surveys have shown a high number of slow worms at this site. Before any development takes place on this site, a mitigation scheme for translocation of reptiles and enhancement of a reptile receptor should be agreed by Wiltshire Council.

The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased phosphate loading, and habitat loss / damage. Significant in-combination effects may make mitigation for phosphate challenging at this location.

Overall, moderate adverse effects are considered likely against this objective and mitigation could be problematic to achieve.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site...

<p>1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?</p>	<p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence.</p> <p>The site is situated to the north of Salisbury. As the site is on the edge of the settlement it is not considered to be within a reasonable walking/cycling distance to the city centre. Future residents are likely to rely on the private vehicle to access some of the city centre services which are not within walking or cycling distance. Development density likely to be fairly low due to the size of the site and also due to the fact that there would need to be a certain degree of landscape mitigation due to the site's fairly prominent location and views to/from Old Sarum.</p>
<p>2. Maximise reuse of previously developed land where possible/appropriate?</p>	<p>The site is greenfield and does not appear to include any previously developed land. Maximising previously developed land would therefore be unlikely.</p>
<p>3. Encourage remediation of contaminated land?</p>	<p>The site is located on greenfield land, as opposed to brownfield (i.e. previously developed land). On the basis of available evidence, it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing. However, if evidence becomes available which suggests that there may be land contamination, an assessment</p>

	would be required as part of any future planning application to establish a remediation and mitigation strategy.
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures and it is considered that development of this site could incorporate an appropriate design and layout that supports sustainable waste management. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	No issues with soil quality are known at this site. In line with national and local planning policy, development of this site should seek to ensure that soil quality and structure are appropriately protected.
6. Protect the best and most versatile appropriate and available agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 2	
<p>This is a greenfield site with little or no potential for making use of previously developed land. Development of this site is unlikely to lead to the loss of Grade 1, 2 or 3a Best and Most Versatile agricultural land.</p> <p>There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Mineral Safeguarding Area. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p> <p>Overall, this site is considered likely to have minor adverse effects against this objective and mitigation is achievable.</p>	
SA objective 3. Use and manage water resources in a sustainable manner	
Decision Aiding Questions. Will the development site...	

<p>1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?</p>	<p>In line with national and local planning policy / practice, the development of the site for housing would be capable of positively responding to the predicted effects of climate change. The site falls within the catchment area supplied by Wessex Water. There is no evidence to suggest that development of the site for housing could not be supported by additional water and sewerage infrastructure to cope with demand. Consideration should be given to incorporating water saving measures and appropriate pollution prevention and control into the design and layout of any new development.</p>
<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. There is capacity available in local mains. It will need to be confirmed whether any network reinforcement is necessary to maintain satisfactory service levels. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.</p>
<p>3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?</p>	<p>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures/technologies and no adverse effects are foreseen.</p>
<p>4. Consider the need for adequate provision of surface water and foul drainage?</p>	<p>There is a requirement for separate foul and storm drainage disposal systems. Offsite connecting sewers required for foul water and surface water. Restricted discharge rates will apply for surface water. From the Wessex Water record map the nearest sewers are on third party land thus will need a requisition under the Water Industry Act 1991, third party agreement with land owners or a couple of hundred metres of off-site storm and foul pipework to reach public sewers in public land.</p> <p>Consideration should be given to the inclusion of SuDS to control the risk of surface water flooding from impermeable surfaces.</p>
<p>5. Protect, and where possible, improve surface, ground and drinking water quality?</p>	<p>In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. Reference should be made to Wiltshire Council's Ground Water Strategy and relevant CIRIA guidance.</p>
<p>6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?</p>	<p>The site falls within the catchment of the Hampshire Avon and in a high risk catchment for phosphate loading which will need to be considered further. The Lower Avon sub-catchment is not understood to be at risk of low-flows from abstraction.</p>

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 3

Residential development on this site will lead to a small increase in demand for water in the area. However, the development of this site for housing would be capable of incorporating measures to positively respond to the predicted effects of climate change. There is a requirement for separate foul and storm drainage disposal systems. Offsite connecting sewers required for foul water and surface water. Restricted discharge rates will apply for surface water. From the Wessex Water record map the nearest sewers are in third party land thus will need a requisition under the Water Industry Act 1991, third party agreement with land owners or a couple of hundred metres of off-site storm and foul pipework to reach public sewers in public land.

It would need to be confirmed whether any network reinforcement is necessary to maintain satisfactory service levels.

The site falls within the catchment of the Hampshire Avon and in a high risk catchment for phosphate loading which will need to be considered further.

Consideration should be given to the inclusion of Sustainable Drainage Systems onsite to control the risk of surface water flooding from impermeable surfaces.

Given the small capacity of the site, development is considered likely to lead to a limited increase in demand for water. Overall, because of the small size of this site and limited capacity for new housing, minor adverse effects are considered likely against this objective and mitigation is considered achievable.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

<p>1. Maintain and improve local air quality?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage).</p> <p>Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. It is likely to increase traffic on local roads, which may impact on local air quality. However, the site does not fall within the Air Quality Management Area (AQMA) designation in Salisbury.</p> <p>Development of this site is likely to increase local commuter traffic, which may impact on local air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could assist in providing opportunities to improve local air quality through making purchasers/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Along the southern boundary of the site lies existing residential development, therefore the site is already affected by noise and light pollution from other dwellings and street lighting. Mitigation measures to limit impacts of noise, light, odour and other forms of pollution would need to be developed and implemented through survey work in accordance with local plan policy and advice from relevant bodies.</p> <p>A Noise Assessment would be required due to the proximity of the site to the nearby Old Sarum airfield. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p>
<p>3. Mitigate the impacts from uses that generate NO₂, SO₂ and PM₁₀ or other particulates?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Generation of NO₂, SO₂ and PM₁₀ is most likely to arise from residents' private car usage as will be the case with any new residential development. The nearest bus stops are located approx. 100m from the site on Castle Road (A345). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p>
<p>4. Seek to reduce development in or</p>	<p>The site is not situated within or in proximity to the designated Air Quality Management Area (AQMA) in Salisbury city centre. Development of the site for housing is unlikely to lead to a significant exacerbation of local air quality issues and/or legal</p>

near to AQMAS ¹¹² ?	compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. This site is in reasonable proximity to the range of services and facilities in Salisbury city centre but vehicle usage is still likely to increase in the area.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 4	
Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). A Noise Assessment would be required due to the proximity of the site to the nearby Old Sarum Airfield. The site is not situated within or in proximity to the designated Air Quality Management Area (AQMA) in Salisbury city centre. Development of the site for housing is	

¹¹² Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

unlikely to lead to a significant exacerbation of local air quality issues and/or legal compliance targets.	
Overall, development of this site for housing is likely to have minor adverse effects against this objective and mitigation is considered achievable.	
SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions	
Decision Aiding Questions. Will the development site...	
1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 5a	
<p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.</p> <p>However, the effect of the development of this site will be to increase greenhouse gas emissions overall and on balance this site is considered to have a minor adverse</p>	

effect in relation this SA objective.	
SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects	
Decision Aiding Questions. Will the development site...	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses.</p> <p>No specific vulnerabilities are known with regards this particular site. The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape.</p>
2. Ensure that development can adapt to the predicted future impacts of climate change?	<p>It is considered that any future development of this site could incorporate appropriate measures to adapt to the predicted future impacts of climate change, through site design and layout. As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience hotter summers, milder winters, increased periods without rain, increased intensity in rainfall and more extreme weather events.</p> <p>Development would need to include climate change adaptation measures such as designing to prevent overheating, for heat resistant landscaping, for more resilient foundations, for drought resistant planting and for generally more resilient buildings and spaces (general design and robust materials).</p> <p>No specific vulnerabilities are known with regards this particular site.</p>
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems (SuDS)?	Ground conditions appear to dictate that the site would not be technically capable of accommodating SuDS measures.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses.
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) -	

SUMMARY OF SA OBJECTIVE 5b

The site is located fully in flood zone 1, and therefore would be a sequentially preferable location for development in terms of flood risk. Overall it is considered that there are no insurmountable barriers that would preclude development of this site.

The site will require planning applications for comprehensive development to be supported by a Flood Risk Assessment. This should include identifying appropriate space for SuDS.

Overall, minor adverse effects are envisaged against this objective for this site, and mitigation is considered achievable.

SA objective 6. Protect, maintain and enhance the historic environment

Decision Aiding Questions. Will the development site...

1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The site is located approximately 300m away from the Stratford Sub Castle conservation area. It is considered that this site would have a negligible effect on the conservation area due to its distance and as it is separated by existing residential properties. There are no listed buildings in the vicinity of the site. There is potential for impacts on skyline views from Old Sarum Airfield CA and from Old Sarum Castle but these can be mitigated through building type, size, design and location.
2. Ensure appropriate archaeological assessment prior to development?	This site is considered to have medium to high archaeological potential. An archaeological assessment will be required in support of any subsequent planning application. Potential Historic Landscape Characterisation sensitivity is considered to be low. The site is described as modern fields created on former downland. Prior character not legible in modernity.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of	In accordance with national policy/local policy, the development of the site for housing could deliver housing that maintains and enhances the distinctiveness of settlements through high quality design. The development of the site would have the potential to appropriately protect and enhance designated heritage assets according to their significance. The site is located approximately 300m away from the Stratford Sub Castle conservation area. It is considered that this site would have a negligible effect on the conservation area and its management objectives due to its distance and as it is

Conservation Areas?	separated by existing residential properties.
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	Development of this site is unlikely to contribute to saving any heritage sites identified as being at risk. There are no buildings on the HE 'at risk' register within proximity of this site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not within a location which is likely to result in impacts to the Stonehenge and Avebury WHS and their settings.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 6	
<p>The site has medium to high archaeological potential. An archaeological assessment will be required in support of any subsequent planning application.</p> <p>The site has the potential to impact on skyline views from Old Sarum Airfield CA and from Old Sarum castle but these can be mitigated through building type, size, design and location, as well as through landscaping. A detailed, site specific Heritage Impact Assessment would need to be undertaken to support any future development at this site, including a detailed analysis of any adverse effects that development may have on nearby heritage assets and how these could be mitigated.</p> <p>Overall it is considered that there are likely minor adverse effects against this objective.</p>	
SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place	

Decision Aiding Questions. Will the development site...	
1. Protect and enhance the landscape character and scenic quality of the countryside?	<p>There are no landscape designations in this area. It is located within an urban fringe setting with low intervisibility. Development of the site would result in the loss of an area used by local people for dog walking however the position of the site is on the edge of an existing residential built up area on Hilltop Way. Any effects on the landscape would be well contained and linked to the existing site and surroundings.</p> <p>The Landscape Character of this site falls within the High Chalk Plain (3B Salisbury Plain East) typology, according to the Wiltshire Landscape Character Assessment¹¹³.</p>
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	In accordance with local plan policy and guidance, the development of the site for housing could offer the potential to deliver Green Infrastructure. This could include access to the Country Park to the east of the site. There would be a requirement for a GI buffer to any mature trees and hedgerows within and adjacent to the site.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver additional access to and availability of urban greenspaces. This would include access to the Country Park to the east of the site.
4. Conserve and enhance areas with landscape designations and take account of their management	The site does not fall within the boundary of or near any statutory landscape designations.

¹¹³ Wiltshire Landscape Character Assessment (Land Use Consultants, December 2005)

objectives, in particular for the three local AONBs ¹¹⁴ ?	
5. Protect rights of way, open space and common land?	<p>PRoW SALS31A runs along the northern boundary of the site from which there are open views of the site and is used by dog walkers frequently. Assuming this right of way remains open during construction and operation, no adverse effects are likely on the accessibility of the PROW. It is, however, a sensitive visual receptor and adverse effects are likely on the views from the PROW - this could be somewhat mitigated through the use of GI buffers.</p> <p>There is no designated open space or common land within the site.</p>
6. Protect the Western Wiltshire Green Belt from inappropriate development?	In accordance with national policy/local plan policy, the development of the site would not lead to a reduction in the openness of the Western Wiltshire Green Belt.
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 7</p> <p>There are no landscape designations in this area. Development of the site would result in the loss of a small area of rough grassland on the edge of an existing residential development. There are trees to the north west of the site and a PRoW runs along the northern boundary of the site. GI buffers would be required to any mature trees and hedgerows within and adjacent to the site.</p> <p>Overall, minor adverse effects on the landscape are likely but there is potential for mitigation measures to reduce the extent of effects.</p>	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	

¹¹⁴ Cotswold AONB, Cranbourne Chase and West Wiltshire AONB, North Wessex Downs AONB

Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	In accordance with local plan policy and national standards, the development of the site is capable of delivering high quality, sustainable homes of different types and tenures. The development of this site will have some benefits in terms of providing different house types, sizes and tenures.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would increase housing supply to help meet local and HMA housing needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations. Salisbury, designated as a Principal Settlement in the Core Strategy, has the ability to support sustainable patterns of growth through its level of facilities, services and employment opportunities.
5. Ensure an adequate provision of housing in the towns to accommodate employment expansion?	This small housing site is unlikely to have significant impacts on employment expansion.
6. Consider the emerging Neighbourhood Plans?	Wiltshire Council is not aware that a Neighbourhood Plan is currently being progressed in Salisbury.
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy/local plan policy, the allocation of the site would boost housing delivery at Salisbury and would not prejudice the delivery of suitable and sustainable development to come forward at the more rural communities.
Assessment outcome (on balance) +	
SUMMARY OF SA OBJECTIVE 8	
Delivery of this site would contribute towards Wiltshire's and Salisbury's housing supply. A development on this site would help to meet local housing needs in accordance with the policies of the Core Strategy, and has the potential to deliver some affordable units alongside open market units. Overall allocation of this site would largely meet the aim of SA Objective 8 and minor benefits are considered likely against this objective.	

SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for high quality design and layout that would enable social integration and inclusion whilst incorporating features to help reduce crime and the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of this site could provide opportunities to enable residents and non-residents to be physically active through appropriate design and provision of public open space and children's play areas and accessible cycling and walking routes to local services/ facilities/ employment. The allocation and development of the site could potentially provide opportunities to improve cycling.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy the allocation and development of the site could provide flexibly designed accommodation to meet the changing needs of the population. This could include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	<p>This site is not considered to be within walking distance of the nearest GP surgeries which are located in the city centre but there is public transport availability nearby.</p> <p>On the basis of evidence supplied by the Wiltshire Clinical Commissioning Group (WCCG), all 6 GP surgeries in Salisbury face capacity issues with expected population increase in Salisbury to 2026. However, this small site would not have a significant impact on surgery capacity in the area.</p>
5. Maximise opportunities within the most deprived areas?	In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation and increase social inclusion in the area. There would be some social and economic benefits for the Salisbury area through housing provision, short-term construction jobs and a larger workforce for local businesses.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	Development of this site in Salisbury is unlikely to reduce rural isolation to any great extent as the housing will be located in Salisbury and will be meeting the needs of Salisbury primarily.
7. Support the development of community campuses?	In accordance with the council's Business Plan objectives, the allocation and development of the site could potentially assist in the delivery of the Five Rivers Health and Wellbeing Centre.
8. Is the site accessible to local schools and is there capacity to cope	The site falls in the catchment area of Wyndham Infants and St Mark's Junior. It is considered that both schools would have

with the additional demand generated from the site?	<p>capacity to accommodate the very small number of pupils expected from this small site.</p> <p>Options are currently being considered for secondary education in Salisbury. All existing secondary schools (including academies) are capable of being expanded to cater for additional pupil numbers. Full contributions are being sought from all developments towards expansion of Sarum Academy.</p>
Assessment outcome (on balance) +	
<p>SUMMARY OF SA OBJECTIVE 9</p> <p>The provision of a small number of dwellings in this location is likely to be positive overall against this objective. It will help to reduce poverty and deprivation in the local and wider community through provision of a range of house sizes and tenures and help to promote more inclusive and self-contained communities. Housing provision will also provide some short-term construction jobs and a larger workforce for local businesses.</p> <p>This site is not considered to be within walking distance of the nearest GP surgeries which are located in the city centre, but there is public transport availability nearby. All 6 GP surgeries in Salisbury face capacity issues with expected population increase. However, this small site would not have a significant impact on surgery capacity in the area.</p> <p>The site falls in the catchment area of Wyndham Infants and St Mark's Junior. It is considered that both schools would have capacity to accommodate the very small number of pupils expected from this small site. Overall, development of this site is likely to have minor benefits against this objective.</p>	
SA objective 10. Reduce the need to travel and promote more sustainable transport choices	
Decision Aiding Questions. Will the development site...	
1. Increase walking and cycling accessibility through the use of developer contributions and site design?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site could potentially provide opportunities to improve cycling and walking routes to local services/facilities/employment.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	In accordance with local plan/Local Transport Plan policies, the site would have the potential to incorporate new cycling infrastructure as well as create links to existing cycling infrastructure.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in	Limited facilities within 800m. 1km to primary schools. 2km to Sarum Business Park. 2.5- 3km to city centre and rail

<p>accessible locations that reduce the need to travel and reliance on the private car?</p>	<p>station/Churchfields. 2 buses per hour to city centre, and this development would support the bus service. 2km to London Road supermarkets. 6km to Fugglestone. 3-4km to nearest secondary school.</p> <p>Overall, development of this site is likely to increase private car journeys in the area, but not significantly.</p>
---	---

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 10

The development of this site for a small number of dwellings will generate minor additional vehicle movements on the local road network, especially through private car use. There would be a likely low impact on the local road network.

A PRoW runs along the northern boundary of the site. Assuming this remains open during construction and operation, or redirected if required, no adverse effects are considered likely.

Overall, this site is considered to have a low impact on the local road network and therefore minor adverse effects are considered likely against this objective.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...

<p>1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?</p>	<p>This site is not in a city centre location. Although the focus of the DPD is not on retail, leisure and/or employment provision, the provision of a small number of new dwellings on this site would increase the population of the area and therefore potentially assist in the support of viable local retail, leisure and/or employment opportunities in the city centre.</p>
<p>2. Support the rural economy?</p>	<p>The site would boost the number of homes in Salisbury and thereby increase the population of the area. This would potentially assist in the support of rural services and facilities.</p>

Assessment outcome (on balance) +

SUMMARY OF SA OBJECTIVE 11

Development of the site would not lead to the loss of designated employment land. Development would increase the local population and could contribute to the local economy, though the capacity of the site is relatively small. Development of this site will create construction jobs in the short-term and provide an increased workforce for local businesses in the medium-long term. No adverse effects are thought likely. Minor benefits are considered likely overall against this objective.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?	In accordance with local plan policy, the development of the site for housing would have the potential to support the vitality and viability of existing employment areas. Development of the site would not lead to the loss of designated employment land.
2. Provide a focus for development in Salisbury and Trowbridge?	In accordance with local plan policy, the development of the site for housing would focus development in Salisbury, a Principal Settlement. Development would support local businesses and provide an increased workforce for local businesses.

Assessment outcome (on balance) +

SUMMARY OF SA OBJECTIVE 12

Development of the site would not lead to the loss of designated employment land Although the site allocation would be for housing, this in itself would generate direct and indirect construction employment, and help stimulate the local economy once built. It has the potential to support the vitality and viability of existing employment areas.

Overall, minor benefits are considered likely against this objective.

Site S80 – Land to the north of Old Sarum, Salisbury

Site context

Site size: 19.6ha Site capacity: approximately 254 dwellings

The site lies north of the Old Sarum development, to the western side of the Portway. It is currently in agricultural use.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	Development of this greenfield site may have some limited adverse effects regarding fragmentation of existing habitats, such as hedgerows on the field boundaries. However, the site is currently in arable use and has the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased water abstraction, increased phosphate loading, and habitat loss / damage. An appropriate assessment (including further HRA consideration) would be required if the site is taken forward into any subsequent stage of the selection process.
3. Result in greater community engagement with biodiversity?	There are no designated or non-designated biodiversity features within or adjacent to this site. It is unlikely that development of this site would lead to greater community engagement with biodiversity.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	There is a hedgerow border to the west of the site. Development of the site for housing would need to make suitable provision for buffers to protect all biodiversity features within and adjacent to this site.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
6. Ensure all new developments have regard to and protect BAP habitats/ species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species. Hedgerows boundaries should be retained wherever possible and enhanced, and additional hedgerow planting or other habitat creation should be included in line with Para 118 of NPPF.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased phosphate loading, and habitat loss / damage.

8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland features. Protection should be given to any individual trees, woodland belts and hedgerows within the site and at site boundaries.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the settlement does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas.
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS). There are no LGS within or in close proximity to this site.
Assessment outcome (on balance) - -	
<p>SUMMARY OF SA OBJECTIVE 1</p> <p>Development of this greenfield site may have some limited adverse effects regarding fragmentation of existing habitats, such as hedgerows on the field boundary. However, the site has the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.</p> <p>Further ecological assessment of this site will be required.</p> <p>The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased phosphate loading, and habitat loss / damage. Significant in-combination effects may make mitigation for phosphate challenging at this location.</p> <p>Overall, moderate adverse effects are considered likely against this objective due to the potential impacts on the River Avon SAC and mitigation would be problematic.</p>	
<p>SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings</p> <p>Decision Aiding Questions. Will the development site...</p>	
1. Maximise densities in sustainable locations that have good access to	The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence.

local facilities, public transport links and key infrastructure?	The site is situated on the edge of Old Sarum. As the site is on the edge of the settlement it is not considered to be within a reasonable walking/cycling distance to the city centre. Future residents will rely on the private vehicle to access many of the city centre services which are not within walking or cycling distance. Development density would be fairly low due to the size of the site and also due to the fact that there would need to be a certain degree of landscape mitigation due to the site's fairly prominent location and views in/out of site.
2. Maximise reuse of previously developed land where possible/appropriate?	The site is greenfield and does not appear to include any previously developed land. Maximising previously developed land would therefore be unlikely.
3. Encourage remediation of contaminated land?	The site is located on greenfield land, as opposed to brownfield (i.e. previously developed land). On the basis of available evidence, it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing. However, if evidence becomes available which suggests that there may be land contamination, an assessment would be required as part of any future planning application to establish a remediation and mitigation strategy.
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures and it is considered that development of this site could incorporate an appropriate design and layout that supports sustainable waste management. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	No issues with soil quality are known at this site. In line with national and local planning policy, development of this site should seek to ensure that soil quality and structure are appropriately protected.
6. Protect the best and most versatile appropriate and available agricultural land?	Evidence shows this site as containing some Grade 3a BMV agricultural land and therefore development of this site may lead to the loss of BMV agricultural land. Where possible, development on this site should be located so as to reduce the loss of BMV.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.
Assessment outcome (on balance) - -	

SUMMARY OF SA OBJECTIVE 2

This is a greenfield site with little or no potential for making use of previously developed land. The site is not considered to be within a reasonable walking/cycling distance of the city centre.

Evidence shows this site as containing some Grade 3a BMV agricultural land and therefore development of this site may lead to the loss of BMV agricultural land. Where possible, development on this site should be located so as to reduce the loss of BMV.

There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Mineral Safeguarding Area. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.

Overall this site is considered likely to have moderate adverse effects against this objective and mitigation could be problematic.

SA objective 3. Use and manage water resources in a sustainable manner

Decision Aiding Questions. Will the development site...

1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	In line with national and local planning policy / practice, the development of the site for housing would be capable of positively responding to the predicted effects of climate change. The site falls within the catchment area supplied by Wessex Water.
2. Ensure that essential water infrastructure is co-ordinated with all new development?	In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. There is no evidence to suggest that development of this site for housing could not be supported by additional water and sewerage infrastructure to cope with demand. It would need to be confirmed whether any network reinforcement is necessary to maintain satisfactory service levels. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures/technologies and no adverse effects are foreseen.
4. Consider the need for adequate provision of surface water and foul	Where appropriate, the development of this site may need to make provision for on-site surface and foul water drainage which is considered possible on this site. There are off site connecting water mains with reinforcement / capacity improvements. The downstream sewerage system is at capacity; therefore a significant capacity works would be required.

drainage?	Consideration should be given to the inclusion of SuDS to control the risk of surface water flooding from impermeable surfaces.
5. Protect, and where possible, improve surface, ground and drinking water quality?	In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality. Part of this site lies within a Source Protection Zone. Underlying chalk may be susceptible to seasonal groundwater levels. Monitoring will be required to determine a suitable storm water disposal system.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?	The site falls within the catchment of the Hampshire Avon and in a high risk catchment for phosphate loading which will need to be considered further. The Lower Avon sub-catchment is not understood to be at risk of low-flows from abstraction.
Assessment outcome (on balance) - -	
<p>SUMMARY OF SA OBJECTIVE 3</p> <p>Residential development on this site will lead to an increase in demand for water in the area. There is no evidence to suggest that development of the site for housing could not be supported by additional water and sewerage infrastructure to cope with demand. Part of this site lies within a Source Protection Zone. Underlying chalk may be susceptible to seasonal groundwater levels. Monitoring will be required to determine a suitable storm water disposal system.</p> <p>There are off site connecting water mains with reinforcement / capacity improvements. The downstream sewerage system is at capacity; therefore significant capacity works would be required. It would need to be confirmed whether any network reinforcement is necessary to maintain satisfactory service levels.</p> <p>The site falls within the catchment of the Hampshire Avon and in a high risk catchment for phosphate loading which will need to be considered further.</p> <p>Consideration should be given to the inclusion of Sustainable Drainage Systems onsite to control the risk of surface water flooding from impermeable surfaces.</p> <p>Development of this site will lead to an increase in demand for water and there are significant issues of concern highlighted above with regards the location of the site in a Source Protection Zone. Overall, moderate adverse effects are considered likely against this objective.</p>	
SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution	

Decision Aiding Questions. Will the development site...	
<p>1. Maintain and improve local air quality?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. It is likely to significantly increase traffic on local roads, which may impact on local air quality. However, the site does not fall within the Air Quality Management Area (AQMA) designation in Salisbury city centre.</p> <p>Development is likely to increase local commuter traffic, which may impact on local air quality. Nevertheless, measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could assist in providing opportunities to improve local air quality through making purchasers/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>Along the southern and Western boundaries of the site lies existing residential development, therefore the site is already affected by noise and light pollution from other residential dwellings and street lighting. Mitigation measures to limit impacts of noise, light, odour and other forms of pollution would need to be developed and implemented through significant survey work in accordance with local plan policy and advice from relevant bodies. A noise assessment of road traffic and aircraft noise (Old Sarum Airfield) will be required.</p> <p>Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p>

3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Generation of NO ₂ , SO ₂ and PM ₁₀ is most likely to arise from residents' private car usage as will be the case with any new residential development. The nearest bus stops are located approx. 100m from the site on Portway. Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAs ¹¹⁵ ?	The site is not situated within or in proximity to the designated Air Quality Management Area (AQMA) in Salisbury city centre. Development of the site for housing is unlikely to lead to a significant exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. This site is not in close proximity to the range of services and facilities in Salisbury city centre and vehicle usage is likely to increase.
7. Ensure that potential impacts from air quality on relevant SACs are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.
Assessment outcome (on balance) -	

¹¹⁵ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

SUMMARY OF SA OBJECTIVE 4

Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Along the southern and western boundaries of the site lies existing residential development, therefore the site is already affected by noise and light pollution from other residential dwellings and street lighting. A noise assessment of road traffic and aircraft noise (Old Sarum Airfield) will be required.

The site is not situated within or in proximity to the designated Air Quality Management Area (AQMA) in Salisbury city centre. Development of the site for housing is unlikely to lead to a significant exacerbation of local air quality issues and/or legal compliance targets.

The Portway is likely to be a source of ambient noise and is recognised as an issue at this site. Further noise assessment would be required to provide detail on this issue. An acoustic buffer could be used to reduce the impact, which may have implications on the capacity of the site.

Overall, development of this site for housing is likely to have minor adverse effects against this objective.

SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions

Decision Aiding Questions. Will the development site...

1. Minimise emissions of greenhouse gases and ozone depleting substances?	Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.
2. Promote the development of renewable and low carbon sources of energy?	Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 5a

Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.

However, the effect of the development of this site will be to increase greenhouse gas emissions overall and on balance this site is considered to have a minor adverse effect in relation this SA objective.

SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects

Decision Aiding Questions. Will the development site...

<p>1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?</p>	<p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk of fluvial flooding from main river and/or ordinary watercourses. The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape.</p>
<p>2. Ensure that development can adapt to the predicted future impacts of climate change?</p>	<p>It is considered that any future development of this site could incorporate appropriate measures to adapt to the predicted future impacts of climate change, through site design and layout. As a result of changing climate already in the system, it is anticipated that in the future Wiltshire will experience hotter summers, milder winters, increased periods without rain, increased intensity in rainfall and more extreme weather events.</p> <p>Development would need to include climate change adaptation measures such as designing to prevent overheating, for heat resistant landscaping, for more resilient foundations, for drought resistant planting and for generally more resilient buildings and spaces (general design and robust materials).</p>
<p>3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems (SuDS)?</p>	<p>The site has the potential to accommodate appropriate SuDS measures to manage surface water run-off from built form.</p> <p>However, ground conditions appear to dictate that the site would not be technically capable of accommodating SuDS measures. Underlying chalk may be susceptible to seasonal groundwater levels. Monitoring will be required to determine a suitable storm water disposal system.</p>
<p>4. Minimise the risk of flooding to people and property (new and</p>	<p>The site is located within Flood Zone 1. As such, the development of the site for housing is unlikely to lead to an increased risk</p>

existing development)?	of fluvial flooding from main river and/or ordinary watercourses.
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 5b	
<p>The site is located fully in flood zone 1, and therefore would be a sequentially preferable location for development in terms of flood risk.</p> <p>There may be issues relating to ground conditions and ability to implement SuDS. Underlying chalk may be susceptible to seasonal groundwater levels. Monitoring will be required to determine a suitable storm water disposal system.</p> <p>Overall minor adverse effects considered likely against this objective and mitigation is considered achievable.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings, Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	The site is located adjacent to the Old Sarum Airfield Conservation Area. The incremental residential enclosure of Old Sarum Airfield CA is harmful to its heritage setting. No designated assets within the site, although a WW2 pillbox survives on the roadside and needs to be considered carefully. There are no listed buildings in the vicinity of the site.
2. Ensure appropriate archaeological assessment prior to development?	<p>The site is considered to have a very high archaeological potential. The site will require an archaeological assessment, excavation and assessment of the setting of the Scheduled Monument and preservation in situ.</p> <p>Potential Historic Landscape Characterisation sensitivity is considered to be low. The site is described as modern fields created on former downland which had been consolidated by a C18/C19 Parliamentary Act. Prior character not legible in modernity.</p>
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where	The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented. However, a WW2 pillbox survives on the roadside and needs to be considered carefully.

appropriate?	
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	<p>In accordance with national policy/local policy, the development of the site for housing could deliver housing that maintains and enhances the distinctiveness of settlements through high quality design.</p> <p>The development of the site would have the potential to appropriately protect and enhance designated heritage assets according to their significance.</p> <p>The site is located adjacent to the Old Sarum Airfield Conservation Area. It is considered that the incremental residential enclosure of Old Sarum Airfield Conservation Area is harmful to its heritage setting when considering its management objectives.</p>
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	Development of this site is unlikely to contribute to saving any heritage sites identified as being at risk. There are no buildings on the HE 'at risk' register within proximity of this site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not within a location which is likely to result in impacts to the Stonehenge and Avebury WHS and their settings.
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 6	
<p>The site has very high archaeological potential. The site will require an archaeological excavation and assessment of the setting of the Scheduled Monument and preservation in situ.</p> <p>It is considered that the incremental residential enclosure of Old Sarum Airfield CA is harmful to its heritage setting. There are no designated assets within the site, although a WW2 pillbox survives on the roadside and needs to be considered carefully.</p> <p>A detailed, site specific Heritage Impact Assessment would need to be undertaken to support any future development at this site.</p> <p>Overall, it is considered that moderate adverse effects are likely against this objective.</p>	
SA objective 7. Conserve and enhance the character and quality of Wiltshire's rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place	

Decision Aiding Questions. Will the development site...	
1. Protect and enhance the landscape character and scenic quality of the countryside?	<p>The site is located within adjacent to a Special Landscape Area (saved SDLP policy C6) to the north, east and south of the site. The site is located in a rural fringe setting with medium intervisibility. Development of the site would result in the loss of an arable field. Development of this site would be encroaching into the rural countryside extending Salisbury further north, and is likely to have significant adverse effects on the character and appearance of the area.</p> <p>The site abuts the northern boundary of the Old Sarum Conservation Area and is alongside Monarchs Way.</p> <p>The Landscape Character of this site falls within the High Chalk Plain (3B Salisbury Plain East) typology, according to the Wiltshire Landscape Character Assessment¹¹⁶.</p>
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	In accordance with local plan policy and guidance, the development of the site for housing could offer the potential to deliver Green Infrastructure. There would be a requirement for a GI buffer to any mature trees and hedgerows within and adjacent to the site.
3. Lead to a net improvement in the quality and quantity of access to urban greenspace and the wider countryside for recreation?	In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver additional access to and availability of urban greenspaces.
4. Conserve and enhance areas with landscape designations and take account of their management	The site does not fall within the boundary of or near any statutory landscape designations, although it is located within adjacent to a Special Landscape Area (saved SDLP policy C6) to the north, east and south of the site.

¹¹⁶ Wiltshire Landscape Character Assessment (Land Use Consultants, December 2005)

objectives, in particular for the three local AONBs ¹¹⁷ ?	
5. Protect rights of way, open space and common land?	There is no designated open space or common land within the site. Bridleway WINT13 runs adjacent to the northern boundary of the site. The development of this site would have adverse effects on the views from this sensitive visual receptor. A buffer to the PROW could be considered to mitigate these effects.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	In accordance with national policy/local plan policy, the development of the site would not lead to a reduction in the openness of the Western Wiltshire Green Belt.
Assessment outcome (on balance) - -	
<p>SUMMARY OF SA OBJECTIVE 7</p> <p>The site is located in a rural fringe setting with medium intervisibility. Development of the site would result in the loss of an arable field and is likely to have significant adverse effects on the views from the adjacent bridleway WINT13.</p> <p>The site is located within adjacent to a Special Landscape Area (saved SDLP policy C6) to the north, east and south of the site. Development of this site would be encroaching into the rural countryside extending Salisbury further north, and could have significant adverse effects on the character and appearance of the area. The site abuts the northern boundary of the Old Sarum Conservation Area and is alongside Monarchs Way.</p> <p>The development of this site is likely to have a moderate adverse impact against this objective.</p>	
SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures	

¹¹⁷ Cotswold AONB, Cranbourne Chase and West Wiltshire AONB, North Wessex Downs AONB

Decision Aiding Questions. Will the development site...	
1. Provide an adequate supply of affordable housing?	The development of the site for housing would help boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	In accordance with local plan policy and national standards, the development of this site is capable of delivering high quality, sustainable homes of different types and tenures. The development of this site will have significant benefits in terms of providing a wide range of house types, sizes and tenures to meet the housing needs of a wide cross-section of the community.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to help meet local and HMA housing needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations. Salisbury, designated as a Principal Settlement in the Core Strategy, has the ability to support sustainable patterns of growth through its level of facilities, services and employment opportunities.
5. Ensure an adequate provision of housing in the towns to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	Wiltshire Council is not aware that a Neighbourhood Plan is being progressed in Salisbury. <u>It is understood that work on a Salisbury neighbourhood plan has commenced by the city council but is not at an advanced stage.</u>
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy/local plan policy, the allocation of the site would boost housing delivery at Salisbury and would not prejudice the delivery of suitable and sustainable development to come forward at the more rural communities.
Assessment outcome (on balance) + + +	
SUMMARY OF SA OBJECTIVE 8	
Delivery of this site for approx. 255 dwellings would contribute significantly towards Wiltshire's and Salisbury's housing supply. A development on this site would help to meet local housing needs in accordance with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units. Overall allocation of this site would meet the aim of SA Objective 8 and major benefits are considered likely against this objective.	

SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities	
Decision Aiding Questions. Will the development site...	
1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for high quality design and layout that would enable social integration and inclusion whilst incorporating features to help reduce crime and the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of this site could provide opportunities to enable residents and non-residents to be physically active through appropriate design and provision of public open space and children's play areas and accessible cycling and walking routes to local services/ facilities/ employment. The allocation and development of the site could potentially provide opportunities to improve cycling.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy the allocation and development of the site could provide flexibly designed accommodation to meet the changing needs of the population. This could include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	This site is not considered to be within walking distance of the nearest GP surgeries which are located in the city centre but there is public transport availability nearby. There are no GP surgeries in Old Sarum. On the basis of evidence supplied by the Wiltshire Clinical Commissioning Group (WCCG), all 6 GP surgeries in Salisbury face capacity issues with expected population increase in Salisbury to 2026 and an impact assessment would be required. If this site was developed for housing, mitigation would be required to support additional patient capacity.
5. Maximise opportunities within the most deprived areas?	In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation and increase social inclusion in the area. There would be some social and economic benefits for the Salisbury area through housing provision, short-term construction jobs and a larger workforce for local businesses.
6. Reduce rural isolation, including access to services for those without a car in rural areas?	Development of this site in Salisbury is unlikely to reduce rural isolation to any great extent as the housing will be located in Salisbury and will be meeting the needs of Salisbury primarily.
7. Support the development of community campuses?	In accordance with the council's Business Plan objectives, the allocation and development of the site could potentially assist in the delivery of the Five Rivers Health and Wellbeing Centre.
8. Is the site accessible to local schools and is there capacity to cope	The site falls in the catchment area of Wyndham Infants and St Mark's Junior Old Sarum primary school. This has been expanded to a 2FE (420 places). It cannot be expanded further. At the current time there are some surplus places at

<p>with the additional demand generated from the site?</p>	<p><u>this school but not enough to meet the anticipated needs from this site. Any surplus places in schools are allocated on a first come first served basis to housing developments, so any places available at Old Sarum primary would need to be further evaluated at the time of any planning application. At this stage, it is likely that full S106 contributions would be needed for both primary and secondary places but if there were any surplus places available at the time of application they would be deducted from the total contribution required. Wiltshire Council has secured a new primary school site on the Longhedge housing site in close proximity to this site and it is possible that a new primary school there could also cater for needs from this site.</u></p> <p>Due to capacity issues, neither school would currently have enough places to meet demand generated by this size of development. The Infant School is on a small site, but the Juniors site is larger and may offer some expansion potential, although it is not known if it could be expanded sufficiently to cater for demand from this site. A site for a new primary school, ideally of at least 1.8ha that could accommodate up to 2 forms of entry (420 pupils), may be needed either onsite or in the vicinity of this site for development to proceed. Provision of land for a new primary school on this site is considered unlikely given the size of the site and anticipated number of dwellings that could be delivered, and a site elsewhere may need to be found. In the light of the education constraints, development is likely to have moderate adverse effects against SA Objective 9.</p> <p>Options are currently being considered for secondary education in Salisbury. All existing secondary schools (including academies) are capable of being expanded to cater for additional pupil numbers. Full contributions are being sought from all developments towards expansion of Sarum Academy.</p>
--	--

Assessment outcome (on balance) --+

SUMMARY OF SA OBJECTIVE 9

The provision of approx. 255 dwellings in this location will help to reduce poverty and deprivation in the local and wider community through provision of a range of house sizes and tenures and help to promote more inclusive and self-contained communities. Housing provision will also provide some short-term construction jobs and a larger workforce for local businesses.

However, on the basis of evidence supplied by the Wiltshire Clinical Commissioning Group (WCCG), all 6 GP surgeries in Salisbury face capacity issues with expected population increase in Salisbury to 2026. If this large site was developed for housing, mitigation would be required to support additional patient capacity. This is a significant issue in Salisbury.

The site falls in the catchment area of Old Sarum primary school. It is likely that the primary education needs of this site could be met partly through capacity at this school and from a new school planned on the Longhedge site. It is likely that full S106 contributions would be needed for both primary and secondary places. ~~The site falls in the catchment area of Wyndham Infants and St Mark's Junior. Due to capacity issues, neither school would have enough places to meet demand generated by this size of development. The Infant School is on a small site, but the Juniors site is larger and may offer some expansion potential,~~

although it is not known if it could be expanded sufficiently to cater for demand from this site. A site for a new primary school, ideally of at least 1.8ha that could accommodate up to 2 forms of entry (420 pupils), may be needed either onsite or in the vicinity of this site for development to proceed. Provision of land for a new primary school on this site is considered unlikely given the size of the site and anticipated number of dwellings that could be delivered, and a site elsewhere may need to be found.

Considering all likely effects against this objective, in the light of the education constraints, development **of this site** is considered likely to have moderate adverse **positive** effects **overall** against SA Objective 9.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site could potentially provide opportunities to improve cycling and walking routes to local services/facilities/employment. However, the site is not within reasonable walking/cycling distance of most services and facilities in Salisbury.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	In accordance with local plan/Local Transport Plan policies, the site would have the potential to incorporate new cycling infrastructure as well as create links to existing cycling infrastructure.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	Site is removed from the city centre and therefore residents would rely on the private car, although it is close to the new development at Old Sarum and Longhedge which is within walking and cycling distance to the site. Overall, development of this site is likely to increase private car journeys in the area, and increase the need to travel.

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 10

The site is located to the north of Salisbury, 3km from the city centre. Residents would rely on the private car, although it is close to the new development at Old Sarum and Longhedge which is within walking and cycling distance to the site.

A PRoW runs along the eastern boundary of the site. Assuming this remains open during construction and operation, or redirected if required, no adverse effects are

considered likely.

Overall, development of this site is likely to increase private car journeys in the area, and increase the need to travel and is considered to have a minor adverse effect against this objective.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...

1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	This site is not in a city centre location. Although the focus of the DPD is not on retail, leisure and/or employment provision, the provision of new dwellings on this site would increase the population of the area and therefore potentially assist in the support of viable local retail, leisure and/or employment opportunities in the city centre.
2. Support the rural economy?	The site would significantly boost the number of homes in Salisbury and thereby increase the population of the area. This would potentially assist in the support of rural services and facilities.

Assessment outcome (on balance) + +

SUMMARY OF SA OBJECTIVE 11

Development of the site would not lead to the loss of designated employment land. Development would increase the local population and could contribute to the local economy through use of local shops and services.

Development of this site will create construction jobs in the short-term and provide an increased workforce for local businesses in the medium-long term. No adverse effects are thought likely. Overall, moderate benefits are considered likely against this objective.

SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce

Decision Aiding Questions. Will the development site...

1. Protect and enhance the vitality and viability of existing employment areas?	In accordance with local plan policy, the development of the site for housing would have the potential to support the vitality and viability of existing and new employment areas at Old Sarum and Longhedge. Development of the site would not lead to the loss of designated employment land.
2. Provide a focus for development in	In accordance with local plan policy, the development of the site for housing would focus development in Salisbury, a

Salisbury and Trowbridge?	Principal Settlement. Development would support local businesses and provide an increased workforce for local businesses.
Assessment outcome (on balance) +	
SUMMARY OF SA OBJECTIVE 12	
<p>Development of the site would not lead to the loss of designated employment land. Although the site allocation would be for housing, this in itself would generate direct and indirect construction employment, and help stimulate the local economy once built. It has the potential to support the vitality and viability of existing employment areas.</p> <p>Overall, minor benefits are likely against this objective.</p>	

Site S159 - Land to the North of Downton Road, Salisbury

Site context	
<p>Site size: 13.53ha Site capacity: approximately 203 dwellings</p> <p>The site is currently in agricultural use. There is an existing road, Lower Road, which runs along the eastern boundary of the site. There is a low hedgerow which runs along the southern boundary of the site adjacent to Downton Rd, with more mature trees lining the northern boundary which meets the River Avon. Possible coalescence issues with Britford as the eastern part of the site abuts Bridge Farm. Views of the steeple of the cathedral can be seen from the site. Existing residential development lies to the west of the site.</p>	
SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses	
Decision Aiding Questions. Will the development site...	
1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?	Development of this greenfield site may have some limited adverse effects regarding fragmentation of existing habitats, such as hedgerows and trees on the site boundaries. However, the site is currently in arable use and has the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.
2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including	The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased water abstraction, increased phosphate loading, and habitat loss / damage. An appropriate assessment (including further HRA consideration) would be required if the site is taken forward into any subsequent stage of the selection process.

buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?	The site is very close to the River Avon SSSI / SAC, and buffers / green space may be needed to mitigate impacts. The rest of the site appears to have been reseeded in the recent past and is likely to be of negligible ecological value.
3. Result in greater community engagement with biodiversity?	There are no designated or non-designated biodiversity features within or adjacent to this site. It is unlikely that development of this site would lead to greater community engagement with biodiversity.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	There is a hedgerow along the northern border of the site. Development of the site for housing would need to make suitable provision for buffers to protect all biodiversity features.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
6. Ensure all new developments have regard to and protect BAP habitats/species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species. Hedgerows should be retained wherever possible and enhanced, and additional hedgerow planting or other habitat creation should be included in line with Para 118 of NPPF.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased phosphate loading, and habitat loss / damage.
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland features. Protection should be given to any individual trees, woodland belts and hedgerows within the site and at site boundaries.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the settlement does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in	Not applicable – the site does not fall within one of the Council’s current guidance areas.

relevant areas?	
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS). There are no LGS within or in close proximity to this site.
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 1	
<p>The site is situated close to the River Avon SSSI / SAC, and buffers / green space may be needed to mitigate impacts. The rest of the site appears to have been reseeded in the recent past and is likely to be of negligible ecological value. Hedgerows should be retained wherever possible and enhanced, and additional hedgerow planting or other habitat creation should be included in line with Para 118 of NPPF. Further ecological assessment of this site will be required.</p> <p>The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased phosphate loading, and habitat loss / damage. Significant in-combination effects may make mitigation for phosphate challenging at this location.</p> <p>Overall, moderate adverse effects are considered likely against this objective due to the potential impacts on the River Avon SAC and mitigation is likely to be problematic.</p>	
SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings	
Decision Aiding Questions. Will the development site...	
1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?	<p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence.</p> <p>The site is situated on the southern edge of Salisbury. As the site is on the edge of the settlement it is not considered to be within a reasonable walking/cycling distance (1.8km) to the city centre. Future residents will rely on the private vehicle to access some of the city centre services which are not within walking or cycling distance. Development density would be fairly low due to the size of the site and also due to the fact that there would need to be a certain degree of landscape mitigation due to the site's fairly prominent location and views in/out of site.</p>
2. Maximise reuse of previously developed land where possible/appropriate?	The site is greenfield and does not appear to include any previously developed land. Maximising previously developed land would therefore be unlikely.

3. Encourage remediation of contaminated land?	The site is located on greenfield land, as opposed to brownfield (i.e. previously developed land). On the basis of available evidence, it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing. However, if evidence becomes available which suggests that there may be land contamination, an assessment would be required as part of any future planning application to establish a remediation and mitigation strategy.
4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures and it is considered that development of this site could incorporate an appropriate design and layout that supports sustainable waste management. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	No issues with soil quality are known at this site. In line with national and local planning policy, development of this site should seek to ensure that soil quality and structure are appropriately protected.
6. Protect the best and most versatile appropriate and available agricultural land?	This site is partially within Grade 1, 2 or 3a BMV agricultural land and therefore development of this site may lead to the loss of BMV agricultural land. Where possible, development on this site should be located so as to reduce the loss of BMV. Given the scale of development, minor adverse effects are anticipated.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 2</p> <p>This is a greenfield site with little or no potential for making use of previously developed land. The site is situated on the southern edge of Salisbury. As the site is on the edge of the settlement it is not considered to be within a reasonable walking/cycling distance (1.8km) to the city centre.</p> <p>This site is partially within Grade 1, 2 or 3a BMV agricultural land and therefore development of this site may lead to the loss of BMV agricultural land. Where possible, development on this site should be located so as to reduce the loss of BMV.</p> <p>There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Mineral Safeguarding Area. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p>	

Overall, this site is considered likely to have minor adverse effects against this objective.

SA objective 3. Use and manage water resources in a sustainable manner

Decision Aiding Questions. Will the development site...

1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?	In line with national and local planning policy / practice, the development of the site for housing would be capable of positively responding to the predicted effects of climate change. The site falls within the catchment area supplied by Wessex Water.
2. Ensure that essential water infrastructure is co-ordinated with all new development?	In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. It would need to be confirmed whether any network reinforcement is necessary to maintain satisfactory service levels. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.
3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?	In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures/technologies and no adverse effects are foreseen.
4. Consider the need for adequate provision of surface water and foul drainage?	Where appropriate, the development of this site may need to make provision for on-site surface and foul water drainage which is considered possible on this site. There is limited capacity in the local water mains and network reinforcement would be required. There are local sewerage connections available at the northern site boundary. Consideration should be given to the inclusion of Sustainable Drainage Systems to control the risk of surface water flooding from impermeable surfaces.
5. Protect, and where possible, improve surface, ground and drinking water quality?	In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality.
6. Encourage sustainable and efficient management of water resources, including consideration of the potential	The site falls within the catchment of the Hampshire Avon and in a high risk catchment for phosphate loading which will need to be considered further through an appropriate assessment if the site is taken forward into any subsequent stage of the

<p>impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?</p>	<p>selection process. The Lower Avon sub-catchment is not understood to be at risk of low-flows from abstraction.</p>
<p>Assessment outcome (on balance) - -</p>	
<p>SUMMARY OF SA OBJECTIVE 3</p> <p>Residential development on this site will lead to an increase in demand for water in the area. There is no evidence to suggest that development of the site for housing could not be supported by additional water and sewerage infrastructure to cope with demand. The site is not covered by a Source Protection Zone.</p> <p>The site falls within the catchment of the Hampshire Avon and in a high risk catchment for phosphate loading which will need to be considered further.</p> <p>There is limited capacity in the local water mains and network reinforcement would be required. There are local sewerage connections available at the northern site boundary. It would need to be confirmed whether any network reinforcement is necessary to maintain satisfactory service levels.</p> <p>Consideration should be given to the inclusion of Sustainable Drainage Systems onsite to control the risk of surface water flooding from impermeable surfaces.</p> <p>Development of this site will lead to an increase in demand for water and there are significant issues of concern with this site against this objective due to its location in the catchment of the Hampshire Avon. Overall, moderate adverse effects are considered likely against this objective.</p>	
<p>SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution</p> <p>Decision Aiding Questions. Will the development site...</p>	
<p>1. Maintain and improve local air quality?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. It is likely to significantly increase traffic on local roads, which may impact on local air quality. However, the site does not fall within an Air Quality Management Area (AQMA) designation in Salisbury.</p> <p>Development is likely to increase local commuter traffic, which may impact on local air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could assist in providing opportunities to improve local air quality through making purchasers/future occupiers aware of Car Share</p>

	Wiltshire as well as the ability to charge electric cars at home.
2. Minimise and, where possible, improve on unacceptable levels of noise, light pollution, odour and vibration through the layout, design and/or location of development?	<p>Along the western boundary of the site lies an existing residential development, therefore the site is already affected by noise and light pollution from other residential dwellings and street lighting. Mitigation measures to limit impacts of noise, light, odour and other forms of pollution would need to be developed and implemented through significant survey work in accordance with local plan policy and advice from relevant bodies. Assessments of road traffic noise impacts and impacts from adjacent agricultural uses may be required.</p> <p>Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p>
3. Mitigate the impacts from uses that generate NO ₂ , SO ₂ and PM ₁₀ or other particulates?	Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Generation of NO ₂ , SO ₂ and PM ₁₀ is most likely to arise from residents' private car usage as will be the case with any new residential development. The nearest bus stops are located approx. 100m from the site on Downton Road (A338). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.
4. Seek to reduce development in or near to AQMAS ¹¹⁸ ?	This site is not situated within or adjacent to the Air Quality Management Area (AQMA) in Salisbury city centre. It is within approx. 1km of the boundary. Development of the site for housing may have some adverse impacts on this designation but it is considered unlikely to lead to a significant exacerbation of local air quality issues and/or legal compliance targets.
5. Ensure that air quality impacts on local biodiversity sites are avoided?	While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on local biodiversity sites. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.

¹¹⁸ Westbury, Bradford-on-Avon, Salisbury, Devizes, Marlborough and Calne

<p>6. Seek to contribute to air quality improvements by locating new development so as to reduce the need to travel by private car?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>This site is in reasonable proximity to the range of services and facilities in Salisbury city centre but vehicle usage is still likely to increase in the area.</p>
<p>7. Ensure that potential impacts from air quality on relevant SACs are avoided?</p>	<p>While development of the site may lead to an increase in vehicular movements, these are unlikely to denigrate local air quality to the extent that this would impact on SACs. Where necessary, air quality strategies will be developed and implemented in accordance with CP55 to address environmental impacts.</p>
<p>Assessment outcome (on balance) -</p>	
<p>SUMMARY OF SA OBJECTIVE 4</p> <p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p> <p>This site is not situated within or adjacent to the Air Quality Management Area (AQMA) in Salisbury city centre. It is within approx. 1km of the boundary. Development of the site for housing may have some adverse impacts on this designation but it is considered unlikely to lead to a significant exacerbation of local air quality issues and/or legal compliance targets.</p> <p>Overall, development of this site is likely to have minor adverse effects against this objective.</p>	
<p>SA objective 5a. Minimise our impacts on climate change – through reducing greenhouse gas emissions</p> <p>Decision Aiding Questions. Will the development site...</p>	
<p>1. Minimise emissions of greenhouse gases and ozone depleting substances?</p>	<p>Development of the site for housing would have the potential to increase greenhouse gas emissions due to emissions generated through the construction and occupation of the development. These emissions could be mitigated through the design process, as set out in 'Delivering strategic objective 2: to address climate change' and Core Policy 41 of the Wiltshire Core Strategy, by incorporating design measures to reduce demand and/or by ensuring as much access as possible to sustainable modes of transport.</p>
<p>2. Promote the development of renewable and low carbon sources of</p>	<p>Promotion and development of low carbon sources could be brought about through the design and planning process, with all proposals for major development being required to submit a Sustainable Energy Strategy (Core Policy 41 of the Wiltshire</p>

energy?	Core Strategy), which will outline the low-carbon strategy for the proposal. On smaller developments, it will be a requirement that building design incorporates building integrated renewable or low carbon technologies.
3. Promote energy efficiency in buildings and new development?	Promotion of energy efficiency will be encouraged through the design process, with new homes incorporating design measures to reduce energy demand such as passive heating measures and passive ventilation.
4. Minimise contributions to climate change through sustainable building practices?	Sustainable building practices will be encouraged on a site by site basis through the consideration of passive design measures to promote a reduction in energy consumption by the development. The use of Construction Management Plans for the construction phase could also encourage sustainable building practices.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 5a	
<p>Minimising the impacts of climate change through reducing greenhouse gas emissions will be possible through the implementation of measures outlined in 'Delivering strategic objective 2: to address climate change' and the related 'Core Policy 41: Sustainable construction and low carbon energy' of the Wiltshire Core Strategy. These measures will ensure the incorporation of design measures to reduce energy demand and increase energy efficiency, as well as the promotion of low carbon energy sources and encouragement of sustainable building practices.</p> <p>However, the effect of the development of this site will be to increase greenhouse gas emissions overall and on balance this site is considered to have a minor adverse impact in relation this SA objective.</p>	
SA objective 5b. Minimise our impacts on climate change – through reducing our vulnerability to future climate change effects	
Decision Aiding Questions. Will the development site...	
1. Take into account the predicted future impacts of climate change in the location and design of development, ensuring that development can adapt to any future flood risk scenarios?	<p>Although the site is located within Flood Zone 1 it is adjacent to Flood Zone 2/3 and approx. 300m from the River Avon itself. Buffers will need to be put in place to the north of the site to ensure against risk of fluvial flooding from main river and/or ordinary watercourses. Consideration should be given to sequentially planning the development of the site to ensure that the risk of flooding is alleviated. Further detailed modelling work (SFRA Level 2) may be required to substantiate whether or not the site can be developed without risk of flooding from fluvial sources.</p> <p>The location and design of any new development on this site should be planned to avoid increased vulnerability to the range of impacts predicted to arise from climate change, including flood risk, water supply and changes to biodiversity and landscape.</p>
2. Ensure that development can adapt to the predicted future impacts of	It is considered that any future development of this site could incorporate appropriate measures to adapt to the predicted future impacts of climate change, through site design and layout. As a result of changing climate already in the system, it is

climate change?	<p>anticipated that in the future Wiltshire will experience hotter summers, milder winters, increased periods without rain, increased intensity in rainfall and more extreme weather events.</p> <p>Development would need to include climate change adaptation measures such as designing to prevent overheating, for heat resistant landscaping, for more resilient foundations, for drought resistant planting and for generally more resilient buildings and spaces (general design and robust materials).</p>
3. Promote provision of surface water attenuation measures to reduce the risk of flooding including: Sustainable Drainage Systems (SuDS)?	The site has the potential to accommodate appropriate SuDS measures to manage surface water run-off from built form.
4. Minimise the risk of flooding to people and property (new and existing development)?	The site is located within Flood Zone 1. However, it is adjacent to Flood Zone 2/3 and approx. 300m from the River Avon itself. Buffers will need to be put in place to the north of the site to ensure against risk of fluvial flooding from main river and/or ordinary watercourses.
5. Protect and enhance the natural function of floodplains?	In accordance with national and local policy provisions, the development of the site would not affect the areal extent and function of the floodplain, although the floodplain is adjacent to the site.
Assessment outcome (on balance) -	
SUMMARY OF SA OBJECTIVE 5b	
<p>The site is located within Flood Zone 1. However, it is adjacent to Flood Zone 2/3 and approx. 300m from the River Avon. Buffers will need to be put in place to the north of the site to ensure against risk of fluvial flooding from main river and/or ordinary watercourses. Consideration should be given to sequentially planning the development of the site to ensure that the risk of flooding is alleviated. Further detailed modelling work (SFRA Level 2) may be required to substantiate whether or not the site can be developed without risk of flooding from fluvial sources.</p> <p>It is considered that it would be possible to mitigate flood risk by sequentially planning development to avoid areas of flood risk and incorporate an appropriate buffer to FZ 2/3. Overall, minor adverse effects are considered likely against this objective.</p>	
SA objective 6. Protect, maintain and enhance the historic environment	
Decision Aiding Questions. Will the development site...	
1. Conserve and enhance features and areas of historical and cultural value, including Listed Buildings,	The site is located directly adjacent to the Salisbury Conservation Area and is approx. 60m away from listed barns associated with the listed building Bridge Farmhouse which is approx. 100m away. A development of this size in such close proximity to the CA and listed buildings raises concerns about potential impacts on these designations. Development on this site would

Conservation Areas, Scheduled Monuments and Historic Parks & Gardens?	also raise concerns about development infilling between Salisbury and Britford which would also contribute towards potential for harm to the setting of Britford Conservation Area. A Heritage Impact Assessment would be required.
2. Ensure appropriate archaeological assessment prior to development?	The site has a medium/high archaeological potential therefore an assessment would need to be undertaken in support of any subsequent planning application. In terms of historic landscape the site has a potentially low sensitivity score; it is described as modern fields which enclose meadow land – common / frequent landscape character.
3. Promote sensitive re-use of historical buildings and buildings of significant local interest, where appropriate?	The site is greenfield and contains no existing buildings, and as such no opportunity to reuse historical buildings or buildings of significance is presented.
4. Maintain and enhance the character and distinctiveness of settlements through high quality and appropriate design, taking into account the management objectives of Conservation Areas?	In accordance with national policy/local policy, the development of the site for housing could deliver housing that maintains and enhances the distinctiveness of settlements through high quality design. However, the proximity of this site to the Britford Conservation Area and individual listed buildings means that designing a development of this size to enhance their character could be difficult to achieve. .
5. Where appropriate, contribute to 'saving' heritage sites identified as being 'at risk'?	Development of this site is unlikely to contribute to saving any heritage sites identified as being at risk. There are no buildings on the HE 'at risk' register within proximity of this site.
6. Protect, manage and present the Stonehenge and Avebury WHS in accordance with international obligations?	The site is not within a location which is likely to result in impacts to the Stonehenge and Avebury WHS and their settings.
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 6	
The site is located adjacent to the Salisbury Conservation Area and in close proximity to listed buildings at Bridge Farm. It also raises concerns about development infilling between Salisbury and Britford which would also contribute towards potential for harm to the setting of the Britford Conservation Area. A development of this size in such close proximity to these CAs and listed buildings raises significant concerns about potential impacts on these designations.	

The site is considered to have medium / high archaeological potential and archaeological assessment would be required in support of any subsequent planning application.

A Heritage Impact Assessment would need to be undertaken to support any future development at this site, including a detailed analysis of any adverse effects that development may have on nearby heritage assets and how these could be mitigated.

Overall, it is considered that there are likely to be moderate adverse effects against this objective.

SA objective 7. Conserve and enhance the character and quality of Wiltshire’s rural and urban landscapes, maintaining and strengthening local distinctiveness and sense of place

Decision Aiding Questions. Will the development site...

1. Protect and enhance the landscape character and scenic quality of the countryside?	<p>The site is located within near to a Special Landscape Area (saved SDLP policy C6) located to the south of the site. The site is located in a rural fringe setting. Development of the site would result in the loss of an arable field. Effects on the landscape are likely to include adverse impacts on the settlement of Britford and on the river Avon valley.</p> <p>The Landscape Character of this site falls within the Chalk River Valley (5B Lower Avon Chalk River Valley) typology, according to the Wiltshire Landscape Character Assessment¹¹⁹.</p>
2. Aid in the delivery of a network of multifunctional Green Infrastructure, in line with the Wiltshire Green Infrastructure Strategy?	In accordance with local plan policy and guidance, the development of the site for housing could offer the potential to deliver Green Infrastructure. There would be a requirement for a GI buffer to any mature trees and hedgerows within and adjacent to the site and to mitigate landscape impacts on Britford and the river Avon valley.
3. Lead to a net improvement in the	In accordance with local plan policy and guidance, the development of the site for housing would offer the potential to deliver

¹¹⁹ Wiltshire Landscape Character Assessment (Land Use Consultants, December 2005)

quality and quantity of access to urban greenspace and the wider countryside for recreation?	additional access to and availability of urban greenspaces.
4. Conserve and enhance areas with landscape designations and take account of their management objectives, in particular for the three local AONBs ¹²⁰ ?	The site does not fall within the boundary or near to any statutory landscape designations, although it is located within <u>near to</u> a Special Landscape Area (saved SDLP policy C6) <u>located to the south of the site.</u>
5. Protect rights of way, open space and common land?	There is no designated open space or common land within the site. Byways BRIT 21 and SALS19 run along the northern boundary of the site. Assuming that these right of ways remain open during construction and operation, no adverse effects are likely on the accessibility of the PROW. There is however likely to be an adverse effect on the views from these sensitive visual receptors, however this could be somewhat mitigated through an appropriate GI buffer.
6. Protect the Western Wiltshire Green Belt from inappropriate development?	In accordance with national policy/local plan policy, the development of the site would not lead to a reduction in the openness of the Western Wiltshire Green Belt.
Assessment outcome (on balance) - -	
SUMMARY OF SA OBJECTIVE 7	
Development of this large site for housing is likely to adversely impact on the setting of Britford, and the river Avon valley. There is existing development to the south and west of the site but to the north and east there is potential for significant landscape impacts. The site is located within <u>near to</u> a Special Landscape Area (saved SDLP policy C6) <u>located to the south of the site.</u>	

¹²⁰ Cotswold AONB, Cranbourne Chase and West Wiltshire AONB, North Wessex Downs AONB

Byways BRIT 21 and SALS19 run along the northern boundary of the site. Assuming that this right of ways remain open during construction and operation, no adverse effects are likely on the accessibility of the PROW.

Overall, moderate effects are considered likely against this objective due to the proximity of the river Avon valley and the small rural settlement of Britford and potential coalescence concerns that could be problematic to mitigate.

SA objective 8. Provide everyone with the opportunity to live in good quality, affordable housing, and ensure an appropriate mix of dwelling sizes, types and tenures

Decision Aiding Questions. Will the development site...

1. Provide an adequate supply of affordable housing?	The development of the site for housing would help significantly boost the local supply of affordable houses in accordance with national policy and local plan policy requirements.
2. Support the provision of a range of house types and sizes to meet the needs of all sectors of the community?	In accordance with local plan policy and national standards, the development of this site is capable of delivering high quality, sustainable homes of different types and tenures. The development of this site will have significant benefits in terms of providing a wide range of house types, sizes and tenures to meet the housing needs of a wide cross-section of the community.
3. Ensure adequate provision of land to meet housing needs?	In accordance with national policy/local plan policy, the allocation of the site would significantly boost housing supply to help meet local and HMA housing needs.
4. Have regard to the settlement hierarchy?	In accordance with local plan policy, the allocation and development of the site would appropriately respect the settlement hierarchy and thereby reduce the risk of speculative development in unsustainable locations. Salisbury, designated as a Principal Settlement in the Core Strategy, has the ability to support sustainable patterns of growth through its level of facilities, services and employment opportunities.
5. Ensure an adequate provision of housing in the towns to accommodate employment expansion?	In accordance with local plan policy, the allocation of the site for housing would assist in bolstering local opportunities for accessing employment.
6. Consider the emerging Neighbourhood Plans?	Wiltshire Council is not aware that a Neighbourhood Plan is currently being progressed in Salisbury. <u>It is understood that work on a Salisbury neighbourhood plan has commenced by the city council but is not at an advanced stage.</u>
7. Provide for an adequate range of housing in rural areas, whilst avoiding isolated dwellings?	In accordance with national policy/local plan policy, the allocation of the site would boost housing delivery at Salisbury and would not prejudice the delivery of suitable and sustainable development to come forward at the more rural communities.

Assessment outcome (on balance) + + +

SUMMARY OF SA OBJECTIVE 8

Delivery of this site for approximately 203 dwellings would contribute towards Wiltshire’s and Salisbury’s housing supply. A development on this site would help to meet local housing needs in accordance with the policies of the Core Strategy, and has the potential to deliver a significant level of affordable units alongside open market units. Overall allocation of this site would meet the aim of SA Objective 8 and major benefits are considered likely against this objective.

SA objective 9. Reduce poverty and deprivation and promote more inclusive and self- contained communities

Decision Aiding Questions. Will the development site...

1. Promote design of buildings and spaces to reduce crime and the fear of crime?	In accordance with national policy/local plan policy, the development of the site would provide opportunities for high quality design and layout that would enable social integration and inclusion whilst incorporating features to help reduce crime and the fear of crime.
2. Promote design of buildings and spaces to reduce obesity?	In accordance with national policy/local plan policy and best practice, the allocation and development of this site could provide opportunities to enable residents and non-residents to be physically active through appropriate design and provision of public open space and children’s play areas and accessible cycling and walking routes to local services/ facilities/ employment. The allocation and development of the site could potentially provide opportunities to improve cycling.
3. Promote the design of buildings and spaces to meet the changing needs of the population?	In accordance with national policy/local plan policy the allocation and development of the site could provide flexibly designed accommodation to meet the changing needs of the population. This could include buildings and spaces to meet the needs of an ageing population as well as disabled people, families and young people.
4. Ensure that new development will be accessible to health facilities, and that they are able to cope with the additional demand?	This site is not considered to be within walking distance of the nearest GP surgeries which are located in the city centre but there is public transport availability nearby. On the basis of evidence supplied by the Wiltshire Clinical Commissioning Group (WCCG), all 6 GP surgeries in Salisbury face capacity issues with expected population increase in Salisbury to 2026 and an impact assessment would be required. If this site was developed for housing, mitigation would be required to support additional patient capacity.
5. Maximise opportunities within the most deprived areas?	In accordance with national policy/local plan policy, the allocation of this site would increase opportunities for local people to access a range of house types, sizes and tenures and thereby help reduce deprivation and increase social inclusion in the area. There would be some social and economic benefits for the Salisbury area through housing provision, short-term construction jobs and a larger workforce for local businesses.
6. Reduce rural isolation, including	Development of this site in Salisbury is unlikely to reduce rural isolation to any great extent as the housing will be located in

access to services for those without a car in rural areas?	Salisbury and will be meeting the needs of Salisbury primarily.
7. Support the development of community campuses?	In accordance with the council's Business Plan objectives, the allocation and development of the site could potentially assist in the delivery of the Five Rivers Health and Wellbeing Centre.
8. Is the site accessible to local schools and is there capacity to cope with the additional demand generated from the site?	<p>The site is within the Longford Primary school catchment. The school only has 3 classes and is on a very small site. The next nearest schools are the Harnham Schools which are full and also not capable of expansion. A site for a new primary school, ideally of at least 1.8ha that could accommodate up to 2 forms of entry (420 pupils), may be required either onsite or in the vicinity of this site for any development to proceed. Provision of land for a new primary school on this site is considered unlikely given the size of the site and anticipated number of dwellings that could be delivered, and a site elsewhere may need to be found.</p> <p>Options are currently being considered for secondary education in Salisbury. All existing secondary schools (including academies) are capable of being expanded to cater for additional pupil numbers. Full contributions are being sought from all developments towards expansion of Sarum Academy.</p>
Assessment outcome (on balance) - -	
<p>SUMMARY OF SA OBJECTIVE 9</p> <p>The provision of approximately 203 dwellings in this location will help to reduce poverty and deprivation in the local and wider community through provision of a range of house sizes and tenures and help to promote more inclusive and self-contained communities. Housing provision will also provide some short-term construction jobs and a larger workforce for local businesses.</p> <p>This site is not considered to be within walking distance of the nearest GP surgeries which are located in the city centre but there is public transport availability nearby.</p> <p>On the basis of evidence supplied by the Wiltshire Clinical Commissioning Group (WCCG), all 6 GP surgeries in Salisbury face capacity issues with expected population increase in Salisbury to 2026 and an impact assessment would be required. If this site was developed for housing, mitigation would be required to support additional patient capacity.</p> <p>The site is within the Longford Primary school catchment. The school only has 3 classes and is on a very small site. The next nearest schools are the Harnham Schools which are full and also not capable of expansion. A site for a new primary school, ideally of at least 1.8ha that could accommodate up to 2 forms of entry (420 pupils), may be required either onsite or in the vicinity of this site for any development to proceed. At the current time, there are no details of any such provision planned for this site and further information would be required. Provision of land for a new primary school on this site is considered unlikely given the size of the site and anticipated number of dwellings that could be delivered, and a site elsewhere may need to be found.</p>	

In the light of the education constraints, development is likely to have moderate adverse effects against SA Objective 9.

SA objective 10. Reduce the need to travel and promote more sustainable transport choices

Decision Aiding Questions. Will the development site...

1. Increase walking and cycling accessibility through the use of developer contributions and site design?	In accordance with national policy/local plan policy and best practice, the allocation and development of the site could potentially provide opportunities to improve cycling and walking routes to local services/facilities/employment.
2. Ensure new development incorporates facilities and infrastructure for cyclists?	In accordance with local plan/Local Transport Plan policies, the site would have the potential to incorporate new cycling infrastructure as well as create links to existing cycling infrastructure.
3. Improve the jobs/homes balance, to reduce out-commuting?	The purpose of the Plan is to allocate land solely for housing development and not employment use. The likely effects on jobs/homes balance over a wider area cannot be ascertained at the level of an individual site.
4. Promote developments in accessible locations that reduce the need to travel and reliance on the private car?	<p>The site is 1.8km from the city centre and therefore would not be very accessible by walking or cycling. The site is opposite the Park and Ride therefore there are frequent bus journeys directly into the city centre which would reduce the reliance on the private car.</p> <p>Overall, development of this site is likely to increase private car journeys in the area, and increase the need to travel.</p>

Assessment outcome (on balance) -

SUMMARY OF SA OBJECTIVE 10

The site is 1.8km from the city centre and therefore would not be very accessible by walking or cycling. The site is opposite the Park and Ride therefore there are frequent bus journeys directly into the city centre which would reduce the reliance on the private car.

A PRow runs along the northern boundary of the site. Assuming this remains open during construction and operation, or redirected if required, no adverse effects are considered likely. Overall, this site is considered as having a minor adverse effect against this objective due to the inevitable increase in car journeys associated with the development.

SA objective 11. Encourage a vibrant and diversified economy and provide for long-term sustainable economic growth

Decision Aiding Questions. Will the development site...	
1. Support appropriate retail, leisure and/or employment opportunities in town centre locations to aid urban regeneration?	This site is not in a city centre location. Although the focus of the DPD is not on retail, leisure and/or employment provision, the provision of a significant number of new dwellings on this site would increase the population of the area and therefore potentially assist in the support of viable local retail, leisure and/or employment opportunities in the city centre.
2. Support the rural economy?	The site would significantly boost the number of homes in Salisbury and thereby increase the population of the area. This would potentially assist in the support of rural services and facilities.
Assessment outcome (on balance) + +	
SUMMARY OF SA OBJECTIVE 11	
Development of the site would not lead to the loss of designated employment land.	
Development would increase the local population and could contribute to the local economy through use of local shops and services. Development of this site will create construction jobs in the short-term and provide an increased workforce for local businesses in the medium-long term. No adverse effects are thought likely.	
Overall, moderate benefits are considered likely against this objective.	
SA objective 12. Ensure adequate provision of high quality employment land and diverse employment opportunities to meet the needs of local businesses and a changing workforce	
Decision Aiding Questions. Will the development site...	
1. Protect and enhance the vitality and viability of existing employment areas?	In accordance with local plan policy, the development of the site for housing would have the potential to support the vitality and viability of existing employment areas. Development of the site would not lead to the loss of designated employment land.
2. Provide a focus for development in Salisbury and Trowbridge?	In accordance with local plan policy, the development of the site for housing would focus development in Salisbury, a Principal Settlement. Development would support local businesses and provide an increased workforce for local businesses.
Assessment outcome (on balance) +	
SUMMARY OF SA OBJECTIVE 12	
Development of the site would not lead to the loss of designated employment land. Although the site allocation would be for housing, this in itself would generate direct	

and indirect construction employment, and help stimulate the local economy once built. It has the potential to support the vitality and viability of existing employment areas.

Overall, minor benefits are considered likely against this objective.

Site S178 - Land to the South of Roman Road, Old Sarum, Salisbury

Site context

Site size: 12.60ha Site capacity: approximately 187 dwellings

The site is made up of agricultural land to the north of Salisbury, overlooking the pig farm to the north. The only point of access is from Old Castle Road. The site is overlooked from Old Sarum. The site slopes downwards from south to north. There is a clump of trees to the south eastern corner of the site, adjacent. Existing residential development to the south west of the site. Farm buildings about the northern boundary of the site.

SA objective 1. Protect and enhance all biodiversity and geological features and avoid irreversible losses

Decision Aiding Questions. Will the development site...

<p>1. Avoid habitat fragmentation including prejudicing future biodiversity restoration?</p>	<p>Development of this large greenfield site may have some adverse effects regarding fragmentation of existing habitats, such as hedgerows and tree belts on the site boundaries. However, the site is currently in arable use and has the potential to make appropriate provision for Green Infrastructure to reduce the risk of habitat fragmentation and allow appropriate restoration.</p>
<p>2. Ensure all new developments protect and enhance local biodiversity through the adoption of appropriate mitigation measures including buffering existing important sites and species (including ancient woodland, CWSs, SSSIs, SACs, SPAs and locally designated sites) and creating biodiversity features within new development resulting in a net gain?</p>	<p>The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased water abstraction, increased phosphate loading, and habitat loss / damage. An appropriate assessment (including further HRA consideration) would be required if the site is taken forward into any subsequent stage of the selection process.</p>

3. Result in greater community engagement with biodiversity?	There are no designated or non-designated biodiversity features within or adjacent to this site. It is unlikely that development of this site would lead to greater community engagement with biodiversity.
4. Require protection and provision of green corridors and river corridors, with use of buffer strips, where necessary?	No river corridors within or adjacent to this site. There is a significant tree belt and hedgerow at the southern and south-western boundaries. Development of the site for housing would need to make suitable provision for buffers to protect all biodiversity features.
5. Aid in the delivery of a network of multifunctional Green Infrastructure?	In accordance with local plan policy and planning guidance, the development of the site would be capable of delivering multi-functional Green Infrastructure that will protect and enhance existing biodiversity features and species and allow for biodiversity gain.
6. Ensure all new developments have regard to and protect BAP habitats/species?	In accordance with local plan policy and biodiversity targets, the development of the site for housing would be capable of protecting BAP habitats/species. There is a significant tree belt and hedgerow at the southern and south-western boundaries which should be retained and enhanced, and additional hedgerow planting or other habitat creation should be included in line with Para 118 of NPPF.
7. Consider the findings of the HRA in site selection and design?	The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased phosphate loading, and habitat loss / damage.
8. Maintain the existing extent of ancient woodland sites?	The development of the site would not affect ancient woodland features. Protection should be given to any individual trees, woodland belts and hedgerows within the site and at site boundaries.
9. Require that disturbance impacts of proposed development are assessed as part of development proposals, particularly in relation to Salisbury Plain and New Forest SPAs?	Not applicable – the settlement does not fall within the visitor catchments of the New Forest or Salisbury Plain SPAs.
10. Consider Wiltshire Council guidance to maintain SAC integrity in relevant areas?	Not applicable – the site does not fall within one of the Council’s current guidance areas
11. Ensure that all new developments protect Local Geological Sites (LGSs) from development?	The development of the site would be unlikely to lead to impacts on designated Local Geological Sites (LGS). There are no LGS within or in close proximity to this site.

Assessment outcome (on balance) - -

SUMMARY OF SA OBJECTIVE 1

There are no designated or non-designated biodiversity features within or adjacent to this site. There is a significant tree belt and hedgerow at the southern and south-western boundaries which should be retained and enhanced, and additional hedgerow planting or other habitat creation should be included in line with Para 118 of NPPF. Further ecological assessment of this site will be required.

The HRA screening assessment has identified that development at the settlement could contribute towards impacts upon the River Avon SAC through increased phosphate loading, and habitat loss / damage. Significant in-combination effects may make mitigation for phosphate challenging at this location.

Overall, moderate adverse effects are considered likely against this objective due to the potential impacts on the River Avon SAC and mitigation is considered problematic.

SA objective 2. Ensure efficient and effective use of land and the use of suitably located previously developed land and buildings

Decision Aiding Questions. Will the development site...

<p>1. Maximise densities in sustainable locations that have good access to local facilities, public transport links and key infrastructure?</p>	<p>The development of the site would be capable of delivering appropriate housing densities in line with local planning policy and available evidence.</p> <p>The site is situated on the northern edge of Salisbury. As the site is on the edge of the settlement it is not considered to be within a reasonable walking/cycling distance to the city centre. Future residents will rely on the private vehicle to access some of the city centre services which are not within walking or cycling distance. Development density would be fairly low due to the size of the site and also due to the fact that there would need to be a certain degree of landscape mitigation due to the site's fairly prominent location and views in/out of site.</p>
<p>2. Maximise reuse of previously developed land where possible/appropriate?</p>	<p>The site is greenfield and does not appear to include any previously developed land. Maximising previously developed land would therefore be unlikely.</p>
<p>3. Encourage remediation of contaminated land?</p>	<p>The site is located on greenfield land, as opposed to brownfield (i.e. previously developed land). On the basis of available evidence, it is considered unlikely that remediation measures would be required in order to facilitate development of the land for housing. However, if evidence becomes available which suggests that there may be land contamination, an assessment would be required as part of any future planning application to establish a remediation and mitigation strategy.</p>

4. Ensure the design and layout of new development supports sustainable waste management?	The development of the site will need to support the delivery of sustainable waste management measures and it is considered that development of this site could incorporate an appropriate design and layout that supports sustainable waste management. Further advice on these matters should be sought through early dialogue with the Council's waste management team.
5. Protect and enhance soil quality?	No issues with soil quality are known at this site. In line with national and local planning policy, development of this site should seek to ensure that soil quality and structure are appropriately protected.
6. Protect the best and most versatile appropriate and available agricultural land?	There is no consistent and up-to-date information relating to quality/grade of agricultural land underlying the site. Notwithstanding this, even if it were to be Grade 1, 2 or 3a best and most versatile agricultural land, given the scale of development and location such a loss would be minor to negligible.
7. Ensure that the allocation of sites considers the areas designated for sustainable waste management and of existing or future mineral working potential?	The site is not located within a designated Mineral Safeguarding Area. As such, development would be unlikely to lead to the sterilisation of known, potentially viable mineral resources. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.
Assessment outcome (on balance) -	
<p>SUMMARY OF SA OBJECTIVE 2</p> <p>This is a greenfield site with little or no potential for making use of previously developed land. The site is situated on the northern edge of Salisbury. As the site is on the edge of the settlement it is not considered to be within a reasonable walking/cycling distance to the city centre.</p> <p>Development of this site is unlikely to lead to the loss of Grade 1, 2 or 3a Best and Most Versatile agricultural land.</p> <p>There are no known contamination issues and therefore unlikely to require remediation. The site is not located within a designated Mineral Safeguarding Area. The site is not located within, or likely to affect a designated safeguarding zone associated with an active waste management facility, or allocated Waste Site Allocation.</p> <p>Overall, this site is considered likely to have minor adverse effects against this objective and mitigation is achievable.</p>	
<p>SA objective 3. Use and manage water resources in a sustainable manner</p> <p>Decision Aiding Questions. Will the development site...</p>	

<p>1. Take into account predicted future impacts of climate change, including water scarcity issues and increased pressure on the sewerage network?</p>	<p>In line with national and local planning policy / practice, the development of the site for housing would be capable of positively responding to the predicted effects of climate change. The site falls within the catchment area supplied by Wessex Water.</p>
<p>2. Ensure that essential water infrastructure is co-ordinated with all new development?</p>	<p>In developing the site for housing, consideration would need to be given to responding positively to existing / planned water infrastructure capacity in the local area. There is no evidence to suggest that development of this site for housing could not be supported by additional water and sewerage infrastructure to cope with demand. It would need to be confirmed whether any network reinforcement is necessary to maintain satisfactory service levels. Where the pressure exerted by new housing development could lead to capacity issues, suitable and timely investment would need to be agreed between the developer(s) and the relevant utilities company.</p>
<p>3. Ensure the installation of water saving measures such as rainwater harvesting and water metering?</p>	<p>In developing the site for housing, consideration would need to be given to the installation of water saving measures (e.g. water harvesting and water metering) in line with local plan policies, national policy and the objectives of the relevant water utilities company. It is considered that it would be possible for any new development on this site to incorporate water saving measures/technologies and no adverse effects are foreseen.</p>
<p>4. Consider the need for adequate provision of surface water and foul drainage?</p>	<p>Where appropriate, the development of this site may need to make provision for on-site surface and foul water drainage which is considered possible on this site. There is capacity in relation to water supply with only minor upsizing works needed. No local sewers available. Consideration should be given to the inclusion of Sustainable Drainage Systems to control the risk of surface water flooding from impermeable surfaces.</p>
<p>5. Protect, and where possible, improve surface, ground and drinking water quality?</p>	<p>In line with the provisions of local planning policy and the Water Framework Directive, the development of the site for housing should make suitable provision to protect and, where appropriate, improve local surface, ground and potable drinking water quality.</p>
<p>6. Encourage sustainable and efficient management of water resources, including consideration of the potential impact of water usage and discharge on biodiversity, particularly in relation to the River Avon SAC and Kennet and Lambourn Floodplain SAC?</p>	<p>The site falls within the catchment of the Hampshire Avon and in a high risk catchment for phosphate loading which will need to be considered further. The Lower Avon sub-catchment is not understood to be at risk of low-flows from abstraction.</p>

Assessment outcome (on balance) - -

SUMMARY OF SA OBJECTIVE 3

Residential development on this site will lead to an increase in demand for water in the area. There is no evidence to suggest that development of the site for housing could not be supported by additional water and sewerage infrastructure to cope with demand. The site is not covered by a Source Protection Zone.

The site falls within the catchment of the Hampshire Avon and in a high risk catchment for phosphate loading which will need to be considered further. There is capacity available in relation to water supply with minor upsizing works. There are no local sewers available however. It would need to be confirmed whether any network reinforcement is necessary to maintain satisfactory service levels.

Consideration should be given to the inclusion of Sustainable Drainage Systems onsite to control the risk of surface water flooding from impermeable surfaces.

Development of this site will lead to an increase in demand for water and there are significant issues of concern with this site due to its location within the catchment of the Hampshire Avon. Overall, moderate adverse effects are considered likely against this objective.

SA objective 4. Improve air quality throughout Wiltshire and minimise all sources of environmental pollution

Decision Aiding Questions. Will the development site...

<p>1. Maintain and improve local air quality?</p>	<p>Development of the site for housing is likely to lead to short-term (construction) and long-term (occupation) impacts on local air quality (e.g. increased private car usage). Mitigation measures to limit the impacts of vehicular movements on local air quality would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies. It is likely to significantly increase traffic on local roads, which may impact on local air quality. However, the site does not fall within an Air Quality Management Area (AQMA) designation in Salisbury.</p> <p>Development is likely to increase local commuter traffic, which may impact on local air quality. Measures will need to be developed and implemented to mitigate vehicular emissions in line with local plan policies and the council's Air Quality Strategy. Such measures may include: landscaping, bunding or separation to increase distance from highways and junctions; possible traffic management or highway improvements abatement technology; and incorporating site layout / separation and other conditions in site planning; traffic routing, site management, site layout and phasing. Developers of the site could assist in providing opportunities to improve local air quality through making purchasers/future occupiers aware of Car Share Wiltshire as well as the ability to charge electric cars at home.</p>
<p>2. Minimise and, where possible, improve on unacceptable levels of</p>	<p>Mitigation measures to limit impacts of noise, light, odour and other forms of pollution would need to be developed and implemented through significant survey work in accordance with local plan policy and advice from relevant bodies. A road</p>

<p>noise, light pollution, odour and vibration through the layout, design and/or location of development?</p>	<p>traffic noise assessment will be required as well as an assessment of noise from nearby Old Sarum airfield and the public house.</p> <p>Development of the site for housing may lead to short-term (construction) and longer-term (occupation) impacts associated with noise, light pollution, odour and vibration. Mitigation measures to limit such impacts would need to be developed and implemented in accordance with local plan policy and advice from relevant bodies.</p>
