### Introduction

The Public Health Outcomes Framework [Healthy lives, healthy people: Improving outcomes and supporting transparency](#) sets out a vision for public health, desired outcomes and the indicators that will help us understand how well public health is being improved and protected. The framework concentrates on two high-level outcomes to be achieved across the public health system, and groups further indicators into four 'domains' that cover the full spectrum of public health. The outcomes reflect a focus not only on how long people live, but on how well they live at all stages of life.

This profile currently presents data for the first set of indicators at England and upper tier local authority levels, collated by Public Health England.

The profile allows you to:

- Compare your local authority against other authorities in the region
- Benchmark your local authority against the England value

Public Health Outcomes Framework baseline data will be revised and corrected in accordance with the [general DH statistical policy on revisions and corrections](#).
