<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>[REFER TO ATTACHMENT FOR FULL REPRESENTATION] 1. INTRODUCTION 1.1 This submission is made by Barratt Homes (Bristol) Ltd in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan Examination. 1.2 The Council submitted the draft Wiltshire Housing Site Allocations Plan (HSAP) along with a Schedule of Proposed Changes and supporting evidence to the Secretary of State for independent examination in July 2018. 1.3 This was followed by a procedural letter from the Inspector in August 2018 which required the Council to undertake a consultation on the Schedule of Proposed Changes to the HSAP, along with the revised Sustainability Appraisal, update to the Habitats Regulations Assessment Addendum, and associated evidence. 1.4 These representations set out Barratt Homes response to these proposed changes and have been prepared having regard to the requirements set out by the National Planning Policy Framework (NPPF). 1.5 Barratt Homes has land interests in the Trowbridge area and have submitted representations at previous stages of the HSAPs preparation in support of allocating land in this location. These specific representations relate to land at Maxcroft Farm in Hilperton, which forms part of the wider Trowbridge Urban Area. 1.6 The following proposed changes are, therefore, considered to be of particular relevance: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. 1.7 Unfortunately, the proposed modifications do not make any fundamental changes to the plan or strategy for Trowbridge. As such, the fundamental thrust of arguments made in previous representations remains the same. 1.8 These key points are considered further in Sections 2, 3 and 4 of these representations, but their content is summarised briefly below: The proposed changes have done nothing to address the shortfall anticipated over the remaining years of the plan period at Trowbridge; The delivery of housing at Trowbridge over the remaining years of the plan period continue to rely on the delivery of housing at a strategic site (Ashton Park) where anticipated delivery trajectories are overly optimistic; There remain serious questions over the deliverability of the identified allocations at Trowbridge given that there is potential for them to be affected by same ecological issues that have affected Ashton Park; The plan simply continues to postpone the delivery of housing at Trowbridge until after the plan period which is an unacceptable approach; The Council should, therefore, look to allocate additional sites to meet Trowbridges housing needs over the remaining years of the plan period and these should include land at Maxcroft Farm. 1.9 Given the above, it is our belief that the plan continues to fail when assessed against the four tests of soundness, as set out at paragraph 35 of the NPPF: Positively prepared the plan fails to meet the objectively</p>				

assessed development and infrastructure requirements of a key strategic settlement (Trowbridge); Justified the plan has not demonstrated it is the most appropriate strategy, when considered against the reasonable alternatives, based on evidence; Effective the plan will not deliver housing in a timely manner in accordance with Wiltshire Core Strategy; and Consistent with national policy a key priority for national planning policy is to boost significantly the supply and delivery of housing. This plan fails to plan for housing at a key strategic settlement with little more than 8 years left in the plan period. 1.10 Land at Maxcroft Farm represents a sustainable and deliverable location for housing development that can support the needs of Trowbridge and Hilperton. Given that housing delivery at Trowbridge is particularly reliant on a large strategic site (Ashton Park) which has suffered significant delays, the risk of further non-delivery of housing at a key strategic settlement in Wiltshire is exacerbated by this plan. The risk for Wiltshire is that the HSAP provides another adopted development plan document that has manifestly failed to address key issues with regard to the delivery and supply of housing. 1.11 The failure to address these issues would simply result in their deferral to a future development plan document or leave them to be addressed via the development management process. 1.12 Barratt Homes trust that the comments contained in these representations will be carefully considered and appropriately responded to by Wiltshire Council in their submission to the Secretary of State. 2. KEY CHANGES MADE TO HSAP 2.1 Some 135 changes are proposed to the HSAP. None of these were particularly fundamental to the overall approach of the plan, with the majority of them relating to factual corrections and tweaks to site allocations. 2.2 The more significant changes relate to the removal of site allocations from the plan at Crudwell, Malmesbury and Market Lavington. The Councils rationale for this was that development at these locations could be addressed through the delivery of Neighbourhood Plans. Barratt Homes do not have any specific comments to make regarding these specific changes. 2.3 To repeat, the specific changes these representations relate to are: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. Implications for Trowbridge 2.4 The fundamental strategy for Trowbridge has not been changed. Whilst the expected quantum of housing to be delivered on the HSAP sites has been revised to the extent where an additional c. 250 dwellings (800 1,050) are now expected to be delivered, the bulk of housing to be delivered is still reliant on the delivery of the long-term allocated site at Ashton Park to meet its housing target identified in the Wiltshire Core Strategy. 2.5 Given the delays in housing coming forward at Ashton Park, the Council are now only expecting the site to deliver 1,350 dwellings over the remaining plan period where it had previously been expected to deliver 1,600 dwellings. They are expecting the remainder (1,250 dwellings) to be delivered post 2026. This reduction has largely cancelled out the additional dwellings that are expected to be delivered at the other allocated sites over the remaining years of the plan period. 2.6 It should be noted that Barratt Homes question this delivery trajectory and consider the Councils assumptions to be overly optimistic. The reasons for this are set out in Section 3 below. 2.7 Regardless, there will be a shortfall in the number of dwellings delivered at Trowbridge over the plan period. This shortfall is expected to be 1,297 dwellings (PC25) which is broadly equivalent to the number of dwellings the Council expects to be delivered at Ashton Park beyond the end of the plan period (1,250). This is not a sound approach and fails to comply with paragraph 182 of NPPF 2012 (since replaced by paragraph 35 of the NPPF 2018). Key Concerns 2.8 Barratt Homes have previously made representations to the HSAP, expressing concerns with the overall approach to delivering housing at Trowbridge in September 2017. 2.9 As the fundamental strategy for Trowbridge has not changed, the thrust of the previous representations is still very much relevant. The key points made within those representations were as follows: There has been a pattern of failure across the district to deliver dwellings at key strategic sites at Chippenham, Salisbury and Trowbridge. There are serious question marks with regard to the delivery of any dwellings at Ashton Park between now and the end of the plan period, with no evidence in terms of a delivery timetable that the 1,350 dwellings that are anticipated by the Council can be completed; As such, it is clear that the large strategic sites have failed to deliver housing in the short-term and will run over into the next plan period; This has led to development pressure elsewhere within the plan area where a number of towns have seen planning by appeal and these will now deliver in excess of the indicative requirements as set out in the Wiltshire Core Strategy (WCS). We expect that the failure to deliver housing at these identified sites will exacerbate pressures on other

areas within Wiltshire to accommodate more growth and undermine the spatial distribution of the WCS; This will be further compounded by the failure of current proposed allocations in the HSAP at Trowbridge to meet the full allocation. As proposed there would be a residual shortfall of 1,297 homes (the changes to the HSAP revised this figure from 1,220 homes) still required to meet the needs of Trowbridge Town and a shortfall of 750 homes to meet the needs of Trowbridge Community Area. As a key strategic settlement and the primary focus of development within the WCS, it is not clear how under delivery at Trowbridge can meet the spatial strategy and development requirements of Wiltshire. There is plainly no difficulty in the HSAP document allocating sites for housing in excess of 42,000. Indeed, properly read, a figure above 42,000 would be entirely consistent with both the working and the evidence surrounding the WCS. Whilst the HSAP provides some limited commentary on the decision not to address the shortfall in Trowbridge, the ramifications of this decision are not examined in the Sustainability Assessment (SA). The non-allocation of homes at a Principal Settlement is a crucial strategic decision and the lack of analysis or commentary of this issue is a glaring omission on the current evidence base. Given the acknowledged need within the HSAP to provide a surplus, alongside the shortfall in the OAN, there is a clear and obvious requirement to allocate a full amount at Trowbridge.

2.10 Moreover, the failure to deliver a full amount of housing at Trowbridge does not match the ambitions of the Town Council who want to maintain Trowbridges status as Wiltshires County Town. The failure to plan to meet its housing needs in full under the HSAP would not be in line with the Towns status and the stated ambitions of locally democratic elected bodies.

Amendments to Trowbridge Settlement Boundary

2.11 In addition to the above, Barratt would like to formally register their support for the proposed amendments to the settlement boundary at Hilperton and Trowbridge which now captures parts of the built-up area that were previously excluded.

3. IMPLICATIONS FOR PROPOSED ALLOCATIONS

Ashton Park

3.1 In addition to the above, Barratt Homes would wish to elaborate further on the deliverability issues at Ashton Park, specifically in reference to the definition of deliverable as set out within the revised NPPF (2018).

3.2 The representations to the Regulation 19 version of the plan were submitted in September 2017. Over a year has since passed and the Ashton Park site still remains without outline planning permission, albeit it is understood that it was resolved to grant permission in April 2018, subject to the signing of a S106 agreement. This agreement had not yet been signed at the time of writing these representations.

3.3 The NPPFs definition of deliverable (for the purpose of Housing Land Supply assessments) states that sites with outline permission or allocated within development plans are not considered to be capable of delivering dwellings unless there is clear evidence that housing completions will begin on site within five years.

3.4 The Council have not provided any clear evidence to suggest that Ashton Park is capable of delivering any dwellings over the next five years. However, the Council are expecting it to deliver 1,350 dwellings by the end of the plan period (2026). With around 7-8 years left of the plan period and the assumption that no dwellings are likely to be delivered over the next five years, the Council appear to be expecting the site to deliver somewhere in the region of 450-675 dwellings per year over the last 2-3 years of the plan period.

3.5 Lichfields produced a research paper entitled Start to Finish: How Quickly do Large-Scale Housing Sites Deliver (November 2016). In their assessment of build-out rates, they noted that the average annual build-out rate for a scheme of 2,000+ dwellings was 161 dwellings per annum (dpa). The highest build out rate of the sites they assessed was 321 dpa (Cranbrook). Even taking this higher figure, the Councils anticipated delivery trajectory for Ashton Park is clearly overly optimistic. The full report is attached at Appendix 1.

APPENDIX 1: LICHFIELDS (NOVEMBER 2016) START TO FINISH: HOW QUICKLY DO LARGE-SCALE HOUSING SITES DELIVER

3.6 Notwithstanding this, the delivery of the bulk of housing at the site is reliant on the provision of a new bypass. It is understood that only around 300 dwellings could be delivered in advance of this key piece of infrastructure. This is another key issue that will have significant implications for delivery of dwellings at Ashton Park.

3.7 Taken together, this means that the shortfall of housing delivery at Trowbridge will be even more significant than the HSAP currently suggests both in the short and longer term.

3.8 This also has implications for the delivery of housing across the district in locations (e.g. Chippenham and Salisbury) which are also heavily reliant on the delivery of housing at strategic development locations to meet their Core Strategy targets. Indeed, the Councils overly optimistic view of delivery trajectories for strategic sites, coupled with an under provision of allocations that are deliverable over the remaining years of the plan period means that the prospect of a housing shortfall would not be confined to the Trowbridge area alone.

3.9 The Council argue that not addressing this shortfall under the HSAP is justified because Trowbridges

needs will be met by housing delivery under a future plan period. However, failing to address important issues of delivery, especially when there is a clear onus from the government to significantly boost the supply of housing, is not an appropriate position to take and fails to comply with paragraph 182 of the NPPF 2012. 3.10 There is a need for Trowbridge to deliver housing in the short term to relieve pressure on other, less sustainable locations for development across the district. 3.11 The Councils decision to pursue a strategy that effectively postpones the delivery of housing at a key strategic settlement such as Trowbridge to a future plan period is unacceptable and unsound. The plan accepts that there will be a shortfall in the delivery of housing at Trowbridge over the current plan period to the tune of 1,297 dwellings. This figure is based on a overly optimistic view as to the quantum of homes that might be delivered by the end of the current plan period (1,350 dwellings) and, as such, we would expect this shortfall to be even more substantial than is currently predicted. 3.12 Given the extent of this shortfall and the implications for failing to deliver a sufficient quantum of homes at Trowbridge under the current plan period, there is a clear need to identify additional housing sites that can deliver housing in the shorter term (i.e. within the remaining years of the plan period). 3.13 Land at Maxcroft Farm is one such site that could deliver housing in the shorter-term help Trowbridge to meet its housing requirements to the end of the current plan period (2026). Other Site Allocations 3.14 The remaining site allocations and their expected delivery are summarised as follows (PC13, PC51 and PC54-73): [TABLE INSERT] 3.15 Section 5 of the previous representations to the Regulation 19 Local Plan also included a critique of the other site allocations within Trowbridge. This still remains very much relevant and we would direct the Inspector to review its contents. 3.16 In essence, the assessment points out that the allocations to the south and east of the town are likely to be affected by the same ecological issues that have affected Ashton Park coming forward. There are, therefore, concerns with regards to the deliverability of these sites within a timely manner (i.e. within the plan period). Again, the HSAP has not identified a suitable set or quantum of sites that will ensure the delivery of housing at Trowbridge in the short term. 3.17 The strategy, in identifying an insufficient number of sites, some (if not all) of which may be unsuitable to be delivered in the plan period, simply postpones the inevitable allocation of further sites at Trowbridge to later plan periods when it should be doing so now. 3.18 The plan is, therefore, unsound because it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives and is inconsistent with national policy. 4. LAND AT MAXCROFT FARM Hilperton and Trowbridge 4.1 As stated previously, Barratt Homes have a specific interest in Land at Maxcroft Farm, Hilperton. However, there has been no assessment of Maxcroft Farm in the HSAP. This is thought to be because it is perceived as relating to Hilperton and not Trowbridge. The previous representations set out why this thinking was flawed. To summarise: Trowbridge, Hilperton, and Staverton Marina effectively constitute a continuous urban area; There is no visual spatial definition of Trowbridge or the remainder for the purposes of identifying additional allocations; The Core Strategy is unclear on the status of Hilperton, as it identifies it as a separate settlement in Core Policy 29; and requires that its distinct identity is protected in paragraph 5.150; but includes it as part of Trowbridge in footnote 56; The Core Strategy also defines Trowbridge Town as the continuous urban area of Trowbridge (which must by any rational definition include Hilperton); and Explicitly includes a less well-connected settlement within the continuous urban area of Trowbridge (Staverton). 4.2 Therefore, in order to meet the indicative housing requirement for Trowbridge Town, there is a need to allocate sites at Trowbridge including Hilperton. However, even if (contrary to footnote 56) Hilperton is excluded from Trowbridge Town, allocations are still required including those at Hilperton to meet the Community Area requirements. 4.3 It is noted that in the Councils submission documents, Wiltshire Housing Site Allocations Plan Consultation Statement Regulation 22 (1) (c) (WHSAP/09), the Council notes the importance of retaining the separate identities of Hilperton, North Bradley and Southwick. Crucially, both Southwick and North Bradley are currently separated by open countryside from the Trowbridge urban area, compared to Hilperton which already forms part of the continuous urban area. Furthermore, the plan goes on to allocated sites adjacent North Bradley, although sets out that a strategic gap should be maintained. This view that Hilperton is a separate village does not recognise the existing pattern of development across north Trowbridge. 4.4 Either way, the delivery of development at Maxcroft Farm in Hilperton would contribute to addressing the shortfall within the Trowbridge CA, whether it is viewed as development at Trowbridge, Hilperton or both. 4.5 Regardless, it is clear that the development of Maxcroft Farm must be seen in the context of delivering housing for the needs of Trowbridge and Hilperton. Therefore, the continuing lack of assessment of Maxcroft Farm as part of the

	<p>Sustainability Appraisal coupled with the lack of commentary on the decision not to allocate for the full housing needs at Trowbridge, means that the HSAP will not meet the needs of Wiltshire nor deliver a sound and objectively assessed plan. Land at Maxcroft Farm 4.6 The credentials of land at Maxcroft Farm were presented to the Council in a Technical Delivery Document as part of the representations on the Regulation 19 version of the HSAP. This document covered: the sustainability of the location; the environmental factors affecting the location; the realistic housing potential/capacity of the area in relation to the environmental effects of development; and the deliverability of the location. 4.7 This was also supported by detailed technical notes supporting this representation in order to address identified concerns from internal consultees at Wiltshire. 4.8 In terms of delivery, Barratt Homes are keen to stress that the delivery of this site is immediate and could be delivered from start on site (following allocation/consent) to practical completion within 24 months. 4.9 Given the issues with delivery in Wiltshire and the strategic settlements this must be considered a significant benefit of the site to realistically deliver well within the remaining plan period before 2026. As set out in the next section it is not thought that the allocations as they stand will achieve this aim. 5. CONCLUSION 5.1 These representations have been prepared by Pegasus Group on behalf of Barratt Homes (Bristol) in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan (HSAP). 5.2 These representations are specifically concerned with the strategy set out within the HSAP delivering new homes at Trowbridge. The key proposed changes identify additional dwellings to be delivered at the already proposed sites, but do not identify additional sites. 5.3 Under the HSAP, Trowbridge is projected to fall short of its Core Strategy housing target by a minimum of 1,297 dwellings. Barratt Homes feel that this figure will be significantly higher due to the Councils overly optimistic assumptions regarding delivery rates at the proposed allocations namely Ashton Park. 5.4 The Council are justifying this shortfall by saying that it will be met during the following plan period (i.e. 2016-2036). However, aside from being bad planning, this approach will further exacerbate pressure on other parts of the district to deliver the housing required under the current plan period (2006-2026), whilst also failing to deliver (among other things) the housing required to support the economic growth of Trowbridge. Ultimately, the strategy will delay the allocation of additional sites to a new local plan when they should be allocated under the HSAP. 5.5 The HSAP must, therefore, be found unsound as it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives of the Core Strategy and is inconsistent with national policy. 5.6 In order to be found sound, Barratt Homes believe it is imperative that additional sites are identified within the HSAP due to the pressing need to deliver homes at Trowbridge over the remaining years of the current plan period. 5.7 Given the sustainable performance and policy compliance of Maxcroft Farm in relation to the strategic priorities set out in the WCS, this is one such location that should be included.</p>

INTRODUCTION 1.1 This submission is made by Barratt Homes (Bristol) Ltd in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan Examination. 1.2 The Council submitted the draft Wiltshire Housing Site Allocations Plan (HSAP) along with a Schedule of Proposed Changes and supporting evidence to the Secretary of State for independent examination in July 2018. 1.3 This was followed by a procedural letter from the Inspector in August 2018 which required the Council to undertake a consultation on the Schedule of Proposed Changes to the HSAP, along with the revised Sustainability Appraisal, update to the Habitats Regulations Assessment Addendum, and associated evidence. 1.4 These representations set out Barratt Homes response to these proposed changes and have been prepared having regard to the requirements set out by the National Planning Policy Framework (NPPF). 1.5 Barratt Homes has land interests in the Trowbridge area and have submitted representations at previous stages of the HSAPs preparation in support of allocating land in this location. These specific representations relate to land at Maxcroft Farm in Hilperton, which forms part of the wider Trowbridge Urban Area. 1.6 The following proposed changes are, therefore, considered to be of particular relevance: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. 1.7 Unfortunately, the proposed modifications do not make any fundamental changes to the plan or strategy for Trowbridge. As such, the fundamental thrust of arguments made in previous representations remains the same. 1.8 These key points are considered further in Sections 2, 3 and 4 of these representations, but their content is summarised briefly below: The proposed changes have done nothing to address the shortfall anticipated over the remaining years of the plan period at Trowbridge; The delivery of housing at Trowbridge over the remaining years of the plan period continue to rely on the delivery of housing at a strategic site (Ashton Park) where anticipated delivery trajectories are overly optimistic; There remain serious questions over the deliverability of the identified allocations at Trowbridge given that there is potential for them to be affected by same ecological issues that have affected Ashton Park; The plan simply continues to postpone the delivery of housing at Trowbridge until after the plan period which is an unacceptable approach; The Council should, therefore, look to allocate additional sites to meet Trowbridges housing needs over the remaining years of the plan period and these should include land at Maxcroft Farm. 1.9 Given the above, it is our belief that the plan continues to fail when assessed against the four tests of soundness, as set out at paragraph 35 of the NPPF: Positively prepared the plan fails to meet the objectively</p>				

assessed development and infrastructure requirements of a key strategic settlement (Trowbridge); Justified the plan has not demonstrated it is the most appropriate strategy, when considered against the reasonable alternatives, based on evidence; Effective the plan will not deliver housing in a timely manner in accordance with Wiltshire Core Strategy; and Consistent with national policy a key priority for national planning policy is to boost significantly the supply and delivery of housing. This plan fails to plan for housing at a key strategic settlement with little more than 8 years left in the plan period. 1.10 Land at Maxcroft Farm represents a sustainable and deliverable location for housing development that can support the needs of Trowbridge and Hilperton. Given that housing delivery at Trowbridge is particularly reliant on a large strategic site (Ashton Park) which has suffered significant delays, the risk of further non-delivery of housing at a key strategic settlement in Wiltshire is exacerbated by this plan. The risk for Wiltshire is that the HSAP provides another adopted development plan document that has manifestly failed to address key issues with regard to the delivery and supply of housing. 1.11 The failure to address these issues would simply result in their deferral to a future development plan document or leave them to be addressed via the development management process. 1.12 Barratt Homes trust that the comments contained in these representations will be carefully considered and appropriately responded to by Wiltshire Council in their submission to the Secretary of State. 2. KEY CHANGES MADE TO HSAP 2.1 Some 135 changes are proposed to the HSAP. None of these were particularly fundamental to the overall approach of the plan, with the majority of them relating to factual corrections and tweaks to site allocations. 2.2 The more significant changes relate to the removal of site allocations from the plan at Crudwell, Malmesbury and Market Lavington. The Councils rationale for this was that development at these locations could be addressed through the delivery of Neighbourhood Plans. Barratt Homes do not have any specific comments to make regarding these specific changes. 2.3 To repeat, the specific changes these representations relate to are: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. Implications for Trowbridge 2.4 The fundamental strategy for Trowbridge has not been changed. Whilst the expected quantum of housing to be delivered on the HSAP sites has been revised to the extent where an additional c. 250 dwellings (800 1,050) are now expected to be delivered, the bulk of housing to be delivered is still reliant on the delivery of the long-term allocated site at Ashton Park to meet its housing target identified in the Wiltshire Core Strategy. 2.5 Given the delays in housing coming forward at Ashton Park, the Council are now only expecting the site to deliver 1,350 dwellings over the remaining plan period where it had previously been expected to deliver 1,600 dwellings. They are expecting the remainder (1,250 dwellings) to be delivered post 2026. This reduction has largely cancelled out the additional dwellings that are expected to be delivered at the other allocated sites over the remaining years of the plan period. 2.6 It should be noted that Barratt Homes question this delivery trajectory and consider the Councils assumptions to be overly optimistic. The reasons for this are set out in Section 3 below. 2.7 Regardless, there will be a shortfall in the number of dwellings delivered at Trowbridge over the plan period. This shortfall is expected to be 1,297 dwellings (PC25) which is broadly equivalent to the number of dwellings the Council expects to be delivered at Ashton Park beyond the end of the plan period (1,250). This is not a sound approach and fails to comply with paragraph 182 of NPPF 2012 (since replaced by paragraph 35 of the NPPF 2018). Key Concerns 2.8 Barratt Homes have previously made representations to the HSAP, expressing concerns with the overall approach to delivering housing at Trowbridge in September 2017. 2.9 As the fundamental strategy for Trowbridge has not changed, the thrust of the previous representations is still very much relevant. The key points made within those representations were as follows: There has been a pattern of failure across the district to deliver dwellings at key strategic sites at Chippenham, Salisbury and Trowbridge. There are serious question marks with regard to the delivery of any dwellings at Ashton Park between now and the end of the plan period, with no evidence in terms of a delivery timetable that the 1,350 dwellings that are anticipated by the Council can be completed; As such, it is clear that the large strategic sites have failed to deliver housing in the short-term and will run over into the next plan period; This has led to development pressure elsewhere within the plan area where a number of towns have seen planning by appeal and these will now deliver in excess of the indicative requirements as set out in the Wiltshire Core Strategy (WCS). We expect that the failure to deliver housing at these identified sites will exacerbate pressures on other

areas within Wiltshire to accommodate more growth and undermine the spatial distribution of the WCS; This will be further compounded by the failure of current proposed allocations in the HSAP at Trowbridge to meet the full allocation. As proposed there would be a residual shortfall of 1,297 homes (the changes to the HSAP revised this figure from 1,220 homes) still required to meet the needs of Trowbridge Town and a shortfall of 750 homes to meet the needs of Trowbridge Community Area. As a key strategic settlement and the primary focus of development within the WCS, it is not clear how under delivery at Trowbridge can meet the spatial strategy and development requirements of Wiltshire. There is plainly no difficulty in the HSAP document allocating sites for housing in excess of 42,000. Indeed, properly read, a figure above 42,000 would be entirely consistent with both the working and the evidence surrounding the WCS. Whilst the HSAP provides some limited commentary on the decision not to address the shortfall in Trowbridge, the ramifications of this decision are not examined in the Sustainability Assessment (SA). The non-allocation of homes at a Principal Settlement is a crucial strategic decision and the lack of analysis or commentary of this issue is a glaring omission on the current evidence base. Given the acknowledged need within the HSAP to provide a surplus, alongside the shortfall in the OAN, there is a clear and obvious requirement to allocate a full amount at Trowbridge.

2.10 Moreover, the failure to deliver a full amount of housing at Trowbridge does not match the ambitions of the Town Council who want to maintain Trowbridges status as Wiltshires County Town. The failure to plan to meet its housing needs in full under the HSAP would not be in line with the Towns status and the stated ambitions of locally democratic elected bodies.

Amendments to Trowbridge Settlement Boundary

2.11 In addition to the above, Barratt would like to formally register their support for the proposed amendments to the settlement boundary at Hilperton and Trowbridge which now captures parts of the built-up area that were previously excluded.

3. IMPLICATIONS FOR PROPOSED ALLOCATIONS

Ashton Park

3.1 In addition to the above, Barratt Homes would wish to elaborate further on the deliverability issues at Ashton Park, specifically in reference to the definition of deliverable as set out within the revised NPPF (2018).

3.2 The representations to the Regulation 19 version of the plan were submitted in September 2017. Over a year has since passed and the Ashton Park site still remains without outline planning permission, albeit it is understood that it was resolved to grant permission in April 2018, subject to the signing of a S106 agreement. This agreement had not yet been signed at the time of writing these representations.

3.3 The NPPFs definition of deliverable (for the purpose of Housing Land Supply assessments) states that sites with outline permission or allocated within development plans are not considered to be capable of delivering dwellings unless there is clear evidence that housing completions will begin on site within five years.

3.4 The Council have not provided any clear evidence to suggest that Ashton Park is capable of delivering any dwellings over the next five years. However, the Council are expecting it to deliver 1,350 dwellings by the end of the plan period (2026). With around 7-8 years left of the plan period and the assumption that no dwellings are likely to be delivered over the next five years, the Council appear to be expecting the site to deliver somewhere in the region of 450-675 dwellings per year over the last 2-3 years of the plan period.

3.5 Lichfields produced a research paper entitled Start to Finish: How Quickly do Large-Scale Housing Sites Deliver (November 2016). In their assessment of build-out rates, they noted that the average annual build-out rate for a scheme of 2,000+ dwellings was 161 dwellings per annum (dpa). The highest build out rate of the sites they assessed was 321 dpa (Cranbrook). Even taking this higher figure, the Councils anticipated delivery trajectory for Ashton Park is clearly overly optimistic. The full report is attached at Appendix 1.

APPENDIX 1: LICHFIELDS (NOVEMBER 2016) START TO FINISH: HOW QUICKLY DO LARGE-SCALE HOUSING SITES DELIVER

3.6 Notwithstanding this, the delivery of the bulk of housing at the site is reliant on the provision of a new bypass. It is understood that only around 300 dwellings could be delivered in advance of this key piece of infrastructure. This is another key issue that will have significant implications for delivery of dwellings at Ashton Park.

3.7 Taken together, this means that the shortfall of housing delivery at Trowbridge will be even more significant than the HSAP currently suggests both in the short and longer term.

3.8 This also has implications for the delivery of housing across the district in locations (e.g. Chippenham and Salisbury) which are also heavily reliant on the delivery of housing at strategic development locations to meet their Core Strategy targets. Indeed, the Councils overly optimistic view of delivery trajectories for strategic sites, coupled with an under provision of allocations that are deliverable over the remaining years of the plan period means that the prospect of a housing shortfall would not be confined to the Trowbridge area alone.

3.9 The Council argue that not addressing this shortfall under the HSAP is justified because Trowbridges

needs will be met by housing delivery under a future plan period. However, failing to address important issues of delivery, especially when there is a clear onus from the government to significantly boost the supply of housing, is not an appropriate position to take and fails to comply with paragraph 182 of the NPPF 2012. 3.10 There is a need for Trowbridge to deliver housing in the short term to relieve pressure on other, less sustainable locations for development across the district. 3.11 The Councils decision to pursue a strategy that effectively postpones the delivery of housing at a key strategic settlement such as Trowbridge to a future plan period is unacceptable and unsound. The plan accepts that there will be a shortfall in the delivery of housing at Trowbridge over the current plan period to the tune of 1,297 dwellings. This figure is based on a overly optimistic view as to the quantum of homes that might be delivered by the end of the current plan period (1,350 dwellings) and, as such, we would expect this shortfall to be even more substantial than is currently predicted. 3.12 Given the extent of this shortfall and the implications for failing to deliver a sufficient quantum of homes at Trowbridge under the current plan period, there is a clear need to identify additional housing sites that can deliver housing in the shorter term (i.e. within the remaining years of the plan period). 3.13 Land at Maxcroft Farm is one such site that could deliver housing in the shorter-term help Trowbridge to meet its housing requirements to the end of the current plan period (2026). Other Site Allocations 3.14 The remaining site allocations and their expected delivery are summarised as follows (PC13, PC51 and PC54-73): [TABLE INSERT] 3.15 Section 5 of the previous representations to the Regulation 19 Local Plan also included a critique of the other site allocations within Trowbridge. This still remains very much relevant and we would direct the Inspector to review its contents. 3.16 In essence, the assessment points out that the allocations to the south and east of the town are likely to be affected by the same ecological issues that have affected Ashton Park coming forward. There are, therefore, concerns with regards to the deliverability of these sites within a timely manner (i.e. within the plan period). Again, the HSAP has not identified a suitable set or quantum of sites that will ensure the delivery of housing at Trowbridge in the short term. 3.17 The strategy, in identifying an insufficient number of sites, some (if not all) of which may be unsuitable to be delivered in the plan period, simply postpones the inevitable allocation of further sites at Trowbridge to later plan periods when it should be doing so now. 3.18 The plan is, therefore, unsound because it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives and is inconsistent with national policy. 4. LAND AT MAXCROFT FARM Hilperton and Trowbridge 4.1 As stated previously, Barratt Homes have a specific interest in Land at Maxcroft Farm, Hilperton. However, there has been no assessment of Maxcroft Farm in the HSAP. This is thought to be because it is perceived as relating to Hilperton and not Trowbridge. The previous representations set out why this thinking was flawed. To summarise: Trowbridge, Hilperton, and Staverton Marina effectively constitute a continuous urban area; There is no visual spatial definition of Trowbridge or the remainder for the purposes of identifying additional allocations; The Core Strategy is unclear on the status of Hilperton, as it identifies it as a separate settlement in Core Policy 29; and requires that its distinct identity is protected in paragraph 5.150; but includes it as part of Trowbridge in footnote 56; The Core Strategy also defines Trowbridge Town as the continuous urban area of Trowbridge (which must by any rational definition include Hilperton); and Explicitly includes a less well-connected settlement within the continuous urban area of Trowbridge (Staverton). 4.2 Therefore, in order to meet the indicative housing requirement for Trowbridge Town, there is a need to allocate sites at Trowbridge including Hilperton. However, even if (contrary to footnote 56) Hilperton is excluded from Trowbridge Town, allocations are still required including those at Hilperton to meet the Community Area requirements. 4.3 It is noted that in the Councils submission documents, Wiltshire Housing Site Allocations Plan Consultation Statement Regulation 22 (1) (c) (WHSAP/09), the Council notes the importance of retaining the separate identities of Hilperton, North Bradley and Southwick. Crucially, both Southwick and North Bradley are currently separated by open countryside from the Trowbridge urban area, compared to Hilperton which already forms part of the continuous urban area. Furthermore, the plan goes on to allocated sites adjacent North Bradley, although sets out that a strategic gap should be maintained. This view that Hilperton is a separate village does not recognise the existing pattern of development across north Trowbridge. 4.4 Either way, the delivery of development at Maxcroft Farm in Hilperton would contribute to addressing the shortfall within the Trowbridge CA, whether it is viewed as development at Trowbridge, Hilperton or both. 4.5 Regardless, it is clear that the development of Maxcroft Farm must be seen in the context of delivering housing for the needs of Trowbridge and Hilperton. Therefore, the continuing lack of assessment of Maxcroft Farm as part of the

	<p>Sustainability Appraisal coupled with the lack of commentary on the decision not to allocate for the full housing needs at Trowbridge, means that the HSAP will not meet the needs of Wiltshire nor deliver a sound and objectively assessed plan. Land at Maxcroft Farm 4.6 The credentials of land at Maxcroft Farm were presented to the Council in a Technical Delivery Document as part of the representations on the Regulation 19 version of the HSAP. This document covered: the sustainability of the location; the environmental factors affecting the location; the realistic housing potential/capacity of the area in relation to the environmental effects of development; and the deliverability of the location. 4.7 This was also supported by detailed technical notes supporting this representation in order to address identified concerns from internal consultees at Wiltshire. 4.8 In terms of delivery, Barratt Homes are keen to stress that the delivery of this site is immediate and could be delivered from start on site (following allocation/consent) to practical completion within 24 months. 4.9 Given the issues with delivery in Wiltshire and the strategic settlements this must be considered a significant benefit of the site to realistically deliver well within the remaining plan period before 2026. As set out in the next section it is not thought that the allocations as they stand will achieve this aim. 5. CONCLUSION 5.1 These representations have been prepared by Pegasus Group on behalf of Barratt Homes (Bristol) in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan (HSAP). 5.2 These representations are specifically concerned with the strategy set out within the HSAP delivering new homes at Trowbridge. The key proposed changes identify additional dwellings to be delivered at the already proposed sites, but do not identify additional sites. 5.3 Under the HSAP, Trowbridge is projected to fall short of its Core Strategy housing target by a minimum of 1,297 dwellings. Barratt Homes feel that this figure will be significantly higher due to the Councils overly optimistic assumptions regarding delivery rates at the proposed allocations namely Ashton Park. 5.4 The Council are justifying this shortfall by saying that it will be met during the following plan period (i.e. 2016-2036). However, aside from being bad planning, this approach will further exacerbate pressure on other parts of the district to deliver the housing required under the current plan period (2006-2026), whilst also failing to deliver (among other things) the housing required to support the economic growth of Trowbridge. Ultimately, the strategy will delay the allocation of additional sites to a new local plan when they should be allocated under the HSAP. 5.5 The HSAP must, therefore, be found unsound as it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives of the Core Strategy and is inconsistent with national policy. 5.6 In order to be found sound, Barratt Homes believe it is imperative that additional sites are identified within the HSAP due to the pressing need to deliver homes at Trowbridge over the remaining years of the current plan period. 5.7 Given the sustainable performance and policy compliance of Maxcroft Farm in relation to the strategic priorities set out in the WCS, this is one such location that should be included.</p>

INTRODUCTION 1.1 This submission is made by Barratt Homes (Bristol) Ltd in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan Examination. 1.2 The Council submitted the draft Wiltshire Housing Site Allocations Plan (HSAP) along with a Schedule of Proposed Changes and supporting evidence to the Secretary of State for independent examination in July 2018. 1.3 This was followed by a procedural letter from the Inspector in August 2018 which required the Council to undertake a consultation on the Schedule of Proposed Changes to the HSAP, along with the revised Sustainability Appraisal, update to the Habitats Regulations Assessment Addendum, and associated evidence. 1.4 These representations set out Barratt Homes response to these proposed changes and have been prepared having regard to the requirements set out by the National Planning Policy Framework (NPPF). 1.5 Barratt Homes has land interests in the Trowbridge area and have submitted representations at previous stages of the HSAPs preparation in support of allocating land in this location. These specific representations relate to land at Maxcroft Farm in Hilperton, which forms part of the wider Trowbridge Urban Area. 1.6 The following proposed changes are, therefore, considered to be of particular relevance: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. 1.7 Unfortunately, the proposed modifications do not make any fundamental changes to the plan or strategy for Trowbridge. As such, the fundamental thrust of arguments made in previous representations remains the same. 1.8 These key points are considered further in Sections 2, 3 and 4 of these representations, but their content is summarised briefly below: The proposed changes have done nothing to address the shortfall anticipated over the remaining years of the plan period at Trowbridge; The delivery of housing at Trowbridge over the remaining years of the plan period continue to rely on the delivery of housing at a strategic site (Ashton Park) where anticipated delivery trajectories are overly optimistic; There remain serious questions over the deliverability of the identified allocations at Trowbridge given that there is potential for them to be affected by same ecological issues that have affected Ashton Park; The plan simply continues to postpone the delivery of housing at Trowbridge until after the plan period which is an unacceptable approach; The Council should, therefore, look to allocate additional sites to meet Trowbridges housing needs over the remaining years of the plan period and these should include land at Maxcroft Farm. 1.9 Given the above, it is our belief that the plan continues to fail when assessed against the four tests of soundness, as set out at paragraph 35 of the NPPF: Positively prepared the plan fails to meet the objectively</p>				

assessed development and infrastructure requirements of a key strategic settlement (Trowbridge); Justified the plan has not demonstrated it is the most appropriate strategy, when considered against the reasonable alternatives, based on evidence; Effective the plan will not deliver housing in a timely manner in accordance with Wiltshire Core Strategy; and Consistent with national policy a key priority for national planning policy is to boost significantly the supply and delivery of housing. This plan fails to plan for housing at a key strategic settlement with little more than 8 years left in the plan period. 1.10 Land at Maxcroft Farm represents a sustainable and deliverable location for housing development that can support the needs of Trowbridge and Hilperton. Given that housing delivery at Trowbridge is particularly reliant on a large strategic site (Ashton Park) which has suffered significant delays, the risk of further non-delivery of housing at a key strategic settlement in Wiltshire is exacerbated by this plan. The risk for Wiltshire is that the HSAP provides another adopted development plan document that has manifestly failed to address key issues with regard to the delivery and supply of housing. 1.11 The failure to address these issues would simply result in their deferral to a future development plan document or leave them to be addressed via the development management process. 1.12 Barratt Homes trust that the comments contained in these representations will be carefully considered and appropriately responded to by Wiltshire Council in their submission to the Secretary of State. 2. KEY CHANGES MADE TO HSAP 2.1 Some 135 changes are proposed to the HSAP. None of these were particularly fundamental to the overall approach of the plan, with the majority of them relating to factual corrections and tweaks to site allocations. 2.2 The more significant changes relate to the removal of site allocations from the plan at Crudwell, Malmesbury and Market Lavington. The Councils rationale for this was that development at these locations could be addressed through the delivery of Neighbourhood Plans. Barratt Homes do not have any specific comments to make regarding these specific changes. 2.3 To repeat, the specific changes these representations relate to are: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. Implications for Trowbridge 2.4 The fundamental strategy for Trowbridge has not been changed. Whilst the expected quantum of housing to be delivered on the HSAP sites has been revised to the extent where an additional c. 250 dwellings (800 1,050) are now expected to be delivered, the bulk of housing to be delivered is still reliant on the delivery of the long-term allocated site at Ashton Park to meet its housing target identified in the Wiltshire Core Strategy. 2.5 Given the delays in housing coming forward at Ashton Park, the Council are now only expecting the site to deliver 1,350 dwellings over the remaining plan period where it had previously been expected to deliver 1,600 dwellings. They are expecting the remainder (1,250 dwellings) to be delivered post 2026. This reduction has largely cancelled out the additional dwellings that are expected to be delivered at the other allocated sites over the remaining years of the plan period. 2.6 It should be noted that Barratt Homes question this delivery trajectory and consider the Councils assumptions to be overly optimistic. The reasons for this are set out in Section 3 below. 2.7 Regardless, there will be a shortfall in the number of dwellings delivered at Trowbridge over the plan period. This shortfall is expected to be 1,297 dwellings (PC25) which is broadly equivalent to the number of dwellings the Council expects to be delivered at Ashton Park beyond the end of the plan period (1,250). This is not a sound approach and fails to comply with paragraph 182 of NPPF 2012 (since replaced by paragraph 35 of the NPPF 2018). Key Concerns 2.8 Barratt Homes have previously made representations to the HSAP, expressing concerns with the overall approach to delivering housing at Trowbridge in September 2017. 2.9 As the fundamental strategy for Trowbridge has not changed, the thrust of the previous representations is still very much relevant. The key points made within those representations were as follows: There has been a pattern of failure across the district to deliver dwellings at key strategic sites at Chippenham, Salisbury and Trowbridge. There are serious question marks with regard to the delivery of any dwellings at Ashton Park between now and the end of the plan period, with no evidence in terms of a delivery timetable that the 1,350 dwellings that are anticipated by the Council can be completed; As such, it is clear that the large strategic sites have failed to deliver housing in the short-term and will run over into the next plan period; This has led to development pressure elsewhere within the plan area where a number of towns have seen planning by appeal and these will now deliver in excess of the indicative requirements as set out in the Wiltshire Core Strategy (WCS). We expect that the failure to deliver housing at these identified sites will exacerbate pressures on other

areas within Wiltshire to accommodate more growth and undermine the spatial distribution of the WCS; This will be further compounded by the failure of current proposed allocations in the HSAP at Trowbridge to meet the full allocation. As proposed there would be a residual shortfall of 1,297 homes (the changes to the HSAP revised this figure from 1,220 homes) still required to meet the needs of Trowbridge Town and a shortfall of 750 homes to meet the needs of Trowbridge Community Area. As a key strategic settlement and the primary focus of development within the WCS, it is not clear how under delivery at Trowbridge can meet the spatial strategy and development requirements of Wiltshire. There is plainly no difficulty in the HSAP document allocating sites for housing in excess of 42,000. Indeed, properly read, a figure above 42,000 would be entirely consistent with both the working and the evidence surrounding the WCS. Whilst the HSAP provides some limited commentary on the decision not to address the shortfall in Trowbridge, the ramifications of this decision are not examined in the Sustainability Assessment (SA). The non-allocation of homes at a Principal Settlement is a crucial strategic decision and the lack of analysis or commentary of this issue is a glaring omission on the current evidence base. Given the acknowledged need within the HSAP to provide a surplus, alongside the shortfall in the OAN, there is a clear and obvious requirement to allocate a full amount at Trowbridge.

2.10 Moreover, the failure to deliver a full amount of housing at Trowbridge does not match the ambitions of the Town Council who want to maintain Trowbridges status as Wiltshires County Town. The failure to plan to meet its housing needs in full under the HSAP would not be in line with the Towns status and the stated ambitions of locally democratic elected bodies.

Amendments to Trowbridge Settlement Boundary

2.11 In addition to the above, Barratt would like to formally register their support for the proposed amendments to the settlement boundary at Hilperton and Trowbridge which now captures parts of the built-up area that were previously excluded.

3. IMPLICATIONS FOR PROPOSED ALLOCATIONS

Ashton Park

3.1 In addition to the above, Barratt Homes would wish to elaborate further on the deliverability issues at Ashton Park, specifically in reference to the definition of deliverable as set out within the revised NPPF (2018).

3.2 The representations to the Regulation 19 version of the plan were submitted in September 2017. Over a year has since passed and the Ashton Park site still remains without outline planning permission, albeit it is understood that it was resolved to grant permission in April 2018, subject to the signing of a S106 agreement. This agreement had not yet been signed at the time of writing these representations.

3.3 The NPPFs definition of deliverable (for the purpose of Housing Land Supply assessments) states that sites with outline permission or allocated within development plans are not considered to be capable of delivering dwellings unless there is clear evidence that housing completions will begin on site within five years.

3.4 The Council have not provided any clear evidence to suggest that Ashton Park is capable of delivering any dwellings over the next five years. However, the Council are expecting it to deliver 1,350 dwellings by the end of the plan period (2026). With around 7-8 years left of the plan period and the assumption that no dwellings are likely to be delivered over the next five years, the Council appear to be expecting the site to deliver somewhere in the region of 450-675 dwellings per year over the last 2-3 years of the plan period.

3.5 Lichfields produced a research paper entitled Start to Finish: How Quickly do Large-Scale Housing Sites Deliver (November 2016). In their assessment of build-out rates, they noted that the average annual build-out rate for a scheme of 2,000+ dwellings was 161 dwellings per annum (dpa). The highest build out rate of the sites they assessed was 321 dpa (Cranbrook). Even taking this higher figure, the Councils anticipated delivery trajectory for Ashton Park is clearly overly optimistic. The full report is attached at Appendix 1.

APPENDIX 1: LICHFIELDS (NOVEMBER 2016) START TO FINISH: HOW QUICKLY DO LARGE-SCALE HOUSING SITES DELIVER

3.6 Notwithstanding this, the delivery of the bulk of housing at the site is reliant on the provision of a new bypass. It is understood that only around 300 dwellings could be delivered in advance of this key piece of infrastructure. This is another key issue that will have significant implications for delivery of dwellings at Ashton Park.

3.7 Taken together, this means that the shortfall of housing delivery at Trowbridge will be even more significant than the HSAP currently suggests both in the short and longer term.

3.8 This also has implications for the delivery of housing across the district in locations (e.g. Chippenham and Salisbury) which are also heavily reliant on the delivery of housing at strategic development locations to meet their Core Strategy targets. Indeed, the Councils overly optimistic view of delivery trajectories for strategic sites, coupled with an under provision of allocations that are deliverable over the remaining years of the plan period means that the prospect of a housing shortfall would not be confined to the Trowbridge area alone.

3.9 The Council argue that not addressing this shortfall under the HSAP is justified because Trowbridges

needs will be met by housing delivery under a future plan period. However, failing to address important issues of delivery, especially when there is a clear onus from the government to significantly boost the supply of housing, is not an appropriate position to take and fails to comply with paragraph 182 of the NPPF 2012. 3.10 There is a need for Trowbridge to deliver housing in the short term to relieve pressure on other, less sustainable locations for development across the district. 3.11 The Councils decision to pursue a strategy that effectively postpones the delivery of housing at a key strategic settlement such as Trowbridge to a future plan period is unacceptable and unsound. The plan accepts that there will be a shortfall in the delivery of housing at Trowbridge over the current plan period to the tune of 1,297 dwellings. This figure is based on a overly optimistic view as to the quantum of homes that might be delivered by the end of the current plan period (1,350 dwellings) and, as such, we would expect this shortfall to be even more substantial than is currently predicted. 3.12 Given the extent of this shortfall and the implications for failing to deliver a sufficient quantum of homes at Trowbridge under the current plan period, there is a clear need to identify additional housing sites that can deliver housing in the shorter term (i.e. within the remaining years of the plan period). 3.13 Land at Maxcroft Farm is one such site that could deliver housing in the shorter-term help Trowbridge to meet its housing requirements to the end of the current plan period (2026). Other Site Allocations 3.14 The remaining site allocations and their expected delivery are summarised as follows (PC13, PC51 and PC54-73): [TABLE INSERT] 3.15 Section 5 of the previous representations to the Regulation 19 Local Plan also included a critique of the other site allocations within Trowbridge. This still remains very much relevant and we would direct the Inspector to review its contents. 3.16 In essence, the assessment points out that the allocations to the south and east of the town are likely to be affected by the same ecological issues that have affected Ashton Park coming forward. There are, therefore, concerns with regards to the deliverability of these sites within a timely manner (i.e. within the plan period). Again, the HSAP has not identified a suitable set or quantum of sites that will ensure the delivery of housing at Trowbridge in the short term. 3.17 The strategy, in identifying an insufficient number of sites, some (if not all) of which may be unsuitable to be delivered in the plan period, simply postpones the inevitable allocation of further sites at Trowbridge to later plan periods when it should be doing so now. 3.18 The plan is, therefore, unsound because it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives and is inconsistent with national policy. 4. LAND AT MAXCROFT FARM Hilperton and Trowbridge 4.1 As stated previously, Barratt Homes have a specific interest in Land at Maxcroft Farm, Hilperton. However, there has been no assessment of Maxcroft Farm in the HSAP. This is thought to be because it is perceived as relating to Hilperton and not Trowbridge. The previous representations set out why this thinking was flawed. To summarise: Trowbridge, Hilperton, and Staverton Marina effectively constitute a continuous urban area; There is no visual spatial definition of Trowbridge or the remainder for the purposes of identifying additional allocations; The Core Strategy is unclear on the status of Hilperton, as it identifies it as a separate settlement in Core Policy 29; and requires that its distinct identity is protected in paragraph 5.150; but includes it as part of Trowbridge in footnote 56; The Core Strategy also defines Trowbridge Town as the continuous urban area of Trowbridge (which must by any rational definition include Hilperton); and Explicitly includes a less well-connected settlement within the continuous urban area of Trowbridge (Staverton). 4.2 Therefore, in order to meet the indicative housing requirement for Trowbridge Town, there is a need to allocate sites at Trowbridge including Hilperton. However, even if (contrary to footnote 56) Hilperton is excluded from Trowbridge Town, allocations are still required including those at Hilperton to meet the Community Area requirements. 4.3 It is noted that in the Councils submission documents, Wiltshire Housing Site Allocations Plan Consultation Statement Regulation 22 (1) (c) (WHSAP/09), the Council notes the importance of retaining the separate identities of Hilperton, North Bradley and Southwick. Crucially, both Southwick and North Bradley are currently separated by open countryside from the Trowbridge urban area, compared to Hilperton which already forms part of the continuous urban area. Furthermore, the plan goes on to allocated sites adjacent North Bradley, although sets out that a strategic gap should be maintained. This view that Hilperton is a separate village does not recognise the existing pattern of development across north Trowbridge. 4.4 Either way, the delivery of development at Maxcroft Farm in Hilperton would contribute to addressing the shortfall within the Trowbridge CA, whether it is viewed as development at Trowbridge, Hilperton or both. 4.5 Regardless, it is clear that the development of Maxcroft Farm must be seen in the context of delivering housing for the needs of Trowbridge and Hilperton. Therefore, the continuing lack of assessment of Maxcroft Farm as part of the

	<p>Sustainability Appraisal coupled with the lack of commentary on the decision not to allocate for the full housing needs at Trowbridge, means that the HSAP will not meet the needs of Wiltshire nor deliver a sound and objectively assessed plan. Land at Maxcroft Farm 4.6 The credentials of land at Maxcroft Farm were presented to the Council in a Technical Delivery Document as part of the representations on the Regulation 19 version of the HSAP. This document covered: the sustainability of the location; the environmental factors affecting the location; the realistic housing potential/capacity of the area in relation to the environmental effects of development; and the deliverability of the location. 4.7 This was also supported by detailed technical notes supporting this representation in order to address identified concerns from internal consultees at Wiltshire. 4.8 In terms of delivery, Barratt Homes are keen to stress that the delivery of this site is immediate and could be delivered from start on site (following allocation/consent) to practical completion within 24 months. 4.9 Given the issues with delivery in Wiltshire and the strategic settlements this must be considered a significant benefit of the site to realistically deliver well within the remaining plan period before 2026. As set out in the next section it is not thought that the allocations as they stand will achieve this aim. 5. CONCLUSION 5.1 These representations have been prepared by Pegasus Group on behalf of Barratt Homes (Bristol) in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan (HSAP). 5.2 These representations are specifically concerned with the strategy set out within the HSAP delivering new homes at Trowbridge. The key proposed changes identify additional dwellings to be delivered at the already proposed sites, but do not identify additional sites. 5.3 Under the HSAP, Trowbridge is projected to fall short of its Core Strategy housing target by a minimum of 1,297 dwellings. Barratt Homes feel that this figure will be significantly higher due to the Councils overly optimistic assumptions regarding delivery rates at the proposed allocations namely Ashton Park. 5.4 The Council are justifying this shortfall by saying that it will be met during the following plan period (i.e. 2016-2036). However, aside from being bad planning, this approach will further exacerbate pressure on other parts of the district to deliver the housing required under the current plan period (2006-2026), whilst also failing to deliver (among other things) the housing required to support the economic growth of Trowbridge. Ultimately, the strategy will delay the allocation of additional sites to a new local plan when they should be allocated under the HSAP. 5.5 The HSAP must, therefore, be found unsound as it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives of the Core Strategy and is inconsistent with national policy. 5.6 In order to be found sound, Barratt Homes believe it is imperative that additional sites are identified within the HSAP due to the pressing need to deliver homes at Trowbridge over the remaining years of the current plan period. 5.7 Given the sustainable performance and policy compliance of Maxcroft Farm in relation to the strategic priorities set out in the WCS, this is one such location that should be included.</p>

INTRODUCTION 1.1 This submission is made by Barratt Homes (Bristol) Ltd in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan Examination. 1.2 The Council submitted the draft Wiltshire Housing Site Allocations Plan (HSAP) along with a Schedule of Proposed Changes and supporting evidence to the Secretary of State for independent examination in July 2018. 1.3 This was followed by a procedural letter from the Inspector in August 2018 which required the Council to undertake a consultation on the Schedule of Proposed Changes to the HSAP, along with the revised Sustainability Appraisal, update to the Habitats Regulations Assessment Addendum, and associated evidence. 1.4 These representations set out Barratt Homes response to these proposed changes and have been prepared having regard to the requirements set out by the National Planning Policy Framework (NPPF). 1.5 Barratt Homes has land interests in the Trowbridge area and have submitted representations at previous stages of the HSAPs preparation in support of allocating land in this location. These specific representations relate to land at Maxcroft Farm in Hilperton, which forms part of the wider Trowbridge Urban Area. 1.6 The following proposed changes are, therefore, considered to be of particular relevance: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. 1.7 Unfortunately, the proposed modifications do not make any fundamental changes to the plan or strategy for Trowbridge. As such, the fundamental thrust of arguments made in previous representations remains the same. 1.8 These key points are considered further in Sections 2, 3 and 4 of these representations, but their content is summarised briefly below: The proposed changes have done nothing to address the shortfall anticipated over the remaining years of the plan period at Trowbridge; The delivery of housing at Trowbridge over the remaining years of the plan period continue to rely on the delivery of housing at a strategic site (Ashton Park) where anticipated delivery trajectories are overly optimistic; There remain serious questions over the deliverability of the identified allocations at Trowbridge given that there is potential for them to be affected by same ecological issues that have affected Ashton Park; The plan simply continues to postpone the delivery of housing at Trowbridge until after the plan period which is an unacceptable approach; The Council should, therefore, look to allocate additional sites to meet Trowbridges housing needs over the remaining years of the plan period and these should include land at Maxcroft Farm. 1.9 Given the above, it is our belief that the plan continues to fail when assessed against the four tests of soundness, as set out at paragraph 35 of the NPPF: Positively prepared the plan fails to meet the objectively</p>				

assessed development and infrastructure requirements of a key strategic settlement (Trowbridge); Justified the plan has not demonstrated it is the most appropriate strategy, when considered against the reasonable alternatives, based on evidence; Effective the plan will not deliver housing in a timely manner in accordance with Wiltshire Core Strategy; and Consistent with national policy a key priority for national planning policy is to boost significantly the supply and delivery of housing. This plan fails to plan for housing at a key strategic settlement with little more than 8 years left in the plan period. 1.10 Land at Maxcroft Farm represents a sustainable and deliverable location for housing development that can support the needs of Trowbridge and Hilperton. Given that housing delivery at Trowbridge is particularly reliant on a large strategic site (Ashton Park) which has suffered significant delays, the risk of further non-delivery of housing at a key strategic settlement in Wiltshire is exacerbated by this plan. The risk for Wiltshire is that the HSAP provides another adopted development plan document that has manifestly failed to address key issues with regard to the delivery and supply of housing. 1.11 The failure to address these issues would simply result in their deferral to a future development plan document or leave them to be addressed via the development management process. 1.12 Barratt Homes trust that the comments contained in these representations will be carefully considered and appropriately responded to by Wiltshire Council in their submission to the Secretary of State. 2. KEY CHANGES MADE TO HSAP 2.1 Some 135 changes are proposed to the HSAP. None of these were particularly fundamental to the overall approach of the plan, with the majority of them relating to factual corrections and tweaks to site allocations. 2.2 The more significant changes relate to the removal of site allocations from the plan at Crudwell, Malmesbury and Market Lavington. The Councils rationale for this was that development at these locations could be addressed through the delivery of Neighbourhood Plans. Barratt Homes do not have any specific comments to make regarding these specific changes. 2.3 To repeat, the specific changes these representations relate to are: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. Implications for Trowbridge 2.4 The fundamental strategy for Trowbridge has not been changed. Whilst the expected quantum of housing to be delivered on the HSAP sites has been revised to the extent where an additional c. 250 dwellings (800 1,050) are now expected to be delivered, the bulk of housing to be delivered is still reliant on the delivery of the long-term allocated site at Ashton Park to meet its housing target identified in the Wiltshire Core Strategy. 2.5 Given the delays in housing coming forward at Ashton Park, the Council are now only expecting the site to deliver 1,350 dwellings over the remaining plan period where it had previously been expected to deliver 1,600 dwellings. They are expecting the remainder (1,250 dwellings) to be delivered post 2026. This reduction has largely cancelled out the additional dwellings that are expected to be delivered at the other allocated sites over the remaining years of the plan period. 2.6 It should be noted that Barratt Homes question this delivery trajectory and consider the Councils assumptions to be overly optimistic. The reasons for this are set out in Section 3 below. 2.7 Regardless, there will be a shortfall in the number of dwellings delivered at Trowbridge over the plan period. This shortfall is expected to be 1,297 dwellings (PC25) which is broadly equivalent to the number of dwellings the Council expects to be delivered at Ashton Park beyond the end of the plan period (1,250). This is not a sound approach and fails to comply with paragraph 182 of NPPF 2012 (since replaced by paragraph 35 of the NPPF 2018). Key Concerns 2.8 Barratt Homes have previously made representations to the HSAP, expressing concerns with the overall approach to delivering housing at Trowbridge in September 2017. 2.9 As the fundamental strategy for Trowbridge has not changed, the thrust of the previous representations is still very much relevant. The key points made within those representations were as follows: There has been a pattern of failure across the district to deliver dwellings at key strategic sites at Chippenham, Salisbury and Trowbridge. There are serious question marks with regard to the delivery of any dwellings at Ashton Park between now and the end of the plan period, with no evidence in terms of a delivery timetable that the 1,350 dwellings that are anticipated by the Council can be completed; As such, it is clear that the large strategic sites have failed to deliver housing in the short-term and will run over into the next plan period; This has led to development pressure elsewhere within the plan area where a number of towns have seen planning by appeal and these will now deliver in excess of the indicative requirements as set out in the Wiltshire Core Strategy (WCS). We expect that the failure to deliver housing at these identified sites will exacerbate pressures on other

areas within Wiltshire to accommodate more growth and undermine the spatial distribution of the WCS; This will be further compounded by the failure of current proposed allocations in the HSAP at Trowbridge to meet the full allocation. As proposed there would be a residual shortfall of 1,297 homes (the changes to the HSAP revised this figure from 1,220 homes) still required to meet the needs of Trowbridge Town and a shortfall of 750 homes to meet the needs of Trowbridge Community Area. As a key strategic settlement and the primary focus of development within the WCS, it is not clear how under delivery at Trowbridge can meet the spatial strategy and development requirements of Wiltshire. There is plainly no difficulty in the HSAP document allocating sites for housing in excess of 42,000. Indeed, properly read, a figure above 42,000 would be entirely consistent with both the working and the evidence surrounding the WCS. Whilst the HSAP provides some limited commentary on the decision not to address the shortfall in Trowbridge, the ramifications of this decision are not examined in the Sustainability Assessment (SA). The non-allocation of homes at a Principal Settlement is a crucial strategic decision and the lack of analysis or commentary of this issue is a glaring omission on the current evidence base. Given the acknowledged need within the HSAP to provide a surplus, alongside the shortfall in the OAN, there is a clear and obvious requirement to allocate a full amount at Trowbridge.

2.10 Moreover, the failure to deliver a full amount of housing at Trowbridge does not match the ambitions of the Town Council who want to maintain Trowbridges status as Wiltshires County Town. The failure to plan to meet its housing needs in full under the HSAP would not be in line with the Towns status and the stated ambitions of locally democratic elected bodies.

Amendments to Trowbridge Settlement Boundary

2.11 In addition to the above, Barratt would like to formally register their support for the proposed amendments to the settlement boundary at Hilperton and Trowbridge which now captures parts of the built-up area that were previously excluded.

### 3. IMPLICATIONS FOR PROPOSED ALLOCATIONS

#### Ashton Park

3.1 In addition to the above, Barratt Homes would wish to elaborate further on the deliverability issues at Ashton Park, specifically in reference to the definition of deliverable as set out within the revised NPPF (2018).

3.2 The representations to the Regulation 19 version of the plan were submitted in September 2017. Over a year has since passed and the Ashton Park site still remains without outline planning permission, albeit it is understood that it was resolved to grant permission in April 2018, subject to the signing of a S106 agreement. This agreement had not yet been signed at the time of writing these representations.

3.3 The NPPFs definition of deliverable (for the purpose of Housing Land Supply assessments) states that sites with outline permission or allocated within development plans are not considered to be capable of delivering dwellings unless there is clear evidence that housing completions will begin on site within five years.

3.4 The Council have not provided any clear evidence to suggest that Ashton Park is capable of delivering any dwellings over the next five years. However, the Council are expecting it to deliver 1,350 dwellings by the end of the plan period (2026). With around 7-8 years left of the plan period and the assumption that no dwellings are likely to be delivered over the next five years, the Council appear to be expecting the site to deliver somewhere in the region of 450-675 dwellings per year over the last 2-3 years of the plan period.

3.5 Lichfields produced a research paper entitled Start to Finish: How Quickly do Large-Scale Housing Sites Deliver (November 2016). In their assessment of build-out rates, they noted that the average annual build-out rate for a scheme of 2,000+ dwellings was 161 dwellings per annum (dpa). The highest build out rate of the sites they assessed was 321 dpa (Cranbrook). Even taking this higher figure, the Councils anticipated delivery trajectory for Ashton Park is clearly overly optimistic. The full report is attached at Appendix 1.

#### APPENDIX 1: LICHFIELDS (NOVEMBER 2016) START TO FINISH: HOW QUICKLY DO LARGE-SCALE HOUSING SITES DELIVER

3.6 Notwithstanding this, the delivery of the bulk of housing at the site is reliant on the provision of a new bypass. It is understood that only around 300 dwellings could be delivered in advance of this key piece of infrastructure. This is another key issue that will have significant implications for delivery of dwellings at Ashton Park.

3.7 Taken together, this means that the shortfall of housing delivery at Trowbridge will be even more significant than the HSAP currently suggests both in the short and longer term.

3.8 This also has implications for the delivery of housing across the district in locations (e.g. Chippenham and Salisbury) which are also heavily reliant on the delivery of housing at strategic development locations to meet their Core Strategy targets. Indeed, the Councils overly optimistic view of delivery trajectories for strategic sites, coupled with an under provision of allocations that are deliverable over the remaining years of the plan period means that the prospect of a housing shortfall would not be confined to the Trowbridge area alone.

3.9 The Council argue that not addressing this shortfall under the HSAP is justified because Trowbridges

needs will be met by housing delivery under a future plan period. However, failing to address important issues of delivery, especially when there is a clear onus from the government to significantly boost the supply of housing, is not an appropriate position to take and fails to comply with paragraph 182 of the NPPF 2012. 3.10 There is a need for Trowbridge to deliver housing in the short term to relieve pressure on other, less sustainable locations for development across the district. 3.11 The Councils decision to pursue a strategy that effectively postpones the delivery of housing at a key strategic settlement such as Trowbridge to a future plan period is unacceptable and unsound. The plan accepts that there will be a shortfall in the delivery of housing at Trowbridge over the current plan period to the tune of 1,297 dwellings. This figure is based on a overly optimistic view as to the quantum of homes that might be delivered by the end of the current plan period (1,350 dwellings) and, as such, we would expect this shortfall to be even more substantial than is currently predicted. 3.12 Given the extent of this shortfall and the implications for failing to deliver a sufficient quantum of homes at Trowbridge under the current plan period, there is a clear need to identify additional housing sites that can deliver housing in the shorter term (i.e. within the remaining years of the plan period). 3.13 Land at Maxcroft Farm is one such site that could deliver housing in the shorter-term help Trowbridge to meet its housing requirements to the end of the current plan period (2026). Other Site Allocations 3.14 The remaining site allocations and their expected delivery are summarised as follows (PC13, PC51 and PC54-73): [TABLE INSERT] 3.15 Section 5 of the previous representations to the Regulation 19 Local Plan also included a critique of the other site allocations within Trowbridge. This still remains very much relevant and we would direct the Inspector to review its contents. 3.16 In essence, the assessment points out that the allocations to the south and east of the town are likely to be affected by the same ecological issues that have affected Ashton Park coming forward. There are, therefore, concerns with regards to the deliverability of these sites within a timely manner (i.e. within the plan period). Again, the HSAP has not identified a suitable set or quantum of sites that will ensure the delivery of housing at Trowbridge in the short term. 3.17 The strategy, in identifying an insufficient number of sites, some (if not all) of which may be unsuitable to be delivered in the plan period, simply postpones the inevitable allocation of further sites at Trowbridge to later plan periods when it should be doing so now. 3.18 The plan is, therefore, unsound because it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives and is inconsistent with national policy. 4. LAND AT MAXCROFT FARM Hilperton and Trowbridge 4.1 As stated previously, Barratt Homes have a specific interest in Land at Maxcroft Farm, Hilperton. However, there has been no assessment of Maxcroft Farm in the HSAP. This is thought to be because it is perceived as relating to Hilperton and not Trowbridge. The previous representations set out why this thinking was flawed. To summarise: Trowbridge, Hilperton, and Staverton Marina effectively constitute a continuous urban area; There is no visual spatial definition of Trowbridge or the remainder for the purposes of identifying additional allocations; The Core Strategy is unclear on the status of Hilperton, as it identifies it as a separate settlement in Core Policy 29; and requires that its distinct identity is protected in paragraph 5.150; but includes it as part of Trowbridge in footnote 56; The Core Strategy also defines Trowbridge Town as the continuous urban area of Trowbridge (which must by any rational definition include Hilperton); and Explicitly includes a less well-connected settlement within the continuous urban area of Trowbridge (Staverton). 4.2 Therefore, in order to meet the indicative housing requirement for Trowbridge Town, there is a need to allocate sites at Trowbridge including Hilperton. However, even if (contrary to footnote 56) Hilperton is excluded from Trowbridge Town, allocations are still required including those at Hilperton to meet the Community Area requirements. 4.3 It is noted that in the Councils submission documents, Wiltshire Housing Site Allocations Plan Consultation Statement Regulation 22 (1) (c) (WHSAP/09), the Council notes the importance of retaining the separate identities of Hilperton, North Bradley and Southwick. Crucially, both Southwick and North Bradley are currently separated by open countryside from the Trowbridge urban area, compared to Hilperton which already forms part of the continuous urban area. Furthermore, the plan goes on to allocated sites adjacent North Bradley, although sets out that a strategic gap should be maintained. This view that Hilperton is a separate village does not recognise the existing pattern of development across north Trowbridge. 4.4 Either way, the delivery of development at Maxcroft Farm in Hilperton would contribute to addressing the shortfall within the Trowbridge CA, whether it is viewed as development at Trowbridge, Hilperton or both. 4.5 Regardless, it is clear that the development of Maxcroft Farm must be seen in the context of delivering housing for the needs of Trowbridge and Hilperton. Therefore, the continuing lack of assessment of Maxcroft Farm as part of the

	<p>Sustainability Appraisal coupled with the lack of commentary on the decision not to allocate for the full housing needs at Trowbridge, means that the HSAP will not meet the needs of Wiltshire nor deliver a sound and objectively assessed plan. Land at Maxcroft Farm 4.6 The credentials of land at Maxcroft Farm were presented to the Council in a Technical Delivery Document as part of the representations on the Regulation 19 version of the HSAP. This document covered: the sustainability of the location; the environmental factors affecting the location; the realistic housing potential/capacity of the area in relation to the environmental effects of development; and the deliverability of the location. 4.7 This was also supported by detailed technical notes supporting this representation in order to address identified concerns from internal consultees at Wiltshire. 4.8 In terms of delivery, Barratt Homes are keen to stress that the delivery of this site is immediate and could be delivered from start on site (following allocation/consent) to practical completion within 24 months. 4.9 Given the issues with delivery in Wiltshire and the strategic settlements this must be considered a significant benefit of the site to realistically deliver well within the remaining plan period before 2026. As set out in the next section it is not thought that the allocations as they stand will achieve this aim. 5. CONCLUSION 5.1 These representations have been prepared by Pegasus Group on behalf of Barratt Homes (Bristol) in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan (HSAP). 5.2 These representations are specifically concerned with the strategy set out within the HSAP delivering new homes at Trowbridge. The key proposed changes identify additional dwellings to be delivered at the already proposed sites, but do not identify additional sites. 5.3 Under the HSAP, Trowbridge is projected to fall short of its Core Strategy housing target by a minimum of 1,297 dwellings. Barratt Homes feel that this figure will be significantly higher due to the Councils overly optimistic assumptions regarding delivery rates at the proposed allocations namely Ashton Park. 5.4 The Council are justifying this shortfall by saying that it will be met during the following plan period (i.e. 2016-2036). However, aside from being bad planning, this approach will further exacerbate pressure on other parts of the district to deliver the housing required under the current plan period (2006-2026), whilst also failing to deliver (among other things) the housing required to support the economic growth of Trowbridge. Ultimately, the strategy will delay the allocation of additional sites to a new local plan when they should be allocated under the HSAP. 5.5 The HSAP must, therefore, be found unsound as it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives of the Core Strategy and is inconsistent with national policy. 5.6 In order to be found sound, Barratt Homes believe it is imperative that additional sites are identified within the HSAP due to the pressing need to deliver homes at Trowbridge over the remaining years of the current plan period. 5.7 Given the sustainable performance and policy compliance of Maxcroft Farm in relation to the strategic priorities set out in the WCS, this is one such location that should be included.</p>

INTRODUCTION 1.1 This submission is made by Barratt Homes (Bristol) Ltd in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan Examination. 1.2 The Council submitted the draft Wiltshire Housing Site Allocations Plan (HSAP) along with a Schedule of Proposed Changes and supporting evidence to the Secretary of State for independent examination in July 2018. 1.3 This was followed by a procedural letter from the Inspector in August 2018 which required the Council to undertake a consultation on the Schedule of Proposed Changes to the HSAP, along with the revised Sustainability Appraisal, update to the Habitats Regulations Assessment Addendum, and associated evidence. 1.4 These representations set out Barratt Homes response to these proposed changes and have been prepared having regard to the requirements set out by the National Planning Policy Framework (NPPF). 1.5 Barratt Homes has land interests in the Trowbridge area and have submitted representations at previous stages of the HSAPs preparation in support of allocating land in this location. These specific representations relate to land at Maxcroft Farm in Hilperton, which forms part of the wider Trowbridge Urban Area. 1.6 The following proposed changes are, therefore, considered to be of particular relevance: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. 1.7 Unfortunately, the proposed modifications do not make any fundamental changes to the plan or strategy for Trowbridge. As such, the fundamental thrust of arguments made in previous representations remains the same. 1.8 These key points are considered further in Sections 2, 3 and 4 of these representations, but their content is summarised briefly below: The proposed changes have done nothing to address the shortfall anticipated over the remaining years of the plan period at Trowbridge; The delivery of housing at Trowbridge over the remaining years of the plan period continue to rely on the delivery of housing at a strategic site (Ashton Park) where anticipated delivery trajectories are overly optimistic; There remain serious questions over the deliverability of the identified allocations at Trowbridge given that there is potential for them to be affected by same ecological issues that have affected Ashton Park; The plan simply continues to postpone the delivery of housing at Trowbridge until after the plan period which is an unacceptable approach; The Council should, therefore, look to allocate additional sites to meet Trowbridges housing needs over the remaining years of the plan period and these should include land at Maxcroft Farm. 1.9 Given the above, it is our belief that the plan continues to fail when assessed against the four tests of soundness, as set out at paragraph 35 of the NPPF: Positively prepared the plan fails to meet the objectively</p>				

assessed development and infrastructure requirements of a key strategic settlement (Trowbridge); Justified the plan has not demonstrated it is the most appropriate strategy, when considered against the reasonable alternatives, based on evidence; Effective the plan will not deliver housing in a timely manner in accordance with Wiltshire Core Strategy; and Consistent with national policy a key priority for national planning policy is to boost significantly the supply and delivery of housing. This plan fails to plan for housing at a key strategic settlement with little more than 8 years left in the plan period. 1.10 Land at Maxcroft Farm represents a sustainable and deliverable location for housing development that can support the needs of Trowbridge and Hilperton. Given that housing delivery at Trowbridge is particularly reliant on a large strategic site (Ashton Park) which has suffered significant delays, the risk of further non-delivery of housing at a key strategic settlement in Wiltshire is exacerbated by this plan. The risk for Wiltshire is that the HSAP provides another adopted development plan document that has manifestly failed to address key issues with regard to the delivery and supply of housing. 1.11 The failure to address these issues would simply result in their deferral to a future development plan document or leave them to be addressed via the development management process. 1.12 Barratt Homes trust that the comments contained in these representations will be carefully considered and appropriately responded to by Wiltshire Council in their submission to the Secretary of State. 2. KEY CHANGES MADE TO HSAP 2.1 Some 135 changes are proposed to the HSAP. None of these were particularly fundamental to the overall approach of the plan, with the majority of them relating to factual corrections and tweaks to site allocations. 2.2 The more significant changes relate to the removal of site allocations from the plan at Crudwell, Malmesbury and Market Lavington. The Councils rationale for this was that development at these locations could be addressed through the delivery of Neighbourhood Plans. Barratt Homes do not have any specific comments to make regarding these specific changes. 2.3 To repeat, the specific changes these representations relate to are: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. Implications for Trowbridge 2.4 The fundamental strategy for Trowbridge has not been changed. Whilst the expected quantum of housing to be delivered on the HSAP sites has been revised to the extent where an additional c. 250 dwellings (800 1,050) are now expected to be delivered, the bulk of housing to be delivered is still reliant on the delivery of the long-term allocated site at Ashton Park to meet its housing target identified in the Wiltshire Core Strategy. 2.5 Given the delays in housing coming forward at Ashton Park, the Council are now only expecting the site to deliver 1,350 dwellings over the remaining plan period where it had previously been expected to deliver 1,600 dwellings. They are expecting the remainder (1,250 dwellings) to be delivered post 2026. This reduction has largely cancelled out the additional dwellings that are expected to be delivered at the other allocated sites over the remaining years of the plan period. 2.6 It should be noted that Barratt Homes question this delivery trajectory and consider the Councils assumptions to be overly optimistic. The reasons for this are set out in Section 3 below. 2.7 Regardless, there will be a shortfall in the number of dwellings delivered at Trowbridge over the plan period. This shortfall is expected to be 1,297 dwellings (PC25) which is broadly equivalent to the number of dwellings the Council expects to be delivered at Ashton Park beyond the end of the plan period (1,250). This is not a sound approach and fails to comply with paragraph 182 of NPPF 2012 (since replaced by paragraph 35 of the NPPF 2018). Key Concerns 2.8 Barratt Homes have previously made representations to the HSAP, expressing concerns with the overall approach to delivering housing at Trowbridge in September 2017. 2.9 As the fundamental strategy for Trowbridge has not changed, the thrust of the previous representations is still very much relevant. The key points made within those representations were as follows: There has been a pattern of failure across the district to deliver dwellings at key strategic sites at Chippenham, Salisbury and Trowbridge. There are serious question marks with regard to the delivery of any dwellings at Ashton Park between now and the end of the plan period, with no evidence in terms of a delivery timetable that the 1,350 dwellings that are anticipated by the Council can be completed; As such, it is clear that the large strategic sites have failed to deliver housing in the short-term and will run over into the next plan period; This has led to development pressure elsewhere within the plan area where a number of towns have seen planning by appeal and these will now deliver in excess of the indicative requirements as set out in the Wiltshire Core Strategy (WCS). We expect that the failure to deliver housing at these identified sites will exacerbate pressures on other

areas within Wiltshire to accommodate more growth and undermine the spatial distribution of the WCS; This will be further compounded by the failure of current proposed allocations in the HSAP at Trowbridge to meet the full allocation. As proposed there would be a residual shortfall of 1,297 homes (the changes to the HSAP revised this figure from 1,220 homes) still required to meet the needs of Trowbridge Town and a shortfall of 750 homes to meet the needs of Trowbridge Community Area. As a key strategic settlement and the primary focus of development within the WCS, it is not clear how under delivery at Trowbridge can meet the spatial strategy and development requirements of Wiltshire. There is plainly no difficulty in the HSAP document allocating sites for housing in excess of 42,000. Indeed, properly read, a figure above 42,000 would be entirely consistent with both the working and the evidence surrounding the WCS. Whilst the HSAP provides some limited commentary on the decision not to address the shortfall in Trowbridge, the ramifications of this decision are not examined in the Sustainability Assessment (SA). The non-allocation of homes at a Principal Settlement is a crucial strategic decision and the lack of analysis or commentary of this issue is a glaring omission on the current evidence base. Given the acknowledged need within the HSAP to provide a surplus, alongside the shortfall in the OAN, there is a clear and obvious requirement to allocate a full amount at Trowbridge.

2.10 Moreover, the failure to deliver a full amount of housing at Trowbridge does not match the ambitions of the Town Council who want to maintain Trowbridges status as Wiltshires County Town. The failure to plan to meet its housing needs in full under the HSAP would not be in line with the Towns status and the stated ambitions of locally democratic elected bodies.

Amendments to Trowbridge Settlement Boundary

2.11 In addition to the above, Barratt would like to formally register their support for the proposed amendments to the settlement boundary at Hilperton and Trowbridge which now captures parts of the built-up area that were previously excluded.

### 3. IMPLICATIONS FOR PROPOSED ALLOCATIONS

#### Ashton Park

3.1 In addition to the above, Barratt Homes would wish to elaborate further on the deliverability issues at Ashton Park, specifically in reference to the definition of deliverable as set out within the revised NPPF (2018).

3.2 The representations to the Regulation 19 version of the plan were submitted in September 2017. Over a year has since passed and the Ashton Park site still remains without outline planning permission, albeit it is understood that it was resolved to grant permission in April 2018, subject to the signing of a S106 agreement. This agreement had not yet been signed at the time of writing these representations.

3.3 The NPPFs definition of deliverable (for the purpose of Housing Land Supply assessments) states that sites with outline permission or allocated within development plans are not considered to be capable of delivering dwellings unless there is clear evidence that housing completions will begin on site within five years.

3.4 The Council have not provided any clear evidence to suggest that Ashton Park is capable of delivering any dwellings over the next five years. However, the Council are expecting it to deliver 1,350 dwellings by the end of the plan period (2026). With around 7-8 years left of the plan period and the assumption that no dwellings are likely to be delivered over the next five years, the Council appear to be expecting the site to deliver somewhere in the region of 450-675 dwellings per year over the last 2-3 years of the plan period.

3.5 Lichfields produced a research paper entitled Start to Finish: How Quickly do Large-Scale Housing Sites Deliver (November 2016). In their assessment of build-out rates, they noted that the average annual build-out rate for a scheme of 2,000+ dwellings was 161 dwellings per annum (dpa). The highest build out rate of the sites they assessed was 321 dpa (Cranbrook). Even taking this higher figure, the Councils anticipated delivery trajectory for Ashton Park is clearly overly optimistic. The full report is attached at Appendix 1.

#### APPENDIX 1: LICHFIELDS (NOVEMBER 2016) START TO FINISH: HOW QUICKLY DO LARGE-SCALE HOUSING SITES DELIVER

3.6 Notwithstanding this, the delivery of the bulk of housing at the site is reliant on the provision of a new bypass. It is understood that only around 300 dwellings could be delivered in advance of this key piece of infrastructure. This is another key issue that will have significant implications for delivery of dwellings at Ashton Park.

3.7 Taken together, this means that the shortfall of housing delivery at Trowbridge will be even more significant than the HSAP currently suggests both in the short and longer term.

3.8 This also has implications for the delivery of housing across the district in locations (e.g. Chippenham and Salisbury) which are also heavily reliant on the delivery of housing at strategic development locations to meet their Core Strategy targets. Indeed, the Councils overly optimistic view of delivery trajectories for strategic sites, coupled with an under provision of allocations that are deliverable over the remaining years of the plan period means that the prospect of a housing shortfall would not be confined to the Trowbridge area alone.

3.9 The Council argue that not addressing this shortfall under the HSAP is justified because Trowbridges

needs will be met by housing delivery under a future plan period. However, failing to address important issues of delivery, especially when there is a clear onus from the government to significantly boost the supply of housing, is not an appropriate position to take and fails to comply with paragraph 182 of the NPPF 2012. 3.10 There is a need for Trowbridge to deliver housing in the short term to relieve pressure on other, less sustainable locations for development across the district. 3.11 The Councils decision to pursue a strategy that effectively postpones the delivery of housing at a key strategic settlement such as Trowbridge to a future plan period is unacceptable and unsound. The plan accepts that there will be a shortfall in the delivery of housing at Trowbridge over the current plan period to the tune of 1,297 dwellings. This figure is based on a overly optimistic view as to the quantum of homes that might be delivered by the end of the current plan period (1,350 dwellings) and, as such, we would expect this shortfall to be even more substantial than is currently predicted. 3.12 Given the extent of this shortfall and the implications for failing to deliver a sufficient quantum of homes at Trowbridge under the current plan period, there is a clear need to identify additional housing sites that can deliver housing in the shorter term (i.e. within the remaining years of the plan period). 3.13 Land at Maxcroft Farm is one such site that could deliver housing in the shorter-term help Trowbridge to meet its housing requirements to the end of the current plan period (2026). Other Site Allocations 3.14 The remaining site allocations and their expected delivery are summarised as follows (PC13, PC51 and PC54-73): [TABLE INSERT] 3.15 Section 5 of the previous representations to the Regulation 19 Local Plan also included a critique of the other site allocations within Trowbridge. This still remains very much relevant and we would direct the Inspector to review its contents. 3.16 In essence, the assessment points out that the allocations to the south and east of the town are likely to be affected by the same ecological issues that have affected Ashton Park coming forward. There are, therefore, concerns with regards to the deliverability of these sites within a timely manner (i.e. within the plan period). Again, the HSAP has not identified a suitable set or quantum of sites that will ensure the delivery of housing at Trowbridge in the short term. 3.17 The strategy, in identifying an insufficient number of sites, some (if not all) of which may be unsuitable to be delivered in the plan period, simply postpones the inevitable allocation of further sites at Trowbridge to later plan periods when it should be doing so now. 3.18 The plan is, therefore, unsound because it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives and is inconsistent with national policy. 4. LAND AT MAXCROFT FARM Hilperton and Trowbridge 4.1 As stated previously, Barratt Homes have a specific interest in Land at Maxcroft Farm, Hilperton. However, there has been no assessment of Maxcroft Farm in the HSAP. This is thought to be because it is perceived as relating to Hilperton and not Trowbridge. The previous representations set out why this thinking was flawed. To summarise: Trowbridge, Hilperton, and Staverton Marina effectively constitute a continuous urban area; There is no visual spatial definition of Trowbridge or the remainder for the purposes of identifying additional allocations; The Core Strategy is unclear on the status of Hilperton, as it identifies it as a separate settlement in Core Policy 29; and requires that its distinct identity is protected in paragraph 5.150; but includes it as part of Trowbridge in footnote 56; The Core Strategy also defines Trowbridge Town as the continuous urban area of Trowbridge (which must by any rational definition include Hilperton); and Explicitly includes a less well-connected settlement within the continuous urban area of Trowbridge (Staverton). 4.2 Therefore, in order to meet the indicative housing requirement for Trowbridge Town, there is a need to allocate sites at Trowbridge including Hilperton. However, even if (contrary to footnote 56) Hilperton is excluded from Trowbridge Town, allocations are still required including those at Hilperton to meet the Community Area requirements. 4.3 It is noted that in the Councils submission documents, Wiltshire Housing Site Allocations Plan Consultation Statement Regulation 22 (1) (c) (WHSAP/09), the Council notes the importance of retaining the separate identities of Hilperton, North Bradley and Southwick. Crucially, both Southwick and North Bradley are currently separated by open countryside from the Trowbridge urban area, compared to Hilperton which already forms part of the continuous urban area. Furthermore, the plan goes on to allocated sites adjacent North Bradley, although sets out that a strategic gap should be maintained. This view that Hilperton is a separate village does not recognise the existing pattern of development across north Trowbridge. 4.4 Either way, the delivery of development at Maxcroft Farm in Hilperton would contribute to addressing the shortfall within the Trowbridge CA, whether it is viewed as development at Trowbridge, Hilperton or both. 4.5 Regardless, it is clear that the development of Maxcroft Farm must be seen in the context of delivering housing for the needs of Trowbridge and Hilperton. Therefore, the continuing lack of assessment of Maxcroft Farm as part of the

	<p>Sustainability Appraisal coupled with the lack of commentary on the decision not to allocate for the full housing needs at Trowbridge, means that the HSAP will not meet the needs of Wiltshire nor deliver a sound and objectively assessed plan. Land at Maxcroft Farm 4.6 The credentials of land at Maxcroft Farm were presented to the Council in a Technical Delivery Document as part of the representations on the Regulation 19 version of the HSAP. This document covered: the sustainability of the location; the environmental factors affecting the location; the realistic housing potential/capacity of the area in relation to the environmental effects of development; and the deliverability of the location. 4.7 This was also supported by detailed technical notes supporting this representation in order to address identified concerns from internal consultees at Wiltshire. 4.8 In terms of delivery, Barratt Homes are keen to stress that the delivery of this site is immediate and could be delivered from start on site (following allocation/consent) to practical completion within 24 months. 4.9 Given the issues with delivery in Wiltshire and the strategic settlements this must be considered a significant benefit of the site to realistically deliver well within the remaining plan period before 2026. As set out in the next section it is not thought that the allocations as they stand will achieve this aim. 5. CONCLUSION 5.1 These representations have been prepared by Pegasus Group on behalf of Barratt Homes (Bristol) in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan (HSAP). 5.2 These representations are specifically concerned with the strategy set out within the HSAP delivering new homes at Trowbridge. The key proposed changes identify additional dwellings to be delivered at the already proposed sites, but do not identify additional sites. 5.3 Under the HSAP, Trowbridge is projected to fall short of its Core Strategy housing target by a minimum of 1,297 dwellings. Barratt Homes feel that this figure will be significantly higher due to the Councils overly optimistic assumptions regarding delivery rates at the proposed allocations namely Ashton Park. 5.4 The Council are justifying this shortfall by saying that it will be met during the following plan period (i.e. 2016-2036). However, aside from being bad planning, this approach will further exacerbate pressure on other parts of the district to deliver the housing required under the current plan period (2006-2026), whilst also failing to deliver (among other things) the housing required to support the economic growth of Trowbridge. Ultimately, the strategy will delay the allocation of additional sites to a new local plan when they should be allocated under the HSAP. 5.5 The HSAP must, therefore, be found unsound as it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives of the Core Strategy and is inconsistent with national policy. 5.6 In order to be found sound, Barratt Homes believe it is imperative that additional sites are identified within the HSAP due to the pressing need to deliver homes at Trowbridge over the remaining years of the current plan period. 5.7 Given the sustainable performance and policy compliance of Maxcroft Farm in relation to the strategic priorities set out in the WCS, this is one such location that should be included.</p>

INTRODUCTION 1.1 This submission is made by Barratt Homes (Bristol) Ltd in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan Examination. 1.2 The Council submitted the draft Wiltshire Housing Site Allocations Plan (HSAP) along with a Schedule of Proposed Changes and supporting evidence to the Secretary of State for independent examination in July 2018. 1.3 This was followed by a procedural letter from the Inspector in August 2018 which required the Council to undertake a consultation on the Schedule of Proposed Changes to the HSAP, along with the revised Sustainability Appraisal, update to the Habitats Regulations Assessment Addendum, and associated evidence. 1.4 These representations set out Barratt Homes response to these proposed changes and have been prepared having regard to the requirements set out by the National Planning Policy Framework (NPPF). 1.5 Barratt Homes has land interests in the Trowbridge area and have submitted representations at previous stages of the HSAPs preparation in support of allocating land in this location. These specific representations relate to land at Maxcroft Farm in Hilperton, which forms part of the wider Trowbridge Urban Area. 1.6 The following proposed changes are, therefore, considered to be of particular relevance: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. 1.7 Unfortunately, the proposed modifications do not make any fundamental changes to the plan or strategy for Trowbridge. As such, the fundamental thrust of arguments made in previous representations remains the same. 1.8 These key points are considered further in Sections 2, 3 and 4 of these representations, but their content is summarised briefly below: The proposed changes have done nothing to address the shortfall anticipated over the remaining years of the plan period at Trowbridge; The delivery of housing at Trowbridge over the remaining years of the plan period continue to rely on the delivery of housing at a strategic site (Ashton Park) where anticipated delivery trajectories are overly optimistic; There remain serious questions over the deliverability of the identified allocations at Trowbridge given that there is potential for them to be affected by same ecological issues that have affected Ashton Park; The plan simply continues to postpone the delivery of housing at Trowbridge until after the plan period which is an unacceptable approach; The Council should, therefore, look to allocate additional sites to meet Trowbridges housing needs over the remaining years of the plan period and these should include land at Maxcroft Farm. 1.9 Given the above, it is our belief that the plan continues to fail when assessed against the four tests of soundness, as set out at paragraph 35 of the NPPF: Positively prepared the plan fails to meet the objectively</p>				

assessed development and infrastructure requirements of a key strategic settlement (Trowbridge); Justified the plan has not demonstrated it is the most appropriate strategy, when considered against the reasonable alternatives, based on evidence; Effective the plan will not deliver housing in a timely manner in accordance with Wiltshire Core Strategy; and Consistent with national policy a key priority for national planning policy is to boost significantly the supply and delivery of housing. This plan fails to plan for housing at a key strategic settlement with little more than 8 years left in the plan period. 1.10 Land at Maxcroft Farm represents a sustainable and deliverable location for housing development that can support the needs of Trowbridge and Hilperton. Given that housing delivery at Trowbridge is particularly reliant on a large strategic site (Ashton Park) which has suffered significant delays, the risk of further non-delivery of housing at a key strategic settlement in Wiltshire is exacerbated by this plan. The risk for Wiltshire is that the HSAP provides another adopted development plan document that has manifestly failed to address key issues with regard to the delivery and supply of housing. 1.11 The failure to address these issues would simply result in their deferral to a future development plan document or leave them to be addressed via the development management process. 1.12 Barratt Homes trust that the comments contained in these representations will be carefully considered and appropriately responded to by Wiltshire Council in their submission to the Secretary of State. 2. KEY CHANGES MADE TO HSAP 2.1 Some 135 changes are proposed to the HSAP. None of these were particularly fundamental to the overall approach of the plan, with the majority of them relating to factual corrections and tweaks to site allocations. 2.2 The more significant changes relate to the removal of site allocations from the plan at Crudwell, Malmesbury and Market Lavington. The Councils rationale for this was that development at these locations could be addressed through the delivery of Neighbourhood Plans. Barratt Homes do not have any specific comments to make regarding these specific changes. 2.3 To repeat, the specific changes these representations relate to are: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. Implications for Trowbridge 2.4 The fundamental strategy for Trowbridge has not been changed. Whilst the expected quantum of housing to be delivered on the HSAP sites has been revised to the extent where an additional c. 250 dwellings (800 1,050) are now expected to be delivered, the bulk of housing to be delivered is still reliant on the delivery of the long-term allocated site at Ashton Park to meet its housing target identified in the Wiltshire Core Strategy. 2.5 Given the delays in housing coming forward at Ashton Park, the Council are now only expecting the site to deliver 1,350 dwellings over the remaining plan period where it had previously been expected to deliver 1,600 dwellings. They are expecting the remainder (1,250 dwellings) to be delivered post 2026. This reduction has largely cancelled out the additional dwellings that are expected to be delivered at the other allocated sites over the remaining years of the plan period. 2.6 It should be noted that Barratt Homes question this delivery trajectory and consider the Councils assumptions to be overly optimistic. The reasons for this are set out in Section 3 below. 2.7 Regardless, there will be a shortfall in the number of dwellings delivered at Trowbridge over the plan period. This shortfall is expected to be 1,297 dwellings (PC25) which is broadly equivalent to the number of dwellings the Council expects to be delivered at Ashton Park beyond the end of the plan period (1,250). This is not a sound approach and fails to comply with paragraph 182 of NPPF 2012 (since replaced by paragraph 35 of the NPPF 2018). Key Concerns 2.8 Barratt Homes have previously made representations to the HSAP, expressing concerns with the overall approach to delivering housing at Trowbridge in September 2017. 2.9 As the fundamental strategy for Trowbridge has not changed, the thrust of the previous representations is still very much relevant. The key points made within those representations were as follows: There has been a pattern of failure across the district to deliver dwellings at key strategic sites at Chippenham, Salisbury and Trowbridge. There are serious question marks with regard to the delivery of any dwellings at Ashton Park between now and the end of the plan period, with no evidence in terms of a delivery timetable that the 1,350 dwellings that are anticipated by the Council can be completed; As such, it is clear that the large strategic sites have failed to deliver housing in the short-term and will run over into the next plan period; This has led to development pressure elsewhere within the plan area where a number of towns have seen planning by appeal and these will now deliver in excess of the indicative requirements as set out in the Wiltshire Core Strategy (WCS). We expect that the failure to deliver housing at these identified sites will exacerbate pressures on other

areas within Wiltshire to accommodate more growth and undermine the spatial distribution of the WCS; This will be further compounded by the failure of current proposed allocations in the HSAP at Trowbridge to meet the full allocation. As proposed there would be a residual shortfall of 1,297 homes (the changes to the HSAP revised this figure from 1,220 homes) still required to meet the needs of Trowbridge Town and a shortfall of 750 homes to meet the needs of Trowbridge Community Area. As a key strategic settlement and the primary focus of development within the WCS, it is not clear how under delivery at Trowbridge can meet the spatial strategy and development requirements of Wiltshire. There is plainly no difficulty in the HSAP document allocating sites for housing in excess of 42,000. Indeed, properly read, a figure above 42,000 would be entirely consistent with both the working and the evidence surrounding the WCS. Whilst the HSAP provides some limited commentary on the decision not to address the shortfall in Trowbridge, the ramifications of this decision are not examined in the Sustainability Assessment (SA). The non-allocation of homes at a Principal Settlement is a crucial strategic decision and the lack of analysis or commentary of this issue is a glaring omission on the current evidence base. Given the acknowledged need within the HSAP to provide a surplus, alongside the shortfall in the OAN, there is a clear and obvious requirement to allocate a full amount at Trowbridge.

2.10 Moreover, the failure to deliver a full amount of housing at Trowbridge does not match the ambitions of the Town Council who want to maintain Trowbridges status as Wiltshires County Town. The failure to plan to meet its housing needs in full under the HSAP would not be in line with the Towns status and the stated ambitions of locally democratic elected bodies.

Amendments to Trowbridge Settlement Boundary

2.11 In addition to the above, Barratt would like to formally register their support for the proposed amendments to the settlement boundary at Hilperton and Trowbridge which now captures parts of the built-up area that were previously excluded.

3. IMPLICATIONS FOR PROPOSED ALLOCATIONS

Ashton Park

3.1 In addition to the above, Barratt Homes would wish to elaborate further on the deliverability issues at Ashton Park, specifically in reference to the definition of deliverable as set out within the revised NPPF (2018).

3.2 The representations to the Regulation 19 version of the plan were submitted in September 2017. Over a year has since passed and the Ashton Park site still remains without outline planning permission, albeit it is understood that it was resolved to grant permission in April 2018, subject to the signing of a S106 agreement. This agreement had not yet been signed at the time of writing these representations.

3.3 The NPPFs definition of deliverable (for the purpose of Housing Land Supply assessments) states that sites with outline permission or allocated within development plans are not considered to be capable of delivering dwellings unless there is clear evidence that housing completions will begin on site within five years.

3.4 The Council have not provided any clear evidence to suggest that Ashton Park is capable of delivering any dwellings over the next five years. However, the Council are expecting it to deliver 1,350 dwellings by the end of the plan period (2026). With around 7-8 years left of the plan period and the assumption that no dwellings are likely to be delivered over the next five years, the Council appear to be expecting the site to deliver somewhere in the region of 450-675 dwellings per year over the last 2-3 years of the plan period.

3.5 Lichfields produced a research paper entitled Start to Finish: How Quickly do Large-Scale Housing Sites Deliver (November 2016). In their assessment of build-out rates, they noted that the average annual build-out rate for a scheme of 2,000+ dwellings was 161 dwellings per annum (dpa). The highest build out rate of the sites they assessed was 321 dpa (Cranbrook). Even taking this higher figure, the Councils anticipated delivery trajectory for Ashton Park is clearly overly optimistic. The full report is attached at Appendix 1.

APPENDIX 1: LICHFIELDS (NOVEMBER 2016) START TO FINISH: HOW QUICKLY DO LARGE-SCALE HOUSING SITES DELIVER

3.6 Notwithstanding this, the delivery of the bulk of housing at the site is reliant on the provision of a new bypass. It is understood that only around 300 dwellings could be delivered in advance of this key piece of infrastructure. This is another key issue that will have significant implications for delivery of dwellings at Ashton Park.

3.7 Taken together, this means that the shortfall of housing delivery at Trowbridge will be even more significant than the HSAP currently suggests both in the short and longer term.

3.8 This also has implications for the delivery of housing across the district in locations (e.g. Chippenham and Salisbury) which are also heavily reliant on the delivery of housing at strategic development locations to meet their Core Strategy targets. Indeed, the Councils overly optimistic view of delivery trajectories for strategic sites, coupled with an under provision of allocations that are deliverable over the remaining years of the plan period means that the prospect of a housing shortfall would not be confined to the Trowbridge area alone.

3.9 The Council argue that not addressing this shortfall under the HSAP is justified because Trowbridges

needs will be met by housing delivery under a future plan period. However, failing to address important issues of delivery, especially when there is a clear onus from the government to significantly boost the supply of housing, is not an appropriate position to take and fails to comply with paragraph 182 of the NPPF 2012. 3.10 There is a need for Trowbridge to deliver housing in the short term to relieve pressure on other, less sustainable locations for development across the district. 3.11 The Councils decision to pursue a strategy that effectively postpones the delivery of housing at a key strategic settlement such as Trowbridge to a future plan period is unacceptable and unsound. The plan accepts that there will be a shortfall in the delivery of housing at Trowbridge over the current plan period to the tune of 1,297 dwellings. This figure is based on a overly optimistic view as to the quantum of homes that might be delivered by the end of the current plan period (1,350 dwellings) and, as such, we would expect this shortfall to be even more substantial than is currently predicted. 3.12 Given the extent of this shortfall and the implications for failing to deliver a sufficient quantum of homes at Trowbridge under the current plan period, there is a clear need to identify additional housing sites that can deliver housing in the shorter term (i.e. within the remaining years of the plan period). 3.13 Land at Maxcroft Farm is one such site that could deliver housing in the shorter-term help Trowbridge to meet its housing requirements to the end of the current plan period (2026). Other Site Allocations 3.14 The remaining site allocations and their expected delivery are summarised as follows (PC13, PC51 and PC54-73): [TABLE INSERT] 3.15 Section 5 of the previous representations to the Regulation 19 Local Plan also included a critique of the other site allocations within Trowbridge. This still remains very much relevant and we would direct the Inspector to review its contents. 3.16 In essence, the assessment points out that the allocations to the south and east of the town are likely to be affected by the same ecological issues that have affected Ashton Park coming forward. There are, therefore, concerns with regards to the deliverability of these sites within a timely manner (i.e. within the plan period). Again, the HSAP has not identified a suitable set or quantum of sites that will ensure the delivery of housing at Trowbridge in the short term. 3.17 The strategy, in identifying an insufficient number of sites, some (if not all) of which may be unsuitable to be delivered in the plan period, simply postpones the inevitable allocation of further sites at Trowbridge to later plan periods when it should be doing so now. 3.18 The plan is, therefore, unsound because it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives and is inconsistent with national policy. 4. LAND AT MAXCROFT FARM Hilperton and Trowbridge 4.1 As stated previously, Barratt Homes have a specific interest in Land at Maxcroft Farm, Hilperton. However, there has been no assessment of Maxcroft Farm in the HSAP. This is thought to be because it is perceived as relating to Hilperton and not Trowbridge. The previous representations set out why this thinking was flawed. To summarise: Trowbridge, Hilperton, and Staverton Marina effectively constitute a continuous urban area; There is no visual spatial definition of Trowbridge or the remainder for the purposes of identifying additional allocations; The Core Strategy is unclear on the status of Hilperton, as it identifies it as a separate settlement in Core Policy 29; and requires that its distinct identity is protected in paragraph 5.150; but includes it as part of Trowbridge in footnote 56; The Core Strategy also defines Trowbridge Town as the continuous urban area of Trowbridge (which must by any rational definition include Hilperton); and Explicitly includes a less well-connected settlement within the continuous urban area of Trowbridge (Staverton). 4.2 Therefore, in order to meet the indicative housing requirement for Trowbridge Town, there is a need to allocate sites at Trowbridge including Hilperton. However, even if (contrary to footnote 56) Hilperton is excluded from Trowbridge Town, allocations are still required including those at Hilperton to meet the Community Area requirements. 4.3 It is noted that in the Councils submission documents, Wiltshire Housing Site Allocations Plan Consultation Statement Regulation 22 (1) (c) (WHSAP/09), the Council notes the importance of retaining the separate identities of Hilperton, North Bradley and Southwick. Crucially, both Southwick and North Bradley are currently separated by open countryside from the Trowbridge urban area, compared to Hilperton which already forms part of the continuous urban area. Furthermore, the plan goes on to allocated sites adjacent North Bradley, although sets out that a strategic gap should be maintained. This view that Hilperton is a separate village does not recognise the existing pattern of development across north Trowbridge. 4.4 Either way, the delivery of development at Maxcroft Farm in Hilperton would contribute to addressing the shortfall within the Trowbridge CA, whether it is viewed as development at Trowbridge, Hilperton or both. 4.5 Regardless, it is clear that the development of Maxcroft Farm must be seen in the context of delivering housing for the needs of Trowbridge and Hilperton. Therefore, the continuing lack of assessment of Maxcroft Farm as part of the

	<p>Sustainability Appraisal coupled with the lack of commentary on the decision not to allocate for the full housing needs at Trowbridge, means that the HSAP will not meet the needs of Wiltshire nor deliver a sound and objectively assessed plan. Land at Maxcroft Farm 4.6 The credentials of land at Maxcroft Farm were presented to the Council in a Technical Delivery Document as part of the representations on the Regulation 19 version of the HSAP. This document covered: the sustainability of the location; the environmental factors affecting the location; the realistic housing potential/capacity of the area in relation to the environmental effects of development; and the deliverability of the location. 4.7 This was also supported by detailed technical notes supporting this representation in order to address identified concerns from internal consultees at Wiltshire. 4.8 In terms of delivery, Barratt Homes are keen to stress that the delivery of this site is immediate and could be delivered from start on site (following allocation/consent) to practical completion within 24 months. 4.9 Given the issues with delivery in Wiltshire and the strategic settlements this must be considered a significant benefit of the site to realistically deliver well within the remaining plan period before 2026. As set out in the next section it is not thought that the allocations as they stand will achieve this aim. 5. CONCLUSION 5.1 These representations have been prepared by Pegasus Group on behalf of Barratt Homes (Bristol) in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan (HSAP). 5.2 These representations are specifically concerned with the strategy set out within the HSAP delivering new homes at Trowbridge. The key proposed changes identify additional dwellings to be delivered at the already proposed sites, but do not identify additional sites. 5.3 Under the HSAP, Trowbridge is projected to fall short of its Core Strategy housing target by a minimum of 1,297 dwellings. Barratt Homes feel that this figure will be significantly higher due to the Councils overly optimistic assumptions regarding delivery rates at the proposed allocations namely Ashton Park. 5.4 The Council are justifying this shortfall by saying that it will be met during the following plan period (i.e. 2016-2036). However, aside from being bad planning, this approach will further exacerbate pressure on other parts of the district to deliver the housing required under the current plan period (2006-2026), whilst also failing to deliver (among other things) the housing required to support the economic growth of Trowbridge. Ultimately, the strategy will delay the allocation of additional sites to a new local plan when they should be allocated under the HSAP. 5.5 The HSAP must, therefore, be found unsound as it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives of the Core Strategy and is inconsistent with national policy. 5.6 In order to be found sound, Barratt Homes believe it is imperative that additional sites are identified within the HSAP due to the pressing need to deliver homes at Trowbridge over the remaining years of the current plan period. 5.7 Given the sustainable performance and policy compliance of Maxcroft Farm in relation to the strategic priorities set out in the WCS, this is one such location that should be included.</p>

INTRODUCTION 1.1 This submission is made by Barratt Homes (Bristol) Ltd in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan Examination. 1.2 The Council submitted the draft Wiltshire Housing Site Allocations Plan (HSAP) along with a Schedule of Proposed Changes and supporting evidence to the Secretary of State for independent examination in July 2018. 1.3 This was followed by a procedural letter from the Inspector in August 2018 which required the Council to undertake a consultation on the Schedule of Proposed Changes to the HSAP, along with the revised Sustainability Appraisal, update to the Habitats Regulations Assessment Addendum, and associated evidence. 1.4 These representations set out Barratt Homes response to these proposed changes and have been prepared having regard to the requirements set out by the National Planning Policy Framework (NPPF). 1.5 Barratt Homes has land interests in the Trowbridge area and have submitted representations at previous stages of the HSAPs preparation in support of allocating land in this location. These specific representations relate to land at Maxcroft Farm in Hilperton, which forms part of the wider Trowbridge Urban Area. 1.6 The following proposed changes are, therefore, considered to be of particular relevance: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. 1.7 Unfortunately, the proposed modifications do not make any fundamental changes to the plan or strategy for Trowbridge. As such, the fundamental thrust of arguments made in previous representations remains the same. 1.8 These key points are considered further in Sections 2, 3 and 4 of these representations, but their content is summarised briefly below: The proposed changes have done nothing to address the shortfall anticipated over the remaining years of the plan period at Trowbridge; The delivery of housing at Trowbridge over the remaining years of the plan period continue to rely on the delivery of housing at a strategic site (Ashton Park) where anticipated delivery trajectories are overly optimistic; There remain serious questions over the deliverability of the identified allocations at Trowbridge given that there is potential for them to be affected by same ecological issues that have affected Ashton Park; The plan simply continues to postpone the delivery of housing at Trowbridge until after the plan period which is an unacceptable approach; The Council should, therefore, look to allocate additional sites to meet Trowbridges housing needs over the remaining years of the plan period and these should include land at Maxcroft Farm. 1.9 Given the above, it is our belief that the plan continues to fail when assessed against the four tests of soundness, as set out at paragraph 35 of the NPPF: Positively prepared the plan fails to meet the objectively</p>				

assessed development and infrastructure requirements of a key strategic settlement (Trowbridge); Justified the plan has not demonstrated it is the most appropriate strategy, when considered against the reasonable alternatives, based on evidence; Effective the plan will not deliver housing in a timely manner in accordance with Wiltshire Core Strategy; and Consistent with national policy a key priority for national planning policy is to boost significantly the supply and delivery of housing. This plan fails to plan for housing at a key strategic settlement with little more than 8 years left in the plan period. 1.10 Land at Maxcroft Farm represents a sustainable and deliverable location for housing development that can support the needs of Trowbridge and Hilperton. Given that housing delivery at Trowbridge is particularly reliant on a large strategic site (Ashton Park) which has suffered significant delays, the risk of further non-delivery of housing at a key strategic settlement in Wiltshire is exacerbated by this plan. The risk for Wiltshire is that the HSAP provides another adopted development plan document that has manifestly failed to address key issues with regard to the delivery and supply of housing. 1.11 The failure to address these issues would simply result in their deferral to a future development plan document or leave them to be addressed via the development management process. 1.12 Barratt Homes trust that the comments contained in these representations will be carefully considered and appropriately responded to by Wiltshire Council in their submission to the Secretary of State. 2. KEY CHANGES MADE TO HSAP 2.1 Some 135 changes are proposed to the HSAP. None of these were particularly fundamental to the overall approach of the plan, with the majority of them relating to factual corrections and tweaks to site allocations. 2.2 The more significant changes relate to the removal of site allocations from the plan at Crudwell, Malmesbury and Market Lavington. The Councils rationale for this was that development at these locations could be addressed through the delivery of Neighbourhood Plans. Barratt Homes do not have any specific comments to make regarding these specific changes. 2.3 To repeat, the specific changes these representations relate to are: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. Implications for Trowbridge 2.4 The fundamental strategy for Trowbridge has not been changed. Whilst the expected quantum of housing to be delivered on the HSAP sites has been revised to the extent where an additional c. 250 dwellings (800 1,050) are now expected to be delivered, the bulk of housing to be delivered is still reliant on the delivery of the long-term allocated site at Ashton Park to meet its housing target identified in the Wiltshire Core Strategy. 2.5 Given the delays in housing coming forward at Ashton Park, the Council are now only expecting the site to deliver 1,350 dwellings over the remaining plan period where it had previously been expected to deliver 1,600 dwellings. They are expecting the remainder (1,250 dwellings) to be delivered post 2026. This reduction has largely cancelled out the additional dwellings that are expected to be delivered at the other allocated sites over the remaining years of the plan period. 2.6 It should be noted that Barratt Homes question this delivery trajectory and consider the Councils assumptions to be overly optimistic. The reasons for this are set out in Section 3 below. 2.7 Regardless, there will be a shortfall in the number of dwellings delivered at Trowbridge over the plan period. This shortfall is expected to be 1,297 dwellings (PC25) which is broadly equivalent to the number of dwellings the Council expects to be delivered at Ashton Park beyond the end of the plan period (1,250). This is not a sound approach and fails to comply with paragraph 182 of NPPF 2012 (since replaced by paragraph 35 of the NPPF 2018). Key Concerns 2.8 Barratt Homes have previously made representations to the HSAP, expressing concerns with the overall approach to delivering housing at Trowbridge in September 2017. 2.9 As the fundamental strategy for Trowbridge has not changed, the thrust of the previous representations is still very much relevant. The key points made within those representations were as follows: There has been a pattern of failure across the district to deliver dwellings at key strategic sites at Chippenham, Salisbury and Trowbridge. There are serious question marks with regard to the delivery of any dwellings at Ashton Park between now and the end of the plan period, with no evidence in terms of a delivery timetable that the 1,350 dwellings that are anticipated by the Council can be completed; As such, it is clear that the large strategic sites have failed to deliver housing in the short-term and will run over into the next plan period; This has led to development pressure elsewhere within the plan area where a number of towns have seen planning by appeal and these will now deliver in excess of the indicative requirements as set out in the Wiltshire Core Strategy (WCS). We expect that the failure to deliver housing at these identified sites will exacerbate pressures on other

areas within Wiltshire to accommodate more growth and undermine the spatial distribution of the WCS; This will be further compounded by the failure of current proposed allocations in the HSAP at Trowbridge to meet the full allocation. As proposed there would be a residual shortfall of 1,297 homes (the changes to the HSAP revised this figure from 1,220 homes) still required to meet the needs of Trowbridge Town and a shortfall of 750 homes to meet the needs of Trowbridge Community Area. As a key strategic settlement and the primary focus of development within the WCS, it is not clear how under delivery at Trowbridge can meet the spatial strategy and development requirements of Wiltshire. There is plainly no difficulty in the HSAP document allocating sites for housing in excess of 42,000. Indeed, properly read, a figure above 42,000 would be entirely consistent with both the working and the evidence surrounding the WCS. Whilst the HSAP provides some limited commentary on the decision not to address the shortfall in Trowbridge, the ramifications of this decision are not examined in the Sustainability Assessment (SA). The non-allocation of homes at a Principal Settlement is a crucial strategic decision and the lack of analysis or commentary of this issue is a glaring omission on the current evidence base. Given the acknowledged need within the HSAP to provide a surplus, alongside the shortfall in the OAN, there is a clear and obvious requirement to allocate a full amount at Trowbridge.

2.10 Moreover, the failure to deliver a full amount of housing at Trowbridge does not match the ambitions of the Town Council who want to maintain Trowbridges status as Wiltshires County Town. The failure to plan to meet its housing needs in full under the HSAP would not be in line with the Towns status and the stated ambitions of locally democratic elected bodies.

Amendments to Trowbridge Settlement Boundary

2.11 In addition to the above, Barratt would like to formally register their support for the proposed amendments to the settlement boundary at Hilperton and Trowbridge which now captures parts of the built-up area that were previously excluded.

3. IMPLICATIONS FOR PROPOSED ALLOCATIONS

Ashton Park

3.1 In addition to the above, Barratt Homes would wish to elaborate further on the deliverability issues at Ashton Park, specifically in reference to the definition of deliverable as set out within the revised NPPF (2018).

3.2 The representations to the Regulation 19 version of the plan were submitted in September 2017. Over a year has since passed and the Ashton Park site still remains without outline planning permission, albeit it is understood that it was resolved to grant permission in April 2018, subject to the signing of a S106 agreement. This agreement had not yet been signed at the time of writing these representations.

3.3 The NPPFs definition of deliverable (for the purpose of Housing Land Supply assessments) states that sites with outline permission or allocated within development plans are not considered to be capable of delivering dwellings unless there is clear evidence that housing completions will begin on site within five years.

3.4 The Council have not provided any clear evidence to suggest that Ashton Park is capable of delivering any dwellings over the next five years. However, the Council are expecting it to deliver 1,350 dwellings by the end of the plan period (2026). With around 7-8 years left of the plan period and the assumption that no dwellings are likely to be delivered over the next five years, the Council appear to be expecting the site to deliver somewhere in the region of 450-675 dwellings per year over the last 2-3 years of the plan period.

3.5 Lichfields produced a research paper entitled Start to Finish: How Quickly do Large-Scale Housing Sites Deliver (November 2016). In their assessment of build-out rates, they noted that the average annual build-out rate for a scheme of 2,000+ dwellings was 161 dwellings per annum (dpa). The highest build out rate of the sites they assessed was 321 dpa (Cranbrook). Even taking this higher figure, the Councils anticipated delivery trajectory for Ashton Park is clearly overly optimistic. The full report is attached at Appendix 1.

APPENDIX 1: LICHFIELDS (NOVEMBER 2016) START TO FINISH: HOW QUICKLY DO LARGE-SCALE HOUSING SITES DELIVER

3.6 Notwithstanding this, the delivery of the bulk of housing at the site is reliant on the provision of a new bypass. It is understood that only around 300 dwellings could be delivered in advance of this key piece of infrastructure. This is another key issue that will have significant implications for delivery of dwellings at Ashton Park.

3.7 Taken together, this means that the shortfall of housing delivery at Trowbridge will be even more significant than the HSAP currently suggests both in the short and longer term.

3.8 This also has implications for the delivery of housing across the district in locations (e.g. Chippenham and Salisbury) which are also heavily reliant on the delivery of housing at strategic development locations to meet their Core Strategy targets. Indeed, the Councils overly optimistic view of delivery trajectories for strategic sites, coupled with an under provision of allocations that are deliverable over the remaining years of the plan period means that the prospect of a housing shortfall would not be confined to the Trowbridge area alone.

3.9 The Council argue that not addressing this shortfall under the HSAP is justified because Trowbridges

needs will be met by housing delivery under a future plan period. However, failing to address important issues of delivery, especially when there is a clear onus from the government to significantly boost the supply of housing, is not an appropriate position to take and fails to comply with paragraph 182 of the NPPF 2012. 3.10 There is a need for Trowbridge to deliver housing in the short term to relieve pressure on other, less sustainable locations for development across the district. 3.11 The Councils decision to pursue a strategy that effectively postpones the delivery of housing at a key strategic settlement such as Trowbridge to a future plan period is unacceptable and unsound. The plan accepts that there will be a shortfall in the delivery of housing at Trowbridge over the current plan period to the tune of 1,297 dwellings. This figure is based on a overly optimistic view as to the quantum of homes that might be delivered by the end of the current plan period (1,350 dwellings) and, as such, we would expect this shortfall to be even more substantial than is currently predicted. 3.12 Given the extent of this shortfall and the implications for failing to deliver a sufficient quantum of homes at Trowbridge under the current plan period, there is a clear need to identify additional housing sites that can deliver housing in the shorter term (i.e. within the remaining years of the plan period). 3.13 Land at Maxcroft Farm is one such site that could deliver housing in the shorter-term help Trowbridge to meet its housing requirements to the end of the current plan period (2026). Other Site Allocations 3.14 The remaining site allocations and their expected delivery are summarised as follows (PC13, PC51 and PC54-73): [TABLE INSERT] 3.15 Section 5 of the previous representations to the Regulation 19 Local Plan also included a critique of the other site allocations within Trowbridge. This still remains very much relevant and we would direct the Inspector to review its contents. 3.16 In essence, the assessment points out that the allocations to the south and east of the town are likely to be affected by the same ecological issues that have affected Ashton Park coming forward. There are, therefore, concerns with regards to the deliverability of these sites within a timely manner (i.e. within the plan period). Again, the HSAP has not identified a suitable set or quantum of sites that will ensure the delivery of housing at Trowbridge in the short term. 3.17 The strategy, in identifying an insufficient number of sites, some (if not all) of which may be unsuitable to be delivered in the plan period, simply postpones the inevitable allocation of further sites at Trowbridge to later plan periods when it should be doing so now. 3.18 The plan is, therefore, unsound because it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives and is inconsistent with national policy. 4. LAND AT MAXCROFT FARM Hilperton and Trowbridge 4.1 As stated previously, Barratt Homes have a specific interest in Land at Maxcroft Farm, Hilperton. However, there has been no assessment of Maxcroft Farm in the HSAP. This is thought to be because it is perceived as relating to Hilperton and not Trowbridge. The previous representations set out why this thinking was flawed. To summarise: Trowbridge, Hilperton, and Staverton Marina effectively constitute a continuous urban area; There is no visual spatial definition of Trowbridge or the remainder for the purposes of identifying additional allocations; The Core Strategy is unclear on the status of Hilperton, as it identifies it as a separate settlement in Core Policy 29; and requires that its distinct identity is protected in paragraph 5.150; but includes it as part of Trowbridge in footnote 56; The Core Strategy also defines Trowbridge Town as the continuous urban area of Trowbridge (which must by any rational definition include Hilperton); and Explicitly includes a less well-connected settlement within the continuous urban area of Trowbridge (Staverton). 4.2 Therefore, in order to meet the indicative housing requirement for Trowbridge Town, there is a need to allocate sites at Trowbridge including Hilperton. However, even if (contrary to footnote 56) Hilperton is excluded from Trowbridge Town, allocations are still required including those at Hilperton to meet the Community Area requirements. 4.3 It is noted that in the Councils submission documents, Wiltshire Housing Site Allocations Plan Consultation Statement Regulation 22 (1) (c) (WHSAP/09), the Council notes the importance of retaining the separate identities of Hilperton, North Bradley and Southwick. Crucially, both Southwick and North Bradley are currently separated by open countryside from the Trowbridge urban area, compared to Hilperton which already forms part of the continuous urban area. Furthermore, the plan goes on to allocated sites adjacent North Bradley, although sets out that a strategic gap should be maintained. This view that Hilperton is a separate village does not recognise the existing pattern of development across north Trowbridge. 4.4 Either way, the delivery of development at Maxcroft Farm in Hilperton would contribute to addressing the shortfall within the Trowbridge CA, whether it is viewed as development at Trowbridge, Hilperton or both. 4.5 Regardless, it is clear that the development of Maxcroft Farm must be seen in the context of delivering housing for the needs of Trowbridge and Hilperton. Therefore, the continuing lack of assessment of Maxcroft Farm as part of the

	<p>Sustainability Appraisal coupled with the lack of commentary on the decision not to allocate for the full housing needs at Trowbridge, means that the HSAP will not meet the needs of Wiltshire nor deliver a sound and objectively assessed plan. Land at Maxcroft Farm 4.6 The credentials of land at Maxcroft Farm were presented to the Council in a Technical Delivery Document as part of the representations on the Regulation 19 version of the HSAP. This document covered: the sustainability of the location; the environmental factors affecting the location; the realistic housing potential/capacity of the area in relation to the environmental effects of development; and the deliverability of the location. 4.7 This was also supported by detailed technical notes supporting this representation in order to address identified concerns from internal consultees at Wiltshire. 4.8 In terms of delivery, Barratt Homes are keen to stress that the delivery of this site is immediate and could be delivered from start on site (following allocation/consent) to practical completion within 24 months. 4.9 Given the issues with delivery in Wiltshire and the strategic settlements this must be considered a significant benefit of the site to realistically deliver well within the remaining plan period before 2026. As set out in the next section it is not thought that the allocations as they stand will achieve this aim. 5. CONCLUSION 5.1 These representations have been prepared by Pegasus Group on behalf of Barratt Homes (Bristol) in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan (HSAP). 5.2 These representations are specifically concerned with the strategy set out within the HSAP delivering new homes at Trowbridge. The key proposed changes identify additional dwellings to be delivered at the already proposed sites, but do not identify additional sites. 5.3 Under the HSAP, Trowbridge is projected to fall short of its Core Strategy housing target by a minimum of 1,297 dwellings. Barratt Homes feel that this figure will be significantly higher due to the Councils overly optimistic assumptions regarding delivery rates at the proposed allocations namely Ashton Park. 5.4 The Council are justifying this shortfall by saying that it will be met during the following plan period (i.e. 2016-2036). However, aside from being bad planning, this approach will further exacerbate pressure on other parts of the district to deliver the housing required under the current plan period (2006-2026), whilst also failing to deliver (among other things) the housing required to support the economic growth of Trowbridge. Ultimately, the strategy will delay the allocation of additional sites to a new local plan when they should be allocated under the HSAP. 5.5 The HSAP must, therefore, be found unsound as it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives of the Core Strategy and is inconsistent with national policy. 5.6 In order to be found sound, Barratt Homes believe it is imperative that additional sites are identified within the HSAP due to the pressing need to deliver homes at Trowbridge over the remaining years of the current plan period. 5.7 Given the sustainable performance and policy compliance of Maxcroft Farm in relation to the strategic priorities set out in the WCS, this is one such location that should be included.</p>

INTRODUCTION 1.1 This submission is made by Barratt Homes (Bristol) Ltd in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan Examination. 1.2 The Council submitted the draft Wiltshire Housing Site Allocations Plan (HSAP) along with a Schedule of Proposed Changes and supporting evidence to the Secretary of State for independent examination in July 2018. 1.3 This was followed by a procedural letter from the Inspector in August 2018 which required the Council to undertake a consultation on the Schedule of Proposed Changes to the HSAP, along with the revised Sustainability Appraisal, update to the Habitats Regulations Assessment Addendum, and associated evidence. 1.4 These representations set out Barratt Homes response to these proposed changes and have been prepared having regard to the requirements set out by the National Planning Policy Framework (NPPF). 1.5 Barratt Homes has land interests in the Trowbridge area and have submitted representations at previous stages of the HSAPs preparation in support of allocating land in this location. These specific representations relate to land at Maxcroft Farm in Hilperton, which forms part of the wider Trowbridge Urban Area. 1.6 The following proposed changes are, therefore, considered to be of particular relevance: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. 1.7 Unfortunately, the proposed modifications do not make any fundamental changes to the plan or strategy for Trowbridge. As such, the fundamental thrust of arguments made in previous representations remains the same. 1.8 These key points are considered further in Sections 2, 3 and 4 of these representations, but their content is summarised briefly below: The proposed changes have done nothing to address the shortfall anticipated over the remaining years of the plan period at Trowbridge; The delivery of housing at Trowbridge over the remaining years of the plan period continue to rely on the delivery of housing at a strategic site (Ashton Park) where anticipated delivery trajectories are overly optimistic; There remain serious questions over the deliverability of the identified allocations at Trowbridge given that there is potential for them to be affected by same ecological issues that have affected Ashton Park; The plan simply continues to postpone the delivery of housing at Trowbridge until after the plan period which is an unacceptable approach; The Council should, therefore, look to allocate additional sites to meet Trowbridges housing needs over the remaining years of the plan period and these should include land at Maxcroft Farm. 1.9 Given the above, it is our belief that the plan continues to fail when assessed against the four tests of soundness, as set out at paragraph 35 of the NPPF: Positively prepared the plan fails to meet the objectively</p>				

assessed development and infrastructure requirements of a key strategic settlement (Trowbridge); Justified the plan has not demonstrated it is the most appropriate strategy, when considered against the reasonable alternatives, based on evidence; Effective the plan will not deliver housing in a timely manner in accordance with Wiltshire Core Strategy; and Consistent with national policy a key priority for national planning policy is to boost significantly the supply and delivery of housing. This plan fails to plan for housing at a key strategic settlement with little more than 8 years left in the plan period. 1.10 Land at Maxcroft Farm represents a sustainable and deliverable location for housing development that can support the needs of Trowbridge and Hilperton. Given that housing delivery at Trowbridge is particularly reliant on a large strategic site (Ashton Park) which has suffered significant delays, the risk of further non-delivery of housing at a key strategic settlement in Wiltshire is exacerbated by this plan. The risk for Wiltshire is that the HSAP provides another adopted development plan document that has manifestly failed to address key issues with regard to the delivery and supply of housing. 1.11 The failure to address these issues would simply result in their deferral to a future development plan document or leave them to be addressed via the development management process. 1.12 Barratt Homes trust that the comments contained in these representations will be carefully considered and appropriately responded to by Wiltshire Council in their submission to the Secretary of State. 2. KEY CHANGES MADE TO HSAP 2.1 Some 135 changes are proposed to the HSAP. None of these were particularly fundamental to the overall approach of the plan, with the majority of them relating to factual corrections and tweaks to site allocations. 2.2 The more significant changes relate to the removal of site allocations from the plan at Crudwell, Malmesbury and Market Lavington. The Councils rationale for this was that development at these locations could be addressed through the delivery of Neighbourhood Plans. Barratt Homes do not have any specific comments to make regarding these specific changes. 2.3 To repeat, the specific changes these representations relate to are: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. Implications for Trowbridge 2.4 The fundamental strategy for Trowbridge has not been changed. Whilst the expected quantum of housing to be delivered on the HSAP sites has been revised to the extent where an additional c. 250 dwellings (800 1,050) are now expected to be delivered, the bulk of housing to be delivered is still reliant on the delivery of the long-term allocated site at Ashton Park to meet its housing target identified in the Wiltshire Core Strategy. 2.5 Given the delays in housing coming forward at Ashton Park, the Council are now only expecting the site to deliver 1,350 dwellings over the remaining plan period where it had previously been expected to deliver 1,600 dwellings. They are expecting the remainder (1,250 dwellings) to be delivered post 2026. This reduction has largely cancelled out the additional dwellings that are expected to be delivered at the other allocated sites over the remaining years of the plan period. 2.6 It should be noted that Barratt Homes question this delivery trajectory and consider the Councils assumptions to be overly optimistic. The reasons for this are set out in Section 3 below. 2.7 Regardless, there will be a shortfall in the number of dwellings delivered at Trowbridge over the plan period. This shortfall is expected to be 1,297 dwellings (PC25) which is broadly equivalent to the number of dwellings the Council expects to be delivered at Ashton Park beyond the end of the plan period (1,250). This is not a sound approach and fails to comply with paragraph 182 of NPPF 2012 (since replaced by paragraph 35 of the NPPF 2018). Key Concerns 2.8 Barratt Homes have previously made representations to the HSAP, expressing concerns with the overall approach to delivering housing at Trowbridge in September 2017. 2.9 As the fundamental strategy for Trowbridge has not changed, the thrust of the previous representations is still very much relevant. The key points made within those representations were as follows: There has been a pattern of failure across the district to deliver dwellings at key strategic sites at Chippenham, Salisbury and Trowbridge. There are serious question marks with regard to the delivery of any dwellings at Ashton Park between now and the end of the plan period, with no evidence in terms of a delivery timetable that the 1,350 dwellings that are anticipated by the Council can be completed; As such, it is clear that the large strategic sites have failed to deliver housing in the short-term and will run over into the next plan period; This has led to development pressure elsewhere within the plan area where a number of towns have seen planning by appeal and these will now deliver in excess of the indicative requirements as set out in the Wiltshire Core Strategy (WCS). We expect that the failure to deliver housing at these identified sites will exacerbate pressures on other

areas within Wiltshire to accommodate more growth and undermine the spatial distribution of the WCS; This will be further compounded by the failure of current proposed allocations in the HSAP at Trowbridge to meet the full allocation. As proposed there would be a residual shortfall of 1,297 homes (the changes to the HSAP revised this figure from 1,220 homes) still required to meet the needs of Trowbridge Town and a shortfall of 750 homes to meet the needs of Trowbridge Community Area. As a key strategic settlement and the primary focus of development within the WCS, it is not clear how under delivery at Trowbridge can meet the spatial strategy and development requirements of Wiltshire. There is plainly no difficulty in the HSAP document allocating sites for housing in excess of 42,000. Indeed, properly read, a figure above 42,000 would be entirely consistent with both the working and the evidence surrounding the WCS. Whilst the HSAP provides some limited commentary on the decision not to address the shortfall in Trowbridge, the ramifications of this decision are not examined in the Sustainability Assessment (SA). The non-allocation of homes at a Principal Settlement is a crucial strategic decision and the lack of analysis or commentary of this issue is a glaring omission on the current evidence base. Given the acknowledged need within the HSAP to provide a surplus, alongside the shortfall in the OAN, there is a clear and obvious requirement to allocate a full amount at Trowbridge.

2.10 Moreover, the failure to deliver a full amount of housing at Trowbridge does not match the ambitions of the Town Council who want to maintain Trowbridges status as Wiltshires County Town. The failure to plan to meet its housing needs in full under the HSAP would not be in line with the Towns status and the stated ambitions of locally democratic elected bodies.

Amendments to Trowbridge Settlement Boundary

2.11 In addition to the above, Barratt would like to formally register their support for the proposed amendments to the settlement boundary at Hilperton and Trowbridge which now captures parts of the built-up area that were previously excluded.

3. IMPLICATIONS FOR PROPOSED ALLOCATIONS

Ashton Park

3.1 In addition to the above, Barratt Homes would wish to elaborate further on the deliverability issues at Ashton Park, specifically in reference to the definition of deliverable as set out within the revised NPPF (2018).

3.2 The representations to the Regulation 19 version of the plan were submitted in September 2017. Over a year has since passed and the Ashton Park site still remains without outline planning permission, albeit it is understood that it was resolved to grant permission in April 2018, subject to the signing of a S106 agreement. This agreement had not yet been signed at the time of writing these representations.

3.3 The NPPFs definition of deliverable (for the purpose of Housing Land Supply assessments) states that sites with outline permission or allocated within development plans are not considered to be capable of delivering dwellings unless there is clear evidence that housing completions will begin on site within five years.

3.4 The Council have not provided any clear evidence to suggest that Ashton Park is capable of delivering any dwellings over the next five years. However, the Council are expecting it to deliver 1,350 dwellings by the end of the plan period (2026). With around 7-8 years left of the plan period and the assumption that no dwellings are likely to be delivered over the next five years, the Council appear to be expecting the site to deliver somewhere in the region of 450-675 dwellings per year over the last 2-3 years of the plan period.

3.5 Lichfields produced a research paper entitled Start to Finish: How Quickly do Large-Scale Housing Sites Deliver (November 2016). In their assessment of build-out rates, they noted that the average annual build-out rate for a scheme of 2,000+ dwellings was 161 dwellings per annum (dpa). The highest build out rate of the sites they assessed was 321 dpa (Cranbrook). Even taking this higher figure, the Councils anticipated delivery trajectory for Ashton Park is clearly overly optimistic. The full report is attached at Appendix 1.

APPENDIX 1: LICHFIELDS (NOVEMBER 2016) START TO FINISH: HOW QUICKLY DO LARGE-SCALE HOUSING SITES DELIVER

3.6 Notwithstanding this, the delivery of the bulk of housing at the site is reliant on the provision of a new bypass. It is understood that only around 300 dwellings could be delivered in advance of this key piece of infrastructure. This is another key issue that will have significant implications for delivery of dwellings at Ashton Park.

3.7 Taken together, this means that the shortfall of housing delivery at Trowbridge will be even more significant than the HSAP currently suggests both in the short and longer term.

3.8 This also has implications for the delivery of housing across the district in locations (e.g. Chippenham and Salisbury) which are also heavily reliant on the delivery of housing at strategic development locations to meet their Core Strategy targets. Indeed, the Councils overly optimistic view of delivery trajectories for strategic sites, coupled with an under provision of allocations that are deliverable over the remaining years of the plan period means that the prospect of a housing shortfall would not be confined to the Trowbridge area alone.

3.9 The Council argue that not addressing this shortfall under the HSAP is justified because Trowbridges

needs will be met by housing delivery under a future plan period. However, failing to address important issues of delivery, especially when there is a clear onus from the government to significantly boost the supply of housing, is not an appropriate position to take and fails to comply with paragraph 182 of the NPPF 2012. 3.10 There is a need for Trowbridge to deliver housing in the short term to relieve pressure on other, less sustainable locations for development across the district. 3.11 The Councils decision to pursue a strategy that effectively postpones the delivery of housing at a key strategic settlement such as Trowbridge to a future plan period is unacceptable and unsound. The plan accepts that there will be a shortfall in the delivery of housing at Trowbridge over the current plan period to the tune of 1,297 dwellings. This figure is based on a overly optimistic view as to the quantum of homes that might be delivered by the end of the current plan period (1,350 dwellings) and, as such, we would expect this shortfall to be even more substantial than is currently predicted. 3.12 Given the extent of this shortfall and the implications for failing to deliver a sufficient quantum of homes at Trowbridge under the current plan period, there is a clear need to identify additional housing sites that can deliver housing in the shorter term (i.e. within the remaining years of the plan period). 3.13 Land at Maxcroft Farm is one such site that could deliver housing in the shorter-term help Trowbridge to meet its housing requirements to the end of the current plan period (2026). Other Site Allocations 3.14 The remaining site allocations and their expected delivery are summarised as follows (PC13, PC51 and PC54-73): [TABLE INSERT] 3.15 Section 5 of the previous representations to the Regulation 19 Local Plan also included a critique of the other site allocations within Trowbridge. This still remains very much relevant and we would direct the Inspector to review its contents. 3.16 In essence, the assessment points out that the allocations to the south and east of the town are likely to be affected by the same ecological issues that have affected Ashton Park coming forward. There are, therefore, concerns with regards to the deliverability of these sites within a timely manner (i.e. within the plan period). Again, the HSAP has not identified a suitable set or quantum of sites that will ensure the delivery of housing at Trowbridge in the short term. 3.17 The strategy, in identifying an insufficient number of sites, some (if not all) of which may be unsuitable to be delivered in the plan period, simply postpones the inevitable allocation of further sites at Trowbridge to later plan periods when it should be doing so now. 3.18 The plan is, therefore, unsound because it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives and is inconsistent with national policy. 4. LAND AT MAXCROFT FARM Hilperton and Trowbridge 4.1 As stated previously, Barratt Homes have a specific interest in Land at Maxcroft Farm, Hilperton. However, there has been no assessment of Maxcroft Farm in the HSAP. This is thought to be because it is perceived as relating to Hilperton and not Trowbridge. The previous representations set out why this thinking was flawed. To summarise: Trowbridge, Hilperton, and Staverton Marina effectively constitute a continuous urban area; There is no visual spatial definition of Trowbridge or the remainder for the purposes of identifying additional allocations; The Core Strategy is unclear on the status of Hilperton, as it identifies it as a separate settlement in Core Policy 29; and requires that its distinct identity is protected in paragraph 5.150; but includes it as part of Trowbridge in footnote 56; The Core Strategy also defines Trowbridge Town as the continuous urban area of Trowbridge (which must by any rational definition include Hilperton); and Explicitly includes a less well-connected settlement within the continuous urban area of Trowbridge (Staverton). 4.2 Therefore, in order to meet the indicative housing requirement for Trowbridge Town, there is a need to allocate sites at Trowbridge including Hilperton. However, even if (contrary to footnote 56) Hilperton is excluded from Trowbridge Town, allocations are still required including those at Hilperton to meet the Community Area requirements. 4.3 It is noted that in the Councils submission documents, Wiltshire Housing Site Allocations Plan Consultation Statement Regulation 22 (1) (c) (WHSAP/09), the Council notes the importance of retaining the separate identities of Hilperton, North Bradley and Southwick. Crucially, both Southwick and North Bradley are currently separated by open countryside from the Trowbridge urban area, compared to Hilperton which already forms part of the continuous urban area. Furthermore, the plan goes on to allocated sites adjacent North Bradley, although sets out that a strategic gap should be maintained. This view that Hilperton is a separate village does not recognise the existing pattern of development across north Trowbridge. 4.4 Either way, the delivery of development at Maxcroft Farm in Hilperton would contribute to addressing the shortfall within the Trowbridge CA, whether it is viewed as development at Trowbridge, Hilperton or both. 4.5 Regardless, it is clear that the development of Maxcroft Farm must be seen in the context of delivering housing for the needs of Trowbridge and Hilperton. Therefore, the continuing lack of assessment of Maxcroft Farm as part of the

	<p>Sustainability Appraisal coupled with the lack of commentary on the decision not to allocate for the full housing needs at Trowbridge, means that the HSAP will not meet the needs of Wiltshire nor deliver a sound and objectively assessed plan. Land at Maxcroft Farm 4.6 The credentials of land at Maxcroft Farm were presented to the Council in a Technical Delivery Document as part of the representations on the Regulation 19 version of the HSAP. This document covered: the sustainability of the location; the environmental factors affecting the location; the realistic housing potential/capacity of the area in relation to the environmental effects of development; and the deliverability of the location. 4.7 This was also supported by detailed technical notes supporting this representation in order to address identified concerns from internal consultees at Wiltshire. 4.8 In terms of delivery, Barratt Homes are keen to stress that the delivery of this site is immediate and could be delivered from start on site (following allocation/consent) to practical completion within 24 months. 4.9 Given the issues with delivery in Wiltshire and the strategic settlements this must be considered a significant benefit of the site to realistically deliver well within the remaining plan period before 2026. As set out in the next section it is not thought that the allocations as they stand will achieve this aim. 5. CONCLUSION 5.1 These representations have been prepared by Pegasus Group on behalf of Barratt Homes (Bristol) in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan (HSAP). 5.2 These representations are specifically concerned with the strategy set out within the HSAP delivering new homes at Trowbridge. The key proposed changes identify additional dwellings to be delivered at the already proposed sites, but do not identify additional sites. 5.3 Under the HSAP, Trowbridge is projected to fall short of its Core Strategy housing target by a minimum of 1,297 dwellings. Barratt Homes feel that this figure will be significantly higher due to the Councils overly optimistic assumptions regarding delivery rates at the proposed allocations namely Ashton Park. 5.4 The Council are justifying this shortfall by saying that it will be met during the following plan period (i.e. 2016-2036). However, aside from being bad planning, this approach will further exacerbate pressure on other parts of the district to deliver the housing required under the current plan period (2006-2026), whilst also failing to deliver (among other things) the housing required to support the economic growth of Trowbridge. Ultimately, the strategy will delay the allocation of additional sites to a new local plan when they should be allocated under the HSAP. 5.5 The HSAP must, therefore, be found unsound as it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives of the Core Strategy and is inconsistent with national policy. 5.6 In order to be found sound, Barratt Homes believe it is imperative that additional sites are identified within the HSAP due to the pressing need to deliver homes at Trowbridge over the remaining years of the current plan period. 5.7 Given the sustainable performance and policy compliance of Maxcroft Farm in relation to the strategic priorities set out in the WCS, this is one such location that should be included.</p>

INTRODUCTION 1.1 This submission is made by Barratt Homes (Bristol) Ltd in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan Examination. 1.2 The Council submitted the draft Wiltshire Housing Site Allocations Plan (HSAP) along with a Schedule of Proposed Changes and supporting evidence to the Secretary of State for independent examination in July 2018. 1.3 This was followed by a procedural letter from the Inspector in August 2018 which required the Council to undertake a consultation on the Schedule of Proposed Changes to the HSAP, along with the revised Sustainability Appraisal, update to the Habitats Regulations Assessment Addendum, and associated evidence. 1.4 These representations set out Barratt Homes response to these proposed changes and have been prepared having regard to the requirements set out by the National Planning Policy Framework (NPPF). 1.5 Barratt Homes has land interests in the Trowbridge area and have submitted representations at previous stages of the HSAPs preparation in support of allocating land in this location. These specific representations relate to land at Maxcroft Farm in Hilperton, which forms part of the wider Trowbridge Urban Area. 1.6 The following proposed changes are, therefore, considered to be of particular relevance: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. 1.7 Unfortunately, the proposed modifications do not make any fundamental changes to the plan or strategy for Trowbridge. As such, the fundamental thrust of arguments made in previous representations remains the same. 1.8 These key points are considered further in Sections 2, 3 and 4 of these representations, but their content is summarised briefly below: The proposed changes have done nothing to address the shortfall anticipated over the remaining years of the plan period at Trowbridge; The delivery of housing at Trowbridge over the remaining years of the plan period continue to rely on the delivery of housing at a strategic site (Ashton Park) where anticipated delivery trajectories are overly optimistic; There remain serious questions over the deliverability of the identified allocations at Trowbridge given that there is potential for them to be affected by same ecological issues that have affected Ashton Park; The plan simply continues to postpone the delivery of housing at Trowbridge until after the plan period which is an unacceptable approach; The Council should, therefore, look to allocate additional sites to meet Trowbridges housing needs over the remaining years of the plan period and these should include land at Maxcroft Farm. 1.9 Given the above, it is our belief that the plan continues to fail when assessed against the four tests of soundness, as set out at paragraph 35 of the NPPF: Positively prepared the plan fails to meet the objectively</p>				

assessed development and infrastructure requirements of a key strategic settlement (Trowbridge); Justified the plan has not demonstrated it is the most appropriate strategy, when considered against the reasonable alternatives, based on evidence; Effective the plan will not deliver housing in a timely manner in accordance with Wiltshire Core Strategy; and Consistent with national policy a key priority for national planning policy is to boost significantly the supply and delivery of housing. This plan fails to plan for housing at a key strategic settlement with little more than 8 years left in the plan period. 1.10 Land at Maxcroft Farm represents a sustainable and deliverable location for housing development that can support the needs of Trowbridge and Hilperton. Given that housing delivery at Trowbridge is particularly reliant on a large strategic site (Ashton Park) which has suffered significant delays, the risk of further non-delivery of housing at a key strategic settlement in Wiltshire is exacerbated by this plan. The risk for Wiltshire is that the HSAP provides another adopted development plan document that has manifestly failed to address key issues with regard to the delivery and supply of housing. 1.11 The failure to address these issues would simply result in their deferral to a future development plan document or leave them to be addressed via the development management process. 1.12 Barratt Homes trust that the comments contained in these representations will be carefully considered and appropriately responded to by Wiltshire Council in their submission to the Secretary of State. 2. KEY CHANGES MADE TO HSAP 2.1 Some 135 changes are proposed to the HSAP. None of these were particularly fundamental to the overall approach of the plan, with the majority of them relating to factual corrections and tweaks to site allocations. 2.2 The more significant changes relate to the removal of site allocations from the plan at Crudwell, Malmesbury and Market Lavington. The Councils rationale for this was that development at these locations could be addressed through the delivery of Neighbourhood Plans. Barratt Homes do not have any specific comments to make regarding these specific changes. 2.3 To repeat, the specific changes these representations relate to are: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. Implications for Trowbridge 2.4 The fundamental strategy for Trowbridge has not been changed. Whilst the expected quantum of housing to be delivered on the HSAP sites has been revised to the extent where an additional c. 250 dwellings (800 1,050) are now expected to be delivered, the bulk of housing to be delivered is still reliant on the delivery of the long-term allocated site at Ashton Park to meet its housing target identified in the Wiltshire Core Strategy. 2.5 Given the delays in housing coming forward at Ashton Park, the Council are now only expecting the site to deliver 1,350 dwellings over the remaining plan period where it had previously been expected to deliver 1,600 dwellings. They are expecting the remainder (1,250 dwellings) to be delivered post 2026. This reduction has largely cancelled out the additional dwellings that are expected to be delivered at the other allocated sites over the remaining years of the plan period. 2.6 It should be noted that Barratt Homes question this delivery trajectory and consider the Councils assumptions to be overly optimistic. The reasons for this are set out in Section 3 below. 2.7 Regardless, there will be a shortfall in the number of dwellings delivered at Trowbridge over the plan period. This shortfall is expected to be 1,297 dwellings (PC25) which is broadly equivalent to the number of dwellings the Council expects to be delivered at Ashton Park beyond the end of the plan period (1,250). This is not a sound approach and fails to comply with paragraph 182 of NPPF 2012 (since replaced by paragraph 35 of the NPPF 2018). Key Concerns 2.8 Barratt Homes have previously made representations to the HSAP, expressing concerns with the overall approach to delivering housing at Trowbridge in September 2017. 2.9 As the fundamental strategy for Trowbridge has not changed, the thrust of the previous representations is still very much relevant. The key points made within those representations were as follows: There has been a pattern of failure across the district to deliver dwellings at key strategic sites at Chippenham, Salisbury and Trowbridge. There are serious question marks with regard to the delivery of any dwellings at Ashton Park between now and the end of the plan period, with no evidence in terms of a delivery timetable that the 1,350 dwellings that are anticipated by the Council can be completed; As such, it is clear that the large strategic sites have failed to deliver housing in the short-term and will run over into the next plan period; This has led to development pressure elsewhere within the plan area where a number of towns have seen planning by appeal and these will now deliver in excess of the indicative requirements as set out in the Wiltshire Core Strategy (WCS). We expect that the failure to deliver housing at these identified sites will exacerbate pressures on other

areas within Wiltshire to accommodate more growth and undermine the spatial distribution of the WCS; This will be further compounded by the failure of current proposed allocations in the HSAP at Trowbridge to meet the full allocation. As proposed there would be a residual shortfall of 1,297 homes (the changes to the HSAP revised this figure from 1,220 homes) still required to meet the needs of Trowbridge Town and a shortfall of 750 homes to meet the needs of Trowbridge Community Area. As a key strategic settlement and the primary focus of development within the WCS, it is not clear how under delivery at Trowbridge can meet the spatial strategy and development requirements of Wiltshire. There is plainly no difficulty in the HSAP document allocating sites for housing in excess of 42,000. Indeed, properly read, a figure above 42,000 would be entirely consistent with both the working and the evidence surrounding the WCS. Whilst the HSAP provides some limited commentary on the decision not to address the shortfall in Trowbridge, the ramifications of this decision are not examined in the Sustainability Assessment (SA). The non-allocation of homes at a Principal Settlement is a crucial strategic decision and the lack of analysis or commentary of this issue is a glaring omission on the current evidence base. Given the acknowledged need within the HSAP to provide a surplus, alongside the shortfall in the OAN, there is a clear and obvious requirement to allocate a full amount at Trowbridge.

2.10 Moreover, the failure to deliver a full amount of housing at Trowbridge does not match the ambitions of the Town Council who want to maintain Trowbridges status as Wiltshires County Town. The failure to plan to meet its housing needs in full under the HSAP would not be in line with the Towns status and the stated ambitions of locally democratic elected bodies.

Amendments to Trowbridge Settlement Boundary

2.11 In addition to the above, Barratt would like to formally register their support for the proposed amendments to the settlement boundary at Hilperton and Trowbridge which now captures parts of the built-up area that were previously excluded.

### 3. IMPLICATIONS FOR PROPOSED ALLOCATIONS

#### Ashton Park

3.1 In addition to the above, Barratt Homes would wish to elaborate further on the deliverability issues at Ashton Park, specifically in reference to the definition of deliverable as set out within the revised NPPF (2018).

3.2 The representations to the Regulation 19 version of the plan were submitted in September 2017. Over a year has since passed and the Ashton Park site still remains without outline planning permission, albeit it is understood that it was resolved to grant permission in April 2018, subject to the signing of a S106 agreement. This agreement had not yet been signed at the time of writing these representations.

3.3 The NPPFs definition of deliverable (for the purpose of Housing Land Supply assessments) states that sites with outline permission or allocated within development plans are not considered to be capable of delivering dwellings unless there is clear evidence that housing completions will begin on site within five years.

3.4 The Council have not provided any clear evidence to suggest that Ashton Park is capable of delivering any dwellings over the next five years. However, the Council are expecting it to deliver 1,350 dwellings by the end of the plan period (2026). With around 7-8 years left of the plan period and the assumption that no dwellings are likely to be delivered over the next five years, the Council appear to be expecting the site to deliver somewhere in the region of 450-675 dwellings per year over the last 2-3 years of the plan period.

3.5 Lichfields produced a research paper entitled Start to Finish: How Quickly do Large-Scale Housing Sites Deliver (November 2016). In their assessment of build-out rates, they noted that the average annual build-out rate for a scheme of 2,000+ dwellings was 161 dwellings per annum (dpa). The highest build out rate of the sites they assessed was 321 dpa (Cranbrook). Even taking this higher figure, the Councils anticipated delivery trajectory for Ashton Park is clearly overly optimistic. The full report is attached at Appendix 1.

#### APPENDIX 1: LICHFIELDS (NOVEMBER 2016) START TO FINISH: HOW QUICKLY DO LARGE-SCALE HOUSING SITES DELIVER

3.6 Notwithstanding this, the delivery of the bulk of housing at the site is reliant on the provision of a new bypass. It is understood that only around 300 dwellings could be delivered in advance of this key piece of infrastructure. This is another key issue that will have significant implications for delivery of dwellings at Ashton Park.

3.7 Taken together, this means that the shortfall of housing delivery at Trowbridge will be even more significant than the HSAP currently suggests both in the short and longer term.

3.8 This also has implications for the delivery of housing across the district in locations (e.g. Chippenham and Salisbury) which are also heavily reliant on the delivery of housing at strategic development locations to meet their Core Strategy targets. Indeed, the Councils overly optimistic view of delivery trajectories for strategic sites, coupled with an under provision of allocations that are deliverable over the remaining years of the plan period means that the prospect of a housing shortfall would not be confined to the Trowbridge area alone.

3.9 The Council argue that not addressing this shortfall under the HSAP is justified because Trowbridges

needs will be met by housing delivery under a future plan period. However, failing to address important issues of delivery, especially when there is a clear onus from the government to significantly boost the supply of housing, is not an appropriate position to take and fails to comply with paragraph 182 of the NPPF 2012. 3.10 There is a need for Trowbridge to deliver housing in the short term to relieve pressure on other, less sustainable locations for development across the district. 3.11 The Councils decision to pursue a strategy that effectively postpones the delivery of housing at a key strategic settlement such as Trowbridge to a future plan period is unacceptable and unsound. The plan accepts that there will be a shortfall in the delivery of housing at Trowbridge over the current plan period to the tune of 1,297 dwellings. This figure is based on a overly optimistic view as to the quantum of homes that might be delivered by the end of the current plan period (1,350 dwellings) and, as such, we would expect this shortfall to be even more substantial than is currently predicted. 3.12 Given the extent of this shortfall and the implications for failing to deliver a sufficient quantum of homes at Trowbridge under the current plan period, there is a clear need to identify additional housing sites that can deliver housing in the shorter term (i.e. within the remaining years of the plan period). 3.13 Land at Maxcroft Farm is one such site that could deliver housing in the shorter-term help Trowbridge to meet its housing requirements to the end of the current plan period (2026). Other Site Allocations 3.14 The remaining site allocations and their expected delivery are summarised as follows (PC13, PC51 and PC54-73): [TABLE INSERT] 3.15 Section 5 of the previous representations to the Regulation 19 Local Plan also included a critique of the other site allocations within Trowbridge. This still remains very much relevant and we would direct the Inspector to review its contents. 3.16 In essence, the assessment points out that the allocations to the south and east of the town are likely to be affected by the same ecological issues that have affected Ashton Park coming forward. There are, therefore, concerns with regards to the deliverability of these sites within a timely manner (i.e. within the plan period). Again, the HSAP has not identified a suitable set or quantum of sites that will ensure the delivery of housing at Trowbridge in the short term. 3.17 The strategy, in identifying an insufficient number of sites, some (if not all) of which may be unsuitable to be delivered in the plan period, simply postpones the inevitable allocation of further sites at Trowbridge to later plan periods when it should be doing so now. 3.18 The plan is, therefore, unsound because it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives and is inconsistent with national policy. 4. LAND AT MAXCROFT FARM Hilperton and Trowbridge 4.1 As stated previously, Barratt Homes have a specific interest in Land at Maxcroft Farm, Hilperton. However, there has been no assessment of Maxcroft Farm in the HSAP. This is thought to be because it is perceived as relating to Hilperton and not Trowbridge. The previous representations set out why this thinking was flawed. To summarise: Trowbridge, Hilperton, and Staverton Marina effectively constitute a continuous urban area; There is no visual spatial definition of Trowbridge or the remainder for the purposes of identifying additional allocations; The Core Strategy is unclear on the status of Hilperton, as it identifies it as a separate settlement in Core Policy 29; and requires that its distinct identity is protected in paragraph 5.150; but includes it as part of Trowbridge in footnote 56; The Core Strategy also defines Trowbridge Town as the continuous urban area of Trowbridge (which must by any rational definition include Hilperton); and Explicitly includes a less well-connected settlement within the continuous urban area of Trowbridge (Staverton). 4.2 Therefore, in order to meet the indicative housing requirement for Trowbridge Town, there is a need to allocate sites at Trowbridge including Hilperton. However, even if (contrary to footnote 56) Hilperton is excluded from Trowbridge Town, allocations are still required including those at Hilperton to meet the Community Area requirements. 4.3 It is noted that in the Councils submission documents, Wiltshire Housing Site Allocations Plan Consultation Statement Regulation 22 (1) (c) (WHSAP/09), the Council notes the importance of retaining the separate identities of Hilperton, North Bradley and Southwick. Crucially, both Southwick and North Bradley are currently separated by open countryside from the Trowbridge urban area, compared to Hilperton which already forms part of the continuous urban area. Furthermore, the plan goes on to allocated sites adjacent North Bradley, although sets out that a strategic gap should be maintained. This view that Hilperton is a separate village does not recognise the existing pattern of development across north Trowbridge. 4.4 Either way, the delivery of development at Maxcroft Farm in Hilperton would contribute to addressing the shortfall within the Trowbridge CA, whether it is viewed as development at Trowbridge, Hilperton or both. 4.5 Regardless, it is clear that the development of Maxcroft Farm must be seen in the context of delivering housing for the needs of Trowbridge and Hilperton. Therefore, the continuing lack of assessment of Maxcroft Farm as part of the

	<p>Sustainability Appraisal coupled with the lack of commentary on the decision not to allocate for the full housing needs at Trowbridge, means that the HSAP will not meet the needs of Wiltshire nor deliver a sound and objectively assessed plan. Land at Maxcroft Farm 4.6 The credentials of land at Maxcroft Farm were presented to the Council in a Technical Delivery Document as part of the representations on the Regulation 19 version of the HSAP. This document covered: the sustainability of the location; the environmental factors affecting the location; the realistic housing potential/capacity of the area in relation to the environmental effects of development; and the deliverability of the location. 4.7 This was also supported by detailed technical notes supporting this representation in order to address identified concerns from internal consultees at Wiltshire. 4.8 In terms of delivery, Barratt Homes are keen to stress that the delivery of this site is immediate and could be delivered from start on site (following allocation/consent) to practical completion within 24 months. 4.9 Given the issues with delivery in Wiltshire and the strategic settlements this must be considered a significant benefit of the site to realistically deliver well within the remaining plan period before 2026. As set out in the next section it is not thought that the allocations as they stand will achieve this aim. 5. CONCLUSION 5.1 These representations have been prepared by Pegasus Group on behalf of Barratt Homes (Bristol) in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan (HSAP). 5.2 These representations are specifically concerned with the strategy set out within the HSAP delivering new homes at Trowbridge. The key proposed changes identify additional dwellings to be delivered at the already proposed sites, but do not identify additional sites. 5.3 Under the HSAP, Trowbridge is projected to fall short of its Core Strategy housing target by a minimum of 1,297 dwellings. Barratt Homes feel that this figure will be significantly higher due to the Councils overly optimistic assumptions regarding delivery rates at the proposed allocations namely Ashton Park. 5.4 The Council are justifying this shortfall by saying that it will be met during the following plan period (i.e. 2016-2036). However, aside from being bad planning, this approach will further exacerbate pressure on other parts of the district to deliver the housing required under the current plan period (2006-2026), whilst also failing to deliver (among other things) the housing required to support the economic growth of Trowbridge. Ultimately, the strategy will delay the allocation of additional sites to a new local plan when they should be allocated under the HSAP. 5.5 The HSAP must, therefore, be found unsound as it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives of the Core Strategy and is inconsistent with national policy. 5.6 In order to be found sound, Barratt Homes believe it is imperative that additional sites are identified within the HSAP due to the pressing need to deliver homes at Trowbridge over the remaining years of the current plan period. 5.7 Given the sustainable performance and policy compliance of Maxcroft Farm in relation to the strategic priorities set out in the WCS, this is one such location that should be included.</p>

INTRODUCTION 1.1 This submission is made by Barratt Homes (Bristol) Ltd in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan Examination. 1.2 The Council submitted the draft Wiltshire Housing Site Allocations Plan (HSAP) along with a Schedule of Proposed Changes and supporting evidence to the Secretary of State for independent examination in July 2018. 1.3 This was followed by a procedural letter from the Inspector in August 2018 which required the Council to undertake a consultation on the Schedule of Proposed Changes to the HSAP, along with the revised Sustainability Appraisal, update to the Habitats Regulations Assessment Addendum, and associated evidence. 1.4 These representations set out Barratt Homes response to these proposed changes and have been prepared having regard to the requirements set out by the National Planning Policy Framework (NPPF). 1.5 Barratt Homes has land interests in the Trowbridge area and have submitted representations at previous stages of the HSAPs preparation in support of allocating land in this location. These specific representations relate to land at Maxcroft Farm in Hilperton, which forms part of the wider Trowbridge Urban Area. 1.6 The following proposed changes are, therefore, considered to be of particular relevance: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. 1.7 Unfortunately, the proposed modifications do not make any fundamental changes to the plan or strategy for Trowbridge. As such, the fundamental thrust of arguments made in previous representations remains the same. 1.8 These key points are considered further in Sections 2, 3 and 4 of these representations, but their content is summarised briefly below: The proposed changes have done nothing to address the shortfall anticipated over the remaining years of the plan period at Trowbridge; The delivery of housing at Trowbridge over the remaining years of the plan period continue to rely on the delivery of housing at a strategic site (Ashton Park) where anticipated delivery trajectories are overly optimistic; There remain serious questions over the deliverability of the identified allocations at Trowbridge given that there is potential for them to be affected by same ecological issues that have affected Ashton Park; The plan simply continues to postpone the delivery of housing at Trowbridge until after the plan period which is an unacceptable approach; The Council should, therefore, look to allocate additional sites to meet Trowbridges housing needs over the remaining years of the plan period and these should include land at Maxcroft Farm. 1.9 Given the above, it is our belief that the plan continues to fail when assessed against the four tests of soundness, as set out at paragraph 35 of the NPPF: Positively prepared the plan fails to meet the objectively</p>				

assessed development and infrastructure requirements of a key strategic settlement (Trowbridge); Justified the plan has not demonstrated it is the most appropriate strategy, when considered against the reasonable alternatives, based on evidence; Effective the plan will not deliver housing in a timely manner in accordance with Wiltshire Core Strategy; and Consistent with national policy a key priority for national planning policy is to boost significantly the supply and delivery of housing. This plan fails to plan for housing at a key strategic settlement with little more than 8 years left in the plan period. 1.10 Land at Maxcroft Farm represents a sustainable and deliverable location for housing development that can support the needs of Trowbridge and Hilperton. Given that housing delivery at Trowbridge is particularly reliant on a large strategic site (Ashton Park) which has suffered significant delays, the risk of further non-delivery of housing at a key strategic settlement in Wiltshire is exacerbated by this plan. The risk for Wiltshire is that the HSAP provides another adopted development plan document that has manifestly failed to address key issues with regard to the delivery and supply of housing. 1.11 The failure to address these issues would simply result in their deferral to a future development plan document or leave them to be addressed via the development management process. 1.12 Barratt Homes trust that the comments contained in these representations will be carefully considered and appropriately responded to by Wiltshire Council in their submission to the Secretary of State. 2. KEY CHANGES MADE TO HSAP 2.1 Some 135 changes are proposed to the HSAP. None of these were particularly fundamental to the overall approach of the plan, with the majority of them relating to factual corrections and tweaks to site allocations. 2.2 The more significant changes relate to the removal of site allocations from the plan at Crudwell, Malmesbury and Market Lavington. The Councils rationale for this was that development at these locations could be addressed through the delivery of Neighbourhood Plans. Barratt Homes do not have any specific comments to make regarding these specific changes. 2.3 To repeat, the specific changes these representations relate to are: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. Implications for Trowbridge 2.4 The fundamental strategy for Trowbridge has not been changed. Whilst the expected quantum of housing to be delivered on the HSAP sites has been revised to the extent where an additional c. 250 dwellings (800 1,050) are now expected to be delivered, the bulk of housing to be delivered is still reliant on the delivery of the long-term allocated site at Ashton Park to meet its housing target identified in the Wiltshire Core Strategy. 2.5 Given the delays in housing coming forward at Ashton Park, the Council are now only expecting the site to deliver 1,350 dwellings over the remaining plan period where it had previously been expected to deliver 1,600 dwellings. They are expecting the remainder (1,250 dwellings) to be delivered post 2026. This reduction has largely cancelled out the additional dwellings that are expected to be delivered at the other allocated sites over the remaining years of the plan period. 2.6 It should be noted that Barratt Homes question this delivery trajectory and consider the Councils assumptions to be overly optimistic. The reasons for this are set out in Section 3 below. 2.7 Regardless, there will be a shortfall in the number of dwellings delivered at Trowbridge over the plan period. This shortfall is expected to be 1,297 dwellings (PC25) which is broadly equivalent to the number of dwellings the Council expects to be delivered at Ashton Park beyond the end of the plan period (1,250). This is not a sound approach and fails to comply with paragraph 182 of NPPF 2012 (since replaced by paragraph 35 of the NPPF 2018). Key Concerns 2.8 Barratt Homes have previously made representations to the HSAP, expressing concerns with the overall approach to delivering housing at Trowbridge in September 2017. 2.9 As the fundamental strategy for Trowbridge has not changed, the thrust of the previous representations is still very much relevant. The key points made within those representations were as follows: There has been a pattern of failure across the district to deliver dwellings at key strategic sites at Chippenham, Salisbury and Trowbridge. There are serious question marks with regard to the delivery of any dwellings at Ashton Park between now and the end of the plan period, with no evidence in terms of a delivery timetable that the 1,350 dwellings that are anticipated by the Council can be completed; As such, it is clear that the large strategic sites have failed to deliver housing in the short-term and will run over into the next plan period; This has led to development pressure elsewhere within the plan area where a number of towns have seen planning by appeal and these will now deliver in excess of the indicative requirements as set out in the Wiltshire Core Strategy (WCS). We expect that the failure to deliver housing at these identified sites will exacerbate pressures on other

areas within Wiltshire to accommodate more growth and undermine the spatial distribution of the WCS; This will be further compounded by the failure of current proposed allocations in the HSAP at Trowbridge to meet the full allocation. As proposed there would be a residual shortfall of 1,297 homes (the changes to the HSAP revised this figure from 1,220 homes) still required to meet the needs of Trowbridge Town and a shortfall of 750 homes to meet the needs of Trowbridge Community Area. As a key strategic settlement and the primary focus of development within the WCS, it is not clear how under delivery at Trowbridge can meet the spatial strategy and development requirements of Wiltshire. There is plainly no difficulty in the HSAP document allocating sites for housing in excess of 42,000. Indeed, properly read, a figure above 42,000 would be entirely consistent with both the working and the evidence surrounding the WCS. Whilst the HSAP provides some limited commentary on the decision not to address the shortfall in Trowbridge, the ramifications of this decision are not examined in the Sustainability Assessment (SA). The non-allocation of homes at a Principal Settlement is a crucial strategic decision and the lack of analysis or commentary of this issue is a glaring omission on the current evidence base. Given the acknowledged need within the HSAP to provide a surplus, alongside the shortfall in the OAN, there is a clear and obvious requirement to allocate a full amount at Trowbridge.

2.10 Moreover, the failure to deliver a full amount of housing at Trowbridge does not match the ambitions of the Town Council who want to maintain Trowbridges status as Wiltshires County Town. The failure to plan to meet its housing needs in full under the HSAP would not be in line with the Towns status and the stated ambitions of locally democratic elected bodies.

Amendments to Trowbridge Settlement Boundary

2.11 In addition to the above, Barratt would like to formally register their support for the proposed amendments to the settlement boundary at Hilperton and Trowbridge which now captures parts of the built-up area that were previously excluded.

### 3. IMPLICATIONS FOR PROPOSED ALLOCATIONS Ashton Park

3.1 In addition to the above, Barratt Homes would wish to elaborate further on the deliverability issues at Ashton Park, specifically in reference to the definition of deliverable as set out within the revised NPPF (2018).

3.2 The representations to the Regulation 19 version of the plan were submitted in September 2017. Over a year has since passed and the Ashton Park site still remains without outline planning permission, albeit it is understood that it was resolved to grant permission in April 2018, subject to the signing of a S106 agreement. This agreement had not yet been signed at the time of writing these representations.

3.3 The NPPFs definition of deliverable (for the purpose of Housing Land Supply assessments) states that sites with outline permission or allocated within development plans are not considered to be capable of delivering dwellings unless there is clear evidence that housing completions will begin on site within five years.

3.4 The Council have not provided any clear evidence to suggest that Ashton Park is capable of delivering any dwellings over the next five years. However, the Council are expecting it to deliver 1,350 dwellings by the end of the plan period (2026). With around 7-8 years left of the plan period and the assumption that no dwellings are likely to be delivered over the next five years, the Council appear to be expecting the site to deliver somewhere in the region of 450-675 dwellings per year over the last 2-3 years of the plan period.

3.5 Lichfields produced a research paper entitled Start to Finish: How Quickly do Large-Scale Housing Sites Deliver (November 2016). In their assessment of build-out rates, they noted that the average annual build-out rate for a scheme of 2,000+ dwellings was 161 dwellings per annum (dpa). The highest build out rate of the sites they assessed was 321 dpa (Cranbrook). Even taking this higher figure, the Councils anticipated delivery trajectory for Ashton Park is clearly overly optimistic. The full report is attached at Appendix 1.

#### APPENDIX 1: LICHFIELDS (NOVEMBER 2016) START TO FINISH: HOW QUICKLY DO LARGE-SCALE HOUSING SITES DELIVER

3.6 Notwithstanding this, the delivery of the bulk of housing at the site is reliant on the provision of a new bypass. It is understood that only around 300 dwellings could be delivered in advance of this key piece of infrastructure. This is another key issue that will have significant implications for delivery of dwellings at Ashton Park.

3.7 Taken together, this means that the shortfall of housing delivery at Trowbridge will be even more significant than the HSAP currently suggests both in the short and longer term.

3.8 This also has implications for the delivery of housing across the district in locations (e.g. Chippenham and Salisbury) which are also heavily reliant on the delivery of housing at strategic development locations to meet their Core Strategy targets. Indeed, the Councils overly optimistic view of delivery trajectories for strategic sites, coupled with an under provision of allocations that are deliverable over the remaining years of the plan period means that the prospect of a housing shortfall would not be confined to the Trowbridge area alone.

3.9 The Council argue that not addressing this shortfall under the HSAP is justified because Trowbridges

needs will be met by housing delivery under a future plan period. However, failing to address important issues of delivery, especially when there is a clear onus from the government to significantly boost the supply of housing, is not an appropriate position to take and fails to comply with paragraph 182 of the NPPF 2012. 3.10 There is a need for Trowbridge to deliver housing in the short term to relieve pressure on other, less sustainable locations for development across the district. 3.11 The Councils decision to pursue a strategy that effectively postpones the delivery of housing at a key strategic settlement such as Trowbridge to a future plan period is unacceptable and unsound. The plan accepts that there will be a shortfall in the delivery of housing at Trowbridge over the current plan period to the tune of 1,297 dwellings. This figure is based on a overly optimistic view as to the quantum of homes that might be delivered by the end of the current plan period (1,350 dwellings) and, as such, we would expect this shortfall to be even more substantial than is currently predicted. 3.12 Given the extent of this shortfall and the implications for failing to deliver a sufficient quantum of homes at Trowbridge under the current plan period, there is a clear need to identify additional housing sites that can deliver housing in the shorter term (i.e. within the remaining years of the plan period). 3.13 Land at Maxcroft Farm is one such site that could deliver housing in the shorter-term help Trowbridge to meet its housing requirements to the end of the current plan period (2026). Other Site Allocations 3.14 The remaining site allocations and their expected delivery are summarised as follows (PC13, PC51 and PC54-73): [TABLE INSERT] 3.15 Section 5 of the previous representations to the Regulation 19 Local Plan also included a critique of the other site allocations within Trowbridge. This still remains very much relevant and we would direct the Inspector to review its contents. 3.16 In essence, the assessment points out that the allocations to the south and east of the town are likely to be affected by the same ecological issues that have affected Ashton Park coming forward. There are, therefore, concerns with regards to the deliverability of these sites within a timely manner (i.e. within the plan period). Again, the HSAP has not identified a suitable set or quantum of sites that will ensure the delivery of housing at Trowbridge in the short term. 3.17 The strategy, in identifying an insufficient number of sites, some (if not all) of which may be unsuitable to be delivered in the plan period, simply postpones the inevitable allocation of further sites at Trowbridge to later plan periods when it should be doing so now. 3.18 The plan is, therefore, unsound because it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives and is inconsistent with national policy. 4. LAND AT MAXCROFT FARM Hilperton and Trowbridge 4.1 As stated previously, Barratt Homes have a specific interest in Land at Maxcroft Farm, Hilperton. However, there has been no assessment of Maxcroft Farm in the HSAP. This is thought to be because it is perceived as relating to Hilperton and not Trowbridge. The previous representations set out why this thinking was flawed. To summarise: Trowbridge, Hilperton, and Staverton Marina effectively constitute a continuous urban area; There is no visual spatial definition of Trowbridge or the remainder for the purposes of identifying additional allocations; The Core Strategy is unclear on the status of Hilperton, as it identifies it as a separate settlement in Core Policy 29; and requires that its distinct identity is protected in paragraph 5.150; but includes it as part of Trowbridge in footnote 56; The Core Strategy also defines Trowbridge Town as the continuous urban area of Trowbridge (which must by any rational definition include Hilperton); and Explicitly includes a less well-connected settlement within the continuous urban area of Trowbridge (Staverton). 4.2 Therefore, in order to meet the indicative housing requirement for Trowbridge Town, there is a need to allocate sites at Trowbridge including Hilperton. However, even if (contrary to footnote 56) Hilperton is excluded from Trowbridge Town, allocations are still required including those at Hilperton to meet the Community Area requirements. 4.3 It is noted that in the Councils submission documents, Wiltshire Housing Site Allocations Plan Consultation Statement Regulation 22 (1) (c) (WHSAP/09), the Council notes the importance of retaining the separate identities of Hilperton, North Bradley and Southwick. Crucially, both Southwick and North Bradley are currently separated by open countryside from the Trowbridge urban area, compared to Hilperton which already forms part of the continuous urban area. Furthermore, the plan goes on to allocated sites adjacent North Bradley, although sets out that a strategic gap should be maintained. This view that Hilperton is a separate village does not recognise the existing pattern of development across north Trowbridge. 4.4 Either way, the delivery of development at Maxcroft Farm in Hilperton would contribute to addressing the shortfall within the Trowbridge CA, whether it is viewed as development at Trowbridge, Hilperton or both. 4.5 Regardless, it is clear that the development of Maxcroft Farm must be seen in the context of delivering housing for the needs of Trowbridge and Hilperton. Therefore, the continuing lack of assessment of Maxcroft Farm as part of the

	<p>Sustainability Appraisal coupled with the lack of commentary on the decision not to allocate for the full housing needs at Trowbridge, means that the HSAP will not meet the needs of Wiltshire nor deliver a sound and objectively assessed plan. Land at Maxcroft Farm 4.6 The credentials of land at Maxcroft Farm were presented to the Council in a Technical Delivery Document as part of the representations on the Regulation 19 version of the HSAP. This document covered: the sustainability of the location; the environmental factors affecting the location; the realistic housing potential/capacity of the area in relation to the environmental effects of development; and the deliverability of the location. 4.7 This was also supported by detailed technical notes supporting this representation in order to address identified concerns from internal consultees at Wiltshire. 4.8 In terms of delivery, Barratt Homes are keen to stress that the delivery of this site is immediate and could be delivered from start on site (following allocation/consent) to practical completion within 24 months. 4.9 Given the issues with delivery in Wiltshire and the strategic settlements this must be considered a significant benefit of the site to realistically deliver well within the remaining plan period before 2026. As set out in the next section it is not thought that the allocations as they stand will achieve this aim. 5. CONCLUSION 5.1 These representations have been prepared by Pegasus Group on behalf of Barratt Homes (Bristol) in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan (HSAP). 5.2 These representations are specifically concerned with the strategy set out within the HSAP delivering new homes at Trowbridge. The key proposed changes identify additional dwellings to be delivered at the already proposed sites, but do not identify additional sites. 5.3 Under the HSAP, Trowbridge is projected to fall short of its Core Strategy housing target by a minimum of 1,297 dwellings. Barratt Homes feel that this figure will be significantly higher due to the Councils overly optimistic assumptions regarding delivery rates at the proposed allocations namely Ashton Park. 5.4 The Council are justifying this shortfall by saying that it will be met during the following plan period (i.e. 2016-2036). However, aside from being bad planning, this approach will further exacerbate pressure on other parts of the district to deliver the housing required under the current plan period (2006-2026), whilst also failing to deliver (among other things) the housing required to support the economic growth of Trowbridge. Ultimately, the strategy will delay the allocation of additional sites to a new local plan when they should be allocated under the HSAP. 5.5 The HSAP must, therefore, be found unsound as it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives of the Core Strategy and is inconsistent with national policy. 5.6 In order to be found sound, Barratt Homes believe it is imperative that additional sites are identified within the HSAP due to the pressing need to deliver homes at Trowbridge over the remaining years of the current plan period. 5.7 Given the sustainable performance and policy compliance of Maxcroft Farm in relation to the strategic priorities set out in the WCS, this is one such location that should be included.</p>

INTRODUCTION 1.1 This submission is made by Barratt Homes (Bristol) Ltd in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan Examination. 1.2 The Council submitted the draft Wiltshire Housing Site Allocations Plan (HSAP) along with a Schedule of Proposed Changes and supporting evidence to the Secretary of State for independent examination in July 2018. 1.3 This was followed by a procedural letter from the Inspector in August 2018 which required the Council to undertake a consultation on the Schedule of Proposed Changes to the HSAP, along with the revised Sustainability Appraisal, update to the Habitats Regulations Assessment Addendum, and associated evidence. 1.4 These representations set out Barratt Homes response to these proposed changes and have been prepared having regard to the requirements set out by the National Planning Policy Framework (NPPF). 1.5 Barratt Homes has land interests in the Trowbridge area and have submitted representations at previous stages of the HSAPs preparation in support of allocating land in this location. These specific representations relate to land at Maxcroft Farm in Hilperton, which forms part of the wider Trowbridge Urban Area. 1.6 The following proposed changes are, therefore, considered to be of particular relevance: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. 1.7 Unfortunately, the proposed modifications do not make any fundamental changes to the plan or strategy for Trowbridge. As such, the fundamental thrust of arguments made in previous representations remains the same. 1.8 These key points are considered further in Sections 2, 3 and 4 of these representations, but their content is summarised briefly below: The proposed changes have done nothing to address the shortfall anticipated over the remaining years of the plan period at Trowbridge; The delivery of housing at Trowbridge over the remaining years of the plan period continue to rely on the delivery of housing at a strategic site (Ashton Park) where anticipated delivery trajectories are overly optimistic; There remain serious questions over the deliverability of the identified allocations at Trowbridge given that there is potential for them to be affected by same ecological issues that have affected Ashton Park; The plan simply continues to postpone the delivery of housing at Trowbridge until after the plan period which is an unacceptable approach; The Council should, therefore, look to allocate additional sites to meet Trowbridges housing needs over the remaining years of the plan period and these should include land at Maxcroft Farm. 1.9 Given the above, it is our belief that the plan continues to fail when assessed against the four tests of soundness, as set out at paragraph 35 of the NPPF: Positively prepared the plan fails to meet the objectively</p>				

assessed development and infrastructure requirements of a key strategic settlement (Trowbridge); Justified the plan has not demonstrated it is the most appropriate strategy, when considered against the reasonable alternatives, based on evidence; Effective the plan will not deliver housing in a timely manner in accordance with Wiltshire Core Strategy; and Consistent with national policy a key priority for national planning policy is to boost significantly the supply and delivery of housing. This plan fails to plan for housing at a key strategic settlement with little more than 8 years left in the plan period. 1.10 Land at Maxcroft Farm represents a sustainable and deliverable location for housing development that can support the needs of Trowbridge and Hilperton. Given that housing delivery at Trowbridge is particularly reliant on a large strategic site (Ashton Park) which has suffered significant delays, the risk of further non-delivery of housing at a key strategic settlement in Wiltshire is exacerbated by this plan. The risk for Wiltshire is that the HSAP provides another adopted development plan document that has manifestly failed to address key issues with regard to the delivery and supply of housing. 1.11 The failure to address these issues would simply result in their deferral to a future development plan document or leave them to be addressed via the development management process. 1.12 Barratt Homes trust that the comments contained in these representations will be carefully considered and appropriately responded to by Wiltshire Council in their submission to the Secretary of State. 2. KEY CHANGES MADE TO HSAP 2.1 Some 135 changes are proposed to the HSAP. None of these were particularly fundamental to the overall approach of the plan, with the majority of them relating to factual corrections and tweaks to site allocations. 2.2 The more significant changes relate to the removal of site allocations from the plan at Crudwell, Malmesbury and Market Lavington. The Councils rationale for this was that development at these locations could be addressed through the delivery of Neighbourhood Plans. Barratt Homes do not have any specific comments to make regarding these specific changes. 2.3 To repeat, the specific changes these representations relate to are: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. Implications for Trowbridge 2.4 The fundamental strategy for Trowbridge has not been changed. Whilst the expected quantum of housing to be delivered on the HSAP sites has been revised to the extent where an additional c. 250 dwellings (800 1,050) are now expected to be delivered, the bulk of housing to be delivered is still reliant on the delivery of the long-term allocated site at Ashton Park to meet its housing target identified in the Wiltshire Core Strategy. 2.5 Given the delays in housing coming forward at Ashton Park, the Council are now only expecting the site to deliver 1,350 dwellings over the remaining plan period where it had previously been expected to deliver 1,600 dwellings. They are expecting the remainder (1,250 dwellings) to be delivered post 2026. This reduction has largely cancelled out the additional dwellings that are expected to be delivered at the other allocated sites over the remaining years of the plan period. 2.6 It should be noted that Barratt Homes question this delivery trajectory and consider the Councils assumptions to be overly optimistic. The reasons for this are set out in Section 3 below. 2.7 Regardless, there will be a shortfall in the number of dwellings delivered at Trowbridge over the plan period. This shortfall is expected to be 1,297 dwellings (PC25) which is broadly equivalent to the number of dwellings the Council expects to be delivered at Ashton Park beyond the end of the plan period (1,250). This is not a sound approach and fails to comply with paragraph 182 of NPPF 2012 (since replaced by paragraph 35 of the NPPF 2018). Key Concerns 2.8 Barratt Homes have previously made representations to the HSAP, expressing concerns with the overall approach to delivering housing at Trowbridge in September 2017. 2.9 As the fundamental strategy for Trowbridge has not changed, the thrust of the previous representations is still very much relevant. The key points made within those representations were as follows: There has been a pattern of failure across the district to deliver dwellings at key strategic sites at Chippenham, Salisbury and Trowbridge. There are serious question marks with regard to the delivery of any dwellings at Ashton Park between now and the end of the plan period, with no evidence in terms of a delivery timetable that the 1,350 dwellings that are anticipated by the Council can be completed; As such, it is clear that the large strategic sites have failed to deliver housing in the short-term and will run over into the next plan period; This has led to development pressure elsewhere within the plan area where a number of towns have seen planning by appeal and these will now deliver in excess of the indicative requirements as set out in the Wiltshire Core Strategy (WCS). We expect that the failure to deliver housing at these identified sites will exacerbate pressures on other

areas within Wiltshire to accommodate more growth and undermine the spatial distribution of the WCS; This will be further compounded by the failure of current proposed allocations in the HSAP at Trowbridge to meet the full allocation. As proposed there would be a residual shortfall of 1,297 homes (the changes to the HSAP revised this figure from 1,220 homes) still required to meet the needs of Trowbridge Town and a shortfall of 750 homes to meet the needs of Trowbridge Community Area. As a key strategic settlement and the primary focus of development within the WCS, it is not clear how under delivery at Trowbridge can meet the spatial strategy and development requirements of Wiltshire. There is plainly no difficulty in the HSAP document allocating sites for housing in excess of 42,000. Indeed, properly read, a figure above 42,000 would be entirely consistent with both the working and the evidence surrounding the WCS. Whilst the HSAP provides some limited commentary on the decision not to address the shortfall in Trowbridge, the ramifications of this decision are not examined in the Sustainability Assessment (SA). The non-allocation of homes at a Principal Settlement is a crucial strategic decision and the lack of analysis or commentary of this issue is a glaring omission on the current evidence base. Given the acknowledged need within the HSAP to provide a surplus, alongside the shortfall in the OAN, there is a clear and obvious requirement to allocate a full amount at Trowbridge.

2.10 Moreover, the failure to deliver a full amount of housing at Trowbridge does not match the ambitions of the Town Council who want to maintain Trowbridges status as Wiltshires County Town. The failure to plan to meet its housing needs in full under the HSAP would not be in line with the Towns status and the stated ambitions of locally democratic elected bodies.

Amendments to Trowbridge Settlement Boundary

2.11 In addition to the above, Barratt would like to formally register their support for the proposed amendments to the settlement boundary at Hilperton and Trowbridge which now captures parts of the built-up area that were previously excluded.

3. IMPLICATIONS FOR PROPOSED ALLOCATIONS

Ashton Park

3.1 In addition to the above, Barratt Homes would wish to elaborate further on the deliverability issues at Ashton Park, specifically in reference to the definition of deliverable as set out within the revised NPPF (2018).

3.2 The representations to the Regulation 19 version of the plan were submitted in September 2017. Over a year has since passed and the Ashton Park site still remains without outline planning permission, albeit it is understood that it was resolved to grant permission in April 2018, subject to the signing of a S106 agreement. This agreement had not yet been signed at the time of writing these representations.

3.3 The NPPFs definition of deliverable (for the purpose of Housing Land Supply assessments) states that sites with outline permission or allocated within development plans are not considered to be capable of delivering dwellings unless there is clear evidence that housing completions will begin on site within five years.

3.4 The Council have not provided any clear evidence to suggest that Ashton Park is capable of delivering any dwellings over the next five years. However, the Council are expecting it to deliver 1,350 dwellings by the end of the plan period (2026). With around 7-8 years left of the plan period and the assumption that no dwellings are likely to be delivered over the next five years, the Council appear to be expecting the site to deliver somewhere in the region of 450-675 dwellings per year over the last 2-3 years of the plan period.

3.5 Lichfields produced a research paper entitled Start to Finish: How Quickly do Large-Scale Housing Sites Deliver (November 2016). In their assessment of build-out rates, they noted that the average annual build-out rate for a scheme of 2,000+ dwellings was 161 dwellings per annum (dpa). The highest build out rate of the sites they assessed was 321 dpa (Cranbrook). Even taking this higher figure, the Councils anticipated delivery trajectory for Ashton Park is clearly overly optimistic. The full report is attached at Appendix 1.

APPENDIX 1: LICHFIELDS (NOVEMBER 2016) START TO FINISH: HOW QUICKLY DO LARGE-SCALE HOUSING SITES DELIVER

3.6 Notwithstanding this, the delivery of the bulk of housing at the site is reliant on the provision of a new bypass. It is understood that only around 300 dwellings could be delivered in advance of this key piece of infrastructure. This is another key issue that will have significant implications for delivery of dwellings at Ashton Park.

3.7 Taken together, this means that the shortfall of housing delivery at Trowbridge will be even more significant than the HSAP currently suggests both in the short and longer term.

3.8 This also has implications for the delivery of housing across the district in locations (e.g. Chippenham and Salisbury) which are also heavily reliant on the delivery of housing at strategic development locations to meet their Core Strategy targets. Indeed, the Councils overly optimistic view of delivery trajectories for strategic sites, coupled with an under provision of allocations that are deliverable over the remaining years of the plan period means that the prospect of a housing shortfall would not be confined to the Trowbridge area alone.

3.9 The Council argue that not addressing this shortfall under the HSAP is justified because Trowbridges

needs will be met by housing delivery under a future plan period. However, failing to address important issues of delivery, especially when there is a clear onus from the government to significantly boost the supply of housing, is not an appropriate position to take and fails to comply with paragraph 182 of the NPPF 2012. 3.10 There is a need for Trowbridge to deliver housing in the short term to relieve pressure on other, less sustainable locations for development across the district. 3.11 The Councils decision to pursue a strategy that effectively postpones the delivery of housing at a key strategic settlement such as Trowbridge to a future plan period is unacceptable and unsound. The plan accepts that there will be a shortfall in the delivery of housing at Trowbridge over the current plan period to the tune of 1,297 dwellings. This figure is based on a overly optimistic view as to the quantum of homes that might be delivered by the end of the current plan period (1,350 dwellings) and, as such, we would expect this shortfall to be even more substantial than is currently predicted. 3.12 Given the extent of this shortfall and the implications for failing to deliver a sufficient quantum of homes at Trowbridge under the current plan period, there is a clear need to identify additional housing sites that can deliver housing in the shorter term (i.e. within the remaining years of the plan period). 3.13 Land at Maxcroft Farm is one such site that could deliver housing in the shorter-term help Trowbridge to meet its housing requirements to the end of the current plan period (2026). Other Site Allocations 3.14 The remaining site allocations and their expected delivery are summarised as follows (PC13, PC51 and PC54-73): [TABLE INSERT] 3.15 Section 5 of the previous representations to the Regulation 19 Local Plan also included a critique of the other site allocations within Trowbridge. This still remains very much relevant and we would direct the Inspector to review its contents. 3.16 In essence, the assessment points out that the allocations to the south and east of the town are likely to be affected by the same ecological issues that have affected Ashton Park coming forward. There are, therefore, concerns with regards to the deliverability of these sites within a timely manner (i.e. within the plan period). Again, the HSAP has not identified a suitable set or quantum of sites that will ensure the delivery of housing at Trowbridge in the short term. 3.17 The strategy, in identifying an insufficient number of sites, some (if not all) of which may be unsuitable to be delivered in the plan period, simply postpones the inevitable allocation of further sites at Trowbridge to later plan periods when it should be doing so now. 3.18 The plan is, therefore, unsound because it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives and is inconsistent with national policy. 4. LAND AT MAXCROFT FARM Hilperton and Trowbridge 4.1 As stated previously, Barratt Homes have a specific interest in Land at Maxcroft Farm, Hilperton. However, there has been no assessment of Maxcroft Farm in the HSAP. This is thought to be because it is perceived as relating to Hilperton and not Trowbridge. The previous representations set out why this thinking was flawed. To summarise: Trowbridge, Hilperton, and Staverton Marina effectively constitute a continuous urban area; There is no visual spatial definition of Trowbridge or the remainder for the purposes of identifying additional allocations; The Core Strategy is unclear on the status of Hilperton, as it identifies it as a separate settlement in Core Policy 29; and requires that its distinct identity is protected in paragraph 5.150; but includes it as part of Trowbridge in footnote 56; The Core Strategy also defines Trowbridge Town as the continuous urban area of Trowbridge (which must by any rational definition include Hilperton); and Explicitly includes a less well-connected settlement within the continuous urban area of Trowbridge (Staverton). 4.2 Therefore, in order to meet the indicative housing requirement for Trowbridge Town, there is a need to allocate sites at Trowbridge including Hilperton. However, even if (contrary to footnote 56) Hilperton is excluded from Trowbridge Town, allocations are still required including those at Hilperton to meet the Community Area requirements. 4.3 It is noted that in the Councils submission documents, Wiltshire Housing Site Allocations Plan Consultation Statement Regulation 22 (1) (c) (WHSAP/09), the Council notes the importance of retaining the separate identities of Hilperton, North Bradley and Southwick. Crucially, both Southwick and North Bradley are currently separated by open countryside from the Trowbridge urban area, compared to Hilperton which already forms part of the continuous urban area. Furthermore, the plan goes on to allocated sites adjacent North Bradley, although sets out that a strategic gap should be maintained. This view that Hilperton is a separate village does not recognise the existing pattern of development across north Trowbridge. 4.4 Either way, the delivery of development at Maxcroft Farm in Hilperton would contribute to addressing the shortfall within the Trowbridge CA, whether it is viewed as development at Trowbridge, Hilperton or both. 4.5 Regardless, it is clear that the development of Maxcroft Farm must be seen in the context of delivering housing for the needs of Trowbridge and Hilperton. Therefore, the continuing lack of assessment of Maxcroft Farm as part of the

	<p>Sustainability Appraisal coupled with the lack of commentary on the decision not to allocate for the full housing needs at Trowbridge, means that the HSAP will not meet the needs of Wiltshire nor deliver a sound and objectively assessed plan. Land at Maxcroft Farm 4.6 The credentials of land at Maxcroft Farm were presented to the Council in a Technical Delivery Document as part of the representations on the Regulation 19 version of the HSAP. This document covered: the sustainability of the location; the environmental factors affecting the location; the realistic housing potential/capacity of the area in relation to the environmental effects of development; and the deliverability of the location. 4.7 This was also supported by detailed technical notes supporting this representation in order to address identified concerns from internal consultees at Wiltshire. 4.8 In terms of delivery, Barratt Homes are keen to stress that the delivery of this site is immediate and could be delivered from start on site (following allocation/consent) to practical completion within 24 months. 4.9 Given the issues with delivery in Wiltshire and the strategic settlements this must be considered a significant benefit of the site to realistically deliver well within the remaining plan period before 2026. As set out in the next section it is not thought that the allocations as they stand will achieve this aim. 5. CONCLUSION 5.1 These representations have been prepared by Pegasus Group on behalf of Barratt Homes (Bristol) in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan (HSAP). 5.2 These representations are specifically concerned with the strategy set out within the HSAP delivering new homes at Trowbridge. The key proposed changes identify additional dwellings to be delivered at the already proposed sites, but do not identify additional sites. 5.3 Under the HSAP, Trowbridge is projected to fall short of its Core Strategy housing target by a minimum of 1,297 dwellings. Barratt Homes feel that this figure will be significantly higher due to the Councils overly optimistic assumptions regarding delivery rates at the proposed allocations namely Ashton Park. 5.4 The Council are justifying this shortfall by saying that it will be met during the following plan period (i.e. 2016-2036). However, aside from being bad planning, this approach will further exacerbate pressure on other parts of the district to deliver the housing required under the current plan period (2006-2026), whilst also failing to deliver (among other things) the housing required to support the economic growth of Trowbridge. Ultimately, the strategy will delay the allocation of additional sites to a new local plan when they should be allocated under the HSAP. 5.5 The HSAP must, therefore, be found unsound as it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives of the Core Strategy and is inconsistent with national policy. 5.6 In order to be found sound, Barratt Homes believe it is imperative that additional sites are identified within the HSAP due to the pressing need to deliver homes at Trowbridge over the remaining years of the current plan period. 5.7 Given the sustainable performance and policy compliance of Maxcroft Farm in relation to the strategic priorities set out in the WCS, this is one such location that should be included.</p>

INTRODUCTION 1.1 This submission is made by Barratt Homes (Bristol) Ltd in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan Examination. 1.2 The Council submitted the draft Wiltshire Housing Site Allocations Plan (HSAP) along with a Schedule of Proposed Changes and supporting evidence to the Secretary of State for independent examination in July 2018. 1.3 This was followed by a procedural letter from the Inspector in August 2018 which required the Council to undertake a consultation on the Schedule of Proposed Changes to the HSAP, along with the revised Sustainability Appraisal, update to the Habitats Regulations Assessment Addendum, and associated evidence. 1.4 These representations set out Barratt Homes response to these proposed changes and have been prepared having regard to the requirements set out by the National Planning Policy Framework (NPPF). 1.5 Barratt Homes has land interests in the Trowbridge area and have submitted representations at previous stages of the HSAPs preparation in support of allocating land in this location. These specific representations relate to land at Maxcroft Farm in Hilperton, which forms part of the wider Trowbridge Urban Area. 1.6 The following proposed changes are, therefore, considered to be of particular relevance: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. 1.7 Unfortunately, the proposed modifications do not make any fundamental changes to the plan or strategy for Trowbridge. As such, the fundamental thrust of arguments made in previous representations remains the same. 1.8 These key points are considered further in Sections 2, 3 and 4 of these representations, but their content is summarised briefly below: The proposed changes have done nothing to address the shortfall anticipated over the remaining years of the plan period at Trowbridge; The delivery of housing at Trowbridge over the remaining years of the plan period continue to rely on the delivery of housing at a strategic site (Ashton Park) where anticipated delivery trajectories are overly optimistic; There remain serious questions over the deliverability of the identified allocations at Trowbridge given that there is potential for them to be affected by same ecological issues that have affected Ashton Park; The plan simply continues to postpone the delivery of housing at Trowbridge until after the plan period which is an unacceptable approach; The Council should, therefore, look to allocate additional sites to meet Trowbridges housing needs over the remaining years of the plan period and these should include land at Maxcroft Farm. 1.9 Given the above, it is our belief that the plan continues to fail when assessed against the four tests of soundness, as set out at paragraph 35 of the NPPF: Positively prepared the plan fails to meet the objectively</p>				

assessed development and infrastructure requirements of a key strategic settlement (Trowbridge); Justified the plan has not demonstrated it is the most appropriate strategy, when considered against the reasonable alternatives, based on evidence; Effective the plan will not deliver housing in a timely manner in accordance with Wiltshire Core Strategy; and Consistent with national policy a key priority for national planning policy is to boost significantly the supply and delivery of housing. This plan fails to plan for housing at a key strategic settlement with little more than 8 years left in the plan period. 1.10 Land at Maxcroft Farm represents a sustainable and deliverable location for housing development that can support the needs of Trowbridge and Hilperton. Given that housing delivery at Trowbridge is particularly reliant on a large strategic site (Ashton Park) which has suffered significant delays, the risk of further non-delivery of housing at a key strategic settlement in Wiltshire is exacerbated by this plan. The risk for Wiltshire is that the HSAP provides another adopted development plan document that has manifestly failed to address key issues with regard to the delivery and supply of housing. 1.11 The failure to address these issues would simply result in their deferral to a future development plan document or leave them to be addressed via the development management process. 1.12 Barratt Homes trust that the comments contained in these representations will be carefully considered and appropriately responded to by Wiltshire Council in their submission to the Secretary of State. 2. KEY CHANGES MADE TO HSAP 2.1 Some 135 changes are proposed to the HSAP. None of these were particularly fundamental to the overall approach of the plan, with the majority of them relating to factual corrections and tweaks to site allocations. 2.2 The more significant changes relate to the removal of site allocations from the plan at Crudwell, Malmesbury and Market Lavington. The Councils rationale for this was that development at these locations could be addressed through the delivery of Neighbourhood Plans. Barratt Homes do not have any specific comments to make regarding these specific changes. 2.3 To repeat, the specific changes these representations relate to are: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. Implications for Trowbridge 2.4 The fundamental strategy for Trowbridge has not been changed. Whilst the expected quantum of housing to be delivered on the HSAP sites has been revised to the extent where an additional c. 250 dwellings (800 1,050) are now expected to be delivered, the bulk of housing to be delivered is still reliant on the delivery of the long-term allocated site at Ashton Park to meet its housing target identified in the Wiltshire Core Strategy. 2.5 Given the delays in housing coming forward at Ashton Park, the Council are now only expecting the site to deliver 1,350 dwellings over the remaining plan period where it had previously been expected to deliver 1,600 dwellings. They are expecting the remainder (1,250 dwellings) to be delivered post 2026. This reduction has largely cancelled out the additional dwellings that are expected to be delivered at the other allocated sites over the remaining years of the plan period. 2.6 It should be noted that Barratt Homes question this delivery trajectory and consider the Councils assumptions to be overly optimistic. The reasons for this are set out in Section 3 below. 2.7 Regardless, there will be a shortfall in the number of dwellings delivered at Trowbridge over the plan period. This shortfall is expected to be 1,297 dwellings (PC25) which is broadly equivalent to the number of dwellings the Council expects to be delivered at Ashton Park beyond the end of the plan period (1,250). This is not a sound approach and fails to comply with paragraph 182 of NPPF 2012 (since replaced by paragraph 35 of the NPPF 2018). Key Concerns 2.8 Barratt Homes have previously made representations to the HSAP, expressing concerns with the overall approach to delivering housing at Trowbridge in September 2017. 2.9 As the fundamental strategy for Trowbridge has not changed, the thrust of the previous representations is still very much relevant. The key points made within those representations were as follows: There has been a pattern of failure across the district to deliver dwellings at key strategic sites at Chippenham, Salisbury and Trowbridge. There are serious question marks with regard to the delivery of any dwellings at Ashton Park between now and the end of the plan period, with no evidence in terms of a delivery timetable that the 1,350 dwellings that are anticipated by the Council can be completed; As such, it is clear that the large strategic sites have failed to deliver housing in the short-term and will run over into the next plan period; This has led to development pressure elsewhere within the plan area where a number of towns have seen planning by appeal and these will now deliver in excess of the indicative requirements as set out in the Wiltshire Core Strategy (WCS). We expect that the failure to deliver housing at these identified sites will exacerbate pressures on other

areas within Wiltshire to accommodate more growth and undermine the spatial distribution of the WCS; This will be further compounded by the failure of current proposed allocations in the HSAP at Trowbridge to meet the full allocation. As proposed there would be a residual shortfall of 1,297 homes (the changes to the HSAP revised this figure from 1,220 homes) still required to meet the needs of Trowbridge Town and a shortfall of 750 homes to meet the needs of Trowbridge Community Area. As a key strategic settlement and the primary focus of development within the WCS, it is not clear how under delivery at Trowbridge can meet the spatial strategy and development requirements of Wiltshire. There is plainly no difficulty in the HSAP document allocating sites for housing in excess of 42,000. Indeed, properly read, a figure above 42,000 would be entirely consistent with both the working and the evidence surrounding the WCS. Whilst the HSAP provides some limited commentary on the decision not to address the shortfall in Trowbridge, the ramifications of this decision are not examined in the Sustainability Assessment (SA). The non-allocation of homes at a Principal Settlement is a crucial strategic decision and the lack of analysis or commentary of this issue is a glaring omission on the current evidence base. Given the acknowledged need within the HSAP to provide a surplus, alongside the shortfall in the OAN, there is a clear and obvious requirement to allocate a full amount at Trowbridge.

2.10 Moreover, the failure to deliver a full amount of housing at Trowbridge does not match the ambitions of the Town Council who want to maintain Trowbridges status as Wiltshires County Town. The failure to plan to meet its housing needs in full under the HSAP would not be in line with the Towns status and the stated ambitions of locally democratic elected bodies.

Amendments to Trowbridge Settlement Boundary

2.11 In addition to the above, Barratt would like to formally register their support for the proposed amendments to the settlement boundary at Hilperton and Trowbridge which now captures parts of the built-up area that were previously excluded.

3. IMPLICATIONS FOR PROPOSED ALLOCATIONS

Ashton Park

3.1 In addition to the above, Barratt Homes would wish to elaborate further on the deliverability issues at Ashton Park, specifically in reference to the definition of deliverable as set out within the revised NPPF (2018).

3.2 The representations to the Regulation 19 version of the plan were submitted in September 2017. Over a year has since passed and the Ashton Park site still remains without outline planning permission, albeit it is understood that it was resolved to grant permission in April 2018, subject to the signing of a S106 agreement. This agreement had not yet been signed at the time of writing these representations.

3.3 The NPPFs definition of deliverable (for the purpose of Housing Land Supply assessments) states that sites with outline permission or allocated within development plans are not considered to be capable of delivering dwellings unless there is clear evidence that housing completions will begin on site within five years.

3.4 The Council have not provided any clear evidence to suggest that Ashton Park is capable of delivering any dwellings over the next five years. However, the Council are expecting it to deliver 1,350 dwellings by the end of the plan period (2026). With around 7-8 years left of the plan period and the assumption that no dwellings are likely to be delivered over the next five years, the Council appear to be expecting the site to deliver somewhere in the region of 450-675 dwellings per year over the last 2-3 years of the plan period.

3.5 Lichfields produced a research paper entitled Start to Finish: How Quickly do Large-Scale Housing Sites Deliver (November 2016). In their assessment of build-out rates, they noted that the average annual build-out rate for a scheme of 2,000+ dwellings was 161 dwellings per annum (dpa). The highest build out rate of the sites they assessed was 321 dpa (Cranbrook). Even taking this higher figure, the Councils anticipated delivery trajectory for Ashton Park is clearly overly optimistic. The full report is attached at Appendix 1.

APPENDIX 1: LICHFIELDS (NOVEMBER 2016) START TO FINISH: HOW QUICKLY DO LARGE-SCALE HOUSING SITES DELIVER

3.6 Notwithstanding this, the delivery of the bulk of housing at the site is reliant on the provision of a new bypass. It is understood that only around 300 dwellings could be delivered in advance of this key piece of infrastructure. This is another key issue that will have significant implications for delivery of dwellings at Ashton Park.

3.7 Taken together, this means that the shortfall of housing delivery at Trowbridge will be even more significant than the HSAP currently suggests both in the short and longer term.

3.8 This also has implications for the delivery of housing across the district in locations (e.g. Chippenham and Salisbury) which are also heavily reliant on the delivery of housing at strategic development locations to meet their Core Strategy targets. Indeed, the Councils overly optimistic view of delivery trajectories for strategic sites, coupled with an under provision of allocations that are deliverable over the remaining years of the plan period means that the prospect of a housing shortfall would not be confined to the Trowbridge area alone.

3.9 The Council argue that not addressing this shortfall under the HSAP is justified because Trowbridges

needs will be met by housing delivery under a future plan period. However, failing to address important issues of delivery, especially when there is a clear onus from the government to significantly boost the supply of housing, is not an appropriate position to take and fails to comply with paragraph 182 of the NPPF 2012. 3.10 There is a need for Trowbridge to deliver housing in the short term to relieve pressure on other, less sustainable locations for development across the district. 3.11 The Councils decision to pursue a strategy that effectively postpones the delivery of housing at a key strategic settlement such as Trowbridge to a future plan period is unacceptable and unsound. The plan accepts that there will be a shortfall in the delivery of housing at Trowbridge over the current plan period to the tune of 1,297 dwellings. This figure is based on a overly optimistic view as to the quantum of homes that might be delivered by the end of the current plan period (1,350 dwellings) and, as such, we would expect this shortfall to be even more substantial than is currently predicted. 3.12 Given the extent of this shortfall and the implications for failing to deliver a sufficient quantum of homes at Trowbridge under the current plan period, there is a clear need to identify additional housing sites that can deliver housing in the shorter term (i.e. within the remaining years of the plan period). 3.13 Land at Maxcroft Farm is one such site that could deliver housing in the shorter-term help Trowbridge to meet its housing requirements to the end of the current plan period (2026). Other Site Allocations 3.14 The remaining site allocations and their expected delivery are summarised as follows (PC13, PC51 and PC54-73): [TABLE INSERT] 3.15 Section 5 of the previous representations to the Regulation 19 Local Plan also included a critique of the other site allocations within Trowbridge. This still remains very much relevant and we would direct the Inspector to review its contents. 3.16 In essence, the assessment points out that the allocations to the south and east of the town are likely to be affected by the same ecological issues that have affected Ashton Park coming forward. There are, therefore, concerns with regards to the deliverability of these sites within a timely manner (i.e. within the plan period). Again, the HSAP has not identified a suitable set or quantum of sites that will ensure the delivery of housing at Trowbridge in the short term. 3.17 The strategy, in identifying an insufficient number of sites, some (if not all) of which may be unsuitable to be delivered in the plan period, simply postpones the inevitable allocation of further sites at Trowbridge to later plan periods when it should be doing so now. 3.18 The plan is, therefore, unsound because it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives and is inconsistent with national policy. 4. LAND AT MAXCROFT FARM Hilperton and Trowbridge 4.1 As stated previously, Barratt Homes have a specific interest in Land at Maxcroft Farm, Hilperton. However, there has been no assessment of Maxcroft Farm in the HSAP. This is thought to be because it is perceived as relating to Hilperton and not Trowbridge. The previous representations set out why this thinking was flawed. To summarise: Trowbridge, Hilperton, and Staverton Marina effectively constitute a continuous urban area; There is no visual spatial definition of Trowbridge or the remainder for the purposes of identifying additional allocations; The Core Strategy is unclear on the status of Hilperton, as it identifies it as a separate settlement in Core Policy 29; and requires that its distinct identity is protected in paragraph 5.150; but includes it as part of Trowbridge in footnote 56; The Core Strategy also defines Trowbridge Town as the continuous urban area of Trowbridge (which must by any rational definition include Hilperton); and Explicitly includes a less well-connected settlement within the continuous urban area of Trowbridge (Staverton). 4.2 Therefore, in order to meet the indicative housing requirement for Trowbridge Town, there is a need to allocate sites at Trowbridge including Hilperton. However, even if (contrary to footnote 56) Hilperton is excluded from Trowbridge Town, allocations are still required including those at Hilperton to meet the Community Area requirements. 4.3 It is noted that in the Councils submission documents, Wiltshire Housing Site Allocations Plan Consultation Statement Regulation 22 (1) (c) (WHSAP/09), the Council notes the importance of retaining the separate identities of Hilperton, North Bradley and Southwick. Crucially, both Southwick and North Bradley are currently separated by open countryside from the Trowbridge urban area, compared to Hilperton which already forms part of the continuous urban area. Furthermore, the plan goes on to allocated sites adjacent North Bradley, although sets out that a strategic gap should be maintained. This view that Hilperton is a separate village does not recognise the existing pattern of development across north Trowbridge. 4.4 Either way, the delivery of development at Maxcroft Farm in Hilperton would contribute to addressing the shortfall within the Trowbridge CA, whether it is viewed as development at Trowbridge, Hilperton or both. 4.5 Regardless, it is clear that the development of Maxcroft Farm must be seen in the context of delivering housing for the needs of Trowbridge and Hilperton. Therefore, the continuing lack of assessment of Maxcroft Farm as part of the

	<p>Sustainability Appraisal coupled with the lack of commentary on the decision not to allocate for the full housing needs at Trowbridge, means that the HSAP will not meet the needs of Wiltshire nor deliver a sound and objectively assessed plan. Land at Maxcroft Farm 4.6 The credentials of land at Maxcroft Farm were presented to the Council in a Technical Delivery Document as part of the representations on the Regulation 19 version of the HSAP. This document covered: the sustainability of the location; the environmental factors affecting the location; the realistic housing potential/capacity of the area in relation to the environmental effects of development; and the deliverability of the location. 4.7 This was also supported by detailed technical notes supporting this representation in order to address identified concerns from internal consultees at Wiltshire. 4.8 In terms of delivery, Barratt Homes are keen to stress that the delivery of this site is immediate and could be delivered from start on site (following allocation/consent) to practical completion within 24 months. 4.9 Given the issues with delivery in Wiltshire and the strategic settlements this must be considered a significant benefit of the site to realistically deliver well within the remaining plan period before 2026. As set out in the next section it is not thought that the allocations as they stand will achieve this aim. 5. CONCLUSION 5.1 These representations have been prepared by Pegasus Group on behalf of Barratt Homes (Bristol) in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan (HSAP). 5.2 These representations are specifically concerned with the strategy set out within the HSAP delivering new homes at Trowbridge. The key proposed changes identify additional dwellings to be delivered at the already proposed sites, but do not identify additional sites. 5.3 Under the HSAP, Trowbridge is projected to fall short of its Core Strategy housing target by a minimum of 1,297 dwellings. Barratt Homes feel that this figure will be significantly higher due to the Councils overly optimistic assumptions regarding delivery rates at the proposed allocations namely Ashton Park. 5.4 The Council are justifying this shortfall by saying that it will be met during the following plan period (i.e. 2016-2036). However, aside from being bad planning, this approach will further exacerbate pressure on other parts of the district to deliver the housing required under the current plan period (2006-2026), whilst also failing to deliver (among other things) the housing required to support the economic growth of Trowbridge. Ultimately, the strategy will delay the allocation of additional sites to a new local plan when they should be allocated under the HSAP. 5.5 The HSAP must, therefore, be found unsound as it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives of the Core Strategy and is inconsistent with national policy. 5.6 In order to be found sound, Barratt Homes believe it is imperative that additional sites are identified within the HSAP due to the pressing need to deliver homes at Trowbridge over the remaining years of the current plan period. 5.7 Given the sustainable performance and policy compliance of Maxcroft Farm in relation to the strategic priorities set out in the WCS, this is one such location that should be included.</p>

INTRODUCTION 1.1 This submission is made by Barratt Homes (Bristol) Ltd in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan Examination. 1.2 The Council submitted the draft Wiltshire Housing Site Allocations Plan (HSAP) along with a Schedule of Proposed Changes and supporting evidence to the Secretary of State for independent examination in July 2018. 1.3 This was followed by a procedural letter from the Inspector in August 2018 which required the Council to undertake a consultation on the Schedule of Proposed Changes to the HSAP, along with the revised Sustainability Appraisal, update to the Habitats Regulations Assessment Addendum, and associated evidence. 1.4 These representations set out Barratt Homes response to these proposed changes and have been prepared having regard to the requirements set out by the National Planning Policy Framework (NPPF). 1.5 Barratt Homes has land interests in the Trowbridge area and have submitted representations at previous stages of the HSAPs preparation in support of allocating land in this location. These specific representations relate to land at Maxcroft Farm in Hilperton, which forms part of the wider Trowbridge Urban Area. 1.6 The following proposed changes are, therefore, considered to be of particular relevance: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. 1.7 Unfortunately, the proposed modifications do not make any fundamental changes to the plan or strategy for Trowbridge. As such, the fundamental thrust of arguments made in previous representations remains the same. 1.8 These key points are considered further in Sections 2, 3 and 4 of these representations, but their content is summarised briefly below: The proposed changes have done nothing to address the shortfall anticipated over the remaining years of the plan period at Trowbridge; The delivery of housing at Trowbridge over the remaining years of the plan period continue to rely on the delivery of housing at a strategic site (Ashton Park) where anticipated delivery trajectories are overly optimistic; There remain serious questions over the deliverability of the identified allocations at Trowbridge given that there is potential for them to be affected by same ecological issues that have affected Ashton Park; The plan simply continues to postpone the delivery of housing at Trowbridge until after the plan period which is an unacceptable approach; The Council should, therefore, look to allocate additional sites to meet Trowbridges housing needs over the remaining years of the plan period and these should include land at Maxcroft Farm. 1.9 Given the above, it is our belief that the plan continues to fail when assessed against the four tests of soundness, as set out at paragraph 35 of the NPPF: Positively prepared the plan fails to meet the objectively</p>				

assessed development and infrastructure requirements of a key strategic settlement (Trowbridge); Justified the plan has not demonstrated it is the most appropriate strategy, when considered against the reasonable alternatives, based on evidence; Effective the plan will not deliver housing in a timely manner in accordance with Wiltshire Core Strategy; and Consistent with national policy a key priority for national planning policy is to boost significantly the supply and delivery of housing. This plan fails to plan for housing at a key strategic settlement with little more than 8 years left in the plan period. 1.10 Land at Maxcroft Farm represents a sustainable and deliverable location for housing development that can support the needs of Trowbridge and Hilperton. Given that housing delivery at Trowbridge is particularly reliant on a large strategic site (Ashton Park) which has suffered significant delays, the risk of further non-delivery of housing at a key strategic settlement in Wiltshire is exacerbated by this plan. The risk for Wiltshire is that the HSAP provides another adopted development plan document that has manifestly failed to address key issues with regard to the delivery and supply of housing. 1.11 The failure to address these issues would simply result in their deferral to a future development plan document or leave them to be addressed via the development management process. 1.12 Barratt Homes trust that the comments contained in these representations will be carefully considered and appropriately responded to by Wiltshire Council in their submission to the Secretary of State. 2. KEY CHANGES MADE TO HSAP 2.1 Some 135 changes are proposed to the HSAP. None of these were particularly fundamental to the overall approach of the plan, with the majority of them relating to factual corrections and tweaks to site allocations. 2.2 The more significant changes relate to the removal of site allocations from the plan at Crudwell, Malmesbury and Market Lavington. The Councils rationale for this was that development at these locations could be addressed through the delivery of Neighbourhood Plans. Barratt Homes do not have any specific comments to make regarding these specific changes. 2.3 To repeat, the specific changes these representations relate to are: PC13 and PC51 which amends the table relating to the quantum of development anticipated at the proposed allocations at Trowbridge; PC25 which revises the anticipated quantum of development at the proposed allocations at Trowbridge and the extent of the shortfall expected over the plan period; and PC54-PC73 which relate to amendments made to the proposed allocations at Trowbridge. Implications for Trowbridge 2.4 The fundamental strategy for Trowbridge has not been changed. Whilst the expected quantum of housing to be delivered on the HSAP sites has been revised to the extent where an additional c. 250 dwellings (800 1,050) are now expected to be delivered, the bulk of housing to be delivered is still reliant on the delivery of the long-term allocated site at Ashton Park to meet its housing target identified in the Wiltshire Core Strategy. 2.5 Given the delays in housing coming forward at Ashton Park, the Council are now only expecting the site to deliver 1,350 dwellings over the remaining plan period where it had previously been expected to deliver 1,600 dwellings. They are expecting the remainder (1,250 dwellings) to be delivered post 2026. This reduction has largely cancelled out the additional dwellings that are expected to be delivered at the other allocated sites over the remaining years of the plan period. 2.6 It should be noted that Barratt Homes question this delivery trajectory and consider the Councils assumptions to be overly optimistic. The reasons for this are set out in Section 3 below. 2.7 Regardless, there will be a shortfall in the number of dwellings delivered at Trowbridge over the plan period. This shortfall is expected to be 1,297 dwellings (PC25) which is broadly equivalent to the number of dwellings the Council expects to be delivered at Ashton Park beyond the end of the plan period (1,250). This is not a sound approach and fails to comply with paragraph 182 of NPPF 2012 (since replaced by paragraph 35 of the NPPF 2018). Key Concerns 2.8 Barratt Homes have previously made representations to the HSAP, expressing concerns with the overall approach to delivering housing at Trowbridge in September 2017. 2.9 As the fundamental strategy for Trowbridge has not changed, the thrust of the previous representations is still very much relevant. The key points made within those representations were as follows: There has been a pattern of failure across the district to deliver dwellings at key strategic sites at Chippenham, Salisbury and Trowbridge. There are serious question marks with regard to the delivery of any dwellings at Ashton Park between now and the end of the plan period, with no evidence in terms of a delivery timetable that the 1,350 dwellings that are anticipated by the Council can be completed; As such, it is clear that the large strategic sites have failed to deliver housing in the short-term and will run over into the next plan period; This has led to development pressure elsewhere within the plan area where a number of towns have seen planning by appeal and these will now deliver in excess of the indicative requirements as set out in the Wiltshire Core Strategy (WCS). We expect that the failure to deliver housing at these identified sites will exacerbate pressures on other

areas within Wiltshire to accommodate more growth and undermine the spatial distribution of the WCS; This will be further compounded by the failure of current proposed allocations in the HSAP at Trowbridge to meet the full allocation. As proposed there would be a residual shortfall of 1,297 homes (the changes to the HSAP revised this figure from 1,220 homes) still required to meet the needs of Trowbridge Town and a shortfall of 750 homes to meet the needs of Trowbridge Community Area. As a key strategic settlement and the primary focus of development within the WCS, it is not clear how under delivery at Trowbridge can meet the spatial strategy and development requirements of Wiltshire. There is plainly no difficulty in the HSAP document allocating sites for housing in excess of 42,000. Indeed, properly read, a figure above 42,000 would be entirely consistent with both the working and the evidence surrounding the WCS. Whilst the HSAP provides some limited commentary on the decision not to address the shortfall in Trowbridge, the ramifications of this decision are not examined in the Sustainability Assessment (SA). The non-allocation of homes at a Principal Settlement is a crucial strategic decision and the lack of analysis or commentary of this issue is a glaring omission on the current evidence base. Given the acknowledged need within the HSAP to provide a surplus, alongside the shortfall in the OAN, there is a clear and obvious requirement to allocate a full amount at Trowbridge.

2.10 Moreover, the failure to deliver a full amount of housing at Trowbridge does not match the ambitions of the Town Council who want to maintain Trowbridges status as Wiltshires County Town. The failure to plan to meet its housing needs in full under the HSAP would not be in line with the Towns status and the stated ambitions of locally democratic elected bodies.

Amendments to Trowbridge Settlement Boundary

2.11 In addition to the above, Barratt would like to formally register their support for the proposed amendments to the settlement boundary at Hilperton and Trowbridge which now captures parts of the built-up area that were previously excluded.

### 3. IMPLICATIONS FOR PROPOSED ALLOCATIONS

#### Ashton Park

3.1 In addition to the above, Barratt Homes would wish to elaborate further on the deliverability issues at Ashton Park, specifically in reference to the definition of deliverable as set out within the revised NPPF (2018).

3.2 The representations to the Regulation 19 version of the plan were submitted in September 2017. Over a year has since passed and the Ashton Park site still remains without outline planning permission, albeit it is understood that it was resolved to grant permission in April 2018, subject to the signing of a S106 agreement. This agreement had not yet been signed at the time of writing these representations.

3.3 The NPPFs definition of deliverable (for the purpose of Housing Land Supply assessments) states that sites with outline permission or allocated within development plans are not considered to be capable of delivering dwellings unless there is clear evidence that housing completions will begin on site within five years.

3.4 The Council have not provided any clear evidence to suggest that Ashton Park is capable of delivering any dwellings over the next five years. However, the Council are expecting it to deliver 1,350 dwellings by the end of the plan period (2026). With around 7-8 years left of the plan period and the assumption that no dwellings are likely to be delivered over the next five years, the Council appear to be expecting the site to deliver somewhere in the region of 450-675 dwellings per year over the last 2-3 years of the plan period.

3.5 Lichfields produced a research paper entitled Start to Finish: How Quickly do Large-Scale Housing Sites Deliver (November 2016). In their assessment of build-out rates, they noted that the average annual build-out rate for a scheme of 2,000+ dwellings was 161 dwellings per annum (dpa). The highest build out rate of the sites they assessed was 321 dpa (Cranbrook). Even taking this higher figure, the Councils anticipated delivery trajectory for Ashton Park is clearly overly optimistic. The full report is attached at Appendix 1.

#### APPENDIX 1: LICHFIELDS (NOVEMBER 2016) START TO FINISH: HOW QUICKLY DO LARGE-SCALE HOUSING SITES DELIVER

3.6 Notwithstanding this, the delivery of the bulk of housing at the site is reliant on the provision of a new bypass. It is understood that only around 300 dwellings could be delivered in advance of this key piece of infrastructure. This is another key issue that will have significant implications for delivery of dwellings at Ashton Park.

3.7 Taken together, this means that the shortfall of housing delivery at Trowbridge will be even more significant than the HSAP currently suggests both in the short and longer term.

3.8 This also has implications for the delivery of housing across the district in locations (e.g. Chippenham and Salisbury) which are also heavily reliant on the delivery of housing at strategic development locations to meet their Core Strategy targets. Indeed, the Councils overly optimistic view of delivery trajectories for strategic sites, coupled with an under provision of allocations that are deliverable over the remaining years of the plan period means that the prospect of a housing shortfall would not be confined to the Trowbridge area alone.

3.9 The Council argue that not addressing this shortfall under the HSAP is justified because Trowbridges

needs will be met by housing delivery under a future plan period. However, failing to address important issues of delivery, especially when there is a clear onus from the government to significantly boost the supply of housing, is not an appropriate position to take and fails to comply with paragraph 182 of the NPPF 2012. 3.10 There is a need for Trowbridge to deliver housing in the short term to relieve pressure on other, less sustainable locations for development across the district. 3.11 The Councils decision to pursue a strategy that effectively postpones the delivery of housing at a key strategic settlement such as Trowbridge to a future plan period is unacceptable and unsound. The plan accepts that there will be a shortfall in the delivery of housing at Trowbridge over the current plan period to the tune of 1,297 dwellings. This figure is based on a overly optimistic view as to the quantum of homes that might be delivered by the end of the current plan period (1,350 dwellings) and, as such, we would expect this shortfall to be even more substantial than is currently predicted. 3.12 Given the extent of this shortfall and the implications for failing to deliver a sufficient quantum of homes at Trowbridge under the current plan period, there is a clear need to identify additional housing sites that can deliver housing in the shorter term (i.e. within the remaining years of the plan period). 3.13 Land at Maxcroft Farm is one such site that could deliver housing in the shorter-term help Trowbridge to meet its housing requirements to the end of the current plan period (2026). Other Site Allocations 3.14 The remaining site allocations and their expected delivery are summarised as follows (PC13, PC51 and PC54-73): [TABLE INSERT] 3.15 Section 5 of the previous representations to the Regulation 19 Local Plan also included a critique of the other site allocations within Trowbridge. This still remains very much relevant and we would direct the Inspector to review its contents. 3.16 In essence, the assessment points out that the allocations to the south and east of the town are likely to be affected by the same ecological issues that have affected Ashton Park coming forward. There are, therefore, concerns with regards to the deliverability of these sites within a timely manner (i.e. within the plan period). Again, the HSAP has not identified a suitable set or quantum of sites that will ensure the delivery of housing at Trowbridge in the short term. 3.17 The strategy, in identifying an insufficient number of sites, some (if not all) of which may be unsuitable to be delivered in the plan period, simply postpones the inevitable allocation of further sites at Trowbridge to later plan periods when it should be doing so now. 3.18 The plan is, therefore, unsound because it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives and is inconsistent with national policy. 4. LAND AT MAXCROFT FARM Hilperton and Trowbridge 4.1 As stated previously, Barratt Homes have a specific interest in Land at Maxcroft Farm, Hilperton. However, there has been no assessment of Maxcroft Farm in the HSAP. This is thought to be because it is perceived as relating to Hilperton and not Trowbridge. The previous representations set out why this thinking was flawed. To summarise: Trowbridge, Hilperton, and Staverton Marina effectively constitute a continuous urban area; There is no visual spatial definition of Trowbridge or the remainder for the purposes of identifying additional allocations; The Core Strategy is unclear on the status of Hilperton, as it identifies it as a separate settlement in Core Policy 29; and requires that its distinct identity is protected in paragraph 5.150; but includes it as part of Trowbridge in footnote 56; The Core Strategy also defines Trowbridge Town as the continuous urban area of Trowbridge (which must by any rational definition include Hilperton); and Explicitly includes a less well-connected settlement within the continuous urban area of Trowbridge (Staverton). 4.2 Therefore, in order to meet the indicative housing requirement for Trowbridge Town, there is a need to allocate sites at Trowbridge including Hilperton. However, even if (contrary to footnote 56) Hilperton is excluded from Trowbridge Town, allocations are still required including those at Hilperton to meet the Community Area requirements. 4.3 It is noted that in the Councils submission documents, Wiltshire Housing Site Allocations Plan Consultation Statement Regulation 22 (1) (c) (WHSAP/09), the Council notes the importance of retaining the separate identities of Hilperton, North Bradley and Southwick. Crucially, both Southwick and North Bradley are currently separated by open countryside from the Trowbridge urban area, compared to Hilperton which already forms part of the continuous urban area. Furthermore, the plan goes on to allocated sites adjacent North Bradley, although sets out that a strategic gap should be maintained. This view that Hilperton is a separate village does not recognise the existing pattern of development across north Trowbridge. 4.4 Either way, the delivery of development at Maxcroft Farm in Hilperton would contribute to addressing the shortfall within the Trowbridge CA, whether it is viewed as development at Trowbridge, Hilperton or both. 4.5 Regardless, it is clear that the development of Maxcroft Farm must be seen in the context of delivering housing for the needs of Trowbridge and Hilperton. Therefore, the continuing lack of assessment of Maxcroft Farm as part of the

	<p>Sustainability Appraisal coupled with the lack of commentary on the decision not to allocate for the full housing needs at Trowbridge, means that the HSAP will not meet the needs of Wiltshire nor deliver a sound and objectively assessed plan. Land at Maxcroft Farm 4.6 The credentials of land at Maxcroft Farm were presented to the Council in a Technical Delivery Document as part of the representations on the Regulation 19 version of the HSAP. This document covered: the sustainability of the location; the environmental factors affecting the location; the realistic housing potential/capacity of the area in relation to the environmental effects of development; and the deliverability of the location. 4.7 This was also supported by detailed technical notes supporting this representation in order to address identified concerns from internal consultees at Wiltshire. 4.8 In terms of delivery, Barratt Homes are keen to stress that the delivery of this site is immediate and could be delivered from start on site (following allocation/consent) to practical completion within 24 months. 4.9 Given the issues with delivery in Wiltshire and the strategic settlements this must be considered a significant benefit of the site to realistically deliver well within the remaining plan period before 2026. As set out in the next section it is not thought that the allocations as they stand will achieve this aim. 5. CONCLUSION 5.1 These representations have been prepared by Pegasus Group on behalf of Barratt Homes (Bristol) in response to the Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents being carried out by Wiltshire Council as part of the preparation of the Housing Site Allocations Plan (HSAP). 5.2 These representations are specifically concerned with the strategy set out within the HSAP delivering new homes at Trowbridge. The key proposed changes identify additional dwellings to be delivered at the already proposed sites, but do not identify additional sites. 5.3 Under the HSAP, Trowbridge is projected to fall short of its Core Strategy housing target by a minimum of 1,297 dwellings. Barratt Homes feel that this figure will be significantly higher due to the Councils overly optimistic assumptions regarding delivery rates at the proposed allocations namely Ashton Park. 5.4 The Council are justifying this shortfall by saying that it will be met during the following plan period (i.e. 2016-2036). However, aside from being bad planning, this approach will further exacerbate pressure on other parts of the district to deliver the housing required under the current plan period (2006-2026), whilst also failing to deliver (among other things) the housing required to support the economic growth of Trowbridge. Ultimately, the strategy will delay the allocation of additional sites to a new local plan when they should be allocated under the HSAP. 5.5 The HSAP must, therefore, be found unsound as it has not been positively prepared, its strategy is unjustified, it will be ineffective in meeting its strategic objectives of the Core Strategy and is inconsistent with national policy. 5.6 In order to be found sound, Barratt Homes believe it is imperative that additional sites are identified within the HSAP due to the pressing need to deliver homes at Trowbridge over the remaining years of the current plan period. 5.7 Given the sustainable performance and policy compliance of Maxcroft Farm in relation to the strategic priorities set out in the WCS, this is one such location that should be included.</p>

<b>Identify subject of representation</b>	Schedule of Proposed Changes - Consultation Document (September 2018) (EXAM/01)		<b>Do you consider the consultation material you are commenting on is unsound because it is not: Positively prepared; Justified; Effective; Consistent with national policy?</b>		
<b>Identify Proposed Change Reference Number</b>	PC92				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	I am writing to support the proposed change (PC92) to remove the Ridgeway Farm, Crudwell site (Housing Allocation H2.13) from the Wiltshire Housing Site Allocations Plan. The proposed development at Ridgeway Farm is inappropriately large and were it to go ahead, would have a detrimental impact on the community for all the reasons stated in previous consultations. The proposed change to have this development removed from the WHSAP is therefore welcomed and we support it on the basis that: There is no Strategic Need for Wiltshire to allocate housing in Crudwell because supply in the Housing Market Area is good and the Wiltshire Core Strategy states that development in Large Villages should be limited to small sites to meet local needs. The Crudwell Neighbourhood Plan is progressing extremely well (Reg14 Consultation planned for November 2018 and Reg16 planned for early Spring) and will allocate land to meet identified needs. The Councils and Governments Localism agenda is best served by allowing the Parish to determine its own future I trust that this and similar representations will result in PC92 going ahead and thank you for your consideration in this matter. Please acknowledge safe receipt of this letter. Thank you.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>The Hilperton Neighbourhood Development Plan clearly states in policies 1d, 1e, 1f, and 1g what mitigation etc. is required if any houses are built west of the relief road. The new number proposed by the council cannot possibly meet these policies. H2.3 was a knee jerk reaction by WC to try to achieve housing target numbers. The whole allocation should be scrapped when the examination/inspection of the plan takes place. What is the point of an NP if its policies can be ignored? The increased number of houses proposed for H2.3 (increased from 205 to 355) is not achievable. The increase in area (16.33ha to 21.24ha) does not justify this increase in numbers. Much of the extra acreage consists of the balancing ponds for the relief road! I read a report recently condemning new housing being built next to new 'by-passes'. This is EXACTLY what WC is suggesting. It is not green, it is not sustainable. It is madness. How long before another by-pass is required for the new by-pass (Elizabeth Way) which opened only a year or two ago? There seems to be a total lack of joined-up planning at Wiltshire Council but it seems happy to ignore its own policies when it suits them. The original number of houses for this site (212) was set by Wiltshire Council in June 2017 and, at that time, WC stated 'although mitigation measures could reduce this number'. How WC now feels that 355 houses can be accommodated with mitigation measures is a mystery known only to the spatial planning team at County Hall. I find it bizarre that WC concedes that approx. 3/4 of site 263 'appears to be grade 3a agricultural land' and yet is still happy to cover it in concrete and tarmac..</p>

<b>Identify Proposed Change Reference Number</b>	PC94				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations.</p> <p>Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

	<p>and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages" are not promoted by National Policy. I am very concerned because there has been no environmental or ecological survey. I live at the back of the field to be built on. There is a lot of wildlife. We have many bats flying along through the summer evening in our garden. We have Kingfishers, woodpeckers, flocks of fieldfares in winter amongst many birds. We have many hedgehogs, mammals, butterflies, and orchids that have come from the field as well as snakes and lizards. Building on this field will destroy important habitat for wildlife. These animals are already under threat. A survey needs to be completed as to the species of bats and wildlife in the field. The owner of the field ripped up the land, the trees and hedges so he can build there. The wildlife has come into our garden from the field, but still survives there.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		[REFER TO ATTACHMENT FOR FULL REPRESENTATION] Objection to PC 3 and Annex A Table 4.1 Housing Land Supply Whilst also Re-Promoting an additional allocation of land for housing at Britford Park & Ride and adjoining land, Salisbury. [TABLE INSERT] 1. Because the latest completion and commitment figures (PC3) for South Wiltshire (and North and West Wiltshire) increase significantly the minimum to be allocated 2017 2026 (see 5th column above) the Authority (and now the Inspector) need to respond in a sound and responsible and timely way. 2. In the case of South Wiltshire, plainly there is a need to allocate something like twice as much housing because 594 was the target to be allocated in 2017 and the Council now (September 2018) needs to identify a further 737 more houses to bring up the amount of housing to meet the minimum housing requirement up to 1,331. Wiltshire Council is not proposing to do anything about this. 3. In our opinion, the Council (and now the Inspector) must increase the amount of land to be allocated for housing in a commensurate way to meet need and ensure a 5-year housing land supply. (See also our comments regarding other Proposed Changes.) [Reps 372 - 377] 4. Furthermore, the wording of the first column as Minimum to be allocated fails to indicate a likely acceptable range contrary to NPPF (1) 6: Delivering a wide choice of high-quality homes. NPPF (1) promotes flexibility and delivery through, inter alia, the use of an additional buffer (para 47). We are therefore asking the Inspector under Section 20 (7C) - because there are only about 7 years left until the end of the plan period (2026) - and given housing need - to identify sufficient land to come forward. It is reasonable to suggest a 5% range, on top of the minimum requirement. We set out below our proposed amendment to Table 4.1. For South Wiltshire, this means the target range should be between 1,331 and 1,852 dwellings between 2017 2026. [TABLE INSERT] 5. Background argument: PC3 is not legally compliant because: (i) it does not appropriately reflect guiding legislation; (ii) nor is it in line with national policy, NPPF (1) particularly Section 6: Delivering a wide choice of high quality homes. 6. The proposed change is not sound because whilst the numbers are factual, the Authority has failed to react to what the new numbers mean and therefore we say this draft document: (1) it is not sufficiently positively prepared with respect to the delivery of a surety of housing land supply; (2) it is not sufficiently justified; (3) it is not able to respond to change; and, (4) it is not consistent with the NPPF (1) particularly Section 6: Delivering a wide choice of high quality homes. 7. We are asking the Inspector to amend PC 3, Table 4.1 and Annex A - but particularly Table 4.1 (see our suggestion above) and the explanatory wording (our suggestions are in bold below). - factual update to table of figures to reflect the latest Housing Land Supply Statement published March 2018 (base date April 2017) and and commensurate increase in housing land to accord with Section 6 of NPPF (1) by adding the land at Britford Park & Ride for at least 100 dwellings (see enclosed details).

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>Reference Table 38.1 Map Grid Ref. F5,F6,G5,G6 Beechwood The text states: Further changes to reflect the Wiltshire Councillors and Parish/Town Council Consultation Winterslow Parish Council has not proposed and does not support this change. We are not aware of any evidence submitted by Wiltshire Councillors that would soundly justify the proposed change. The Parish Council responded to previous consultations on the DPD and is therefore disappointed that such a significant new proposal should have been approved by WC without any communication with the Parish Council. The garden is site number 3408 in WC SHELAA 2017. The site is documented as having a capacity of 32 homes. If the site remains within the Settlement Boundary it would effectively be a substantial Site Allocation within our village. Other local landowners will justifiably challenge such a decision. The draft DPD clearly states that WC does not propose any site allocations in Large Villages. In Topic Paper 1 Para 7.18 the principle is set out that large gardens shall be excluded. The consultation raised concerns about small parcels of open land on the edge of settlements. This site is NOT a small parcel. In Para 7.20 the Conclusion states: The methodology will include the curtilage of a property that relates more closely to the built environment, e.g. a garden), or has limited capacity to extend the built form of the settlement in terms of scale and location The site is much larger than a reasonably sized garden and has much more than a limited capacity. The Conclusion then states: However, it will exclude the curtilage of a property that relates more closely to the open countryside, e.g. a field or a paddock, or has the capacity to substantially extend the built form of the settlement in terms of scale and location . Although the site is not a paddock it is 0.9 ha and (as evidenced by the SHELAA) has the capacity to substantially extend the built form of the settlement in terms of BOTH scale AND location . Previous comments have made reference to the draft Winterslow Neighbourhood Plan. We understand that such considerations are excluded from the DPD process relating to Settlement Boundaries. For the record, however, this site is no longer in our draft NP and ,currently, the NP process in Winterslow has been paused by the Parish Council. Winterslow Parish Council respectfully requests that this change be removed from the DPD.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>[REFER TO ATTACHMENT FOR FULL REPRESENTATION] Objection to PC 16 and PC 17: Five Year Housing Land Supply These are the Propose Changes we are concerned about - quoted verbatim PC 16 - "Housing trajectories are site by site estimates of start and finish dates and annual completions. Aggregating housing trajectories for each HMA shows how the Plan helps to deliver in excess of five years supply of land in each area for the remaining years of the plan period. The table below provides estimates of how many years supply there will be in each remaining year of the plan period. It shows that supply exceeds the five - year requirement through to the end of the plan period for all years except one four in the South Wiltshire HMA and well before by then additional allocations will be included within the review of the WCS." (Source: EXAM.01.01 p6 Sept 2018) PC17 [TABLE INSERT] 1. Summary of our 5 Year Housing Land Supply objection: the proposed latest information (above) is contrary to NPPF (1) 6: Delivering a wide choice of high-quality homes with respect to both South Wiltshire and N/W Wiltshire. The Framework (1) now imposes a duty on Wiltshire Council to take steps to rectify the problem and not rely on a later review of the WCS (Wiltshire Core Strategy) that may take several years. 2. This DPD needs to provide now a reliable and realistic, planned 2018 - 2026, 5 Year Supply to deliver much needed homes of a type and tenure in the right place continuously. 3. Having more than a 5 years housing land supply (much better to have at least 7 or 8 years) also encourages commensurate with the amount - greater choice for consumers. This keeps house prices lower through competition. Having more than 5 years land supply is essential it brings greater surety and greater resilience , should one or more sites be delayed. To correct this flaw that is painfully obvious in PCs 16 and 17, more developable and deliverable land, in accordance with Footnotes 11 and 12 on p12 of NPPF (1) - must be brought forward such as the land at Britford Park &amp; Ride, within the settlement boundary at Salisbury. Benchmarks proposed revisions to PC 17 include: [TABLE INSERT] 4. PC16 and 17 are not legally compliant because: (i) they do not appropriately reflect guiding legislation; (ii) nor are they in line with national policy, NPPF (1) particularly Section 6: Delivering a wide choice of highquality homes. 5. PC 16 and PC 17 Table 4.8 and supporting text are not sound because: (1) they are not sufficiently positively prepared with respect to the delivery of a surety of housing land supply; (2) they are not sufficiently justified; (3) they are not able to respond to change; and, (4) they are not consistent with the NPPF (1) particularly Section 6: Delivering a wide choice of high quality homes. 6. We are asking the Inspector to amend PC 16 and PC17 and Annex A particularly the table (see above) and also the explanatory wording by allocating more land for housing in South Wiltshire (an N + W Wiltshire, too) - and we are proposing land at Britford Park &amp; Ride and adjoining land for allocation (see our objections to PC 3 etc.) [ Rep 370 ].</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>[REFER TO ATTACHMENT FOR FULL REPRESENTATION] Objection to PC 15 and Annex A Table 4.7 Windfall and Housing Land Supply Re-Promoting Land at Britford Park &amp; Ride and adjoining land, Salisbury [TABLE INSERT] 1. Summary of our windfall objection: the proposed latest windfall allowance 2017 - 2026 in the 5th column seeks to increase the windfall allowance to try to fix the increasing housing land shortfall (see our objection to PC 3 etc). In our opinion, this is contrary to NPPF (1) that is tilted 6: Delivering a wide choice of high-quality homes and also deals with windfall housing. 2. NPPF (1) para 48 promotes flexibility and delivery and warns Planning Authorities not to use an allowance for windfall sites unless the evidence is - realistic - reliable and - compelling. No such evidence has been submitted and those numbers should be viewed with caution. 3. Further, with the considerable tightening of all the main settlements boundaries and the exclusion of residential gardens, infill windfall brownfield housing cannot be a reliable supply: it is a dwindling asset, particularly at Salisbury. The forecast amount of windfall sites coming forward should be conservative, robust and reliable, not hopeful and optimistic (fingers crossed). 4. It is very important point to note and in fairness to the Authority, Wiltshire Council do indeed (of course) concede this at para 5.7 of Topic Paper 3 (July 2018): the use of a windfall allowance should not be relied upon. 5. However, it is not realistic to say windfalls should be completely not relied upon. This is too extreme and contradictory a position for the Authority to take. Para 5.7 should be amended accordingly. 6. We are therefore again placing before the Inspector under S20 (7C) an invitation to correct this significant flaw and contradiction in the DPD and supporting paperwork. We are suggesting a simple, robust and reliable 4% windfall allowance (4% of the minimum housing requirement). In the context of our Objection to PC15, this means the windfall for South Wiltshire should be c. 420 dwellings rather than c. 740 between 2017 - 2026: [TABLE INSERT] 7. Forgive the complexity of the next table, but we have applied the 4% windfall to Table 4.7 whilst also taking into account our objection to PC 3 regarding the need to allocate more housing land and identify a housing requirement range, rather than an absolute minimum (that the Authority seem to be treating as being an acceptable maximum target) [TABLE INSERT] 8. Background argument : PC15 is not legally compliant because: (i) it does not appropriately reflect guiding legislation; (ii) nor is it in line with national policy, NPPF (1) particularly Section 6: Delivering a wide choice of high quality homes. 9. The proposed change in Table 4.7 is not sound because: (1) it is not sufficiently positively prepared with respect to the delivery of a surety of housing land supply ; (2) it is not sufficiently justified; (3) it is not able to respond to change; and, (4) it is not consistent with the NPPF (1) particularly Section 6: Delivering a wide choice of high quality homes. 10. We are asking the Inspector to amend</p>				

	PC 15 and Annex A and particularly Table 4.7 (see above) and also the explanatory wording at Para 5.7 of The Topic Paper 3: HLSA (July 2018).

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>[PLEASE SEE THE ATTACHED DOCUMENT FOR THE FULL REPRESENTATION] Objection to PCs 29 30 and 31: The dropping of Churchfields and the strategy for Salisbury in the context of Re-Promoting Brownfield land within the settlement boundary at Britford Park &amp; Ride and adjoining land, Salisbury [TABLE INSERT] Objections to PC 29, 30 and 31 on the basis that Wiltshire Council has not adopted sound or realistic build out rates and not allocated enough land 2017 2026 1. PCs 29 and 30 confirm the dropping of Churchfields that was to provide 1,100 dwellings between 2017 2026 from the draft Housing DPD. This is a major change. 2. In part, Fugglestone Red is being put forward as its replacement, but that site is already identified in the Wiltshire Core Strategy (2015) to provide 1,250 new homes and 8 hectares of employment land (to assist with decanting businesses from Churchfields during the 2020s). Whilst the house builder may have encouraged Wiltshire Council to add to the already approved 1,250 houses, there is no known planning application that adds a further 500 houses here. 3. There is an outline permission for this quantum of development (S/2012/0814) but this proposal, supported by an Environmental Impact Assessment, was based on 1,250 dwellings as part of a balanced mixed-use development. Are we to assume all 8 ha of employment is to be housing developed at 30 dwellings per ha that means 30 x 8 = c. 240 houses? Where will the other 8 ha of land come from? 4. Neither Topic Papers 3 or 4 state how much more additional housing will be delivered at Fugglestone Red between 2017 2026 (!). 5. Using a robust delivery rate of 70 units per year (that is a lot to build in one location, plus releasing too much stock in one location onto the market too quickly will depress prices and so house builders will slow down on delivery if this starts to happen, or if the market dips. So, Persimmon Homes will probably on average deliver at 1,250 / 70 = 17.8 but say to be generous - a range of 13 18 years. The development began with houses being completed in c. 2015/6 leading to the inevitable conclusion Fugglestone Red might well deliver 1,250 houses between 2015 2028/33? We cannot see how more housing (c. 500 more houses?) could be delivered faster on the same large site before the end of the Plan period: 2025/6. 6. Even allowing a very optimistic delivery rate of say 100 houses pa = (1,250 + 500 dwellings extra to help cover for Churchfields) / 100 = 17.5 years that would be too slow a delivery to support the Councils claims of a sound approach to meeting housing need at Salisbury 2017 2026. Delivering 1,750 houses at Fugglestone Red will take more than 7 years 2018 2026. It would stretch from 2015 2032. 7. Netherhampton Road is also identified as a new source of housing land. But PC 31 explains that Netherhampton Road will not deliver any housing for several years . 8. Does this mean more than two years (no housing until 2020?), or more literally, seven or more years (2025)? We do not think it is possible to deliver affordable and market houses for sale at Netherhampton Road by 2020/1. 9. In our opinion, this site is too controversial and even if supported, quite complex and a real challenge to come on stream until 2023, at the earliest, even applying a completion rate of 40 then 70 dwellings per annum: in our opinion 40 (2023/4) + 70</p>				

	(2024/5)+ 70 (2025/6) might only be possible at best: 180 dwellings out of a planned 640 (less than 30% of the planned contribution before 2026). The Councils trajectory for Netherhampton Road is also not sound. 10. In the light of our other objections and comments on the Proposed Changes, we are suggesting there are real problems with delivering enough housing land at Salisbury at Fugglestone Red, Netherhampton Road, Rowbarrow etc. We consider Wiltshire Council is missing an opportunity to bring forward a sustainable housing development predominantly within the settlement boundary at Britford Park and Ride for 100 houses on Areas A D at build rates of 30 (2021/2) + 35 (2022/3) + 35 (2023/4) see Plan 0010.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	[REFER TO ATTACHMENT FOR FULL REPRESENTATION] Objections to PC 51 and CATP 17: Trowbridge Community Topic Paper by Benchmark (Nov 18) We are objecting to PC 51 and Table 5.3 that states: [TABLE INSERT] We are concerned about CATP 17 (referred to in the 6th column) that runs to about 120 pages and includes many small proposed changes. Table G.11 on page 118 draws together the conclusion for Trowbridge. We are concerned (seriously) with the whole of CATP 17a because insufficient land has been proposed to be allocated at Trowbridge 2018 2026 (see our other objections). Indeed, CATP 17a encapsulates this problem as it seeks to tweak the supply at Trowbridge to identify more land (an increase from 880 to 1,050 houses). But it is still not enough. Therefore, Table 5.3 and G.11 and the work supporting it in CATP 17a , is not sound. This is Table G.11: [TABLE INSERT] 1. This Proposed Change raises several issues, the most important is the suggestion in Table G.11 that there are only 6 sites in the Trowbridge Area that are available, achievable and deliverable at Trowbridge. This is not sound. 2. All our representations (Nov 2018) promote Staverton Triangle because it is available, achievable and deliverable for at least 60 houses but NB we do not repeat those details again. 3. We are therefore promoting the following amendment to the whole of CATP 17a and PC 51 etc: [TABLE INSERT]

<b>Identify Proposed Change Reference Number</b>	PC94				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations.</p> <p>Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

	<p>and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. Since moving to the village some 15 years ago the level of traffic using the B3098 through the village has increased incredibly, particularly over the past 5 years. To even consider building 2 further large developments which feed into the B3098 beggars belief. Has any consideration been given to the available capacity of Bratton school the need for which the 2 proposed developments will require to be raised beyond its current level?</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations.</p> <p>Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages" are not promoted by National Policy. There are areas of concern for both sites. Only small scale housing developments in large villages are allowed by National Policy and development at each site conflicts with the Wiltshire Core Strategy, which allows "developments fewer than 10 dwellings in a Large Village" Each Site exceeds the recorded "housing needs" of the village and will not increase employment opportunities within the village as required by Wiltshire Council's own Policy; Combined total of both sites would exceed the number of houses required in Wiltshire Council's own Policy. If Westbury Town developable commitments are considered there is already a surplus of 291 in the Area without these sites. Wiltshire Council have therefore already exceeded the allotted quota Each site is assessed as "modest" development, but the Council is using incorrect figures. They state that there are currently 819 houses in the village whereas there are actually only 506; The Council has made errors in the assessment of Bratton as a Large Village by counting 2 recreation fields, 1 children's play area and 1 sports pitch as facilities. The latest statistics for cars per household indicate 1.76 for rural locations which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in an hour. Each development will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide-open expanses of the hillside at this part of the Special Landscape Area; Existing Pedestrian and bicycle access to the centre of the village along Westbury road and its pavement and across Court lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic; Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers; Bicycle access to and from both sites would be hazardous and there is little opportunity for a bicycle lane on either side of the highway; The village is carrying out its Neighbourhood Plan which should set out the plans for the village, not this Plan; There is further loss of green space and agricultural land; Development of this size will add to the existing pressures on Bratton surgery.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	I am writing to say that Crudwell no longer needs Ridgeway Farm as an allocation site for housing. We are only a small village with no facilities as such. Malmesbury is a big town with job opportunities, schools, shops and amenities. Crudwell is very close to the border with Gloucestershire and the towns of Cirencester, Tetbury and Kemble all of which have had or are building lots of new homes. South of Crudwell in Corsham and Hullavington more houses are being built. I am supporting the removal of the Ridgeway Farm site from the Wilts Housing Site Allocations Plan. PC92 is what is important. It is important that we are able to write our neighbourhood plan and decide if and where we want houses when the need is there rather than being dictated to by people who do not know our village.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	The extension of the settlement boundary to the south along Aldbourne Road does not comply with the settlement boundary review methodology in that it includes land and buildings that are visually and physically separate from the village. A greenfield site which has continuously been refused development including a dismissed appeal has been included which would by definition make the site in principle acceptable for development as it would be within the settlement boundary. The site has been described by the Wiltshire Planning officer, AONB planning adviser ad Planning Inspectorate as being set out on a limb away from the village of Baydon in open countryside. The inclusion of the site would undermine the planning process and nation policy in particular, para 8, 11, 170 and 172 of the NPPF (July 2018).

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>Submission 9 th November 2018 by [NAME REDACTED] [ADDRESS REDACTED] To: The Government Inspector appointed to review WCs proposal to build at Southwick Court Fields Site 3565 Opening statement I, and most Trowbridge residents I have spoken to over the last 18 months (since I first became aware of the failed initial consultation by WC about housing development and boundary change proposals), understand that new housing needs to be provided in Trowbridge and throughout Wiltshire, as part of Wiltshire County Councils duty to the Government to aid the resolution of the housing crisis in the UK. However, I and many others in Trowbridge, have seen at first hand how WC, has failed to undertake an effective process of consultation and communication to fully engage the residents of Trowbridge and its Town Council (and surrounding parishes), in a way that would provide buy-in from the maximum number of stakeholders to produce the best plans for new build and the regeneration of the County Town that is so badly needed. I wish to present several key issues for your consideration as listed below. I trust you will be able to see through the fog of pretence by WC at providing consultation, information and informed decision making on their part, which I challenge as not being the case. In reality, there has been a lack of engagement and information, a lack of acknowledgement of objections raised and a complete lack of cognisance of alternative suggestions made by Trowbridge Town Council whose proposals I support. Key issues Poor quality second (re-run) consultation by WC denuding many residents a proper opportunity to research and respond with informed questions, support for schemes or objections against schemes. This was despite assurances to improve the consultation processes after a failed previous consultation. Limited and ineffective consultation by WCC has plagued this process affecting the ability of residents to voice their opinion or have the proper time to research the effects of the proposals and make reasonable representations. This is the most important planning proposal to affect Trowbridge and yet there has been almost no outward publicity by WCC except via their website of to residents who may have been able to attend weekday WCC Cabinet meetings. After protests at WCC Cabinet meetings in 2017 by the limited number of informed residents available to attend, it was agreed to re-run the consultation and for WCC to use the interim time to raise awareness and engage with all residents of the affected areas in Trowbridge, e.g. by letter, mass advertising and leaflet drop to the affected existing build. Unfortunately there was no change in the level of effort by WC to increase the awareness among the affected residents, either by post or other methods of PR and consequently the consultation was still with virtually the same small numbers of residents. Most of the additional residents who engaged belatedly in the process only found out by word of mouth, and many were only finding out about the consultation at the end of the process. Even now, many are still oblivious of the issues and how it is likely to affect their neighbourhood. At Cabinet meetings, Cabinet members including the Chair (Scott) and Member with responsibility for Planning (Sturgis) have repeatedly fobbed off</p>				

those who raised issues about the Trowbridge plans, without answering the questions or properly addressing the issues raised by those informed enough to make representation. I would stress that this is not a political attack as I would normally support their policies, but as a professional businessman of 40 years plus, if I treated my clients and customers in this way I wouldn't have any business. That lack of accountability and riding roughshod approach over ordinary citizens is appalling and shows local government at its worst. At the re-run consultation open days at County Hall (Summer 2017), the Council Planning Officers present deliberately obstructed residents in gaining access to information by providing inadequate pictorial examples (e.g. by providing poorly produced and inaccurate mapping of proposed sites) and refusing to answer questions about:-

- where the Southwick Court Fields development access routes would be
- how it would affect the integrity of the surrounding cul-de-sacs
- what the effect of concrete development would be on the flood plains
- how it would affect road congestion which is already very high in these areas
- what the environmental issues were and how they would be mitigated
- how it would affect animal habitat, including for Bechstein bats
- what justification there was to try to change a historic town border in place for over 300 years
- what tree preservation process would be followed to protect the (already protected by law) historic hedgerows from destruction
- what the effects of the loss of open space would have on the thousands of people that use these fields every year for recreational purposes (our field survey demonstrates 35,000 annual users)
- why there were plans to build on green belt when there were significant brown field sites that had laid dormant for years without WCC having an effective plan to develop (this being critical to the regeneration of Trowbridge - why they were going against their own planning policy and that of the Government to use green belt instead of brown field
- why the WC was being developer led rather than managing effectively the development plan (e.g. lack of WC control over West Ashton building development led to the builder falling way behind schedule increasing the pressure to build elsewhere to make up the shortfall)

They claimed that access routes and planning detail had not been discussed despite the fact that we received tree preservation order information concurrent to the consultation appertaining directly to the protection of the border of Sandringham Road and Balmoral Road with Southwick Court, showing a proposed 7m access point, demonstrating the subversive culture of the management of planning at WC. All these questions are still awaiting a satisfactory answer by WC and it is very frustrating that the subsequent questions raised at the WC cabinet meetings could not extract reasonable answers either. For example, at Cabinet meetings I attended in 2017/18 as a member of the public along with a few other residents, the member for Planning (Sturgis) whenever asked about Trowbridge issues and specifically about brown field sites being ignored, the WCs own policy being ignored and issues re Southwick Fields, continually and repeatedly referred to his experience with Chippenham avoiding answering the questions relating directly to Trowbridge. Evidence of this is available from the video tapes of the meetings and in the responses to questions at those Cabinet meetings and you will see that we were not being properly informed. I am still waiting for a written response to questions that I asked in writing as part of the second consultation that finished in September 2017. Other points re the failure of proper consultation:

- Lack of letters to residents whose properties are part of the existing build in roads adjacent to Southwick Fields explaining what was being proposed. (As an example of good communication I quoted at WC Cabinet meetings that I am a Governor at a local school and have been petitioning for a zebra crossing - this has led to Banas Council sending numerous letters of explanation and consultation to houses affected - a good example of a council acting with positive intent to keep but WC has sent nothing.)
- No answers or acknowledgements of my letter submitted as part of the second consultation has been received
- No acknowledgement or response to the points raised directly pertinent to proposed development in Trowbridge of Site 3565

In particular, I refer to WCC Cabinet documents (Wiltshire Housing Site Allocations Development Plan Document) made public at meeting of 3rd July 2018, where several local councils at different levels identified the same failure to communicate, e.g. page 225 (response 8&9 page 4 of 22 point 2.5) and statement by Warminster and Market Lavington. This is just one example showing how WC failed to communicate or even follow the right rules. Many other similar examples are included in these documents, including the opinions and alternative proposals by Trowbridge Town Council (pages 212 onwards), detailed at previous public TT Council meetings that Trowbridge residents attended and supported by those residents in very clear terms that the Cabinet could not have doubted, and yet they ignored without reasonable explanation. WC knew about these proposals but chose to hide behind their interpretation of the law rather than listen to the genuine concerns and alternative suggestions of the people of

	<p>Trowbridge. The irony of all this is that with a few relatively small changes to the plan, WC would have garnered full support for its proposals. Southwick Court Fields Site 3565 specific objections I refer your to my letter of 20 th September 2017 to WC Planning in relation to the consultation process on Southwick Court Fields Site 3565, a proposal which I object to. I am yet to have an answer to the points I raised. The key issues and objections I would wish you to consider are detailed in that letter, which is 27 pages long, none of which I have had a response to by WC. It includes photographs of flooding of our garden which is bordered by a Lambrok Stream Winterbourne which rises to full every winter. Each element is set out with an overview and then detailed points and any objections or alternative suggestions. A copy of this letter should be available from WC Spatial Planning as part of the overall submission to you, but in the event that it is not available, I would be happy to supply a copy. You will note the previous flooding experienced by properties adjacent to these fields which can only be worse from concreting over; the issues about potential destruction of integrity of the historic hedgerow; the need for avoidance of destruction of the integrity of existing cul-de-sacs and the detrimental affect on existing built form; the lack of suitable local road infrastructure to service the site; the loss of animal habitat and many other issues raised including the 35,000 people that use these fields every year (our own survey has established this and was explained at Cabinet which has chosen to ignore it). I urge you to consider all these issues more carefully than WC have, and believe that in doing so you will draw the conclusion, like all local residents have, that Site 3565 is not a suitable place to build 180 houses or more, that there are several other better options that can be used to reach the quotas of new housing required in Trowbridge, and that the desire of the residents of Trowbridge to ensure an improved and regenerated town centre can be realised at the same time. Housing built in the centre provides direct access to shops, promotes high street shopping commerciality (a government wish) which is failing currently in Trowbridge (as can be witnessed by the closure of shops in the high street). It would also give direct access to rail and bus transport which is especially important for low income families without other means of transport. Other points I ask you to also consider: - Written commitments as voted by Council to respect the current built form which are compromised by the 3565 proposals and option to merge them with current built form. - Proven historical value of the land (ref HIA published in March of this year) including the uninhabited sightlines across the fields to the historic Westbury White Horse. These views have been part of the Wiltshire landscape for over 1000 years. There is evidence that suggests King Alfred's army camped in these fields which are in plain sight of Bratton Escarpment. - Notified flood plain and significant surface water already on site and proposed mitigation on the upward slope in denial of gravity - Loss of division between Southwick and Trowbridge - Incorrect inclusion of site by WC in Trowbridge proposal when it is in fact in Southwick I would be willing to present to the Inspectorate if required. Yours sincerely [NAME REDACTED]</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	There is no Strategic Need for Wiltshire to allocate housing in Crudwell because supply in the Housing Market Area is good and the Wiltshire Core Strategy states that development in Large Villages should be limited to small sites to meet local needs. Our Neighbourhood Plan is progressing extremely well (Reg14 Consultation planned for November 2018 and Reg16 planned for early Spring), and is planning to allocate land to meet identified needs. The Councils and Governments Localism agenda is best served by allowing the Parish to determine its own future.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	WC received a substantial number of objections to the original proposal insofar that the allocation on the Hilperton Gap should be dropped as it clashed with WC Core strategy, would disrupt the Bechstein bat migration route, remove green space and was opposed by the vast majority of residents. Instead WC received 3 objections from housing development organisation stating they could build more houses on that space, so WC have increased the proposed allocation. Last week the Hilperton Neighbourhood Development plan which calls for no development on the Hilperton Gap was passed in referendum by 942 votes to 92. This proposed allocation goes against the spirit of the Neighbourhood Plan and should be dropped.

These representations are submitted specifically in relation to the residential dwelling at Fair View, Hindon Road, Dinton, SP3 5HW, and seek to object to proposed changes to the settlement boundary in Dinton. The site consists of a residential bungalow, with a large amount of residential amenity space surrounding the property in the form of a front, side and rear garden, an access drive, hard surfacing for parking, and outbuildings (shed, garages and greenhouse). It is noted that the proposed revisions to the Dinton settlement boundary, published in the Pre-Submission version of the emerging plan, sought to remove a portion of the site from the settlement boundary, locating the new boundary around the bungalow and a small part of the associated land only SEE ATTACHED MAP: As can be seen, the site (added in green to the above plan) has been divided by the new proposed settlement boundary (red) although this does not actually align with any physical features of the site which is all clearly associated with the bungalow. In the proposed changes to the Dinton Settlement Boundary, published in September 2018, it can be seen that a number of similar situations in the north of the settlement have been amended, adding residential gardens back in to the settlement boundary where they had previously been removed through the Pre-Submission Plan. The published Proposed Changes in Dinton (SBR PC 45) state that these amendments have occurred either to "include housing development within the settlement boundary" (changes F5, F4 and F3), or "to include the entirety of the residential gardens" because "this land is physically related to the settlement" (changes G5 and H5). Given that Fair View has a clearly defined boundary, which is formed of mature hedgerows or fencing, and is bounded by residential properties, we would like to request that the settlement boundary is amended in this location to include the entire site. This land is part of the residential garden of the property, and is physically related to the settlement, meaning there is no justification for its removal from the settlement boundary. I trust you have all the information required to make the requested amendment to the settlement boundary, however if you require any further information please do not hesitate to contact me.</p>

<b>Please state which evidence document this representation relates to:</b>	Wiltshire Housing Site Allocations draft plan - Stage 4a Site Landscape Assessment Part 3: Omission sites in the Chippenham, Devizes, Malmesbury, Salisbury, Warminster and Westbury Community Areas - Prepared by Wiltshire Council and The Environment Partne				
<b>Please give details of why you support or do not support the updates to the</b>	<b>OBJECTIONS TO TWO DOCUMENTS:- (1) Stage 4a Part 3, and Stage 4a Part 2.Site landscape Assessments.</b>				

**associated evidence documents.**

**Site 738** is re-introduced and passes through Stages 3 and Stages 4A on to Stage 4B of the Site allocation process.

Its Stage 4 Landscape Assessment is set out in **Stage 4a Part 3** - and I object as set out below.

**Site 321 in Bratton** was assessed and its results are in **Stage 4a Part 2 Site Landscape Assessment, (Westbury Community Area, pages 65 to 67)** and I compare the two sites with objections.

**Part 3 - Site 738:**

**Element: Site Description:** Final line: To the immediate south and south west of the site it should also be stated that the "sloping ground" rises up to the road leading up to the White Horse, beyond which there is a very deep combe before the land rise to the Salisbury Plain itself.

**Landscape Character:** Evaluation of landscape character and surrounding area:

The B3098 Westbury Road is stated to "not appear to be a particularly busy road.." This is simply not correct. It is busy and traffic is increasing, for private cars, vans and HGVs. For large portions of the day in particular during rush hours, there is considerable amount of traffic of private vehicles passing at speed through the village. This is through-going traffic for commuting and delivering, from the Westbury direction to Pewsey, Devizes and Calne directions, including the A360 south towards Andover and the A303. Some traffic goes through the village along the B3098. Others are using Bratton as a through-cut from Warminster and Westbury to Devizes and Calne, entering Bratton to turn left/north down the narrow steep lane of Court Lane and then passing through the villages of Steeple Ashton and the narrow lanes of Great Hinton) likewise for traffic to Melksham but through Steeple Ashton only, and back to the A350, avoiding the slow queuing traffic on the A350 and any road work sites, especially avoiding the delays at the small Yarnbrook roundabout. High HGV lorries from the south coming north on the A360 are diverted off the A360 at Littleton Pannel/West Lavington because of a low bridge and many continue along the B3098 to Westbury rather than return to the A360 to pass through Devizes.

The result is that the road by Site 738 and Site 321 is not quiet and peaceful, and the blind steep junction from the B3098 to Court Lane is a problematic turning and a dangerous crossing place.

The western edge of the village does have a remote feel, but that is due to the large open exposed nature of the location with the vast landscape of Salisbury Plain above, the high steep escarpments and combes, with the village of Bratton perched on the escarpment. The south western corner of Salisbury Plain at this point is dramatic. The remoteness also comes from the historical perspective given weight by the Iron age fortifications and the White Horse and the feeling that time has stood still here for centuries. The scale of the area is large. The incline and road up to the Iron Age fortification above is approximately one kilometre.

As such housing on a scale of 20 -22 houses and/or 35-40 houses with a suburban scale and feel, garages, roads, and lighting is more inappropriate than just an extension outside the village settlement.

**Views. (page 22)** The visual prominence judgement for Ste 738 has been given as "Moderate-Low sensitivity". This is not correct, although from the west the view will be hidden to some extent by the large trees of the solitary house to the west. The ground of Site 738 is higher up and can be seen from further away than Site 321. Site 321 is judged as "Moderate - High" and surely Site 738 is harmed to a greater extent or at least the same extent as Site 321.

Again Site 738 is assessed for Public Accessibility as "Moderate-Low sensitivity" and again that the site is said to be of "moderate- low visual prominence" but this is not correct especially when considering its high position, that it is overlooked by the houses in Castle Road and that walkers up Castle Road will look down on the site. Site 321 is stated to be for Public Accessibility "High Sensitivity" and the visual prominence is given as "moderate-high". The locations are very close to each other on opposite sides of the road with Site 738 being on higher ground - surely the assessments for Site 738 should be the same as for Site 321 in not indeed a higher adverse score and judgement.

**Mitigation:**

The capacity to accommodate change is not "moderate - high" as assessed. This is because -

the views which are affected are important ones, in particular from above being the area of Salisbury plain and the long descent in to Bratton down Castle Road, from the area of the Special Landscape Area.

The proposed development is higher up the escarpment and so can be viewed from further away. This will be compounded at night with the additional street lighting on the side of Salisbury Plain. The White Horse and/or this point in Bratton can be viewed from as far as Brass Knocker Hill outside Bath to the North West, from Avon Road in Devizes, from Seend village and to further west than Frome.

The part of the escarpment of Salisbury Plain is very open and remote. It is the absence of hedgerows and trees here that makes it remarkable. The planting of additional trees and hedgerow planting to block the views is not the appropriate step to take to reduce the negative impact of the development.

**Impact:**

The magnitude of effect on landscape character is given as "Low adverse", one up from "negligible". This must be too low an assessment The magnitude of effect on views for site 321 is given as "medium adverse" whereas for Site 738 it is only "Low adverse".

**Mitigation Measures and capacity to accommodate change:**

	<p>For Site 738 this is given as "High" but this can not be correct. Landscape and visual effects should not be mitigated by planting of additional trees in an open area and such planting will be out of character. It may be essential for an estate of 20-22 houses but it must mean that the capacity measurement should be "Moderate-Low", if not "Moderate-High". The capacity for Site 321 to accommodate change is given as "Moderate - high" and this is for a site planted firmly in the main view of the whole landscape looking from the West and the White Horse itself - meaning that Site 738 should not be a better scale of measurement than this.</p> <p>The assessments need to take in to account the large numbers contemplated on both sites. Even 20-22 houses is a large development, especially once adding in pavements, parking and turning spaces, garages, roads, lighting and of course the two story houses. It will result in tightly knit development, forming a block, in a part of the village which is presently an empty field in a rural area.</p> <p>Although Site 738 has been rejected as an allocation site at a later stage this assessment stage remains vital in the process, especially if the Site 738 is later re-introduced a further time.</p>

<b>Identify Proposed Change Reference Number</b>	PC93				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations.</p> <p>Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages" are not promoted by National Policy. It is a crazy number of houses that are planned for Bratton. Yes there is a need for more housing but certainly not what is proposed here for a number of reasons. What is happening in Westbury must be taken into account since Bratton is part of the infrastructure supporting and supported by Westbury. A huge number of houses are being built in Westbury and as a consequence, roads, schools and medical services are under enormous pressure. The area simply cannot cope with even more residents. As one small example Westbury Rail Station is already having to expand its car park. Where will further cars park? The road through Bratton, is dangerous because of the volume of traffic on it, not to mention cyclists and horses. At the Westbury end the road is far too narrow, particularly from the cemetery until the mini roundabout by the Turkish barber in Westbury and, from Bratton towards Edington there is not even room for a pavement making walking through particularly dangerous. It gets increasingly dangerous through Edington and further, towards Market Lavington. The volume of traffic and the winding, undulating nature of the road make it particularly dangerous (and, of course, the many potholes!). How will it cope with the inevitable extra traffic? Court Lane is very dangerous with a particularly dangerous junction onto Westbury road and there is an increasing number of delivery trucks and lorries using it. How will people get to Trowbridge when all routes to Wiltshires major town are log jammed? The queues along the A350 are horrendous at rush hour even now and have not been helped by the vast housing estates that are continuing to expand on the outskirts of Westbury Bratton Post Office and shop is a valuable village resource particularly when the next nearest Post Office in Westbury is beyond the Westbury Station. It is already so cramped that it can be very uncomfortable in there. Additionally, there is nowhere to park except on the side of the road (thus exacerbating the dangers on the B3098 already mentioned). Bratton is lucky enough to have a doctors surgery and pharmacy in the village. It is one of the things that makes the village attractive and it is a wonderful service but very difficult even now to get a doctors appointment I was recently told six weeks. There is no way that it will be able to cope with the influx of residents 57 new houses would bring - I believe there is an additional proposed housing project in The Butts as well. I also believe that the Westbury White Horse Surgery is struggling to cope with the number of patients it has and if the little Bratton surgery becomes inundated, what will happen to those in dire need of medical attention? - our nearest hospital is the community hospital in Trowbridge The Bratton primary school is another issue as there will inevitably be an increase in the numbers of students, even on a conservative estimate with the possible addition two classes of students. a) Where will they be accommodated, b) Who will teach them and c) How will the school provide sporting facilities in a limited space? The disruption that will be caused as a result of the building works will be horrendous. The road will have to be dug up to lay sewage, water pipes, gas and electricity and phone lines. Given how much disruption we have already had to our phone services as BT tries to improve our service, what will happen when the service boxes have to take an even greater load? As to the actual housing that will be built far too many of the new houses label themselves executive. They are clearly not aimed at those in need of housing but at building apparently prestigious houses for those with the where-withal to pay for them. Couples who grew up in the area should be able to live in the area and not be forced out by the greed of builders. A couple of token cheaper houses for first time buyers is not enough and while I am not advocating the building of tiny modern boxes with no garden, as seems to be the case where affordable housing is often built, jamming as many houses as possible into the smallest footprint, it should be a consideration. We are pleased that we live

	<p>close to a main line to London and use it frequently it is, it seems, also our downfall because so many people want to live in this area for that reason. However, that does not justify endless estates to allow the commuters easy access. It seems to me that Wiltshire County Council would do well to look at using some of the brown sites around other areas that are more able to cope with the additional housing in terms of infrastructure and planners need to plan intelligently and with compassion, bearing in mind the impact on the quality of life of both current and future residents.</p>

<b>Identify Proposed Change Reference Number</b>	SBR PC42				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Having examined the proposed change SBR PC42 set out in the Schedule of Proposed Changes to the Wiltshire Housing Site Allocations Plan I have concluded that it is unsound because: It is not justified by (and is inconsistent with) Wiltshire Council's Settlement Boundary Review Methodology published in May 2018 It is based solely on the submissions of a single respondent (West Tisbury Parish Council) which were made without the benefit of consultation with local residents/landowners and which West Tisbury Parish Council now wishes to revise. It is not supported by the emerging Tisbury Neighbourhood Plan or any other evidence. Description of the land affected by SBR PC42 The land in question largely comprises: a field, a break of large conifers forming a boundary of a field on which sheep graze, and private allotments which face the break of conifers. I enclose a picture of the field taken while standing next to the break of conifers: [SEE ATTACHED PICTURE].</p> <p>Wiltshire Council's original assessment up to June 2017 When Wiltshire Council consulted in June 2017 on the Housing Site Allocations Plan it did not propose the settlement boundary change which it has now put forward. The Council properly applied its own policy "to exclude the curtilage of a property that relates more closely to the open countryside e.g. a field or a paddock or has the capacity to substantially extend the built form of the settlement in terms of scale and location." Consultation supporting the original assessment Neither West Tisbury nor Tisbury parish councils used their prerogative to review their settlement boundaries during the informal and Regulation 18 consultations which took place on the draft neighbourhood plan, as set out in the Regulation 18 Consultation Report and Statement of Early Community Engagement. The change at SBR PC42 Nevertheless, in early 2018 Wiltshire Council subsequently revised the settlement boundary at SBR PC42 in response to two representations received from West Tisbury Parish Council (Figures refs. A77, Comment IDs 143 and 375). Comment ID 143 refers to "rationalisation". Comment ID 375 follows a site visit by parish councillors and differs substantially in tone. Comment ID 143 accurately reflects the West Tisbury Parish Council minute authorising the representation. However, West Tisbury Parish Council has been unable, within 14 days of the request being made, to provide a copy of the minutes of the site visit authorising Comment ID 375. Lack of sufficient or appropriate consultation Although West Tisbury Parish Council felt it necessary to repeat and "strongly emphasise" its first representation by submitting Comment ID 375, it did not think its impact sufficiently important to consult residents and parishioners either through the opportunity presented by the formal draft neighbourhood plan consultation, nor direct with residents potentially affected. Local residents have been surprised that West Tisbury Parish Council should have, out of the blue, made these specific representations without consulting those affected. Lack of justification for SBR PC42 The only justification given by West Tisbury Parish Council was that of "rationalisation" so that "all the gardens should be included". That alone is insufficient justification for a settlement boundary change. It is inconsistent with Wiltshire Council's Settlement Boundary</p>			

	<p>Review Methodology (the Review Methodology). The "best practice" stated on tables 3.1 and 3.2 of the Review Methodology clearly exclude: Open space or allotments at the edge of settlements Large gardens, paddocks or orchards Based on this best practice, Wiltshire Council's policy set out in Table 5.1 of the Review Methodology clearly excludes: Curtilages of properties which have the capacity to extend the built form of the settlement. This includes large residential gardens. Recreational or amenity space at the edge of settlements which primarily relate to the countryside (in form or nature) Almost all the additional land included in SBR PC42 is comprised of a field, allotments or tree plantings which primarily relate to the surrounding countryside. My contention is that West Tisbury Parish Council decided to "tidy up" the settlement boundary with a nice, clean line. Wiltshire Council then accepted the representations made by West Tisbury Parish Council without properly questioning why it should depart from its own policy. Wiltshire Council then transformed West Tisbury Parish Council's "tidying up" into a more acceptable, "post rationalised" form of words at SBR PC42. This is not a sound way of conducting settlement boundary changes and does not pass the test of the most appropriate strategy when considered against reasonable alternatives, based on proportionate evidence. A sound settlement boundary change would include in the settlement the gardens of 86-89 Monmouth Road, but exclude the field adjoining 86 Monmouth Road, the allotments next to Stanley Cottage (Monmouth Road), the break of large conifers forming the field boundary and the land between it and the access track. Regulation 22 consultation Thanks to the examination commenced in August 2018 West Tisbury Parish Council re-examined this matter more fully at its meeting on 1 November 2018 with the benefit of more detailed information. I understand that as a result, West Tisbury Parish Council has decided to amend its representation to the effect that the settlement boundary should be retained at its existing location with the exception of the small gardens and their garages which directly adjoin Numbers 86 and 89 Monmouth Road. West Tisbury Parish Council resolved to respond to the current consultation accordingly. The orange line on the plan below shows the resulting boundary [SEE PLAN ATTACHED]. This has my support because it correctly excludes the private allotments, conifer field boundary and field which adjoin open countryside, as originally determined by Wiltshire Council in accordance with its policies.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Introduction and Background This planning policy representation is submitted in relation to our site at London Road in Salisbury, edged red on the enclosed Site Location Plan at Appendix 1 . The representation is submitted on a straightforward matter in order to support the Local Planning Authority's decision to include the site within the Settlement Boundary for Salisbury as part of the Wiltshire Housing Site Allocations Plan. As the Local Planning Authority (LPA) correctly understands, the site benefits from two extant permissions for retail development that have been supported by the Local Planning Authority as follows: 1. Outline Permission Reference S/1994/0632 and Reserved Matters Approval Reference S/1998/0373 ('1990s permission'). These decisions authorised the construction of a bulky goods retail development measuring 8,361 sq. m, which was implemented through preliminary groundworks for an access and therefore remains extant. 2. Permission Reference 14/04756/FUL which includes full permission for a 6,030 sq. m Class A1 foodstore with petrol filling station. The permission was granted on 15 August 2017 ('2017 permission') and remains extant until 15 August 2020. There are also further permissions for the site that have now expired that demonstrate the support for the site to be developed. Against the background of the extant permissions, and the site description and characteristics set out below, the minor amendment to the boundary of the settlement to include the site is justified to reflect the how the site sits within the settlement of Salisbury. Site Description and Characteristics The site is a triangular-shaped parcel of land to the north east corner of Salisbury. The site is bound to the south / south east by London Road (A30) and to the north / north east by Pearce Way. The most eastern part of the site contains the implemented access for the 1990s permission set out above, which provides an access into the site from a roundabout with three further arms. Located to the north of the site is a large modern residential development, to the north east a Premier Inn and associated restaurant, south east of the site is a car showroom, with a health and fitness club and office development located to the south and located along London Road. West of the site are large residential areas of Bishopdown. An Aldi is located along London Road is located approximately 600m to the south west of the site. It is important to note the view of the LPA officers in granting the 2017 permission that they consider the site to be a brownfield site, owing to the implemented 1990s permission. Additionally, permission has been granted within the last 15 months for a large format supermarket. A copy of the Committee Report for the 2017 permission is included at Appendix 2 . The text confirming the Local Planning Authority's view that the site is considered to be a brownfield site is included at the second paragraph on Page 10 of the Report included at Appendix 2 . Support for the Settlement Boundary Amendment In the light of the above, it can be clearly seen that the site is surrounded by development on all sides the site is in effect an island surrounded by development. Accordingly, the area is located within what is characterised on the ground as the settlement for Salisbury. The current Settlement Boundary is therefore dated and in need of updating to reflect the current</p>			

	settlement area for Salisbury. We intend to deliver development on the above site and benefit from extant permissions for commercial floorspace that supports sustainable economic growth in Salisbury. The decision by the Local Planning Authority to amend the settlement boundary for Salisbury is therefore justified and reflects the developed areas of the City. We trust our comments will be taken into account and the Local Planning Authority's decision to amend the Settlement Boundary will be supported by the Secretary of State.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>Woodlands (Mere) Ltd wish to fully support the amendments to the Mere settlement boundary. Please refer to the Savills covering letter for more information. REPRESENTATIONS TO THE SCHEDULE OF PROPOSED CHANGES - WILTSHIRE HOUSING SITE ALLOCATIONS PLAN BEAUMONT BUSINESS PARK, MERE I am writing on behalf of my client Woodlands (Mere) Ltd to make representations to the current consultation on the Schedule of Proposed Changes to the Wiltshire Housing Site Allocations Plan, which were published in September 2017. We support the inclusion of the Beaumont Business Park within the revised settlement boundary for Mere. The site was established between the 1960s and 1980s, and previously formed a small industrial park to the south of the settlement in conjunction with the former Hillbrush Factory, directly to the north of the site. The longstanding history of built development in this area therefore supports its inclusion within the formal settlement boundary for Mere. The former Hillbrush Factory received outline planning consent in March 2015 for the demolition of the existing factory buildings and the erection of 134 dwellings with associated infrastructure (Ref: 14/06780/OUT). This development has now commenced following Reserved Matters approval. Woodlands (Mere) Ltd are currently progressing a pre-application for residential development at the site. The buildings are no longer suitable for modern business or industrial uses, and the site layout, which was developed due to the previous use of chimney manufacturing, does not make efficient use of the land. In addition, the new residential development immediately adjacent to the site means a residential use at the site would be more appropriate. It is noted that Wiltshire Council currently have a Brownfield Land Register Part 1 which was published in 2017. In the Planning Update Newsletter, published by the Ministry of Housing Communities and Local Government (MHCLG) on 6 November 2018, the Government has reminded Local Planning Authorities of the requirement to update the register at least once per year. This would therefore be a suitable opportunity to include the site at Beaumont Business Park onto the register. In accordance with Wiltshire Councils requirement, the site is suitable, available and achievable for residential, as confirmed by the Strategic Housing and Employment Land Availability Assessment (SHELAA) from July 2017. In conclusion, given the previously developed nature of the site, the proposed changes to the Mere settlement boundary are fully supported. If you require any further information regarding the site or these representations please do not hesitate to contact me.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	I do not believe that the consultation material to be sound. The proposed change as stated in 12 EXAM. 01.09 Schedule of Proposed Changes (Sept 2018)_9of46_Ramsbury is to amend the pre-submission settlement boundary to include the properties to the south of Newton Road. This is based on the proposed action in Table 24.8 in WHSAP.11 WHSA Consultation Statement Regulation (1) (c) Appendices M P The proposed action is to: Include the properties to the south of Newton Road, on the east of the road adjacent to The Old Mill, Scholarads Lane, and their curtilages. The curtilage of the property to the east of Anvil cottage has been divided by the proposed change to the settlement boundary as shown in the pictures below. The proposed change to the settlement boundary should be changed to bring the whole curtilage within the settlement boundary as indicated by the dotted line. This point was noted in Comment ID: 351 in the Settlement Boundary Review Informal Consultation with Parish and Town Councils 28/7/14 to 22/9/14.

<b>Identify Proposed Change Reference Number</b>		SBR PC21			
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>We make this representation on behalf of Wadworth and Co; the owners of a parcel of land that is now being shown as excluded from the proposed settlement boundary of Seend on the Settlement Boundary Review Proposed Changes plan labelled SBR PC21. The land is found on the western boundary of the village within map grid reference F8/G8. The land has been included within the proposed settlement boundary in the pre-submission documents and now according to Table 19.1, it is proposed that the land be excluded from within the proposed settlement boundary for Seend following Wiltshire Councillors and Town Parish / Town Councillor consultation. The explanation provided by Seend Parish according to the Report on consultation with Wiltshire Councillors and town and parish councils on the proposed changes to the Wiltshire Housing Site Allocations Plan 15 th May -11 th June 2018 is that the site on the western boundary at F8/G8 should be excluded from the settlement boundary as the site is more related to the open countryside, especially in relation to the expansive views it provides. The site in question is a former car park associated with the Bell Inn. The Bell has the benefit of planning permission for a change of use to a single C3 residential dwelling (Planning permission ref: 18/05648/FUL) and as a result, the land is now vacant and available. Whilst the land to the rear of the site is considered to be open countryside, the site itself; being a car park, comprises a large amount of hard standing and has an existing access which provides a direct link to Trowbridge Road (A361). Being associated with the former public house and due to the nature of the site, we consider the site to constitute previously developed land. As a brownfield site and potential windfall, the inclusion of the site within the proposed development boundary would help contribute towards the local housing requirements over the plan period. Paragraph 118(c) of the National Planning Policy Framework ( July 2018 NPPF) gives substantial weight to the use of suitable brownfield land within settlements for homes and other identified needs. Significantly and specifically, Paragraph 118(d) of the NPPF encourages the re-development of car parks (among other sites) if this would represent an effective use of under-utilized land. The inclusion of the site enables an element of flexibility in the housing delivery for Seend, a settlement identified as a large village in Policy CP15 of the Core Strategy (2015) and any future planning application could help to support and sustain its services and facilities. Respondents in the Seend Parish Housing Needs Survey (June 2016) were asked if there was a lack of suitable existing housing in the Parish to meet their needs, to which eighteen out of nineteen households answered yes. We see such brownfield sites as being critical to delivering homes, particularly in constrained settlements such as Seend. Therefore, we do not consider that the plan has been positively prepared should the proposed change be accepted. Subject to other material planning considerations (including those which the Parish Refer), the site could accommodate a small number of 2 3 bedroom homes; the housing size of which is sought by respondents according to the Parish Survey. By excluding the site from the settlement boundary, we consider</p>				

	that the proposed change would not accord with the NPPF and a specific connection can be drawn in this particular case. The site is physically and functionally related to a large rural settlement and consequently, the effectiveness of the plan is compromised as it would not set out to do what it is supposed to in its Strategic Objectives as it would not built resilient communities nor support appropriate development in rural areas to help maintain the vitality and viability of settlements and the countryside. The proposed change would conflict with the NPPFs promotion of sustainable development in rural areas where housing should be located to enhance or maintain the vitality of rural communities. On these grounds we argue that in order to make the plan sound, the land located on the western boundary of Seend (grid reference F8/G8) should continue to be included within the Seend settlement boundary as previously proposed and not excluded as shown in SBR PC21.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	Bishopstrow Village Meeting (Parish Council) met on 28 September 2018 and considered aspects of the Wiltshire Housing Site Allocation DPD, particularly those concerning proposed development at East of the Dene, Warminster (Housing Allocation H2.7). It noted that comments from Wiltshire Council (Conservation Officer) and Heritage England showed concern for the local area in terms of: Environment Landscape Heritage assets Impact on Bishopstrow Conservation Area The meeting further noted that the major impact on the development of the whole site was at its southern and eastern sections where the heritage assets of Bishopstrow House, The Cotes, Home Farm, listed walls and Bishopstrow Conservation Area are located. It was the meetings belief that a way of preserving the integrity of this part of the site would be to extend the boundary of the Bishopstrow Conservation Area as shown on the map below, where the extension is shown in red.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>[REFER TO ATTACHMENT FOR FULL REPRESENTATION AND APPENDIX] 1. Introduction 1.1 These representations have been prepared and submitted by Savills on behalf of Waddeton Park Ltd (Waddeton Park) in response to the Focussed Changes consultation, and further evidence base, on the draft Wiltshire Housing Site Allocation Plan (WHSAP). 1.2 Waddeton Park have previously submitted representations, dated September 2017, in support of the WHSAP, and in particular the allocation of Site H2.6 Southwick Court, Trowbridge to the Submission Plan consultation. Since this submission, further work undertaken by Waddeton Parks technical team, and discussions with Wiltshire Council and other consultees, in particular Historic England, have enabled further clarification to be provided in regard to the nature of the proposals for the allocation site, and the compilation of a detailed evidence base supporting them. This includes a full suite of ecology surveys, geotechnical assessment, flood risk and drainage assessment, geophysics, heritage impact assessment, landscape and visual assessment and transport assessment. This more detailed evidence base has informed the discussions since the September 2017 Consultation, and is referenced as appropriate below. 1.3 The September 2017 Consultation highlighted the substantive need for further housing allocations within Wiltshire, and in particular in Trowbridge, to respond to the adopted housing requirement as set out in the Wiltshire Core Strategy. It set out that there has been a demonstrable shortfall in housing delivery within Trowbridge over the plan period to date (from 2006) with this a particular concern given the towns role as the Principal Settlement in the North West Housing Market Area (HMA), and a key location for growth over the plan period. This has been reaffirmed in the updated evidence base, as set out in Section 2 below. 1.4 The submission of the WHSAP in July 2018 results in its Examination taking place within the transitory period of the National Planning Policy Framework (NPPF); which as per paragraph 214 (NPPF, 2018) means that the test of soundness for the purposes of this Examination remains those set out in paragraph 182 of the NPPF (2012): Positively prepared the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements; Justified the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence; Effective the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and Consistent with national policy the plan should enable the delivery of sustainable development in accordance with the policies in the Framework. 1.5 It is recognised as part two of Wiltshires development plan that elements of soundness were examined as part of the Core Strategy; for example the identification of the housing requirement, the spatial strategy, settlement hierarchy and disaggregation of the housing requirement to community areas and settlements. These are therefore also considered as appropriate within this representation. 2. Housing Need and Delivery: Approach of the WHSAP 2.1 The adopted Core Strategy requires the delivery of 24,740 dwellings within the North West</p>			

HMA over the plan period to 2026. As confirmed by Core Policy 2, and the Core Strategy Inspector, these numbers are minimum housing requirements, and provide a flexible and positive basis to provide for the needs of the area (#40, IR December 2014).

2.2 The Topic Papers published as part of the evidence base supporting the September 2017 Consultation confirmed that there had been a persistent housing delivery issue within the North West HMA since the adoption of the Core Strategy, and also that there is a particular failure in regard to the delivery of housing within the town of Trowbridge itself: a major concern given the importance of the town in the adopted Spatial Strategy. The Addendum Topic Papers (dated July and September 2018) reconfirm this position, and raise further concerns in regard to the delivery of housing within Trowbridge to meet its adopted target.

2.3 The North West HMA has consistently been unable to demonstrate a five year housing land supply (5HLS) since adoption of the Core Strategy; with the supply fluctuating regularly. This has been emphasised by the reliance upon large strategic sites to meet the housing requirement, and the delay in a number of these coming forward in a timely manner. The shortfall for the North West HMA in delivery over the plan period to date is demonstrated by the simple analysis of the housing requirement versus completions (updated figures from Topic Paper 3 Addendum July 2018): [TABLE INSERT]

2.4 Over the first eleven years of the plan period, the North West HMA has a 582 unit shortfall. This is significant, both in respect to absolute housing delivery, but also as a result of the associated undersupply of affordable housing.

2.5 In terms of housing land supply moving forward, Addendum Topic Paper 4 (July 2018) confirms that, against the Councils current housing land supply assessment, the North West HMA will fail to demonstrate an adequate housing land supply (referenced by 5HLS) from 2024/25 (see Table 2.3). The updated 5HLS assessment published with this consultation, within the Addendum Topic Paper 4, has resulted in a decrease in the projected 5HLS over the remaining plan period from that published as part of the Submission Consultation in 2017: with a reduction of 0.72years supply for the current period (2017/18), and a decrease in projected 5HLS over the next six years.

2.6 In regard to the town of Trowbridge, it is identified as the Principal Settlement within the North West HMA, and as the key location for growth over the plan period. The adopted Core Strategy is based upon a vision predicated upon sustainable patterns of development focussing on the settlement hierarchy (IR, #16). Trowbridge is identified as a location to support the delivery of 6,810 dwellings over the plan period; which as identified by Core Policy 29 seeks to strengthen its role as the principal service centre, whilst delivering a balance of housing and employment opportunities in association with improved infrastructure.

2.7 The September 2017 Consultation recognised that there have been, and continue to be, issues with the delivery of the only Core Strategy strategic allocation within Trowbridge: Ashton Park, and it identified that the quantum of development initially anticipated to be delivered within the Core Strategy plan period of 2,600 dwellings by 2026; had fallen to 1,600 (#5.24, TP4 July 2017). However, the Schedule of Proposed Changes subject to this consultation confirms that this trajectory has fallen further, with only 1,350 dwellings now expected to be delivered on the strategic site before 2026 (PC26): a reduction of 250 units since the 2017 trajectory, and 1,250 units from the Core Strategies anticipated delivery.

2.8 Trowbridges housing land supply is identified below: [TABLE INSERT]

2.9 The WHSAP identifies allocations within Trowbridge, including Southwick Court, for 1,050 dwellings, and as such, there remains a shortfall in identified housing land supply for Trowbridge over the remaining nine years of the plan period. This is confirmed in Addendum Topic Paper 4 which sets out a shortfall of 19% against the Core Strategy target (Table 5.8): equating to 1,297 units. Against adopted Core Strategy Policy 43, this would equate to a shortfall of 390 affordable units in the town.

2.10 This shortfall is significant and, when considered against Trowbridges role as the Principal Settlement, emphasises the considerable importance of the draft allocations in delivering the needs of the town and the wider HMA .

2.11 It also provides context in regard to comments raised by interested parties about the availability of alternative sites within Trowbridge. As set out by the Council in their response (paragraph 21.72, Consultation Statement, July 2018) all known alternative sites have been assessed , and as such, whilst brownfield windfall opportunities may come forward over the remaining plan period, they will not meet the identified scale of the shortfall within Trowbridge, at 1,297 units, and will certainly not provide for the shortfall in addition to being alternative sites to the draft allocations.

3. Site Assessment: Southwick Court

3.1 The 2017 Representation made a number of detailed points in regard to the site assessment as contained in the Trowbridge Community Area Topic Paper June 2017 (Table G.9) and the Sustainability Appraisal (June 2017).

3.2 The September 2018 Updated Trowbridge Topic Paper makes a number of changes in regard to the site assessment notably in regard to heritage. Our response to

the heritage update is discussed in Section 4 below. 3.3 In addition, the updated Topic Paper confirms that the allocation site is no longer required to identify land for the provision of a primary school with an alternative site identified with Trowbridge (see p114 and 118). This is confirmed within the Schedule of Proposed Changes - PC53 and PC55. This clarification had been provided by the Council within recent discussions with Waddeton Park, and as such, an updated Concept Plan has been produced which now excludes the land previously identified for a primary school. The removal of the land for the primary school has also resulted in amendments to the open space provision, opportunities for ecological enhancements, and a change in the assessment of potential heritage impacts which are discussed further below and in Section 4. 3.4 The updated Concept Plan is attached at Appendix 1: which confirms the ability to deliver 180 dwellings on the western part of the allocation site; alongside substantive open space on the western and southern parts of the site. The Concept Plan also confirms the opportunities for connections (pedestrian/cycle) to the north, a new pedestrian crossing to Southwick Country Park, woodland planting, ecological corridors and the drainage proposals for the site. These are discussed further below. 3.5 It is noted that the comments received from interested parties have been published, as set out in the Consultation Statement (July 2018). In addition, Waddeton Park undertook a public engagement exercise in late 2017 where a number of queries were raised by interested parties these are essentially duplicated from those sent to the earlier Submission Plan consultation. Where appropriate, we respond to these additional matters raised below. 3.6 As above, in response to the suggested changes to draft Policy H2.6 in regard to heritage and drainage (PC72 and 73); these are considered separately in Sections 4 and 5 of this Representation. Accessibility 3.7 We support the conclusions of the Councils site assessment, which confirm that the site is sustainably located on the edge of the town, with the ability to connect with local services and facilities to the north. There are a range of facilities in the immediate locality, including a post office and convenience store (circa 600m), public houses (circa 240m and 620m) and Spitfire Retail Park which has a range of retail units (circa 800m). Grove Primary School is the nearest existing primary school to the site and is located approximately 500m to the north of the site on Hazel Grove. Southwick Church of England Primary School is located approximately 1.2km to the south of the site on Hollis Way. Steps Ahead Day Nursery is located in Trowbridge Retail Park, approximately 800m northeast of the site. 3.8 The Clarendon Academy is located 1km north of the site and is a mixed secondary school and sixth form. Wiltshire College, Trowbridge is located approximately 550m north of the site on College Road and provides a wide range of courses. 3.9 The White Horse Business Park and Meridian Business Park are located approximately 1.5km east of the site along A363 Bradley Road. In addition, Trowbridge Town Centre and Wiltshire College to the north of the site provide employment opportunities. Spitfire Retail Park and Trowbridge Retail Park to the east of the site also provide local employment opportunities. There are further employment opportunities throughout Trowbridge. 3.10 These are accessed to the north of the allocation site, and there are a number of opportunities for new and improved pedestrian and cycle links into the existing development to the north; as illustrated on the Concept Plan. 3.11 The vehicular access from the A361 is shown on the Concept Plan. The detailed access junction has been subject to pre-application advice from Wiltshire Highways, and a detailed design has been finalised for the future submission of a planning application on the allocation site. The access link will also deliver a 3m wide shared pedestrian/cycle link. 3.12 In addition, the emerging proposals include a new pedestrian link across the A361 connecting to Southwick Country Park, providing a key element of any future strategic green link, and responding to the draft Habitat Regulations Assessment (dHRA) which emphasises the role of this recreation facility. 3.13 There are a number of bus stops in the immediate vicinity, including Marston Road (circa 270m), the A371 (circa 540m) and A363 (circa 800m), which provide services for routes 60, X34, 94, 185, 67, 81, 87/87A, and 265. These provide a circular route serving Trowbridge (hourly), alongside half hourly services to Chippenham, Frome, Bath, Salisbury and Warminster, and locations along the route. A route within the site is also provided to access the existing bus stop on the A361, and the access proposals for the site will include appropriate footways to access these bus stops. The Transport Assessment has identified mitigation/enhancement opportunities; including the relocation and improvements (raised kerb and shelter) for the existing northbound bus stop, and a new southbound bus stop. 3.14 It is noted that a number of local residents have expressed concern with the potential for a vehicular access directly north into the existing urban area of Trowbridge. As per above, the site access is taken directly from the A361. An emergency vehicular access would be provided, through enabling a vehicular movement along one of the proposed

pedestrian/cycle links, but access will be appropriately controlled, and secured through the detailed planning application. 3.15 It is noted that as part of the current consultation that the Trowbridge Transport Strategy Refresh (May 2018) has been published. We welcome this update of the earlier 2012 study. The Refresh confirms that the study has a strategic role; considering existing transport-related issues within the town and wider strategic transport objectives alongside considering the potential impacts of the draft allocation sites on the local transport network. The Refresh doesn't indicate any significant transport concerns in regard to the town following the delivery of the draft allocations; notably with the without mitigation scenario not resulting in any junctions becoming over capacity, and with the combined allocations only anticipated to have a marginal impact on the network performance. 3.16 The Refresh identifies those schemes which contain either a direct or cumulative relationship with Cluster 3 (which contains the allocation site, plus the other two draft allocations (either side of the A361)); albeit it doesn't indicate that these are necessary to make the allocations acceptable with the objective of the Refresh to result in no negative impacts on residents (#3.2) as opposed to the NPPFs threshold of severe. Nevertheless, strategic transport improvements are supported, and contributions from developers can be secured through the Community Infrastructure Levy (CIL); which currently has a number of schemes listed from the earlier 2012 Trowbridge Transport Study listed on the Regulation 123. 3.17 The Refresh notes that future planning applications will be required to consider whether a direct contribution to any of the schemes would be appropriate. This can come forward through the future detailed planning application, supported by the Transport Assessment. However, we would note that the emerging proposals for the allocation site already include a number of the elements identified within the schemes identified within the Refresh: for example, the detailed planning application will be supported by a Travel Plan (ST01) and new and improved bus stops on the A361 (PT04). Biodiversity 3.18 A full suite of ecology surveys have been undertaken on the allocation site, including: Phase 1 Habitat Survey, bat activity and static detector surveys alongside systematic surveys for badgers, otters, great crested newts and water voles. In addition, a baseline lighting assessment has been undertaken. These surveys have confirmed that there are no ecological features or protected habitats which would preclude development of the allocation site. 3.19 The emerging ecological assessment for the proposals on the allocation site have confirmed that a combination of retention of key features, establishing green corridors, delivering a sensitive lighting regime, securing a Construction Environmental Management Plan and new habitat creation (including woodland creation, species rich grasslands and ponds) will ensure that the detailed application proposals can be delivered in accordance with local and national planning policy. These are shown on the Concept Plan (Appendix 1) where relevant, with the detail capable of being secured through a future planning consent. 3.20 The draft Habitats Regulations Assessment (dHRA June 2017) and Addendum (September 2018) consider the potential for effects, either individually or in-combination, on the Bath and Bradford-on-Avon SAC. The Addendum HRA continues to support the conclusions of the dHRA that the allocation site would not have likely significant effects on its own, or in-combination, subject to the inclusion of appropriate measures within detailed planning applications to address habitat loss/deterioration and recreational impacts. 3.21 The allocation site is outside of any recognised Core Areas (which are defined in the Wiltshire Councils guidance note on planning applications and the SAC), but recent evidence shows there is a possibility of it being used by Bechsteins bats. A tree roost has recently been discovered on the northern edge of Southwick Country Park, and the bats are likely to forage and commute through the landscape around their roosts. Waddeton Park have undertaken a full season of bat surveys, carried out between April and October, which provide a more detailed evidence base than that supporting the dHRA and associated Addendum. 3.22 The surveys did not detect Myotis bats in large quantities (relative to the other bat species that were recorded), but it is possible that some of these recordings were of Bechsteins bats given the difficulties in distinguishing the species within surveys. As might be expected, the vast majority of activity was recorded along field boundaries, with relatively little activity recorded over the open fields. Where there was activity over open fields it was mostly of the larger bat species (noctules and serotines). There are several mature trees with potential roosting features, but no tree roosts were recorded. The habitats within and around the allocation site that are potentially important for SAC bats include streams and hedges around field boundaries, mature trees with roosting potential, the moat and buildings within the Southwick Court complex, and Axe and Cleaver Lane on the eastern boundary. 3.23 The field boundaries are largely tall hedgerows with mature trees, which provide high quality foraging and commuting habitat for bats. A lighting survey of the allocation site showed

that there is little light pollution, except in locations along the sites northern boundary where it adjoins the existing adjacent development and a streetlit road. The open fields are species-poor and agriculturally improved, but the fact that they are grazed by cattle enhances their quality for foraging bats. 3.24 In accordance with the design principles set out in the dHRA, the Concept Plan includes the provision of dark, landscaped buffers along the retained hedgerows, stream and field boundaries. These are 10-16 m wide and cover all of the important features identified through field surveys. Where the main access road passes through hedgerows, it has been sited to minimise habitat loss and a detailed lighting strategy brought forward through a future planning application would avoid illumination at relevant sensitive points by street lights. 3.25 In addition to the landscaped buffers, the emerging development design offers large areas of habitat creation in the west (the area of which has increased as a result of the removal of the school) and south of the site to benefit bats and other wildlife. This area includes provision for woodland planting, open grassland and ponds. This accords with the principles of the emerging Addendum HRA, which sets out that habitat offsetting, in accordance with the emerging Trowbridge Bat Mitigation Strategy, should be delivered within the allocation sites themselves (paragraph 3.3.6). The availability of 12ha of open space within the allocation site provides significant opportunities to deliver a range of enhanced and new habitats to offset any impacts on habitat loss/deterioration; and the detailed planning application will set out the precise nature of these habitats, in addition to their long-term maintenance, in accordance with the emerging Trowbridge Bat Mitigation Strategy. 3.26 The emerging proposals include significant areas of green recreational space, above the adopted policy standards. This ensures that the allocation site provides additional opportunities to support recreational activities. The Concept Plan confirms the opportunities to link with existing PROWs and informal recreation routes within the locality, and confirms the provision of a new pedestrian link across the A361, providing a direct link into Southwick Country Park. As confirmed in the dHRA, these measures represents a key objective in directing recreational pressure to Southwick Country Park, with the proposals on the allocation site providing an opportunity to deliver a number of the elements identified as opportunities for improvement within Figure 6 of the dHRA. 3.27 The draft allocation policy by virtue of the site area and development quantum, provides appropriate opportunities to deliver green links, new and enhanced habitats for bat foraging, and significant recreational open space in accordance with the requirements set out for the dHRA and its Addendum. There is no indication that future development on the allocation site would be unacceptable on ecological grounds. Landscape 3.28 The 2017 Representation submitted a detailed landscape commentary in response to the Councils evidence base, and this representation does not repeat those comments. The emerging proposals for the allocation site are supported by a full Landscape and Visual Impact Assessment (LVIA). The LVIA provides a robust and detailed assessment of the allocation site to a level of detail which will enable a decision to be taken on the planning application. As such, it provides a greater degree of clarity on the assessment of potential harm and the opportunities for mitigation than the allocation policy alone. 3.29 Our previous representation identified a number of concerns in response to the Councils Site Landscape Assessment for example, it fails to reference the more recent landscape analysis, West Wiltshire Landscape Character Assessment (March 2007); referencing the County-wide 2005 assessment only. The 2007 Assessment provides a more site specific appraisal of the existing baseline contribution that the site makes to the local character, and in association with this, the influence that the existing built form of Trowbridges urban area has on the character of the site, and thus the impact of development. It is also noted that the viewpoint locations shown on the map included within the Site Landscape Assessment are incorrect. 3.30 The full LVIA has identified a significant number of opportunities for landscape mitigation; including enhancement of existing landscape features, such as the northern landscape corridor, a substantial new landscape corridor along the southern and eastern edges of the proposed housing area, retention of the open nature of the western side of the allocation site, and creation of a network of pedestrian links throughout the site contained within the green infrastructure. These are illustrated on the Concept Plan. 3.31 The Councils assessment has not taken into account the potential for mitigation measures to be incorporated into future proposals on the allocation site, and therefore overstates the potential landscape impacts of developing on the allocation site. In contrast to the Councils assessment, the emerging LVIA concludes that the emerging proposals would not give rise to any unacceptable landscape or visual impacts and that, subject to the incorporation of the proposed mitigation measures, there is no landscape or visual justification as to why the proposed allocation of the site is unsound. 4. Heritage: Change Reference:

PC72 4.1 We support the changes made to Policy H2.6 in regard to heritage. Since the September 2017 Consultation, discussions between Waddeton Park, Historic England and Wiltshire Council have progressed in regard to the nature of the proposals on the site comprising discussions as to what elements the allocation policy is required to address, and what elements would be determined through the future planning application. 4.2 These discussions have been informed by a full Heritage Impact Assessment (HIA) undertaken by Cotswold Archaeology. This has been drafted to a planning application level of detail, and is informed by a field survey, LIDAR, geophysics and a detailed desk-based heritage assessment in accordance with the Chartered Institute of Archaeologists Guidelines. The discussions have also been informed by a joint site visit undertaken by Waddeton Parks heritage consultant and representatives from Historic England. 4.3 The work undertaken by Cotswold Archaeology, and shared with the Council and Historic England, supersedes the LUC Wiltshire Housing Site Allocations Plan: Heritage Impact Assessment (dated March 2018). It is based upon a more detailed assessment, including detailed research, analysis and field survey, and accords with the Institute Guidelines. The LUC Assessment does not; and as it sets out itself, is based upon a strategic high-level review of sites based upon secondary material (section 1.11) and the maximum case development scenario (section 1.13). The Cotswold Archaeology assessment meets the requirements of the proposed amendment to Policy H2.6; and as such, provides the certainty now at the allocation stage, that the impacts of the emerging proposals on designated and undesignated heritage assets are acceptable; and as agreed with Historic England, less than substantial. Remnant Water Meadows 4.4 In terms of the non-designated heritage asset, the former water meadows, the Cotswold Archaeology HIA has confirmed that the LUCs assessment of the extent of this feature, and its importance are incorrect. The LUC study was based upon a high level assessment of contemporary aerial photography and LiDAR. The Cotswold Archaeology HIA is based upon a geophysical survey and a site visit. This confirms that there are no former water meadows in the eastern part of the allocation site (noting that a site visit would have confirmed this given the topography of the eastern side). This is a factual error in the LUC study. 4.5 The assessment of potential impacts on the remnant water meadows is incorrect. It is erroneously based upon the extent of the remnant earthworks being the entire allocation site which as set out above is not correct. The remnant features have little value beyond their physicality, which has been substantially eroded. If the definition of setting the surroundings in which a heritage asset is experienced is applied, then given the limited remnants and the fact that the earthworks are basically not experienced as they are so eroded, their setting must be commensurately limited. 4.6 It also assumes development across the entire allocation site which as per the wording of draft Policy H2.6, and the emerging Concept Plan, is not correct. The draft allocation policy precludes development on the western side, therefore preserving the assets, and there will be limited disturbance of the system (for access), which will be sensitively designed. This is more than appropriate design for a feature of low heritage importance. Southwick Court 4.7 The LUC Study is a high-level assessment based upon limited information and analysis; it fails to accord with Historic England's The Setting of Heritage Assets (GPA3). A full consideration of the setting is not given: a single aspect is taken, and greatly over emphasised. The assessment fails to consider the visibility of the listed asset, its insular nature, the lack of a designed setting and the impact of the post-war housing in the assessment. The risk of harm is again based upon development of the whole of the allocation site, and the loss of the erroneously identified eastern water meadows. 4.8 The subsequent discussions with the Council and Historic England, and the emerging proposals for the site, have been informed by the full HIA undertaken by Cotswold Archaeology. 4.9 This confirmed that the key setting of the listed buildings comprises their location within the historic moated enclosure, which is very insular in its setting with very limited views of the historic buildings from beyond. The main frontage of the house faces to the south-east, across its garden and away from the allocation site. The key setting of the listed buildings will not be harmed by development as set out in the Concept Plan. 4.10 In respect to the wider setting, the farmhouse was not designed within a parkland setting (its location is due to the former medieval moated manor), and its current agricultural setting is heavily influenced by the post-war development at Trowbridge and Southwick. Retaining the western part of the site open and free from development enables an open parkland setting to be maintained across the entire western part of the allocation site, and the delivery of a sensitively design access road through the detailed planning application (in terms of scale, material, landscaping and lighting) will ensure that effects of the western part of the allocation site on the designated assets are minimised. As shown on the Concept Plan, a new landscaped edge will be created on the

	<p>eastern part of the allocation site. 4.11 There is sufficient clarity to conclude that the allocation site can be delivered without unacceptable impacts on the identified heritage assets (in respect to the non-development of the western side, the sensitively designed access road and requirement for a full Heritage Impact Assessment), and that, through detailed design at the planning application stage, appropriate mitigation measures (both inherent and additional) can be secured which minimise the impact of the emerging proposals on the assets. It is agreed (with the benefit of the detailed HIA and emerging Concept Plan) that this harm would fall within the less than substantial harm as defined by paragraph 196 of the National Planning Policy Framework (NPPF), and as confirmed in Section 2 above, there is a clear and pressing need for additional housing within Trowbridge. Heritage Conclusions 4.12 The outcome of these discussions has informed the Concept Plan which is appended in Appendix 1, and also the proposed modifications set out in PC72. 4.13 As part of these discussions, it has been confirmed that a sensitively design rural access road will be required on the western side of the allocation site; with associated low level lighting, landscaping and minimal street signage. The exact details of this can be agreed through the future planning application, however, as per discussions with Historic England, we would support the inclu</p>

Introduction 1.1 These representations have been prepared and submitted by Savills on behalf of Waddeton Park Ltd (Waddeton Park) in response to the Focussed Changes consultation, and further evidence base, on the draft Wiltshire Housing Site Allocation Plan (WHSAP). 1.2 Waddeton Park have previously submitted representations, dated September 2017, in support of the WHSAP, and in particular the allocation of Site H2.6 Southwick Court, Trowbridge to the Submission Plan consultation. Since this submission, further work undertaken by Waddeton Parks technical team, and discussions with Wiltshire Council and other consultees, in particular Historic England, have enabled further clarification to be provided in regard to the nature of the proposals for the allocation site, and the compilation of a detailed evidence base supporting them. This includes a full suite of ecology surveys, geotechnical assessment, flood risk and drainage assessment, geophysics, heritage impact assessment, landscape and visual assessment and transport assessment. This more detailed evidence base has informed the discussions since the September 2017 Consultation, and is referenced as appropriate below. 1.3 The September 2017 Consultation highlighted the substantive need for further housing allocations within Wiltshire, and in particular in Trowbridge, to respond to the adopted housing requirement as set out in the Wiltshire Core Strategy. It set out that there has been a demonstrable shortfall in housing delivery within Trowbridge over the plan period to date (from 2006) with this a particular concern given the towns role as the Principal Settlement in the North West Housing Market Area (HMA), and a key location for growth over the plan period. This has been reaffirmed in the updated evidence base, as set out in Section 2 below. 1.4 The submission of the WHSAP in July 2018 results in its Examination taking place within the transitory period of the National Planning Policy Framework (NPPF); which as per paragraph 214 (NPPF, 2018) means that the test of soundness for the purposes of this Examination remains those set out in paragraph 182 of the NPPF (2012): Positively prepared the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements; Justified the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence; Effective the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and Consistent with national policy the plan should enable the delivery of sustainable development in accordance with the policies in the Framework. 1.5 It is recognised as part two of Wiltshires development plan that elements of soundness were examined as part of the Core Strategy; for example the identification of the housing requirement, the spatial strategy, settlement hierarchy and disaggregation of the housing requirement to community areas and settlements. These are therefore also considered as appropriate within this representation. 2. Housing Need and Delivery: Approach of the WHSAP 2.1 The adopted Core Strategy requires the delivery of 24,740 dwellings within the North West</p>			

HMA over the plan period to 2026. As confirmed by Core Policy 2, and the Core Strategy Inspector, these numbers are minimum housing requirements, and provide a flexible and positive basis to provide for the needs of the area (#40, IR December 2014).

2.2 The Topic Papers published as part of the evidence base supporting the September 2017 Consultation confirmed that there had been a persistent housing delivery issue within the North West HMA since the adoption of the Core Strategy, and also that there is a particular failure in regard to the delivery of housing within the town of Trowbridge itself: a major concern given the importance of the town in the adopted Spatial Strategy. The Addendum Topic Papers (dated July and September 2018) reconfirm this position, and raise further concerns in regard to the delivery of housing within Trowbridge to meet its adopted target.

2.3 The North West HMA has consistently been unable to demonstrate a five year housing land supply (5HLS) since adoption of the Core Strategy; with the supply fluctuating regularly. This has been emphasised by the reliance upon large strategic sites to meet the housing requirement, and the delay in a number of these coming forward in a timely manner. The shortfall for the North West HMA in delivery over the plan period to date is demonstrated by the simple analysis of the housing requirement versus completions (updated figures from Topic Paper 3 Addendum July 2018): [TABLE INSERT]

2.4 Over the first eleven years of the plan period, the North West HMA has a 582 unit shortfall. This is significant, both in respect to absolute housing delivery, but also as a result of the associated undersupply of affordable housing.

2.5 In terms of housing land supply moving forward, Addendum Topic Paper 4 (July 2018) confirms that, against the Councils current housing land supply assessment, the North West HMA will fail to demonstrate an adequate housing land supply (referenced by 5HLS) from 2024/25 (see Table 2.3). The updated 5HLS assessment published with this consultation, within the Addendum Topic Paper 4, has resulted in a decrease in the projected 5HLS over the remaining plan period from that published as part of the Submission Consultation in 2017: with a reduction of 0.72years supply for the current period (2017/18), and a decrease in projected 5HLS over the next six years.

2.6 In regard to the town of Trowbridge, it is identified as the Principal Settlement within the North West HMA, and as the key location for growth over the plan period. The adopted Core Strategy is based upon a vision predicated upon sustainable patterns of development focussing on the settlement hierarchy (IR, #16). Trowbridge is identified as a location to support the delivery of 6,810 dwellings over the plan period; which as identified by Core Policy 29 seeks to strengthen its role as the principal service centre, whilst delivering a balance of housing and employment opportunities in association with improved infrastructure.

2.7 The September 2017 Consultation recognised that there have been, and continue to be, issues with the delivery of the only Core Strategy strategic allocation within Trowbridge: Ashton Park, and it identified that the quantum of development initially anticipated to be delivered within the Core Strategy plan period of 2,600 dwellings by 2026; had fallen to 1,600 (#5.24, TP4 July 2017). However, the Schedule of Proposed Changes subject to this consultation confirms that this trajectory has fallen further, with only 1,350 dwellings now expected to be delivered on the strategic site before 2026 (PC26): a reduction of 250 units since the 2017 trajectory, and 1,250 units from the Core Strategies anticipated delivery.

2.8 Trowbridges housing land supply is identified below: [TABLE INSERT]

2.9 The WHSAP identifies allocations within Trowbridge, including Southwick Court, for 1,050 dwellings, and as such, there remains a shortfall in identified housing land supply for Trowbridge over the remaining nine years of the plan period. This is confirmed in Addendum Topic Paper 4 which sets out a shortfall of 19% against the Core Strategy target (Table 5.8): equating to 1,297 units. Against adopted Core Strategy Policy 43, this would equate to a shortfall of 390 affordable units in the town.

2.10 This shortfall is significant and, when considered against Trowbridges role as the Principal Settlement, emphasises the considerable importance of the draft allocations in delivering the needs of the town and the wider HMA .

2.11 It also provides context in regard to comments raised by interested parties about the availability of alternative sites within Trowbridge. As set out by the Council in their response (paragraph 21.72, Consultation Statement, July 2018) all known alternative sites have been assessed , and as such, whilst brownfield windfall opportunities may come forward over the remaining plan period, they will not meet the identified scale of the shortfall within Trowbridge, at 1,297 units, and will certainly not provide for the shortfall in addition to being alternative sites to the draft allocations.

3. Site Assessment: Southwick Court

3.1 The 2017 Representation made a number of detailed points in regard to the site assessment as contained in the Trowbridge Community Area Topic Paper June 2017 (Table G.9) and the Sustainability Appraisal (June 2017).

3.2 The September 2018 Updated Trowbridge Topic Paper makes a number of changes in regard to the site assessment notably in regard to heritage. Our response to

the heritage update is discussed in Section 4 below. 3.3 In addition, the updated Topic Paper confirms that the allocation site is no longer required to identify land for the provision of a primary school with an alternative site identified with Trowbridge (see p114 and 118). This is confirmed within the Schedule of Proposed Changes - PC53 and PC55. This clarification had been provided by the Council within recent discussions with Waddeton Park, and as such, an updated Concept Plan has been produced which now excludes the land previously identified for a primary school. The removal of the land for the primary school has also resulted in amendments to the open space provision, opportunities for ecological enhancements, and a change in the assessment of potential heritage impacts which are discussed further below and in Section 4. 3.4 The updated Concept Plan is attached at Appendix 1: which confirms the ability to deliver 180 dwellings on the western part of the allocation site; alongside substantive open space on the western and southern parts of the site. The Concept Plan also confirms the opportunities for connections (pedestrian/cycle) to the north, a new pedestrian crossing to Southwick Country Park, woodland planting, ecological corridors and the drainage proposals for the site. These are discussed further below. 3.5 It is noted that the comments received from interested parties have been published, as set out in the Consultation Statement (July 2018). In addition, Waddeton Park undertook a public engagement exercise in late 2017 where a number of queries were raised by interested parties these are essentially duplicated from those sent to the earlier Submission Plan consultation. Where appropriate, we respond to these additional matters raised below. 3.6 As above, in response to the suggested changes to draft Policy H2.6 in regard to heritage and drainage (PC72 and 73); these are considered separately in Sections 4 and 5 of this Representation. Accessibility 3.7 We support the conclusions of the Councils site assessment, which confirm that the site is sustainably located on the edge of the town, with the ability to connect with local services and facilities to the north. There are a range of facilities in the immediate locality, including a post office and convenience store (circa 600m), public houses (circa 240m and 620m) and Spitfire Retail Park which has a range of retail units (circa 800m). Grove Primary School is the nearest existing primary school to the site and is located approximately 500m to the north of the site on Hazel Grove. Southwick Church of England Primary School is located approximately 1.2km to the south of the site on Hollis Way. Steps Ahead Day Nursery is located in Trowbridge Retail Park, approximately 800m northeast of the site. 3.8 The Clarendon Academy is located 1km north of the site and is a mixed secondary school and sixth form. Wiltshire College, Trowbridge is located approximately 550m north of the site on College Road and provides a wide range of courses. 3.9 The White Horse Business Park and Meridian Business Park are located approximately 1.5km east of the site along A363 Bradley Road. In addition, Trowbridge Town Centre and Wiltshire College to the north of the site provide employment opportunities. Spitfire Retail Park and Trowbridge Retail Park to the east of the site also provide local employment opportunities. There are further employment opportunities throughout Trowbridge. 3.10 These are accessed to the north of the allocation site, and there are a number of opportunities for new and improved pedestrian and cycle links into the existing development to the north; as illustrated on the Concept Plan. 3.11 The vehicular access from the A361 is shown on the Concept Plan. The detailed access junction has been subject to pre-application advice from Wiltshire Highways, and a detailed design has been finalised for the future submission of a planning application on the allocation site. The access link will also deliver a 3m wide shared pedestrian/cycle link. 3.12 In addition, the emerging proposals include a new pedestrian link across the A361 connecting to Southwick Country Park, providing a key element of any future strategic green link, and responding to the draft Habitat Regulations Assessment (dHRA) which emphasises the role of this recreation facility. 3.13 There are a number of bus stops in the immediate vicinity, including Marston Road (circa 270m), the A371 (circa 540m) and A363 (circa 800m), which provide services for routes 60, X34, 94, 185, 67, 81, 87/87A, and 265. These provide a circular route serving Trowbridge (hourly), alongside half hourly services to Chippenham, Frome, Bath, Salisbury and Warminster, and locations along the route. A route within the site is also provided to access the existing bus stop on the A361, and the access proposals for the site will include appropriate footways to access these bus stops. The Transport Assessment has identified mitigation/enhancement opportunities; including the relocation and improvements (raised kerb and shelter) for the existing northbound bus stop, and a new southbound bus stop. 3.14 It is noted that a number of local residents have expressed concern with the potential for a vehicular access directly north into the existing urban area of Trowbridge. As per above, the site access is taken directly from the A361. An emergency vehicular access would be provided, through enabling a vehicular movement along one of the proposed

pedestrian/cycle links, but access will be appropriately controlled, and secured through the detailed planning application. 3.15 It is noted that as part of the current consultation that the Trowbridge Transport Strategy Refresh (May 2018) has been published. We welcome this update of the earlier 2012 study. The Refresh confirms that the study has a strategic role; considering existing transport-related issues within the town and wider strategic transport objectives alongside considering the potential impacts of the draft allocation sites on the local transport network. The Refresh doesn't indicate any significant transport concerns in regard to the town following the delivery of the draft allocations; notably with the without mitigation scenario not resulting in any junctions becoming over capacity, and with the combined allocations only anticipated to have a marginal impact on the network performance. 3.16 The Refresh identifies those schemes which contain either a direct or cumulative relationship with Cluster 3 (which contains the allocation site, plus the other two draft allocations (either side of the A361)); albeit it doesn't indicate that these are necessary to make the allocations acceptable with the objective of the Refresh to result in no negative impacts on residents (#3.2) as opposed to the NPPFs threshold of severe. Nevertheless, strategic transport improvements are supported, and contributions from developers can be secured through the Community Infrastructure Levy (CIL); which currently has a number of schemes listed from the earlier 2012 Trowbridge Transport Study listed on the Regulation 123. 3.17 The Refresh notes that future planning applications will be required to consider whether a direct contribution to any of the schemes would be appropriate. This can come forward through the future detailed planning application, supported by the Transport Assessment. However, we would note that the emerging proposals for the allocation site already include a number of the elements identified within the schemes identified within the Refresh: for example, the detailed planning application will be supported by a Travel Plan (ST01) and new and improved bus stops on the A361 (PT04). Biodiversity 3.18 A full suite of ecology surveys have been undertaken on the allocation site, including: Phase 1 Habitat Survey, bat activity and static detector surveys alongside systematic surveys for badgers, otters, great crested newts and water voles. In addition, a baseline lighting assessment has been undertaken. These surveys have confirmed that there are no ecological features or protected habitats which would preclude development of the allocation site. 3.19 The emerging ecological assessment for the proposals on the allocation site have confirmed that a combination of retention of key features, establishing green corridors, delivering a sensitive lighting regime, securing a Construction Environmental Management Plan and new habitat creation (including woodland creation, species rich grasslands and ponds) will ensure that the detailed application proposals can be delivered in accordance with local and national planning policy. These are shown on the Concept Plan (Appendix 1) where relevant, with the detail capable of being secured through a future planning consent. 3.20 The draft Habitats Regulations Assessment (dHRA June 2017) and Addendum (September 2018) consider the potential for effects, either individually or in-combination, on the Bath and Bradford-on-Avon SAC. The Addendum HRA continues to support the conclusions of the dHRA that the allocation site would not have likely significant effects on its own, or in-combination, subject to the inclusion of appropriate measures within detailed planning applications to address habitat loss/deterioration and recreational impacts. 3.21 The allocation site is outside of any recognised Core Areas (which are defined in the Wiltshire Councils guidance note on planning applications and the SAC), but recent evidence shows there is a possibility of it being used by Bechsteins bats. A tree roost has recently been discovered on the northern edge of Southwick Country Park, and the bats are likely to forage and commute through the landscape around their roosts. Waddeton Park have undertaken a full season of bat surveys, carried out between April and October, which provide a more detailed evidence base than that supporting the dHRA and associated Addendum. 3.22 The surveys did not detect Myotis bats in large quantities (relative to the other bat species that were recorded), but it is possible that some of these recordings were of Bechsteins bats given the difficulties in distinguishing the species within surveys. As might be expected, the vast majority of activity was recorded along field boundaries, with relatively little activity recorded over the open fields. Where there was activity over open fields it was mostly of the larger bat species (noctules and serotines). There are several mature trees with potential roosting features, but no tree roosts were recorded. The habitats within and around the allocation site that are potentially important for SAC bats include streams and hedges around field boundaries, mature trees with roosting potential, the moat and buildings within the Southwick Court complex, and Axe and Cleaver Lane on the eastern boundary. 3.23 The field boundaries are largely tall hedgerows with mature trees, which provide high quality foraging and commuting habitat for bats. A lighting survey of the allocation site showed

that there is little light pollution, except in locations along the sites northern boundary where it adjoins the existing adjacent development and a streetlit road. The open fields are species-poor and agriculturally improved, but the fact that they are grazed by cattle enhances their quality for foraging bats. 3.24 In accordance with the design principles set out in the dHRA, the Concept Plan includes the provision of dark, landscaped buffers along the retained hedgerows, stream and field boundaries. These are 10-16 m wide and cover all of the important features identified through field surveys. Where the main access road passes through hedgerows, it has been sited to minimise habitat loss and a detailed lighting strategy brought forward through a future planning application would avoid illumination at relevant sensitive points by street lights. 3.25 In addition to the landscaped buffers, the emerging development design offers large areas of habitat creation in the west (the area of which has increased as a result of the removal of the school) and south of the site to benefit bats and other wildlife. This area includes provision for woodland planting, open grassland and ponds. This accords with the principles of the emerging Addendum HRA, which sets out that habitat offsetting, in accordance with the emerging Trowbridge Bat Mitigation Strategy, should be delivered within the allocation sites themselves (paragraph 3.3.6). The availability of 12ha of open space within the allocation site provides significant opportunities to deliver a range of enhanced and new habitats to offset any impacts on habitat loss/deterioration; and the detailed planning application will set out the precise nature of these habitats, in addition to their long-term maintenance, in accordance with the emerging Trowbridge Bat Mitigation Strategy. 3.26 The emerging proposals include significant areas of green recreational space, above the adopted policy standards. This ensures that the allocation site provides additional opportunities to support recreational activities. The Concept Plan confirms the opportunities to link with existing PROWs and informal recreation routes within the locality, and confirms the provision of a new pedestrian link across the A361, providing a direct link into Southwick Country Park. As confirmed in the dHRA, these measures represents a key objective in directing recreational pressure to Southwick Country Park, with the proposals on the allocation site providing an opportunity to deliver a number of the elements identified as opportunities for improvement within Figure 6 of the dHRA. 3.27 The draft allocation policy by virtue of the site area and development quantum, provides appropriate opportunities to deliver green links, new and enhanced habitats for bat foraging, and significant recreational open space in accordance with the requirements set out for the dHRA and its Addendum. There is no indication that future development on the allocation site would be unacceptable on ecological grounds. Landscape 3.28 The 2017 Representation submitted a detailed landscape commentary in response to the Councils evidence base, and this representation does not repeat those comments. The emerging proposals for the allocation site are supported by a full Landscape and Visual Impact Assessment (LVIA). The LVIA provides a robust and detailed assessment of the allocation site to a level of detail which will enable a decision to be taken on the planning application. As such, it provides a greater degree of clarity on the assessment of potential harm and the opportunities for mitigation than the allocation policy alone. 3.29 Our previous representation identified a number of concerns in response to the Councils Site Landscape Assessment for example, it fails to reference the more recent landscape analysis, West Wiltshire Landscape Character Assessment (March 2007); referencing the County-wide 2005 assessment only. The 2007 Assessment provides a more site specific appraisal of the existing baseline contribution that the site makes to the local character, and in association with this, the influence that the existing built form of Trowbridges urban area has on the character of the site, and thus the impact of development. It is also noted that the viewpoint locations shown on the map included within the Site Landscape Assessment are incorrect. 3.30 The full LVIA has identified a significant number of opportunities for landscape mitigation; including enhancement of existing landscape features, such as the northern landscape corridor, a substantial new landscape corridor along the southern and eastern edges of the proposed housing area, retention of the open nature of the western side of the allocation site, and creation of a network of pedestrian links throughout the site contained within the green infrastructure. These are illustrated on the Concept Plan. 3.31 The Councils assessment has not taken into account the potential for mitigation measures to be incorporated into future proposals on the allocation site, and therefore overstates the potential landscape impacts of developing on the allocation site. In contrast to the Councils assessment, the emerging LVIA concludes that the emerging proposals would not give rise to any unacceptable landscape or visual impacts and that, subject to the incorporation of the proposed mitigation measures, there is no landscape or visual justification as to why the proposed allocation of the site is unsound. 4. Heritage: Change Reference:

PC72 4.1 We support the changes made to Policy H2.6 in regard to heritage. Since the September 2017 Consultation, discussions between Waddeton Park, Historic England and Wiltshire Council have progressed in regard to the nature of the proposals on the site comprising discussions as to what elements the allocation policy is required to address, and what elements would be determined through the future planning application. 4.2 These discussions have been informed by a full Heritage Impact Assessment (HIA) undertaken by Cotswold Archaeology. This has been drafted to a planning application level of detail, and is informed by a field survey, LIDAR, geophysics and a detailed desk-based heritage assessment in accordance with the Chartered Institute of Archaeologists Guidelines. The discussions have also been informed by a joint site visit undertaken by Waddeton Parks heritage consultant and representatives from Historic England. 4.3 The work undertaken by Cotswold Archaeology, and shared with the Council and Historic England, supersedes the LUC Wiltshire Housing Site Allocations Plan: Heritage Impact Assessment (dated March 2018). It is based upon a more detailed assessment, including detailed research, analysis and field survey, and accords with the Institute Guidelines. The LUC Assessment does not; and as it sets out itself, is based upon a strategic high-level review of sites based upon secondary material (section 1.11) and the maximum case development scenario (section 1.13). The Cotswold Archaeology assessment meets the requirements of the proposed amendment to Policy H2.6; and as such, provides the certainty now at the allocation stage, that the impacts of the emerging proposals on designated and undesignated heritage assets are acceptable; and as agreed with Historic England, less than substantial. Remnant Water Meadows 4.4 In terms of the non-designated heritage asset, the former water meadows, the Cotswold Archaeology HIA has confirmed that the LUCs assessment of the extent of this feature, and its importance are incorrect. The LUC study was based upon a high level assessment of contemporary aerial photography and LiDAR. The Cotswold Archaeology HIA is based upon a geophysical survey and a site visit. This confirms that there are no former water meadows in the eastern part of the allocation site (noting that a site visit would have confirmed this given the topography of the eastern side). This is a factual error in the LUC study. 4.5 The assessment of potential impacts on the remnant water meadows is incorrect. It is erroneously based upon the extent of the remnant earthworks being the entire allocation site which as set out above is not correct. The remnant features have little value beyond their physicality, which has been substantially eroded. If the definition of setting the surroundings in which a heritage asset is experienced is applied, then given the limited remnants and the fact that the earthworks are basically not experienced as they are so eroded, their setting must be commensurately limited. 4.6 It also assumes development across the entire allocation site which as per the wording of draft Policy H2.6, and the emerging Concept Plan, is not correct. The draft allocation policy precludes development on the western side, therefore preserving the assets, and there will be limited disturbance of the system (for access), which will be sensitively designed. This is more than appropriate design for a feature of low heritage importance. Southwick Court 4.7 The LUC Study is a high-level assessment based upon limited information and analysis; it fails to accord with Historic England's The Setting of Heritage Assets (GPA3). A full consideration of the setting is not given: a single aspect is taken, and greatly over emphasised. The assessment fails to consider the visibility of the listed asset, its insular nature, the lack of a designed setting and the impact of the post-war housing in the assessment. The risk of harm is again based upon development of the whole of the allocation site, and the loss of the erroneously identified eastern water meadows. 4.8 The subsequent discussions with the Council and Historic England, and the emerging proposals for the site, have been informed by the full HIA undertaken by Cotswold Archaeology. 4.9 This confirmed that the key setting of the listed buildings comprises their location within the historic moated enclosure, which is very insular in its setting with very limited views of the historic buildings from beyond. The main frontage of the house faces to the south-east, across its garden and away from the allocation site. The key setting of the listed buildings will not be harmed by development as set out in the Concept Plan. 4.10 In respect to the wider setting, the farmhouse was not designed within a parkland setting (its location is due to the former medieval moated manor), and its current agricultural setting is heavily influenced by the post-war development at Trowbridge and Southwick. Retaining the western part of the site open and free from development enables an open parkland setting to be maintained across the entire western part of the allocation site, and the delivery of a sensitively design access road through the detailed planning application (in terms of scale, material, landscaping and lighting) will ensure that effects of the western part of the allocation site on the designated assets are minimised. As shown on the Concept Plan, a new landscaped edge will be created on the

	<p>eastern part of the allocation site. 4.11 There is sufficient clarity to conclude that the allocation site can be delivered without unacceptable impacts on the identified heritage assets (in respect to the non-development of the western side, the sensitively designed access road and requirement for a full Heritage Impact Assessment), and that, through detailed design at the planning application stage, appropriate mitigation measures (both inherent and additional) can be secured which minimise the impact of the emerging proposals on the assets. It is agreed (with the benefit of the detailed HIA and emerging Concept Plan) that this harm would fall within the less than substantial harm as defined by paragraph 196 of the National Planning Policy Framework (NPPF), and as confirmed in Section 2 above, there is a clear and pressing need for additional housing within Trowbridge. Heritage Conclusions 4.12 The outcome of these discussions has informed the Concept Plan which is appended in Appendix 1, and also the proposed modifications set out in PC72. 4.13 As part of these discussions, it has been confirmed that a sensitively design rural access road will be required on the western side of the allocation site; with associated low level lighting, landscaping and minimal street signage. The exact details of this can be agreed through the future planning application, however, as per discussions with Historic England, we would support the inc</p>

<b>Identify Proposed Change Reference Number</b>	PC94				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations.</p> <p>Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

	<p>and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages" are not promoted by National Policy. The Council needs to correct the error in its assessment of Bratton as a Large Village which it is not. This should help prevent any further consideration of oversized developments. The proposed developments will be purely for the profit of local landowners and of no benefit to the village. They will only burden the services of doctors and school. The increase in traffic will be very dangerous - this was the grounds for past refusal so how can it be considered as a safe and sound proposal?</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	We refer to the proposed change so to include the new residential development on land south of Potley Lane as inside the settlement boundary. We agree this is built residential development that is fundamentally now part of the settlement and therefore support this change. In other respects we continue to object to the plan for the reasons set out in our September 2017 representations.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	Bishopstrow Village Meeting (Parish Council) met on 28 September 2018 and considered aspects of the Wiltshire Housing Site Allocation DPD, particularly those concerning proposed development at East of the Dene, Warminster (Housing Allocation H2.7). It noted that comments from Wiltshire Council (Conservation Officer) and Heritage England showed concern for the local area in terms of: Environment Landscape Heritage assets Impact on Bishopstrow Conservation Area The meeting further noted that the major impact on the development of the whole site was at its southern and eastern sections where the heritage assets of Bishopstrow House, The Cotes, Home Farm, listed walls and Bishopstrow Conservation Area are located. It was the meetings belief that a way of preserving the integrity of this part of the site would be to extend the boundary of the Bishopstrow Conservation Area as shown on the map below, where the extension is shown in red.

<b>Identify Proposed Change Reference Number</b>	PC94				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations.</p> <p>Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

	<p>and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages" are not promoted by National Policy. Bratton is apparently a large village in a sought after rural location. A significant part of it is designated a CONSERVATION AREA, and while the proposed sites fall outside of this, the village needs to be taken as a whole if it is not to lose, irrevocably, the elements which make it worthy of conservation: its social history and special location at the foot of the Plain. It is NOT a suburb of Westbury and should never become one. Quite apart from the factual and statistical inaccuracies and nonsense of these proposals, planners have a statutory duty to safeguard the Conservation Area. It will be damaged beyond repair by the totally overblown and unnecessary proposals.</p>

Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages" are not promoted by National Policy. These 2 sites are totally inappropriate for a village the size of Bratton, especially considering the fact that the village has been incorrectly categorised. The natural aspect of the village will be damaged forever by allowing the development of 2 modern housing sites at the western B3098 entrance to the village. The village is inappropriately served by public transportation to support such a huge expansion. The overall road system is also ill-founded for such development also.</p>

Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

	<p>and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages" are not promoted by National Policy. These are ill conceived proposals which breach the Council's own protocols regarding rural development and the information on which they are made is inaccurate. They would bring nothing of benefit to the village should they be allowed to be built but will ruin its character and charm.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	Response to 2nd Consultation: regarding Site 1021 Church Lane, Trowbridge WHSAP - Focussed consultation on the Schedule of Proposed Changes and associated evidence documents Having looked at the documents containing the changes made following the original WHSAP consultation process I have concluded that the following material considerations regarding proposed Site 1021 made during the consultation have not been taken on board: 1. Ancient hedgerows - we can evidence that the hedgerows were all in existence before 1850 (through maps) and are therefore protected under the Hedgerow Act. 2. There is contradiction in the approach to discounting sites based on the settlement boundary. 3. The Council could not have taken into account the heritage, environmental and flood importance of the site at the stage when they discounted sites in 2015-2017 as we brought this to their attention in Sept 2017. When these factors are taken into account by the WHSAP the tiny Site 1021 with its unique historical rural setting and home to rare species of wildlife will become even more inappropriate to develop by comparison with the vast majority of other potential sites.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	I support the proposed change to remove the Ridgeway Farm site from the Wiltshire Housing Site Allocations Plan on the basis that: The proposed Ridgeway Farm development includes an additional 40 dwellings which, together with the 10 dwellings recently built on this site, represents a near 20% increase in dwellings in the village of Crudwell. This is a disproportionate increase and is concentrated on one site. There is no strategic need for Wiltshire to allocate housing in Crudwell because supply in the Housing Market Area is good and the Wiltshire Core Strategy states that development in Large Villages should be limited to "small sites" to meet local needs. Ridgeway Farm is not a small site. The Crudwell Neighbourhood Plan is progressing well and is planning to allocate land to meet identified needs. The Neighbourhood Plan is taking into account the concerns felt by the local community (including drainage and flooding, school capacity, road safety and impact on the environment), as well as a full consideration of the options available and any applicable environmental and infrastructure constraints. It will allow the community to determine its own future.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	I am writing to support the proposed change (PC92) to remove the Ridgeway Farm, Crudwell site (Housing Allocation H2.13) from the Wiltshire Housing Site Allocations Plan . The proposed development at Ridgeway Farm is inappropriately large and were it to go ahead, would have a detrimental impact on the community for all the reasons stated in previous consultations. The proposed change to have this development removed from the WHSAP is therefore welcomed and I support it on the basis that: There is no Strategic Need for Wiltshire to allocate housing in Crudwell because supply in the Housing Market Area is good and the Wiltshire Core Strategy states that development in Large Villages should be limited to small sites to meet local needs. The Crudwell Neighbourhood Plan is progressing extremely well (Reg14 Consultation planned for November 2018 and Reg16 planned for early Spring) and will allocate land to meet identified needs. The Councils and Governments Localism agenda is best served by allowing the Parish to determine its own future. I trust that this and similar representations will result in PC92 going ahead and thank you for your consideration in this matter. Please acknowledge safe receipt of this letter. Thank you.

<b>Identify Proposed Change Reference Number</b>	PC100				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>I have been trying without success to use the website to make additional comments on these issues. As the consultation closes today I hope that use of this email address (copied to [REDACTED] and [REDACTED] ) will suffice. I commented on the initial draft previously but this was without sight of the "amended" Local Transport Plan which has now been made available. As a resident of 15 years living directly on Netherhampton Road I am personally affected by traffic issues which affect my family's health and well being. Over the period of my residence the traffic has increased enormously, particularly in the form of heavy lorries, most of which are at the maximum weight limit allowed (and probably in some cases over the limit). Netherhampton Road was designed as a "B" road but has since had designation (without any upgrading) as an "A" road. Previous consultations by Wiltshire Council has stated the residents of Harnham cannot use the size of this road to prevent development, but no consideration has been given in any plans to the increase of these heavy vehicles. There is much emphasis through the draft plan on preventing car use and yet nothing addresses anywhere that I can see the issue of these goods vehicles. Far from being an overall transport strategy this plan appears to be directed solely at the residents of Salisbury and their private car use. The heavy lorries using the A3094 Netherhampton Road commence noisy almost continuous transit along this road from approximately 3.40 a.m. My sleep patterns are such that I am awakened by the first of these Monday to Friday between 3.30 and 3.50 am. For a period I kept a diary which was passed to my local councillors and research was carried out into the traffic levels. Results showed that in excess of 40% of this traffic did not have business in Wiltshire but was using the road as an unofficial by pass to the Salisbury. The arrival of satnavs as a norm in vehicles has assisted in increasing the volume of traffic in the past 10 years. This research also showed the average speed of all vehicles was at least one third over the speed limit of 30mph. All Wiltshire Council figures appear to look at the times between 08.00 to 10.00a.m, and 15.00 to 17.00. The actual reality of the "nuisance" traffic is far outside these boundaries. Much of the traffic at the Gyratory end between these times is school run traffic which is an issue the Council fails to address. Genuine commuting or business traffic commences far earlier. I am happy to invite a representative to my home at 3.30 a.m. if he wishes to witness this! In the past year alone I have had to ask Wessex Water to repair the water main outside my home twice and they have also had to dig up the road and fill holes caused by traffic weight (not potholes but subsidence of the road surface). In the time I have lived here there has rarely been a period when the road has not had some sort of collapse or serious damage to drains, gas pipes or water mains. Structurally the road is not suited to the heavyweight vehicles constantly using it. Added car movements and construction traffic from any housing sites will compound this. When these vehicles hit these holes, even at 30 miles an hour, my house shakes and I have even had pictures fall from walls. My bungalow has a frontage of 30 feet so I am set back from the road which other</p>			

residents do not have the good fortune to be. The Transport plan acknowledges that there is little that can be done at the Park Wall end and that only some minor adjustments can be made at the Harnham Gyratory end of the road. The proposed site of these new homes is more or less midway between these two junctions. Harnham has no facilities apart from one local One Stop shop about 120 yards from my house. This offers little parking and is on a blind corner on to Netherhampton Road. The site proposals do not include any local shop facilities so this shop will no doubt be the nearest option for residents adding to traffic and parking congestion, I would add that is not uncommon for the lorries to pull up on Netherhampton Road to use this shop with the consequences of blocking the road, this despite yellow lines, a traffic island and a pedestrian crossing in close vicinity. The estate encompassing Essex Square, Wiltshire Road etc has only two roads accessing it from Netherhampton Road. These are from Norfolk Road where the shop is and at the traffic lights from Saxon Road. The latter is often heavily congested with school traffic. On occasion it has been known for residents to have to wait as long as 10 minutes to turn safely from Norfolk Road into Netherhampton Road. Any further congestion from people living on the new housing sites will greatly increase the problem. Much is made of s.106 Agreements in the plans but these are not guarantees to residents currently living in Harnham who already have the effects of traffic to deal with. Much is made of a 15 minute bus service to these new sites. When I moved to Harnham there was such a service but these buses have now been cut over the years to 30 minutes and hourly on Sunday. There is no compulsion to private bus companies to run these services and therefore no guarantee. Buses within Salisbury are extremely expensive. To reach the district hospital from Harnham requires 2 buses, one taking you into town and the second taking you out. Return fares on this journey amount to around £8.00 per trip per person. Assumedly any residents on the proposed sites would therefore use a car for the journeys. The travel plan refers to 4 major employers been envisaged in the City centre. Salisbury once had a large number of roles in the financial services sector. In the past 2 years all but one of these companies have left the area with the result that the specialist roles the employees fulfilled are no longer available. Those employees kept on by the merged companies now commute out of Salisbury, mainly by car due to the inadequacies of links to places such as Swindon which is now Wiltshire's one remaining large employer in financial services. The reference in the transport plan to commuters into Salisbury from outside the area is now out of date. On top of this the Salisbury City Council has allowed change of use of all but one of these major office buildings to make Retirement homes and flats. There remains only one office for rental by business, and since the redevelopment commenced it appears not one business is moving in any time soon. To develop a transport plan based on workers based in the City centre appears incorrect when it is assuming there will be 2,500 employees in City centre sites. My enquiries of Wiltshire Council have confirmed that these major employers are hypothetical at this stage. Following the Novochock incidents in Salisbury and Amesbury Wiltshire Council introduced free parking in these areas in an effort to get people back into the City. Judging from the amount of vehicles in the three hour parking bays around town during the all day free parking the number of visitors increased considerably particularly on Saturdays. Contrary to the Council's statements Salisbury only has one Wiltshire Council long stay car park and even during the all day free parking these bays were never full. If visiting Salisbury when parking fees apply the cost is extortionate in comparison with facilities and shops within the City. The free parking experiment has encouraged people back into the City but numbers are already appearing to drop off now it's only free from 3.00p.m. Put bluntly the cost outweighs any benefit to visitors. Even hotel guests have to rush to their cars before parking charges start to tick over as tickets in the long stay car park run from 8.00 a.m. If the Council is serious about redevelopment and rebranding the City they must address these issues without constantly telling residents they must not use vehicles. Recent research following the Novochock incidents has led to estate agents stating that 60% of properties in the area are sold to people from outside. These proposed new properties will be beyond the finances of the average Salisbury worker. The average wage in Salisbury according to payscale.com is just under £24,000. Houses built on the site in Netherhampton Road will clearly not be of high value due to their location and yet as Salisbury is the 7th most expensive town wage to house price ratio in the United Kingdom they will be well outside the pockets of the local people of Harnham and it's surrounding areas. If these areas have to be allocated could they not be used for some of the new council housing the Government as announced rather than to invite more outsiders in to commute out? There is mention of a new primary school in the plans but no doctors surgery. Harnham, which is a

considerable size, has no doctors surgery within its local area meaning travel by residents to other sites within the City centre and the outskirts is necessary. Like most areas there is a problem getting factor's appointments and the building of some 700 homes without new facilities will put even more pressure on the medical facilities. s.106 Agreements will not cover these facilities from what I understand. These two sites offer very little apart from housing. Tinkering with roads, adding cycle paths etc will not remove the unsuitability of the areas chosen without major commitment to the road network, access problems and more importantly doctor surgeries, shops and leisure outlets. As described in these plans any homes on these sites are just fill ins of land with high density houses. There would be no sense of community or belonging as they are too remote from either the City Centre or Wilton. Harnham has a few public houses and a social club but these are around 2 miles from the sites and not accessible. Plannine in Salisbury has taken a scatter gun approach over the years causing many of the traffic problems as a result. An example of two faxed planning is the soon to be opened drive through McDonald's on the Southampton Road. So congested with traffic is this stretch of road that our local MP has stated today that he is "watching this road". Traffic queuing here can often stretch back to Exeter Road roundabout at all times of the day. Who in their right mind would therefore consider adding a drive through restaurant into this major blocked artery a good idea? It seems ridiculous for Wiltshire Council to rage about traffic in the centre of Salisbury when planning allows more and more development along this road which can realistically only be reached by car - the name drive-thru giving the game away. In October 2018 research by the group Transport for New Homes concluded that current planning rules by numbers of homes in an area rather than offering local facilities was creating estates where people were "trapped in car dependency". This report looked at 20 housing sites around the country and ironically highlighted as one of the worst an estate in Trowbridge, Wiltshire - the home of Wiltshire Council. This report states: The problem is that planners are measured by whether they hit their targets for new housing, she said. At the moment they just approach developers who are sitting on greenfield sites and end up peppering housing round towns without any regard to whether the land is accessible or not. Ironically they are describing the Netherhampton Road sites exactly! Salisbury is in a complete muddle at present following the Novochock incidents, departure of major employers in the area and the closure of many shops in the City centre. It is arguable whether these allocations are even in the right area of Wiltshire to be useful. No one is actually certain how things will develop in the nexr 10 years. The lack of local jobs currently available in the mid-salary range will affect new people moving into the area. Certainly Salisbury City Council has taken steps with its planning agreements for retirement complexes over business use to state inadvertently that they envisage a much older demographic development for the area. As I have already stated previously I object to this ill planned development on the grounds of traffic increase, air quality, lack of facilities etc. However I would say that I would not object to a smaller development of rentable council or housing association homes for those on the Council waiting list for Salisbury houses if proper facilities such as shops, doctors surgery, leisure facilities were on site thereby hopefully reducing car reliance and properly planned. Development on the proposed scale without these facilities and road improvements such as a by pass will only add to the existing problems. If these sites do go ahead for development of any kind could I suggest that building site traffic is only allowed to enter from the Park Wall end of tge A3094 to at least give residents of Netherhampton Road relief from the dirt and traffic problems during any presumably long construction period.

<b>Identify Proposed Change Reference Number</b>	PC94				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations. Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement and across</p>				

	<p>Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. Additional comments: 1. I moved to Bratton from London in January 18 as it was No 1) a village No 2) quiet No3) safe. If such a large number of houses are built as proposed Bratton will cease to be a village No 2) it won't be so quiet due to increased traffic and No 3) it certainly becomes increasingly less safe. Furthermore the proposal does not meet expectations of 'villages'! Statistics should not be fudged - could end up a criminal offence.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	We have a sound neighbourhood plan which is progressing very well. Reg 14 is planned for November 2018, and Reg 16 is planned for early next year. This neighbourhood plan is aiming to allocate land to meet identified housing needs. The parish should be able to determine its own future, as set out in the Council's and the Government's localism agenda. The neighbourhood plan's agenda is consistent with the National Strategy: small scale housing developments (less than ten) are promoted in large villages. For these reasons, I support the proposed change to remove the Ridgeway Farm site from the Wiltshire Housing Site Allocations Plan.

<p><b>associated evidence documents.</b></p>	<p>Has anyone come to Harnham to see for themselves the TWO roads out. I somewhere read an incredible statement from, I believe , a councillor stating that there would be little extra traffic!!</p> <p>840 ish houses would generate 1600 extra cars on the two roads. The road I live in has an average of two cars per house so I assume the same would happen on the new estate. Talking to someone in the council, there are plans for a school and retail outlets eg Tesco.</p> <p>So that's a school with teachers, Teaching assistants, admin staff, canteen workers etc, few of them local so again added traffic not to mention the parents driving to the school. The new store will generate traffic from Wilton and the west side of Salisbury and we will have gridlock. The Tesco store would need many large articulated lorries to keep the shop stocked. The roads are not wide enough to allow this added traffic</p> <p>If you want to build a southern by-pass this might work but as I said there is only one road out to the west and one to the east, already congested now at certain times of the day.</p> <p>The road I live in turns into the main road via traffic lights and some parts of the day it is nearly impossible to drive out of the road due to stationary traffic across the junction!!!</p> <p>I know the government is pushing for all these houses but this would be a traffic nightmare and must be stopped. This is a disaster waiting to happen. I don't suppose any of the people pushing for this to happen live in our area?</p> <p>The council should continue to look for brown sites etc like UK land and stop building on our fields or we will have to source more and more food from abroad!!!</p>

There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. Building these houses in the area approaching the village will be an eyesore and detrimental to the village as a whole. The number is for too large for a village of this size, and goes against Wiltshire's own guidelines. The figures used to justify the build area are also inaccurate. The increase in traffic is not acceptable and housing should only be considered as part of the Neighbourhood Plans and not an imposition from the centre.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	I support the proposed change, to remove the Ridgeway Site Allocation from the Wiltshire Site Allocation DPD, on the basis that: There is no Strategic Need for Wiltshire to allocate housing in Crudwell because supply in the Housing Market Area is good and the Wiltshire Core Strategy states that development in Large Villages should be limited to "small sites" to meet local needs. Our village's Neighbourhood Plan is progressing extremely well (Reg 14 Consultation planned for November 2018 and Reg16 planned for early Spring), and is planning to allocate land to meet identified needs. The Council's and Government's Localism agenda is best served by allowing the Parish to determine its own future.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations. Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement and across</p>			

	<p>Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. We are a village. Let's stay that way not an extension of Westbury!</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>RE: Wiltshire Housing Site Allocations Plan - Focussed consultation on the Schedule of Proposed Changes and associated evidence documents (including revised Sustainability Appraisal and an update to the Addendum to the Habitats Regulations Assessment) This letter provides the response of Gladman Developments Ltd. (hereafter referred to as Gladman ) to the Wiltshire Housing Site Allocations Plan - Focussed consultation on the Schedule of Proposed Changes and associated evidence documents (including revised Sustainability Appraisal and an update to the addendum to the Habitats Regulations Assessment) , which is being consulted upon until 9th November 2018. This consultation relates to a Schedule of Proposed Changes that was submitted to the Secretary of State alongside the Local Plan. Gladman note that the Councils Examination website includes correspondence between the Inspector (PC01, PC01a and PC02) in which it was agreed that a six-week period of public consultation would be undertaken on the proposed changes in advance of the Hearings Sessions stage of the Examination. Gladman welcome the opportunity to comment on the proposed changes and agree that they would represent main modifications to the plan that was previously published for consultation under Regulation 19 in Summer 2017. Having considered the consultation documents that have been published by the Council, Gladman would wish to reiterate the continued relevance of our representations that were submitted on Friday 22 September 2017 during the Regulation 19 consultation. We also maintain our request to be provided the opportunity to discuss the matters that we have raised further at any associated Hearings Sessions in due course. The comments provided below should be read alongside our representations that were made in September 2017, which can be found enclosed for information. Overview Wiltshire Local Plan 2006 2026 Since the Regulation 19 consultation in Summer 2017, the national planning policy position has evolved. In particular, the Revised National Planning Policy Framework, July 2018 has been published (NPPF2) confirming the introduction of a new standard methodology for the calculation of housing needs. It is noted that NPPF2 will not directly impact upon the Wiltshire Site Allocations Plan at this stage due to transitional arrangements being in place for those plans submitted for Examination before 24 January 2019. However, the requisite requirements within the standard methodology are expected to see the annual housing requirement for Wiltshire increase and are therefore relevant in the wider context of the Wiltshire Local Plan and the pressing need for it to be comprehensively reviewed. As set out in our previous representations, the Wiltshire Core Strategy that was adopted in January 2016 was predicated on the need to ensure that it is the subject of a partial review at an early date, reflecting both the need to look forward to an appropriately long term end date (and in this context the need for minimum 15 year plan periods have been confirmed through paragraph 22 of NPPF2); and, the need to reflect up to date evidence of housing need. Gladman continue to stress that the minimum housing requirement set out through the Core Strategy and the associated Inspectors Report is not a capped target</p>			

and should not therefore be treated that way through the production of the Site Allocations Plan. Housing Delivery Strategy and the Settlement Boundary Review It is noted that the schedule of proposed changes is supported by Topic Paper 1: Settlement Boundary Review Methodology. Gladman continue to raise concerns at this proposed approach to managing development at the edge of settlements, as it fails to provide flexibility to support sustainable forms of development from coming forward or recognise the indicative nature of the proposed distribution of housing in the Core Strategy (as set out in Section 4.2 of our previous representations). Topic Paper 1 highlights some examples of local authorities where settlement boundaries have been proposed or are included within local plans. However, this benchmarking is selective and fails to consider local planning authorities that take forward a criteria based approach to managing growth at the settlement edge (e.g. Harborough District Council) or authorities that provide flexibility within policy wording to ensure that development adjacent to settlement boundaries can come forward in circumstances where it is demonstrably sustainable or the need exists, including needs associated with the maintenance of a rolling five year supply of housing land (e.g. Derbyshire Dales District Council and South Derbyshire District Council). It is noted that the revised Settlement Boundary methodology proposes to exclude employment development at the edge of large villages. Gladman are of the view that the existing built form of a settlement should be included in its entirety where settlement boundaries are proposed within local plans. Furthermore, the Councils decision to exclude proposed site allocations and unimplemented planning permissions from settlement boundaries is also a critical issue that will need to be positively managed through the Councils monitoring and decision-making processes. Gladman are of a view that site allocations and consented sites should be included within settlement boundaries. Site Allocations Within Gladmans previous representations, concerns were raised that the emerging Site Allocations Local Plan was failing to bring forward a strategy that could meet the minimum housing requirement set out in the adopted Core Strategy or meet objectively assessed housing needs. Having reviewed the Schedule of Proposed Changes and associated Topic Papers, the opportunity has not been taken to improve this position. Indeed, it appears to have worsened. An updated version of Figure 1 Currently Proposed Contingency of Housing Land is provided below: [SEE TABLE IN ATTACHMENT] It is now considered highly unlikely that the minimum requirement will be met over the plan period and the proposed plan is therefore considered by Gladman to be inconsistent with national policy. In particular, paragraph 47 of the original National Planning Policy Framework (NPPF1), which requires local planning authorities to boost significantly the supply of housing. In plan-making, it is essential that the housing requirement is treated as a minimum rather than a maximum ceiling. In the case of Wiltshire, this is exacerbated by the fact that the Core Strategys housing requirement does not reflect the Full Objectively Assessed Housing Needs. Gladman are of the firm view that greater headroom is required within the Wiltshire Local Plans housing allocations as a result. As set out in our previous representations to the Local Plan, Gladman consider that there is a need to provide a contingency of sites at the upper end of the Home Builders Federations suggested range (20%). This continues to be an approach that Inspectors endorse in local plan examinations. In addition to the examples highlighted in our previous representations at paragraph 4.3.5, a 17% contingency has been applied to the Derbyshire Dales Local Plan (examined Spring 2017); a 17% contingency has been applied in the Rugby Local Plan (examined Summer 2018); and, a 16% contingency has been applied in the Stockton-on-Tees Local Plan (examined Summer 2018); Our previous representations included a table at Figure 3 that highlighted the required surplus that would need to be identified to secure a 20% contingency. For completeness, this has been updated below to reflect the Councils most recent position: [SEE TABLE IN ATTACHMENT] The Councils site selection process (set out in Topic Paper 2, July 2018) indicates that the requirement of the Site Allocations Plan is to allocate sites for housing development to ensure enough land is allocated to help meet the minimum requirements of each housing market area (paragraph 2.1). This is considered by Gladman to be a mis-interpretation of national policy on this matter, which seeks: to significantly boost the supply of housing; meet objectively assessed housing needs for the housing market area in full over the plan period; include flexibility to allow rapid responses to change; and, to positively seek opportunities to meet the development needs of the area. Implementation and Monitoring As stated in our previous representations, there is a pressing need for the Wiltshire Local Plan to be comprehensively reviewed. A clear monitoring and review mechanism is required within the Plan to ensure that the it is fully responsive to changes in circumstance relating to the development needs of the area and the maintenance of a five year housing land supply. Any such

	mechanism should be built into policy wording and set an unambiguous commitment to review the plan, or specific policies of the plan, within a firmly agreed period.

<b>Identify Proposed Change Reference Number</b>	N/A [CRUDWELL PLANNING APPLICATION]				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	My husband I wish to register our complaint about the proposed development at The Ridgeway Site, Tetbury Lane, Crudwell. It will completely swamp the village and take away its identity. Tetbury Lane is a narrow road, which is used extensively during the year by large (and growing even larger) tractors and farm vehicles which make walking up the lane to the much used village hall difficult without the addition of more housing. The lane has been running with water during the heavy bursts of rain which we have had since the new houses were built. They are built on a slight rise and the road washes the water away down the lane, the drains are not kept clear (they are plugged with leaves, mud and plants growing in them) so the water rushes down the road to the main highway. The school in the village is packed to capacity (I know this for a fact as I help there) and the doctors' surgery in Malmesbury is difficult to get an appointment because of the new housing around Malmesbury. With the increase in staff at Dyson (much needed jobs brought to the area), the A429 is particularly busy from 6am through to 6.30pm. It can take several minutes to get out from Tetbury Lane if you need to access it at 8.30am or from 5pm. This planning application needs to be thought through very carefully so as not to lose the identity of a very lively and hospitable village.

<b>Identify Proposed Change Reference Number</b>	PC94				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Consultation on the draft Wiltshire Housing Site Allocations Plan - Sites 321 and 738 To whom it may concern I write with the following comments on the proposed developments noted above, which I trust the above may be of use: Quantity of houses Bratton is deemed a large village under Core Policy 32 of the Wiltshire Core Strategy (WCS). Paragraph 4.15 states development in large villages 'will predominantly take the form of small housing (defined as sites involving fewer than 10 dwellings). Both sites propose significantly greater than 10 dwellings - Site 321 proposes 35, and Site 738 proposes a further 22. Both would therefore be considered as major applications. I am unaware of any justification for the increased demand for housing in Bratton, and welcome any further information on this. Table 5.19 of the WCS states 55 more houses are needed to be provided by 2026 across the remainder of the Westbury Community Area. The proposed sites in Bratton would exceed this, irrespective of any other proposed developments across the community area. It would be illogical for Bratton to absorb this need in its entirety, especially given that Dilton Marsh (for example) has better access to both employment and transport links. The proposed development would see a 10-15% increase in dwellings (there is a discrepancy between Wiltshire Councils and Bratton Parish Councils figures for the number of existing houses (819 vs 506)), which is a significant addition to the village, with no proposed employment or any other additional services. The significance either of these developments will have upon the village should also ensure a thorough and comprehensive public consultation and engagement is undertaken to ensure the appropriateness of any development. Location of development 'There is a general presumption against development outside the defined limits of development of Large Villages (WCS 4.16). I believe both sites currently lie outside the Bratton settlement boundary (I appreciate this has recently been the subject of a proposed revision), and would also have a significant impact on the setting of both the village and the surrounding countryside. Density of development I appreciate the need to maximise developable plots of land, but the proposed density of both developments should take into consideration the surrounding built context (NPPF paragraphs 122-123). Both sites densities exceed densities seen elsewhere in the village, and are approximately 1.5x greater than the adjacent Court Orchard estate, which itself has a higher density than elsewhere in the village. This would amount to an incongruous grain, especially considering that both sites lie on the the boundary of the village (not the centre, where density would typically increase). Given these sites would in effect form the western entrance to the village, care should be taken to ensure appropriate and sensitive development. Sustainability CP1 (WCS) states that development at Large [ ] Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. NPPF paragraphs 72 &amp; 78 promote developments which support and aid a sustainable community. Both sites would only provide housing (potentially in excess of what is needed), and do not provide any greater</p>			

	community benefit. Highways Bratton has few viable alternatives to transport beyond the use of private car. Further, with little local employment, and typically 2 cars per household, development would see a significant increase in vehicular use, with both sites only able to access the B3098. Again, this would show no great reason for the proposed increased in density, which is typically applied where there is less reliance on private cars. These developments would only further increase reliance on the car, contrary to CP34.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	Thank you for consulting the Environment Agency on the proposed changes to the above strategic document. We wish to offer the following comments. In our response to the Wiltshire Housing Site Allocations Plan (WHSAP) Pre-Submission Draft Plan, June 2017 (letter from Katherine Burt, dated 22 September 2017) we considered the Plan to be unsound. We note that our comments have been incorporated in the proposed changes to the Plan, therefore we now consider the Plan to be sound, provided all other related Plans (e.g. The Hampshire Avon Nutrients Management Plan) are carried forward and implemented. Below we offer further comments relating to the proposed changes. Flood Risk Relating to proposed change ref number PC13 on page 5 and PC51 on page 20, we note that two sites in Trowbridge Upper Studley and Elizabeth Way have had their housing numbers increased. In our previous comments we specified that any housing on these sites must be kept within Flood Zone 1. Therefore we would request that you check whether the amount of Flood Zone 1 on the sites can adequately accommodate the increase in housing, i.e. will there be enough space on the site?

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	Thank you for consulting the Environment Agency on the proposed changes to the above strategic document. We wish to offer the following comments. In our response to the Wiltshire Housing Site Allocations Plan (WHSAP) Pre-Submission Draft Plan, June 2017 (letter from Katherine Burt, dated 22 September 2017) we considered the Plan to be unsound. We note that our comments have been incorporated in the proposed changes to the Plan, therefore we now consider the Plan to be sound, provided all other related Plans (e.g. The Hampshire Avon Nutrients Management Plan) are carried forward and implemented. Below we offer further comments relating to the proposed changes. Flood Risk Relating to proposed change ref number PC13 on page 5 and PC51 on page 20, we note that two sites in Trowbridge Upper Studley and Elizabeth Way have had their housing numbers increased. In our previous comments we specified that any housing on these sites must be kept within Flood Zone 1. Therefore we would request that you check whether the amount of Flood Zone 1 on the sites can adequately accommodate the increase in housing, i.e. will there be enough space on the site?

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	Bore Hill Farm, Warminster PC80, page 34 Since we made our previous comments, the allocation of this site has stimulated much local public interest. The Environment Agency have been involved as we are the regulator in charge of Permitting the adjacent waste management facility (Anaerobic Digestion [AD] plant). We previously made a comment about the potential for odour from the plant to be an issue for new residents. We wish to add to the strength of our comments by adding that we have many records of odour complaints relating to this AD plant. Despite the fact that we are working with the site operator to address this problem, odour persists as an issue for many existing local residents. Therefore, we can be confident in saying that odour is very likely to be an issue for new residents at Bore Hill Farm in the future. In light of this, we would encourage Wiltshire Council to carefully consider the allocation of this site for housing. Notwithstanding this, we would not wish to object to this allocation.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>The local community believe that the H2.7 East of Dene (Home Farm) site should be removed from the proposed DPD. The reasons are attached by separate sheet to the document. [see below]. The views represented in this paper are that of the local East Boreham community submitted on their behalf by the East Boreham Residents' Action Group (EBRAG). The aim is to ensure that development in and around East Boreham is sustainable. EBRAG formed in 1980, but still retains an active, experienced and knowledgeable committee, a data base of some several hundred concerned residents and a website (currently being reconstructed) with over 7,000 hits. EBRAG has held several well attended public meetings, regularly updates local residents on the current situation through email and leaflet drop and has the backing of the local county MP, ward town councillors and clearly the local community. EBRAG has submitted many representations on the Wiltshire Council websites against a speculative development application 16/10502/OUT and the original proposed Wiltshire Council Spatial Planning WHSAP/20 for site H2.7, dated 22nd September 2017. These documents should be read in conjunction with this further submittal. The community feels that the proposed revised changes to PC76, PC77 and PC:78 within the WHSAP for Housing Allocation H2. 7 does not adequately reflect the many representations and specific concerns made on this proposed allocation during the initial and subsequent consultation. The Wiltshire Council changes only repeat the policies in the National Planning Policy Framework (NPPF) that a Planning Authority would be required to follow. The Regulation 22 (1) (c) Report Consultation Statement Appendices M -P (Paragraph 21.74) indicated that 64 representations were received and documents the Wiltshire Council response. The following paragraphs highlight the local communities continued concerns with the lack of proposed changes following that representation. Landscape/ conservation Issues Issues raised Disagreement over potential landscape/conservation impacts and the suitability of parts of H2.7 site to be developed. Wiltshire Council Response Assessment of H2.7 site and the raised concerns by Wiltshire Council officers has led to the conclusion that development should be located primarily within the northwest part of H2.7, where landscape and conservation impacts can be more effectively mitigated. Proposed change by Wiltshire Council following representation None. EBRAG comment The conclusion from the 2017 Landscape Assessment Part stated - "The site contributes to the setting of Bishopstrow Conservation Area, Battlesbury Hill and south eastern edge of Warminster. There are also views through the site from the local PRoW network north towards Battlesbury Hill and south towards the treed Bishopstrow Conservation Area. It would be difficult to mitigate the removal of these features should the site be developed. However, proposed development would be less constrained in the north west of the site due to the proximity of existing development and the lower sensitivity in terms of wider landscape setting and views. Boundaries to development could be planted with groups of trees, copses and individual specimen trees to help mitigate the effect on landscape character and views. The</p>				

northern, south western and eastern parts of the site would be more sensitive to development due to the proximity of the Conservation Area and views north towards Battlesbury Hill. The overall capacity to accommodate change would be moderate -/ow". The Landscape Assessment does not consider the views from Battlesbury however the Heritage Impact Assessment does indicate a potential for - "setting change to Battlesbury Camp hillfort (SM) in vistas to the south from the monument". The landscape associated with this site has not changed since the Planning Inspectors Report into the West Wiltshire District Plan in 2004 who, when considering the location of Warminster's Settlement Boundary, commented - "/ saw that the land mostly comprises arable fields, with similar fields to the north, together with a few cottages and other houses (some set in trees) and bounded by lanes or roads, to the east, west and south. Although there is urban development immediately to the west (across Grange Lane), the area has a pleasant and obviously rural appearance and is very much on the edge of Warminster. From my observations from local footpaths to the north, west and east of the area and from Battlesbury Hill, I consider that the land relates well in visual terms to the open countryside to the north and east, forming an integral part of the countryside east of the town. I accept that a high stone wall and cottages fronting Boreham Road impact on any meaningful visual relationship with the countryside to the south, other than when seen from the Hill top. However, in view of the open-ness of the land and its linkage with other open land to the east and north (and especially Battlesbury Hill), I consider that the town policy limit hereabouts should be drawn along the eastern edge of the denser development fronting The Dene, St George's Close and (the southern part of) Grange Lane". The current Heritage Impact Assessment (LUC) provides a much more comprehensive and detailed assessment including the effects of limiting development in the north. This document details much more significant effects than were considered by the Sustainability Analysis and therefore should be reviewed in entirety before any decisions are reached. River Avon SAC Issues raised The need to protect biodiversity (River Avon SAC and 5551, local wildlife). Wiltshire Council Response Additional wording is proposed to be added to the supporting text to ensure that the policy adequately addresses the need to protect the River Avon SAC. EBRAG Comment Although Wiltshire Council Response indicates that a wording change is proposed, EBRAG cannot identify any change in PC76, PC77 and PC78 that relates to change. The main problem affecting the River Avon SAC is phosphate concentration. To this end Wiltshire Council has a Nutrient Management Plan (NMP) to identify appropriate and proportionate mitigation measures. However, the Planning . Officer's report on application 17-01463-FUL to the Strategic Planning Committee 15th August 2018 stated - "The aim of the NMP is to bring phosphate concentrations in the River Avon SAC down to the conservation targets set by Natural England in order to bring the river system into a favourable condition. This is a requirement of the Habitats Regulations. The underlying premise of the Plan is that increases in sewage derived phosphate would be more than offset by reductions from DEFRA's catchment sensitive farming {CSF} initiatives. However, at the beginning of 2018, Natural England and the EA reported that CSF has been much less effective than that which was projected by the NMP modelling and is unlikely to satisfactorily offset the increased level of phosphates from new development". Surface water flooding has been reported many times on the East of Dene site (H2.7), to the west in Grange Lane, to the south along Boreham Road and principally around the Sutton Veny roundabout. This combined with the less effectiveness mitigation is likely to increase the phosphate concentration in the River Avon. Wiltshire Council have yet to successfully manage pollution of the River Avon with respect to the current planning approvals and should not be proposing further harmful development at this time until a SFRA level 2 is completed. Flooding Issue raised Flooding issues on the site and in the local area and the lack of SFRA Level 2 or Surface Water Management Plan. Wiltshire Council response The proposed allocation is located within Flood Zone 1. The Environment Agency has no objection in principle. Any proposals for development of this site should be informed by a site-specific flood risk assessment which should inform design, layout and any mitigation measures required. Proposed change Give greater emphasis to flood and drainage requirements through site specific assessments. EBRAG Comment The only way Wiltshire Council can achieve its legally required duty of managing all forms of flooding in combination across the county is to understand the causes of all floods, record the extent of flooding, where the problem areas are and then devise a strategy to manage these issues. Current national flood risk management policy requires councils to undertake high level flood risk assessments (SFRA 1) and use these to highlight areas needing further assessment; Warminster has been highlighted as needing more. Using the historic flood records and additional flood assessments undertaken in high risk areas such as a SFRA 2,

surface water management plan, flood risk asset maps and floodplain extent maps, Wiltshire Council can then devise an adequate flood management strategy. This has yet to occur. Without the required SFRA 2, or associated supporting plans, Wiltshire Council has (like in Watermead Parish) broken national requirements and proceeded without undertaking an adequately detailed sequential test. Does this make the current development site selection for Warminster illegal? The EA and Wiltshire Council came to a legal understanding when finalising the Core Strategy called a Main Modification which meant the EA would not stop the whole Core Strategy by objecting, only if Wiltshire Council agreed to do the required SFRA 2. This was intended to increase Wiltshire Councils understanding of flood causes in Warminster to ensure safe site selection, which is a legal requirement. The cause of flooding comes from Zones 1 and 2 overwhelming the known limited capacity of the flood infrastructure and the amount of space left in Zone 3, the floodplain, due to previous developments and the addition of flood assets like culverts, bridges and sluices. These increase flood risk across the area but the location and effects have not been mapped yet. Wiltshire Councils response to the issues raised are that the areas being put forward are in Zone 1, the developers will do sufficient flood risk assessments and that the EA will not object. This fails to recognise the EA have a standing objection that Wiltshire Council doesn't have sufficient flood info to make site selection decisions. Developers assessments therefore, when completing their flood risk assessments, will also be based on inaccurate data, so any flood management strategies are extremely suspect. Heritage Assets Issue raised Potential harmful impacts on heritage assets (including Bishopstrow Conservation Area and listed buildings surrounding the site). Wiltshire Council Proposed change. Heritage Impact Assessment to ensure appropriate consideration is given to the significance of heritage assets and their settings. EBRAG Comment The proposed changes do not adequately reflect the comment (ID 1646) from Historic England - "There is a risk to the significance of several affected heritage assets including a Conservation Area, listed buildings and the wider historic landscape setting. No doubt this site will be of considerable archaeological interest. Is the local authority able to confirm it is satisfied that it is appropriate to undertake an archaeological assessment at the application stage that would allow an appropriate response where necessary as a result of the findings? See relevant national policy. Greater certainty/clarity is required re the degree of harm; the strategic layout and form of future development in response to this context. This is sensitive site and difficult to access and as it is a pivotal issue in relationship to the principle it needs to be resolved at the Plan stage and not left to any future application. A field boundary/Jane divides the site north south and is a strong characteristic feature". The Wiltshire Council proposed changes only reflect the actions that would be carried out for any development site to designated and non-designated heritage consistent with national policy. It does not reflect the quantity of heritage assets affected, archaeological interest, historic setting and the degree of harm that development would produce. As stated by Historic England in their comment this is a sensitive site. The local community have repeatedly suggested extending the Bishopstrow Conservation area from the east of the site to cover the south west and eastern area of the site to protect against future development. Infrastructure Issue raised Concern over infrastructure capacity (including Education and Health). Wiltshire Council response towards Education While local school capacity is noted as problematic, primary school expansion is possible. Wiltshire Council Proposed change None. EBRAG Comment The Wiltshire Infrastructure Delivery Plan (dated September 2013) indicated the essential infrastructure need was - "Relocation of Kingdown Secondary School to provide an additional 241 pupil places. Some surplus places but forecast to be full by 2014/11 The Wiltshire Infrastructure Delivery Plan (dated December 2016) indicated the essential infrastructure need was - "Site (at least 3.6ha) to co-locate additional secondary places within West Urban Extension to provide 309 places. Some surplus places but full by 2018. Not able to expand. No land nearby. Land required on strategic site. 11 (Note: emphasis in bold in original Wiltshire Council document). The Planning Officer's Report to the Strategic Planning Committee (15th August 2018) for planning application 17-01463-FUL states that- "In terms of secondary school infrastructure, the only designated non-private local secondary serving Warminster is Kingdown Academy which has PAN (years 7-11) capacity of 1,385 places. As of October 2017, the number of year 7-11 pupils on the roll amounted to 1,310 pupils and it is forecasted that the number of pupils will increase to 1,335 by 2023. As is the case with the local primary schools, there are other registered/consented residential developments in the community area that would take up the nominal spare capacity at the Academy which has limited potential to expand at the existing site". At the Warminster Town Council meeting (22nd May 2018) to discuss planning application 17-

01463-FUL, Town Councillor Brett, Chair of the Kingdown Academy, stated that he was unaware of any approach made to the school about future provision to meet requirement. He also stated that there were no plans for Kingdown Academy Year 7 group to be moved to a different site. Wiltshire Council response does not address the well-known infrastructure problems associated with secondary education in Warminster. The capacity problems of secondary education in Warminster has been well documented before the original Core Strategy examination in 2013 and Wiltshire Council have yet to demonstrate any progress to mitigate in the last 5 years. Wiltshire Council response towards provision of Health Provision The Wiltshire Infrastructure Delivery Plan {dated September 2013} indicated the essential infrastructure need was- "£Potential relocation of existing GP practice and improvements to existing practices in the villages. Most practices are full to capacity". The Wiltshire Infrastructure Delivery Plan (dated December 2016) indicated the essential infrastructure need was - "Support development of local primary healthcare facilities. Meet impact of new housing of local practises, which are already undersized for the current number of current patients". (Note: emphasis in bold in original Wiltshire Council document). Since the Wiltshire Core Strategy was approved, the number of GP Practices in Warminster have decreased from 2 to 1, with the closure of the Smallbrook Surgery in September 2017. An outline planning application has been approved for the WUE in June 2018 which does include a new medical centre, however this is not supported by NHSE of the CCG and so has yet to materialise. EBRAG Summary By failing to address raised concerns or propose solutions to either the education or health infrastructure, deemed essential for development in Warminster in the Core Strategy in 2013, Wiltshire Council have not adequately explained how further additional housing in Warminster can be proposed without the relevant infrastructure issues being addressed and mitigated. Access Issue raised Concerns over highways and access impacts. Wiltshire Council response Evidence indicates that the local highways network is capable of accommodating the number of dwellings proposed and that Highways consider access could be achieved. Wiltshire Council Proposed change None. EBRAG Comment Wiltshire Council proposed access to H2.7 from Boreham Road, now reclassified as a B road, however the speed of traffic in both directions remains significant as cars accelerate leaving or start to slow to enter, Warminster. This is directly opposite the proposed access entrance. Anyone standing on the blind bend just short of the proposed Boreham Road entrance to the site, witness cars regularly driving well above the speed limits. The local community remains concerned that since this is the only proposed access to the site, there will be a high risk of accidents occurring at the proposed entrance just after a blind bend. The final Heritage Impact Assessment (LUC) dated March 2018 described in its predicted effects for the access from Boreham Road as- "11/f access is taken from Boreham Road, development will result in loss of at least one section of historic walling. This would result in setting change to the Bishopstrow Conservation Area as the wall currently provides a strong visual and historic boundary for the CA -in addition to making a strong positive contribution to the character and appearance of the CA". It goes on to say in the options for sustainable development that - "limited development could be accommodated in northwest corner of the site. This, in parallel with strengthening existing landscape structure, would avoid adverse setting change to key heritage assets". Access would need to be secured from the existing road network in The Dene, or via other means of access to the north, to avoid issues set out above. Although Wiltshire Council have accepted the overall conclusions from this document and limited the development to the northwest part of the site, they have ignored the effects of setting change due to access from Boreham Road. Wiltshire Council have not provided any explanation as to the reason that the option of access from the north has been ignored. Employment. Issue raised. Concern over lack of local employment opportunities. Wiltshire Council response. Due to the close location of Warminster, a Market Town and the proximity of the site to existing bus networks, the site is considered to be in a reasonably sustainable location. Proposed change. None. EBRAG Comment The underlying principles of the Wiltshire Core Strategy (Policy CPI) seek to manage future development to ensure that communities have an appropriate balance of jobs, services and facilities and homes. The strategy recognises that previous growth hasn't always been delivered in a proportionate manner, whereby housing is delivered in settlements where there are insufficient employment opportunities leading to out-commuting. This is the primary reason why the Warminster West Urban Extension (WUE) is a mix of housing, employment land, primary school, local amenities etc. H2.7 is purely a housing development and does not meet the principles of the Core Strategy in providing balanced facilities that are needed for a self-contained community. H2.7 does not provide additional employment area and so for new local

	<p>employment, relies on the employment area being developed to support the needs of the WUE. Wiltshire Council and Warminster Town Council have both recognised that Warminster is unusual in that more people commute out of town for work than are employed within the town boundaries. The main towns for employment near Warminster are Bath, Westbury, Trowbridge, Freme and Salisbury. With the exception of Salisbury, all of these would involve households from H2. 7 commuting through Warminster Town Centre. It therefore will contribute to Warminster's existing current traffic problems at peak times. EBRAG Overall Conclusion. Given the above information on landscape, pollution, flooding, heritage assets, infrastructure, access and employment the local community feel that if the sustainability assessment was repeated for this site against the objectives, it would have produced a different result. The site would have been classified as having major adverse effects and so would not have been considered suitable for selection. The local community believe that the H2.7 East of Dene (Home Farm) site should be removed from the proposed plan.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>The local community believe that the H2.7 East of Dene (Home Farm) site should be removed from the proposed DPD. The reasons are attached by separate sheet to the document. [see below]. The views represented in this paper are that of the local East Boreham community submitted on their behalf by the East Boreham Residents' Action Group (EBRAG). The aim is to ensure that development in and around East Boreham is sustainable. EBRAG formed in 1980, but still retains an active, experienced and knowledgeable committee, a data base of some several hundred concerned residents and a website (currently being reconstructed) with over 7,000 hits. EBRAG has held several well attended public meetings, regularly updates local residents on the current situation through email and leaflet drop and has the backing of the local county MP, ward town councillors and clearly the local community. EBRAG has submitted many representations on the Wiltshire Council websites against a speculative development application 16/10502/OUT and the original proposed Wiltshire Council Spatial Planning WHSAP/20 for site H2.7, dated 22nd September 2017. These documents should be read in conjunction with this further submittal. The community feels that the proposed revised changes to PC76, PC77 and PC:78 within the WHSAP for Housing Allocation H2. 7 does not adequately reflect the many representations and specific concerns made on this proposed allocation during the initial and subsequent consultation. The Wiltshire Council changes only repeat the policies in the National Planning Policy Framework (NPPF) that a Planning Authority would be required to follow. The Regulation 22 (1) (c) Report Consultation Statement Appendices M -P (Paragraph 21.74) indicated that 64 representations were received and documents the Wiltshire Council response. The following paragraphs highlight the local communities continued concerns with the lack of proposed changes following that representation. Landscape/ conservation Issues Issues raised Disagreement over potential landscape/conservation impacts and the suitability of parts of H2.7 site to be developed. Wiltshire Council Response Assessment of H2.7 site and the raised concerns by Wiltshire Council officers has led to the conclusion that development should be located primarily within the northwest part of H2.7, where landscape and conservation impacts can be more effectively mitigated. Proposed change by Wiltshire Council following representation None. EBRAG comment The conclusion from the 2017 Landscape Assessment Part stated - "The site contributes to the setting of Bishopstrow Conservation Area, Battlesbury Hill and south eastern edge of Warminster. There are also views through the site from the local PRoW network north towards Battlesbury Hill and south towards the treed Bishopstrow Conservation Area. It would be difficult to mitigate the removal of these features should the site be developed. However, proposed development would be less constrained in the north west of the site due to the proximity of existing development and the lower sensitivity in terms of wider landscape setting and views. Boundaries to development could be planted with groups of trees, copses and individual specimen trees to help mitigate the effect on landscape character and views. The</p>			

northern, south western and eastern parts of the site would be more sensitive to development due to the proximity of the Conservation Area and views north towards Battlesbury Hill. The overall capacity to accommodate change would be moderate -/ow". The Landscape Assessment does not consider the views from Battlesbury however the Heritage Impact Assessment does indicate a potential for - "setting change to Battlesbury Camp hillfort (SM) in vistas to the south from the monument". The landscape associated with this site has not changed since the Planning Inspectors Report into the West Wiltshire District Plan in 2004 who, when considering the location of Warminster's Settlement Boundary, commented - "/ saw that the land mostly comprises arable fields, with similar fields to the north, together with a few cottages and other houses (some set in trees) and bounded by lanes or roads, to the east, west and south. Although there is urban development immediately to the west (across Grange Lane), the area has a pleasant and obviously rural appearance and is very much on the edge of Warminster. From my observations from local footpaths to the north, west and east of the area and from Battlesbury Hill, I consider that the land relates well in visual terms to the open countryside to the north and east, forming an integral part of the countryside east of the town. I accept that a high stone wall and cottages fronting Boreham Road impact on any meaningful visual relationship with the countryside to the south, other than when seen from the Hill top. However, in view of the open-ness of the land and its linkage with other open land to the east and north (and especially Battlesbury Hill), I consider that the town policy limit hereabouts should be drawn along the eastern edge of the denser development fronting The Dene, St George's Close and (the southern part of) Grange Lane". The current Heritage Impact Assessment (LUC) provides a much more comprehensive and detailed assessment including the effects of limiting development in the north. This document details much more significant effects than were considered by the Sustainability Analysis and therefore should be reviewed in entirety before any decisions are reached. River Avon SAC Issues raised The need to protect biodiversity (River Avon SAC and 5551, local wildlife). Wiltshire Council Response Additional wording is proposed to be added to the supporting text to ensure that the policy adequately addresses the need to protect the River Avon SAC. EBRAG Comment Although Wiltshire Council Response indicates that a wording change is proposed, EBRAG cannot identify any change in PC76, PC77 and PC78 that relates to change. The main problem affecting the River Avon SAC is phosphate concentration. To this end Wiltshire Council has a Nutrient Management Plan (NMP) to identify appropriate and proportionate mitigation measures. However, the Planning . Officer's report on application 17-01463-FUL to the Strategic Planning Committee 15th August 2018 stated - "The aim of the NMP is to bring phosphate concentrations in the River Avon SAC down to the conservation targets set by Natural England in order to bring the river system into a favourable condition. This is a requirement of the Habitats Regulations. The underlying premise of the Plan is that increases in sewage derived phosphate would be more than offset by reductions from DEFRA's catchment sensitive farming {CSF} initiatives. However, at the beginning of 2018, Natural England and the EA reported that CSF has been much less effective than that which was projected by the NMP modelling and is unlikely to satisfactorily offset the increased level of phosphates from new development". Surface water flooding has been reported many times on the East of Dene site (H2.7), to the west in Grange Lane, to the south along Boreham Road and principally around the Sutton Veny roundabout. This combined with the less effectiveness mitigation is likely to increase the phosphate concentration in the River Avon. Wiltshire Council have yet to successfully manage pollution of the River Avon with respect to the current planning approvals and should not be proposing further harmful development at this time until a SFRA level 2 is completed. Flooding Issue raised Flooding issues on the site and in the local area and the lack of SFRA Level 2 or Surface Water Management Plan. Wiltshire Council response The proposed allocation is located within Flood Zone 1. The Environment Agency has no objection in principle. Any proposals for development of this site should be informed by a site-specific flood risk assessment which should inform design, layout and any mitigation measures required. Proposed change Give greater emphasis to flood and drainage requirements through site specific assessments. EBRAG Comment The only way Wiltshire Council can achieve its legally required duty of managing all forms of flooding in combination across the county is to understand the causes of all floods, record the extent of flooding, where the problem areas are and then devise a strategy to manage these issues. Current national flood risk management policy requires councils to undertake high level flood risk assessments (SFRA 1) and use these to highlight areas needing further assessment; Warminster has been highlighted as needing more. Using the historic flood records and additional flood assessments undertaken in high risk areas such as a SFRA 2,

surface water management plan, flood risk asset maps and floodplain extent maps, Wiltshire Council can then devise an adequate flood management strategy. This has yet to occur. Without the required SFRA 2, or associated supporting plans, Wiltshire Council has (like in Watermead Parish) broken national requirements and proceeded without undertaking an adequately detailed sequential test. Does this make the current development site selection for Warminster illegal? The EA and Wiltshire Council came to a legal understanding when finalising the Core Strategy called a Main Modification which meant the EA would not stop the whole Core Strategy by objecting, only if Wiltshire Council agreed to do the required SFRA 2. This was intended to increase Wiltshire Councils understanding of flood causes in Warminster to ensure safe site selection, which is a legal requirement. The cause of flooding comes from Zones 1 and 2 overwhelming the known limited capacity of the flood infrastructure and the amount of space left in Zone 3, the floodplain, due to previous developments and the addition of flood assets like culverts, bridges and sluices. These increase flood risk across the area but the location and effects have not been mapped yet. Wiltshire Councils response to the issues raised are that the areas being put forward are in Zone 1, the developers will do sufficient flood risk assessments and that the EA will not object. This fails to recognise the EA have a standing objection that Wiltshire Council doesn't have sufficient flood info to make site selection decisions. Developers assessments therefore, when completing their flood risk assessments, will also be based on inaccurate data, so any flood management strategies are extremely suspect. Heritage Assets Issue raised Potential harmful impacts on heritage assets (including Bishopstrow Conservation Area and listed buildings surrounding the site). Wiltshire Council Proposed change. Heritage Impact Assessment to ensure appropriate consideration is given to the significance of heritage assets and their settings. EBRAG Comment The proposed changes do not adequately reflect the comment (ID 1646) from Historic England - "There is a risk to the significance of several affected heritage assets including a Conservation Area, listed buildings and the wider historic landscape setting. No doubt this site will be of considerable archaeological interest. Is the local authority able to confirm it is satisfied that it is appropriate to undertake an archaeological assessment at the application stage that would allow an appropriate response where necessary as a result of the findings? See relevant national policy. Greater certainty/clarity is required re the degree of harm; the strategic layout and form of future development in response to this context. This is sensitive site and difficult to access and as it is a pivotal issue in relationship to the principle it needs to be resolved at the Plan stage and not left to any future application. A field boundary/Jane divides the site north south and is a strong characteristic feature". The Wiltshire Council proposed changes only reflect the actions that would be carried out for any development site to designated and non-designated heritage consistent with national policy. It does not reflect the quantity of heritage assets affected, archaeological interest, historic setting and the degree of harm that development would produce. As stated by Historic England in their comment this is a sensitive site. The local community have repeatedly suggested extending the Bishopstrow Conservation area from the east of the site to cover the south west and eastern area of the site to protect against future development. Infrastructure Issue raised Concern over infrastructure capacity (including Education and Health). Wiltshire Council response towards Education While local school capacity is noted as problematic, primary school expansion is possible. Wiltshire Council Proposed change None. EBRAG Comment The Wiltshire Infrastructure Delivery Plan (dated September 2013) indicated the essential infrastructure need was - "Relocation of Kingdown Secondary School to provide an additional 241 pupil places. Some surplus places but forecast to be full by 2014/11 The Wiltshire Infrastructure Delivery Plan (dated December 2016) indicated the essential infrastructure need was - "Site (at least 3.6ha) to co-locate additional secondary places within West Urban Extension to provide 309 places. Some surplus places but full by 2018. Not able to expand. No land nearby. Land required on strategic site. 11 (Note: emphasis in bold in original Wiltshire Council document). The Planning Officer's Report to the Strategic Planning Committee (15th August 2018) for planning application 17-01463-FUL states that- "In terms of secondary school infrastructure, the only designated non-private local secondary serving Warminster is Kingdown Academy which has PAN (years 7-11) capacity of 1,385 places. As of October 2017, the number of year 7-11 pupils on the roll amounted to 1,310 pupils and it is forecasted that the number of pupils will increase to 1,335 by 2023. As is the case with the local primary schools, there are other registered/consented residential developments in the community area that would take up the nominal spare capacity at the Academy which has limited potential to expand at the existing site". At the Warminster Town Council meeting (22nd May 2018) to discuss planning application 17-

01463-FUL, Town Councillor Brett, Chair of the Kingdown Academy, stated that he was unaware of any approach made to the school about future provision to meet requirement. He also stated that there were no plans for Kingdown Academy Year 7 group to be moved to a different site. Wiltshire Council response does not address the well-known infrastructure problems associated with secondary education in Warminster. The capacity problems of secondary education in Warminster has been well documented before the original Core Strategy examination in 2013 and Wiltshire Council have yet to demonstrate any progress to mitigate in the last 5 years. Wiltshire Council response towards provision of Health Provision The Wiltshire Infrastructure Delivery Plan {dated September 2013} indicated the essential infrastructure need was- "£Potential relocation of existing GP practice and improvements to existing practices in the villages. Most practices are full to capacity". The Wiltshire Infrastructure Delivery Plan (dated December 2016) indicated the essential infrastructure need was - "Support development of local primary healthcare facilities. Meet impact of new housing of local practises, which are already undersized for the current number of current patients". (Note: emphasis in bold in original Wiltshire Council document). Since the Wiltshire Core Strategy was approved, the number of GP Practices in Warminster have decreased from 2 to 1, with the closure of the Smallbrook Surgery in September 2017. An outline planning application has been approved for the WUE in June 2018 which does include a new medical centre, however this is not supported by NHSE of the CCG and so has yet to materialise. EBRAG Summary By failing to address raised concerns or propose solutions to either the education or health infrastructure, deemed essential for development in Warminster in the Core Strategy in 2013, Wiltshire Council have not adequately explained how further additional housing in Warminster can be proposed without the relevant infrastructure issues being addressed and mitigated. Access Issue raised Concerns over highways and access impacts. Wiltshire Council response Evidence indicates that the local highways network is capable of accommodating the number of dwellings proposed and that Highways consider access could be achieved. Wiltshire Council Proposed change None. EBRAG Comment Wiltshire Council proposed access to H2.7 from Boreham Road, now reclassified as a B road, however the speed of traffic in both directions remains significant as cars accelerate leaving or start to slow to enter, Warminster. This is directly opposite the proposed access entrance. Anyone standing on the blind bend just short of the proposed Boreham Road entrance to the site, witness cars regularly driving well above the speed limits. The local community remains concerned that since this is the only proposed access to the site, there will be a high risk of accidents occurring at the proposed entrance just after a blind bend. The final Heritage Impact Assessment (LUC) dated March 2018 described in its predicted effects for the access from Boreham Road as- "11/f access is taken from Boreham Road, development will result in loss of at least one section of historic walling. This would result in setting change to the Bishopstrow Conservation Area as the wall currently provides a strong visual and historic boundary for the CA -in addition to making a strong positive contribution to the character and appearance of the CA". It goes on to say in the options for sustainable development that - "limited development could be accommodated in northwest corner of the site. This, in parallel with strengthening existing landscape structure, would avoid adverse setting change to key heritage assets". Access would need to be secured from the existing road network in The Dene, or via other means of access to the north, to avoid issues set out above. Although Wiltshire Council have accepted the overall conclusions from this document and limited the development to the northwest part of the site, they have ignored the effects of setting change due to access from Boreham Road. Wiltshire Council have not provided any explanation as to the reason that the option of access from the north has been ignored. Employment. Issue raised. Concern over lack of local employment opportunities. Wiltshire Council response. Due to the close location of Warminster, a Market Town and the proximity of the site to existing bus networks, the site is considered to be in a reasonably sustainable location. Proposed change. None. EBRAG Comment The underlying principles of the Wiltshire Core Strategy (Policy CPI) seek to manage future development to ensure that communities have an appropriate balance of jobs, services and facilities and homes. The strategy recognises that previous growth hasn't always been delivered in a proportionate manner, whereby housing is delivered in settlements where there are insufficient employment opportunities leading to out-commuting. This is the primary reason why the Warminster West Urban Extension (WUE) is a mix of housing, employment land, primary school, local amenities etc. H2.7 is purely a housing development and does not meet the principles of the Core Strategy in providing balanced facilities that are needed for a self-contained community. H2.7 does not provide additional employment area and so for new local

	<p>employment, relies on the employment area being developed to support the needs of the WUE. Wiltshire Council and Warminster Town Council have both recognised that Warminster is unusual in that more people commute out of town for work than are employed within the town boundaries. The main towns for employment near Warminster are Bath, Westbury, Trowbridge, Freme and Salisbury. With the exception of Salisbury, all of these would involve households from H2. 7 commuting through Warminster Town Centre. It therefore will contribute to Warminster's existing current traffic problems at peak times. EBRAG Overall Conclusion. Given the above information on landscape, pollution, flooding, heritage assets, infrastructure, access and employment the local community feel that if the sustainability assessment was repeated for this site against the objectives, it would have produced a different result. The site would have been classified as having major adverse effects and so would not have been considered suitable for selection. The local community believe that the H2.7 East of Dene (Home Farm) site should be removed from the proposed plan.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Wiltshire Housing Site Allocation Plan Opposition to Site 3565 For the attention of the GOVERNMENT INSPECTOR Throughout the planning process Wiltshire Council has consistently broken a number of its Core Policies and ignored legislation and governmental agencies reports and recommendations directly pertaining to Site 3565. There has been widespread public condemnation of Site 3565 from the local community. Factual supporting evidence supplied by members of the public containing reports from government agencies directly linked to the site has been disregarded throughout the consultation process. Submissions made by the public as part of the process have been significantly edited by Spatial Planning in its final publication. Trowbridge Council has consistently opposed all plans to develop the site. Despite an exhaustive list of significant arguments backed and reinforced by government legislation against the development of 3565, the site remains in Wiltshires Housing Site Allocation Plan. Arguments against the development of Site 3565 with supporting evidence are as follows: The site has been widely recognised as an area of archaeological landscape of considerable importance. Furthermore, Natural England in possession of the full facts pertaining to the site, concluded, we advise that the plan is unsound. The proposed development is adjacent to important heritage sites and recognised by government agencies as being of significant importance. Trowbridge Council and Parish Councils, notably Southwick and North Bradley have consistently opposed any proposal for development. Moreover in Wiltshire Councils Core Policy 29 and the supporting text (paragraph 5.150) of the WCS, it clearly states that surrounding villages should have separate and distinct identities as villages. Open countryside should be maintained to protect the character and identity of these villages as separate communities. Development of the site would contravene this policy and neighbouring villages would merge with Trowbridge thus losing their distinct individuality affording no separation in its outcome. Site 3565 has been recognised as of significant importance as referenced in the Listed Buildings and Conservation Areas Act 1990, as it encompasses the Grade 11* Listed Southwick Court Farm and farmstead with its medieval moat and post medieval water meadow system. The 1990 Act gives special regard when considering land for development and the need to take account of the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses (S16 and 66). Paragraph 132 of the NPPF states that when considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the assets conservation. Significance can be harmed or lost through development within its setting. As heritage assets are irreplaceable, any harm or loss should require clear and convincing justification. Core Policy 58 of the Wiltshire Core Strategy echoes the above national policy in seeking the protection, conservation and, where possible, enhancement of listed buildings. Any development of the site would significantly undermine the integrity of the listed buildings and archaeology and subject it to significant harm. Southwick Court lies immediately to</p>			

the south of the proposed development. The County Planning Archaeologist reported in June 2017 that by putting 180 houses will have an impact on a number of heritage assets. The preservation and conservation of the site has already been significantly compromised in recent years by the installation of a Solar Farm. This has already impacted on the managed landscape and associated buildings related to the heritage site. Recommendations, findings and conclusions documented in a Sustainability Assessment Heritage Impact Assessment of the site have been ignored by Wiltshire Council. The report concluded by highlighting The designated assets are of high importance, reflecting their national significance Paragraph 132 of the NPPF states that when considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the assets conservation. Significance can be harmed or lost through development within its setting. As heritage assets are irreplaceable, any harm or loss should require clear and convincing justification. Core Policy 58 of the Wiltshire Core Strategy echoes the above national policy in seeking the protection, conservation and, where possible, enhancement of listed buildings. Bramble Farm sits within Site 3565 under a tenancy arrangement. Cattle graze on the fields and winter feed is an invaluable by product that ensures the farm is economically viable. Development of the land would make the farm unsustainable by removing fields that provide essential winter feed. The site has historically provided recreational and leisure pursuits for the local community. Three public footpaths are officially recognised on OS maps and an additional two are in the process of being added as they meet the criteria for being in use for an excess of thirty years. Wiltshire Core Policy clearly states that public rights of way network will be protected from development for other land uses Development of the site would directly impact on the landscape potentially blocking or removing public footpaths and rights of way. This clearly contravenes Wiltshires Core Policy. In addition, Natural England has stated that they are unsure how the arguments surrounding public rights of way, open spaces and common land have been duly considered in Wiltshire Councils Planning Allocation Plan. Site 3565 encompasses hedgerows that fulfil the criteria of Important as set out in the 1997 Hedgerow Act. The hedgerows date back to at least 1795 as can be evidenced on an Andrews and Dury map of Wiltshire dating back to this year. Development of the site would necessitate cutting through Important hedgerows. The Act clearly and unreservedly states that a hedgerow must not be cut through unless it is for the defence of the realm or public safety and by no more than 20 metres wide, where no other means of access is available and then it must be immediately made good. Any access to Site 3565 would necessitate the hedgerow being cut through and that would contravene criteria set out by DEFRA. In addition to contravening government legislation, it must be noted that the hedgerows form natural habitats for endangered species, notably Bechstein Bats and water voles. Any disruption to the hedgerows would impact detrimentally on these creatures. As custodians it is our duty and responsibility to ensure the continuation of protected species wherever possible and government legislation is in place to ensure local governments adhere to this. To cut through hedgerows in the certain knowledge that these endangered species are present is unacceptable and contravenes government legislation presented by DEFRA. Furthermore any cut through would involve cutting down trees that have tree protection orders in place. Wiltshire Council has been made aware that the site encompasses both Level 2 and 3 flood plains. The area is bisected by the Lambrok Stream and the Lambrok Brook. The site has historically and regularly experienced episodes of significant flooding. This has directly impacted on the North South axis of the site where surface water and raw sewage has been forced out of drains into existing housing developments gardens adjacent to the proposed site. The land consistently suffers from excessive surface water. Further development would exacerbate and increase incidents of flooding and would invalidate the Environment Agency requirement for a lifetime certainty of freedom from flooding. NPPF regulations state that development should be away from flood plain areas and associated drainage and this is further supported by Natural England. Should Site 3565 be developed, flooding will inevitably increase, thereby significantly impacting on current housing developments built in the 1970s, 1980s and 1990s alongside newly built properties under the current proposals whilst further undermining and damaging important heritage sites situated on and within the site. This will directly contravene the Environmental Agency documentations. To gain access to the site would incur breaking through Important and protected hedgerows and protected trees, dissecting flood plains and or building a bridge/culvert from the A361. None of which is either legal or financially viable. Given the number of brown sites currently available for development in Trowbridge, most notably the old Bowyers site and mindful that planning permission for a significant number of houses has already been granted

	<p>by Wiltshire Council eg: at West Ashton Court, the need to develop a significant heritage site with legal protection is unwarranted. We must preserve our heritage sites and be mindful of any development that significantly under minds their integrity and importance for future generations. To develop Site 3565 would be illegal and unsustainable under current legislation. The site is presented as being of marginal sustainability and fails many of the tests set up for sustainability criteria, most notably access to an infrastructure supporting health, education and transport links. Serious concerns have been raised in the HIA report pertaining to these matters. Thank you for taking the time to consider my arguments as listed above. Given the strength and significance of the legal arguments stated within and supplied by government agencies, I hope Site 3565 will be removed from Wiltshires Housing Site Allocation Plan following your inspection.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Consultation on the draft Wiltshire Housing Site Allocations Plan - Sites 321 and 738 To whom it may concern I write with the following comments on the proposed developments noted above, which I trust the above may be of use: Quantity of houses Bratton is deemed a large village under Core Policy 32 of the Wiltshire Core Strategy (WCS). Paragraph 4.15 states development in large villages 'will predominantly take the form of small housing (defined as sites involving fewer than 10 dwellings). Both sites propose significantly greater than 10 dwellings - Site 321 proposes 35, and Site 738 proposes a further 22. Both would therefore be considered as major applications. I am unaware of any justification for the increased demand for housing in Bratton, and welcome any further information on this. Table 5.19 of the WCS states 55 more houses are needed to be provided by 2026 across the remainder of the Westbury Community Area. The proposed sites in Bratton would exceed this, irrespective of any other proposed developments across the community area. It would be illogical for Bratton to absorb this need in its entirety, especially given that Dilton Marsh (for example) has better access to both employment and transport links. The proposed development would see a 10-15% increase in dwellings (there is a discrepancy between Wiltshire Councils and Bratton Parish Councils figures for the number of existing houses (819 vs 506)), which is a significant addition to the village, with no proposed employment or any other additional services. The significance either of these developments will have upon the village should also ensure a thorough and comprehensive public consultation and engagement is undertaken to ensure the appropriateness of any development. Location of development 'There is a general presumption against development outside the defined limits of development of Large Villages (WCS 4.16). I believe both sites currently lie outside the Bratton settlement boundary (I appreciate this has recently been the subject of a proposed revision), and would also have a significant impact on the setting of both the village and the surrounding countryside. Density of development I appreciate the need to maximise developable plots of land, but the proposed density of both developments should take into consideration the surrounding built context (NPPF paragraphs 122-123). Both sites densities exceed densities seen elsewhere in the village, and are approximately 1.5x greater than the adjacent Court Orchard estate, which itself has a higher density than elsewhere in the village. This would amount to an incongruous grain, especially considering that both sites lie on the the boundary of the village (not the centre, where density would typically increase). Given these sites would in effect form the western entrance to the village, care should be taken to ensure appropriate and sensitive development. Sustainability CP1 (WCS) states that development at Large [ ] Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. NPPF paragraphs 72 &amp; 78 promote developments which support and aid a sustainable community. Both sites would only provide housing (potentially in excess of what is needed), and do not provide any greater</p>			

	<p>community benefit. Highways Bratton has few viable alternatives to transport beyond the use of private car. Further, with little local employment, and typically 2 cars per household, development would see a significant increase in vehicular use, with both sites only able to access the B3098. Again, this would show no great reason for the proposed increased in density, which is typically applied where there is less reliance on private cars. These developments would only further increase reliance on the car, contrary to CP34.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	SBR PC41: Winterslow My client supports the some of the proposed changes to the pre-submission Winterslow Settlement Boundary in particular Old Manor Farm and part of the land to the rear (south west), West Winterslow and the settlement boundary HSAP Submission July 2018 as shown. These changes to the settlement policy boundary are considered to be sound as it is promotes sustainable patterns of development in accordance with paragraph 138 of the National Planning Policy Framework (NPPF). Winterslow and West Winterslow has a good range of local community facilities including a village shop, church, primary school, 2 public houses and village hall therefore the changes to increase the size of the settlement boundary are supported as there is potential for growth. According to PC27: Amendments to Table 4.11 local housing needs for the South Wiltshire Community Area and the rural areas of the South Wiltshire Housing Market Area have not been met. Therefore new housing development and SHLAA sites at Winterslow and other South Wiltshire Commnuity Areas should still be considered to meet the housing need as there is no Neighbourhood Plan for the area.

**Assessment Addendum  
(September 2018).**

1.1 The majority of the issues identified and the changes outlined are appropriate and address matters that are rightfully for Wiltshire to take a view on. However, there remain some outstanding issues in the (South Wiltshire) Downton area that have implications that could affect the New Forest European nature conservation sites, described briefly below.

1.2 The Conservation of Habitats and Species Regulations 2010 require development to avoid harmful impacts on the integrity of protected sites, and to ensure that appropriate mitigation measures are in place where likely significant effects have been identified.

1.3 Wiltshire Council produced a Habitats Regulations Assessment (HRA)[1] for its Core Strategy adopted in 2015. It was concluded that the Core Strategy includes sufficient policies to avoid or mitigate potential adverse effects on European nature conservation sites. It noted that further HRA would be required for the Site Specific Allocations DPD on this issue (HRA, p.9).

1.4 The Housing Site Allocations Plan now proposes 190 dwellings for the Downton area which will be within 5km of the New Forest SPA and will have a recreational impact on the New Forest Nature 2000 sites.

1.5 The HRA fails to acknowledge the recreational impacts that will arise from development so close to the New Forest Natura 2000 sites. It further fails to address the adverse impacts through appropriate mitigation measures. The Plan should set out what form the mitigation will be required in relation to any sites identified so that developers can proceed without adverse impacts on the New Forest European sites. The Wiltshire Local Plan or supporting documents may provide some of this information, in which cross referencing may be appropriate. But to be silent on Natura 2000 habitat impact avoidance when the issue is identified in the HRA would be a significant soundness issue and would not comply with the conservation of the New Forest European Sites.

1.6 This has already been acknowledged in the adopted Downton Neighbourhood Plan (2016) which states that: *“There is a risk that new housing in the Downton Parish Neighbourhood Plan Area would lead to impacts on the New Forest Special Protection Area as a result of increased recreational disturbance on ground nesting birds. Wiltshire Council is committed to preparing a New Forest Mitigation Strategy to deliver measures to offset the impacts. However, until the strategy is complete, the Neighbourhood Plan notes developers must comply with CP50 of the Core Strategy by providing bespoke measures to demonstrate their proposals would have no adverse effect on the SPA.”* (p.28).[2]

Conclusion

**1.7 NFDC objects to the commitment to 190 dwellings at Downton without ensuring the required mitigation to avoid adverse effects on the integrity of the New Forest European sites is provided. It is NFDC’s view that the proposed housing will lead to likely significant effects on the New Forest European sites unless provision for mitigation is incorporated into the Site Allocations Plan. The Plan currently fails to set out provision for mitigation. The objection is made on the grounds that as currently drafted the Plan is contrary to the Habitats Regulations.**

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>Unfortunately I cannot get through the labyrinth of guff re the above on the official site nor indeed get into a position of responding on the correct forms...I wonder if this is intended to frustrate residents? It is also quite irritating to have to repeat previously aired objections! Anyway...my concerns are none-the-less relevant for having to be represented in this email as follows:- Concerns:- Roadways...unable to cope with more traffic and are generally in terrible condition now.They have deteriorated badly this year, Tetbury Lane in particular since the 10 houses went up. Drainage...additional housing in the fields backing on to the streams will only cause more problems and exacerbate the flooding risks. We do not want any further repeats of the two previous flood events. Indeed, any further development to the West and North of the village...ie off either Tetbury Lane or Tuners Lane will only serve to increase issues for all those residents in the Northern part of the village....and indeed the older and more significant village properties in terms of flood risk. Tuners Lane Ford is a low point and natural water confluence...both from the West fields and North fields, running down the A429. Services...school is at capacity and there is no shop. Extra housing will significantly increase car journeys in and out of the village with attendant heightened risks to all in terms of accidents with traffic backing up on the far too busy A429. The development already underway (10 houses in Tetbury Lane) is already quite frightening. The houses more than dominate that part of Crudwell; they appear monstrously large and have changed adversely the aspect of Tetbury Lane. Any more would simply make matters worse. Amenity Land....the village is served by many walking paths around the fields; further developments will take these paths away from residents. Not satisfactory. Summary....no further houses in Crudwell please. Certainly not the proposed extension to the existing horrible Tetbury Lane Development. Any development...not that I think any more is warranted for Crudwell...needs to be on the East side of village and South of Church Fields...ie on the Carpenters Yard and Crudwell garage sites.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>[SEE ATTACHMENT FOR FULL REPRESENTATION] Land East of the Dene, Warminster (Site: H2.7) Representations to Focussed Consultation on the Wiltshire Housing Site Allocations Plan 1. Introduction These representations have been prepared by Savills on behalf of Hallam Land Management (HLM), in response to the Focussed Consultation on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan. HLM control an area of land approximately 11.05 hectares in size adjacent to the eastern edge of Warminster, a proportion of which is allocated within the Draft Plan under Policy H2.7 (East of the Dene, Warminster) for residential development. The land has been promoted throughout the Site Allocations DPD process, most recently through the Pre-Submission Draft Plan in September 2017, seeking an allocation for residential development. The site has also been submitted previously to the SHLAA. A copy of the Site Location Plan is attached at Appendix 1. Extensive information on the suitability of the site, and the technical evidence supporting the pending outline planning application for development of up to 135 residential dwellings (16/10502/OUT), can be viewed in the comprehensive representations submitted in September 2017. These representations solely respond to the Proposed Changes which have been published by Wiltshire Council, and some of the associated evidence base documents. Comments on Policy H2.7 are made as a result, as are proposed changes to the policy wording. Overall, whilst we fully support the allocation of the site in principle and welcome the Councils recognition that the site is suitable for development, we remain concerned that the current wording and allocation boundary for Policy H2.7 will unnecessarily restrict the delivery of development upon the site. We have therefore proposed changes to the wording of draft Policy H2.7 to address these concerns and ensure that the policy is sound and that a well-planned, high-quality residential development can come forward. These representations are structured as follows: Section 1: Introduction Section 2: Comments on Schedule of Proposed Changes Section 3: Comments on Associated Evidence Base Section 4: Response to draft Policy H2.7 (East of the Dene, Warminster) Section 5: Conclusion 2. Schedule of Proposed Changes Since the September 2017 Consultation, discussions between HLM, Historic England and Wiltshire Council have progressed in regard to the nature of the proposals on the site. These discussions have been informed by the detailed Archaeological and Heritage Assessments which have been submitted as part of the pending planning application for the site. Despite this dialogue, there remain inaccuracies and inconsistencies within the supporting text relating to draft Policy H2.7. Proposed Change ref: PC76 suggests a change to paragraph 5.89, to read: Bishopstrow Conservation Area encloses the site on two sides and there are a number of historic buildings within close proximity to the site boundary, including Bishopstrow House (Grade II listed) and its designed landscape, as well as Bishopstrow Home Farm (nondesignated heritage asset). The archaeological potential on the site is high. The main access will be from Boreham Road but the south-west part of the site is considered to</p>				

be unsuited to built development because of its sensitivity in heritage and landscape terms. This land may remain in agricultural use or becomes either formal or informal open space, but will be undeveloped so the character of the area continues to preserve the significance of heritage assets. (underlining proposed insertion). We are concerned with the inaccuracy of the proposed insertion of The archaeological potential on the site is high , which does not appear to be based on up to date factual evidence. Trial trenching, undertaken on site as part of the pending planning application (16/10502/OUT), has confirmed that no significant archaeological remains exist. The trial trenching was undertaken at the request of the Councils Archaeological Officer (Rachel Foster) through consultation on the planning application. A summary report was then prepared and submitted to the Council, and a response received from the Councils Archaeological Officer on 28 April 2017 and 30 May 2017 confirming that the content of the report is acceptable and that there is no evidence to indicate significant remains which would preclude development of the site, and that necessary mitigation measures can be secured by condition. Copies of the responses from the Councils Archaeological Officer confirming this position can be found at Appendix 2. Therefore, given paragraph 5.89 is contrary to the evidence obtained on site, and agreed with the Councils archaeological officer, we propose that the wording The archaeological potential on the site is high is removed. In addition, for the reasons explained in our previous representations, we maintain our objection to the wording in paragraph 5.89 which states that the south-west part of the site is considered to be unsuited to built development because of its sensitivity in heritage and landscape terms . Whilst we acknowledge the need for any development on the site to conserve the significance of the nearby designated and non-designated heritage assets, we disagree that the supporting text to the policy should specify that the south west part of the site is unsuited to development. It would be premature to come to this conclusion in the absence of a detailed scheme (including potential mitigation measures) which can be assessed for its visual and heritage impacts. To address this matter, we have proposed new policy wording within Section 4 of these representations to emphasise that development proposals for the site are capable of responding to the identified constraints without the need to exclude a significant element of the site. We therefore propose that the wording within paragraph 5.89 but the south-west part of the site is considered to be unsuited to built development because of its sensitivity in heritage and landscape terms , is removed as this matter is addressed by our alternative policy wording.

3. Associated Evidence Base Wiltshire Housing Site Allocations Plan - Sustainability Appraisal Report (Revised September 2018) Paragraph 1.7.42 of the revised Sustainability Appraisal (SA) states that The HRA addendum identifies that the Council has been advised by the Environment Agency and Natural England that it cannot rely on the River Avon Special Area of Conservation Nutrient Management Plan alone, and that new development within the catchment of the Hampshire Avon needs to be phosphate neutral . This is also reiterated within paragraph 8.3.115. No reference is made to the Memorandum of Understanding: River Avon Special Area of Conservation Phosphate Neutral Development Interim Mitigation (May 2018) (HRA/03) which has been prepared and forms part of the supporting evidence base for the Plan. This Memorandum of Understanding describes how each local planning authority will ensure that development is phosphate neutral, and therefore will not have adverse effects upon the integrity of the River Avon Special Area of Conservation (SAC). This will involve working with developers to help develop and implement appropriate phosphate controls and mitigation measures to achieve this, which we support. This should be referenced in, and read alongside, the SA. In addition, paragraph 8.3.2 of the revised SA makes reference to a small number of sites which involve mixed use development to have a master plan and more extensive site specific requirements . When reviewing the sites listed, it is clear that the land East of the Dene is the proposed allocation listed which comprises only residential development and not a mix of uses. The other sites listed in paragraph 8.3.2 include other uses such as employment, education or community uses in addition to the residential proposed. To address this inaccuracy, it is therefore requested that the land East of the Dene, Warminster is removed from this list within the SA given that the draft Plan proposes only residential development on the site, and not mixed use. It is also noted that paragraph 8.3.105 includes the insertion of a reduced site capacity figure for land East of the Dene, Warminster, including the words to approximately 100 dwellings . As set out in our previous representations in September 2017, the pending planning application proposals (16/10502/OUT) demonstrate that, even with a significant over-provision of open space and a sensitive response to the constraints within the application masterplan, the site has the potential to deliver a quantum of development in excess of 100 dwellings. Therefore, and as

suggested within Section 4 of these representations, it is considered that the capacity should be stated as approximately 100-130 dwellings, and we therefore request a change to this part of the SA as a result. Annex A: Proposed Changes to figures in Section 4: Housing Delivery Strategy

This document presents the updated housing delivery figures for Warminster, consistent with those contained in the latest Housing Land Supply Statement (March 2018). It is interesting to note that even when taking into account the completions up to 2017 and developable commitments up to 2026, there is an anticipated residual of 165 dwellings against the housing requirement for the town. It is therefore significant that such a residual requirement is anticipated, even after the proposed allocations are taken into account. In this context it is important that those sites which are allocated for residential development, including Land East of the Dene, deliver development which maximises the number of homes having regard to the environmental constraints of the site. We will therefore continue to work with the Council throughout the examination to fully support this proposed allocation.

4. Response to draft Policy H2.7 (East of the Dene, Warminster) We strongly support the allocation of the Land East of the Dene as an entirely appropriate and suitable option for future development. However, we continue to have significant concerns over the scope and form of draft Policy H2.7, which, in its current form is considered to have the potential to unnecessarily restrict the delivery of the site and stifle the masterplanning and placemaking process. No changes have been proposed as part of this consultation to the main policy wording for H2.7, and therefore our main areas of concern, as set out in the September 2017 representations, are: 1. Reference to 2ha of undeveloped land to be located in the south west part of the site ; 2. Draft site allocation boundary; 3. Site capacity of 100 dwellings; In addition, through recent discussions with Historic England and during the pre-application process associated with the outline planning application, we are very familiar with the key issues, constraints and opportunities presented by the site. It is our view that these should be captured in the proposed allocation policy wording in a manner which then provides a clear steer to the local authority as to the important matters which need to be considered in determining the planning application. With this objective in mind, we propose replacement policy wording as follows: Policy H2.7 Land east of The Dene, as identified on the policies map, is proposed for residential development. The scale of development will be determined through the masterplanning process associated with the planning application but is anticipated to comprise approximately 100-130 dwellings. Development proposals for the site should respond to the following site specific considerations: 1. Provision of a multi-functional green infrastructure for biodiversity and recreational benefits including well integrated Sustainable Urban Drainage Systems and habitat, pedestrian and cycle connectivity within the site and to the surrounding area. 2. Avoid or minimise adverse impacts on landscape character, as well as providing landscape and environmental enhancements This should include: Retention and protection of existing mature trees of high quality and, as far as possible, important hedgerows ; and The provision of new planting, habitat creation and accessible greenspace; 3. Seek to conserve the significance of the following designated and non-designated heritage assets. As part of the Masterplan the following should be addressed: The southern extent of the allocation and boundary treatment should respond to and respect the setting of Bishopstrow House and its grounds, the relationship with Bishopstrow Conservation Area and retain the views to Battlesbury Hill from the confluence of Boreham Road and the access track/right of way to Home Farm; and The extent of development on the north eastern part of the allocation should respond to the setting of Bishopstrow House and its grounds and the contribution it makes to their setting. 4. In relation to transport, the masterplan should provide: a suitable vehicular access to the site from Boreham Road which is sensitive to the contribution that the wall, through which the access would be taken, makes to the setting of the Conservation Area; a road through the development designed to respect the heritage sensitivities of the locality; and enhanced pedestrian and cycle links from the development. The proposed policy wording is based on the up to date conditions on site, and would, in our view, provide greater flexibility for the future delivery of development to assist in meeting the housing requirement for the town. 5. Conclusion For the reasons outlined in these representations, whilst we strongly support the allocation of the land East of the Dene, Warminster, given the highly sustainable nature of the site, we remain concerned with the policy wording of draft Policy H2.7. Whilst we note the wording of Policy H2.7 is itself not included within the Proposed Changes consultation, we have nonetheless recommended changes to the policy wording for draft Policy H2.7 to include the key principles and development requirements for the site, and ensure that future development is not unnecessarily restricted. The proposed amendments to the policy wording will also ensure that sufficient flexibility exists to ensure that proposals

	<p>for the site have the opportunity to promote development which responds in the most effective manner to the site constraints whilst ensuring such development is deliverable. To ensure consistency with the suggested policy wording, we have also requested some changes to the supporting sub text below Policy H2.7 in the Plan. Aside from the Proposed Changes, these representations have also commented upon the associated evidence base, including the Sustainability Appraisal Report (Revised September 2018) and Annex A: Proposed Changes to figures in Section 4: Housing Delivery Strategy. We trust these representations will be carefully considered and we look forward to working with officers to support the proposed allocation through the examination.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Representations on Wiltshire Housing Site Allocations Plan - Focussed Consultation on the Schedule of Proposed Changes and associated evidence documents I write on behalf of my client, Edenstone Homes, on the above consultation which is currently being undertaken by the Council in relation to the Housing Sites Allocations Plan. This consultation has come forward because the Council submitted a Schedule of Proposed Changes with the submission documents which arose as a result of decisions made by Councillors. The Inspector has raised concerns that these proposed changes have not been the subject of Public Consultation which has been undertaken in the correct manner. It is concerning that despite being registered with the Council for updates on planning policy matters, no notification of this consultation was received and we were only made aware of it when monitoring the website for updates on the Examination. As you will be aware, we have made previous representations on the Housing Sites Allocations Plan and we would be grateful if these representations together with all previous submissions are taken into account by the Inspector. Our representations relate to the site known as Land at Ridgeway Farm, Crudwell. The site was previously allocated for housing development in the Draft Wiltshire Housing Site Allocations Plan under reference H2.13. Following the full Council meeting on 10th July 2018, it was resolved to submit the plan to the Secretary of State for Examination with a number of modifications which included: Amending Policy H2 to delete site allocation H2.13 in relation to Crudwell and delete section on Malmesbury Community area at paragraphs 5.111 to 5.114. This appears to have been made on the basis of a purely political decision rather than on planning merits. The minutes of this meeting appear to suggest that good progress has been made on the Crudwell Neighbourhood Plan. PC92 also states that given that good progress has been made on the preparation of the Crudwell Neighbourhood Plan, which seeks to allocate sites, evidence indicates that the Council can defer housing allocation options to be developed through the emerging neighbourhood plan, rather than through the WHSAP process. It is on this basis that the allocation at Ridgeway Farm was removed from the proposed Allocations Plan. This was decided despite the response to the Vice Chair of the Neighbourhood Plan Steering Group at Cabinet on 3rd July, that the proposed allocation should be retained at this stage as the Crudwell Neighbourhood Plan has not yet reached Regulation 14 Stage. Weight to be given to the emerging Crudwell Neighbourhood Plan There are a number of Neighbourhood Plans throughout Wiltshire that are at various stages of advancement. It is our view that those Neighbourhood Plans that are at an early stage should not dictate the overall strategy for strategic plan making within Wiltshire. In discussing the amount of weight that should be applied to emerging Neighbourhood Plans, the Planning Practice Guidance (paragraph 07) states that whilst an emerging Neighbourhood Plan may be a material consideration, the weight to be given to relevant policies in emerging plans depend on their stage of preparation, extent to which there are unresolved objections to relevant policies and the</p>			

degree of consistency of the relevant policies in the emerging plan (Paragraph 216, NPPF 2012). Paragraph 16 of the NPPF (2012) states clearly that Neighbourhood Plans should, inter alia, support the strategic development needs set out in Local Plans. Paragraph 184 goes on to state that the ambition of the neighbourhood should be aligned with the strategic needs and priorities of the wider local area and be in general conformity with the strategic policies of the Local Plan (or, in this case, the Site Allocations Plan). The Crudwell Neighbourhood Plan is at an extremely early stage of development. Despite designating its Neighbourhood Plan area in 2015, progress has been slow and the Regulation 14 stage has not yet been reached. All that is known presently is the intention of a community to prepare a plan. At this stage, there is little content to take into consideration and, importantly, detailed proposals have not been widely consulted on and endorsed by the community. As such, no weight can be given to the Neighbourhood Plan at this stage. The Neighbourhood Plan goes through two stages of formal consultation before it is submitted for examination. The first of these stages is carried out by the Parish and is known as the Regulation 14 stage, the pre-submission consultation. The parish is responsible for carrying out consultation on its draft Neighbourhood Plan. Following this, the plan is formally submitted to the Local Planning Authority (Regulation 15/16), where generally more weight can be attributed. The Neighbourhood Plan is clearly some way off passing examination or passing a referendum vote and being made. It consequently does not form part of the Development Plan and given its limited progress and very early stage of development, no weight should be attributed to it for the purposes of the Wiltshire Site Allocation Plan examination. In summary, it is strongly held that those Neighbourhood Plans at an early stage preparation should not guide the development priorities and needs for the Wiltshire plan area. The Crudwell Neighbourhood Plan, in particular, has not yet been published in draft form and therefore it is a considerable way off from examination and ultimately being made and forming part of the Development Plan. In line with the NPPF, Neighbourhood Plans should be guided by overarching strategic policies that have been found sound and tested thoroughly through the examination process. It is not for Neighbourhood Plans to dictate the overall strategy for the area.

Deliverability of Land at Ridgeway Farm As Officers will be aware, there is currently a full application pending on Land at Ridgeway Farm for the erection of 36 dwellings. This application has been prepared by Edenstone Homes, a housebuilder who are keen to deliver the scheme as quickly as possible following the erection of the first phase of 10 dwellings on the site. The current application has allowed for all technical matters to be explored and addressed in full. This has demonstrated that the site is capable of delivering dwellings in line with the proposed allocation and providing a policy compliant level of affordable housing. As is set out in a letter to the Case Officer from Ridge and Partners dated 23rd October 2018, all technical matters have been or are in the process of being resolved. As it stands, the only concern relating to this application is one of principle and the sites current location outside of the settlement boundary. The revised NPPF 2018, includes a definition on deliverable and states that to be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. Sites that are not major development, and sites with detailed planning permission, should be considered deliverable until permission expires. In the case of Land at Ridgeway Farm, the site is clearly seen as deliverable for the following reasons: There is a current full planning application pending on the site The site is being promoted by a housebuilder who will develop the site within five years It is situated directly to a site that has been recently completed by the same housebuilder. The inclusion of the site within the draft Allocation Plan following detailed technical analysis by Officers of the Council clearly shows that it is a suitable location for development. The removal of the site from the draft Housing Sites Allocation Plan is clearly politically motivated, given the lack of progress on the Neighbourhood Plan which has been detailed above. The removal of this site from the proposed Allocations Plan raises serious questions over housing land supply within the North and West Market Area. As set out in table 3.4 of Topic Paper 3 - Addendum on Housing Land Supply (July 2018), the Council is unlikely to be able to demonstrate a 5-year housing land supply within the North and West Market area beyond 2024. This inability to be able to ensure that a supply of housing can be provided over the plan period seriously questions the soundness of the proposed Allocations Plan. The Officers Response to Crudwell Parish Councils representation made since the May Cabinet meeting recommends making no change to the Plan and therefore retaining proposed allocation H2.13 Ridgeway Farm, Crudwell in the Plan. This was in the interests of ensuring that the overall housing land supply position across the North and West Housing Market Area is sustained. Questions have already

	<p>been raised in a recent appeal (ref: APP/Y3940/W/17/3187915) over whether the Council is able to demonstrate a 5-year supply currently within this Housing Market Area. This appeal decision is awaited, but the Council considers that a minimum of a 5.25 years supply can be demonstrated. This is only marginally above the required 5 years, and given under delivery in recent years, there needs to be additional allocations and greater flexibility built into the plan to ensure that a supply can be sustained. The above, coupled with the incoming Standard Methodology for calculating Housing Supply, the amended definition of deliverable in the NPPF, together with the uncertainties around the timescales of the Crudwell Neighbourhood Plan, raises significant questions on whether the housing requirements for the Malmesbury Community Area can actually be met. In addition to this, it must be noted that housing figures for Community Areas in the Wiltshire Core Strategy are expressed as indicative requirements and are not a cap on development. Given the Governments intention to significantly boost the supply of housing, plans should be positively prepared, providing sustainable growth in suitable locations. . Concluding Comments The removal of Land at Ridgeway Farm from the proposed Housing Sites Allocation Plan raises serious questions as to whether the submitted plan is sound. The removal of the site was purely a political decision without appropriate evidence to justify that decision. As has been set out within this representation, significant questions must be asked as to how much progress has been made with the Crudwell Neighbourhood Plan. At the time of writing, it has still not been the subject of Regulation 14 consultation despite being designated a plan area in 2015. The lack of progress on the Neighbourhood Plan raises serious concerns over the soundness of the proposed Allocations Plan as the Council have already set out they feel they are unable to demonstrate a 5 year housing land supply in the North and West Market Area beyond 2024 and questions are already being raised over their existing supply. Paragraph 59 of the NPPF clearly sets out the Governments key objective of significantly boosting the supply of housing. It has been demonstrated through the submission of a planning application that Land at Ridgeway Farm is deliverable and there are no technical matters which prevent the site coming forward in the short term. As a result, the proposed allocation should be reinstated. I trust these comments will be taken into consideration during the examination process. In the meantime, if you require any further clarification please do not hesitate to contact me.</p>

<b>Please give details of why you support or do not support the updates to the</b>	Assessment of other sites in Crudwell				

<p><b>associated evidence documents.</b></p>	<p>We are also aware that the Sustainability Appraisal was revised in September 2018 and this includes the assessment of an additional site in Crudwell, Land at Tuners Lane (Site OM014). This site is assessed on its potential to deliver approximately 40 units. It does not appear that this site has been considered by the Council through previous versions of the Strategic Housing Land Availability Assessment (SHLAA) and we would question the late insertion of the site.</p> <p>At this stage, it appears that no information has been provided to demonstrate that the site is deliverable or that any technical issues can be overcome. Whilst the site has an existing access, one would question the ability to deliver appropriate visibility splays given that the access is located close to a bend in the road. There are also heritage constraints in the vicinity of the site. In comparison, Ridgeway Farm has been considered through an approved detailed planning application (15/03136/OUT) which has now been implemented. The Officer Report accompanying that application acknowledges the Council's Spatial Planning Team confirms the site lies 'adjacent to the village settlement boundary and is well related to the village'. Furthermore, that the site lies in a sustainable location for development within the settlement. There are also no technical issues which cannot be overcome in respect of Ridgeway Farm and therefore the site is deliverable.</p>

**Assessment Addendum  
(September 2018).**

**1. Introduction**

These representations have been prepared by Savills on behalf of Hallam Land Management (HLM), in response to the Focussed Consultation on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan.

HLM control an area of land approximately 11.05 hectares in size adjacent to the eastern edge of Warminster, a proportion of which is allocated within the Draft Plan under Policy H2.7 (East of the Dene, Warminster) for residential development. The land has been promoted throughout the Site Allocations DPD process, most recently through the Pre-Submission Draft Plan in September 2017, seeking an allocation for residential development. The site has also been submitted previously to the SHLAA. A copy of the Site Location Plan is attached at Appendix 1.

Extensive information on the suitability of the site, and the technical evidence supporting the pending outline planning application for development of up to 135 residential dwellings (16/10502/OUT), can be viewed in the comprehensive representations submitted in September 2017. These representations solely respond to the 'Proposed Changes' which have been published by Wiltshire Council, and some of the associated evidence base documents. Comments on Policy H2.7 are made as a result, as are proposed changes to the policy wording.

Overall, whilst we fully support the allocation of the site in principle and welcome the Council's recognition that the site is suitable for development, we remain concerned that the current wording and allocation boundary for Policy H2.7 will unnecessarily restrict the delivery of development upon the site.

We have therefore proposed changes to the wording of draft Policy H2.7 to address these concerns and ensure that the policy is sound and that a well-planned, high-quality residential development can come forward.

These representations are structured as follows:

- Section 1: Introduction
- Section 2: Comments on Schedule of Proposed Changes
- Section 3: Comments on Associated Evidence Base
- Section 4: Response to draft Policy H2.7 (East of the Dene, Warminster)
- Section 5: Conclusion

**2. Schedule of Proposed Changes**

Since the September 2017 Consultation, discussions between HLM, Historic England and Wiltshire Council have progressed in regard to the nature of the proposals on the site. These discussions have been informed by the detailed Archaeological and Heritage Assessments which have been submitted as part of the pending planning application for the site.

Despite this dialogue, there remain inaccuracies and inconsistencies within the supporting text relating to draft Policy H2.7.

Proposed Change ref: PC76 suggests a change to paragraph 5.89, to read

Bishopstrow Conservation Area encloses the site on two sides and there are a number of historic buildings within close proximity to the site boundary, including Bishopstrow House (Grade II listed) and its designed landscape, as well as Bishopstrow Home Farm (nondesigned heritage asset). The archaeological potential on the site is high. The main access will be from Boreham Road but the south-west part of the site is considered to be unsuited to built development because of its sensitivity in heritage and landscape terms. This land may remain in agricultural use or becomes either formal or informal open space, but will be undeveloped so the character of the area continues to preserve the significance of heritage assets. (underlining proposed insertion).

We are concerned with the inaccuracy of the proposed insertion of “*The archaeological potential on the site is high*”, which does not appear to be based on up to date factual evidence

Trial trenching, undertaken on site as part of the pending planning application (16/10502/OUT), has confirmed that no significant archaeological remains exist. The trial trenching was undertaken at the request of the Council’s Archaeological Officer (Rachel Foster) through consultation on the planning application. A summary report was then prepared and submitted to the Council, and a response received from the Council’s Archaeological Officer on 28 April 2017 and 30 May 2017 confirming that the content of the report is acceptable and that there is no evidence to indicate significant remains which would preclude development of the site, and that necessary mitigation measures can be secured by condition. Copies of the responses from the Council’s Archaeological Officer confirming this position can be found at Appendix 2.

Therefore, given paragraph 5.89 is contrary to the evidence obtained on site, and agreed with the Council’s archaeological officer, we propose that the wording “*The archaeological potential on the site is high*” is removed.

In addition, for the reasons explained in our previous representations, we maintain our objection to the wording in paragraph 5.89 which states that “*the south-west part of the site is considered to be unsuited to built development because of its sensitivity in heritage and landscape terms*”.

Whilst we acknowledge the need for any development on the site to conserve the significance of the nearby designated and non-designated heritage assets, we disagree that the supporting text to the policy should specify that the south west part of the site is ‘unsuited’ to development. It would be premature to come to this conclusion in the absence of a detailed scheme (including potential mitigation measures) which can be assessed for its visual and heritage impacts.

To address this matter, we have proposed new policy wording within Section 4 of these representations to emphasise that development proposals for the site are capable of responding to the identified constraints without the need to exclude a significant element of the site.

We therefore propose that the wording within paragraph 5.89 “*but the south-west part of the site is considered to be unsuited to built development because of its sensitivity in heritage and landscape terms*”, is removed as this matter is addressed by our alternative policy wording.

### **3. Associated Evidence Base**

Wiltshire Housing Site Allocations Plan - Sustainability Appraisal Report (Revised September 2018)

Paragraph 1.7.42 of the revised Sustainability Appraisal (SA) states that *“The HRA addendum identifies that the Council has been advised by the Environment Agency and Natural England that it cannot rely on the River Avon Special Area of Conservation Nutrient Management Plan alone, and that new development within the catchment of the Hampshire Avon needs to be “phosphate neutral”*. This is also reiterated within paragraph 8.3.115.

No reference is made to the ‘Memorandum of Understanding: River Avon Special Area of Conservation Phosphate Neutral Development Interim Mitigation (May 2018) (HRA/03)’ which has been prepared and forms part of the supporting evidence base for the Plan. This Memorandum of Understanding describes how each local planning authority will ensure that development is ‘phosphate neutral’, and therefore will not have adverse effects upon the integrity of the River Avon Special Area of Conservation (SAC). This will involve working with developers to help develop and implement appropriate phosphate controls and mitigation measures to achieve this, which we support. This should be referenced in, and read alongside, the SA.

In addition, paragraph 8.3.2 of the revised SA makes reference to a small number of sites which involve *“mixed use development to have a master plan and more extensive site specific requirements”*. When reviewing the sites listed, it is clear that the land East of the Dene is the proposed allocation listed which comprises only residential development and not a mix of uses. The other sites listed in paragraph 8.3.2 include other uses such as employment, education or community uses in addition to the residential proposed. To address this inaccuracy, it is therefore requested that the land East of the Dene, Warminster is removed from this list within the SA given that the draft Plan proposes only residential development on the site, and not mixed use

It is also noted that paragraph 8.3.105 includes the insertion of a reduced site capacity figure for land East of the Dene, Warminster, including the words *“to approximately 100 dwellings”*. As set out in our previous representations in September 2017, the pending planning application proposals (16/10502/OUT) demonstrate that, even with a significant over-provision of open space and a sensitive response to the constraints within the application masterplan, the site has the potential to deliver a quantum of development in excess of 100 dwellings

Therefore, and as suggested within Section 4 of these representations, it is considered that the capacity should be stated as approximately 100 – 130 dwellings, and we therefore request a change to this part of the SA as a result.

#### Annex A: Proposed Changes to figures in Section 4: Housing Delivery Strategy

This document presents the updated housing delivery figures for Warminster, consistent with those contained in the latest Housing Land Supply Statement (March 2018). It is interesting to note that even when taking into account the completions up to 2017 and developable commitments up to 2026, there is an anticipated residual of 165 dwellings against the housing requirement for the town.

It is therefore significant that such a residual requirement is anticipated, even after the proposed allocations are taken into account. In this context it is important that those sites which are allocated for residential development, including Land East of the Dene, deliver development which maximises the number of homes having regard to the environmental constraints of the site. We will therefore continue to work with the Council throughout the examination to fully support this proposed allocation.

#### **4. Response to draft Policy H2.7 (East of the Dene, Warminster)**

We strongly support the allocation of the Land East of the Dene as an entirely appropriate and suitable option for future development. However, we continue to have significant concerns over the scope and form of draft Policy H2.7, which, in its current form is considered to have the potential to unnecessarily restrict the delivery of the site and stifle the masterplanning and placemaking process. No changes have been proposed as part of this consultation to the main policy wording for H2.7, and therefore our main areas of concern, as set out in the September 2017 representations, are:

1. Reference to *“2ha of undeveloped land to be located in the south west part of the site”*;
2. Draft site allocation boundary;
3. Site capacity of 100 dwellings;

In addition, through recent discussions with Historic England and during the pre-application process associated with the outline planning application, we are very familiar with the key issues, constraints and opportunities presented by the site. It is our view that these should be captured in the proposed allocation policy wording in a manner which then provides a clear steer to the local authority as to the important matters which need to be considered in determining the planning application.

With this objective in mind, we propose replacement policy wording as follows:

*Policy H2.7*

*Land east of The Dene, as identified on the policies map, is proposed for residential development. The scale of development will be determined through the masterplanning process associated with the planning application but is anticipated to comprise approximately 100-130 dwellings.*

*Development proposals for the site should respond to the following site specific considerations:*

1. *Provision of a multi-functional green infrastructure for biodiversity and recreational benefits including well integrated Sustainable Urban Drainage Systems and habitat, pedestrian and cycle connectivity within the site and to the surrounding area.*
2. *Avoid or minimise adverse impacts on landscape character, as well as providing landscape and environmental enhancements This should include*
  - *Retention and protection of existing mature trees of high quality and, as far as possible, important hedgerows ; and*
  - *The provision of new planting, habitat creation and accessible greenspace;*
3. *Seek to conserve the significance of the following designated and non-designated heritage assets. As part of the Masterplan the following should be addressed:*
  - *The southern extent of the allocation and boundary treatment should respond to and respect the setting of Bishopstrow House and its grounds, the relationship with Bishopstrow Conservation Area and retain the views to Battlesbury Hill from the confluence of Boreham Road and the access track/right of way to Home Farm; and*

- *The extent of development on the north eastern part of the allocation should respond to the setting of Bishopstrow House and its grounds and the contribution it makes to their setting.*

4. *In relation to transport, the masterplan should provide:*

- *a suitable vehicular access to the site from Boreham Road which is sensitive to the contribution that the wall, through which the access would be taken, makes to the setting of the Conservation Area;*
- *a road through the development designed to respect the heritage sensitives of the locality; and*
- *enhanced pedestrian and cycle links from the development.*

The proposed policy wording is based on the up to date conditions on site, and would, in our view, provide greater flexibility for the future delivery of development to assist in meeting the housing requirement for the town.

### 5. Conclusion

For the reasons outlined in these representations, whilst we strongly support the allocation of the land East of the Dene, Warminster, given the highly sustainable nature of the site, we remain concerned with the policy wording of draft Policy H2.7.

Whilst we note the wording of Policy H2.7 is itself not included within the Proposed Changes consultation, we have nonetheless recommended changes to the policy wording for draft Policy H2.7 to include the key principles and development requirements for the site, and ensure that future development is not unnecessarily restricted. The proposed amendments to the policy wording will also ensure that sufficient flexibility exists to ensure that proposals for the site have the opportunity to promote development which responds in the most effective manner to the site constraints whilst ensuring such development is deliverable.

To ensure consistency with the suggested policy wording, we have also requested some changes to the supporting sub text below Policy H2.7 in the Plan.

Aside from the Proposed Changes, these representations have also commented upon the associated evidence base, including the Sustainability Appraisal Report (Revised September 2018) and 'Annex A: Proposed Changes to figures in Section 4: Housing Delivery Strategy'.

We trust these representations will be carefully considered and we look forward to working with officers to support the proposed allocation through the examination.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	PC68: Church Lane This proposed change includes additional supporting text to the proposed allocation at Church Lane. This is to respond to comments from Historic England in respect of the potential impact of the allocation on the setting of the Grade II listed Church of St John. The text acknowledges that there are views from the Church to the south-west (across the allocation) and that the allocation site forms part of fragmentary remains of a post-medieval water meadow system. Whilst acknowledging this key constraint, we consider that it does not provide any certainty about the capacity for accommodating development, and raises questions about whether the the housing could be sustainably accommodated at a less constrained location within the Trowbridge Community Area.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	PC72 & PC73: Southwick Court The proposed change includes further text in respect of the potential impact of the site on the water meadows (as a non-designated heritage asset) and on Southwick Court, a Grade II* listed medieval manor and farmhouse. The texts makes reference to a Heritage Impact Assessment which will be prepared by the Council and the need for further detailed assessment for planning applications. Reflecting our previous representations, we consider that this does not provide enough certainty about the capacity of the site to accommodate development, and this work must be progressed as part of the plan-making process. As it stands we do not consider there is adequate evidence to justify the principle and quantum of housing development proposed in this location. The proposed changes also include an acknowledgement that some parts of the site fall within Flood Zone 2 / 3 and need to be sequentially planned. Evidently such an assessment should be undertaken at the plan-making stage, and the Council should not be allocating sites in full knowledge that they may not meet the requirement of the sequential test, particularly when sites at a lower risk of flooding are available.

<b>Identify Proposed Change Reference Number</b>	PC13				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>PC13 and PC21 The HSAP has sought to address Trowbridges housing shortfall by increasing the density of housing numbers within existing proposed allocations around the perimeter of the town. Across Trowbridges proposed allocations dwelling numbers are proposed to increase by 265. Trowbridges growth has been impeded for several years as a result of the possible impact of development on the Bath and Bradford-on-Avon Bats SAC. The effects of this has been to significantly delay progress of the Core Strategy allocation, Ashton Park, and other development opportunities in the town and its immediate vicinity. Furthermore, progress has been delayed as a result of the slow delivery of infrastructure to unlock the site. Table 4.10 of the Proposed Changes document (PC21) identifies an under delivery in Trowbridge of 19% against an overall requirement for 2006-26 of 6,810 dwellings. This represents 1,294 dwellings. Trowbridge is therefore the worst performing settlement in the whole of Wiltshire in terms of housing delivery, and this has had a significant impact on the delivery of the development strategy set out by the Council. Although the Factual Update to the Habitat Regulations Assessment Addendum states work on a Trowbridge Bat Mitigation Strategy is underway to allow development to proceed with recommended attenuation, the final publication date of this document or its findings are still unclear. Consequently, the implications for the delivery of Ashton Park and the proposed allocations are uncertain. Until the mitigation strategy is finalised and agreed by all stakeholders, the implications for development in Trowbridge remain uncertain and cannot be fully considered at examination. This will have commensurate impacts on delivery across the town. It is important that the Plan put forward for examination is positively prepared and sufficiently flexible to be able to respond to constraints and associated uncertainties in supply. However, the plan for Trowbridge as it stands is reliant on the uncertain outcomes of the Mitigation Strategy. Should progress with the document fail, under delivery through to the end of the Plan period is likely to result. We consider that this is tacitly acknowledged by the Council within the Factual Update to Habitat Regulations Assessment Addendum, where it is stated that: the bats response to development is likely to be delayed and difficult to ascertain with confidence, [and] this could suggest a need for phasing further development over and above the current draft and adopted allocation that might arise from the Local Plan Review. Otherwise there would be a risk that the capacity of the area to support the internationally important population of Bechsteins bats may be exceeded and as a result have significant adverse effects on the integrity of the SAC. Para. 3.3.10 The Council then conclude that this is not a matter for the HSAP to resolve and that it should instead be considered by the Local Plan Review. In view that the evidence underpinning the mitigation strategy and consequent delivery of these housing allocations has not been published for scrutiny, this lends further uncertainty to the deliverability of the proposed allocations at Trowbridge. In addition to not providing enough certainty to the deliverability of the proposed strategy, it is considered that the Proposed Changes continue to perpetuate an arbitrary</p>				

	<p>divide between Trowbridge town and the wider Community Area. The wider Trowbridge Community Area, particularly to the south and east of the town where fewer constraints are present, should provide sites to deliver the flexibility the Plan requires. At present the Plan has failed to consider all sustainable, available and deliverable sites to meet the short to medium term shortfall in delivery. We therefore object to the continued exclusion of the Trowbridge Community Area Remainder from consideration in the site selection process and the continued lack of flexibility in the strategy. Given the acknowledged environmental and infrastructure constraints around the town it is imperative that the LPA fully considers all options at this stage. The HSAP elects to allocate development near to Large Villages, including adjacent to North Bradley, and also where the indicative Remainder requirement is met. The continued decision to exclude wider consideration of all Large Villages around Trowbridge, including Southwick, is untenable in light of the significant housing shortfall. Beyond the SAC constraints identified, Trowbridges allocations are noted to have significant sensitivities to development as a result of landscape, heritage and flood risk, as well as requiring significant transport and social infrastructure to support development. The Proposed Changes Plan makes clear the numerous site-specific requirements, whilst increasing the allocation numbers within each site. The need to bring forward significant infrastructure investment, notably to improve education capacity within the town (PC53), as well as provide local sports facilities, green space and health facilities, places significant constraints on site capacity. In addition, the need to provide 10 to 16m landscaped corridors through sites to protect bat commuting corridors will further constrain deliverable housing numbers. These issues need to be clearly tested and addressed before the Council can be certain that they will deliver the required housing to meet the shortfall at Trowbridge.</p>

<b>Please give details of why you support or do not support the updates to the Sustainability Appraisal (September 2018) or the Habitats Regulation</b>	<p>Section 2.3 Bath and Bradford on Avon Bats SAC</p> <p>Section 2.3 of the Factual Update to the Habitat Regulations Assessment Addendum states work on a Bat Mitigation Strategy is underway to allow development to proceed with recommended attenuation. It is also stated that the strategy will be sufficiently advanced during the examination to allow the Council to demonstrate that the Plan is sound. A map is due to be prepared showing the zones where development would have a high or medium risk of adverse effects for the bats and where recreational pressure is likely to lead to in-combination effects.</p>				

**Assessment Addendum  
(September 2018).**

The final publication date of this document and its findings are still unclear. Until the Mitigation Strategy is finalised and agreed by all stakeholders, the implications for development in Trowbridge and the proposed allocations remain uncertain and cannot be fully considered at examination. The Mitigation Strategy should form a key piece of evidence to inform the development strategy at Trowbridge. To-date it has not been published in either final or draft form, and we consider this a considerable oversight which has prevented proper scrutiny of the proposed allocations and undermines any certainty regarding their deliverability.

Furthermore, the recommendations of the Strategy will have clear implications for the density of development across Trowbridge. Whilst allocation numbers have been increased at four sites, the Strategy looks set to recommend a variety of mitigation measures which centre on preserving landscape corridors, dark spaces and existing habitats within greenfield sites.

It is not possible for the Council to state that the plan will be found sound if the outcomes of the Strategy have not yet been either made public for scrutiny or available in draft form. This has commensurate impacts on delivery across the town. Without definitive mitigation measures identified, housing numbers cannot be established for certain.

It is important that the Plan put forward for examination is positively prepared and sufficiently flexible to be able to respond to constraints and associated uncertainties in supply. However, the plan for Trowbridge as it stands is reliant on the uncertain outcomes of the Mitigation Strategy. Should progress with the document fail, under delivery through to the end of the Plan period is likely to result.

Whilst much of the Trowbridge Community Area falls within the consultation zone for the SAC (as defined by Bat Special Areas of Conservation (SAC): Planning Guidance for Wiltshire (Issue 3.0, 10 September 2015) it should be acknowledged that there are areas which have a greater or lesser sensitivity or scope for impact. Sites within the wider community area that are less constrained should be given full consideration, particularly where they are not within any of the core sustenance zones for Annex II bats or within key species buffers.

**Section 3.3 Bath and Bradford on Avon Bats SAC – habitat loss / deterioration**

This section responds to Natural England's question as to whether the housing numbers in the Plan are deliverable. They have also noted that in the absence of bat surveys and defined mitigation standards, the capacity of the allocations is uncertain.

The Council's response is to suggest a 'precautionary' approach which will assume that habitats such as hedgerows, tree planting and streams are of key importance to bats within the consultation zones.

In considering the effects of this on the capacity of the proposed allocations, it is considered that there is evidently a great deal of supposition and uncertainty which is caused by the lack of any detailed information about the interface of the bats, their habitats and the development proposed. This is evident when looking at the Council's responses on the Upper Studley allocation, where the Council acknowledges the pressure such sites will place on important commuting and foraging habitats, and the potential to limit the scope for urban development. It is suggested that this will be mitigated through subsequent design. Reference is again made to the Mitigation Strategy, a key piece of evidence which is not available for scrutiny and clearly has not informed the preparation of the Plan.

This response is considered to be wholly inadequate given the significant delays to housing delivery at Trowbridge which have arisen out of this very issue. The Council must be able to share evidence to provide the certainty that the proposed allocations can be delivered. At the very least, the Council must propose a delivery strategy which provides enough flexibility to ensure that unexpected constraints on allocations will not lead

	to further shortfalls within the plan-period. An obvious solution to this would be to ensure that the distribution strategy includes the wider Trowbridge Community Area to maximise the scope to incorporate sustainable, deliverable sites.

<b>Identify Proposed Change Reference Number</b>	PC94				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations.</p> <p>Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages" are not promoted by National Policy. It is a crazy number of houses that are planned for Bratton. Yes there is a need for more housing but certainly not what is proposed here for a number of reasons. What is happening in Westbury must be taken into account since Bratton is part of the infrastructure supporting and supported by Westbury. A huge number of houses are being built in Westbury and as a consequence, roads, schools and medical services are under enormous pressure. The area simply cannot cope with even more residents. As one small example Westbury Rail Station is already having to expand its car park. Where will further cars park? The road through Bratton, is dangerous because of the volume of traffic on it, not to mention cyclists and horses. At the Westbury end the road is far too narrow, particularly from the cemetery until the mini roundabout by the Turkish barber in Westbury and, from Bratton towards Edington there is not even room for a pavement making walking through particularly dangerous. It gets increasingly dangerous through Edington and further, towards Market Lavington. The volume of traffic and the winding, undulating nature of the road make it particularly dangerous (and, of course, the many potholes!). How will it cope with the inevitable extra traffic? Court Lane is very dangerous with a particularly dangerous junction onto Westbury road and there is an increasing number of delivery trucks and lorries using it. How will people get to Trowbridge when all routes to Wiltshires major town are log jammed? The queues along the A350 are horrendous at rush hour even now and have not been helped by the vast housing estates that are continuing to expand on the outskirts of Westbury Bratton Post Office and shop is a valuable village resource particularly when the next nearest Post Office in Westbury is beyond the Westbury Station. It is already so cramped that it can be very uncomfortable in there. Additionally, there is nowhere to park except on the side of the road (thus exacerbating the dangers on the B3098 already mentioned). Bratton is lucky enough to have a doctors surgery and pharmacy in the village. It is one of the things that makes the village attractive and it is a wonderful service but very difficult even now to get a doctors appointment I was recently told six weeks. There is no way that it will be able to cope with the influx of residents 57 new houses would bring - I believe there is an additional proposed housing project in The Butts as well. I also believe that the Westbury White Horse Surgery is struggling to cope with the number of patients it has and if the little Bratton surgery becomes inundated, what will happen to those in dire need of medical attention? - our nearest hospital is the community hospital in Trowbridge The Bratton primary school is another issue as there will inevitably be an increase in the numbers of students, even on a conservative estimate with the possible addition two classes of students. a) Where will they be accommodated, b) Who will teach them and c) How will the school provide sporting facilities in a limited space? The disruption that will be caused as a result of the building works will be horrendous. The road will have to be dug up to lay sewage, water pipes, gas and electricity and phone lines. Given how much disruption we have already had to our phone services as BT tries to improve our service, what will happen when the service boxes have to take an even greater load? As to the actual housing that will be built far too many of the new houses label themselves executive. They are clearly not aimed at those in need of housing but at building apparently prestigious houses for those with the where-withal to pay for them. Couples who grew up in the area should be able to live in the area and not be forced out by the greed of builders. A couple of token cheaper houses for first time buyers is not enough and while I am not advocating the building of tiny modern boxes with no garden, as seems to be the case where affordable housing is often built, jamming as many houses as possible into the smallest footprint, it should be a consideration. We are pleased that we live

	<p>close to a main line to London and use it frequently it is, it seems, also our downfall because so many people want to live in this area for that reason. However, that does not justify endless estates to allow the commuters easy access. It seems to me that Wiltshire County Council would do well to look at using some of the brown sites around other areas that are more able to cope with the additional housing in terms of infrastructure and planners need to plan intelligently and with compassion, bearing in mind the impact on the quality of life of both current and future residents.</p>

All references made are listed in the body of the text and where possible are included in a bibliography complete with hyperlinks. Sources referenced are from Wiltshire County Policy, WCC Commissioned consultants reports, Natural England, The Environment Agency, Wiltshire County Officers Reports, DEFRA, Wiltshire County Planning Archaeologist and currently applicable NPPF direction. Argument Site 3565 is unsuitable for development and unsustainable Description Site 3565 (Fields adjacent to Southwick Court) lies mostly in the Parish of Southwick, and partly in the Parish of North Bradley, just outside of the County Town of Trowbridge (Grid Ref ST 84776 55992). On the Northern side of the site lies a stream and brook network which is defined by a hedgerow dating to at least 1795. The hedgerow is protected by the 1997 Hedgerows act under several set criteria as an Important hedgerow. A majority of this hedgerow is also protected by tree protection orders and contains a brook which intersects with the Lambrok Stream. The Northern side of this hedgerow lies within the town of Trowbridge, the Southern within the Parish of Southwick. As the Sustainability Appraisal states: The land serves to separate Trowbridge from the village of Southwick. As such, development would potentially threaten the separate identity of Southwick and intrinsic quality of the countryside. Which runs contrary to Core Policy 29 and should immediately render the site invalid. To the immediate North of this protected hedgerow lies a variety of developments, the majority dating back to the 1970s with some as recently constructed as the late 1990s. These consist of a variety of building styles but are well screened from both the rolling landscape and the protected Heritage assets beyond. Without exception they are constructed within the boundary of the town of Trowbridge. The current built form has been protected within the Housing Site allocation document in which it pledges to respect the current form. This takes the shape of a number of cul-de-sacs which define the town boundary with the proposed site. The proposed site is bisected on a North-South line by the protected Lambrok Stream. This divides the site into two portions, the westernmost third which is directly adjacent to the A361 and the easternmost two thirds. The stream feeds directly into the stream and brook running along the hedgerow and is bounded by significant level two and three flood plains. This is exacerbated by a drop-off of approximately three metres from the Southern extreme of the proposed site to the Northern boundary demarcated by the Hedgerow and stream. The Lambrok stream floods on a regular basis which then impacts on the brook and stream feature running along the Parish boundary. The system takes surface water runoff from several hundred yards away from the properties to the North of Silver Street Lane some hundred and fifty metres upslope to the North. This flooding directly impacts on the entire North-South axis of the site and affects the entirety of the drop-off. A consequence of this flooding is to force both surface water and untreated sewage out of the drains in the nearby housing developments. The immediate South of the site is bounded by the Lambrok Stream</p>			

and is also classified as being predominantly level two and three flood plain. The majority of the land between these areas of notified flood plain is classified as suffering from build-up of excessive surface water. To the South West of the site lie the two registered Heritage Assets of Southwick Court and its separately listed moat. These are informed and contextualised by the site itself which contains earthworks associated with the Assets from the post-medieval period. The moat feature is fed and supported by the managed and developed geology and fieldworks which are a part of the Lambrok stream. Independent consultants have recognised the interdependency of these features and the reliance of the one on the other. A field to the South-East of the proposed site has been noted to have damaged the context of the Listed Assets with the construction of a solar farm. Whilst this is not visible from the Assets, it has impacted on the managed landscape and associated ancillary buildings related to the Assets. The proposed development is directly adjacent to the Assets themselves. To the immediate South-East lie Bramble Farm. This land is currently used for cattle farming as is the site itself which is worked on a tenancy basis. Access to Bramble Farm is by a part shingled and part earthen trackway known as Axe and Cleaver Lane. The proposed site itself is currently used for a mix of the aforementioned cattle farming, informal recreation and leisure, and houses a number of public footpaths. The footpaths lead to the nearby villages of Southwick and North Bradley and on to the villages of Wingfield and Hoggington. Current OS maps include three footpaths, but DMMO procedures are currently in place for two others with documentary evidence showing their unrestricted use for thirty years. Use of the site for dwellings will therefore increase flooding suffered by current dwelling invalidating the Environment Agency requirement for lifetime certainty of freedom from flooding and fail NPPF sequential testing. The use of the site will irreparably damage Heritage assets, described by consultants as: Nationally important (Wiltshire Housing Sites Allocations Plan: Historic impact assessment 7.15) Finally, access to the site will either involve cutting through a level three flood plain and protected hedgerow. Or Cutting through Important Hedgerow protected by the 1997 Hedgrows Act and invalidating the terms of the proposed plan as voted into being by Cabinet and Councillors. Or Cutting a road from Southwick village across landscape integral to listed Heritage Assets. Or Enacting a Compulsory Purchase Order to develop Axe and Cleaver Lane to make it fit for vehicular traffic. Legislative, Factual and Policy issues Legislative The 1997 Hedgerow act specifically forbids the permanent destruction or removal of an Important hedgerow. A link provided by DEFRA is here: <https://www.gov.uk/guidance/countryside-hedgerows-regulation-and-management> The hedgerow running to the immediate North of the site, forming the boundary between Trowbridge and Southwick is show on the 1793 Andrews and Durys map of Wiltshire and can be found in the Wiltshire & Swindon History Centre, Chippenham. A link to this map appears in the bibliography and a detail is reproduced below: [See attachment for map] This unequivocally dates the boundary and is sufficient, along with other set criteria such as the presence of a watercourse, footpath and broad leafed species, to meet the criteria. Despite permission granted in advance of any application by the County arboricultural Officer to cut through this hedgerow: There has been a site meeting with various interested parties who have expressed a clear desire not to remove any trees or any parts of the existing hedge other than one small section to make way for an emergency access route with lockable bollards on both sides of the proposed route. They will include this within a tree survey and recommendations and should the development gain consent, they would be permitted to remove the small, 7m section of hedge. This hedgerow is protected under legislation. No order needs to me made to confer this status in law, just the meeting of the criteria. It marks a pre-1850 parish or township boundary (criterion a) It incorporates an archaeological feature (post medieval earthworks) as noted in the Proposal and confirmed by the Planning Archaeologist (email in appendix C) (criterion 2/3). The hedgerow is associated with a pre-1600 estate or manor (criterion 4) Contains certain categories of species of bird, animals or plants listed in the Wildlife and Countryside Act or Joint Nature Conservation Committee (JNCC) publications. Runs alongside a bridleway, footpath, road used as a public path, or a byway open to all traffic and includes at least 4 woody species, on average, in a 30m length and has at least 2 of the associated features listed at (i) or (v) below. The associated features are: i. A bank or wall supporting the hedgerow. ii. Less than 10% gaps. iii. On average, at least one tree per 50m. iv. At least 3 species from a list of 57 woodland plants. v. v.A ditch. vi. A number of connections with other hedgerows, ponds or woodland. vii. A parallel hedge within 15m. The act states that the hedgerow cannot be removed and can only be temporarily broken through if the work is for defence of the realm or for public safety reasons and only if there is no other access. If a breakthrough has to occur it must be no wider than 20

metres and replaced as soon as the work is complete. Furthermore it is clearly stated that: The presumption is in favour of protecting and retaining important hedgerows (The hedgerow regulations 1997 1.7) the removal(1) of a hedgerow to which these Regulations apply is prohibited (The hedgerow regulations 1997 5.0) This removes access from the town of Trowbridge. Paragraph 170 of the current NPPF regulations states that: A functional floodplain is a very important planning tool in making space for flood waters when flooding occurs. Generally, development should be directed away from these areas using the Environment Agency's catchment flood management plans, shoreline management plans and local flood risk management strategies produced by lead local flood authorities. The area identified as functional floodplain should take into account the effects of defences and other flood risk management infrastructure. Areas which would naturally flood, but which are prevented from doing so by existing defences and infrastructure or solid buildings, will not normally be identified as functional floodplain. If an area is intended to flood, eg an upstream flood storage area designed to protect communities further downstream, then this should be safeguarded from development and identified as functional floodplain, even though it might not flood very often. Paragraph: 015 Reference ID: 7-015-20140306 This photograph illustrates the nature of the functional flood plain as shown in the Environment Agency South Court Farm map. The photograph was taken on the upper portion of the flood plain itself. [See attachment for photograph] The building in the background being Southwick Court Farm and the wooden structure in the middle ground the corral indicated on the same photograph. This is at the high point of a drop off of approximately two metres to the hedge junction at the bottom left of the photo (Northern fringe of the site). This photograph was taken from approximately this point on the satellite image: [See attachment for map] This is the Environment Agency Flood plain assessment (two footpaths appearing on OS maps are absent from this map but run from the current built form, these are not currently disputed or subject to DMMO Process): [See attachment for map] Current flood events have had this impact in nearby properties: Policy Wiltshire Policy CR1, contained within the January 2009 Leisure and Recreation Development Plan Document states that: The public rights of way network will be protected from development for other land uses and extensions and improvements will be sought, where appropriate, as part of development proposals. This recognition goes further and an Officer report relating to the Solar Farm constructed in another section of the Southwick Court estate reads: The Planning (Listed Buildings and Conservation Areas) Act 1990 to give special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses (S16 and 66). Paragraph 132 of the NPPF states that when considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the assets conservation. Significance can be harmed or lost through development within its setting. As heritage assets are irreplaceable, any harm or loss should require clear and convincing justification. Core Policy 58 of the Wiltshire Core Strategy echoes the above national policy in seeking the protection, conservation and, where possible, enhancement of listed buildings. As will be illustrated this policy is not upheld when the HIA report is considered. The proposed site contains three notified footpaths as set out in OS maps and a further two long standing trackways are the subject of DMMO applications at this time. When Natural England comments made to Wiltshire Council in their response to the Housing Allocation Proposal are taken into consideration: We note that a high proportion of the proposed sites are land which is either bisected or bounded by public rights of way or is used for recreational purposes as open space. Development of these sites is likely to detrimentally affect the recreational value of these features. (C.f. NPPF paras 74. Existing open space should not be built on unless and 75. Planning policies should protect and enhance public rights of way and access.). We note that the Wiltshire Core Strategy says (CP51 green infrastructure) If damage or loss of existing green infrastructure is unavoidable, the creation of new or replacement green infrastructure equal to or above its current value and quality, that maintains the integrity and functionality of the green infrastructure network, will be required. Proposals for major development should be accompanied by an audit of the existing green infrastructure within and around the site and a statement demonstrating how this will be retained and enhanced through the development process. We are unaware of any such audits being undertaken since the Core Strategy was adopted, and our impression is that, compensatory provision has rarely, if ever, been made. This demonstrates the determination of an independent body in the assessment of the aspect of the site which is relevant here. The Sustainability Assessment defines the site as being used for informal recreation. A survey delivered average daily usage as being between 100

and 120 individuals. Furthermore Natural England responded to Wiltshire Council by stating that: It is not clear how public rights of way and valued open space has been considered in the Sustainability Appraisal. While they feature under objective 7, (will the policy protect rights of way, open space and common land?), a word search shows that right/rights of way is only mentioned 3 times in the site assessments, while existing open space is mentioned only twice. In its own assessment of the site Wiltshire Council describe the site in the following words: This is recreational or amenity space at the edge of a settlement that relates more closely to the built environment. Core Policy 29 and the supporting text (paragraph 5.150) of the WCS identify specific issues to be addressed in planning for the Trowbridge Community Area, including: It is recognised that the villages surrounding Trowbridge, particularly Hilperton, Southwick North Bradley and West Ashton, have separate and distinct identities as villages. Open countryside should be maintained to protect the character and identity of these villages as separate communities. All development in Trowbridge should be sensitive to constraints, such as the local County Wildlife Sites, SSSIs, Ancient Woodland, the Western Wiltshire Greenbelt and areas at risk of flooding This site is within Southwick, but abutting Trowbridge thereby removing that separation entirely and both contains, and is bounded by, areas not only at risk of flooding, but which currently flood on a regular basis. Independent adjudication WCC commissioned reports The Sustainability assessment commissioned by Wiltshire Council (Wiltshire Housing Site Allocations Plan Sustainability Appraisal Report, Annex 1, A.9 Trowbridge Principal Settlement) is confusing and as a document presented to both Cabinet and Council for two discrete votes talks of housing density of both 280 and 237 dwellings. The Housing Allocation Proposal suggests 180 as the density for this site. Despite this the site is continually referred to as being on the North of the town. The inference being that the site is within the boundary of the Town and not the village. Paragraph 157 of the current NPPF states that: Crucially, Local Plans should: Identify land where development would be inappropriate, for instance because of its environmental or historic significance The County Planning Archaeologist has reported in June 2017 that: I have previously provided screening opinion advice for this site to the planning team. I highlighted that The Wiltshire and Swindon Historic Environment Record shows that a number of features have been plotted within the proposed development site which relate to a post-medieval water meadow system. Southwick Court Farm lies immediately south of the proposed development site and contains a number of important heritage assets including a medieval moated site with a medieval farmstead of which the farmhouse is a Grade II\* Listed Building (national ref. 1194818) dating from 1567 to 1599. I therefore raised the need to have a full assessment of the impacts on the heritage assets in particular on the water meadows and Grade II\* Listed Building. Without further assessment I cannot advise on the appropriateness of the development but I would say that putting 180 houses will have an impact on a number of heritage assets. The Sustainability Assessment advises strongly that an independent Heritage Impact Assessment be made of the site. At the time of presentation of the Sustainability Assessment such a report had been made and presented. The section pertaining to this site runs for seven pages including a map and I have taken the liberty of adding a link in the bibliography to this document in which seven pages relate to this site. In an attempt to present the significance of this document to the argument I reproduce a number of direct quotations here: 7.16 Setting makes a critical contribution to the significance of both assets, relating in the first instance to their immediate setting within the earlier intact and functional moated enclosure. The relationship to the later farm buildings outside the moat adds to the historical value in supplying the most recent agricultural chapter in the narrative of a site continuously occupied for around 600 years. The relationship to the wider landscape also contributes to the significance of the assets. 7.17 Similarly, the relationship of the asset group to the wider agricultural hinterland is important, as currently it stands in splendid isolation as the one prominent feature delineated in part by the trees following the moat boundary in a sizeable tract of open agricultural landscape. The asset and its wider setting should therefore be considered to be an archaeological landscape of considerable importance. For example, the open space around the asset allows a clear understanding of the hierarchy of the 16th/17th century farmsteads in the immediate vicinity. 7.18 A Functional and historical connection with this agricultural landscape can therefore be established which elevates its importance in terms of contribution to these values and the assets setting. 7.20 The designated assets are of high importance, reflecting their national significance. The moat itself should be viewed as being indivisible from the significance of the designated features and, in its own right, likely to be of equivalent significance to a Scheduled Monument<sup>18</sup>. 7.23 Change in the wider landscape of the proposed site is

likely to have two main effects. Firstly, it has the potential to sever the functional and historical links between the moated site and particularly the farmhouse with the contemporary water meadows that were likely integral to the 16th century enhancement of the place, and with the later enclosure landscape that forms its agricultural hinterland. Secondly, development has the potential to change the ability to appreciate the assets relatively prominent position in the local landscape. It stands on a small area of slightly elevated ground, in splendid isolation from the surrounding historic villages reflecting its origins as an isolated farm centre. Risk of harm 7.24 Development of the entire proposed allocation would completely sever the assets from their landscape and economic/historical context. This would result in harm to the significance of the asset. Similarly, development would be likely to reduce the legibility of the asset as an isolated manorial farm, and change its prominence in the local landscape. The historical landholdings of the assets have already been harmed by development, particularly the large-scale intrusion created by the nearby solar farm. 7.25 While the core of the assets relationships and setting i.e. between the individual built elements and the archaeological heritage would remain intact, the potential extent of losses of demonstrably functionally, historically and visually connected landscape comprising the wider setting of the asset represents a major impact. This would likely approach substantial harm, given the cumulative effect of interacting layers of assets significance in forming a large-scale and relatively intact historic landscape. 7.26 Taking a precautionary approach, this is considered to be a high effect for the purposes of this assessment. 7.27 The same assertions hold for the non-designated elements of the place. Options for sustainable development 7.28 Development anywhere within the proposed allocation area will result in loss of functional and historical relationships between the asset and the area of water meadow or enclosures affected. Mitigation by design is not considered to be a realistic option if delivery of significant numbers of houses on site is required. While a small number of units could be accommodated in the extreme eastern extent of the site, this would need to be very carefully designed to sit down into the landscape but the comparatively flat site and open landscape does not lend itself to this type of intervention. Cumulative effects 7.34 When considered in combination with other proposed allocations (H2.2 and H2.4) H2.6 could result in significant urbanisation of the southern edge of Trowbridge. This would substantially reduce the current separation between the historic settlements of Southwick and North Bradley from suburban Trowbridge, in addition to eroding the significant and legible historic character of the landscape. The final summative comment is: Options for sustainable development 7.36 As indicated above, archaeological investigation to understand the extent, date and significance of in situ remains would be required; the results should inform an appropriate mitigation strategy in support of any planning application. This would be secured by condition. 7.37 Mitigation by design is not considered to be a realistic option if delivery of significant numbers of houses on site is required. Insertion of a small area of development in the eastern extremity of the site could potentially avoid the majority of effects, but may not be either viable or feasible on other grounds. (My highlights throughout) [See attachment for highlights] The conclusion is accompanied by this map, red being land to remain untouched: [See attachment for map] And the interpretation of this conclusion as presented to Cabinet and Council to inform their vote was presented as: In fact, the assessment concludes that less than substantial harm would likely result, albeit at a perceived higher end of the less than substantial harm scale. To paraphrase this interpretation: In actual fact the wording used to interpret a clear directive is speculative, misleading and does not appear in any conclusion in the independent report and the site has been adjudged to be at high risk and totally unsuited to any significant development. In the HRA assessment of the site commissioned by Wiltshire Council a determination of the site determined that due to its ecologically and environmentally sensitive nature the Lambrok stream and associated drainage features must be: Protected and/or buffered. This is in partial recognition of its significance as a natural corridor for wildlife, relied upon by some endangered species such as water voles and Bechstein bats and partially as recognition of the ongoing practical function as a flood plain. National body comment In response to the HRA document Natural England responded to Wiltshire Council with this determination: A range of onsite mitigation measures are proposed. However, it is not clear that these measures can be delivered while delivering the development requirements of the site. For example, can hedgerows be retained or will they need to be bisected by access roads etc.? If they cannot be delivered, it is not clear whether this invalidates the conclusions of the HRA. The onsite mitigation policy says Sensitive habitat features include: ... These features should be retained. The policy thus only protects the listed sensitive features, but not any unlisted

sensitive features. The HRA does not discuss whether this list of features covers the vast majority of features or otherwise quantified the proportion of features covered. It would give greater certainty to the HRA if it did. We note that the onsite mitigation policy requires 10-16m of native landscaping. It is not clear why these figures were chosen, and why there is such a spread in width. We suggest this is reviewed and justified, to provide greater certainty in the conclusions of the HRA. In the same response they also determine: In terms of site allocation policies, we have concerns around whether the allocations are consistent with the NPPF in the context of impacts on rights of way and open space, given what we perceive as a lack of implementation of relevant NPPF and Core Strategy policies (NPPF paras 74 and 75 and CP51) on comparable sites. As such, without confirmation that a robust approach will be taken to implementing these policies, we advise that the plan is unsound. (My bold and italic) The Environment agency has, in relation to this point, determined that a 20 metre environmental buffer be incorporated. This independent determination and specialist advice removes the access to the site from either the North or East. Access from the North, being through the residential property which the Council have pledged to respect in the plan as voted upon by Cabinet and Councillors, and through an important hedgerow protected in law and through a required environmental buffer (whatever the depth) is therefore neither practical or legal. This would also require acquiescence from The Town and Parish Councils who publicly oppose the site along with a separate license from the Environment Agency due to the notified flood plain and the associated drainage system. Access from the East, the A361, would also require cutting through hedgerow protected by the HRA assessment, Natural England requirements and disregarding the Heritage Impact Assessment. In addition a bridge/culvert would need to be constructed to protect not only the Heritage Asset as listed, but to ensure the lifetime surety from flooding as required by the NPPF sequential test. The site is presented as being of marginal sustainability and fails many of the tests set up for sustainability criteria, most notably access to infrastructure and transport links (a sporadic and limited bus service and distances of over 2km to both the centre of town and any rail service). Serious concerns have been raised in the HIA report and breaches of both law and regulation would have to be made. Conclusion Since the site was first put forward for consultation in the June 2017 Draft Housing Allocation Proposal many arguments based in fact have emerged mitigating against its sustainability. These take the form of legal proscriptions such as the 1997 Hedgerows Act and the Planning (Listed Buildings and Conservation Areas) Act 1990, direction from National bodies such as Natural England and the Environment Agency, procedural direction from the NPPF and from reports commissioned by Wiltshire Council at great cost to the public purse. This emerging evidence argues strongly that, had it been in the hands of Council Officers during the writing of the Draft, the site would have been deemed unsustainable and unsuited to development. The process in which we are all engaged is designed to seek the truth and to give weight to all evidence, irrespective of its source, but judged only on its validity. This presentation is referenced, logical and factual. It refers to a single site in a County wide process and must have occupied a proportionately small amount of assessment at its inclusion but which means immeasurably more to those who use and value it beyond its monetary value. It can only be hoped that, with the presentation of this interwoven evidence a true picture of the site as current recreational space, wildlife haven, functional flood plain and nationally important landscape it can be safeguarded. The descriptors in the above paragraph are those of agencies and Officers from whose hard work the argument above is developed and presented. Thank you for taking the time to consider and assess the above points. If at any point you feel that a visit to the site would be advantageous I would be happy to act as your guide. All references made are listed in the body of the text and where possible are included in a bibliography complete with hyperlinks. Sources referenced are from Wiltshire County Policy, WCC Commissioned consultants reports, Natural England, The Environment Agency, Wiltshire County Officers Reports, DEFRA, Wiltshire County Planning Archaeologist and currently applicable NPPF direction. Argument Site 3565 is unsuitable for development and unsustainable Description Site 3565 (Fields adjacent to Southwick Court) lies mostly in the Parish of Southwick, and partly in the Parish of North Bradley, just outside of the County Town of Trowbridge (Grid Ref ST 84776 55992). On the Northern side of the site lies a stream and brook network which is defined by a hedgerow dating to at least 1795. The hedgerow is protected by the 1997 Hedgerows act under several set criteria as an Important hedgerow. A majority of this hedgerow is also protected by tree protection orders and contains a brook which intersects with the Lambrok Stream. The Northern side of this hedgerow lies within the town of Trowbridge, the Southern within the Parish of Southwick. As the Sustainability Appraisal states: The land serves to separate Trowbridge from the village of Southwick. As such, development would potentially threaten the separate identity of Southwick and intrinsic quality of the countryside. Which runs contrary to Core Policy 29 and should immediately render the site invalid. To the immediate North of this protected hedgerow lies a variety of developments, the majority dating back to the 1970s with some as recently constructed as the late 1990s. These consist of a variety of building styles but are well screened from both the rolling landscape and the protected Heritage assets beyond. Without exception they are constructed within the boundary of the town of Trowbridge. The current built form has been protected within the Housing Site allocation document in which it pledges to respect the current form. This takes the shape of a number of cul-de-sacs which define the town boundary with the proposed site. The proposed site is bisected on a North-South line by the protected Lambrok Stream. This divides the site into two portions, the westernmost third which is directly adjacent to the A361 and the easternmost two thirds. The stream feeds directly into the stream and brook running along the hedgerow and is bounded by significant level two and three flood plains. This is exacerbated by a drop-off of approximately three metres from the Southern extreme of the proposed site to the Northern boundary demarcated by the Hedgerow and stream. The Lambrok stream floods on a regular basis which then impacts on the brook and stream feature running along the Parish boundary. The system takes surface water runoff from several hundred yards away from the properties to the North of Silver Street Lane some hundred and fifty metres upslope to the North. This flooding directly impacts on the entire North-South axis of the site and affects the entirety of the drop-off. A consequence of this flooding is to force both surface water and untreated sewage out of the drains in the nearby housing developments. The immediate South of the site is bounded by the Lambrok Stream</p>				

and is also classified as being predominantly level two and three flood plain. The majority of the land between these areas of notified flood plain is classified as suffering from build-up of excessive surface water. To the South West of the site lie the two registered Heritage Assets of Southwick Court and its separately listed moat. These are informed and contextualised by the site itself which contains earthworks associated with the Assets from the post-medieval period. The moat feature is fed and supported by the managed and developed geology and fieldworks which are a part of the Lambrok stream. Independent consultants have recognised the interdependency of these features and the reliance of the one on the other. A field to the South-East of the proposed site has been noted to have damaged the context of the Listed Assets with the construction of a solar farm. Whilst this is not visible from the Assets, it has impacted on the managed landscape and associated ancillary buildings related to the Assets. The proposed development is directly adjacent to the Assets themselves. To the immediate South-East lie Bramble Farm. This land is currently used for cattle farming as is the site itself which is worked on a tenancy basis. Access to Bramble Farm is by a part shingled and part earthen trackway known as Axe and Cleaver Lane. The proposed site itself is currently used for a mix of the aforementioned cattle farming, informal recreation and leisure, and houses a number of public footpaths. The footpaths lead to the nearby villages of Southwick and North Bradley and on to the villages of Wingfield and Hoggington. Current OS maps include three footpaths, but DMMO procedures are currently in place for two others with documentary evidence showing their unrestricted use for thirty years. Use of the site for dwellings will therefore increase flooding suffered by current dwelling invalidating the Environment Agency requirement for lifetime certainty of freedom from flooding and fail NPPF sequential testing. The use of the site will irreparably damage Heritage assets, described by consultants as: Nationally important (Wiltshire Housing Sites Allocations Plan: Historic impact assessment 7.15) Finally, access to the site will either involve cutting through a level three flood plain and protected hedgerow. Or Cutting through Important Hedgerow protected by the 1997 Hedgrows Act and invalidating the terms of the proposed plan as voted into being by Cabinet and Councillors. Or Cutting a road from Southwick village across landscape integral to listed Heritage Assets. Or Enacting a Compulsory Purchase Order to develop Axe and Cleaver Lane to make it fit for vehicular traffic. Legislative, Factual and Policy issues Legislative The 1997 Hedgerow act specifically forbids the permanent destruction or removal of an Important hedgerow. A link provided by DEFRA is here: <https://www.gov.uk/guidance/countryside-hedgerows-regulation-and-management> The hedgerow running to the immediate North of the site, forming the boundary between Trowbridge and Southwick is show on the 1793 Andrews and Durys map of Wiltshire and can be found in the Wiltshire & Swindon History Centre, Chippenham. A link to this map appears in the bibliography and a detail is reproduced below: [See attachment for map] This unequivocally dates the boundary and is sufficient, along with other set criteria such as the presence of a watercourse, footpath and broad leaved species, to meet the criteria. Despite permission granted in advance of any application by the County arboricultural Officer to cut through this hedgerow: There has been a site meeting with various interested parties who have expressed a clear desire not to remove any trees or any parts of the existing hedge other than one small section to make way for an emergency access route with lockable bollards on both sides of the proposed route. They will include this within a tree survey and recommendations and should the development gain consent, they would be permitted to remove the small, 7m section of hedge. This hedgerow is protected under legislation. No order needs to me made to confer this status in law, just the meeting of the criteria. It marks a pre-1850 parish or township boundary (criterion a) It incorporates an archaeological feature (post medieval earthworks) as noted in the Proposal and confirmed by the Planning Archaeologist (email in appendix C) (criterion 2/3). The hedgerow is associated with a pre-1600 estate or manor (criterion 4) Contains certain categories of species of bird, animals or plants listed in the Wildlife and Countryside Act or Joint Nature Conservation Committee (JNCC) publications. Runs alongside a bridleway, footpath, road used as a public path, or a byway open to all traffic and includes at least 4 woody species, on average, in a 30m length and has at least 2 of the associated features listed at (i) or (v) below. The associated features are: i. A bank or wall supporting the hedgerow. ii. Less than 10% gaps. iii. On average, at least one tree per 50m. iv. At least 3 species from a list of 57 woodland plants. v. v.A ditch. vi. A number of connections with other hedgerows, ponds or woodland. vii. A parallel hedge within 15m. The act states that the hedgerow cannot be removed and can only be temporarily broken through if the work is for defence of the realm or for public safety reasons and only if there is no other access. If a breakthrough has to occur it must be no wider than 20

metres and replaced as soon as the work is complete. Furthermore it is clearly stated that: The presumption is in favour of protecting and retaining important hedgerows (The hedgerow regulations 1997 1.7) the removal(1) of a hedgerow to which these Regulations apply is prohibited (The hedgerow regulations 1997 5.0) This removes access from the town of Trowbridge. Paragraph 170 of the current NPPF regulations states that: A functional floodplain is a very important planning tool in making space for flood waters when flooding occurs. Generally, development should be directed away from these areas using the Environment Agency's catchment flood management plans, shoreline management plans and local flood risk management strategies produced by lead local flood authorities. The area identified as functional floodplain should take into account the effects of defences and other flood risk management infrastructure. Areas which would naturally flood, but which are prevented from doing so by existing defences and infrastructure or solid buildings, will not normally be identified as functional floodplain. If an area is intended to flood, eg an upstream flood storage area designed to protect communities further downstream, then this should be safeguarded from development and identified as functional floodplain, even though it might not flood very often. Paragraph: 015 Reference ID: 7-015-20140306 This photograph illustrates the nature of the functional flood plain as shown in the Environment Agency South Court Farm map. The photograph was taken on the upper portion of the flood plain itself. [See attachment for photograph] The building in the background being Southwick Court Farm and the wooden structure in the middle ground the corral indicated on the same photograph. This is at the high point of a drop off of approximately two metres to the hedge junction at the bottom left of the photo (Northern fringe of the site). This photograph was taken from approximately this point on the satellite image: [See attachment for map] This is the Environment Agency Flood plain assessment (two footpaths appearing on OS maps are absent from this map but run from the current built form, these are not currently disputed or subject to DMMO Process): [See attachment for map] Current flood events have had this impact in nearby properties: Policy Wiltshire Policy CR1, contained within the January 2009 Leisure and Recreation Development Plan Document states that: The public rights of way network will be protected from development for other land uses and extensions and improvements will be sought, where appropriate, as part of development proposals. This recognition goes further and an Officer report relating to the Solar Farm constructed in another section of the Southwick Court estate reads: The Planning (Listed Buildings and Conservation Areas) Act 1990 to give special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses (S16 and 66). Paragraph 132 of the NPPF states that when considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the assets conservation. Significance can be harmed or lost through development within its setting. As heritage assets are irreplaceable, any harm or loss should require clear and convincing justification. Core Policy 58 of the Wiltshire Core Strategy echoes the above national policy in seeking the protection, conservation and, where possible, enhancement of listed buildings. As will be illustrated this policy is not upheld when the HIA report is considered. The proposed site contains three notified footpaths as set out in OS maps and a further two long standing trackways are the subject of DMMO applications at this time. When Natural England comments made to Wiltshire Council in their response to the Housing Allocation Proposal are taken into consideration: We note that a high proportion of the proposed sites are land which is either bisected or bounded by public rights of way or is used for recreational purposes as open space. Development of these sites is likely to detrimentally affect the recreational value of these features. (C.f. NPPF paras 74. Existing open space should not be built on unless and 75. Planning policies should protect and enhance public rights of way and access.). We note that the Wiltshire Core Strategy says (CP51 green infrastructure) If damage or loss of existing green infrastructure is unavoidable, the creation of new or replacement green infrastructure equal to or above its current value and quality, that maintains the integrity and functionality of the green infrastructure network, will be required. Proposals for major development should be accompanied by an audit of the existing green infrastructure within and around the site and a statement demonstrating how this will be retained and enhanced through the development process. We are unaware of any such audits being undertaken since the Core Strategy was adopted, and our impression is that, compensatory provision has rarely, if ever, been made. This demonstrates the determination of an independent body in the assessment of the aspect of the site which is relevant here. The Sustainability Assessment defines the site as being used for informal recreation. A survey delivered average daily usage as being between 100

and 120 individuals. Furthermore Natural England responded to Wiltshire Council by stating that: It is not clear how public rights of way and valued open space has been considered in the Sustainability Appraisal. While they feature under objective 7, (will the policy protect rights of way, open space and common land?), a word search shows that right/rights of way is only mentioned 3 times in the site assessments, while existing open space is mentioned only twice. In its own assessment of the site Wiltshire Council describe the site in the following words: This is recreational or amenity space at the edge of a settlement that relates more closely to the built environment. Core Policy 29 and the supporting text (paragraph 5.150) of the WCS identify specific issues to be addressed in planning for the Trowbridge Community Area, including: It is recognised that the villages surrounding Trowbridge, particularly Hilperton, Southwick North Bradley and West Ashton, have separate and distinct identities as villages. Open countryside should be maintained to protect the character and identity of these villages as separate communities. All development in Trowbridge should be sensitive to constraints, such as the local County Wildlife Sites, SSSIs, Ancient Woodland, the Western Wiltshire Greenbelt and areas at risk of flooding This site is within Southwick, but abutting Trowbridge thereby removing that separation entirely and both contains, and is bounded by, areas not only at risk of flooding, but which currently flood on a regular basis. Independent adjudication WCC commissioned reports The Sustainability assessment commissioned by Wiltshire Council (Wiltshire Housing Site Allocations Plan Sustainability Appraisal Report, Annex 1, A.9 Trowbridge Principal Settlement) is confusing and as a document presented to both Cabinet and Council for two discrete votes talks of housing density of both 280 and 237 dwellings. The Housing Allocation Proposal suggests 180 as the density for this site. Despite this the site is continually referred to as being on the North of the town. The inference being that the site is within the boundary of the Town and not the village. Paragraph 157 of the current NPPF states that: Crucially, Local Plans should: Identify land where development would be inappropriate, for instance because of its environmental or historic significance The County Planning Archaeologist has reported in June 2017 that: I have previously provided screening opinion advice for this site to the planning team. I highlighted that The Wiltshire and Swindon Historic Environment Record shows that a number of features have been plotted within the proposed development site which relate to a post-medieval water meadow system. Southwick Court Farm lies immediately south of the proposed development site and contains a number of important heritage assets including a medieval moated site with a medieval farmstead of which the farmhouse is a Grade II\* Listed Building (national ref. 1194818) dating from 1567 to 1599. I therefore raised the need to have a full assessment of the impacts on the heritage assets in particular on the water meadows and Grade II\* Listed Building. Without further assessment I cannot advise on the appropriateness of the development but I would say that putting 180 houses will have an impact on a number of heritage assets. The Sustainability Assessment advises strongly that an independent Heritage Impact Assessment be made of the site. At the time of presentation of the Sustainability Assessment such a report had been made and presented. The section pertaining to this site runs for seven pages including a map and I have taken the liberty of adding a link in the bibliography to this document in which seven pages relate to this site. In an attempt to present the significance of this document to the argument I reproduce a number of direct quotations here: 7.16 Setting makes a critical contribution to the significance of both assets, relating in the first instance to their immediate setting within the earlier intact and functional moated enclosure. The relationship to the later farm buildings outside the moat adds to the historical value in supplying the most recent agricultural chapter in the narrative of a site continuously occupied for around 600 years. The relationship to the wider landscape also contributes to the significance of the assets. 7.17 Similarly, the relationship of the asset group to the wider agricultural hinterland is important, as currently it stands in splendid isolation as the one prominent feature delineated in part by the trees following the moat boundary in a sizeable tract of open agricultural landscape. The asset and its wider setting should therefore be considered to be an archaeological landscape of considerable importance. For example, the open space around the asset allows a clear understanding of the hierarchy of the 16th/17th century farmsteads in the immediate vicinity. 7.18 A Functional and historical connection with this agricultural landscape can therefore be established which elevates its importance in terms of contribution to these values and the assets setting. 7.20 The designated assets are of high importance, reflecting their national significance. The moat itself should be viewed as being indivisible from the significance of the designated features and, in its own right, likely to be of equivalent significance to a Scheduled Monument<sup>18</sup>. 7.23 Change in the wider landscape of the proposed site is

likely to have two main effects. Firstly, it has the potential to sever the functional and historical links between the moated site and particularly the farmhouse with the contemporary water meadows that were likely integral to the 16th century enhancement of the place, and with the later enclosure landscape that forms its agricultural hinterland. Secondly, development has the potential to change the ability to appreciate the assets relatively prominent position in the local landscape. It stands on a small area of slightly elevated ground, in splendid isolation from the surrounding historic villages reflecting its origins as an isolated farm centre. Risk of harm 7.24 Development of the entire proposed allocation would completely sever the assets from their landscape and economic/historical context. This would result in harm to the significance of the asset. Similarly, development would be likely to reduce the legibility of the asset as an isolated manorial farm, and change its prominence in the local landscape. The historical landholdings of the assets have already been harmed by development, particularly the large-scale intrusion created by the nearby solar farm. 7.25 While the core of the assets relationships and setting i.e. between the individual built elements and the archaeological heritage would remain intact, the potential extent of losses of demonstrably functionally, historically and visually connected landscape comprising the wider setting of the asset represents a major impact. This would likely approach substantial harm, given the cumulative effect of interacting layers of assets significance in forming a large-scale and relatively intact historic landscape. 7.26 Taking a precautionary approach, this is considered to be a high effect for the purposes of this assessment. 7.27 The same assertions hold for the non-designated elements of the place. Options for sustainable development 7.28 Development anywhere within the proposed allocation area will result in loss of functional and historical relationships between the asset and the area of water meadow or enclosures affected. Mitigation by design is not considered to be a realistic option if delivery of significant numbers of houses on site is required. While a small number of units could be accommodated in the extreme eastern extent of the site, this would need to be very carefully designed to sit down into the landscape but the comparatively flat site and open landscape does not lend itself to this type of intervention. Cumulative effects 7.34 When considered in combination with other proposed allocations (H2.2 and H2.4) H2.6 could result in significant urbanisation of the southern edge of Trowbridge. This would substantially reduce the current separation between the historic settlements of Southwick and North Bradley from suburban Trowbridge, in addition to eroding the significant and legible historic character of the landscape. The final summative comment is: Options for sustainable development 7.36 As indicated above, archaeological investigation to understand the extent, date and significance of in situ remains would be required; the results should inform an appropriate mitigation strategy in support of any planning application. This would be secured by condition. 7.37 Mitigation by design is not considered to be a realistic option if delivery of significant numbers of houses on site is required. Insertion of a small area of development in the eastern extremity of the site could potentially avoid the majority of effects, but may not be either viable or feasible on other grounds. (My highlights throughout) [See attachment for highlights] The conclusion is accompanied by this map, red being land to remain untouched: [See attachment for map] And the interpretation of this conclusion as presented to Cabinet and Council to inform their vote was presented as: In fact, the assessment concludes that less than substantial harm would likely result, albeit at a perceived higher end of the less than substantial harm scale. To paraphrase this interpretation: In actual fact the wording used to interpret a clear directive is speculative, misleading and does not appear in any conclusion in the independent report and the site has been adjudged to be at high risk and totally unsuited to any significant development. In the HRA assessment of the site commissioned by Wiltshire Council a determination of the site determined that due to its ecologically and environmentally sensitive nature the Lambrok stream and associated drainage features must be: Protected and/or buffered. This is in partial recognition of its significance as a natural corridor for wildlife, relied upon by some endangered species such as water voles and Bechstein bats and partially as recognition of the ongoing practical function as a flood plain. National body comment In response to the HRA document Natural England responded to Wiltshire Council with this determination: A range of onsite mitigation measures are proposed. However, it is not clear that these measures can be delivered while delivering the development requirements of the site. For example, can hedgerows be retained or will they need to be bisected by access roads etc.? If they cannot be delivered, it is not clear whether this invalidates the conclusions of the HRA. The onsite mitigation policy says Sensitive habitat features include: ... These features should be retained. The policy thus only protects the listed sensitive features, but not any unlisted

sensitive features. The HRA does not discuss whether this list of features covers the vast majority of features or otherwise quantified the proportion of features covered. It would give greater certainty to the HRA if it did. We note that the onsite mitigation policy requires 10-16m of native landscaping. It is not clear why these figures were chosen, and why there is such a spread in width. We suggest this is reviewed and justified, to provide greater certainty in the conclusions of the HRA. In the same response they also determine: In terms of site allocation policies, we have concerns around whether the allocations are consistent with the NPPF in the context of impacts on rights of way and open space, given what we perceive as a lack of implementation of relevant NPPF and Core Strategy policies (NPPF paras 74 and 75 and CP51) on comparable sites. As such, without confirmation that a robust approach will be taken to implementing these policies, we advise that the plan is unsound. (My bold and italic) The Environment agency has, in relation to this point, determined that a 20 metre environmental buffer be incorporated. This independent determination and specialist advice removes the access to the site from either the North or East. Access from the North, being through the residential property which the Council have pledged to respect in the plan as voted upon by Cabinet and Councillors, and through an important hedgerow protected in law and through a required environmental buffer (whatever the depth) is therefore neither practical or legal. This would also require acquiescence from The Town and Parish Councils who publicly oppose the site along with a separate license from the Environment Agency due to the notified flood plain and the associated drainage system. Access from the East, the A361, would also require cutting through hedgerow protected by the HRA assessment, Natural England requirements and disregarding the Heritage Impact Assessment. In addition a bridge/culvert would need to be constructed to protect not only the Heritage Asset as listed, but to ensure the lifetime surety from flooding as required by the NPPF sequential test. The site is presented as being of marginal sustainability and fails many of the tests set up for sustainability criteria, most notably access to infrastructure and transport links (a sporadic and limited bus service and distances of over 2km to both the centre of town and any rail service). Serious concerns have been raised in the HIA report and breaches of both law and regulation would have to be made. Conclusion Since the site was first put forward for consultation in the June 2017 Draft Housing Allocation Proposal many arguments based in fact have emerged mitigating against its sustainability. These take the form of legal proscriptions such as the 1997 Hedgerows Act and the Planning (Listed Buildings and Conservation Areas) Act 1990, direction from National bodies such as Natural England and the Environment Agency, procedural direction from the NPPF and from reports commissioned by Wiltshire Council at great cost to the public purse. This emerging evidence argues strongly that, had it been in the hands of Council Officers during the writing of the Draft, the site would have been deemed unsustainable and unsuited to development. The process in which we are all engaged is designed to seek the truth and to give weight to all evidence, irrespective of its source, but judged only on its validity. This presentation is referenced, logical and factual. It refers to a single site in a County wide process and must have occupied a proportionately small amount of assessment at its inclusion but which means immeasurably more to those who use and value it beyond its monetary value. It can only be hoped that, with the presentation of this interwoven evidence a true picture of the site as current recreational space, wildlife haven, functional flood plain and nationally important landscape it can be safeguarded. The descriptors in the above paragraph are those of agencies and Officers from whose hard work the argument above is developed and presented. Thank you for taking the time to consider and assess the above points. If at any point you feel that a visit to the site would be advantageous I would be happy to act as your guide. Argument

Site 3565 is unsuitable for development and unsustainable

Description

Site 3565 (Fields adjacent to Southwick Court) lies mostly in the Parish of Southwick, and partly in the Parish of North Bradley, just outside of the County Town of Trowbridge (Grid Ref ST 84776 55992). On the Northern side of the site lies a stream and brook network which is defined by a hedgerow dating to at least 1795. The hedgerow is protected by the 1997 Hedgerows act under several set criteria as an Important hedgerow. A majority of this hedgerow is also protected by tree protection orders and contains a brook which intersects with the Lambrok Stream. The Northern side of this hedgerow lies within the town of Trowbridge, the Southern within the Parish of Southwick. As the Sustainability Appraisal states:

“The land serves to separate Trowbridge from the village of Southwick. As such, development would potentially threaten the separate identity of Southwick and intrinsic quality of the countryside.”

Which runs contrary to Core Policy 29 and should immediately render the site invalid.

To the immediate North of this protected hedgerow lies a variety of developments, the majority dating back to the 1970's with some as recently constructed as the late 1990's. These consist of a variety of building styles but are well screened from both the rolling landscape and the protected Heritage assets beyond. Without exception they are constructed within the boundary of the town of Trowbridge. The current built form has been protected within the Housing Site allocation document in which it pledges to respect the current form. This takes the shape of a number of cul-de-sac's which define the town boundary with the proposed site.

The proposed site is bisected on a North-South line by the protected Lambrok Stream. This divides the site into two portions, the westernmost third which is directly adjacent to the A361 and the easternmost two thirds. The stream feeds directly into the stream and brook running along the hedgerow and is bounded by significant level two and three flood plains. This is exacerbated by a drop-off of approximately three metres from the Southern extreme of the proposed site to the Northern boundary demarcated by the Hedgerow and stream.

The Lambrok stream floods on a regular basis which then impacts on the brook and stream feature running along the Parish boundary. The system takes surface water runoff from several hundred yards away from the properties to the North of Silver Street Lane some hundred and fifty metres upslope to the North. This flooding directly impacts on the entire North-South axis of the site and affects the entirety of the drop-off. A consequence of this flooding is to force both surface water and untreated sewage out of the drains in the nearby housing developments.

The immediate South of the site is bounded by the Lambrok Stream and is also classified as being predominantly level two and three flood plain. The majority of the land between these areas of notified flood plain is classified as suffering from build-up of excessive surface water.

To the South West of the site lie the two registered Heritage Assets of Southwick Court and it's separately listed moat. These are informed and contextualised by the site itself which contains earthworks associated with the Assets from the post-medieval period. The moat feature is fed and

supported by the managed and developed geology and fieldworks which are a part of the Lambrok stream. Independent consultants have recognised the interdependency of these features and the reliance of the one on the other.

A field to the South-East of the proposed site has been noted to have damaged the context of the Listed Assets with the construction of a solar farm. Whilst this is not visible from the Assets, it has impacted on the managed landscape and associated ancillary buildings related to the Assets. The proposed development is directly adjacent to the Assets themselves.

To the immediate South-East lie Bramble Farm. This land is currently used for cattle farming as is the site itself which is worked on a tenancy basis. Access to Bramble Farm is by a part shingled and part earthen trackway known as Axe and Cleaver Lane.

The proposed site itself is currently used for a mix of the aforementioned cattle farming, informal recreation and leisure, and houses a number of public footpaths. The footpaths lead to the nearby villages of Southwick and North Bradley and on to the villages of Wingfield and Hoggington. Current OS maps include three footpaths, but DMMO procedures are currently in place for two others with documentary evidence showing their unrestricted use for thirty years.

Use of the site for dwellings will therefore increase flooding suffered by current dwelling invalidating the Environment Agency requirement for 'lifetime certainty' of freedom from flooding and fail NPPF sequential testing. The use of the site will irreparably damage Heritage assets, described by consultants as:

"Nationally important"

(Wiltshire Housing Sites Allocations Plan: Historic impact assessment 7.15)

Finally, access to the site will either involve cutting through a level three flood plain and protected hedgerow.

Or

Cutting through Important Hedgerow protected by the 1997 Hedgrows Act and invalidating the terms of the proposed plan as voted into being by Cabinet and Councillors.

Or

Cutting a road from Southwick village across landscape integral to listed Heritage Assets.

Or

Enacting a Compulsory Purchase Order to develop Axe and Cleaver Lane to make it fit for vehicular traffic.

Legislative, Factual and Policy issues

Legislative

The 1997 Hedgerow act specifically forbids the permanent destruction or removal of an 'Important' hedgerow. A link provided by DEFRA is here:

<https://www.gov.uk/guidance/countryside-hedgerows-regulation-and-management>

The hedgerow running to the immediate North of the site, forming the boundary between Trowbridge and Southwick is show on the 1793 Andrews and Durys map of Wiltshire and can be found in the Wiltshire & Swindon History Centre, Chippenham. A link to this map appears in the bibliography and a detail is reproduced below:

[See attachement for map]

This unequivocally dates the boundary and is sufficient, along with other set criteria such as the presence of a watercourse, footpath and broad leafed species, to meet the criteria.

Despite permission granted in advance of any application by the County arboricultural Officer to cut through this hedgerow:

“There has been a site meeting with various interested parties who have expressed a clear desire not to remove any trees or any parts of the existing hedge other than one small section to make way for an emergency access route with lockable bollards on both sides of the proposed route. They will include this within a tree survey and recommendations and should the development gain consent, they would be permitted to remove the small, 7m section of hedge.”

This hedgerow is protected under legislation. No order needs to me made to confer this status in law, just the meeting of the criteria.

- It marks a pre-1850 parish or township boundary (criterion a)
- It incorporates an archaeological feature (post medieval earthworks) as noted in the Proposal and confirmed by the Planning Archaeologist (email in appendix C) (criterion 2/3).
- The hedgerow is associated with a pre-1600 estate or manor (criterion 4)
- Contains certain categories of species of bird, animals or plants listed in the Wildlife and Countryside Act or Joint Nature Conservation Committee (JNCC) publications.
- Runs alongside a bridleway, footpath, road used as a public path, or a byway open to all traffic and includes at least 4 woody species, on average, in a 30m length and has at least 2 of the associated features listed at (i) or (v) below. The associated features are:
  - i. A bank or wall supporting the hedgerow.
  - ii. Less than 10% gaps.
  - iii. On average, at least one tree per 50m.
  - iv. At least 3 species from a list of 57 woodland plants.

v. v.A ditch.

vi. A number of connections with other hedgerows, ponds or woodland.

vii. A parallel hedge within 15m.

The act states that the hedgerow cannot be removed and can only be temporarily broken through if the work is for defence of the realm or for public safety reasons and only if there is no other access. If a breakthrough has to occur it must be no wider than 20 metres and replaced as soon as the work is complete.

Furthermore it is clearly stated that:

“ The presumption is in favour of protecting and retaining important hedgerows” (The hedgerow regulations 1997 1.7)

“the removal(1) of a hedgerow to which these Regulations apply is prohibited” (The hedgerow regulations 1997 5.0)

This removes access from the town of Trowbridge.

Paragraph 170 of the current NPPF regulations states that:

A functional floodplain is a very important planning tool in making space for flood waters when flooding occurs. Generally, development should be directed away from these areas using the Environment Agency’s catchment flood management plans, shoreline management plans and local flood risk management strategies produced by lead local flood authorities.

The area identified as functional floodplain should take into account the effects of defences and other flood risk management infrastructure. Areas which would naturally flood, but which are prevented from doing so by existing defences and infrastructure or solid buildings, will not normally be identified as functional floodplain. If an area is intended to flood, eg an upstream flood storage area designed to protect communities further downstream, then this should be safeguarded from development and identified as functional floodplain, even though it might not flood very often.

Paragraph: 015 Reference ID: 7-015-20140306

This photograph illustrates the nature of the functional flood plain as shown in the Environment Agency “South Court Farm” map. The photograph was taken on the upper portion of the flood plain itself.

[See attachement for photograph]

The building in the background being Southwick Court Farm and the wooden structure in the middle ground the corral indicated on the same photograph. This is at the high point of a drop off of approximately two metres to the hedge junction at the bottom left of the photo (Northern fringe of the site).

This photograph was taken from approximately this point on the satellite image:

[See attachment for map]

This is the Environment Agency Flood plain assessment (two footpaths appearing on OS maps are absent from this map but run from the current built form, these are not currently disputed or subject to DMMO Process):

[See attachment for map]

Current flood events have had this impact in nearby properties:

Policy

Wiltshire Policy CR1, contained within the January 2009 Leisure and Recreation Development Plan Document states that:

“The public rights of way network will be protected from development for other land uses and extensions and improvements will be sought, where appropriate, as part of development proposals.”

This recognition goes further and an Officer report relating to the Solar Farm constructed in another section of the Southwick Court estate reads:

“The Planning (Listed Buildings and Conservation Areas) Act 1990 to give special regard to the “desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses” (S16 and 66). Paragraph 132 of the NPPF states that “when considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset’s conservation. ... Significance can be harmed or lost through ... development within its setting. As heritage assets are irreplaceable, any harm or loss should require clear and convincing justification.” Core Policy 58 of the Wiltshire Core Strategy echoes the above national policy in seeking the protection, conservation and, where possible, enhancement of listed buildings.”

As will be illustrated this policy is not upheld when the HIA report is considered.

The proposed site contains three notified footpaths as set out in OS maps and a further two-long standing trackways are the subject of DMMO applications at this time. When Natural England comments made to Wiltshire Council in their response to the Housing Allocation Proposal are taken into consideration:

“We note that a high proportion of the proposed sites are land which is either bisected or bounded by public rights of way or is used for recreational purposes as open space. Development of these sites is likely to detrimentally affect the recreational value of these features. (C.f. NPPF paras 74. Existing open space...should not be built on unless... and 75. Planning policies should protect and enhance public rights of way and access.). We note that the Wiltshire Core Strategy says (CP51 – green infrastructure)

“If damage or loss of existing green infrastructure is unavoidable, the creation of new or replacement green infrastructure equal to or above its current value and quality, that maintains the integrity and functionality of the green infrastructure network, will be required. Proposals for major development should be accompanied by an audit of the existing green infrastructure within and around the site and a statement demonstrating how this will be retained and enhanced through the development process.”

We are unaware of any such audits being undertaken since the Core Strategy was adopted, and our impression is that, compensatory provision has rarely, if ever, been made.”

This demonstrates the determination of an independent body in the assessment of the aspect of the site which is relevant here.

The Sustainability Assessment defines the site as being used for informal recreation. A survey delivered average daily usage as being between 100 and 120 individuals. Furthermore Natural England responded to Wiltshire Council by stating that:

“It is not clear how public rights of way and valued open space has been considered in the Sustainability Appraisal. While they feature under objective 7, (will the policy protect rights of way, open space and common land?), a word search shows that right/rights of way is only mentioned 3 times in the site assessments, while existing open space is mentioned only twice.”

In its own assessment of the site Wiltshire Council describe the site in the following words:

“This is recreational or amenity space at the edge of a settlement that relates more closely to the built environment.

Core Policy 29 and the supporting text (paragraph 5.150) of the WCS identify specific issues to be addressed in planning for the Trowbridge Community Area, including:

“It is recognised that the villages surrounding Trowbridge, particularly Hilperton, Southwick North Bradley and West Ashton, have separate and distinct identities as villages. Open countryside should be maintained to protect the character and identity of these villages as separate communities.”

“All development in Trowbridge should be sensitive to constraints, such as the local County Wildlife Sites, SSSIs, Ancient Woodland, the Western Wiltshire Greenbelt and areas at risk of flooding”

This site is within Southwick, but abutting Trowbridge thereby removing that separation entirely and both contains, and is bounded by, areas not only at risk of flooding, but which currently flood on a regular basis.

Independent adjudication

WCC commissioned reports

The Sustainability assessment commissioned by Wiltshire Council (Wiltshire Housing Site Allocations Plan Sustainability Appraisal Report, Annex 1, A.9 Trowbridge Principal Settlement) is confusing and as a document presented to both Cabinet and Council for two discrete votes talks of housing density of both 280 and 237 dwellings. The Housing Allocation Proposal suggests 180 as the density for this site. Despite this the site is continually referred to as being on the North of the town. The inference being that the site is within the boundary of the Town and not the village.

Paragraph 157 of the current NPPF states that:

Crucially, Local Plans should:

“Identify land where development would be inappropriate, for instance because of its environmental or historic significance”

The County Planning Archaeologist has reported in June 2017 that:

“I have previously provided screening opinion advice for this site to the planning team. I highlighted that The Wiltshire and Swindon Historic Environment Record shows that a number of features have been plotted within the proposed development site which relate to a post-medieval water meadow system. Southwick Court Farm lies immediately south of the proposed development site and contains a number of important heritage assets including a medieval moated site with a medieval farmstead of which the farmhouse is a Grade II\* Listed Building (national ref. 1194818) dating from 1567 to 1599. I therefore raised the need to have a full assessment of the impacts on the heritage assets in particular on the water meadows and Grade II\* Listed Building.

Without further assessment I cannot advise on the appropriateness of the development but I would say that putting 180 houses will have an impact on a number of heritage assets.”

The Sustainability Assessment advises strongly that an independent Heritage Impact Assessment be made of the site. At the time of presentation of the Sustainability Assessment such a report had been made and presented. The section pertaining to this site runs for seven pages including a map and I have taken the liberty of adding a link in the bibliography to this document in which seven pages relate to this site.

In an attempt to present the significance of this document to the argument I reproduce a number of direct quotations here:

7.16 Setting makes a critical contribution to the significance of both assets, relating in the first instance to their immediate setting within the earlier – intact and functional – moated enclosure. The relationship to the later farm buildings outside the moat adds to the historical value in supplying the most recent agricultural chapter in the narrative of a site continuously occupied for around 600 years. The relationship to the wider landscape also contributes to the significance of the assets.

7.17 Similarly, the relationship of the asset group to the wider agricultural hinterland is important, as currently it stands in ‘splendid isolation’ as the one prominent feature – delineated in part by the trees following the moat boundary – in a sizeable tract of open agricultural landscape. The asset and its wider setting should therefore be considered to be an archaeological landscape of considerable importance. For example, the open space around the asset allows a clear understanding of the hierarchy of the 16th/17th century farmsteads in the immediate vicinity.

7.18 A Functional and historical connection with this agricultural landscape can therefore be established which elevates its importance in terms of contribution to these values and the assets’ setting.

7.20 The designated assets are of high importance, reflecting their national significance. The moat itself should be viewed as being indivisible from the significance of the designated features and, in its own right, likely to be of equivalent significance to a Scheduled Monument<sup>18</sup>.

7.23 Change in the wider landscape of the proposed site is likely to have two main effects. Firstly, it has the potential to sever the functional and historical links between the moated site and particularly the farmhouse with the contemporary water meadows that were likely integral to the 16th century enhancement of the place, and with the later enclosure landscape that forms its agricultural hinterland. Secondly, development has the potential to change the ability to appreciate the assets’ relatively prominent position in the local landscape. It stands on a small area of slightly elevated ground, in ‘splendid isolation’ from the surrounding historic villages – reflecting its origins as an isolated farm centre.

#### Risk of harm

7.24 Development of the entire proposed allocation would completely sever the assets from their landscape and economic/historical context. This would result in harm to the significance of the asset. Similarly, development would be likely to reduce the legibility of the asset as an isolated manorial farm, and change its prominence in the local landscape. The historical landholdings of the assets have already been harmed by development, particularly the large-scale intrusion created by the nearby solar farm.

7.25 While the core of the assets' relationships and setting – i.e. between the individual built elements and the archaeological heritage – would remain intact, the potential extent of losses of demonstrably functionally, historically and visually connected landscape comprising the wider setting of the asset represents a major impact. This would likely approach substantial harm, given the cumulative effect of interacting layers of asset's significance in forming a large-scale and relatively intact historic landscape.

7.26 Taking a precautionary approach, this is considered to be a high effect for the purposes of this assessment.

7.27 The same assertions hold for the non-designated elements of the place.

#### Options for sustainable development

7.28 Development anywhere within the proposed allocation area will result in loss of functional and historical relationships between the asset and the area of water meadow or enclosures affected.

Mitigation by design is not considered to be a realistic option if delivery of significant numbers of houses on site is required. While a small number of units could be accommodated in the extreme eastern extent of the site, this would need to be very carefully designed to 'sit down' into the landscape – but the comparatively flat site and open landscape does not lend itself to this type of intervention.

#### Cumulative effects

7.34 When considered in combination with other proposed allocations (H2.2 and H2.4) H2.6 could result in significant urbanisation of the southern edge of Trowbridge. This would substantially reduce the current separation between the historic settlements of Southwick and North Bradley from suburban Trowbridge, in addition to eroding the significant and legible historic character of the landscape.

The final summative comment is:

#### Options for sustainable development

7.36 As indicated above, archaeological investigation to understand the extent, date and significance of in situ remains would be required; the results should inform an appropriate mitigation strategy in support of any planning application. This would be secured by condition.

7.37 Mitigation by design is not considered to be a realistic option if delivery of significant numbers of houses on site is required. Insertion of a small area of development in the eastern extremity of the site could potentially avoid the majority of effects, but may not be either viable or feasible on other grounds.

(My highlights throughout) [See attachment for highlights]

The conclusion is accompanied by this map, red being land to remain untouched:

[See attachment for map]

And the interpretation of this conclusion as presented to Cabinet and Council to inform their vote was presented as:

“In fact, the assessment concludes that less than substantial harm would likely result, albeit at a perceived higher end of the less than substantial harm scale.”

To paraphrase this interpretation:

“In actual fact the wording used to interpret a clear directive is speculative, misleading and does not appear in any conclusion in the independent report and the site has been adjudged to be at high risk and totally unsuited to any significant development”

In the HRA assessment of the site commissioned by Wiltshire Council a determination of the site determined that due to its ecologically and environmentally sensitive nature the Lambrook stream and associated drainage features must be:

“Protected and/or buffered”

This is in partial recognition of its significance as a natural corridor for wildlife, relied upon by some endangered species such as water voles and Bechstein bats and partially as recognition of the ongoing practical function as a flood plain.

National body comment

In response to the HRA document Natural England responded to Wiltshire Council with this determination:

“A range of onsite mitigation measures are proposed. However, it is not clear that these measures can be delivered while delivering the development requirements of the site. For example, can hedgerows be retained or will they need to be bisected by access roads etc.? If they cannot be delivered, it is not clear whether this invalidates the conclusions of the HRA.

The onsite mitigation policy says “Sensitive habitat features...include: ... These features should be retained...”. The policy thus only protects the listed sensitive features, but not any unlisted sensitive features. The HRA does not discuss whether this list of features covers the vast majority of features or otherwise quantified the proportion of features covered. It would give greater certainty to the HRA if it did.

We note that the onsite mitigation policy requires 10-16m of native landscaping. It is not clear why these figures were chosen, and why there is such a spread in width. We suggest this is reviewed and justified, to provide greater certainty in the conclusions of the HRA.”

In the same response they also determine:

“In terms of site allocation policies, we have concerns around whether the allocations are consistent with the NPPF in the context of impacts on rights of way and open space, given what we perceive as a lack of implementation of relevant NPPF and Core Strategy policies (NPPF paras 74

and 75 and CP51) on comparable sites. As such, without confirmation that a robust approach will be taken to implementing these policies, we advise that the plan is unsound." (My bold and italic)

The Environment agency has, in relation to this point, determined that a 20 metre environmental buffer be incorporated.

This independent determination and specialist advice removes the access to the site from either the North or East.

Access from the North, being through the residential property which the Council have pledged to respect in the plan as voted upon by Cabinet and Councillors, and through an important hedgerow protected in law and through a required environmental buffer (whatever the depth) is therefore neither practical or legal. This would also require acquiescence from The Town and Parish Councils who publicly oppose the site along with a separate license from the Environment Agency due to the notified flood plain and the associated drainage system.

Access from the East, the A361, would also require cutting through hedgerow protected by the HRA assessment, Natural England requirements and disregarding the Heritage Impact Assessment. In addition a bridge/culvert would need to be constructed to protect not only the Heritage Asset as listed, but to ensure the lifetime surety from flooding as required by the NPPF sequential test.

The site is presented as being of marginal sustainability and fails many of the tests set up for sustainability criteria, most notably access to infrastructure and transport links (a sporadic and limited bus service and distances of over 2km to both the centre of town and any rail service). Serious concerns have been raised in the HIA report and breaches of both law and regulation would have to be made.

#### Conclusion

Since the site was first put forward for consultation in the June 2017 Draft Housing Allocation Proposal many arguments based in fact have emerged mitigating against its sustainability. These take the form of legal proscriptions such as the 1997 Hedgerows Act and the Planning (Listed Buildings and Conservation Areas) Act 1990, direction from National bodies such as Natural England and the Environment Agency, procedural direction from the NPPF and from reports commissioned by Wiltshire Council at great cost to the public purse.

This emerging evidence argues strongly that, had it been in the hands of Council Officers during the writing of the Draft, the site would have been deemed unsustainable and unsuited to development. The process in which we are all engaged is designed to seek the truth and to give weight to all evidence, irrespective of its source, but judged only on its validity.

This presentation is referenced, logical and factual. It refers to a single site in a County wide process and must have occupied a proportionately small amount of assessment at its inclusion but which means immeasurably more to those who use and value it beyond its monetary value. It can only be hoped that, with the presentation of this interwoven evidence a true picture of the site as current recreational space, wildlife haven, functional flood plain and nationally important landscape it can be safeguarded.

The descriptors in the above paragraph are those of agencies and Officers from whose hard work the argument above is developed and presented.

Thank you for taking the time to consider and assess the above points. If at any point you feel that a visit to the site would be advantageous I would be happy to act as your guide.

Argument

Site 3565 is unsuitable for development and unsustainable

Description

Site 3565 (Fields adjacent to Southwick Court) lies mostly in the Parish of Southwick, and partly in the Parish of North Bradley, just outside of the County Town of Trowbridge (Grid Ref ST 84776 55992). On the Northern side of the site lies a stream and brook network which is defined by a hedgerow dating to at least 1795. The hedgerow is protected by the 1997 Hedgerows act under several set criteria as an Important hedgerow. A majority of this hedgerow is also protected by tree protection orders and contains a brook which intersects with the Lambrok Stream. The Northern side of this hedgerow lies within the town of Trowbridge, the Southern within the Parish of Southwick. As the Sustainability Appraisal states:

“The land serves to separate Trowbridge from the village of Southwick. As such, development would potentially threaten the separate identity of Southwick and intrinsic quality of the countryside.”

Which runs contrary to Core Policy 29 and should immediately render the site invalid.

To the immediate North of this protected hedgerow lies a variety of developments, the majority dating back to the 1970's with some as recently constructed as the late 1990's. These consist of a variety of building styles but are well screened from both the rolling landscape and the protected Heritage assets beyond. Without exception they are constructed within the boundary of the town of Trowbridge. The current built form has been protected within the Housing Site allocation document in which it pledges to respect the current form. This takes the shape of a number of cul-de-sac's which define the town boundary with the proposed site.

The proposed site is bisected on a North-South line by the protected Lambrok Stream. This divides the site into two portions, the westernmost third which is directly adjacent to the A361 and the easternmost two thirds. The stream feeds directly into the stream and brook running along the hedgerow and is bounded by significant level two and three flood plains. This is exacerbated by a drop-off of approximately three metres from the Southern extreme of the proposed site to the Northern boundary demarcated by the Hedgerow and stream.

The Lambrok stream floods on a regular basis which then impacts on the brook and stream feature running along the Parish boundary. The system takes surface water runoff from several hundred yards away from the properties to the North of Silver Street Lane some hundred and fifty metres upslope to the North. This flooding directly impacts on the entire North-South axis of the site and affects the entirety of the drop-off. A consequence of this flooding is to force both surface water and untreated sewage out of the drains in the nearby housing developments.

The immediate South of the site is bounded by the Lambrok Stream and is also classified as being predominantly level two and three flood plain. The majority of the land between these areas of notified flood plain is classified as suffering from build-up of excessive surface water.

To the South West of the site lie the two registered Heritage Assets of Southwick Court and it's separately listed moat. These are informed and contextualised by the site itself which contains earthworks associated with the Assets from the post-medieval period. The moat feature is fed and

supported by the managed and developed geology and fieldworks which are a part of the Lambrok stream. Independent consultants have recognised the interdependency of these features and the reliance of the one on the other.

A field to the South-East of the proposed site has been noted to have damaged the context of the Listed Assets with the construction of a solar farm. Whilst this is not visible from the Assets, it has impacted on the managed landscape and associated ancillary buildings related to the Assets. The proposed development is directly adjacent to the Assets themselves.

To the immediate South-East lie Bramble Farm. This land is currently used for cattle farming as is the site itself which is worked on a tenancy basis. Access to Bramble Farm is by a part shingled and part earthen trackway known as Axe and Cleaver Lane.

The proposed site itself is currently used for a mix of the aforementioned cattle farming, informal recreation and leisure, and houses a number of public footpaths. The footpaths lead to the nearby villages of Southwick and North Bradley and on to the villages of Wingfield and Hoggington. Current OS maps include three footpaths, but DMMO procedures are currently in place for two others with documentary evidence showing their unrestricted use for thirty years.

Use of the site for dwellings will therefore increase flooding suffered by current dwelling invalidating the Environment Agency requirement for 'lifetime certainty' of freedom from flooding and fail NPPF sequential testing. The use of the site will irreparably damage Heritage assets, described by consultants as:

"Nationally important"

(Wiltshire Housing Sites Allocations Plan: Historic impact assessment 7.15)

Finally, access to the site will either involve cutting through a level three flood plain and protected hedgerow.

Or

Cutting through Important Hedgerow protected by the 1997 Hedgrows Act and invalidating the terms of the proposed plan as voted into being by Cabinet and Councillors.

Or

Cutting a road from Southwick village across landscape integral to listed Heritage Assets.

Or

Enacting a Compulsory Purchase Order to develop Axe and Cleaver Lane to make it fit for vehicular traffic.

Legislative, Factual and Policy issues

Legislative

The 1997 Hedgerow act specifically forbids the permanent destruction or removal of an 'Important' hedgerow. A link provided by DEFRA is here:

<https://www.gov.uk/guidance/countryside-hedgerows-regulation-and-management>

The hedgerow running to the immediate North of the site, forming the boundary between Trowbridge and Southwick is show on the 1793 Andrews and Durys map of Wiltshire and can be found in the Wiltshire & Swindon History Centre, Chippenham. A link to this map appears in the bibliography and a detail is reproduced below:

[See attachment for map]

This unequivocally dates the boundary and is sufficient, along with other set criteria such as the presence of a watercourse, footpath and broad leafed species, to meet the criteria.

Despite permission granted in advance of any application by the County arboricultural Officer to cut through this hedgerow:

“There has been a site meeting with various interested parties who have expressed a clear desire not to remove any trees or any parts of the existing hedge other than one small section to make way for an emergency access route with lockable bollards on both sides of the proposed route. They will include this within a tree survey and recommendations and should the development gain consent, they would be permitted to remove the small, 7m section of hedge.”

This hedgerow is protected under legislation. No order needs to me made to confer this status in law, just the meeting of the criteria.

- It marks a pre-1850 parish or township boundary (criterion a)
- It incorporates an archaeological feature (post medieval earthworks) as noted in the Proposal and confirmed by the Planning Archaeologist (email in appendix C) (criterion 2/3).
- The hedgerow is associated with a pre-1600 estate or manor (criterion 4)
- Contains certain categories of species of bird, animals or plants listed in the Wildlife and Countryside Act or Joint Nature Conservation Committee (JNCC) publications.
- Runs alongside a bridleway, footpath, road used as a public path, or a byway open to all traffic and includes at least 4 woody species, on average, in a 30m length and has at least 2 of the associated features listed at (i) or (v) below. The associated features are:
  - i. A bank or wall supporting the hedgerow.
  - ii. Less than 10% gaps.
  - iii. On average, at least one tree per 50m.
  - iv. At least 3 species from a list of 57 woodland plants.

v. v.A ditch.

vi. A number of connections with other hedgerows, ponds or woodland.

vii. A parallel hedge within 15m.

The act states that the hedgerow cannot be removed and can only be temporarily broken through if the work is for defence of the realm or for public safety reasons and only if there is no other access. If a breakthrough has to occur it must be no wider than 20 metres and replaced as soon as the work is complete.

Furthermore it is clearly stated that:

“ The presumption is in favour of protecting and retaining important hedgerows” (The hedgerow regulations 1997 1.7)

“the removal(1) of a hedgerow to which these Regulations apply is prohibited” (The hedgerow regulations 1997 5.0)

This removes access from the town of Trowbridge.

Paragraph 170 of the current NPPF regulations states that:

A functional floodplain is a very important planning tool in making space for flood waters when flooding occurs. Generally, development should be directed away from these areas using the Environment Agency’s catchment flood management plans, shoreline management plans and local flood risk management strategies produced by lead local flood authorities.

The area identified as functional floodplain should take into account the effects of defences and other flood risk management infrastructure. Areas which would naturally flood, but which are prevented from doing so by existing defences and infrastructure or solid buildings, will not normally be identified as functional floodplain. If an area is intended to flood, eg an upstream flood storage area designed to protect communities further downstream, then this should be safeguarded from development and identified as functional floodplain, even though it might not flood very often.

Paragraph: 015 Reference ID: 7-015-20140306

This photograph illustrates the nature of the functional flood plain as shown in the Environment Agency “South Court Farm” map. The photograph was taken on the upper portion of the flood plain itself.

[See attachement for photograph]

The building in the background being Southwick Court Farm and the wooden structure in the middle ground the corral indicated on the same photograph. This is at the high point of a drop off of approximately two metres to the hedge junction at the bottom left of the photo (Northern fringe of the site).

This photograph was taken from approximately this point on the satellite image:

[See attachment for map]

This is the Environment Agency Flood plain assessment (two footpaths appearing on OS maps are absent from this map but run from the current built form, these are not currently disputed or subject to DMMO Process):

[See attachment for map]

Current flood events have had this impact in nearby properties:

Policy

Wiltshire Policy CR1, contained within the January 2009 Leisure and Recreation Development Plan Document states that:

“The public rights of way network will be protected from development for other land uses and extensions and improvements will be sought, where appropriate, as part of development proposals.”

This recognition goes further and an Officer report relating to the Solar Farm constructed in another section of the Southwick Court estate reads:

“The Planning (Listed Buildings and Conservation Areas) Act 1990 to give special regard to the “desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses” (S16 and 66). Paragraph 132 of the NPPF states that “when considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset’s conservation. ... Significance can be harmed or lost through ... development within its setting. As heritage assets are irreplaceable, any harm or loss should require clear and convincing justification.” Core Policy 58 of the Wiltshire Core Strategy echoes the above national policy in seeking the protection, conservation and, where possible, enhancement of listed buildings.”

As will be illustrated this policy is not upheld when the HIA report is considered.

The proposed site contains three notified footpaths as set out in OS maps and a further two-long standing trackways are the subject of DMMO applications at this time. When Natural England comments made to Wiltshire Council in their response to the Housing Allocation Proposal are taken into consideration:

“We note that a high proportion of the proposed sites are land which is either bisected or bounded by public rights of way or is used for recreational purposes as open space. Development of these sites is likely to detrimentally affect the recreational value of these features. (C.f. NPPF paras 74. Existing open space...should not be built on unless... and 75. Planning policies should protect and enhance public rights of way and access.). We note that the Wiltshire Core Strategy says (CP51 – green infrastructure)

“If damage or loss of existing green infrastructure is unavoidable, the creation of new or replacement green infrastructure equal to or above its current value and quality, that maintains the integrity and functionality of the green infrastructure network, will be required. Proposals for major development should be accompanied by an audit of the existing green infrastructure within and around the site and a statement demonstrating how this will be retained and enhanced through the development process.”

We are unaware of any such audits being undertaken since the Core Strategy was adopted, and our impression is that, compensatory provision has rarely, if ever, been made.”

This demonstrates the determination of an independent body in the assessment of the aspect of the site which is relevant here.

The Sustainability Assessment defines the site as being used for informal recreation. A survey delivered average daily usage as being between 100 and 120 individuals. Furthermore Natural England responded to Wiltshire Council by stating that:

“It is not clear how public rights of way and valued open space has been considered in the Sustainability Appraisal. While they feature under objective 7, (will the policy protect rights of way, open space and common land?), a word search shows that right/rights of way is only mentioned 3 times in the site assessments, while existing open space is mentioned only twice.”

In its own assessment of the site Wiltshire Council describe the site in the following words:

“This is recreational or amenity space at the edge of a settlement that relates more closely to the built environment.

Core Policy 29 and the supporting text (paragraph 5.150) of the WCS identify specific issues to be addressed in planning for the Trowbridge Community Area, including:

“It is recognised that the villages surrounding Trowbridge, particularly Hilperton, Southwick North Bradley and West Ashton, have separate and distinct identities as villages. Open countryside should be maintained to protect the character and identity of these villages as separate communities.”

“All development in Trowbridge should be sensitive to constraints, such as the local County Wildlife Sites, SSSIs, Ancient Woodland, the Western Wiltshire Greenbelt and areas at risk of flooding”

This site is within Southwick, but abutting Trowbridge thereby removing that separation entirely and both contains, and is bounded by, areas not only at risk of flooding, but which currently flood on a regular basis.

Independent adjudication

WCC commissioned reports

The Sustainability assessment commissioned by Wiltshire Council (Wiltshire Housing Site Allocations Plan Sustainability Appraisal Report, Annex 1, A.9 Trowbridge Principal Settlement) is confusing and as a document presented to both Cabinet and Council for two discrete votes talks of housing density of both 280 and 237 dwellings. The Housing Allocation Proposal suggests 180 as the density for this site. Despite this the site is continually referred to as being on the North of the town. The inference being that the site is within the boundary of the Town and not the village.

Paragraph 157 of the current NPPF states that:

Crucially, Local Plans should:

“Identify land where development would be inappropriate, for instance because of its environmental or historic significance”

The County Planning Archaeologist has reported in June 2017 that:

“I have previously provided screening opinion advice for this site to the planning team. I highlighted that The Wiltshire and Swindon Historic Environment Record shows that a number of features have been plotted within the proposed development site which relate to a post-medieval water meadow system. Southwick Court Farm lies immediately south of the proposed development site and contains a number of important heritage assets including a medieval moated site with a medieval farmstead of which the farmhouse is a Grade II\* Listed Building (national ref. 1194818) dating from 1567 to 1599. I therefore raised the need to have a full assessment of the impacts on the heritage assets in particular on the water meadows and Grade II\* Listed Building.

Without further assessment I cannot advise on the appropriateness of the development but I would say that putting 180 houses will have an impact on a number of heritage assets.”

The Sustainability Assessment advises strongly that an independent Heritage Impact Assessment be made of the site. At the time of presentation of the Sustainability Assessment such a report had been made and presented. The section pertaining to this site runs for seven pages including a map and I have taken the liberty of adding a link in the bibliography to this document in which seven pages relate to this site.

In an attempt to present the significance of this document to the argument I reproduce a number of direct quotations here:

7.16 Setting makes a critical contribution to the significance of both assets, relating in the first instance to their immediate setting within the earlier – intact and functional – moated enclosure. The relationship to the later farm buildings outside the moat adds to the historical value in supplying the most recent agricultural chapter in the narrative of a site continuously occupied for around 600 years. The relationship to the wider landscape also contributes to the significance of the assets.

7.17 Similarly, the relationship of the asset group to the wider agricultural hinterland is important, as currently it stands in ‘splendid isolation’ as the one prominent feature – delineated in part by the trees following the moat boundary – in a sizeable tract of open agricultural landscape. The asset and its wider setting should therefore be considered to be an archaeological landscape of considerable importance. For example, the open space around the asset allows a clear understanding of the hierarchy of the 16th/17th century farmsteads in the immediate vicinity.

7.18 A Functional and historical connection with this agricultural landscape can therefore be established which elevates its importance in terms of contribution to these values and the assets’ setting.

7.20 The designated assets are of high importance, reflecting their national significance. The moat itself should be viewed as being indivisible from the significance of the designated features and, in its own right, likely to be of equivalent significance to a Scheduled Monument<sup>18</sup>.

7.23 Change in the wider landscape of the proposed site is likely to have two main effects. Firstly, it has the potential to sever the functional and historical links between the moated site and particularly the farmhouse with the contemporary water meadows that were likely integral to the 16th century enhancement of the place, and with the later enclosure landscape that forms its agricultural hinterland. Secondly, development has the potential to change the ability to appreciate the assets’ relatively prominent position in the local landscape. It stands on a small area of slightly elevated ground, in ‘splendid isolation’ from the surrounding historic villages – reflecting its origins as an isolated farm centre.

#### Risk of harm

7.24 Development of the entire proposed allocation would completely sever the assets from their landscape and economic/historical context. This would result in harm to the significance of the asset. Similarly, development would be likely to reduce the legibility of the asset as an isolated manorial farm, and change its prominence in the local landscape. The historical landholdings of the assets have already been harmed by development, particularly the large-scale intrusion created by the nearby solar farm.

7.25 While the core of the assets' relationships and setting – i.e. between the individual built elements and the archaeological heritage – would remain intact, the potential extent of losses of demonstrably functionally, historically and visually connected landscape comprising the wider setting of the asset represents a major impact. This would likely approach substantial harm, given the cumulative effect of interacting layers of asset's significance in forming a large-scale and relatively intact historic landscape.

7.26 Taking a precautionary approach, this is considered to be a high effect for the purposes of this assessment.

7.27 The same assertions hold for the non-designated elements of the place.

#### Options for sustainable development

7.28 Development anywhere within the proposed allocation area will result in loss of functional and historical relationships between the asset and the area of water meadow or enclosures affected.

Mitigation by design is not considered to be a realistic option if delivery of significant numbers of houses on site is required. While a small number of units could be accommodated in the extreme eastern extent of the site, this would need to be very carefully designed to 'sit down' into the landscape – but the comparatively flat site and open landscape does not lend itself to this type of intervention.

#### Cumulative effects

7.34 When considered in combination with other proposed allocations (H2.2 and H2.4) H2.6 could result in significant urbanisation of the southern edge of Trowbridge. This would substantially reduce the current separation between the historic settlements of Southwick and North Bradley from suburban Trowbridge, in addition to eroding the significant and legible historic character of the landscape.

The final summative comment is:

#### Options for sustainable development

7.36 As indicated above, archaeological investigation to understand the extent, date and significance of in situ remains would be required; the results should inform an appropriate mitigation strategy in support of any planning application. This would be secured by condition.

7.37 Mitigation by design is not considered to be a realistic option if delivery of significant numbers of houses on site is required. Insertion of a small area of development in the eastern extremity of the site could potentially avoid the majority of effects, but may not be either viable or feasible on other grounds.

(My highlights throughout) [See attachment for highlights]

The conclusion is accompanied by this map, red being land to remain untouched:

[See attachment for map]

And the interpretation of this conclusion as presented to Cabinet and Council to inform their vote was presented as:

“In fact, the assessment concludes that less than substantial harm would likely result, albeit at a perceived higher end of the less than substantial harm scale.”

To paraphrase this interpretation:

“In actual fact the wording used to interpret a clear directive is speculative, misleading and does not appear in any conclusion in the independent report and the site has been adjudged to be at high risk and totally unsuited to any significant development”

In the HRA assessment of the site commissioned by Wiltshire Council a determination of the site determined that due to its ecologically and environmentally sensitive nature the Lambrook stream and associated drainage features must be:

“Protected and/or buffered”

This is in partial recognition of its significance as a natural corridor for wildlife, relied upon by some endangered species such as water voles and Bechstein bats and partially as recognition of the ongoing practical function as a flood plain.

National body comment

In response to the HRA document Natural England responded to Wiltshire Council with this determination:

“A range of onsite mitigation measures are proposed. However, it is not clear that these measures can be delivered while delivering the development requirements of the site. For example, can hedgerows be retained or will they need to be bisected by access roads etc.? If they cannot be delivered, it is not clear whether this invalidates the conclusions of the HRA.

The onsite mitigation policy says “Sensitive habitat features...include: ... These features should be retained...”. The policy thus only protects the listed sensitive features, but not any unlisted sensitive features. The HRA does not discuss whether this list of features covers the vast majority of features or otherwise quantified the proportion of features covered. It would give greater certainty to the HRA if it did.

We note that the onsite mitigation policy requires 10-16m of native landscaping. It is not clear why these figures were chosen, and why there is such a spread in width. We suggest this is reviewed and justified, to provide greater certainty in the conclusions of the HRA.”

In the same response they also determine:

“In terms of site allocation policies, we have concerns around whether the allocations are consistent with the NPPF in the context of impacts on rights of way and open space, given what we perceive as a lack of implementation of relevant NPPF and Core Strategy policies (NPPF paras 74

and 75 and CP51) on comparable sites. As such, without confirmation that a robust approach will be taken to implementing these policies, we advise that the plan is unsound." (My bold and italic)

The Environment agency has, in relation to this point, determined that a 20 metre environmental buffer be incorporated.

This independent determination and specialist advice removes the access to the site from either the North or East.

Access from the North, being through the residential property which the Council have pledged to respect in the plan as voted upon by Cabinet and Councillors, and through an important hedgerow protected in law and through a required environmental buffer (whatever the depth) is therefore neither practical or legal. This would also require acquiescence from The Town and Parish Councils who publicly oppose the site along with a separate license from the Environment Agency due to the notified flood plain and the associated drainage system.

Access from the East, the A361, would also require cutting through hedgerow protected by the HRA assessment, Natural England requirements and disregarding the Heritage Impact Assessment. In addition a bridge/culvert would need to be constructed to protect not only the Heritage Asset as listed, but to ensure the lifetime surety from flooding as required by the NPPF sequential test.

The site is presented as being of marginal sustainability and fails many of the tests set up for sustainability criteria, most notably access to infrastructure and transport links (a sporadic and limited bus service and distances of over 2km to both the centre of town and any rail service). Serious concerns have been raised in the HIA report and breaches of both law and regulation would have to be made.

#### Conclusion

Since the site was first put forward for consultation in the June 2017 Draft Housing Allocation Proposal many arguments based in fact have emerged mitigating against its sustainability. These take the form of legal proscriptions such as the 1997 Hedgerows Act and the Planning (Listed Buildings and Conservation Areas) Act 1990, direction from National bodies such as Natural England and the Environment Agency, procedural direction from the NPPF and from reports commissioned by Wiltshire Council at great cost to the public purse.

This emerging evidence argues strongly that, had it been in the hands of Council Officers during the writing of the Draft, the site would have been deemed unsustainable and unsuited to development. The process in which we are all engaged is designed to seek the truth and to give weight to all evidence, irrespective of its source, but judged only on its validity.

This presentation is referenced, logical and factual. It refers to a single site in a County wide process and must have occupied a proportionately small amount of assessment at its inclusion but which means immeasurably more to those who use and value it beyond its monetary value. It can only be hoped that, with the presentation of this interwoven evidence a true picture of the site as current recreational space, wildlife haven, functional flood plain and nationally important landscape it can be safeguarded.

The descriptors in the above paragraph are those of agencies and Officers from whose hard work the argument above is developed and presented.

Thank you for taking the time to consider and assess the above points. If at any point you feel that a visit to the site would be advantageous I would be happy to act as your guide.

Argument

Site 3565 is unsuitable for development and unsustainable

Description

Site 3565 (Fields adjacent to Southwick Court) lies mostly in the Parish of Southwick, and partly in the Parish of North Bradley, just outside of the County Town of Trowbridge (Grid Ref ST 84776 55992). On the Northern side of the site lies a stream and brook network which is defined by a hedgerow dating to at least 1795. The hedgerow is protected by the 1997 Hedgerows act under several set criteria as an Important hedgerow. A majority of this hedgerow is also protected by tree protection orders and contains a brook which intersects with the Lambrok Stream. The Northern side of this hedgerow lies within the town of Trowbridge, the Southern within the Parish of Southwick. As the Sustainability Appraisal states:

“The land serves to separate Trowbridge from the village of Southwick. As such, development would potentially threaten the separate identity of Southwick and intrinsic quality of the countryside.”

Which runs contrary to Core Policy 29 and should immediately render the site invalid.

To the immediate North of this protected hedgerow lies a variety of developments, the majority dating back to the 1970's with some as recently constructed as the late 1990's. These consist of a variety of building styles but are well screened from both the rolling landscape and the protected Heritage assets beyond. Without exception they are constructed within the boundary of the town of Trowbridge. The current built form has been protected within the Housing Site allocation document in which it pledges to respect the current form. This takes the shape of a number of cul-de-sac's which define the town boundary with the proposed site.

The proposed site is bisected on a North-South line by the protected Lambrok Stream. This divides the site into two portions, the westernmost third which is directly adjacent to the A361 and the easternmost two thirds. The stream feeds directly into the stream and brook running along the hedgerow and is bounded by significant level two and three flood plains. This is exacerbated by a drop-off of approximately three metres from the Southern extreme of the proposed site to the Northern boundary demarcated by the Hedgerow and stream.

The Lambrok stream floods on a regular basis which then impacts on the brook and stream feature running along the Parish boundary. The system takes surface water runoff from several hundred yards away from the properties to the North of Silver Street Lane some hundred and fifty metres upslope to the North. This flooding directly impacts on the entire North-South axis of the site and affects the entirety of the drop-off. A consequence of this flooding is to force both surface water and untreated sewage out of the drains in the nearby housing developments.

The immediate South of the site is bounded by the Lambrok Stream and is also classified as being predominantly level two and three flood plain. The majority of the land between these areas of notified flood plain is classified as suffering from build-up of excessive surface water.

To the South West of the site lie the two registered Heritage Assets of Southwick Court and it's separately listed moat. These are informed and contextualised by the site itself which contains earthworks associated with the Assets from the post-medieval period. The moat feature is fed and

supported by the managed and developed geology and fieldworks which are a part of the Lambrok stream. Independent consultants have recognised the interdependency of these features and the reliance of the one on the other.

A field to the South-East of the proposed site has been noted to have damaged the context of the Listed Assets with the construction of a solar farm. Whilst this is not visible from the Assets, it has impacted on the managed landscape and associated ancillary buildings related to the Assets. The proposed development is directly adjacent to the Assets themselves.

To the immediate South-East lie Bramble Farm. This land is currently used for cattle farming as is the site itself which is worked on a tenancy basis. Access to Bramble Farm is by a part shingled and part earthen trackway known as Axe and Cleaver Lane.

The proposed site itself is currently used for a mix of the aforementioned cattle farming, informal recreation and leisure, and houses a number of public footpaths. The footpaths lead to the nearby villages of Southwick and North Bradley and on to the villages of Wingfield and Hoggington. Current OS maps include three footpaths, but DMMO procedures are currently in place for two others with documentary evidence showing their unrestricted use for thirty years.

Use of the site for dwellings will therefore increase flooding suffered by current dwelling invalidating the Environment Agency requirement for 'lifetime certainty' of freedom from flooding and fail NPPF sequential testing. The use of the site will irreparably damage Heritage assets, described by consultants as:

"Nationally important"

(Wiltshire Housing Sites Allocations Plan: Historic impact assessment 7.15)

Finally, access to the site will either involve cutting through a level three flood plain and protected hedgerow.

Or

Cutting through Important Hedgerow protected by the 1997 Hedgrows Act and invalidating the terms of the proposed plan as voted into being by Cabinet and Councillors.

Or

Cutting a road from Southwick village across landscape integral to listed Heritage Assets.

Or

Enacting a Compulsory Purchase Order to develop Axe and Cleaver Lane to make it fit for vehicular traffic.

Legislative, Factual and Policy issues

Legislative

The 1997 Hedgerow act specifically forbids the permanent destruction or removal of an 'Important' hedgerow. A link provided by DEFRA is here:  
<https://www.gov.uk/guidance/countryside-hedgerows-regulation-and-management>

The hedgerow running to the immediate North of the site, forming the boundary between Trowbridge and Southwick is show on the 1793 Andrews and Durys map of Wiltshire and can be found in the Wiltshire & Swindon History Centre, Chippenham. A link to this map appears in the bibliography and a detail is reproduced below:

[See attachement for map]

This unequivocally dates the boundary and is sufficient, along with other set criteria such as the presence of a watercourse, footpath and broad leafed species, to meet the criteria.

Despite permission granted in advance of any application by the County arboricultural Officer to cut through this hedgerow:

“There has been a site meeting with various interested parties who have expressed a clear desire not to remove any trees or any parts of the existing hedge other than one small section to make way for an emergency access route with lockable bollards on both sides of the proposed route. They will include this within a tree survey and recommendations and should the development gain consent, they would be permitted to remove the small, 7m section of hedge.”

This hedgerow is protected under legislation. No order needs to me made to confer this status in law, just the meeting of the criteria.

- It marks a pre-1850 parish or township boundary (criterion a)
- It incorporates an archaeological feature (post medieval earthworks) as noted in the Proposal and confirmed by the Planning Archaeologist (email in appendix C) (criterion 2/3).
- The hedgerow is associated with a pre-1600 estate or manor (criterion 4)
- Contains certain categories of species of bird, animals or plants listed in the Wildlife and Countryside Act or Joint Nature Conservation Committee (JNCC) publications.
- Runs alongside a bridleway, footpath, road used as a public path, or a byway open to all traffic and includes at least 4 woody species, on average, in a 30m length and has at least 2 of the associated features listed at (i) or (v) below. The associated features are:
  - i. A bank or wall supporting the hedgerow.
  - ii. Less than 10% gaps.
  - iii. On average, at least one tree per 50m.
  - iv. At least 3 species from a list of 57 woodland plants.

v. v.A ditch.

vi. A number of connections with other hedgerows, ponds or woodland.

vii. A parallel hedge within 15m.

The act states that the hedgerow cannot be removed and can only be temporarily broken through if the work is for defence of the realm or for public safety reasons and only if there is no other access. If a breakthrough has to occur it must be no wider than 20 metres and replaced as soon as the work is complete.

Furthermore it is clearly stated that:

“ The presumption is in favour of protecting and retaining important hedgerows” (The hedgerow regulations 1997 1.7)

“the removal(1) of a hedgerow to which these Regulations apply is prohibited” (The hedgerow regulations 1997 5.0)

This removes access from the town of Trowbridge.

Paragraph 170 of the current NPPF regulations states that:

A functional floodplain is a very important planning tool in making space for flood waters when flooding occurs. Generally, development should be directed away from these areas using the Environment Agency’s catchment flood management plans, shoreline management plans and local flood risk management strategies produced by lead local flood authorities.

The area identified as functional floodplain should take into account the effects of defences and other flood risk management infrastructure. Areas which would naturally flood, but which are prevented from doing so by existing defences and infrastructure or solid buildings, will not normally be identified as functional floodplain. If an area is intended to flood, eg an upstream flood storage area designed to protect communities further downstream, then this should be safeguarded from development and identified as functional floodplain, even though it might not flood very often.

Paragraph: 015 Reference ID: 7-015-20140306

This photograph illustrates the nature of the functional flood plain as shown in the Environment Agency “South Court Farm” map. The photograph was taken on the upper portion of the flood plain itself.

[See attachement for photograph]

The building in the background being Southwick Court Farm and the wooden structure in the middle ground the corral indicated on the same photograph. This is at the high point of a drop off of approximately two metres to the hedge junction at the bottom left of the photo (Northern fringe of the site).

This photograph was taken from approximately this point on the satellite image:

[See attachment for map]

This is the Environment Agency Flood plain assessment (two footpaths appearing on OS maps are absent from this map but run from the current built form, these are not currently disputed or subject to DMMO Process):

[See attachment for map]

Current flood events have had this impact in nearby properties:

Policy

Wiltshire Policy CR1, contained within the January 2009 Leisure and Recreation Development Plan Document states that:

“The public rights of way network will be protected from development for other land uses and extensions and improvements will be sought, where appropriate, as part of development proposals.”

This recognition goes further and an Officer report relating to the Solar Farm constructed in another section of the Southwick Court estate reads:

“The Planning (Listed Buildings and Conservation Areas) Act 1990 to give special regard to the “desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses” (S16 and 66). Paragraph 132 of the NPPF states that “when considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset’s conservation. ... Significance can be harmed or lost through ... development within its setting. As heritage assets are irreplaceable, any harm or loss should require clear and convincing justification.” Core Policy 58 of the Wiltshire Core Strategy echoes the above national policy in seeking the protection, conservation and, where possible, enhancement of listed buildings.”

As will be illustrated this policy is not upheld when the HIA report is considered.

The proposed site contains three notified footpaths as set out in OS maps and a further two-long standing trackways are the subject of DMMO applications at this time. When Natural England comments made to Wiltshire Council in their response to the Housing Allocation Proposal are taken into consideration:

“We note that a high proportion of the proposed sites are land which is either bisected or bounded by public rights of way or is used for recreational purposes as open space. Development of these sites is likely to detrimentally affect the recreational value of these features. (C.f. NPPF paras 74. Existing open space...should not be built on unless... and 75. Planning policies should protect and enhance public rights of way and access.). We note that the Wiltshire Core Strategy says (CP51 – green infrastructure)

“If damage or loss of existing green infrastructure is unavoidable, the creation of new or replacement green infrastructure equal to or above its current value and quality, that maintains the integrity and functionality of the green infrastructure network, will be required. Proposals for major development should be accompanied by an audit of the existing green infrastructure within and around the site and a statement demonstrating how this will be retained and enhanced through the development process.”

We are unaware of any such audits being undertaken since the Core Strategy was adopted, and our impression is that, compensatory provision has rarely, if ever, been made.”

This demonstrates the determination of an independent body in the assessment of the aspect of the site which is relevant here.

The Sustainability Assessment defines the site as being used for informal recreation. A survey delivered average daily usage as being between 100 and 120 individuals. Furthermore Natural England responded to Wiltshire Council by stating that:

“It is not clear how public rights of way and valued open space has been considered in the Sustainability Appraisal. While they feature under objective 7, (will the policy protect rights of way, open space and common land?), a word search shows that right/rights of way is only mentioned 3 times in the site assessments, while existing open space is mentioned only twice.”

In its own assessment of the site Wiltshire Council describe the site in the following words:

“This is recreational or amenity space at the edge of a settlement that relates more closely to the built environment.

Core Policy 29 and the supporting text (paragraph 5.150) of the WCS identify specific issues to be addressed in planning for the Trowbridge Community Area, including:

“It is recognised that the villages surrounding Trowbridge, particularly Hilperton, Southwick North Bradley and West Ashton, have separate and distinct identities as villages. Open countryside should be maintained to protect the character and identity of these villages as separate communities.”

“All development in Trowbridge should be sensitive to constraints, such as the local County Wildlife Sites, SSSIs, Ancient Woodland, the Western Wiltshire Greenbelt and areas at risk of flooding”

This site is within Southwick, but abutting Trowbridge thereby removing that separation entirely and both contains, and is bounded by, areas not only at risk of flooding, but which currently flood on a regular basis.

Independent adjudication

WCC commissioned reports

The Sustainability assessment commissioned by Wiltshire Council (Wiltshire Housing Site Allocations Plan Sustainability Appraisal Report, Annex 1, A.9 Trowbridge Principal Settlement) is confusing and as a document presented to both Cabinet and Council for two discrete votes talks of housing density of both 280 and 237 dwellings. The Housing Allocation Proposal suggests 180 as the density for this site. Despite this the site is continually referred to as being on the North of the town. The inference being that the site is within the boundary of the Town and not the village.

Paragraph 157 of the current NPPF states that:

Crucially, Local Plans should:

“Identify land where development would be inappropriate, for instance because of its environmental or historic significance”

The County Planning Archaeologist has reported in June 2017 that:

“I have previously provided screening opinion advice for this site to the planning team. I highlighted that The Wiltshire and Swindon Historic Environment Record shows that a number of features have been plotted within the proposed development site which relate to a post-medieval water meadow system. Southwick Court Farm lies immediately south of the proposed development site and contains a number of important heritage assets including a medieval moated site with a medieval farmstead of which the farmhouse is a Grade II\* Listed Building (national ref. 1194818) dating from 1567 to 1599. I therefore raised the need to have a full assessment of the impacts on the heritage assets in particular on the water meadows and Grade II\* Listed Building.

Without further assessment I cannot advise on the appropriateness of the development but I would say that putting 180 houses will have an impact on a number of heritage assets.”

The Sustainability Assessment advises strongly that an independent Heritage Impact Assessment be made of the site. At the time of presentation of the Sustainability Assessment such a report had been made and presented. The section pertaining to this site runs for seven pages including a map and I have taken the liberty of adding a link in the bibliography to this document in which seven pages relate to this site.

In an attempt to present the significance of this document to the argument I reproduce a number of direct quotations here:

7.16 Setting makes a critical contribution to the significance of both assets, relating in the first instance to their immediate setting within the earlier – intact and functional – moated enclosure. The relationship to the later farm buildings outside the moat adds to the historical value in supplying the most recent agricultural chapter in the narrative of a site continuously occupied for around 600 years. The relationship to the wider landscape also contributes to the significance of the assets.

7.17 Similarly, the relationship of the asset group to the wider agricultural hinterland is important, as currently it stands in ‘splendid isolation’ as the one prominent feature – delineated in part by the trees following the moat boundary – in a sizeable tract of open agricultural landscape. The asset and its wider setting should therefore be considered to be an archaeological landscape of considerable importance. For example, the open space around the asset allows a clear understanding of the hierarchy of the 16th/17th century farmsteads in the immediate vicinity.

7.18 A Functional and historical connection with this agricultural landscape can therefore be established which elevates its importance in terms of contribution to these values and the assets’ setting.

7.20 The designated assets are of high importance, reflecting their national significance. The moat itself should be viewed as being indivisible from the significance of the designated features and, in its own right, likely to be of equivalent significance to a Scheduled Monument<sup>18</sup>.

7.23 Change in the wider landscape of the proposed site is likely to have two main effects. Firstly, it has the potential to sever the functional and historical links between the moated site and particularly the farmhouse with the contemporary water meadows that were likely integral to the 16th century enhancement of the place, and with the later enclosure landscape that forms its agricultural hinterland. Secondly, development has the potential to change the ability to appreciate the assets’ relatively prominent position in the local landscape. It stands on a small area of slightly elevated ground, in ‘splendid isolation’ from the surrounding historic villages – reflecting its origins as an isolated farm centre.

#### Risk of harm

7.24 Development of the entire proposed allocation would completely sever the assets from their landscape and economic/historical context. This would result in harm to the significance of the asset. Similarly, development would be likely to reduce the legibility of the asset as an isolated manorial farm, and change its prominence in the local landscape. The historical landholdings of the assets have already been harmed by development, particularly the large-scale intrusion created by the nearby solar farm.

7.25 While the core of the assets' relationships and setting – i.e. between the individual built elements and the archaeological heritage – would remain intact, the potential extent of losses of demonstrably functionally, historically and visually connected landscape comprising the wider setting of the asset represents a major impact. This would likely approach substantial harm, given the cumulative effect of interacting layers of asset's significance in forming a large-scale and relatively intact historic landscape.

7.26 Taking a precautionary approach, this is considered to be a high effect for the purposes of this assessment.

7.27 The same assertions hold for the non-designated elements of the place.

#### Options for sustainable development

7.28 Development anywhere within the proposed allocation area will result in loss of functional and historical relationships between the asset and the area of water meadow or enclosures affected.

Mitigation by design is not considered to be a realistic option if delivery of significant numbers of houses on site is required. While a small number of units could be accommodated in the extreme eastern extent of the site, this would need to be very carefully designed to 'sit down' into the landscape – but the comparatively flat site and open landscape does not lend itself to this type of intervention.

#### Cumulative effects

7.34 When considered in combination with other proposed allocations (H2.2 and H2.4) H2.6 could result in significant urbanisation of the southern edge of Trowbridge. This would substantially reduce the current separation between the historic settlements of Southwick and North Bradley from suburban Trowbridge, in addition to eroding the significant and legible historic character of the landscape.

The final summative comment is:

#### Options for sustainable development

7.36 As indicated above, archaeological investigation to understand the extent, date and significance of in situ remains would be required; the results should inform an appropriate mitigation strategy in support of any planning application. This would be secured by condition.

7.37 Mitigation by design is not considered to be a realistic option if delivery of significant numbers of houses on site is required. Insertion of a small area of development in the eastern extremity of the site could potentially avoid the majority of effects, but may not be either viable or feasible on other grounds.

(My highlights throughout) [See attachment for highlights]

The conclusion is accompanied by this map, red being land to remain untouched:

[See attachment for map]

And the interpretation of this conclusion as presented to Cabinet and Council to inform their vote was presented as:

“In fact, the assessment concludes that less than substantial harm would likely result, albeit at a perceived higher end of the less than substantial harm scale.”

To paraphrase this interpretation:

“In actual fact the wording used to interpret a clear directive is speculative, misleading and does not appear in any conclusion in the independent report and the site has been adjudged to be at high risk and totally unsuited to any significant development”

In the HRA assessment of the site commissioned by Wiltshire Council a determination of the site determined that due to its ecologically and environmentally sensitive nature the Lambrook stream and associated drainage features must be:

“Protected and/or buffered”

This is in partial recognition of its significance as a natural corridor for wildlife, relied upon by some endangered species such as water voles and Bechstein bats and partially as recognition of the ongoing practical function as a flood plain.

National body comment

In response to the HRA document Natural England responded to Wiltshire Council with this determination:

“A range of onsite mitigation measures are proposed. However, it is not clear that these measures can be delivered while delivering the development requirements of the site. For example, can hedgerows be retained or will they need to be bisected by access roads etc.? If they cannot be delivered, it is not clear whether this invalidates the conclusions of the HRA.

The onsite mitigation policy says “Sensitive habitat features...include: ... These features should be retained...”. The policy thus only protects the listed sensitive features, but not any unlisted sensitive features. The HRA does not discuss whether this list of features covers the vast majority of features or otherwise quantified the proportion of features covered. It would give greater certainty to the HRA if it did.

We note that the onsite mitigation policy requires 10-16m of native landscaping. It is not clear why these figures were chosen, and why there is such a spread in width. We suggest this is reviewed and justified, to provide greater certainty in the conclusions of the HRA.”

In the same response they also determine:

“In terms of site allocation policies, we have concerns around whether the allocations are consistent with the NPPF in the context of impacts on rights of way and open space, given what we perceive as a lack of implementation of relevant NPPF and Core Strategy policies (NPPF paras 74

and 75 and CP51) on comparable sites. As such, without confirmation that a robust approach will be taken to implementing these policies, we advise that the plan is unsound." (My bold and italic)

The Environment agency has, in relation to this point, determined that a 20 metre environmental buffer be incorporated.

This independent determination and specialist advice removes the access to the site from either the North or East.

Access from the North, being through the residential property which the Council have pledged to respect in the plan as voted upon by Cabinet and Councillors, and through an important hedgerow protected in law and through a required environmental buffer (whatever the depth) is therefore neither practical or legal. This would also require acquiescence from The Town and Parish Councils who publicly oppose the site along with a separate license from the Environment Agency due to the notified flood plain and the associated drainage system.

Access from the East, the A361, would also require cutting through hedgerow protected by the HRA assessment, Natural England requirements and disregarding the Heritage Impact Assessment. In addition a bridge/culvert would need to be constructed to protect not only the Heritage Asset as listed, but to ensure the lifetime surety from flooding as required by the NPPF sequential test.

The site is presented as being of marginal sustainability and fails many of the tests set up for sustainability criteria, most notably access to infrastructure and transport links (a sporadic and limited bus service and distances of over 2km to both the centre of town and any rail service). Serious concerns have been raised in the HIA report and breaches of both law and regulation would have to be made.

#### Conclusion

Since the site was first put forward for consultation in the June 2017 Draft Housing Allocation Proposal many arguments based in fact have emerged mitigating against its sustainability. These take the form of legal proscriptions such as the 1997 Hedgerows Act and the Planning (Listed Buildings and Conservation Areas) Act 1990, direction from National bodies such as Natural England and the Environment Agency, procedural direction from the NPPF and from reports commissioned by Wiltshire Council at great cost to the public purse.

This emerging evidence argues strongly that, had it been in the hands of Council Officers during the writing of the Draft, the site would have been deemed unsustainable and unsuited to development. The process in which we are all engaged is designed to seek the truth and to give weight to all evidence, irrespective of its source, but judged only on its validity.

This presentation is referenced, logical and factual. It refers to a single site in a County wide process and must have occupied a proportionately small amount of assessment at its inclusion but which means immeasurably more to those who use and value it beyond its monetary value. It can only be hoped that, with the presentation of this interwoven evidence a true picture of the site as current recreational space, wildlife haven, functional flood plain and nationally important landscape it can be safeguarded.

The descriptors in the above paragraph are those of agencies and Officers from whose hard work the argument above is developed and presented.

Thank you for taking the time to consider and assess the above points. If at any point you feel that a visit to the site would be advantageous I would be happy to act as your guide.

Introduction

All information presented below is believed to be factual. All references made are listed in the body of the text and where possible are included in a bibliography complete with hyperlinks. Sources referenced are from Wiltshire County Policy, WCC Commissioned consultants reports, Natural England, The Environment Agency, Wiltshire County Officers Reports, DEFRA, Wiltshire County Planning Archaeologist and currently applicable NPPF direction.

Argument

Site 3565 is unsuitable for development and unsustainable

Description

Site 3565 (Fields adjacent to Southwick Court) lies mostly in the Parish of Southwick, and partly in the Parish of North Bradley, just outside of the County Town of Trowbridge (Grid Ref ST 84776 55992). On the Northern side of the site lies a stream and brook network which is defined by a hedgerow dating to at least 1795. The hedgerow is protected by the 1997 Hedgerows act under several set criteria as an Important hedgerow. A majority of this hedgerow is also protected by tree protection orders and contains a brook which intersects with the Lambrok Stream. The Northern side of this hedgerow lies within the town of Trowbridge, the Southern within the Parish of Southwick. As the Sustainability Appraisal states:

“The land serves to separate Trowbridge from the village of Southwick. As such, development would potentially threaten the separate identity of Southwick and intrinsic quality of the countryside.”

Which runs contrary to Core Policy 29 and should immediately render the site invalid.

To the immediate North of this protected hedgerow lies a variety of developments, the majority dating back to the 1970's with some as recently constructed as the late 1990's. These consist of a variety of building styles but are well screened from both the rolling landscape and the protected Heritage assets beyond. Without exception they are constructed within the boundary of the town of Trowbridge. The current built form has been protected within the Housing Site allocation document in which it pledges to respect the current form. This takes the shape of a number of cul-de-sac's which define the town boundary with the proposed site.

The proposed site is bisected on a North-South line by the protected Lambrok Stream. This divides the site into two portions, the westernmost third which is directly adjacent to the A361 and the easternmost two thirds. The stream feeds directly into the stream and brook running along the

hedgerow and is bounded by significant level two and three flood plains. This is exacerbated by a drop-off of approximately three metres from the Southern extreme of the proposed site to the Northern boundary demarcated by the Hedgerow and stream.

The Lambrok stream floods on a regular basis which then impacts on the brook and stream feature running along the Parish boundary. The system takes surface water runoff from several hundred yards away from the properties to the North of Silver Street Lane some hundred and fifty metres upslope to the North. This flooding directly impacts on the entire North-South axis of the site and affects the entirety of the drop-off. A consequence of this flooding is to force both surface water and untreated sewage out of the drains in the nearby housing developments.

The immediate South of the site is bounded by the Lambrok Stream and is also classified as being predominantly level two and three flood plain. The majority of the land between these areas of notified flood plain is classified as suffering from build-up of excessive surface water.

To the South West of the site lie the two registered Heritage Assets of Southwick Court and its separately listed moat. These are informed and contextualised by the site itself which contains earthworks associated with the Assets from the post-medieval period. The moat feature is fed and supported by the managed and developed geology and fieldworks which are a part of the Lambrok stream. Independent consultants have recognised the interdependency of these features and the reliance of the one on the other.

A field to the South-East of the proposed site has been noted to have damaged the context of the Listed Assets with the construction of a solar farm. Whilst this is not visible from the Assets, it has impacted on the managed landscape and associated ancillary buildings related to the Assets. The proposed development is directly adjacent to the Assets themselves.

To the immediate South-East lie Bramble Farm. This land is currently used for cattle farming as is the site itself which is worked on a tenancy basis. Access to Bramble Farm is by a part shingled and part earthen trackway known as Axe and Cleaver Lane.

The proposed site itself is currently used for a mix of the aforementioned cattle farming, informal recreation and leisure, and houses a number of public footpaths. The footpaths lead to the nearby villages of Southwick and North Bradley and on to the villages of Wingfield and Hoggington. Current OS maps include three footpaths, but DMMO procedures are currently in place for two others with documentary evidence showing their unrestricted use for thirty years.

Use of the site for dwellings will therefore increase flooding suffered by current dwelling invalidating the Environment Agency requirement for 'lifetime certainty' of freedom from flooding and fail NPPF sequential testing. The use of the site will irreparably damage Heritage assets, described by consultants as:

"Nationally important"

(Wiltshire Housing Sites Allocations Plan: Historic impact assessment 7.15)

Finally, access to the site will either involve cutting through a level three flood plain and protected hedgerow.

Or

Cutting through Important Hedgerow protected by the 1997 Hedgrows Act and invalidating the terms of the proposed plan as voted into being by Cabinet and Councillors.

Or

Cutting a road from Southwick village across landscape integral to listed Heritage Assets.

Or

Enacting a Compulsory Purchase Order to develop Axe and Cleaver Lane to make it fit for vehicular traffic.

Legislative, Factual and Policy issues

Legislative

The 1997 Hedgerow act specifically forbids the permanent destruction or removal of an 'Important' hedgerow. A link provided by DEFRA is here:

<https://www.gov.uk/guidance/countryside-hedgerows-regulation-and-management>

The hedgerow running to the immediate North of the site, forming the boundary between Trowbridge and Southwick is show on the 1793 Andrews and Durys map of Wiltshire and can be found in the Wiltshire & Swindon History Centre, Chippenham. A link to this map appears in the bibliography and a detail is reproduced below:

[See attachement for map]

This unequivocally dates the boundary and is sufficient, along with other set criteria such as the presence of a watercourse, footpath and broad leafed species, to meet the criteria.

Despite permission granted in advance of any application by the County arboricultural Officer to cut through this hedgerow:

“There has been a site meeting with various interested parties who have expressed a clear desire not to remove any trees or any parts of the existing hedge other than one small section to make way for an emergency access route with lockable bollards on both sides of the proposed route. They will include this within a tree survey and recommendations and should the development gain consent, they would be permitted to remove the small, 7m section of hedge.”

This hedgerow is protected under legislation. No order needs to be made to confer this status in law, just the meeting of the criteria.

- It marks a pre-1850 parish or township boundary (criterion a)
- It incorporates an archaeological feature (post medieval earthworks) as noted in the Proposal and confirmed by the Planning Archaeologist (email in appendix C) (criterion 2/3).
- The hedgerow is associated with a pre-1600 estate or manor (criterion 4)
- Contains certain categories of species of bird, animals or plants listed in the Wildlife and Countryside Act or Joint Nature Conservation Committee (JNCC) publications.
- Runs alongside a bridleway, footpath, road used as a public path, or a byway open to all traffic and includes at least 4 woody species, on average, in a 30m length and has at least 2 of the associated features listed at (i) or (v) below. The associated features are:
  - i. A bank or wall supporting the hedgerow.
  - ii. Less than 10% gaps.
  - iii. On average, at least one tree per 50m.
  - iv. At least 3 species from a list of 57 woodland plants.
  - v. A ditch.
  - vi. A number of connections with other hedgerows, ponds or woodland.
  - vii. A parallel hedge within 15m.

The act states that the hedgerow cannot be removed and can only be temporarily broken through if the work is for defence of the realm or for public safety reasons and only if there is no other access. If a breakthrough has to occur it must be no wider than 20 metres and replaced as soon as the work is complete.

Furthermore it is clearly stated that:

“ The presumption is in favour of protecting and retaining important hedgerows” (The hedgerow regulations 1997 1.7)

“the removal(1) of a hedgerow to which these Regulations apply is prohibited” (The hedgerow regulations 1997 5.0)

This removes access from the town of Trowbridge.

Paragraph 170 of the current NPPF regulations states that:

A functional floodplain is a very important planning tool in making space for flood waters when flooding occurs. Generally, development should be directed away from these areas using the Environment Agency’s catchment flood management plans, shoreline management plans and local flood risk management strategies produced by lead local flood authorities.

The area identified as functional floodplain should take into account the effects of defences and other flood risk management infrastructure. Areas which would naturally flood, but which are prevented from doing so by existing defences and infrastructure or solid buildings, will not normally be identified as functional floodplain. If an area is intended to flood, eg an upstream flood storage area designed to protect communities further downstream, then this should be safeguarded from development and identified as functional floodplain, even though it might not flood very often.

Paragraph: 015 Reference ID: 7-015-20140306

This photograph illustrates the nature of the functional flood plain as shown in the Environment Agency “South Court Farm” map. The photograph was taken on the upper portion of the flood plain itself.

[See attachment for photograph]

The building in the background being Southwick Court Farm and the wooden structure in the middle ground the corral indicated on the same photograph. This is at the high point of a drop off of approximately two metres to the hedge junction at the bottom left of the photo (Northern fringe of the site).

This photograph was taken from approximately this point on the satellite image:

[See attachement for map]

This is the Environment Agency Flood plain assessment (two footpaths appearing on OS maps are absent from this map but run from the current built form, these are not currently disputed or subject to DMMO Process):

[See attachment for map]

Current flood events have had this impact in nearby properties:

Policy

Wiltshire Policy CR1, contained within the January 2009 Leisure and Recreation Development Plan Document states that:

“The public rights of way network will be protected from development for other land uses and extensions and improvements will be sought, where appropriate, as part of development proposals.”

This recognition goes further and an Officer report relating to the Solar Farm constructed in another section of the Southwick Court estate reads:

“The Planning (Listed Buildings and Conservation Areas) Act 1990 to give special regard to the “desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses” (S16 and 66). Paragraph 132 of the NPPF states that “when considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset’s conservation. ... Significance can be harmed or lost through ... development within its setting. As heritage assets are irreplaceable, any harm or loss should require clear and convincing justification.” Core Policy 58 of the Wiltshire Core Strategy echoes the above national policy in seeking the protection, conservation and, where possible, enhancement of listed buildings.”

As will be illustrated this policy is not upheld when the HIA report is considered.

The proposed site contains three notified footpaths as set out in OS maps and a further two-long standing trackways are the subject of DMMO applications at this time. When Natural England comments made to Wiltshire Council in their response to the Housing Allocation Proposal are taken into consideration:

“We note that a high proportion of the proposed sites are land which is either bisected or bounded by public rights of way or is used for recreational purposes as open space. Development of these sites is likely to detrimentally affect the recreational value of these features. (C.f. NPPF paras 74. Existing open space...should not be built on unless... and 75. Planning policies should protect and enhance public rights of way and access.). We note that the Wiltshire Core Strategy says (CP51 – green infrastructure)

“If damage or loss of existing green infrastructure is unavoidable, the creation of new or replacement green infrastructure equal to or above its current value and quality, that maintains the integrity and functionality of the green infrastructure network, will be required. Proposals for major development should be accompanied by an audit of the existing green infrastructure within and around the site and a statement demonstrating how this will be retained and enhanced through the development process.”

We are unaware of any such audits being undertaken since the Core Strategy was adopted, and our impression is that, compensatory provision has rarely, if ever, been made.”

This demonstrates the determination of an independent body in the assessment of the aspect of the site which is relevant here.

The Sustainability Assessment defines the site as being used for informal recreation. A survey delivered average daily usage as being between 100 and 120 individuals. Furthermore Natural England responded to Wiltshire Council by stating that:

“It is not clear how public rights of way and valued open space has been considered in the Sustainability Appraisal. While they feature under objective 7, (will the policy protect rights of way, open space and common land?), a word search shows that right/rights of way is only mentioned 3 times in the site assessments, while existing open space is mentioned only twice.”

In its own assessment of the site Wiltshire Council describe the site in the following words:

“This is recreational or amenity space at the edge of a settlement that relates more closely to the built environment.

Core Policy 29 and the supporting text (paragraph 5.150) of the WCS identify specific issues to be addressed in planning for the Trowbridge Community Area, including:

“It is recognised that the villages surrounding Trowbridge, particularly Hilperton, Southwick North Bradley and West Ashton, have separate and distinct identities as villages. Open countryside should be maintained to protect the character and identity of these villages as separate communities.”

“All development in Trowbridge should be sensitive to constraints, such as the local County Wildlife Sites, SSSIs, Ancient Woodland, the Western Wiltshire Greenbelt and areas at risk of flooding”

This site is within Southwick, but abutting Trowbridge thereby removing that separation entirely and both contains, and is bounded by, areas not only at risk of flooding, but which currently flood on a regular basis.

Independent adjudication

WCC commissioned reports

The Sustainability assessment commissioned by Wiltshire Council (Wiltshire Housing Site Allocations Plan Sustainability Appraisal Report, Annex 1, A.9 Trowbridge Principal Settlement) is confusing and as a document presented to both Cabinet and Council for two discrete votes talks of housing density of both 280 and 237 dwellings. The Housing Allocation Proposal suggests 180 as the density for this site. Despite this the site is continually referred to as being on the North of the town. The inference being that the site is within the boundary of the Town and not the village.

Paragraph 157 of the current NPPF states that:

Crucially, Local Plans should:

“Identify land where development would be inappropriate, for instance because of its environmental or historic significance”

The County Planning Archaeologist has reported in June 2017 that:

“I have previously provided screening opinion advice for this site to the planning team. I highlighted that The Wiltshire and Swindon Historic Environment Record shows that a number of features have been plotted within the proposed development site which relate to a post-medieval water meadow system. Southwick Court Farm lies immediately south of the proposed development site and contains a number of important heritage assets including a medieval moated site with a medieval farmstead of which the farmhouse is a Grade II\* Listed Building (national ref. 1194818) dating from 1567 to 1599. I therefore raised the need to have a full assessment of the impacts on the heritage assets in particular on the water meadows and Grade II\* Listed Building.

Without further assessment I cannot advise on the appropriateness of the development but I would say that putting 180 houses will have an impact on a number of heritage assets.”

The Sustainability Assessment advises strongly that an independent Heritage Impact Assessment be made of the site. At the time of presentation of the Sustainability Assessment such a report had been made and presented. The section pertaining to this site runs for seven pages including a map and I have taken the liberty of adding a link in the bibliography to this document in which seven pages relate to this site.

In an attempt to present the significance of this document to the argument I reproduce a number of direct quotations here:

7.16 Setting makes a critical contribution to the significance of both assets, relating in the first instance to their immediate setting within the earlier – intact and functional – moated enclosure. The relationship to the later farm buildings outside the moat adds to the historical value in supplying the most recent agricultural chapter in the narrative of a site continuously occupied for around 600 years. The relationship to the wider landscape also contributes to the significance of the assets.

7.17 Similarly, the relationship of the asset group to the wider agricultural hinterland is important, as currently it stands in ‘splendid isolation’ as the one prominent feature – delineated in part by the trees following the moat boundary – in a sizeable tract of open agricultural landscape. The asset and its wider setting should therefore be considered to be an archaeological landscape of considerable importance. For example, the open space around the asset allows a clear understanding of the hierarchy of the 16th/17th century farmsteads in the immediate vicinity.

7.18 A Functional and historical connection with this agricultural landscape can therefore be established which elevates its importance in terms of contribution to these values and the assets’ setting.

7.20 The designated assets are of high importance, reflecting their national significance. The moat itself should be viewed as being indivisible from the significance of the designated features and, in its own right, likely to be of equivalent significance to a Scheduled Monument<sup>18</sup>.

7.23 Change in the wider landscape of the proposed site is likely to have two main effects. Firstly, it has the potential to sever the functional and historical links between the moated site and particularly the farmhouse with the contemporary water meadows that were likely integral to the 16th century enhancement of the place, and with the later enclosure landscape that forms its agricultural hinterland. Secondly, development has the potential to change the ability to appreciate the assets’ relatively prominent position in the local landscape. It stands on a small area of slightly elevated ground, in ‘splendid isolation’ from the surrounding historic villages – reflecting its origins as an isolated farm centre.

Risk of harm

7.24 Development of the entire proposed allocation would completely sever the assets from their landscape and economic/historical context. This would result in harm to the significance of the asset. Similarly, development would be likely to reduce the legibility of the asset as

an isolated manorial farm, and change its prominence in the local landscape. The historical landholdings of the assets have already been harmed by development, particularly the large-scale intrusion created by the nearby solar farm.

7.25 While the core of the assets' relationships and setting – i.e. between the individual built elements and the archaeological heritage – would remain intact, the potential extent of losses of demonstrably functionally, historically and visually connected landscape comprising the wider setting of the asset represents a major impact. This would likely approach substantial harm, given the cumulative effect of interacting layers of asset's significance in forming a large-scale and relatively intact historic landscape.

7.26 Taking a precautionary approach, this is considered to be a high effect for the purposes of this assessment.

7.27 The same assertions hold for the non-designated elements of the place.

#### Options for sustainable development

7.28 Development anywhere within the proposed allocation area will result in loss of functional and historical relationships between the asset and the area of water meadow or enclosures affected.

Mitigation by design is not considered to be a realistic option if delivery of significant numbers of houses on site is required. While a small number of units could be accommodated in the extreme eastern extent of the site, this would need to be very carefully designed to 'sit down' into the landscape – but the comparatively flat site and open landscape does not lend itself to this type of intervention.

#### Cumulative effects

7.34 When considered in combination with other proposed allocations (H2.2 and H2.4) H2.6 could result in significant urbanisation of the southern edge of Trowbridge. This would substantially reduce the current separation between the historic settlements of Southwick and North Bradley from suburban Trowbridge, in addition to eroding the significant and legible historic character of the landscape.

The final summative comment is:

#### Options for sustainable development

7.36 As indicated above, archaeological investigation to understand the extent, date and significance of in situ remains would be required; the results should inform an appropriate mitigation strategy in support of any planning application. This would be secured by condition.

7.37 Mitigation by design is not considered to be a realistic option if delivery of significant numbers of houses on site is required. Insertion of a small area of development in the eastern extremity of the site could potentially avoid the majority of effects, but may not be either viable or feasible on other grounds.

(My highlights throughout) [See attachment for highlights]

The conclusion is accompanied by this map, red being land to remain untouched:

[See attachment for map]

And the interpretation of this conclusion as presented to Cabinet and Council to inform their vote was presented as:

“In fact, the assessment concludes that less than substantial harm would likely result, albeit at a perceived higher end of the less than substantial harm scale.”

To paraphrase this interpretation:

“In actual fact the wording used to interpret a clear directive is speculative, misleading and does not appear in any conclusion in the independent report and the site has been adjudged to be at high risk and totally unsuited to any significant development”

In the HRA assessment of the site commissioned by Wiltshire Council a determination of the site determined that due to its ecologically and environmentally sensitive nature the Lambrook stream and associated drainage features must be:

“Protected and/or buffered”

This is in partial recognition of its significance as a natural corridor for wildlife, relied upon by some endangered species such as water voles and Bechstein bats and partially as recognition of the ongoing practical function as a flood plain.

National body comment

In response to the HRA document Natural England responded to Wiltshire Council with this determination:

“A range of onsite mitigation measures are proposed. However, it is not clear that these measures can be delivered while delivering the development requirements of the site. For example, can hedgerows be retained or will they need to be bisected by access roads etc.? If they cannot be delivered, it is not clear whether this invalidates the conclusions of the HRA.

The onsite mitigation policy says “Sensitive habitat features...include: ... These features should be retained...”. The policy thus only protects the listed sensitive features, but not any unlisted sensitive features. The HRA does not discuss whether this list of features covers the vast majority of features or otherwise quantified the proportion of features covered. It would give greater certainty to the HRA if it did.

We note that the onsite mitigation policy requires 10-16m of native landscaping. It is not clear why these figures were chosen, and why there is such a spread in width. We suggest this is reviewed and justified, to provide greater certainty in the conclusions of the HRA.”

In the same response they also determine:

“In terms of site allocation policies, we have concerns around whether the allocations are consistent with the NPPF in the context of impacts on rights of way and open space, given what we perceive as a lack of implementation of relevant NPPF and Core Strategy policies (NPPF paras 74 and 75 and CP51) on comparable sites. As such, without confirmation that a robust approach will be taken to implementing these policies, we advise that the plan is unsound.” (My bold and italic)

The Environment agency has, in relation to this point, determined that a 20 metre environmental buffer be incorporated.

This independent determination and specialist advice removes the access to the site from either the North or East.

Access from the North, being through the residential property which the Council have pledged to respect in the plan as voted upon by Cabinet and Councillors, and through an important hedgerow protected in law and through a required environmental buffer (whatever the depth) is therefore neither practical or legal. This would also require acquiescence from The Town and Parish Councils who publicly oppose the site along with a separate license from the Environment Agency due to the notified flood plain and the associated drainage system.

Access from the East, the A361, would also require cutting through hedgerow protected by the HRA assessment, Natural England requirements and disregarding the Heritage Impact Assessment. In addition a bridge/culvert would need to be constructed to protect not only the Heritage Asset as listed, but to ensure the lifetime surety from flooding as required by the NPPF sequential test.

The site is presented as being of marginal sustainability and fails many of the tests set up for sustainability criteria, most notably access to infrastructure and transport links (a sporadic and limited bus service and distances of over 2km to both the centre of town and any rail service). Serious concerns have been raised in the HIA report and breaches of both law and regulation would have to be made.

Conclusion

Since the site was first put forward for consultation in the June 2017 Draft Housing Allocation Proposal many arguments based in fact have emerged mitigating against its sustainability. These take the form of legal proscriptions such as the 1997 Hedgerows Act and the Planning

(Listed Buildings and Conservation Areas) Act 1990, direction from National bodies such as Natural England and the Environment Agency, procedural direction from the NPPF and from reports commissioned by Wiltshire Council at great cost to the public purse.

This emerging evidence argues strongly that, had it been in the hands of Council Officers during the writing of the Draft, the site would have been deemed unsustainable and unsuited to development. The process in which we are all engaged is designed to seek the truth and to give weight to all evidence, irrespective of its source, but judged only on its validity.

This presentation is referenced, logical and factual. It refers to a single site in a County wide process and must have occupied a proportionately small amount of assessment at its inclusion but which means immeasurably more to those who use and value it beyond its monetary value. It can only be hoped that, with the presentation of this interwoven evidence a true picture of the site as current recreational space, wildlife haven, functional flood plain and nationally important landscape it can be safeguarded.

The descriptors in the above paragraph are those of agencies and Officers from whose hard work the argument above is developed and presented.

Thank you for taking the time to consider and assess the above points. If at any point you feel that a visit to the site would be advantageous I would be happy to act as your guide.

<p><b>associated evidence documents.</b></p>	<p>The planned size of development here is for 14 properties, which would give it a similar density to Rosenheim Rise, where I used to live. I have two concerns.</p> <p>Firstly, at this density, I hope that each property will be provided with two parking spaces to prevent parking on pavements and anti-social parking. This has become an increasing problem in Rosenheim Rise, and the other estate developments within the village.</p> <p>Secondly, I would be worried about the access to this site. There appears to be an access point from Castle Road to the land in question, but I suspect that developers wish for access directly onto the B3098. This latter option would be dangerous, as the junction would be on a non-linear approach to the village and visibility would be an issue. The safest access is definitely from Castle Road to the southeast corner of the land in question.</p>

Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	Re: Crudwell Parish Neighbourhood Plan Steering Group in support of the removal of Ridgeway Farm - Wiltshire Housing Site Allocation Proposed Change Reference Number PC92 Crudwell Neighbourhood Plan Steering Group fully supports the Councils decision to remove the Ridgeway Farm Site from the Wiltshire Housing Site Allocations Plan and would like to restate its comments on the original plan that decisions of this type are best made by local people at a local level with the support of the community. We submit our comments on the basis that: There is no Strategic Need for Wiltshire to allocate housing in Crudwell because supply in the Housing Market Area is good and the Wiltshire Core Strategy states that development in Large Villages should be limited to small sites to meet local needs. Our Neighbourhood Plan is progressing extremely well (Reg14 Consultation planned for early December 2018 and Reg16 planned for Spring), and is planning to allocate land to meet identified needs. The Councils and Governments Localism agenda is best served by allowing the Parish to determine its own future. On that basis, we support the Proposed Change (PC92), which removes the Ridgeway Farm Site from the Wiltshire Housing Site Allocations Plan to allow the Crudwell Neighbourhood Plan to make the decision about growth in Crudwell Parish.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>[REFER TO ATTACHMENT FOR FULL REPRESENTATION] INTRODUCTION We write with reference to the above and welcome the opportunity to submit comments on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan. Please treat this as our formal representations, duly made within the consultation period. Building around 12,000 new homes a year in more than 400 locations nationwide, Persimmon is one of the UKs leading house builders, committed to the highest standards of planning, design and construction. Persimmon Homes is actively engaged with the delivery of various strategic and non-strategic mixed-use and residential schemes in Wiltshire and so is well placed to comment on the Plan. Persimmon Homes supports the preparation of the Wiltshire Site Allocations DPD as an opportunity to revise the out-of-date settlement boundaries and allocate new sites for housing to support the delivery of housing over the remainder of the Core Strategy plan period. However, Persimmon Homes maintains the concerns put forward in the previous comments on the draft Plan (representations dated 22 September 2017 consultee ID 983136). COMMENTS ON PROPOSED CHANGES PC1, PC5, PC7, PC8, PC11, PC18, PC18, PC38, PC45, PC46 MARKET LAVINGTON Persimmon Homes objects to proposed change PC46 which seeks to delete Housing Allocation H1.2 Underhill Nursery Market Lavington and the consequential changes to the Plan referenced as PC1, PC5, PC7, PC8, PC11, PC18, PC18, PC38 and PC45. The proposed change is not sound because it is not positively prepared or justified. The reason for the proposed change given in the Councils Schedule of Proposed Changes is: To reflect the resolution of Wiltshire Councils Cabinet, all sites at Market Lavington are proposed to be deleted from the WHSAP. The reason for this is that there is a comfortable five-year housing land supply position in the East HMA such that there is not a strategic need for sites to be allocated through the WHSAP at Market Lavington. Furthermore, significant progress has been made on the preparation of the Market Lavington Neighbourhood Plan, and given the strong five-year supply position in the East HMA, the Council can defer the consideration of potential housing allocations at Market Lavington to the emerging neighbourhood plan . The justification given for the change could therefore be summarised as: (i) because there is a five year land supply in the HMA; and (ii) because the Market Lavington Neighbourhood Plan can identify housing sites instead. With regard to the first reason, it is correct that the Council is currently able to demonstrate a five year land supply in the East Wiltshire HMA (indeed it is currently able to do this in each of the three HMAs). However this has not been used by the Council as justification for failing to identify sites in other Community Areas that have a substantial indicative remaining housing requirement to be identified. The Councils Devizes Community Area Topic Paper (July 2018) identifies that with the previously identified sites at Market Lavington removed (80 units) there is an indicative residual requirement for 81 dwellings still to be identified and delivered by 2026. Given that Market Lavington is identified in the Wiltshire Core Strategy as a Local Service Centre with a</p>			

good level of services and facilities (the highest order settlement in the Devizes Community Area remainder), it would be in line with the Councils overarching spatial strategy to deliver a high proportion of the outstanding need at Market Lavington, particularly given the lack of housing development at the settlement over recent years. Objective 3 of the draft Site Allocations Plan is to To allocate sites at the settlements in the County that support the spatial strategy of the Wiltshire Core Strategy. The spatial strategy for Wiltshire contained in the Core Strategy promotes the sustainable development of the County . The proposed removal of the sites at Market Lavington is inconsistent with this objective. The second reason given for the removal of the sites at Market Lavington relates to the relationship between the Site Allocations Plan and neighbourhood planning. In our representations to the previous consultation we made the following general comments about the lack of clarity between the two: The relationship between the draft Wiltshire Housing Site Allocations and emerging neighbourhood plans is not clear. Paragraph 2.22 states that the Site Allocations Plan does not take decisions in areas where Neighbourhood Plans have been made or are well advanced, however does not define this term. There is no guarantee that a draft Neighbourhood Plan will be progressed by the relevant Qualifying Body or be considered to meet the basic conditions by an independent examiner. It is therefore possible that settlements with capacity for housing development have not been comprehensively assessed as part of the DPD plan-making process. With respect to areas where Neighbourhood Plans are well advanced or have been made, Wiltshire Council would be encouraged to take a more positive approach to the preparation of the Housing Site Allocations DPD. The identification of reserve sites would be supported as this would allow for new housing to come forward in the event that a Neighbourhood Plan allocation proved to be unavailable or undeliverable. These comments have further relevance following the decision to delete the allocations at Market Lavington and leave it to the Neighbourhood Plan to deliver the outstanding need in the Community Area. The preparation of the Market Lavington Neighbourhood Plan has been nearly as protracted as that for the Housing Site Allocations Plan. The Market Lavington Neighbourhood Area was designated on 2 March 2015. A draft Neighbourhood Plan is yet to be submitted to the Local Planning Authority. It is recommended that Housing Allocation 1.2 Underhill Nursery Market Lavington be reinstated to the Plan. Persimmon Homes controls land required to facilitate the widening of the Fiddington Hill access highway to an adoptable standard.

**PC32 APPROXIMATE NUMBER OF DWELLINGS** In our previous representations we noted that As a general comment, it is critical that the approximate number of dwellings identified for each proposed site allocation is treated as indicative. For the majority of proposed site allocations, it is not possible at this stage in the planning process to prescribe an absolute figure for the capacity of each site. A design-led approach to the master planning of each site should be adopted, as informed by a detailed understanding of the site constraints and opportunities. Persimmon Homes therefore supports the proposed change to amend the heading in tables to note that the number of dwellings to be provided at each site allocation is approximate . This is consistent with the rest of the Plan and the underpinning Wiltshire Core Strategy.

**PC63 ELIZABETH WAY, TROWBRIDGE - SITE BOUNDARY** Persimmon Homes supports the proposed amendment to the boundary of the Elizabeth Way allocation to correct an error in the draft Site Allocations Plan. The allocation boundary now runs up to the southern boundary of the Elizabeth Way road.

**PC64 ELIZABETH WAY, TROWBRIDGE INCREASE NUMBER OF DWELLINGS** Persimmon Homes supports the amendment to increase the approximate number of dwellings to be delivered at the Elizabeth Way site allocation from 205 to 355. Whilst it should be appreciated that the number of dwellings is approximate, the figure of 205 dwellings stated in the draft Plan equates to a gross density of circa 10 dwellings per hectare, and thus grossly underestimated the potential of the site to contribute to delivering the housing shortfall at the Principal Settlement of Trowbridge. Furthermore, in February 2016 HGT Developments submitted an Outline planning application for up to 170 dwellings on part of the land, which is still to be determined. If Wiltshire Council granted consent to this application which covers circa 40% of the site allocation it would leave only approximately 35 dwellings to be delivered across the remaining circa 60% of the site (or approximately 3 dwellings per hectare). The underestimation of a sites potential to contribute to housing need in a Local Plan causes further issues at the application stage and can frustrate the delivery of new homes. Persimmon Homes supports a design-led approach to masterplanning the site as a whole, which will establish the number of dwellings that can be delivered on the allocation. Persimmon has an interest in part of the allocation and is collaborating with the other site owners / developers to bring the site forward for development. Persimmon would welcome an amendment to the Plan to require a site-wide

masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan. PC65 ELIZABETH WAY, TROWBRIDGE HERITAGE IMPACT Persimmon Homes does not object to the proposed change, which seeks to give further recognition to the heritage assets in proximity to the site. It should however be noted that the site is capable of being developed without damaging these assets and their setting. The principal justification given for the proposed change is to reflect the Heritage Impact Assessment prepared by LUC on behalf of the Council in March 2018. The Heritage Impact Assessment considers the significance of the Fieldways Hotel (Grade II\* Listed). The Assessment notes that Fieldways setting makes an important contribution to the significance of the asset and that the most important element of its setting is the relationship between the building and its immediate grounds. The Assessment does note that there are landscape features outside of this area and specifically notes a series of three eyecatcher planting clumps. It should be noted that these landscape features are all positioned within a small field immediately adjacent to the Fieldways Hotel within the allocation site. This field (circa 0.8ha) is not controlled by Persimmon but will likely be retained as a green space. Persimmon would welcome an amendment to the Plan to require a site-wide masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan to consider issues such as the potential impact on heritage assets. Persimmon Homes queries the other part of this proposed change to note that the site has high archaeological value. The reason given for making this change is in response to comments from Heritage England. However, Heritage Englands previous comments on the Plan note that the site is medium archaeological value. PC88, P90 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE BOUNDARY Persimmon Homes previous comments noted It is recommended that the proposed allocation red line be amended to remove the track running along the western boundary of the site, to ensure that the masterplanning and development of the site can proceed on a sound basis. The proposed change to amend the allocation boundary to remove the adjacent track is therefore welcomed. It should be noted that the track is not a Public Right of Way. Furthermore its inclusion within the site allocation boundary had caused some local concern that the track may be used as vehicular access, which would not be appropriate. PC89 EAST OF FARRELLS FIELD, YATTON KEYNELL FRA Persimmon Homes does not object to the proposed change to require any planning application to be supported by a Flood Risk Assessment (FRA). Persimmon Homes is preparing a detailed planning application for the development of the site, which is supported by an FRA / Drainage Strategy. PC91 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE ACCESS Persimmon Homes does not object to the proposed change to delete a sentence which stated that access to the site would be taken from Farrells Field. As stated in Persimmon Homes representations to the previous consultation on the Housing Site Allocations Plan, it was envisaged that the site would be accessed from the existing development of Farrells Field via an extension of the road that runs to the site boundary. This option was and remains a technically achievable way of accessing the site. However, following discussions with representatives of Yatton Keynell Parish Council and consultation with the local community who have expressed a preference for the site to be accessed via a new junction directly onto the main road (the B4039 to the north), Persimmon Homes has committed to this alternative access arrangement. Persimmon Homes is preparing a detailed planning application for the development of the site which identifies a vehicular access directly onto the B4039. COMMENTS ON SUPPORTING EVIDENCE Persimmon Homes maintains that there are inconsistencies in the identification of areas of search and the application of the Sustainability Appraisal in the site-selection process. The representations made during the previous consultation on the draft Plan are attached to these comments (representations dated 22 September 2017 consultee ID 983136).

**Please state which of the Sustainability Appraisal documents or Habitats Regulation Assessment**

**Please give details of why you support or do not support the updates to the Sustainability Appraisal (September 2018) or the Habitats Regulation Assessment Addendum (September 2018).**

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>[REFER TO ATTACHMENT FOR FULL REPRESENTATION] INTRODUCTION We write with reference to the above and welcome the opportunity to submit comments on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan. Please treat this as our formal representations, duly made within the consultation period. Building around 12,000 new homes a year in more than 400 locations nationwide, Persimmon is one of the UKs leading house builders, committed to the highest standards of planning, design and construction. Persimmon Homes is actively engaged with the delivery of various strategic and non-strategic mixed-use and residential schemes in Wiltshire and so is well placed to comment on the Plan. Persimmon Homes supports the preparation of the Wiltshire Site Allocations DPD as an opportunity to revise the out-of-date settlement boundaries and allocate new sites for housing to support the delivery of housing over the remainder of the Core Strategy plan period. However, Persimmon Homes maintains the concerns put forward in the previous comments on the draft Plan (representations dated 22 September 2017 consultee ID 983136). COMMENTS ON PROPOSED CHANGES PC1, PC5, PC7, PC8, PC11, PC18, PC18, PC38, PC45, PC46 MARKET LAVINGTON Persimmon Homes objects to proposed change PC46 which seeks to delete Housing Allocation H1.2 Underhill Nursery Market Lavington and the consequential changes to the Plan referenced as PC1, PC5, PC7, PC8, PC11, PC18, PC18, PC38 and PC45. The proposed change is not sound because it is not positively prepared or justified. The reason for the proposed change given in the Councils Schedule of Proposed Changes is: To reflect the resolution of Wiltshire Councils Cabinet, all sites at Market Lavington are proposed to be deleted from the WHSAP. The reason for this is that there is a comfortable five-year housing land supply position in the East HMA such that there is not a strategic need for sites to be allocated through the WHSAP at Market Lavington. Furthermore, significant progress has been made on the preparation of the Market Lavington Neighbourhood Plan, and given the strong five-year supply position in the East HMA, the Council can defer the consideration of potential housing allocations at Market Lavington to the emerging neighbourhood plan . The justification given for the change could therefore be summarised as: (i) because there is a five year land supply in the HMA; and (ii) because the Market Lavington Neighbourhood Plan can identify housing sites instead. With regard to the first reason, it is correct that the Council is currently able to demonstrate a five year land supply in the East Wiltshire HMA (indeed it is currently able to do this in each of the three HMAs). However this has not been used by the Council as justification for failing to identify sites in other Community Areas that have a substantial indicative remaining housing requirement to be identified. The Councils Devizes Community Area Topic Paper (July 2018) identifies that with the previously identified sites at Market Lavington removed (80 units) there is an indicative residual requirement for 81 dwellings still to be identified and delivered by 2026. Given that Market Lavington is identified in the Wiltshire Core Strategy as a Local Service Centre with a</p>			

good level of services and facilities (the highest order settlement in the Devizes Community Area remainder), it would be in line with the Councils overarching spatial strategy to deliver a high proportion of the outstanding need at Market Lavington, particularly given the lack of housing development at the settlement over recent years. Objective 3 of the draft Site Allocations Plan is to To allocate sites at the settlements in the County that support the spatial strategy of the Wiltshire Core Strategy. The spatial strategy for Wiltshire contained in the Core Strategy promotes the sustainable development of the County . The proposed removal of the sites at Market Lavington is inconsistent with this objective. The second reason given for the removal of the sites at Market Lavington relates to the relationship between the Site Allocations Plan and neighbourhood planning. In our representations to the previous consultation we made the following general comments about the lack of clarity between the two: The relationship between the draft Wiltshire Housing Site Allocations and emerging neighbourhood plans is not clear. Paragraph 2.22 states that the Site Allocations Plan does not take decisions in areas where Neighbourhood Plans have been made or are well advanced, however does not define this term. There is no guarantee that a draft Neighbourhood Plan will be progressed by the relevant Qualifying Body or be considered to meet the basic conditions by an independent examiner. It is therefore possible that settlements with capacity for housing development have not been comprehensively assessed as part of the DPD plan-making process. With respect to areas where Neighbourhood Plans are well advanced or have been made, Wiltshire Council would be encouraged to take a more positive approach to the preparation of the Housing Site Allocations DPD. The identification of reserve sites would be supported as this would allow for new housing to come forward in the event that a Neighbourhood Plan allocation proved to be unavailable or undeliverable. These comments have further relevance following the decision to delete the allocations at Market Lavington and leave it to the Neighbourhood Plan to deliver the outstanding need in the Community Area. The preparation of the Market Lavington Neighbourhood Plan has been nearly as protracted as that for the Housing Site Allocations Plan. The Market Lavington Neighbourhood Area was designated on 2 March 2015. A draft Neighbourhood Plan is yet to be submitted to the Local Planning Authority. It is recommended that Housing Allocation 1.2 Underhill Nursery Market Lavington be reinstated to the Plan. Persimmon Homes controls land required to facilitate the widening of the Fiddington Hill access highway to an adoptable standard.

**PC32 APPROXIMATE NUMBER OF DWELLINGS** In our previous representations we noted that As a general comment, it is critical that the approximate number of dwellings identified for each proposed site allocation is treated as indicative. For the majority of proposed site allocations, it is not possible at this stage in the planning process to prescribe an absolute figure for the capacity of each site. A design-led approach to the master planning of each site should be adopted, as informed by a detailed understanding of the site constraints and opportunities. Persimmon Homes therefore supports the proposed change to amend the heading in tables to note that the number of dwellings to be provided at each site allocation is approximate . This is consistent with the rest of the Plan and the underpinning Wiltshire Core Strategy.

**PC63 ELIZABETH WAY, TROWBRIDGE - SITE BOUNDARY** Persimmon Homes supports the proposed amendment to the boundary of the Elizabeth Way allocation to correct an error in the draft Site Allocations Plan. The allocation boundary now runs up to the southern boundary of the Elizabeth Way road.

**PC64 ELIZABETH WAY, TROWBRIDGE INCREASE NUMBER OF DWELLINGS** Persimmon Homes supports the amendment to increase the approximate number of dwellings to be delivered at the Elizabeth Way site allocation from 205 to 355. Whilst it should be appreciated that the number of dwellings is approximate, the figure of 205 dwellings stated in the draft Plan equates to a gross density of circa 10 dwellings per hectare, and thus grossly underestimated the potential of the site to contribute to delivering the housing shortfall at the Principal Settlement of Trowbridge. Furthermore, in February 2016 HGT Developments submitted an Outline planning application for up to 170 dwellings on part of the land, which is still to be determined. If Wiltshire Council granted consent to this application which covers circa 40% of the site allocation it would leave only approximately 35 dwellings to be delivered across the remaining circa 60% of the site (or approximately 3 dwellings per hectare). The underestimation of a sites potential to contribute to housing need in a Local Plan causes further issues at the application stage and can frustrate the delivery of new homes. Persimmon Homes supports a design-led approach to masterplanning the site as a whole, which will establish the number of dwellings that can be delivered on the allocation. Persimmon has an interest in part of the allocation and is collaborating with the other site owners / developers to bring the site forward for development. Persimmon would welcome an amendment to the Plan to require a site-wide

masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan. PC65 ELIZABETH WAY, TROWBRIDGE HERITAGE IMPACT Persimmon Homes does not object to the proposed change, which seeks to give further recognition to the heritage assets in proximity to the site. It should however be noted that the site is capable of being developed without damaging these assets and their setting. The principal justification given for the proposed change is to reflect the Heritage Impact Assessment prepared by LUC on behalf of the Council in March 2018. The Heritage Impact Assessment considers the significance of the Fieldways Hotel (Grade II\* Listed). The Assessment notes that Fieldways setting makes an important contribution to the significance of the asset and that the most important element of its setting is the relationship between the building and its immediate grounds. The Assessment does note that there are landscape features outside of this area and specifically notes a series of three eyecatcher planting clumps. It should be noted that these landscape features are all positioned within a small field immediately adjacent to the Fieldways Hotel within the allocation site. This field (circa 0.8ha) is not controlled by Persimmon but will likely be retained as a green space. Persimmon would welcome an amendment to the Plan to require a site-wide masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan to consider issues such as the potential impact on heritage assets. Persimmon Homes queries the other part of this proposed change to note that the site has high archaeological value. The reason given for making this change is in response to comments from Heritage England. However, Heritage Englands previous comments on the Plan note that the site is medium archaeological value. PC88, P90 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE BOUNDARY Persimmon Homes previous comments noted It is recommended that the proposed allocation red line be amended to remove the track running along the western boundary of the site, to ensure that the masterplanning and development of the site can proceed on a sound basis. The proposed change to amend the allocation boundary to remove the adjacent track is therefore welcomed. It should be noted that the track is not a Public Right of Way. Furthermore its inclusion within the site allocation boundary had caused some local concern that the track may be used as vehicular access, which would not be appropriate. PC89 EAST OF FARRELLS FIELD, YATTON KEYNELL FRA Persimmon Homes does not object to the proposed change to require any planning application to be supported by a Flood Risk Assessment (FRA). Persimmon Homes is preparing a detailed planning application for the development of the site, which is supported by an FRA / Drainage Strategy. PC91 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE ACCESS Persimmon Homes does not object to the proposed change to delete a sentence which stated that access to the site would be taken from Farrells Field. As stated in Persimmon Homes representations to the previous consultation on the Housing Site Allocations Plan, it was envisaged that the site would be accessed from the existing development of Farrells Field via an extension of the road that runs to the site boundary. This option was and remains a technically achievable way of accessing the site. However, following discussions with representatives of Yatton Keynell Parish Council and consultation with the local community who have expressed a preference for the site to be accessed via a new junction directly onto the main road (the B4039 to the north), Persimmon Homes has committed to this alternative access arrangement. Persimmon Homes is preparing a detailed planning application for the development of the site which identifies a vehicular access directly onto the B4039. COMMENTS ON SUPPORTING EVIDENCE Persimmon Homes maintains that there are inconsistencies in the identification of areas of search and the application of the Sustainability Appraisal in the site-selection process. The representations made during the previous consultation on the draft Plan are attached to these comments (representations dated 22 September 2017 consultee ID 983136).

Please treat this as our formal representations, duly made within the consultation period. Building around 12,000 new homes a year in more than 400 locations nationwide, Persimmon is one of the UKs leading house builders, committed to the highest standards of planning, design and construction. Persimmon Homes is actively engaged with the delivery of various strategic and non-strategic mixed-use and residential schemes in Wiltshire and so is well placed to comment on the Plan. Persimmon Homes supports the preparation of the Wiltshire Site Allocations DPD as an opportunity to revise the out-of-date settlement boundaries and allocate new sites for housing to support the delivery of housing over the remainder of the Core Strategy plan period. However, Persimmon Homes maintains the concerns put forward in the previous comments on the draft Plan (representations dated 22 September 2017 consultee ID 983136). COMMENTS ON PROPOSED CHANGES PC1, PC5, PC7, PC8, PC11, PC18, PC18, PC38, PC45, PC46 MARKET LAVINGTON Persimmon Homes objects to proposed change PC46 which seeks to delete Housing Allocation H1.2 Underhill Nursery Market Lavington and the consequential changes to the Plan referenced as PC1, PC5, PC7, PC8, PC11, PC18, PC18, PC38 and PC45. The proposed change is not sound because it is not positively prepared or justified. The reason for the proposed change given in the Councils Schedule of Proposed Changes is: To reflect the resolution of Wiltshire Councils Cabinet, all sites at Market Lavington are proposed to be deleted from the WHSAP. The reason for this is that there is a comfortable five-year housing land supply position in the East HMA such that there is not a strategic need for sites to be allocated through the WHSAP at Market Lavington. Furthermore, significant progress has been made on the preparation of the Market Lavington Neighbourhood Plan, and given the strong five-year supply position in the East HMA, the Council can defer the consideration of potential housing allocations at Market Lavington to the emerging neighbourhood plan . The justification given for the change could therefore be summarised as: (i) because there is a five year land supply in the HMA; and (ii) because the Market Lavington Neighbourhood Plan can identify housing sites instead. With regard to the first reason, it is correct that the Council is currently able to demonstrate a five year land supply in the East Wiltshire HMA (indeed it is currently able to do this in each of the three HMAs). However this has not been used by the Council as justification for failing to identify sites in other Community Areas that have a substantial indicative remaining housing requirement to be identified. The Councils Devizes Community Area Topic Paper (July 2018) identifies that with the previously identified sites at Market Lavington removed (80 units) there is an indicative residual requirement for 81 dwellings still to be identified and delivered by 2026. Given that Market Lavington is identified in the Wiltshire Core Strategy as a Local Service Centre with a</p>			

good level of services and facilities (the highest order settlement in the Devizes Community Area remainder), it would be in line with the Councils overarching spatial strategy to deliver a high proportion of the outstanding need at Market Lavington, particularly given the lack of housing development at the settlement over recent years. Objective 3 of the draft Site Allocations Plan is to To allocate sites at the settlements in the County that support the spatial strategy of the Wiltshire Core Strategy. The spatial strategy for Wiltshire contained in the Core Strategy promotes the sustainable development of the County . The proposed removal of the sites at Market Lavington is inconsistent with this objective. The second reason given for the removal of the sites at Market Lavington relates to the relationship between the Site Allocations Plan and neighbourhood planning. In our representations to the previous consultation we made the following general comments about the lack of clarity between the two: The relationship between the draft Wiltshire Housing Site Allocations and emerging neighbourhood plans is not clear. Paragraph 2.22 states that the Site Allocations Plan does not take decisions in areas where Neighbourhood Plans have been made or are well advanced, however does not define this term. There is no guarantee that a draft Neighbourhood Plan will be progressed by the relevant Qualifying Body or be considered to meet the basic conditions by an independent examiner. It is therefore possible that settlements with capacity for housing development have not been comprehensively assessed as part of the DPD plan-making process. With respect to areas where Neighbourhood Plans are well advanced or have been made, Wiltshire Council would be encouraged to take a more positive approach to the preparation of the Housing Site Allocations DPD. The identification of reserve sites would be supported as this would allow for new housing to come forward in the event that a Neighbourhood Plan allocation proved to be unavailable or undeliverable. These comments have further relevance following the decision to delete the allocations at Market Lavington and leave it to the Neighbourhood Plan to deliver the outstanding need in the Community Area. The preparation of the Market Lavington Neighbourhood Plan has been nearly as protracted as that for the Housing Site Allocations Plan. The Market Lavington Neighbourhood Area was designated on 2 March 2015. A draft Neighbourhood Plan is yet to be submitted to the Local Planning Authority. It is recommended that Housing Allocation 1.2 Underhill Nursery Market Lavington be reinstated to the Plan. Persimmon Homes controls land required to facilitate the widening of the Fiddington Hill access highway to an adoptable standard.

**PC32 APPROXIMATE NUMBER OF DWELLINGS** In our previous representations we noted that As a general comment, it is critical that the approximate number of dwellings identified for each proposed site allocation is treated as indicative. For the majority of proposed site allocations, it is not possible at this stage in the planning process to prescribe an absolute figure for the capacity of each site. A design-led approach to the master planning of each site should be adopted, as informed by a detailed understanding of the site constraints and opportunities. Persimmon Homes therefore supports the proposed change to amend the heading in tables to note that the number of dwellings to be provided at each site allocation is approximate . This is consistent with the rest of the Plan and the underpinning Wiltshire Core Strategy.

**PC63 ELIZABETH WAY, TROWBRIDGE - SITE BOUNDARY** Persimmon Homes supports the proposed amendment to the boundary of the Elizabeth Way allocation to correct an error in the draft Site Allocations Plan. The allocation boundary now runs up to the southern boundary of the Elizabeth Way road.

**PC64 ELIZABETH WAY, TROWBRIDGE INCREASE NUMBER OF DWELLINGS** Persimmon Homes supports the amendment to increase the approximate number of dwellings to be delivered at the Elizabeth Way site allocation from 205 to 355. Whilst it should be appreciated that the number of dwellings is approximate, the figure of 205 dwellings stated in the draft Plan equates to a gross density of circa 10 dwellings per hectare, and thus grossly underestimated the potential of the site to contribute to delivering the housing shortfall at the Principal Settlement of Trowbridge. Furthermore, in February 2016 HGT Developments submitted an Outline planning application for up to 170 dwellings on part of the land, which is still to be determined. If Wiltshire Council granted consent to this application which covers circa 40% of the site allocation it would leave only approximately 35 dwellings to be delivered across the remaining circa 60% of the site (or approximately 3 dwellings per hectare). The underestimation of a sites potential to contribute to housing need in a Local Plan causes further issues at the application stage and can frustrate the delivery of new homes. Persimmon Homes supports a design-led approach to masterplanning the site as a whole, which will establish the number of dwellings that can be delivered on the allocation. Persimmon has an interest in part of the allocation and is collaborating with the other site owners / developers to bring the site forward for development. Persimmon would welcome an amendment to the Plan to require a site-wide

masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan. PC65 ELIZABETH WAY, TROWBRIDGE HERITAGE IMPACT Persimmon Homes does not object to the proposed change, which seeks to give further recognition to the heritage assets in proximity to the site. It should however be noted that the site is capable of being developed without damaging these assets and their setting. The principal justification given for the proposed change is to reflect the Heritage Impact Assessment prepared by LUC on behalf of the Council in March 2018. The Heritage Impact Assessment considers the significance of the Fieldways Hotel (Grade II\* Listed). The Assessment notes that Fieldways setting makes an important contribution to the significance of the asset and that the most important element of its setting is the relationship between the building and its immediate grounds. The Assessment does note that there are landscape features outside of this area and specifically notes a series of three eyecatcher planting clumps. It should be noted that these landscape features are all positioned within a small field immediately adjacent to the Fieldways Hotel within the allocation site. Given that Market Lavington is identified in the Wiltshire Core Strategy as a Local Service Centre with a</p>				

good level of services and facilities (the highest order settlement in the Devizes Community Area remainder), it would be in line with the Councils overarching spatial strategy to deliver a high proportion of the outstanding need at Market Lavington, particularly given the lack of housing development at the settlement over recent years. Objective 3 of the draft Site Allocations Plan is to To allocate sites at the settlements in the County that support the spatial strategy of the Wiltshire Core Strategy. The spatial strategy for Wiltshire contained in the Core Strategy promotes the sustainable development of the County . The proposed removal of the sites at Market Lavington is inconsistent with this objective. The second reason given for the removal of the sites at Market Lavington relates to the relationship between the Site Allocations Plan and neighbourhood planning. In our representations to the previous consultation we made the following general comments about the lack of clarity between the two: The relationship between the draft Wiltshire Housing Site Allocations and emerging neighbourhood plans is not clear. Paragraph 2.22 states that the Site Allocations Plan does not take decisions in areas where Neighbourhood Plans have been made or are well advanced, however does not define this term. There is no guarantee that a draft Neighbourhood Plan will be progressed by the relevant Qualifying Body or be considered to meet the basic conditions by an independent examiner. It is therefore possible that settlements with capacity for housing development have not been comprehensively assessed as part of the DPD plan-making process. With respect to areas where Neighbourhood Plans are well advanced or have been made, Wiltshire Council would be encouraged to take a more positive approach to the preparation of the Housing Site Allocations DPD. The identification of reserve sites would be supported as this would allow for new housing to come forward in the event that a Neighbourhood Plan allocation proved to be unavailable or undeliverable. These comments have further relevance following the decision to delete the allocations at Market Lavington and leave it to the Neighbourhood Plan to deliver the outstanding need in the Community Area. The preparation of the Market Lavington Neighbourhood Plan has been nearly as protracted as that for the Housing Site Allocations Plan. The Market Lavington Neighbourhood Area was designated on 2 March 2015. A draft Neighbourhood Plan is yet to be submitted to the Local Planning Authority. It is recommended that Housing Allocation 1.2 Underhill Nursery Market Lavington be reinstated to the Plan. Persimmon Homes controls land required to facilitate the widening of the Fiddington Hill access highway to an adoptable standard.

**PC32 APPROXIMATE NUMBER OF DWELLINGS** In our previous representations we noted that As a general comment, it is critical that the approximate number of dwellings identified for each proposed site allocation is treated as indicative. For the majority of proposed site allocations, it is not possible at this stage in the planning process to prescribe an absolute figure for the capacity of each site. A design-led approach to the master planning of each site should be adopted, as informed by a detailed understanding of the site constraints and opportunities. Persimmon Homes therefore supports the proposed change to amend the heading in tables to note that the number of dwellings to be provided at each site allocation is approximate . This is consistent with the rest of the Plan and the underpinning Wiltshire Core Strategy.

**PC63 ELIZABETH WAY, TROWBRIDGE - SITE BOUNDARY** Persimmon Homes supports the proposed amendment to the boundary of the Elizabeth Way allocation to correct an error in the draft Site Allocations Plan. The allocation boundary now runs up to the southern boundary of the Elizabeth Way road.

**PC64 ELIZABETH WAY, TROWBRIDGE INCREASE NUMBER OF DWELLINGS** Persimmon Homes supports the amendment to increase the approximate number of dwellings to be delivered at the Elizabeth Way site allocation from 205 to 355. Whilst it should be appreciated that the number of dwellings is approximate, the figure of 205 dwellings stated in the draft Plan equates to a gross density of circa 10 dwellings per hectare, and thus grossly underestimated the potential of the site to contribute to delivering the housing shortfall at the Principal Settlement of Trowbridge. Furthermore, in February 2016 HGT Developments submitted an Outline planning application for up to 170 dwellings on part of the land, which is still to be determined. If Wiltshire Council granted consent to this application which covers circa 40% of the site allocation it would leave only approximately 35 dwellings to be delivered across the remaining circa 60% of the site (or approximately 3 dwellings per hectare). The underestimation of a sites potential to contribute to housing need in a Local Plan causes further issues at the application stage and can frustrate the delivery of new homes. Persimmon Homes supports a design-led approach to masterplanning the site as a whole, which will establish the number of dwellings that can be delivered on the allocation. Persimmon has an interest in part of the allocation and is collaborating with the other site owners / developers to bring the site forward for development. Persimmon would welcome an amendment to the Plan to require a site-wide

masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan. PC65 ELIZABETH WAY, TROWBRIDGE HERITAGE IMPACT Persimmon Homes does not object to the proposed change, which seeks to give further recognition to the heritage assets in proximity to the site. It should however be noted that the site is capable of being developed without damaging these assets and their setting. The principal justification given for the proposed change is to reflect the Heritage Impact Assessment prepared by LUC on behalf of the Council in March 2018. The Heritage Impact Assessment considers the significance of the Fieldways Hotel (Grade II\* Listed). The Assessment notes that Fieldways setting makes an important contribution to the significance of the asset and that the most important element of its setting is the relationship between the building and its immediate grounds. The Assessment does note that there are landscape features outside of this area and specifically notes a series of three eyecatcher planting clumps. It should be noted that these landscape features are all positioned within a small field immediately adjacent to the Fieldways Hotel within the allocation site. This field (circa 0.8ha) is not controlled by Persimmon but will likely be retained as a green space. Persimmon would welcome an amendment to the Plan to require a site-wide masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan to consider issues such as the potential impact on heritage assets. Persimmon Homes queries the other part of this proposed change to note that the site has high archaeological value. The reason given for making this change is in response to comments from Heritage England. However, Heritage Englands previous comments on the Plan note that the site is medium archaeological value. PC88, P90 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE BOUNDARY Persimmon Homes previous comments noted It is recommended that the proposed allocation red line be amended to remove the track running along the western boundary of the site, to ensure that the masterplanning and development of the site can proceed on a sound basis. The proposed change to amend the allocation boundary to remove the adjacent track is therefore welcomed. It should be noted that the track is not a Public Right of Way. Furthermore its inclusion within the site allocation boundary had caused some local concern that the track may be used as vehicular access, which would not be appropriate. PC89 EAST OF FARRELLS FIELD, YATTON KEYNELL FRA Persimmon Homes does not object to the proposed change to require any planning application to be supported by a Flood Risk Assessment (FRA). Persimmon Homes is preparing a detailed planning application for the development of the site, which is supported by an FRA / Drainage Strategy. PC91 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE ACCESS Persimmon Homes does not object to the proposed change to delete a sentence which stated that access to the site would be taken from Farrells Field. As stated in Persimmon Homes representations to the previous consultation on the Housing Site Allocations Plan, it was envisaged that the site would be accessed from the existing development of Farrells Field via an extension of the road that runs to the site boundary. This option was and remains a technically achievable way of accessing the site. However, following discussions with representatives of Yatton Keynell Parish Council and consultation with the local community who have expressed a preference for the site to be accessed via a new junction directly onto the main road (the B4039 to the north), Persimmon Homes has committed to this alternative access arrangement. Persimmon Homes is preparing a detailed planning application for the development of the site which identifies a vehicular access directly onto the B4039. COMMENTS ON SUPPORTING EVIDENCE Persimmon Homes maintains that there are inconsistencies in the identification of areas of search and the application of the Sustainability Appraisal in the site-selection process. The representations made during the previous consultation on the draft Plan are attached to these comments (representations dated 22 September 2017 consultee ID 983136).

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>[REFER TO ATTACHMENT FOR FULL REPRESENTATION] INTRODUCTION We write with reference to the above and welcome the opportunity to submit comments on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan. Please treat this as our formal representations, duly made within the consultation period. Building around 12,000 new homes a year in more than 400 locations nationwide, Persimmon is one of the UKs leading house builders, committed to the highest standards of planning, design and construction. Persimmon Homes is actively engaged with the delivery of various strategic and non-strategic mixed-use and residential schemes in Wiltshire and so is well placed to comment on the Plan. Persimmon Homes supports the preparation of the Wiltshire Site Allocations DPD as an opportunity to revise the out-of-date settlement boundaries and allocate new sites for housing to support the delivery of housing over the remainder of the Core Strategy plan period. However, Persimmon Homes maintains the concerns put forward in the previous comments on the draft Plan (representations dated 22 September 2017 consultee ID 983136). COMMENTS ON PROPOSED CHANGES PC1, PC5, PC7, PC8, PC11, PC18, PC18, PC38, PC45, PC46 MARKET LAVINGTON Persimmon Homes objects to proposed change PC46 which seeks to delete Housing Allocation H1.2 Underhill Nursery Market Lavington and the consequential changes to the Plan referenced as PC1, PC5, PC7, PC8, PC11, PC18, PC18, PC38 and PC45. The proposed change is not sound because it is not positively prepared or justified. The reason for the proposed change given in the Councils Schedule of Proposed Changes is: To reflect the resolution of Wiltshire Councils Cabinet, all sites at Market Lavington are proposed to be deleted from the WHSAP. The reason for this is that there is a comfortable five-year housing land supply position in the East HMA such that there is not a strategic need for sites to be allocated through the WHSAP at Market Lavington. Furthermore, significant progress has been made on the preparation of the Market Lavington Neighbourhood Plan, and given the strong five-year supply position in the East HMA, the Council can defer the consideration of potential housing allocations at Market Lavington to the emerging neighbourhood plan . The justification given for the change could therefore be summarised as: (i) because there is a five year land supply in the HMA; and (ii) because the Market Lavington Neighbourhood Plan can identify housing sites instead. With regard to the first reason, it is correct that the Council is currently able to demonstrate a five year land supply in the East Wiltshire HMA (indeed it is currently able to do this in each of the three HMAs). However this has not been used by the Council as justification for failing to identify sites in other Community Areas that have a substantial indicative remaining housing requirement to be identified. The Councils Devizes Community Area Topic Paper (July 2018) identifies that with the previously identified sites at Market Lavington removed (80 units) there is an indicative residual requirement for 81 dwellings still to be identified and delivered by 2026. Given that Market Lavington is identified in the Wiltshire Core Strategy as a Local Service Centre with a</p>			

good level of services and facilities (the highest order settlement in the Devizes Community Area remainder), it would be in line with the Councils overarching spatial strategy to deliver a high proportion of the outstanding need at Market Lavington, particularly given the lack of housing development at the settlement over recent years. Objective 3 of the draft Site Allocations Plan is to To allocate sites at the settlements in the County that support the spatial strategy of the Wiltshire Core Strategy. The spatial strategy for Wiltshire contained in the Core Strategy promotes the sustainable development of the County . The proposed removal of the sites at Market Lavington is inconsistent with this objective. The second reason given for the removal of the sites at Market Lavington relates to the relationship between the Site Allocations Plan and neighbourhood planning. In our representations to the previous consultation we made the following general comments about the lack of clarity between the two: The relationship between the draft Wiltshire Housing Site Allocations and emerging neighbourhood plans is not clear. Paragraph 2.22 states that the Site Allocations Plan does not take decisions in areas where Neighbourhood Plans have been made or are well advanced, however does not define this term. There is no guarantee that a draft Neighbourhood Plan will be progressed by the relevant Qualifying Body or be considered to meet the basic conditions by an independent examiner. It is therefore possible that settlements with capacity for housing development have not been comprehensively assessed as part of the DPD plan-making process. With respect to areas where Neighbourhood Plans are well advanced or have been made, Wiltshire Council would be encouraged to take a more positive approach to the preparation of the Housing Site Allocations DPD. The identification of reserve sites would be supported as this would allow for new housing to come forward in the event that a Neighbourhood Plan allocation proved to be unavailable or undeliverable. These comments have further relevance following the decision to delete the allocations at Market Lavington and leave it to the Neighbourhood Plan to deliver the outstanding need in the Community Area. The preparation of the Market Lavington Neighbourhood Plan has been nearly as protracted as that for the Housing Site Allocations Plan. The Market Lavington Neighbourhood Area was designated on 2 March 2015. A draft Neighbourhood Plan is yet to be submitted to the Local Planning Authority. It is recommended that Housing Allocation 1.2 Underhill Nursery Market Lavington be reinstated to the Plan. Persimmon Homes controls land required to facilitate the widening of the Fiddington Hill access highway to an adoptable standard.

**PC32 APPROXIMATE NUMBER OF DWELLINGS** In our previous representations we noted that As a general comment, it is critical that the approximate number of dwellings identified for each proposed site allocation is treated as indicative. For the majority of proposed site allocations, it is not possible at this stage in the planning process to prescribe an absolute figure for the capacity of each site. A design-led approach to the master planning of each site should be adopted, as informed by a detailed understanding of the site constraints and opportunities. Persimmon Homes therefore supports the proposed change to amend the heading in tables to note that the number of dwellings to be provided at each site allocation is approximate . This is consistent with the rest of the Plan and the underpinning Wiltshire Core Strategy.

**PC63 ELIZABETH WAY, TROWBRIDGE - SITE BOUNDARY** Persimmon Homes supports the proposed amendment to the boundary of the Elizabeth Way allocation to correct an error in the draft Site Allocations Plan. The allocation boundary now runs up to the southern boundary of the Elizabeth Way road.

**PC64 ELIZABETH WAY, TROWBRIDGE INCREASE NUMBER OF DWELLINGS** Persimmon Homes supports the amendment to increase the approximate number of dwellings to be delivered at the Elizabeth Way site allocation from 205 to 355. Whilst it should be appreciated that the number of dwellings is approximate, the figure of 205 dwellings stated in the draft Plan equates to a gross density of circa 10 dwellings per hectare, and thus grossly underestimated the potential of the site to contribute to delivering the housing shortfall at the Principal Settlement of Trowbridge. Furthermore, in February 2016 HGT Developments submitted an Outline planning application for up to 170 dwellings on part of the land, which is still to be determined. If Wiltshire Council granted consent to this application which covers circa 40% of the site allocation it would leave only approximately 35 dwellings to be delivered across the remaining circa 60% of the site (or approximately 3 dwellings per hectare). The underestimation of a sites potential to contribute to housing need in a Local Plan causes further issues at the application stage and can frustrate the delivery of new homes. Persimmon Homes supports a design-led approach to masterplanning the site as a whole, which will establish the number of dwellings that can be delivered on the allocation. Persimmon has an interest in part of the allocation and is collaborating with the other site owners / developers to bring the site forward for development. Persimmon would welcome an amendment to the Plan to require a site-wide

masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan. PC65 ELIZABETH WAY, TROWBRIDGE HERITAGE IMPACT Persimmon Homes does not object to the proposed change, which seeks to give further recognition to the heritage assets in proximity to the site. It should however be noted that the site is capable of being developed without damaging these assets and their setting. The principal justification given for the proposed change is to reflect the Heritage Impact Assessment prepared by LUC on behalf of the Council in March 2018. The Heritage Impact Assessment considers the significance of the Fieldways Hotel (Grade II\* Listed). The Assessment notes that Fieldways setting makes an important contribution to the significance of the asset and that the most important element of its setting is the relationship between the building and its immediate grounds. The Assessment does note that there are landscape features outside of this area and specifically notes a series of three eyecatcher planting clumps. It should be noted that these landscape features are all positioned within a small field immediately adjacent to the Fieldways Hotel within the allocation site. This field (circa 0.8ha) is not controlled by Persimmon but will likely be retained as a green space. Persimmon would welcome an amendment to the Plan to require a site-wide masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan to consider issues such as the potential impact on heritage assets. Persimmon Homes queries the other part of this proposed change to note that the site has high archaeological value. The reason given for making this change is in response to comments from Heritage England. However, Heritage Englands previous comments on the Plan note that the site is medium archaeological value. PC88, P90 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE BOUNDARY Persimmon Homes previous comments noted It is recommended that the proposed allocation red line be amended to remove the track running along the western boundary of the site, to ensure that the masterplanning and development of the site can proceed on a sound basis. The proposed change to amend the allocation boundary to remove the adjacent track is therefore welcomed. It should be noted that the track is not a Public Right of Way. Furthermore its inclusion within the site allocation boundary had caused some local concern that the track may be used as vehicular access, which would not be appropriate. PC89 EAST OF FARRELLS FIELD, YATTON KEYNELL FRA Persimmon Homes does not object to the proposed change to require any planning application to be supported by a Flood Risk Assessment (FRA). Persimmon Homes is preparing a detailed planning application for the development of the site, which is supported by an FRA / Drainage Strategy. PC91 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE ACCESS Persimmon Homes does not object to the proposed change to delete a sentence which stated that access to the site would be taken from Farrells Field. As stated in Persimmon Homes representations to the previous consultation on the Housing Site Allocations Plan, it was envisaged that the site would be accessed from the existing development of Farrells Field via an extension of the road that runs to the site boundary. This option was and remains a technically achievable way of accessing the site. However, following discussions with representatives of Yatton Keynell Parish Council and consultation with the local community who have expressed a preference for the site to be accessed via a new junction directly onto the main road (the B4039 to the north), Persimmon Homes has committed to this alternative access arrangement. Persimmon Homes is preparing a detailed planning application for the development of the site which identifies a vehicular access directly onto the B4039. COMMENTS ON SUPPORTING EVIDENCE Persimmon Homes maintains that there are inconsistencies in the identification of areas of search and the application of the Sustainability Appraisal in the site-selection process. The representations made during the previous consultation on the draft Plan are attached to these comments (representations dated 22 September 2017 consultee ID 983136).

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>[REFER TO ATTACHMENT FOR FULL REPRESENTATION] INTRODUCTION We write with reference to the above and welcome the opportunity to submit comments on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan. Please treat this as our formal representations, duly made within the consultation period. Building around 12,000 new homes a year in more than 400 locations nationwide, Persimmon is one of the UKs leading house builders, committed to the highest standards of planning, design and construction. Persimmon Homes is actively engaged with the delivery of various strategic and non-strategic mixed-use and residential schemes in Wiltshire and so is well placed to comment on the Plan. Persimmon Homes supports the preparation of the Wiltshire Site Allocations DPD as an opportunity to revise the out-of-date settlement boundaries and allocate new sites for housing to support the delivery of housing over the remainder of the Core Strategy plan period. However, Persimmon Homes maintains the concerns put forward in the previous comments on the draft Plan (representations dated 22 September 2017 consultee ID 983136). COMMENTS ON PROPOSED CHANGES PC1, PC5, PC7, PC8, PC11, PC18, PC18, PC38, PC45, PC46 MARKET LAVINGTON Persimmon Homes objects to proposed change PC46 which seeks to delete Housing Allocation H1.2 Underhill Nursery Market Lavington and the consequential changes to the Plan referenced as PC1, PC5, PC7, PC8, PC11, PC18, PC18, PC38 and PC45. The proposed change is not sound because it is not positively prepared or justified. The reason for the proposed change given in the Councils Schedule of Proposed Changes is: To reflect the resolution of Wiltshire Councils Cabinet, all sites at Market Lavington are proposed to be deleted from the WHSAP. The reason for this is that there is a comfortable five-year housing land supply position in the East HMA such that there is not a strategic need for sites to be allocated through the WHSAP at Market Lavington. Furthermore, significant progress has been made on the preparation of the Market Lavington Neighbourhood Plan, and given the strong five-year supply position in the East HMA, the Council can defer the consideration of potential housing allocations at Market Lavington to the emerging neighbourhood plan . The justification given for the change could therefore be summarised as: (i) because there is a five year land supply in the HMA; and (ii) because the Market Lavington Neighbourhood Plan can identify housing sites instead. With regard to the first reason, it is correct that the Council is currently able to demonstrate a five year land supply in the East Wiltshire HMA (indeed it is currently able to do this in each of the three HMAs). However this has not been used by the Council as justification for failing to identify sites in other Community Areas that have a substantial indicative remaining housing requirement to be identified. The Councils Devizes Community Area Topic Paper (July 2018) identifies that with the previously identified sites at Market Lavington removed (80 units) there is an indicative residual requirement for 81 dwellings still to be identified and delivered by 2026. Given that Market Lavington is identified in the Wiltshire Core Strategy as a Local Service Centre with a</p>				

good level of services and facilities (the highest order settlement in the Devizes Community Area remainder), it would be in line with the Councils overarching spatial strategy to deliver a high proportion of the outstanding need at Market Lavington, particularly given the lack of housing development at the settlement over recent years. Objective 3 of the draft Site Allocations Plan is to To allocate sites at the settlements in the County that support the spatial strategy of the Wiltshire Core Strategy. The spatial strategy for Wiltshire contained in the Core Strategy promotes the sustainable development of the County . The proposed removal of the sites at Market Lavington is inconsistent with this objective. The second reason given for the removal of the sites at Market Lavington relates to the relationship between the Site Allocations Plan and neighbourhood planning. In our representations to the previous consultation we made the following general comments about the lack of clarity between the two: The relationship between the draft Wiltshire Housing Site Allocations and emerging neighbourhood plans is not clear. Paragraph 2.22 states that the Site Allocations Plan does not take decisions in areas where Neighbourhood Plans have been made or are well advanced, however does not define this term. There is no guarantee that a draft Neighbourhood Plan will be progressed by the relevant Qualifying Body or be considered to meet the basic conditions by an independent examiner. It is therefore possible that settlements with capacity for housing development have not been comprehensively assessed as part of the DPD plan-making process. With respect to areas where Neighbourhood Plans are well advanced or have been made, Wiltshire Council would be encouraged to take a more positive approach to the preparation of the Housing Site Allocations DPD. The identification of reserve sites would be supported as this would allow for new housing to come forward in the event that a Neighbourhood Plan allocation proved to be unavailable or undeliverable. These comments have further relevance following the decision to delete the allocations at Market Lavington and leave it to the Neighbourhood Plan to deliver the outstanding need in the Community Area. The preparation of the Market Lavington Neighbourhood Plan has been nearly as protracted as that for the Housing Site Allocations Plan. The Market Lavington Neighbourhood Area was designated on 2 March 2015. A draft Neighbourhood Plan is yet to be submitted to the Local Planning Authority. It is recommended that Housing Allocation 1.2 Underhill Nursery Market Lavington be reinstated to the Plan. Persimmon Homes controls land required to facilitate the widening of the Fiddington Hill access highway to an adoptable standard.

**PC32 APPROXIMATE NUMBER OF DWELLINGS** In our previous representations we noted that As a general comment, it is critical that the approximate number of dwellings identified for each proposed site allocation is treated as indicative. For the majority of proposed site allocations, it is not possible at this stage in the planning process to prescribe an absolute figure for the capacity of each site. A design-led approach to the master planning of each site should be adopted, as informed by a detailed understanding of the site constraints and opportunities. Persimmon Homes therefore supports the proposed change to amend the heading in tables to note that the number of dwellings to be provided at each site allocation is approximate . This is consistent with the rest of the Plan and the underpinning Wiltshire Core Strategy.

**PC63 ELIZABETH WAY, TROWBRIDGE - SITE BOUNDARY** Persimmon Homes supports the proposed amendment to the boundary of the Elizabeth Way allocation to correct an error in the draft Site Allocations Plan. The allocation boundary now runs up to the southern boundary of the Elizabeth Way road.

**PC64 ELIZABETH WAY, TROWBRIDGE INCREASE NUMBER OF DWELLINGS** Persimmon Homes supports the amendment to increase the approximate number of dwellings to be delivered at the Elizabeth Way site allocation from 205 to 355. Whilst it should be appreciated that the number of dwellings is approximate, the figure of 205 dwellings stated in the draft Plan equates to a gross density of circa 10 dwellings per hectare, and thus grossly underestimated the potential of the site to contribute to delivering the housing shortfall at the Principal Settlement of Trowbridge. Furthermore, in February 2016 HGT Developments submitted an Outline planning application for up to 170 dwellings on part of the land, which is still to be determined. If Wiltshire Council granted consent to this application which covers circa 40% of the site allocation it would leave only approximately 35 dwellings to be delivered across the remaining circa 60% of the site (or approximately 3 dwellings per hectare). The underestimation of a sites potential to contribute to housing need in a Local Plan causes further issues at the application stage and can frustrate the delivery of new homes. Persimmon Homes supports a design-led approach to masterplanning the site as a whole, which will establish the number of dwellings that can be delivered on the allocation. Persimmon has an interest in part of the allocation and is collaborating with the other site owners / developers to bring the site forward for development. Persimmon would welcome an amendment to the Plan to require a site-wide

masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan. PC65 ELIZABETH WAY, TROWBRIDGE HERITAGE IMPACT Persimmon Homes does not object to the proposed change, which seeks to give further recognition to the heritage assets in proximity to the site. It should however be noted that the site is capable of being developed without damaging these assets and their setting. The principal justification given for the proposed change is to reflect the Heritage Impact Assessment prepared by LUC on behalf of the Council in March 2018. The Heritage Impact Assessment considers the significance of the Fieldways Hotel (Grade II\* Listed). The Assessment notes that Fieldways setting makes an important contribution to the significance of the asset and that the most important element of its setting is the relationship between the building and its immediate grounds. The Assessment does note that there are landscape features outside of this area and specifically notes a series of three eyecatcher planting clumps. It should be noted that these landscape features are all positioned within a small field immediately adjacent to the Fieldways Hotel within the allocation site. This field (circa 0.8ha) is not controlled by Persimmon but will likely be retained as a green space. Persimmon would welcome an amendment to the Plan to require a site-wide masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan to consider issues such as the potential impact on heritage assets. Persimmon Homes queries the other part of this proposed change to note that the site has high archaeological value. The reason given for making this change is in response to comments from Heritage England. However, Heritage Englands previous comments on the Plan note that the site is medium archaeological value. PC88, P90 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE BOUNDARY Persimmon Homes previous comments noted It is recommended that the proposed allocation red line be amended to remove the track running along the western boundary of the site, to ensure that the masterplanning and development of the site can proceed on a sound basis. The proposed change to amend the allocation boundary to remove the adjacent track is therefore welcomed. It should be noted that the track is not a Public Right of Way. Furthermore its inclusion within the site allocation boundary had caused some local concern that the track may be used as vehicular access, which would not be appropriate. PC89 EAST OF FARRELLS FIELD, YATTON KEYNELL FRA Persimmon Homes does not object to the proposed change to require any planning application to be supported by a Flood Risk Assessment (FRA). Persimmon Homes is preparing a detailed planning application for the development of the site, which is supported by an FRA / Drainage Strategy. PC91 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE ACCESS Persimmon Homes does not object to the proposed change to delete a sentence which stated that access to the site would be taken from Farrells Field. As stated in Persimmon Homes representations to the previous consultation on the Housing Site Allocations Plan, it was envisaged that the site would be accessed from the existing development of Farrells Field via an extension of the road that runs to the site boundary. This option was and remains a technically achievable way of accessing the site. However, following discussions with representatives of Yatton Keynell Parish Council and consultation with the local community who have expressed a preference for the site to be accessed via a new junction directly onto the main road (the B4039 to the north), Persimmon Homes has committed to this alternative access arrangement. Persimmon Homes is preparing a detailed planning application for the development of the site which identifies a vehicular access directly onto the B4039. COMMENTS ON SUPPORTING EVIDENCE Persimmon Homes maintains that there are inconsistencies in the identification of areas of search and the application of the Sustainability Appraisal in the site-selection process. The representations made during the previous consultation on the draft Plan are attached to these comments (representations dated 22 September 2017 consultee ID 983136).

Persimmon Homes supports the preparation of the Wiltshire Site Allocations DPD as an opportunity to revise the out-of-date settlement boundaries and allocate new sites for housing to support the delivery of housing over the remainder of the Core Strategy plan period. However, Persimmon Homes maintains the concerns put forward in the previous comments on the draft Plan (representations dated 22 September 2017 consultee ID 983136). COMMENTS ON PROPOSED CHANGES PC1, PC5, PC7, PC8, PC11, PC18, PC18, PC38, PC45, PC46 MARKET LAVINGTON Persimmon Homes objects to proposed change PC46 which seeks to delete Housing Allocation H1.2 Underhill Nursery Market Lavington and the consequential changes to the Plan referenced as PC1, PC5, PC7, PC8, PC11, PC18, PC18, PC38 and PC45. The proposed change is not sound because it is not positively prepared or justified. The reason for the proposed change given in the Councils Schedule of Proposed Changes is: To reflect the resolution of Wiltshire Councils Cabinet, all sites at Market Lavington are proposed to be deleted from the WHSAP. The reason for this is that there is a comfortable five-year housing land supply position in the East HMA such that there is not a strategic need for sites to be allocated through the WHSAP at Market Lavington. Furthermore, significant progress has been made on the preparation of the Market Lavington Neighbourhood Plan, and given the strong five-year supply position in the East HMA, the Council can defer the consideration of potential housing allocations at Market Lavington to the emerging neighbourhood plan . The justification given for the change could therefore be summarised as: (i) because there is a five year land supply in the HMA; and (ii) because the Market Lavington Neighbourhood Plan can identify housing sites instead. With regard to the first reason, it is correct that the Council is currently able to demonstrate a five year land supply in the East Wiltshire HMA (indeed it is currently able to do this in each of the three HMAs). However this has not been used by the Council as justification for failing to identify sites in other Community Areas that have a substantial indicative remaining housing requirement to be identified. The Councils Devizes Community Area Topic Paper (July 2018) identifies that with the previously identified sites at Market Lavington removed (80 units) there is an indicative residual requirement for 81 dwellings still to be identified and delivered by 2026. Given that Market Lavington is identified in the Wiltshire Core Strategy as a Local Service Centre with a</p>			

good level of services and facilities (the highest order settlement in the Devizes Community Area remainder), it would be in line with the Councils overarching spatial strategy to deliver a high proportion of the outstanding need at Market Lavington, particularly given the lack of housing development at the settlement over recent years. Objective 3 of the draft Site Allocations Plan is to To allocate sites at the settlements in the County that support the spatial strategy of the Wiltshire Core Strategy. The spatial strategy for Wiltshire contained in the Core Strategy promotes the sustainable development of the County . The proposed removal of the sites at Market Lavington is inconsistent with this objective. The second reason given for the removal of the sites at Market Lavington relates to the relationship between the Site Allocations Plan and neighbourhood planning. In our representations to the previous consultation we made the following general comments about the lack of clarity between the two: The relationship between the draft Wiltshire Housing Site Allocations and emerging neighbourhood plans is not clear. Paragraph 2.22 states that the Site Allocations Plan does not take decisions in areas where Neighbourhood Plans have been made or are well advanced, however does not define this term. There is no guarantee that a draft Neighbourhood Plan will be progressed by the relevant Qualifying Body or be considered to meet the basic conditions by an independent examiner. It is therefore possible that settlements with capacity for housing development have not been comprehensively assessed as part of the DPD plan-making process. With respect to areas where Neighbourhood Plans are well advanced or have been made, Wiltshire Council would be encouraged to take a more positive approach to the preparation of the Housing Site Allocations DPD. The identification of reserve sites would be supported as this would allow for new housing to come forward in the event that a Neighbourhood Plan allocation proved to be unavailable or undeliverable. These comments have further relevance following the decision to delete the allocations at Market Lavington and leave it to the Neighbourhood Plan to deliver the outstanding need in the Community Area. The preparation of the Market Lavington Neighbourhood Plan has been nearly as protracted as that for the Housing Site Allocations Plan. The Market Lavington Neighbourhood Area was designated on 2 March 2015. A draft Neighbourhood Plan is yet to be submitted to the Local Planning Authority. It is recommended that Housing Allocation 1.2 Underhill Nursery Market Lavington be reinstated to the Plan. Persimmon Homes controls land required to facilitate the widening of the Fiddington Hill access highway to an adoptable standard.

**PC32 APPROXIMATE NUMBER OF DWELLINGS** In our previous representations we noted that As a general comment, it is critical that the approximate number of dwellings identified for each proposed site allocation is treated as indicative. For the majority of proposed site allocations, it is not possible at this stage in the planning process to prescribe an absolute figure for the capacity of each site. A design-led approach to the master planning of each site should be adopted, as informed by a detailed understanding of the site constraints and opportunities. Persimmon Homes therefore supports the proposed change to amend the heading in tables to note that the number of dwellings to be provided at each site allocation is approximate . This is consistent with the rest of the Plan and the underpinning Wiltshire Core Strategy.

**PC63 ELIZABETH WAY, TROWBRIDGE - SITE BOUNDARY** Persimmon Homes supports the proposed amendment to the boundary of the Elizabeth Way allocation to correct an error in the draft Site Allocations Plan. The allocation boundary now runs up to the southern boundary of the Elizabeth Way road.

**PC64 ELIZABETH WAY, TROWBRIDGE INCREASE NUMBER OF DWELLINGS** Persimmon Homes supports the amendment to increase the approximate number of dwellings to be delivered at the Elizabeth Way site allocation from 205 to 355. Whilst it should be appreciated that the number of dwellings is approximate, the figure of 205 dwellings stated in the draft Plan equates to a gross density of circa 10 dwellings per hectare, and thus grossly underestimated the potential of the site to contribute to delivering the housing shortfall at the Principal Settlement of Trowbridge. Furthermore, in February 2016 HGT Developments submitted an Outline planning application for up to 170 dwellings on part of the land, which is still to be determined. If Wiltshire Council granted consent to this application which covers circa 40% of the site allocation it would leave only approximately 35 dwellings to be delivered across the remaining circa 60% of the site (or approximately 3 dwellings per hectare). The underestimation of a sites potential to contribute to housing need in a Local Plan causes further issues at the application stage and can frustrate the delivery of new homes. Persimmon Homes supports a design-led approach to masterplanning the site as a whole, which will establish the number of dwellings that can be delivered on the allocation. Persimmon has an interest in part of the allocation and is collaborating with the other site owners / developers to bring the site forward for development. Persimmon would welcome an amendment to the Plan to require a site-wide

masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan. PC65 ELIZABETH WAY, TROWBRIDGE HERITAGE IMPACT Persimmon Homes does not object to the proposed change, which seeks to give further recognition to the heritage assets in proximity to the site. It should however be noted that the site is capable of being developed without damaging these assets and their setting. The principal justification given for the proposed change is to reflect the Heritage Impact Assessment prepared by LUC on behalf of the Council in March 2018. The Heritage Impact Assessment considers the significance of the Fieldways Hotel (Grade II\* Listed). The Assessment notes that Fieldways setting makes an important contribution to the significance of the asset and that the most important element of its setting is the relationship between the building and its immediate grounds. The Assessment does note that there are landscape features outside of this area and specifically notes a series of three eyecatcher planting clumps. It should be noted that these landscape features are all positioned within a small field immediately adjacent to the Fieldways Hotel within the allocation site. This field (circa 0.8ha) is not controlled by Persimmon but will likely be retained as a green space. Persimmon would welcome an amendment to the Plan to require a site-wide masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan to consider issues such as the potential impact on heritage assets. Persimmon Homes queries the other part of this proposed change to note that the site has high archaeological value. The reason given for making this change is in response to comments from Heritage England. However, Heritage Englands previous comments on the Plan note that the site is medium archaeological value. PC88, P90 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE BOUNDARY Persimmon Homes previous comments noted It is recommended that the proposed allocation red line be amended to remove the track running along the western boundary of the site, to ensure that the masterplanning and development of the site can proceed on a sound basis. The proposed change to amend the allocation boundary to remove the adjacent track is therefore welcomed. It should be noted that the track is not a Public Right of Way. Furthermore its inclusion within the site allocation boundary had caused some local concern that the track may be used as vehicular access, which would not be appropriate. PC89 EAST OF FARRELLS FIELD, YATTON KEYNELL FRA Persimmon Homes does not object to the proposed change to require any planning application to be supported by a Flood Risk Assessment (FRA). Persimmon Homes is preparing a detailed planning application for the development of the site, which is supported by an FRA / Drainage Strategy. PC91 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE ACCESS Persimmon Homes does not object to the proposed change to delete a sentence which stated that access to the site would be taken from Farrells Field. As stated in Persimmon Homes representations to the previous consultation on the Housing Site Allocations Plan, it was envisaged that the site would be accessed from the existing development of Farrells Field via an extension of the road that runs to the site boundary. This option was and remains a technically achievable way of accessing the site. However, following discussions with representatives of Yatton Keynell Parish Council and consultation with the local community who have expressed a preference for the site to be accessed via a new junction directly onto the main road (the B4039 to the north), Persimmon Homes has committed to this alternative access arrangement. Persimmon Homes is preparing a detailed planning application for the development of the site which identifies a vehicular access directly onto the B4039. COMMENTS ON SUPPORTING EVIDENCE Persimmon Homes maintains that there are inconsistencies in the identification of areas of search and the application of the Sustainability Appraisal in the site-selection process. The representations made during the previous consultation on the draft Plan are attached to these comments (representations dated 22 September 2017 consultee ID 983136).

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>[REFER TO ATTACHMENT FOR FULL REPRESENTATION] INTRODUCTION We write with reference to the above and welcome the opportunity to submit comments on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan. Please treat this as our formal representations, duly made within the consultation period. Building around 12,000 new homes a year in more than 400 locations nationwide, Persimmon is one of the UKs leading house builders, committed to the highest standards of planning, design and construction. Persimmon Homes is actively engaged with the delivery of various strategic and non-strategic mixed-use and residential schemes in Wiltshire and so is well placed to comment on the Plan. Persimmon Homes supports the preparation of the Wiltshire Site Allocations DPD as an opportunity to revise the out-of-date settlement boundaries and allocate new sites for housing to support the delivery of housing over the remainder of the Core Strategy plan period. However, Persimmon Homes maintains the concerns put forward in the previous comments on the draft Plan (representations dated 22 September 2017 consultee ID 983136). COMMENTS ON PROPOSED CHANGES PC1, PC5, PC7, PC8, PC11, PC18, PC18, PC38, PC45, PC46 MARKET LAVINGTON Persimmon Homes objects to proposed change PC46 which seeks to delete Housing Allocation H1.2 Underhill Nursery Market Lavington and the consequential changes to the Plan referenced as PC1, PC5, PC7, PC8, PC11, PC18, PC18, PC38 and PC45. The proposed change is not sound because it is not positively prepared or justified. The reason for the proposed change given in the Councils Schedule of Proposed Changes is: To reflect the resolution of Wiltshire Councils Cabinet, all sites at Market Lavington are proposed to be deleted from the WHSAP. The reason for this is that there is a comfortable five-year housing land supply position in the East HMA such that there is not a strategic need for sites to be allocated through the WHSAP at Market Lavington. Furthermore, significant progress has been made on the preparation of the Market Lavington Neighbourhood Plan, and given the strong five-year supply position in the East HMA, the Council can defer the consideration of potential housing allocations at Market Lavington to the emerging neighbourhood plan . The justification given for the change could therefore be summarised as: (i) because there is a five year land supply in the HMA; and (ii) because the Market Lavington Neighbourhood Plan can identify housing sites instead. With regard to the first reason, it is correct that the Council is currently able to demonstrate a five year land supply in the East Wiltshire HMA (indeed it is currently able to do this in each of the three HMAs). However this has not been used by the Council as justification for failing to identify sites in other Community Areas that have a substantial indicative remaining housing requirement to be identified. The Councils Devizes Community Area Topic Paper (July 2018) identifies that with the previously identified sites at Market Lavington removed (80 units) there is an indicative residual requirement for 81 dwellings still to be identified and delivered by 2026. Given that Market Lavington is identified in the Wiltshire Core Strategy as a Local Service Centre with a</p>			

good level of services and facilities (the highest order settlement in the Devizes Community Area remainder), it would be in line with the Councils overarching spatial strategy to deliver a high proportion of the outstanding need at Market Lavington, particularly given the lack of housing development at the settlement over recent years. Objective 3 of the draft Site Allocations Plan is to allocate sites at the settlements in the County that support the spatial strategy of the Wiltshire Core Strategy. The spatial strategy for Wiltshire contained in the Core Strategy promotes the sustainable development of the County. The proposed removal of the sites at Market Lavington is inconsistent with this objective. The second reason given for the removal of the sites at Market Lavington relates to the relationship between the Site Allocations Plan and neighbourhood planning. In our representations to the previous consultation we made the following general comments about the lack of clarity between the two: The relationship between the draft Wiltshire Housing Site Allocations and emerging neighbourhood plans is not clear. Paragraph 2.22 states that the Site Allocations Plan does not take decisions in areas where Neighbourhood Plans have been made or are well advanced, however does not define this term. There is no guarantee that a draft Neighbourhood Plan will be progressed by the relevant Qualifying Body or be considered to meet the basic conditions by an independent examiner. It is therefore possible that settlements with capacity for housing development have not been comprehensively assessed as part of the DPD plan-making process. With respect to areas where Neighbourhood Plans are well advanced or have been made, Wiltshire Council would be encouraged to take a more positive approach to the preparation of the Housing Site Allocations DPD. The identification of reserve sites would be supported as this would allow for new housing to come forward in the event that a Neighbourhood Plan allocation proved to be unavailable or undeliverable. These comments have further relevance following the decision to delete the allocations at Market Lavington and leave it to the Neighbourhood Plan to deliver the outstanding need in the Community Area. The preparation of the Market Lavington Neighbourhood Plan has been nearly as protracted as that for the Housing Site Allocations Plan. The Market Lavington Neighbourhood Area was designated on 2 March 2015. A draft Neighbourhood Plan is yet to be submitted to the Local Planning Authority. It is recommended that Housing Allocation 1.2 Underhill Nursery Market Lavington be reinstated to the Plan. Persimmon Homes controls land required to facilitate the widening of the Fiddington Hill access highway to an adoptable standard.

**PC32 APPROXIMATE NUMBER OF DWELLINGS** In our previous representations we noted that As a general comment, it is critical that the approximate number of dwellings identified for each proposed site allocation is treated as indicative. For the majority of proposed site allocations, it is not possible at this stage in the planning process to prescribe an absolute figure for the capacity of each site. A design-led approach to the master planning of each site should be adopted, as informed by a detailed understanding of the site constraints and opportunities. Persimmon Homes therefore supports the proposed change to amend the heading in tables to note that the number of dwellings to be provided at each site allocation is approximate. This is consistent with the rest of the Plan and the underpinning Wiltshire Core Strategy.

**PC63 ELIZABETH WAY, TROWBRIDGE - SITE BOUNDARY** Persimmon Homes supports the proposed amendment to the boundary of the Elizabeth Way allocation to correct an error in the draft Site Allocations Plan. The allocation boundary now runs up to the southern boundary of the Elizabeth Way road.

**PC64 ELIZABETH WAY, TROWBRIDGE INCREASE NUMBER OF DWELLINGS** Persimmon Homes supports the amendment to increase the approximate number of dwellings to be delivered at the Elizabeth Way site allocation from 205 to 355. Whilst it should be appreciated that the number of dwellings is approximate, the figure of 205 dwellings stated in the draft Plan equates to a gross density of circa 10 dwellings per hectare, and thus grossly underestimated the potential of the site to contribute to delivering the housing shortfall at the Principal Settlement of Trowbridge. Furthermore, in February 2016 HGT Developments submitted an Outline planning application for up to 170 dwellings on part of the land, which is still to be determined. If Wiltshire Council granted consent to this application which covers circa 40% of the site allocation it would leave only approximately 35 dwellings to be delivered across the remaining circa 60% of the site (or approximately 3 dwellings per hectare). The underestimation of a sites potential to contribute to housing need in a Local Plan causes further issues at the application stage and can frustrate the delivery of new homes. Persimmon Homes supports a design-led approach to masterplanning the site as a whole, which will establish the number of dwellings that can be delivered on the allocation. Persimmon has an interest in part of the allocation and is collaborating with the other site owners / developers to bring the site forward for development. Persimmon would welcome an amendment to the Plan to require a site-wide

masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan. PC65 ELIZABETH WAY, TROWBRIDGE HERITAGE IMPACT Persimmon Homes does not object to the proposed change, which seeks to give further recognition to the heritage assets in proximity to the site. It should however be noted that the site is capable of being developed without damaging these assets and their setting. The principal justification given for the proposed change is to reflect the Heritage Impact Assessment prepared by LUC on behalf of the Council in March 2018. The Heritage Impact Assessment considers the significance of the Fieldways Hotel (Grade II\* Listed). The Assessment notes that Fieldways setting makes an important contribution to the significance of the asset and that the most important element of its setting is the relationship between the building and its immediate grounds. The Assessment does note that there are landscape features outside of this area and specifically notes a series of three eyecatcher planting clumps. It should be noted that these landscape features are all positioned within a small field immediately adjacent to the Fieldways Hotel within the allocation site. This field (circa 0.8ha) is not controlled by Persimmon but will likely be retained as a green space. Persimmon would welcome an amendment to the Plan to require a site-wide masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan to consider issues such as the potential impact on heritage assets. Persimmon Homes queries the other part of this proposed change to note that the site has high archaeological value. The reason given for making this change is in response to comments from Heritage England. However, Heritage Englands previous comments on the Plan note that the site is medium archaeological value. PC88, P90 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE BOUNDARY Persimmon Homes previous comments noted It is recommended that the proposed allocation red line be amended to remove the track running along the western boundary of the site, to ensure that the masterplanning and development of the site can proceed on a sound basis. The proposed change to amend the allocation boundary to remove the adjacent track is therefore welcomed. It should be noted that the track is not a Public Right of Way. Furthermore its inclusion within the site allocation boundary had caused some local concern that the track may be used as vehicular access, which would not be appropriate. PC89 EAST OF FARRELLS FIELD, YATTON KEYNELL FRA Persimmon Homes does not object to the proposed change to require any planning application to be supported by a Flood Risk Assessment (FRA). Persimmon Homes is preparing a detailed planning application for the development of the site, which is supported by an FRA / Drainage Strategy. PC91 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE ACCESS Persimmon Homes does not object to the proposed change to delete a sentence which stated that access to the site would be taken from Farrells Field. As stated in Persimmon Homes representations to the previous consultation on the Housing Site Allocations Plan, it was envisaged that the site would be accessed from the existing development of Farrells Field via an extension of the road that runs to the site boundary. This option was and remains a technically achievable way of accessing the site. However, following discussions with representatives of Yatton Keynell Parish Council and consultation with the local community who have expressed a preference for the site to be accessed via a new junction directly onto the main road (the B4039 to the north), Persimmon Homes has committed to this alternative access arrangement. Persimmon Homes is preparing a detailed planning application for the development of the site which identifies a vehicular access directly onto the B4039. COMMENTS ON SUPPORTING EVIDENCE Persimmon Homes maintains that there are inconsistencies in the identification of areas of search and the application of the Sustainability Appraisal in the site-selection process. The representations made during the previous consultation on the draft Plan are attached to these comments (representations dated 22 September 2017 consultee ID 983136).

good level of services and facilities (the highest order settlement in the Devizes Community Area remainder), it would be in line with the Councils overarching spatial strategy to deliver a high proportion of the outstanding need at Market Lavington, particularly given the lack of housing development at the settlement over recent years. Objective 3 of the draft Site Allocations Plan is to allocate sites at the settlements in the County that support the spatial strategy of the Wiltshire Core Strategy. The spatial strategy for Wiltshire contained in the Core Strategy promotes the sustainable development of the County. The proposed removal of the sites at Market Lavington is inconsistent with this objective. The second reason given for the removal of the sites at Market Lavington relates to the relationship between the Site Allocations Plan and neighbourhood planning. In our representations to the previous consultation we made the following general comments about the lack of clarity between the two: The relationship between the draft Wiltshire Housing Site Allocations and emerging neighbourhood plans is not clear. Paragraph 2.22 states that the Site Allocations Plan does not take decisions in areas where Neighbourhood Plans have been made or are well advanced, however does not define this term. There is no guarantee that a draft Neighbourhood Plan will be progressed by the relevant Qualifying Body or be considered to meet the basic conditions by an independent examiner. It is therefore possible that settlements with capacity for housing development have not been comprehensively assessed as part of the DPD plan-making process. With respect to areas where Neighbourhood Plans are well advanced or have been made, Wiltshire Council would be encouraged to take a more positive approach to the preparation of the Housing Site Allocations DPD. The identification of reserve sites would be supported as this would allow for new housing to come forward in the event that a Neighbourhood Plan allocation proved to be unavailable or undeliverable. These comments have further relevance following the decision to delete the allocations at Market Lavington and leave it to the Neighbourhood Plan to deliver the outstanding need in the Community Area. The preparation of the Market Lavington Neighbourhood Plan has been nearly as protracted as that for the Housing Site Allocations Plan. The Market Lavington Neighbourhood Area was designated on 2 March 2015. A draft Neighbourhood Plan is yet to be submitted to the Local Planning Authority. It is recommended that Housing Allocation 1.2 Underhill Nursery Market Lavington be reinstated to the Plan. Persimmon Homes controls land required to facilitate the widening of the Fiddington Hill access highway to an adoptable standard.

**PC32 APPROXIMATE NUMBER OF DWELLINGS** In our previous representations we noted that As a general comment, it is critical that the approximate number of dwellings identified for each proposed site allocation is treated as indicative. For the majority of proposed site allocations, it is not possible at this stage in the planning process to prescribe an absolute figure for the capacity of each site. A design-led approach to the master planning of each site should be adopted, as informed by a detailed understanding of the site constraints and opportunities. Persimmon Homes therefore supports the proposed change to amend the heading in tables to note that the number of dwellings to be provided at each site allocation is approximate. This is consistent with the rest of the Plan and the underpinning Wiltshire Core Strategy.

**PC63 ELIZABETH WAY, TROWBRIDGE - SITE BOUNDARY** Persimmon Homes supports the proposed amendment to the boundary of the Elizabeth Way allocation to correct an error in the draft Site Allocations Plan. The allocation boundary now runs up to the southern boundary of the Elizabeth Way road.

**PC64 ELIZABETH WAY, TROWBRIDGE INCREASE NUMBER OF DWELLINGS** Persimmon Homes supports the amendment to increase the approximate number of dwellings to be delivered at the Elizabeth Way site allocation from 205 to 355. Whilst it should be appreciated that the number of dwellings is approximate, the figure of 205 dwellings stated in the draft Plan equates to a gross density of circa 10 dwellings per hectare, and thus grossly underestimated the potential of the site to contribute to delivering the housing shortfall at the Principal Settlement of Trowbridge. Furthermore, in February 2016 HGT Developments submitted an Outline planning application for up to 170 dwellings on part of the land, which is still to be determined. If Wiltshire Council granted consent to this application which covers circa 40% of the site allocation it would leave only approximately 35 dwellings to be delivered across the remaining circa 60% of the site (or approximately 3 dwellings per hectare). The underestimation of a sites potential to contribute to housing need in a Local Plan causes further issues at the application stage and can frustrate the delivery of new homes. Persimmon Homes supports a design-led approach to masterplanning the site as a whole, which will establish the number of dwellings that can be delivered on the allocation. Persimmon has an interest in part of the allocation and is collaborating with the other site owners / developers to bring the site forward for development. Persimmon would welcome an amendment to the Plan to require a site-wide

masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan. PC65 ELIZABETH WAY, TROWBRIDGE HERITAGE IMPACT Persimmon Homes does not object to the proposed change, which seeks to give further recognition to the heritage assets in proximity to the site. It should however be noted that the site is capable of being developed without damaging these assets and their setting. The principal justification given for the proposed change is to reflect the Heritage Impact Assessment prepared by LUC on behalf of the Council in March 2018. The Heritage Impact Assessment considers the significance of the Fieldways Hotel (Grade II\* Listed). The Assessment notes that Fieldways setting makes an important contribution to the significance of the asset and that the most important element of its setting is the relationship between the building and its immediate grounds. The Assessment does note that there are landscape features outside of this area and specifically notes a series of three eyecatcher planting clumps. It should be noted that these landscape features are all positioned within a small field immediately adjacent to the Fieldways Hotel within the allocation site. This field (circa 0.8ha) is not controlled by Persimmon but will likely be retained as a green space. Persimmon would welcome an amendment to the Plan to require a site-wide masterplan as has been identified for the other large allocations in the draft Wiltshire Housing Site Allocations Plan to consider issues such as the potential impact on heritage assets. Persimmon Homes queries the other part of this proposed change to note that the site has high archaeological value. The reason given for making this change is in response to comments from Heritage England. However, Heritage Englands previous comments on the Plan note that the site is medium archaeological value. PC88, P90 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE BOUNDARY Persimmon Homes previous comments noted It is recommended that the proposed allocation red line be amended to remove the track running along the western boundary of the site, to ensure that the masterplanning and development of the site can proceed on a sound basis. The proposed change to amend the allocation boundary to remove the adjacent track is therefore welcomed. It should be noted that the track is not a Public Right of Way. Furthermore its inclusion within the site allocation boundary had caused some local concern that the track may be used as vehicular access, which would not be appropriate. PC89 EAST OF FARRELLS FIELD, YATTON KEYNELL FRA Persimmon Homes does not object to the proposed change to require any planning application to be supported by a Flood Risk Assessment (FRA). Persimmon Homes is preparing a detailed planning application for the development of the site, which is supported by an FRA / Drainage Strategy. PC91 EAST OF FARRELLS FIELD, YATTON KEYNELL SITE ACCESS Persimmon Homes does not object to the proposed change to delete a sentence which stated that access to the site would be taken from Farrells Field. As stated in Persimmon Homes representations to the previous consultation on the Housing Site Allocations Plan, it was envisaged that the site would be accessed from the existing development of Farrells Field via an extension of the road that runs to the site boundary. This option was and remains a technically achievable way of accessing the site. However, following discussions with representatives of Yatton Keynell Parish Council and consultation with the local community who have expressed a preference for the site to be accessed via a new junction directly onto the main road (the B4039 to the north), Persimmon Homes has committed to this alternative access arrangement. Persimmon Homes is preparing a detailed planning application for the development of the site which identifies a vehicular access directly onto the B4039. COMMENTS ON SUPPORTING EVIDENCE Persimmon Homes maintains that there are inconsistencies in the identification of areas of search and the application of the Sustainability Appraisal in the site-selection process. The representations made during the previous consultation on the draft Plan are attached to these comments (representations dated 22 September 2017 consultee ID 983136).

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations.</p> <p>Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

	<p>and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy.</p>

Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages" are not promoted by National Policy. I would like to add my comments to the Wiltshire Housing Site Allocation plan, specifically with regards to SHLAA Reference 321- Bratton, Court Orchard/Cassways which has been identified to provide 40 dwellings. The Sustainability Appraisal Report PSCONS09N states that the site provides capacity for 32 residential units but I would like to point out that the site in question has had numerous planning applications refused for less than the amount currently proposed. W/92/00217/FUL was submitted for construction of 23 dwellings and was refused. W/93/00507/FUL was submitted for construction of 23 dwellings and was refused. W/78/01201/HIS was submitted for construction of a farmhouse and was refused. W/74/00979/HIS was submitted for six houses to the north of the current proposed development site and was refused. I believe that Bratton would not be able to support nor requires the amount of housing proposed and that the infrastructure, transport and amenities do not support the Site Allocation Plan. Infrastructure and Transport Buses are busy and infrequent at peak times with the route itself being one that Wiltshire Council themselves have already reduced subsidies for. Although gas and electricity are currently fit for purpose, telephone/broadband services are inadequate as they already are in rural areas. This development will be at the furthest point away from the Bratton telephone exchange and will dramatically affect the capacity/speeds for the surrounding properties. Water pressure is an existing issue for some villagers so any additional dwellings will add to the already overburdened services. With a development of 40 houses being proposed, this does flag a number of issues with the site, highway infrastructure and impact on local residents. Census data for 2011 shows that the average number of cars/vans per household sits at 1.3. This figure would indicate that an additional 52 vehicles would be brought into the village plus any visitors, etc. The road quality of the B3098 is already questionable throughout the village with subsiding edges of the pavement. The proposed turn off into the new development is at a pinch point within the width of the existing carriageway with no site lines towards the village for those wanting to exit the proposed development. Any entrance or exit would not meet the minimum standards for a clear envelope of visibility in accordance with the Highways Agency document TD41/95 based on the design speed of the road. The proposed development would also introduce noise pollution, air pollution and light pollution to the west of the village. Employment and Amenities There are little employment opportunities within the boundaries of the village as there are few employers outside of small scale agriculture, retail and hospitality businesses. There are few amenities within the village so there would be a necessity to commute daily to and from again adding to the stress on the underlying transport infrastructure.

Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

	<p>and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. The proposed developments cannot be legally compliant if they do not comply with the Core Strategy. Site 321 development will increase traffic on Court Lane which, as it already has cars parked on it which reduce it to single file, will become even more dangerous.</p>

<b>Please state which of the Sustainability Appraisal documents or Habitats Regulation Assessment document this representation relates to:</b>			<b>Please give details of why you support or do not support the updates to the Sustainability Appraisal (September 2018) or the Habitats Regulation Assessment Addendum (September 2018).</b>		
<b>Please state which evidence document this representation relates to:</b>	Wiltshire Housing Site Allocations Plan Community Area Topic Paper Westbury (July 2018 Submission version) (CATP/19)				

**Please give details of why you support or do not support the updates to the associated evidence documents.**

**Positively prepared** - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses.

There is no requirement for further allocations.

**Justified** - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: *At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled.*

The reduction of 5 houses in PC 94 does not cancel the following points.

Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: *Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities.*

The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch.

Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%.

Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport .

The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour.

Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view.

Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area).

Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement.

Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic.

Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a.

There is loss of green space and agricultural land.

Developments of this size will add to the existing pressures on Bratton Surgery.

The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan.

**Effective** - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities.

**Consistent with national policy** - Large scale housing developments in "Large Villages " are not promoted by National Policy.

There is a need for 1 and 2 bedroomed and terraced houses (30% mixed starter homes) which was and is being addressed by Plan no. 321 which also is reacting to the original Plan as read by the village (through survey) some 3-4 years ago.

Plan 738 should not even be considered it would congest the entrance to the village it harms the views and landscapes of the village and would conflict with the landscape and Salisbury Plain (Special Protection Area).

Access to by bike, car or on foot to Plan 738 would be dangerous – whereas for the other site 321 would be safer with more space for layout. I have gone through the bullet points for both sites and have ticked those I agree with.

Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement and across</p>			

	<p>Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. Additional comments: When driving from Westbury along the B3098 and on entering Bratton there is a natural narrowing of the road directly at the point where site 738 meets the B3098 and this narrowing continues to the further edge of the site 321. Therefore both sites touch the B3098 where the road is at its narrowest and this natural chicane extends for the full width of both sites, where there are also slight bends that may restrict vision. People may have noted that a new telegraph pole has been sited slightly further into the field by a few feet at the point where site 738 meets the B3098. Introducing what may be another 70 to 100 vehicles on to the B3098 at that point, I think would dramatically increase the "road risk" to cyclist, pedestrians and vehicle users. Specifically building on site 738 will not doubt have a negative effect on the wildlife that regularly uses the field, Badgers, Foxes, bats, deer, all types of birds and a couple of years ago I noted what I thought was a newt [REDACTED] close to site 738. In my view there are other areas within the Parish of Bratton that are more suitable for housing that will pose less risk to the travelling public.</p>

Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations.</p> <p>Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

	<p>and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	The change proposed in SBR PC42 is unsound due to reasons as follows: 1. It is not justified by the Wiltshire Settlement Boundary Review Methodology published in May 2018; 2. It is based on a submission by West Tisbury Parish Council without consultation with local residents. SBR PC42 does not follow the Review Methodology as published, which states that large gardens, paddocks, orchards and open spaces or allotments are the edge of settlements would be excluded. The changes proposed under SBR PC42 include exactly such categories of land. The lack of consultation by West Tisbury Parish Council on this proposed change is unjustified and represents poor practice. It is understood that West Tisbury Parish Council have now reconsidered the boundary change and are now proposing a change as follows: (Please see original representation) This change recognises inclusion in the settlement of the gardens and garages of 86, 87, 88 and 89 Monmouth Road, but exclude the field adjoining 86 Monmouth Road, the vegetable gardens next to Stanley Cottage Monmouth Road, the line of large conifers forming the field boundary and the space between those trees and the access track. This new proposed boundary change has my support.

<b>Identify Proposed Change Reference Number</b>	PC60				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>Introduction On behalf of our client, Castlewood Properties Ventures Ltd. (hereafter referred to 'Castlewood'), we write to provide representations to the "Focussed consultation on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan" (WHSAP). We are responding to this consultation in respect of our client's land interest at Land off the A363 at White Horse Business Park Trowbridge, which is proposed allocation H2.2 in the Wiltshire Housing Site Allocations Plan (WHSAP). Castlewood are local developers who can provide greater certainty of delivery, and have a strong track record in delivering development in Wiltshire. We comment specifically in respect of the proposed amendments relating to proposed allocation H2.2, namely PC59 and PC60 and their consequential changes (PC13, PC15, PC17, PC21, PC22, PC25, PC51, PC56). In summary, these proposed amendments seek to reduce the capacity of proposed allocation H2.2 to 'approximately 175 dwellings'. This follows a decision by the Council's Cabinet, relating to perceived coalescence between the proposed allocation site and the village of North Bradley. We consider this in detail in these Representations. These Representations should be viewed alongside the 'Land off the A363 at White Horse Business Park' Vision Document prepared by Tur1ey (November 2018). These Representations should also be read in combination with those from parties who also have an interest in the H2.2 site, on land to the south of Castlewood's parcel.</p> <p>Proposed H2.2 Allocation The Proposed Allocation site H2.2 comprises 18.96ha and extends from Bradley Road at the north to Westbury Road at the south. There are several land interests relating to Proposed Allocation H2.2. Castlewood's interests relate to a 8.37ha parcel at the northern end of the allocation site, closest to the Trowbridge settlement. This northern parcel of land (hereafter referred to 'The Site') is identified in the accompanying Vision Document, The Site fronts onto A363 where the proposed access is to the residential development is to be secured. Trowbridge is a Principal Settlement, situated within the Trowbridge Community Area and located in the North and West Wiltshire Housing Market Area (HMA). Therefore the scope of these representations is focused on the proposed strategy for the North and West Wiltshire HMA, the Trowbridge Community Area and Trowbridge specifically. Previous Representations on behalf of Castlewood were submitted to the Council in September 2017, in response to the WHSAP Pre-Submission consultation, and in February 2018 to provide the Council with an indicative illustrative layout. The following technical reports were all submitted in February 2018 to demonstrate that there are no significant constraints to delivery of residential development in the site: - Baseline Landscape and Visual Appraisal (referred to hereafter as LVA); LVIA Constraints and Opportunities Plan - Flood Risk and Surface Water Drainage Technical Note; - Highways and Transport Technical Note; - Heritage Technical Note; It is not the intention of these Representations to repeat information previously provided, rather to respond to the key changes proposed by this latest consultation. These representations are supported by the following documents, which provide further</p>				

technical information demonstrating the capability of the Proposed Allocation to deliver at least 300 dwellings, of which around 140 dwellings can be provided on the Site: - Land off the A363 at White Horse Business Park Vision Document, prepared by Turley (November 2018) - Ecology Technical Note (November 2018), prepared by Nicholas Pearson Associates The Ecology Technical Note discusses the ecological considerations which have informed the masterplan, and demonstrates that there are no ecological considerations which do not preclude development of the Site for approximately 140 dwellings, including the need for buffers to be retained as dark corridors. WHSAP Proposed Changes With respect to the document EXAM0101 Schedule of Proposed Changes (September 2018), the key changes related to the Proposed Allocation are as follows: - PC59 - Amend the boundary of the allocation as set out in Annex C; And first sentence of paragraph 5.52 to read: "Approximately 25.62 18.96 ha of land off the A363 southwest of the White Horse Business Park is allocated for the development" - PC60 - Amend first sentence of paragraph 5.52 as follows: "land off the A363 south-west of the White Horse Business Park is allocated for the development of approximately 150 225 175 dwellings, as identified on the Policies Map." We do wish to object to PC60. This reduction in dwelling numbers is unjustified, and indeed the allocation quantum should be increased to "at least 300 dwellings", based on the technical evidence and other considerations, such as Trowbridge's identified shortfall. The Representation will set out the justification for this. We note that the Councils evidence base has been updated in respect of: - Wiltshire Housing Site Allocations Plan Sustainability Appraisal Revised September 2018 (EXAM/02A, EXAM/02A.1, EXAM/02B and EXAM/02C); - Update to the Wiltshire Housing Site Allocations Pre-Submission Draft (June 2017) Assessment under the Habitats Regulations Assessment Addendum (September 2018) (EXAM/03); - Wiltshire Housing Site Allocations Plan Community Area Topic Paper Trowbridge (July 2018 Submission version - updated September 2018) (CATP/17a); The Community Area Topic Paper Trowbridge has been amended in relation to site ref. 298 (The Proposed Allocation). The amendments are as follows: Whilst this site is not without constraint (including potential effects on protected bat species and the significance of heritage assets), these can be mitigated through on-site measures. To address these matters as a result in any development scheme on the allocation would not involve the whole SHLAA site option but would nonetheless need to deliver all necessary mitigation. Therefore, the potential dwelling capacity stated in the SHLAA/SHELAA would be reduced to approximately 150 175 dwellings (para 5.24, pg 22) This amendment is not supported by the technical information submitted with our previous representations nor the ecology technical note accompanying this Representation. As set out above, the ecological technical note concludes there are no ecological considerations which preclude development of the Site alone for approximately 140 dwellings, including the need for buffers to be retained as dark corridors in respect of the protected bat species. In relation to heritage assets, there are no listed buildings on the Site itself and the Masterplan identifies that appropriate provision can be made for the setting of listed buildings in the vicinity whilst providing c.140 units on the Site, with the remainder of the c.300 units to be provided on the remaining parts of the Proposed Allocation. It should also be noted that the Community Area Topic Paper has also been amended in relation to the immediately adjacent Elm Grove Farm Proposed Allocation. Ecology (protected bat species) and heritage assets are again raised as a potential constraint, however conversely for this site the amendment concludes that these matters can be mitigated through on site measures and the site's capacity increased. No clear explanation appears to have been provided for the different approach between the sites. It is noted that some of the documents which our previous representations and technical documents commented on, such as the Wiltshire Housing Site Allocations draft plan - Stage 4a Site Landscape Assessment Part 2 (June 2017) (WHSAP/20), have not been updated for the purposes of this consultation. We do not seek to repeat comments previously made in relation to these documents, and would refer you to our previous Representations. In respect of technical considerations we note that the only amendment to the Councils Sustainability Assessment in respect of Proposed Allocation H2.2 (site ref. 298) is in respect of heritage considerations: The Grade II Listed Kings Farmhouse (and its setting), Willow Grove, monuments and gateway to former Baptist Church and Little Common Farm are situated within the site area, and important heritage farmsteads are situated to the north and south of the site. A detailed heritage assessment (building upon the high-level Heritage Impact Assessment prepared by the Council) would be required to support any subsequent planning application. A Heritage Impact Assessment would be required. Archaeological potential of the site is

medium and therefore archaeological assessment would be required (SA Obj. 6). We can confirm that we have no objections to this amended text. It is acknowledged that heritage will be an important consideration for the Proposed Allocation, albeit of less significance to the Site given the location of the Listed Buildings, outwith the Castlewood land interests.

**Background to Allocation** By way of background, the site was submitted to the SHLAA and was assessed under site reference 298. The site passed stage 4a with a stated capacity of 338 dwellings and was progressed as a 'preferred site', however the stated capacity was reduced to 150 dwellings (WHSAP Trowbridge Community Area Topic Paper July 2018, page 18). The assessment of site options (Appendix G) explains this reduction stating "mitigation measures required to address effects on heritage assets, ecology and landscape would result in a reduction to the developable area of the site and a potential reduction in dwelling capacity." (WHSAP Trowbridge Community Area Topic Paper July 2018, page 97). This resulted in the Pre-Submission Draft WHSAP (September 2017) consultation including the site as an allocation for "approximately 150 dwellings" under site reference H2.2. The pre-submission draft was subject to a period of public consultation and subsequent to this consultation, the Council proposed to increase the capacity of the site. This amendment to proposed allocation H2.2 was originally set out in the Council's Cabinet Papers of 15th May 2018, which refer to a capacity increase from approximately 150 to 300 dwellings (Council's Cabinet Papers of 15th May 2018, pages 294, 365). [It is noted that there are inconsistencies in the Council's Cabinet Papers of 15th May 2018, as there is also reference to an increase to 225 dwellings.] This demonstrates that the Council consider that a capacity of approximately 300 dwellings was appropriate for the H2.2 allocation site. The WHSAP was subsequently deferred from consideration at the 15th May 2018 Cabinet meeting to be heard at the 3rd July 2018 Cabinet instead. It is understood this was to allow further consultation on the proposed changes with Wiltshire Councillors and town and parish councils (Minutes of 3rd July 2018 Cabinet, paragraph 257). For the Cabinet Papers of 3rd July 2018, the Council prepared an Addendum following the deferral of the item from Cabinet of 15 May 2018. This Addendum refers to a smaller capacity increase for allocation H2.2 from approximately 150 to 225 dwellings.. At the 3rd July 2018 Cabinet, Cllr Sturgis proposed further changes to the in response to the housing numbers on the Allocation site, understood to be in response to consultation with Wiltshire Councillors and town and parish councils. The following change was proposed:

(c) Amend Proposed Change 39 (site allocation H2.2, land off the A363 at White Horse Business Park, Trowbridge) to reduce the proposed dwelling increase by 50 dwellings This proposed change had the effect of reducing the capacity increase further from approximately 150 to 175 dwellings. The minutes of the 3rd July 2018 Cabinet meeting provide further insight into Member's justification for this change: In justifying the further proposed changes, Cllr Sturgis referred to the addendum, and provided clarification as follows ... the reduction in the increase in housing numbers on site H2.2 would provide for landscape buffer for North Bradley. In response to concerns raised by David Feather that insufficient weight had been given to North Bradley's Neighbourhood Plan, Councillor Sturgis stated that other neighbourhood plans were further 'forward, and could therefore be given greater weight. Councillor Sturgis went on to say that: he hoped that the proposed amendments to the White Horse business park site would go some way to maintaining a gap between North Bradley and Trowbridge; and that Wiltshire Council would continue to work to support the North Bradley neighbourhood plan so that it would be better progressed by the time of the examination in public. The issue of alleged coalescence between the Trowbridge and North Bradley settlements is therefore identified to be one of the key issues from the Council's perspective relating to the Proposed Allocation's capacity. It is noted that the Community Area Topic Paper raises concerns regarding ecological (bat species) and heritage constraints, which would require mitigation in order to be satisfactorily addressed. We dispute the Council's concerns regarding the perceived coalescence of Trowbridge and North Bradley, and the limit on capacity created by the ecological and heritage constraints. For the reasons we will set out below we consider the Council's approach to reducing the overall dwelling capacity on site H2.2 to be unsound. The capacity of proposed allocation H2.2 should be reinstated as approximately 300 dwellings, as per the previous view of Planning Officers .

**Representations** We fervently disagree with the Council's position, that the Proposed Allocation is only capable of accommodating approximately 175 dwellings, in order to maintain a gap between the North Bradley and Trowbridge settlements, and provide appropriate mitigation. Our evidence base (and supported by the representations prepared by Linden Homes in relation to a separate parcel of the Allocation Site) supports a higher capacity. Crucially, the Council's own evidence base supports a higher capacity. For example, the WSHAP

Stage 4a Site Landscape Assessment concludes that the capacity of the Site to accommodate change is described as 'moderate-high', This is discussed further below. We feel that the Proposed Allocation is capable of accommodating at least 300 dwellings, without causing issues of coalescence with the North Bradley settlement. Specifically to these Representations, we feel that the Site (the northern parcel of land defined in the accompanying Vision Document) is capable of accommodating approximately 140 dwellings, again without causing issues of coalescence and provide adequate mitigation. This is now considered in full.

**Background on Relationship to Trowbridge** The Site is in close proximity to the existing settlement boundary of Trowbridge to the north (as defined by the Core Strategy 2015, fig 1), less than 50m to the south of the existing boundary. As part of the WHSAP, the Council are undertaking a settlement boundary review (WHSAP Topic Paper 1 Settlement Boundary Review Methodology, refers). This Topic Paper concludes that the White Horse Business Park to the east of the site meets the methodology for being included within the settlement. [MAP INSERT] Accordingly the Draft WHSAP proposes to include White Horse Business Park within the settlement boundary (fig 2). As a result, in addition to being in close proximity to the existing settlement boundary of Trowbridge to the north, the Site also abuts the proposed settlement boundary of Trowbridge - in its extended form - to the east (as defined by the Draft WHSAP, fig 2). The Site therefore relates well to the Trowbridge settlement and in combination with proposed housing allocation 'Elm Grove Farm', would enhance connectivity between the existing Trowbridge settlement and the established White Horse Business Park. Indeed delivery of residential development on the Allocation Site would bridge the separation between the business park and the wider settlement. The potential of the Allocation Site and the adjacent Elm Grove Farm allocation to be successfully integrated into existing and planned developments in the area, while maintaining a defensible buffer to North Bradley is recognised in the Trowbridge Community Area Topic Paper. The relationship between White Horse Business Park, the Proposed Allocation (ref 298) to the SW and proposed allocation 'Elm Grove Farm' (ref 613/248) to the SE is demonstrated in fig 2. The Site is ideally placed to provide improvements to walking and cycling routes through to the town, and the proposed masterplan shows how these improved linkages can be delivered as part of a residential development. The Proposed Allocation would therefore provide a cohesive and logical extension to Trowbridge. It should be noted that the Site would be directly connected to the settlement to the north and east, and would very much look to the north and Trowbridge in terms of connectivity and access to facilities.

**[MAP INSERT] Landscape Evidence and Design Solution** The previous Representations submitted to the Council on behalf of Castlewood in February 2018 provide the Council with an indicative illustrative layout and a Landscape and Visual Appraisal which concludes that there are no significant constraints to the delivery of residential units on the site. The LVA concludes that visually, the Site is relatively well contained on account of the existing hedgerow structure, generally flat topography, the surrounding mature tree belts and surrounding development. The visibility of the site is limited to occasional short distance views from immediate visual receptors. In the wider surrounding landscape, the cumulative effect of field boundary hedgerows and the flat low lying topography provide visual containment. Although, the site is likely to be glimpsed from raised land to the southeast, the intervening distance will prevent its features being discernible. The Site therefore has low visual prominence. There are strong landscape buffers on the edge of North Bradley and the development provides opportunities to reinforce existing landscape features. This will lead to a softening of views towards Trowbridge from North Bradley, especially as the existing settlement edge of Trowbridge is defined by commercial development and the proposed development will provide a softer, more permanent edge. The LVA acknowledges that whilst there would be some physical reduction in the separation between Trowbridge and North Bradley as a result of the Proposed Allocation, the visual effects could be minimised and mitigated. The proposed Masterplan provided in the accompanying Vision Document incorporates such mitigation measures, including:

- The LVA acknowledges that a visual break is experienced between the settlements of Trowbridge and North Bradley when travelling along Woodmarsh. Accordingly the masterplan has not identified development in those areas most significant to the perceived visual separation between North Bradley and Trowbridge, as informed by the LVA. This preserves the setting of North Bradley village and its integrity.
- The northern development parcel is set back considerably from Woodmarsh to reinforce the visual separation from North Bradley and it is proposed that the development in this area will generally be of lower density so as to set the proposed development within a landscape context and that the built form is more visually connected to the south of Trowbridge and visually

buffer the scheme from North Bradley. - The proposed masterplan proposes to implement significant new planting along the south-western boundary, in addition to significant existing planting to reinforce the visual separation between the proposed development and North Bradley. The LVA confirms that the development of the site could be achieved without resulting in significant landscape and/or visual impacts (in relation to the receptors identified in the LVA including the A363, Woodmarsh and residential properties on the eastern edge of North Bradley). In addition, the findings of the Councils own evidence base are significant. The WHSAP Stage 4a Site Landscape Assessment (June 2017) concludes that the overall magnitude of effect on views if the site were to be developed is identified as 'low adverse'. The capacity of Site 298 to accommodate change is described as 'moderate-high'. It is considered, therefore, that the site should be allocated for a much higher number of dwellings given the sustainable location and absence of any constraints which cannot be mitigated against. The overall effect will be to proportionately increase the quantum of market and affordable dwellings, which can be achieved through the Proposed Allocation, whilst simultaneously protecting the integrity of North Bradley as a village. Indeed, the opportunity to achieve a comprehensive design will provide greater opportunities for more meaningful green infrastructure provision, landscaping and open space. In summary, we contend that delivery of approximately 300 dwellings on the Proposed Allocation would not lead to unacceptable coalescence between Trowbridge and North Bradley. Residential development on the site would link, both visually and physically, primarily with Trowbridge and the adjacent White Horse Business Park, which is proposed in the WHSAP to form part of the Trowbridge settlement boundary. As demonstrated in the accompanying Vision Document, development on the site would be sensitively designed with the incorporation of new or strengthened landscape buffers and careful siting of built form to protect visual separation between the two settlements. Utilising the approach set out in the Vision Document, the Site could accommodate c. 140 units, as part of a wider 300 unit allocation.

**Housing Need** As a Principal Settlement, Trowbridge is a primary focus for development. Moreover, the role of the town as a significant employment and strategic service centre will be expected to be strengthened over the Plan period up to 2026 and beyond. There are, however, severe constraints to the growth of Trowbridge. In particular, with Green Belt and Flood Zone designations to the north and west of Trowbridge (Fig 3), opportunities to expand Trowbridge in order to accommodate the identified housing need are limited. In proposing the allocation of this site, the Council identified that development of the site for housing would contribute to the area strategy for the town by boosting the supply of homes to help meet indicative requirements" [MAP INSERT] In the context of Trowbridge being a focus for growth and taking a large proportion of housing need, we wish to comment on PC25, which is a factual update to reflect the latest published Housing Land Supply Statement (March 2018) and to reflect PC55, PC60, PC64 and PC70 that propose higher densities on site allocations to make best use of land. PC25 relates to the following amended paragraph: Unlike Chippenham however, allocations made by the Plan will not be sufficient to ensure that housing provision meets indicative requirements. Six new site allocations provide land for approximately 800 1,050 dwellings and have the potential to increase their capacity to make the best use of land. Nevertheless, housing development at Trowbridge will fall short of the WCS indicative level of 6,810 dwellings by around 1,220 1,297."

In addition, related to the Trowbridge Community Area, the Council's Housing Land Supply Statement Addendum July 2018 Submission Version (ref: TOP/03C) indicates there is still an indicative residual requirement for the remainder of the Trowbridge Community Area of at least 2,230 dwellings during the remainder of the Plan period up to 2026. As things stand therefore the Council are not National planning policy is clear that the Council must look at its residential allocations beyond five years to ensure there is a consistent pipeline for bringing forward new residential development. The Council, despite the amendments, acknowledge that housing development at Trowbridge will fall short of the requirements. By failing to allocating sufficient quantum of new housing in the WHSAP, the Council is currently failing to fully meet its identified housing needs. The Plan has not therefore been positively prepared. To ensure a sound Plan, which is consistent with national planning policy, it is essential that either: a) additional site are identified and allocated; or b) greater quantum of housing is allocated on existing/ proposed allocations. In relation to option a), as set out above Trowbridge lacks genuine, alternative options to extend the settlement due to constraints, including Green Belt designations and Flood Zone primarily to the north and west. Consideration should therefore be given to intensify allocations proposed by the WHSAP, where technical constraints do not preclude this. As has been demonstrated by these Representations,

	<p>and in those previously submitted, there are no technical constraints which preclude a greater quantum of development than currently proposed in the WHSAP. Indeed, the Council have previously identified the potential of this site to accommodate c 300 dwellings, and the proposed reduction to 175 to accommodate ecology and heritage mitigation measures is unjustified. The technical work undertaken, and submitted to the Council during the WHSAP process demonstrate that the Proposed Allocation is capable of accommodating at least 300 dwellings with the incorporation of necessary mitigation measures. The sustainability appraisal undertaken by the Council identify the Proposed Allocation as a 'more sustainable' site. As such, priority should be maximising the housing numbers on this site in the first instance to address the outstanding house requirement, rather than looking towards 'less sustainable sites. Conclusion In summary, it is contended that proposed modification PC60 (and its consequential changes) to the WHSAP render the document unsound and contrary to paragraph 182 of the NPPF (2012). The proposed modification is inconsistent with the technical information provided to the Council, and the Council's own evidence base documents, which recognises the capability of the Proposed Allocation to accommodate a greater quantum of residential units whilst still maintaining appropriate separation between Trowbridge and North Bradley and providing adequate mitigation. The reduction in dwelling numbers for Proposed Allocation H2.2 does not represent positive preparation of the WHSAP. There is an identified housing need in the Trowbridge Community Area and the WHSAP as currently proposed does not meet the full requirement. It is recognised that mitigation will be required in relation to heritage and ecology matters, however the technical work undertaken has identified that appropriate mitigation can be accommodated with a greater quantum of dwellings than 175. Indeed, the accompanying Vision Document relating specially to our client's interests on the north parcel, identifies around 140 dwellings can be appropriately accommodated on that part of the allocation alone. In order to remedy this and make the WHSAP sound, we request that the capacity of the Proposed Allocation H2.2 is reinstated as "at least 300 dwellings", and consequential changes subsequently amended. Specifically to these Representations, we request that recognition is given to the capability of the Site to accommodating approximately 140 dwellings as part of the H2.2 allocation. In order to effectively put this case before the Inspector and address any questions they may have and to also rebuff any argument the Council may make for proceeding with proposed modification PC60 and its consequential changes we consider it necessary to attend the Examination Hearings in a speaking capacity. For reference, we append a full set of additional details as follows. These reports and drawings concern the proposed development of the Site and provide information regarding constraints: Vision Document Ecology Technical Note Flood Risk &amp; Drainage Technical Note Heritage Technical Note Highways Technical Note Landscape and Visual Appraisal</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>Introduction On behalf of our client, Castlewood Properties Ventures Ltd. (hereafter referred to 'Castlewood'), we write to provide representations to the "Focussed consultation on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan" (WHSAP). We are responding to this consultation in respect of our client's land interest at Land off the A363 at White Horse Business Park Trowbridge, which is proposed allocation H2.2 in the Wiltshire Housing Site Allocations Plan (WHSAP). Castlewood are local developers who can provide greater certainty of delivery, and have a strong track record in delivering development in Wiltshire. We comment specifically in respect of the proposed amendments relating to proposed allocation H2.2, namely PC59 and PC60 and their consequential changes (PC13, PC15, PC17, PC21, PC22, PC25, PC51, PC56). In summary, these proposed amendments seek to reduce the capacity of proposed allocation H2.2 to 'approximately 175 dwellings'. This follows a decision by the Council's Cabinet, relating to perceived coalescence between the proposed allocation site and the village of North Bradley. We consider this in detail in these Representations. These Representations should be viewed alongside the 'Land off the A363 at White Horse Business Park' Vision Document prepared by Tur1ey (November 2018). These Representations should also be read in combination with those from parties who also have an interest in the H2.2 site, on land to the south of Castlewood's parcel.</p> <p>Proposed H2.2 Allocation The Proposed Allocation site H2.2 comprises 18.96ha and extends from Bradley Road at the north to Westbury Road at the south. There are several land interests relating to Proposed Allocation H2.2. Castlewood's interests relate to a 8.37ha parcel at the northern end of the allocation site, closest to the Trowbridge settlement. This northern parcel of land (hereafter referred to 'The Site') is identified in the accompanying Vision Document, The Site fronts onto A363 where the proposed access is to the residential development is to be secured. Trowbridge is a Principal Settlement, situated within the Trowbridge Community Area and located in the North and West Wiltshire Housing Market Area (HMA). Therefore the scope of these representations is focused on the proposed strategy for the North and West Wiltshire HMA, the Trowbridge Community Area and Trowbridge specifically. Previous Representations on behalf of Castlewood were submitted to the Council in September 2017, in response to the WHSAP Pre-Submission consultation, and in February 2018 to provide the Council with an indicative illustrative layout. The following technical reports were all submitted in February 2018 to demonstrate that there are no significant constraints to delivery of residential development in the site: - Baseline Landscape and Visual Appraisal (referred to hereafter as LVA); LVIA Constraints and Opportunities Plan - Flood Risk and Surface Water Drainage Technical Note; - Highways and Transport Technical Note; - Heritage Technical Note; It is not the intention of these Representations to repeat information previously provided, rather to respond to the key changes proposed by this latest consultation. These representations are supported by the following documents, which provide further</p>				

technical information demonstrating the capability of the Proposed Allocation to deliver at least 300 dwellings, of which around 140 dwellings can be provided on the Site: - Land off the A363 at White Horse Business Park Vision Document, prepared by Turley (November 2018) - Ecology Technical Note (November 2018), prepared by Nicholas Pearson Associates. The Ecology Technical Note discusses the ecological considerations which have informed the masterplan, and demonstrates that there are no ecological considerations which do not preclude development of the Site for approximately 140 dwellings, including the need for buffers to be retained as dark corridors. WHSAP Proposed Changes. With respect to the document EXAM0101 Schedule of Proposed Changes (September 2018), the key changes related to the Proposed Allocation are as follows: - PC59 - Amend the boundary of the allocation as set out in Annex C; And first sentence of paragraph 5.52 to read: "Approximately 25.62 18.96 ha of land off the A363 southwest of the White Horse Business Park is allocated for the development" - PC60 - Amend first sentence of paragraph 5.52 as follows: "land off the A363 south-west of the White Horse Business Park is allocated for the development of approximately 150 225 175 dwellings, as identified on the Policies Map." We do wish to object to PC60. This reduction in dwelling numbers is unjustified, and indeed the allocation quantum should be increased to "at least 300 dwellings", based on the technical evidence and other considerations, such as Trowbridge's identified shortfall. The Representation will set out the justification for this. We note that the Council's evidence base has been updated in respect of: - Wiltshire Housing Site Allocations Plan Sustainability Appraisal Revised September 2018 (EXAM/02A, EXAM/02A.1, EXAM/02B and EXAM/02C); - Update to the Wiltshire Housing Site Allocations Pre-Submission Draft (June 2017) Assessment under the Habitats Regulations Assessment Addendum (September 2018) (EXAM/03); - Wiltshire Housing Site Allocations Plan Community Area Topic Paper Trowbridge (July 2018 Submission version - updated September 2018) (CATP/17a); The Community Area Topic Paper Trowbridge has been amended in relation to site ref. 298 (The Proposed Allocation). The amendments are as follows: Whilst this site is not without constraint (including potential effects on protected bat species and the significance of heritage assets), these can be mitigated through on-site measures. To address these matters as a result in any development scheme on the allocation would not involve the whole SHLAA site option but would nonetheless need to deliver all necessary mitigation. Therefore, the potential dwelling capacity stated in the SHLAA/SHELAA would be reduced to approximately 150 175 dwellings (para 5.24, pg 22). This amendment is not supported by the technical information submitted with our previous representations nor the ecology technical note accompanying this Representation. As set out above, the ecological technical note concludes there are no ecological considerations which preclude development of the Site alone for approximately 140 dwellings, including the need for buffers to be retained as dark corridors in respect of the protected bat species. In relation to heritage assets, there are no listed buildings on the Site itself and the Masterplan identifies that appropriate provision can be made for the setting of listed buildings in the vicinity whilst providing c.140 units on the Site, with the remainder of the c.300 units to be provided on the remaining parts of the Proposed Allocation. It should also be noted that the Community Area Topic Paper has also been amended in relation to the immediately adjacent Elm Grove Farm Proposed Allocation. Ecology (protected bat species) and heritage assets are again raised as a potential constraint, however conversely for this site the amendment concludes that these matters can be mitigated through on-site measures and the site's capacity increased. No clear explanation appears to have been provided for the different approach between the sites. It is noted that some of the documents which our previous representations and technical documents commented on, such as the Wiltshire Housing Site Allocations draft plan - Stage 4a Site Landscape Assessment Part 2 (June 2017) (WHSAP/20), have not been updated for the purposes of this consultation. We do not seek to repeat comments previously made in relation to these documents, and would refer you to our previous Representations. In respect of technical considerations we note that the only amendment to the Council's Sustainability Assessment in respect of Proposed Allocation H2.2 (site ref. 298) is in respect of heritage considerations: The Grade II Listed Kings Farmhouse (and its setting), Willow Grove, monuments and gateway to former Baptist Church and Little Common Farm are situated within the site area, and important heritage farmsteads are situated to the north and south of the site. A detailed heritage assessment (building upon the high-level Heritage Impact Assessment prepared by the Council) would be required to support any subsequent planning application. A Heritage Impact Assessment would be required. Archaeological potential of the site is

medium and therefore archaeological assessment would be required (SA Obj. 6). We can confirm that we have no objections to this amended text. It is acknowledged that heritage will be an important consideration for the Proposed Allocation, albeit of less significance to the Site given the location of the Listed Buildings, outwith the Castlewood land interests.

**Background to Allocation** By way of background, the site was submitted to the SHLAA and was assessed under site reference 298. The site passed stage 4a with a stated capacity of 338 dwellings and was progressed as a 'preferred site', however the stated capacity was reduced to 150 dwellings (WHSAP Trowbridge Community Area Topic Paper July 2018, page 18). The assessment of site options (Appendix G) explains this reduction stating "mitigation measures required to address effects on heritage assets, ecology and landscape would result in a reduction to the developable area of the site and a potential reduction in dwelling capacity." (WHSAP Trowbridge Community Area Topic Paper July 2018, page 97). This resulted in the Pre-Submission Draft WHSAP (September 2017) consultation including the site as an allocation for "approximately 150 dwellings" under site reference H2.2. The pre-submission draft was subject to a period of public consultation and subsequent to this consultation, the Council proposed to increase the capacity of the site. This amendment to proposed allocation H2.2 was originally set out in the Council's Cabinet Papers of 15th May 2018, which refer to a capacity increase from approximately 150 to 300 dwellings (Council's Cabinet Papers of 15th May 2018, pages 294, 365). [It is noted that there are inconsistencies in the Council's Cabinet Papers of 15th May 2018, as there is also reference to an increase to 225 dwellings.] This demonstrates that the Council consider that a capacity of approximately 300 dwellings was appropriate for the H2.2 allocation site. The WHSAP was subsequently deferred from consideration at the 15th May 2018 Cabinet meeting to be heard at the 3rd July 2018 Cabinet instead. It is understood this was to allow further consultation on the proposed changes with Wiltshire Councillors and town and parish councils (Minutes of 3rd July 2018 Cabinet, paragraph 257). For the Cabinet Papers of 3rd July 2018, the Council prepared an Addendum following the deferral of the item from Cabinet of 15 May 2018. This Addendum refers to a smaller capacity increase for allocation H2.2 from approximately 150 to 225 dwellings.. At the 3rd July 2018 Cabinet, Cllr Sturgis proposed further changes to the in response to the housing numbers on the Allocation site, understood to be in response to consultation with Wiltshire Councillors and town and parish councils. The following change was proposed:

(c) Amend Proposed Change 39 (site allocation H2.2, land off the A363 at White Horse Business Park, Trowbridge) to reduce the proposed dwelling increase by 50 dwellings This proposed change had the effect of reducing the capacity increase further from approximately 150 to 175 dwellings. The minutes of the 3rd July 2018 Cabinet meeting provide further insight into Member's justification for this change: In justifying the further proposed changes, Cllr Sturgis referred to the addendum, and provided clarification as follows ... the reduction in the increase in housing numbers on site H2.2 would provide for landscape buffer for North Bradley. In response to concerns raised by David Feather that insufficient weight had been given to North Bradley's Neighbourhood Plan, Councillor Sturgis stated that other neighbourhood plans were further 'forward, and could therefore be given greater weight. Councillor Sturgis went on to say that: he hoped that the proposed amendments to the White Horse business park site would go some way to maintaining a gap between North Bradley and Trowbridge; and that Wiltshire Council would continue to work to support the North Bradley neighbourhood plan so that it would be better progressed by the time of the examination in public. The issue of alleged coalescence between the Trowbridge and North Bradley settlements is therefore identified to be one of the key issues from the Council's perspective relating to the Proposed Allocation's capacity. It is noted that the Community Area Topic Paper raises concerns regarding ecological (bat species) and heritage constraints, which would require mitigation in order to be satisfactorily addressed. We dispute the Council's concerns regarding the perceived coalescence of Trowbridge and North Bradley, and the limit on capacity created by the ecological and heritage constraints. For the reasons we will set out below we consider the Council's approach to reducing the overall dwelling capacity on site H2.2 to be unsound. The capacity of proposed allocation H2.2 should be reinstated as approximately 300 dwellings, as per the previous view of Planning Officers .

**Representations** We fervently disagree with the Council's position, that the Proposed Allocation is only capable of accommodating approximately 175 dwellings, in order to maintain a gap between the North Bradley and Trowbridge settlements, and provide appropriate mitigation. Our evidence base (and supported by the representations prepared by Linden Homes in relation to a separate parcel of the Allocation Site) supports a higher capacity. Crucially, the Council's own evidence base supports a higher capacity. For example, the WSHAP

Stage 4a Site Landscape Assessment concludes that the capacity of the Site to accommodate change is described as 'moderate-high', This is discussed further below. We feel that the Proposed Allocation is capable of accommodating at least 300 dwellings, without causing issues of coalescence with the North Bradley settlement. Specifically to these Representations, we feel that the Site (the northern parcel of land defined in the accompanying Vision Document) is capable of accommodating approximately 140 dwellings, again without causing issues of coalescence and provide adequate mitigation. This is now considered in full.

**Background on Relationship to Trowbridge** The Site is in close proximity to the existing settlement boundary of Trowbridge to the north (as defined by the Core Strategy 2015, fig 1), less than 50m to the south of the existing boundary. As part of the WHSAP, the Council are undertaking a settlement boundary review (WHSAP Topic Paper 1 Settlement Boundary Review Methodology, refers). This Topic Paper concludes that the White Horse Business Park to the east of the site meets the methodology for being included within the settlement. [MAP INSERT] Accordingly the Draft WHSAP proposes to include White Horse Business Park within the settlement boundary (fig 2). As a result, in addition to being in close proximity to the existing settlement boundary of Trowbridge to the north, the Site also abuts the proposed settlement boundary of Trowbridge - in its extended form - to the east (as defined by the Draft WHSAP, fig 2). The Site therefore relates well to the Trowbridge settlement and in combination with proposed housing allocation 'Elm Grove Farm', would enhance connectivity between the existing Trowbridge settlement and the established White Horse Business Park. Indeed delivery of residential development on the Allocation Site would bridge the separation between the business park and the wider settlement. The potential of the Allocation Site and the adjacent Elm Grove Farm allocation to be successfully integrated into existing and planned developments in the area, while maintaining a defensible buffer to North Bradley is recognised in the Trowbridge Community Area Topic Paper. The relationship between White Horse Business Park, the Proposed Allocation (ref 298) to the SW and proposed allocation 'Elm Grove Farm' (ref 613/248) to the SE is demonstrated in fig 2. The Site is ideally placed to provide improvements to walking and cycling routes through to the town, and the proposed masterplan shows how these improved linkages can be delivered as part of a residential development. The Proposed Allocation would therefore provide a cohesive and logical extension to Trowbridge. It should be noted that the Site would be directly connected to the settlement to the north and east, and would very much look to the north and Trowbridge in terms of connectivity and access to facilities.

**[MAP INSERT] Landscape Evidence and Design Solution** The previous Representations submitted to the Council on behalf of Castlewood in February 2018 provide the Council with an indicative illustrative layout and a Landscape and Visual Appraisal which concludes that there are no significant constraints to the delivery of residential units on the site. The LVA concludes that visually, the Site is relatively well contained on account of the existing hedgerow structure, generally flat topography, the surrounding mature tree belts and surrounding development. The visibility of the site is limited to occasional short distance views from immediate visual receptors. In the wider surrounding landscape, the cumulative effect of field boundary hedgerows and the flat low lying topography provide visual containment. Although, the site is likely to be glimpsed from raised land to the southeast, the intervening distance will prevent its features being discernible. The Site therefore has low visual prominence. There are strong landscape buffers on the edge of North Bradley and the development provides opportunities to reinforce existing landscape features. This will lead to a softening of views towards Trowbridge from North Bradley, especially as the existing settlement edge of Trowbridge is defined by commercial development and the proposed development will provide a softer, more permanent edge. The LVA acknowledges that whilst there would be some physical reduction in the separation between Trowbridge and North Bradley as a result of the Proposed Allocation, the visual effects could be minimised and mitigated. The proposed Masterplan provided in the accompanying Vision Document incorporates such mitigation measures, including:

- The LVA acknowledges that a visual break is experienced between the settlements of Trowbridge and North Bradley when travelling along Woodmarsh. Accordingly the masterplan has not identified development in those areas most significant to the perceived visual separation between North Bradley and Trowbridge, as informed by the LVA. This preserves the setting of North Bradley village and its integrity.
- The northern development parcel is set back considerably from Woodmarsh to reinforce the visual separation from North Bradley and it is proposed that the development in this area will generally be of lower density so as to set the proposed development within a landscape context and that the built form is more visually connected to the south of Trowbridge and visually

buffer the scheme from North Bradley. - The proposed masterplan proposes to implement significant new planting along the south-western boundary, in addition to significant existing planting to reinforce the visual separation between the proposed development and North Bradley. The LVA confirms that the development of the site could be achieved without resulting in significant landscape and/or visual impacts (in relation to the receptors identified in the LVA including the A363, Woodmarsh and residential properties on the eastern edge of North Bradley). In addition, the findings of the Council's own evidence base are significant. The WHSAP Stage 4a Site Landscape Assessment (June 2017) concludes that the overall magnitude of effect on views if the site were to be developed is identified as 'low adverse'. The capacity of Site 298 to accommodate change is described as 'moderate-high'. It is considered, therefore, that the site should be allocated for a much higher number of dwellings given the sustainable location and absence of any constraints which cannot be mitigated against. The overall effect will be to proportionately increase the quantum of market and affordable dwellings, which can be achieved through the Proposed Allocation, whilst simultaneously protecting the integrity of North Bradley as a village. Indeed, the opportunity to achieve a comprehensive design will provide greater opportunities for more meaningful green infrastructure provision, landscaping and open space. In summary, we contend that delivery of approximately 300 dwellings on the Proposed Allocation would not lead to unacceptable coalescence between Trowbridge and North Bradley. Residential development on the site would link, both visually and physically, primarily with Trowbridge and the adjacent White Horse Business Park, which is proposed in the WHSAP to form part of the Trowbridge settlement boundary. As demonstrated in the accompanying Vision Document, development on the site would be sensitively designed with the incorporation of new or strengthened landscape buffers and careful siting of built form to protect visual separation between the two settlements. Utilising the approach set out in the Vision Document, the Site could accommodate c. 140 units, as part of a wider 300 unit allocation.

**Housing Need** As a Principal Settlement, Trowbridge is a primary focus for development. Moreover, the role of the town as a significant employment and strategic service centre will be expected to be strengthened over the Plan period up to 2026 and beyond. There are, however, severe constraints to the growth of Trowbridge. In particular, with Green Belt and Flood Zone designations to the north and west of Trowbridge (Fig 3), opportunities to expand Trowbridge in order to accommodate the identified housing need are limited. In proposing the allocation of this site, the Council identified that development of the site for housing would contribute to the area strategy for the town by boosting the supply of homes to help meet indicative requirements" [MAP INSERT] In the context of Trowbridge being a focus for growth and taking a large proportion of housing need, we wish to comment on PC25, which is a factual update to reflect the latest published Housing Land Supply Statement (March 2018) and to reflect PC55, PC60, PC64 and PC70 that propose higher densities on site allocations to make best use of land. PC25 relates to the following amended paragraph: Unlike Chippenham however, allocations made by the Plan will not be sufficient to ensure that housing provision meets indicative requirements. Six new site allocations provide land for approximately 800 1,050 dwellings and have the potential to increase their capacity to make the best use of land. Nevertheless, housing development at Trowbridge will fall short of the WCS indicative level of 6,810 dwellings by around 1,220 1,297."

In addition, related to the Trowbridge Community Area, the Council's Housing Land Supply Statement Addendum July 2018 Submission Version (ref: TOP/03C) indicates there is still an indicative residual requirement for the remainder of the Trowbridge Community Area of at least 2,230 dwellings during the remainder of the Plan period up to 2026. As things stand therefore the Council are not National planning policy is clear that the Council must look at its residential allocations beyond five years to ensure there is a consistent pipeline for bringing forward new residential development. The Council, despite the amendments, acknowledge that housing development at Trowbridge will fall short of the requirements. By failing to allocating sufficient quantum of new housing in the WHSAP, the Council is currently failing to fully meet its identified housing needs. The Plan has not therefore been positively prepared. To ensure a sound Plan, which is consistent with national planning policy, it is essential that either: a) additional site are identified and allocated; or b) greater quantum of housing is allocated on existing/ proposed allocations. In relation to option a), as set out above Trowbridge lacks genuine, alternative options to extend the settlement due to constraints, including Green Belt designations and Flood Zone primarily to the north and west. Consideration should therefore be given to intensify allocations proposed by the WHSAP, where technical constraints do not preclude this. As has been demonstrated by these Representations,

	<p>and in those previously submitted, there are no technical constraints which preclude a greater quantum of development than currently proposed in the WHSAP. Indeed, the Council have previously identified the potential of this site to accommodate c 300 dwellings, and the proposed reduction to 175 to accommodate ecology and heritage mitigation measures is unjustified. The technical work undertaken, and submitted to the Council during the WHSAP process demonstrate that the Proposed Allocation is capable of accommodating at least 300 dwellings with the incorporation of necessary mitigation measures. The sustainability appraisal undertaken by the Council identify the Proposed Allocation as a 'more sustainable' site. As such, priority should be maximising the housing numbers on this site in the first instance to address the outstanding house requirement, rather than looking towards 'less sustainable sites. Conclusion In summary, it is contended that proposed modification PC60 (and its consequential changes) to the WHSAP render the document unsound and contrary to paragraph 182 of the NPPF (2012). The proposed modification is inconsistent with the technical information provided to the Council, and the Council's own evidence base documents, which recognises the capability of the Proposed Allocation to accommodate a greater quantum of residential units whilst still maintaining appropriate separation between Trowbridge and North Bradley and providing adequate mitigation. The reduction in dwelling numbers for Proposed Allocation H2.2 does not represent positive preparation of the WHSAP. There is an identified housing need in the Trowbridge Community Area and the WHSAP as currently proposed does not meet the full requirement. It is recognised that mitigation will be required in relation to heritage and ecology matters, however the technical work undertaken has identified that appropriate mitigation can be accommodated with a greater quantum of dwellings than 175. Indeed, the accompanying Vision Document relating specially to our client's interests on the north parcel, identifies around 140 dwellings can be appropriately accommodated on that part of the allocation alone. In order to remedy this and make the WHSAP sound, we request that the capacity of the Proposed Allocation H2.2 is reinstated as "at least 300 dwellings", and consequential changes subsequently amended. Specifically to these Representations, we request that recognition is given to the capability of the Site to accommodating approximately 140 dwellings as part of the H2.2 allocation. In order to effectively put this case before the Inspector and address any questions they may have and to also rebuff any argument the Council may make for proceeding with proposed modification PC60 and its consequential changes we consider it necessary to attend the Examination Hearings in a speaking capacity. For reference, we append a full set of additional details as follows. These reports and drawings concern the proposed development of the Site and provide information regarding constraints: Vision Document Ecology Technical Note Flood Risk &amp; Drainage Technical Note Heritage Technical Note Highways Technical Note Landscape and Visual Appraisal</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>Introduction On behalf of our client, Castlewood Properties Ventures Ltd. (hereafter referred to 'Castlewood'), we write to provide representations to the "Focussed consultation on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan" (WHSAP). We are responding to this consultation in respect of our client's land interest at Land off the A363 at White Horse Business Park Trowbridge, which is proposed allocation H2.2 in the Wiltshire Housing Site Allocations Plan (WHSAP). Castlewood are local developers who can provide greater certainty of delivery, and have a strong track record in delivering development in Wiltshire. We comment specifically in respect of the proposed amendments relating to proposed allocation H2.2, namely PC59 and PC60 and their consequential changes (PC13, PC15, PC17, PC21, PC22, PC25, PC51, PC56). In summary, these proposed amendments seek to reduce the capacity of proposed allocation H2.2 to 'approximately 175 dwellings'. This follows a decision by the Council's Cabinet, relating to perceived coalescence between the proposed allocation site and the village of North Bradley. We consider this in detail in these Representations. These Representations should be viewed alongside the 'Land off the A363 at White Horse Business Park' Vision Document prepared by Tur1ey (November 2018). These Representations should also be read in combination with those from parties who also have an interest in the H2.2 site, on land to the south of Castlewood's parcel.</p> <p>Proposed H2.2 Allocation The Proposed Allocation site H2.2 comprises 18.96ha and extends from Bradley Road at the north to Westbury Road at the south. There are several land interests relating to Proposed Allocation H2.2. Castlewood's interests relate to a 8.37ha parcel at the northern end of the allocation site, closest to the Trowbridge settlement. This northern parcel of land (hereafter referred to 'The Site') is identified in the accompanying Vision Document, The Site fronts onto A363 where the proposed access is to the residential development is to be secured. Trowbridge is a Principal Settlement, situated within the Trowbridge Community Area and located in the North and West Wiltshire Housing Market Area (HMA). Therefore the scope of these representations is focused on the proposed strategy for the North and West Wiltshire HMA, the Trowbridge Community Area and Trowbridge specifically. Previous Representations on behalf of Castlewood were submitted to the Council in September 2017, in response to the WHSAP Pre-Submission consultation, and in February 2018 to provide the Council with an indicative illustrative layout. The following technical reports were all submitted in February 2018 to demonstrate that there are no significant constraints to delivery of residential development in the site: - Baseline Landscape and Visual Appraisal (referred to hereafter as LVA); LVIA Constraints and Opportunities Plan - Flood Risk and Surface Water Drainage Technical Note; - Highways and Transport Technical Note; - Heritage Technical Note; It is not the intention of these Representations to repeat information previously provided, rather to respond to the key changes proposed by this latest consultation. These representations are supported by the following documents, which provide further</p>				

technical information demonstrating the capability of the Proposed Allocation to deliver at least 300 dwellings, of which around 140 dwellings can be provided on the Site: - Land off the A363 at White Horse Business Park Vision Document, prepared by Turley (November 2018) - Ecology Technical Note (November 2018), prepared by Nicholas Pearson Associates. The Ecology Technical Note discusses the ecological considerations which have informed the masterplan, and demonstrates that there are no ecological considerations which do not preclude development of the Site for approximately 140 dwellings, including the need for buffers to be retained as dark corridors. WHSAP Proposed Changes. With respect to the document EXAM0101 Schedule of Proposed Changes (September 2018), the key changes related to the Proposed Allocation are as follows: - PC59 - Amend the boundary of the allocation as set out in Annex C; And first sentence of paragraph 5.52 to read: "Approximately 25.62 18.96 ha of land off the A363 southwest of the White Horse Business Park is allocated for the development" - PC60 - Amend first sentence of paragraph 5.52 as follows: "land off the A363 south-west of the White Horse Business Park is allocated for the development of approximately 150 225 175 dwellings, as identified on the Policies Map." We do wish to object to PC60. This reduction in dwelling numbers is unjustified, and indeed the allocation quantum should be increased to "at least 300 dwellings", based on the technical evidence and other considerations, such as Trowbridge's identified shortfall. The Representation will set out the justification for this. We note that the Council's evidence base has been updated in respect of: - Wiltshire Housing Site Allocations Plan Sustainability Appraisal Revised September 2018 (EXAM/02A, EXAM/02A.1, EXAM/02B and EXAM/02C); - Update to the Wiltshire Housing Site Allocations Pre-Submission Draft (June 2017) Assessment under the Habitats Regulations Assessment Addendum (September 2018) (EXAM/03); - Wiltshire Housing Site Allocations Plan Community Area Topic Paper Trowbridge (July 2018 Submission version - updated September 2018) (CATP/17a); The Community Area Topic Paper Trowbridge has been amended in relation to site ref. 298 (The Proposed Allocation). The amendments are as follows: Whilst this site is not without constraint (including potential effects on protected bat species and the significance of heritage assets), these can be mitigated through on-site measures. To address these matters as a result in any development scheme on the allocation would not involve the whole SHLAA site option but would nonetheless need to deliver all necessary mitigation. Therefore, the potential dwelling capacity stated in the SHLAA/SHELAA would be reduced to approximately 150 175 dwellings (para 5.24, pg 22). This amendment is not supported by the technical information submitted with our previous representations nor the ecology technical note accompanying this Representation. As set out above, the ecological technical note concludes there are no ecological considerations which preclude development of the Site alone for approximately 140 dwellings, including the need for buffers to be retained as dark corridors in respect of the protected bat species. In relation to heritage assets, there are no listed buildings on the Site itself and the Masterplan identifies that appropriate provision can be made for the setting of listed buildings in the vicinity whilst providing c.140 units on the Site, with the remainder of the c.300 units to be provided on the remaining parts of the Proposed Allocation. It should also be noted that the Community Area Topic Paper has also been amended in relation to the immediately adjacent Elm Grove Farm Proposed Allocation. Ecology (protected bat species) and heritage assets are again raised as a potential constraint, however conversely for this site the amendment concludes that these matters can be mitigated through on-site measures and the site's capacity increased. No clear explanation appears to have been provided for the different approach between the sites. It is noted that some of the documents which our previous representations and technical documents commented on, such as the Wiltshire Housing Site Allocations draft plan - Stage 4a Site Landscape Assessment Part 2 (June 2017) (WHSAP/20), have not been updated for the purposes of this consultation. We do not seek to repeat comments previously made in relation to these documents, and would refer you to our previous Representations. In respect of technical considerations we note that the only amendment to the Council's Sustainability Assessment in respect of Proposed Allocation H2.2 (site ref. 298) is in respect of heritage considerations: The Grade II Listed Kings Farmhouse (and its setting), Willow Grove, monuments and gateway to former Baptist Church and Little Common Farm are situated within the site area, and important heritage farmsteads are situated to the north and south of the site. A detailed heritage assessment (building upon the high-level Heritage Impact Assessment prepared by the Council) would be required to support any subsequent planning application. A Heritage Impact Assessment would be required. Archaeological potential of the site is

medium and therefore archaeological assessment would be required (SA Obj. 6). We can confirm that we have no objections to this amended text. It is acknowledged that heritage will be an important consideration for the Proposed Allocation, albeit of less significance to the Site given the location of the Listed Buildings, outwith the Castlewood land interests. Background to Allocation By way of background, the site was submitted to the SHLAA and was assessed under site reference 298. The site passed stage 4a with a stated capacity of 338 dwellings and was progressed as a 'preferred site', however the stated capacity was reduced to 150 dwellings (WHSAP Trowbridge Community Area Topic Paper July 2018, page 18). The assessment of site options (Appendix G) explains this reduction stating "mitigation measures required to address effects on heritage assets, ecology and landscape would result in a reduction to the developable area of the site and a potential reduction in dwelling capacity." (WHSAP Trowbridge Community Area Topic Paper July 2018, page 97). This resulted in the Pre-Submission Draft WHSAP (September 2017) consultation including the site as an allocation for "approximately 150 dwellings" under site reference H2.2. The pre-submission draft was subject to a period of public consultation and subsequent to this consultation, the Council proposed to increase the capacity of the site. This amendment to proposed allocation H2.2 was originally set out in the Council's Cabinet Papers of 15th May 2018, which refer to a capacity increase from approximately 150 to 300 dwellings (Council's Cabinet Papers of 15th May 2018, pages 294, 365). [It is noted that there are inconsistencies in the Council's Cabinet Papers of 15th May 2018, as there is also reference to an increase to 225 dwellings.] This demonstrates that the Council consider that a capacity of approximately 300 dwellings was appropriate for the H2.2 allocation site. The WHSAP was subsequently deferred from consideration at the 15th May 2018 Cabinet meeting to be heard at the 3rd July 2018 Cabinet instead. It is understood this was to allow further consultation on the proposed changes with Wiltshire Councillors and town and parish councils (Minutes of 3rd July 2018 Cabinet, paragraph 257). For the Cabinet Papers of 3rd July 2018, the Council prepared an Addendum following the deferral of the item from Cabinet of 15 May 2018. This Addendum refers to a smaller capacity increase for allocation H2.2 from approximately 150 to 225 dwellings.. At the 3rd July 2018 Cabinet, Cllr Sturgis proposed further changes to the in response to the housing numbers on the Allocation site, understood to be in response to consultation with Wiltshire Councillors and town and parish councils. The following change was proposed: (c) Amend Proposed Change 39 (site allocation H2.2, land off the A363 at White Horse Business Park, Trowbridge) to reduce the proposed dwelling increase by 50 dwellings This proposed change had the effect of reducing the capacity increase further from approximately 150 to 175 dwellings. The minutes of the 3rd July 2018 Cabinet meeting provide further insight into Member's justification for this change: In justifying the further proposed changes, Cllr Sturgis referred to the addendum, and provided clarification as follows ... the reduction in the increase in housing numbers on site H2.2 would provide for landscape buffer for North Bradley. In response to concerns raised by David Feather that insufficient weight had been given to North Bradley's Neighbourhood Plan, Councillor Sturgis stated that other neighbourhood plans were further 'forward, and could therefore be given greater weight. Councillor Sturgis went on to say that: he hoped that the proposed amendments to the White Horse business park site would go some way to maintaining a gap between North Bradley and Trowbridge; and that Wiltshire Council would continue to work to support the North Bradley neighbourhood plan so that it would be better progressed by the time of the examination in public. The issue of alleged coalescence between the Trowbridge and North Bradley settlements is therefore identified to be one of the key issues from the Council's perspective relating to the Proposed Allocation's capacity. It is noted that the Community Area Topic Paper raises concerns regarding ecological (bat species) and heritage constraints, which would require mitigation in order to be satisfactorily addressed. We dispute the Council's concerns regarding the perceived coalescence of Trowbridge and North Bradley, and the limit on capacity created by the ecological and heritage constraints. For the reasons we will set out below we consider the Council's approach to reducing the overall dwelling capacity on site H2.2 to be unsound. The capacity of proposed allocation H2.2 should be reinstated as approximately 300 dwellings, as per the previous view of Planning Officers. Representations We fervently disagree with the Council's position, that the Proposed Allocation is only capable of accommodating approximately 175 dwellings, in order to maintain a gap between the North Bradley and Trowbridge settlements, and provide appropriate mitigation. Our evidence base (and supported by the representations prepared by Linden Homes in relation to a separate parcel of the Allocation Site) supports a higher capacity. Crucially, the Council's own evidence base supports a higher capacity. For example, the WSHAP

Stage 4a Site Landscape Assessment concludes that the capacity of the Site to accommodate change is described as 'moderate-high', This is discussed further below. We feel that the Proposed Allocation is capable of accommodating at least 300 dwellings, without causing issues of coalescence with the North Bradley settlement. Specifically to these Representations, we feel that the Site (the northern parcel of land defined in the accompanying Vision Document) is capable of accommodating approximately 140 dwellings, again without causing issues of coalescence and provide adequate mitigation. This is now considered in full.

**Background on Relationship to Trowbridge** The Site is in close proximity to the existing settlement boundary of Trowbridge to the north (as defined by the Core Strategy 2015, fig 1), less than 50m to the south of the existing boundary. As part of the WHSAP, the Council are undertaking a settlement boundary review (WHSAP Topic Paper 1 Settlement Boundary Review Methodology, refers). This Topic Paper concludes that the White Horse Business Park to the east of the site meets the methodology for being included within the settlement. [MAP INSERT] Accordingly the Draft WHSAP proposes to include White Horse Business Park within the settlement boundary (fig 2). As a result, in addition to being in close proximity to the existing settlement boundary of Trowbridge to the north, the Site also abuts the proposed settlement boundary of Trowbridge - in its extended form - to the east (as defined by the Draft WHSAP, fig 2). The Site therefore relates well to the Trowbridge settlement and in combination with proposed housing allocation 'Elm Grove Farm', would enhance connectivity between the existing Trowbridge settlement and the established White Horse Business Park. Indeed delivery of residential development on the Allocation Site would bridge the separation between the business park and the wider settlement. The potential of the Allocation Site and the adjacent Elm Grove Farm allocation to be successfully integrated into existing and planned developments in the area, while maintaining a defensible buffer to North Bradley is recognised in the Trowbridge Community Area Topic Paper. The relationship between White Horse Business Park, the Proposed Allocation (ref 298) to the SW and proposed allocation 'Elm Grove Farm' (ref 613/248) to the SE is demonstrated in fig 2. The Site is ideally placed to provide improvements to walking and cycling routes through to the town, and the proposed masterplan shows how these improved linkages can be delivered as part of a residential development. The Proposed Allocation would therefore provide a cohesive and logical extension to Trowbridge. It should be noted that the Site would be directly connected to the settlement to the north and east, and would very much look to the north and Trowbridge in terms of connectivity and access to facilities.

**[MAP INSERT] Landscape Evidence and Design Solution** The previous Representations submitted to the Council on behalf of Castlewood in February 2018 provide the Council with an indicative illustrative layout and a Landscape and Visual Appraisal which concludes that there are no significant constraints to the delivery of residential units on the site. The LVA concludes that visually, the Site is relatively well contained on account of the existing hedgerow structure, generally flat topography, the surrounding mature tree belts and surrounding development. The visibility of the site is limited to occasional short distance views from immediate visual receptors. In the wider surrounding landscape, the cumulative effect of field boundary hedgerows and the flat low lying topography provide visual containment. Although, the site is likely to be glimpsed from raised land to the southeast, the intervening distance will prevent its features being discernible. The Site therefore has low visual prominence. There are strong landscape buffers on the edge of North Bradley and the development provides opportunities to reinforce existing landscape features. This will lead to a softening of views towards Trowbridge from North Bradley, especially as the existing settlement edge of Trowbridge is defined by commercial development and the proposed development will provide a softer, more permanent edge. The LVA acknowledges that whilst there would be some physical reduction in the separation between Trowbridge and North Bradley as a result of the Proposed Allocation, the visual effects could be minimised and mitigated. The proposed Masterplan provided in the accompanying Vision Document incorporates such mitigation measures, including:

- The LVA acknowledges that a visual break is experienced between the settlements of Trowbridge and North Bradley when travelling along Woodmarsh. Accordingly the masterplan has not identified development in those areas most significant to the perceived visual separation between North Bradley and Trowbridge, as informed by the LVA. This preserves the setting of North Bradley village and its integrity.
- The northern development parcel is set back considerably from Woodmarsh to reinforce the visual separation from North Bradley and it is proposed that the development in this area will generally be of lower density so as to set the proposed development within a landscape context and that the built form is more visually connected to the south of Trowbridge and visually

buffer the scheme from North Bradley. - The proposed masterplan proposes to implement significant new planting along the south-western boundary, in addition to significant existing planting to reinforce the visual separation between the proposed development and North Bradley. The LVA confirms that the development of the site could be achieved without resulting in significant landscape and/or visual impacts (in relation to the receptors identified in the LVA including the A363, Woodmarsh and residential properties on the eastern edge of North Bradley). In addition, the findings of the Council's own evidence base are significant. The WHSAP Stage 4a Site Landscape Assessment (June 2017) concludes that the overall magnitude of effect on views if the site were to be developed is identified as 'low adverse'. The capacity of Site 298 to accommodate change is described as 'moderate-high'. It is considered, therefore, that the site should be allocated for a much higher number of dwellings given the sustainable location and absence of any constraints which cannot be mitigated against. The overall effect will be to proportionately increase the quantum of market and affordable dwellings, which can be achieved through the Proposed Allocation, whilst simultaneously protecting the integrity of North Bradley as a village. Indeed, the opportunity to achieve a comprehensive design will provide greater opportunities for more meaningful green infrastructure provision, landscaping and open space. In summary, we contend that delivery of approximately 300 dwellings on the Proposed Allocation would not lead to unacceptable coalescence between Trowbridge and North Bradley. Residential development on the site would link, both visually and physically, primarily with Trowbridge and the adjacent White Horse Business Park, which is proposed in the WHSAP to form part of the Trowbridge settlement boundary. As demonstrated in the accompanying Vision Document, development on the site would be sensitively designed with the incorporation of new or strengthened landscape buffers and careful siting of built form to protect visual separation between the two settlements. Utilising the approach set out in the Vision Document, the Site could accommodate c. 140 units, as part of a wider 300 unit allocation.

**Housing Need** As a Principal Settlement, Trowbridge is a primary focus for development. Moreover, the role of the town as a significant employment and strategic service centre will be expected to be strengthened over the Plan period up to 2026 and beyond. There are, however, severe constraints to the growth of Trowbridge. In particular, with Green Belt and Flood Zone designations to the north and west of Trowbridge (Fig 3), opportunities to expand Trowbridge in order to accommodate the identified housing need are limited. In proposing the allocation of this site, the Council identified that development of the site for housing would contribute to the area strategy for the town by boosting the supply of homes to help meet indicative requirements" [MAP INSERT] In the context of Trowbridge being a focus for growth and taking a large proportion of housing need, we wish to comment on PC25, which is a factual update to reflect the latest published Housing Land Supply Statement (March 2018) and to reflect PC55, PC60, PC64 and PC70 that propose higher densities on site allocations to make best use of land. PC25 relates to the following amended paragraph: Unlike Chippenham however, allocations made by the Plan will not be sufficient to ensure that housing provision meets indicative requirements. Six new site allocations provide land for approximately 800 1,050 dwellings and have the potential to increase their capacity to make the best use of land. Nevertheless, housing development at Trowbridge will fall short of the WCS indicative level of 6,810 dwellings by around 1,220 1,297."

In addition, related to the Trowbridge Community Area, the Council's Housing Land Supply Statement Addendum July 2018 Submission Version (ref: TOP/03C) indicates there is still an indicative residual requirement for the remainder of the Trowbridge Community Area of at least 2,230 dwellings during the remainder of the Plan period up to 2026. As things stand therefore the Council are not National planning policy is clear that the Council must look at its residential allocations beyond five years to ensure there is a consistent pipeline for bringing forward new residential development. The Council, despite the amendments, acknowledge that housing development at Trowbridge will fall short of the requirements. By failing to allocating sufficient quantum of new housing in the WHSAP, the Council is currently failing to fully meet its identified housing needs. The Plan has not therefore been positively prepared. To ensure a sound Plan, which is consistent with national planning policy, it is essential that either: a) additional site are identified and allocated; or b) greater quantum of housing is allocated on existing/ proposed allocations. In relation to option a), as set out above Trowbridge lacks genuine, alternative options to extend the settlement due to constraints, including Green Belt designations and Flood Zone primarily to the north and west. Consideration should therefore be given to intensify allocations proposed by the WHSAP, where technical constraints do not preclude this. As has been demonstrated by these Representations,

	<p>and in those previously submitted, there are no technical constraints which preclude a greater quantum of development than currently proposed in the WHSAP. Indeed, the Council have previously identified the potential of this site to accommodate c 300 dwellings, and the proposed reduction to 175 to accommodate ecology and heritage mitigation measures is unjustified. The technical work undertaken, and submitted to the Council during the WHSAP process demonstrate that the Proposed Allocation is capable of accommodating at least 300 dwellings with the incorporation of necessary mitigation measures. The sustainability appraisal undertaken by the Council identify the Proposed Allocation as a 'more sustainable' site. As such, priority should be maximising the housing numbers on this site in the first instance to address the outstanding house requirement, rather than looking towards 'less sustainable sites. Conclusion In summary, it is contended that proposed modification PC60 (and its consequential changes) to the WHSAP render the document unsound and contrary to paragraph 182 of the NPPF (2012). The proposed modification is inconsistent with the technical information provided to the Council, and the Council's own evidence base documents, which recognises the capability of the Proposed Allocation to accommodate a greater quantum of residential units whilst still maintaining appropriate separation between Trowbridge and North Bradley and providing adequate mitigation. The reduction in dwelling numbers for Proposed Allocation H2.2 does not represent positive preparation of the WHSAP. There is an identified housing need in the Trowbridge Community Area and the WHSAP as currently proposed does not meet the full requirement. It is recognised that mitigation will be required in relation to heritage and ecology matters, however the technical work undertaken has identified that appropriate mitigation can be accommodated with a greater quantum of dwellings than 175. Indeed, the accompanying Vision Document relating specially to our client's interests on the north parcel, identifies around 140 dwellings can be appropriately accommodated on that part of the allocation alone. In order to remedy this and make the WHSAP sound, we request that the capacity of the Proposed Allocation H2.2 is reinstated as "at least 300 dwellings", and consequential changes subsequently amended. Specifically to these Representations, we request that recognition is given to the capability of the Site to accommodating approximately 140 dwellings as part of the H2.2 allocation. In order to effectively put this case before the Inspector and address any questions they may have and to also rebuff any argument the Council may make for proceeding with proposed modification PC60 and its consequential changes we consider it necessary to attend the Examination Hearings in a speaking capacity. For reference, we append a full set of additional details as follows. These reports and drawings concern the proposed development of the Site and provide information regarding constraints: Vision Document Ecology Technical Note Flood Risk &amp; Drainage Technical Note Heritage Technical Note Highways Technical Note Landscape and Visual Appraisal</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>Introduction On behalf of our client, Castlewood Properties Ventures Ltd. (hereafter referred to 'Castlewood'), we write to provide representations to the "Focussed consultation on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan" (WHSAP). We are responding to this consultation in respect of our client's land interest at Land off the A363 at White Horse Business Park Trowbridge, which is proposed allocation H2.2 in the Wiltshire Housing Site Allocations Plan (WHSAP). Castlewood are local developers who can provide greater certainty of delivery, and have a strong track record in delivering development in Wiltshire. We comment specifically in respect of the proposed amendments relating to proposed allocation H2.2, namely PC59 and PC60 and their consequential changes (PC13, PC15, PC17, PC21, PC22, PC25, PC51, PC56). In summary, these proposed amendments seek to reduce the capacity of proposed allocation H2.2 to 'approximately 175 dwellings'. This follows a decision by the Council's Cabinet, relating to perceived coalescence between the proposed allocation site and the village of North Bradley. We consider this in detail in these Representations. These Representations should be viewed alongside the 'Land off the A363 at White Horse Business Park' Vision Document prepared by Tur1ey (November 2018). These Representations should also be read in combination with those from parties who also have an interest in the H2.2 site, on land to the south of Castlewood's parcel.</p> <p>Proposed H2.2 Allocation The Proposed Allocation site H2.2 comprises 18.96ha and extends from Bradley Road at the north to Westbury Road at the south. There are several land interests relating to Proposed Allocation H2.2. Castlewood's interests relate to a 8.37ha parcel at the northern end of the allocation site, closest to the Trowbridge settlement. This northern parcel of land (hereafter referred to 'The Site') is identified in the accompanying Vision Document, The Site fronts onto A363 where the proposed access is to the residential development is to be secured. Trowbridge is a Principal Settlement, situated within the Trowbridge Community Area and located in the North and West Wiltshire Housing Market Area (HMA). Therefore the scope of these representations is focused on the proposed strategy for the North and West Wiltshire HMA, the Trowbridge Community Area and Trowbridge specifically. Previous Representations on behalf of Castlewood were submitted to the Council in September 2017, in response to the WHSAP Pre-Submission consultation, and in February 2018 to provide the Council with an indicative illustrative layout. The following technical reports were all submitted in February 2018 to demonstrate that there are no significant constraints to delivery of residential development in the site: - Baseline Landscape and Visual Appraisal (referred to hereafter as LVA); LVIA Constraints and Opportunities Plan - Flood Risk and Surface Water Drainage Technical Note; - Highways and Transport Technical Note; - Heritage Technical Note; It is not the intention of these Representations to repeat information previously provided, rather to respond to the key changes proposed by this latest consultation. These representations are supported by the following documents, which provide further</p>				

technical information demonstrating the capability of the Proposed Allocation to deliver at least 300 dwellings, of which around 140 dwellings can be provided on the Site: - Land off the A363 at White Horse Business Park Vision Document, prepared by Turley (November 2018) - Ecology Technical Note (November 2018), prepared by Nicholas Pearson Associates. The Ecology Technical Note discusses the ecological considerations which have informed the masterplan, and demonstrates that there are no ecological considerations which do not preclude development of the Site for approximately 140 dwellings, including the need for buffers to be retained as dark corridors. WHSAP Proposed Changes. With respect to the document EXAM0101 Schedule of Proposed Changes (September 2018), the key changes related to the Proposed Allocation are as follows: - PC59 - Amend the boundary of the allocation as set out in Annex C; And first sentence of paragraph 5.52 to read: "Approximately 25.62 18.96 ha of land off the A363 southwest of the White Horse Business Park is allocated for the development" - PC60 - Amend first sentence of paragraph 5.52 as follows: "land off the A363 south-west of the White Horse Business Park is allocated for the development of approximately 150 225 175 dwellings, as identified on the Policies Map." We do wish to object to PC60. This reduction in dwelling numbers is unjustified, and indeed the allocation quantum should be increased to "at least 300 dwellings", based on the technical evidence and other considerations, such as Trowbridge's identified shortfall. The Representation will set out the justification for this. We note that the Council's evidence base has been updated in respect of: - Wiltshire Housing Site Allocations Plan Sustainability Appraisal Revised September 2018 (EXAM/02A, EXAM/02A.1, EXAM/02B and EXAM/02C); - Update to the Wiltshire Housing Site Allocations Pre-Submission Draft (June 2017) Assessment under the Habitats Regulations Assessment Addendum (September 2018) (EXAM/03); - Wiltshire Housing Site Allocations Plan Community Area Topic Paper Trowbridge (July 2018 Submission version - updated September 2018) (CATP/17a); The Community Area Topic Paper Trowbridge has been amended in relation to site ref. 298 (The Proposed Allocation). The amendments are as follows: Whilst this site is not without constraint (including potential effects on protected bat species and the significance of heritage assets), these can be mitigated through on-site measures. To address these matters as a result in any development scheme on the allocation would not involve the whole SHLAA site option but would nonetheless need to deliver all necessary mitigation. Therefore, the potential dwelling capacity stated in the SHLAA/SHELAA would be reduced to approximately 150 175 dwellings (para 5.24, pg 22). This amendment is not supported by the technical information submitted with our previous representations nor the ecology technical note accompanying this Representation. As set out above, the ecological technical note concludes there are no ecological considerations which preclude development of the Site alone for approximately 140 dwellings, including the need for buffers to be retained as dark corridors in respect of the protected bat species. In relation to heritage assets, there are no listed buildings on the Site itself and the Masterplan identifies that appropriate provision can be made for the setting of listed buildings in the vicinity whilst providing c.140 units on the Site, with the remainder of the c.300 units to be provided on the remaining parts of the Proposed Allocation. It should also be noted that the Community Area Topic Paper has also been amended in relation to the immediately adjacent Elm Grove Farm Proposed Allocation. Ecology (protected bat species) and heritage assets are again raised as a potential constraint, however conversely for this site the amendment concludes that these matters can be mitigated through on-site measures and the site's capacity increased. No clear explanation appears to have been provided for the different approach between the sites. It is noted that some of the documents which our previous representations and technical documents commented on, such as the Wiltshire Housing Site Allocations draft plan - Stage 4a Site Landscape Assessment Part 2 (June 2017) (WHSAP/20), have not been updated for the purposes of this consultation. We do not seek to repeat comments previously made in relation to these documents, and would refer you to our previous Representations. In respect of technical considerations we note that the only amendment to the Council's Sustainability Assessment in respect of Proposed Allocation H2.2 (site ref. 298) is in respect of heritage considerations: The Grade II Listed Kings Farmhouse (and its setting), Willow Grove, monuments and gateway to former Baptist Church and Little Common Farm are situated within the site area, and important heritage farmsteads are situated to the north and south of the site. A detailed heritage assessment (building upon the high-level Heritage Impact Assessment prepared by the Council) would be required to support any subsequent planning application. A Heritage Impact Assessment would be required. Archaeological potential of the site is

medium and therefore archaeological assessment would be required (SA Obj. 6). We can confirm that we have no objections to this amended text. It is acknowledged that heritage will be an important consideration for the Proposed Allocation, albeit of less significance to the Site given the location of the Listed Buildings, outwith the Castlewood land interests. Background to Allocation By way of background, the site was submitted to the SHLAA and was assessed under site reference 298. The site passed stage 4a with a stated capacity of 338 dwellings and was progressed as a 'preferred site', however the stated capacity was reduced to 150 dwellings (WHSAP Trowbridge Community Area Topic Paper July 2018, page 18). The assessment of site options (Appendix G) explains this reduction stating "mitigation measures required to address effects on heritage assets, ecology and landscape would result in a reduction to the developable area of the site and a potential reduction in dwelling capacity." (WHSAP Trowbridge Community Area Topic Paper July 2018, page 97). This resulted in the Pre-Submission Draft WHSAP (September 2017) consultation including the site as an allocation for "approximately 150 dwellings" under site reference H2.2. The pre-submission draft was subject to a period of public consultation and subsequent to this consultation, the Council proposed to increase the capacity of the site. This amendment to proposed allocation H2.2 was originally set out in the Council's Cabinet Papers of 15th May 2018, which refer to a capacity increase from approximately 150 to 300 dwellings (Council's Cabinet Papers of 15th May 2018, pages 294, 365). [It is noted that there are inconsistencies in the Council's Cabinet Papers of 15th May 2018, as there is also reference to an increase to 225 dwellings.] This demonstrates that the Council consider that a capacity of approximately 300 dwellings was appropriate for the H2.2 allocation site. The WHSAP was subsequently deferred from consideration at the 15th May 2018 Cabinet meeting to be heard at the 3rd July 2018 Cabinet instead. It is understood this was to allow further consultation on the proposed changes with Wiltshire Councillors and town and parish councils (Minutes of 3rd July 2018 Cabinet, paragraph 257). For the Cabinet Papers of 3rd July 2018, the Council prepared an Addendum following the deferral of the item from Cabinet of 15 May 2018. This Addendum refers to a smaller capacity increase for allocation H2.2 from approximately 150 to 225 dwellings.. At the 3rd July 2018 Cabinet, Cllr Sturgis proposed further changes to the in response to the housing numbers on the Allocation site, understood to be in response to consultation with Wiltshire Councillors and town and parish councils. The following change was proposed: (c) Amend Proposed Change 39 (site allocation H2.2, land off the A363 at White Horse Business Park, Trowbridge) to reduce the proposed dwelling increase by 50 dwellings This proposed change had the effect of reducing the capacity increase further from approximately 150 to 175 dwellings. The minutes of the 3rd July 2018 Cabinet meeting provide further insight into Member's justification for this change: In justifying the further proposed changes, Cllr Sturgis referred to the addendum, and provided clarification as follows ... the reduction in the increase in housing numbers on site H2.2 would provide for landscape buffer for North Bradley. In response to concerns raised by David Feather that insufficient weight had been given to North Bradley's Neighbourhood Plan, Councillor Sturgis stated that other neighbourhood plans were further 'forward, and could therefore be given greater weight. Councillor Sturgis went on to say that: he hoped that the proposed amendments to the White Horse business park site would go some way to maintaining a gap between North Bradley and Trowbridge; and that Wiltshire Council would continue to work to support the North Bradley neighbourhood plan so that it would be better progressed by the time of the examination in public. The issue of alleged coalescence between the Trowbridge and North Bradley settlements is therefore identified to be one of the key issues from the Council's perspective relating to the Proposed Allocation's capacity. It is noted that the Community Area Topic Paper raises concerns regarding ecological (bat species) and heritage constraints, which would require mitigation in order to be satisfactorily addressed. We dispute the Council's concerns regarding the perceived coalescence of Trowbridge and North Bradley, and the limit on capacity created by the ecological and heritage constraints. For the reasons we will set out below we consider the Council's approach to reducing the overall dwelling capacity on site H2.2 to be unsound. The capacity of proposed allocation H2.2 should be reinstated as approximately 300 dwellings, as per the previous view of Planning Officers. Representations We fervently disagree with the Council's position, that the Proposed Allocation is only capable of accommodating approximately 175 dwellings, in order to maintain a gap between the North Bradley and Trowbridge settlements, and provide appropriate mitigation. Our evidence base (and supported by the representations prepared by Linden Homes in relation to a separate parcel of the Allocation Site) supports a higher capacity. Crucially, the Council's own evidence base supports a higher capacity. For example, the WSHAP

Stage 4a Site Landscape Assessment concludes that the capacity of the Site to accommodate change is described as 'moderate-high', This is discussed further below. We feel that the Proposed Allocation is capable of accommodating at least 300 dwellings, without causing issues of coalescence with the North Bradley settlement. Specifically to these Representations, we feel that the Site (the northern parcel of land defined in the accompanying Vision Document) is capable of accommodating approximately 140 dwellings, again without causing issues of coalescence and provide adequate mitigation. This is now considered in full.

**Background on Relationship to Trowbridge** The Site is in close proximity to the existing settlement boundary of Trowbridge to the north (as defined by the Core Strategy 2015, fig 1), less than 50m to the south of the existing boundary. As part of the WHSAP, the Council are undertaking a settlement boundary review (WHSAP Topic Paper 1 Settlement Boundary Review Methodology, refers). This Topic Paper concludes that the White Horse Business Park to the east of the site meets the methodology for being included within the settlement. [MAP INSERT] Accordingly the Draft WHSAP proposes to include White Horse Business Park within the settlement boundary (fig 2). As a result, in addition to being in close proximity to the existing settlement boundary of Trowbridge to the north, the Site also abuts the proposed settlement boundary of Trowbridge - in its extended form - to the east (as defined by the Draft WHSAP, fig 2). The Site therefore relates well to the Trowbridge settlement and in combination with proposed housing allocation 'Elm Grove Farm', would enhance connectivity between the existing Trowbridge settlement and the established White Horse Business Park. Indeed delivery of residential development on the Allocation Site would bridge the separation between the business park and the wider settlement. The potential of the Allocation Site and the adjacent Elm Grove Farm allocation to be successfully integrated into existing and planned developments in the area, while maintaining a defensible buffer to North Bradley is recognised in the Trowbridge Community Area Topic Paper. The relationship between White Horse Business Park, the Proposed Allocation (ref 298) to the SW and proposed allocation 'Elm Grove Farm' (ref 613/248) to the SE is demonstrated in fig 2. The Site is ideally placed to provide improvements to walking and cycling routes through to the town, and the proposed masterplan shows how these improved linkages can be delivered as part of a residential development. The Proposed Allocation would therefore provide a cohesive and logical extension to Trowbridge. It should be noted that the Site would be directly connected to the settlement to the north and east, and would very much look to the north and Trowbridge in terms of connectivity and access to facilities.

**[MAP INSERT] Landscape Evidence and Design Solution** The previous Representations submitted to the Council on behalf of Castlewood in February 2018 provide the Council with an indicative illustrative layout and a Landscape and Visual Appraisal which concludes that there are no significant constraints to the delivery of residential units on the site. The LVA concludes that visually, the Site is relatively well contained on account of the existing hedgerow structure, generally flat topography, the surrounding mature tree belts and surrounding development. The visibility of the site is limited to occasional short distance views from immediate visual receptors. In the wider surrounding landscape, the cumulative effect of field boundary hedgerows and the flat low lying topography provide visual containment. Although, the site is likely to be glimpsed from raised land to the southeast, the intervening distance will prevent its features being discernible. The Site therefore has low visual prominence. There are strong landscape buffers on the edge of North Bradley and the development provides opportunities to reinforce existing landscape features. This will lead to a softening of views towards Trowbridge from North Bradley, especially as the existing settlement edge of Trowbridge is defined by commercial development and the proposed development will provide a softer, more permanent edge. The LVA acknowledges that whilst there would be some physical reduction in the separation between Trowbridge and North Bradley as a result of the Proposed Allocation, the visual effects could be minimised and mitigated. The proposed Masterplan provided in the accompanying Vision Document incorporates such mitigation measures, including:

- The LVA acknowledges that a visual break is experienced between the settlements of Trowbridge and North Bradley when travelling along Woodmarsh. Accordingly the masterplan has not identified development in those areas most significant to the perceived visual separation between North Bradley and Trowbridge, as informed by the LVA. This preserves the setting of North Bradley village and its integrity.
- The northern development parcel is set back considerably from Woodmarsh to reinforce the visual separation from North Bradley and it is proposed that the development in this area will generally be of lower density so as to set the proposed development within a landscape context and that the built form is more visually connected to the south of Trowbridge and visually

buffer the scheme from North Bradley. - The proposed masterplan proposes to implement significant new planting along the south-western boundary, in addition to significant existing planting to reinforce the visual separation between the proposed development and North Bradley. The LVA confirms that the development of the site could be achieved without resulting in significant landscape and/or visual impacts (in relation to the receptors identified in the LVA including the A363, Woodmarsh and residential properties on the eastern edge of North Bradley). In addition, the findings of the Council's own evidence base are significant. The WHSAP Stage 4a Site Landscape Assessment (June 2017) concludes that the overall magnitude of effect on views if the site were to be developed is identified as 'low adverse'. The capacity of Site 298 to accommodate change is described as 'moderate-high'. It is considered, therefore, that the site should be allocated for a much higher number of dwellings given the sustainable location and absence of any constraints which cannot be mitigated against. The overall effect will be to proportionately increase the quantum of market and affordable dwellings, which can be achieved through the Proposed Allocation, whilst simultaneously protecting the integrity of North Bradley as a village. Indeed, the opportunity to achieve a comprehensive design will provide greater opportunities for more meaningful green infrastructure provision, landscaping and open space. In summary, we contend that delivery of approximately 300 dwellings on the Proposed Allocation would not lead to unacceptable coalescence between Trowbridge and North Bradley. Residential development on the site would link, both visually and physically, primarily with Trowbridge and the adjacent White Horse Business Park, which is proposed in the WHSAP to form part of the Trowbridge settlement boundary. As demonstrated in the accompanying Vision Document, development on the site would be sensitively designed with the incorporation of new or strengthened landscape buffers and careful siting of built form to protect visual separation between the two settlements. Utilising the approach set out in the Vision Document, the Site could accommodate c. 140 units, as part of a wider 300 unit allocation.

**Housing Need** As a Principal Settlement, Trowbridge is a primary focus for development. Moreover, the role of the town as a significant employment and strategic service centre will be expected to be strengthened over the Plan period up to 2026 and beyond. There are, however, severe constraints to the growth of Trowbridge. In particular, with Green Belt and Flood Zone designations to the north and west of Trowbridge (Fig 3), opportunities to expand Trowbridge in order to accommodate the identified housing need are limited. In proposing the allocation of this site, the Council identified that development of the site for housing would contribute to the area strategy for the town by boosting the supply of homes to help meet indicative requirements" [MAP INSERT] In the context of Trowbridge being a focus for growth and taking a large proportion of housing need, we wish to comment on PC25, which is a factual update to reflect the latest published Housing Land Supply Statement (March 2018) and to reflect PC55, PC60, PC64 and PC70 that propose higher densities on site allocations to make best use of land. PC25 relates to the following amended paragraph: Unlike Chippenham however, allocations made by the Plan will not be sufficient to ensure that housing provision meets indicative requirements. Six new site allocations provide land for approximately 800 1,050 dwellings and have the potential to increase their capacity to make the best use of land. Nevertheless, housing development at Trowbridge will fall short of the WCS indicative level of 6,810 dwellings by around 1,220 1,297."

In addition, related to the Trowbridge Community Area, the Council's Housing Land Supply Statement Addendum July 2018 Submission Version (ref: TOP/03C) indicates there is still an indicative residual requirement for the remainder of the Trowbridge Community Area of at least 2,230 dwellings during the remainder of the Plan period up to 2026. As things stand therefore the Council are not National planning policy is clear that the Council must look at its residential allocations beyond five years to ensure there is a consistent pipeline for bringing forward new residential development. The Council, despite the amendments, acknowledge that housing development at Trowbridge will fall short of the requirements. By failing to allocating sufficient quantum of new housing in the WHSAP, the Council is currently failing to fully meet its identified housing needs. The Plan has not therefore been positively prepared. To ensure a sound Plan, which is consistent with national planning policy, it is essential that either: a) additional site are identified and allocated; or b) greater quantum of housing is allocated on existing/ proposed allocations. In relation to option a), as set out above Trowbridge lacks genuine, alternative options to extend the settlement due to constraints, including Green Belt designations and Flood Zone primarily to the north and west. Consideration should therefore be given to intensify allocations proposed by the WHSAP, where technical constraints do not preclude this. As has been demonstrated by these Representations,

	<p>and in those previously submitted, there are no technical constraints which preclude a greater quantum of development than currently proposed in the WHSAP. Indeed, the Council have previously identified the potential of this site to accommodate c 300 dwellings, and the proposed reduction to 175 to accommodate ecology and heritage mitigation measures is unjustified. The technical work undertaken, and submitted to the Council during the WHSAP process demonstrate that the Proposed Allocation is capable of accommodating at least 300 dwellings with the incorporation of necessary mitigation measures. The sustainability appraisal undertaken by the Council identify the Proposed Allocation as a 'more sustainable' site. As such, priority should be maximising the housing numbers on this site in the first instance to address the outstanding house requirement, rather than looking towards 'less sustainable sites. Conclusion In summary, it is contended that proposed modification PC60 (and its consequential changes) to the WHSAP render the document unsound and contrary to paragraph 182 of the NPPF (2012). The proposed modification is inconsistent with the technical information provided to the Council, and the Council's own evidence base documents, which recognises the capability of the Proposed Allocation to accommodate a greater quantum of residential units whilst still maintaining appropriate separation between Trowbridge and North Bradley and providing adequate mitigation. The reduction in dwelling numbers for Proposed Allocation H2.2 does not represent positive preparation of the WHSAP. There is an identified housing need in the Trowbridge Community Area and the WHSAP as currently proposed does not meet the full requirement. It is recognised that mitigation will be required in relation to heritage and ecology matters, however the technical work undertaken has identified that appropriate mitigation can be accommodated with a greater quantum of dwellings than 175. Indeed, the accompanying Vision Document relating specially to our client's interests on the north parcel, identifies around 140 dwellings can be appropriately accommodated on that part of the allocation alone. In order to remedy this and make the WHSAP sound, we request that the capacity of the Proposed Allocation H2.2 is reinstated as "at least 300 dwellings", and consequential changes subsequently amended. Specifically to these Representations, we request that recognition is given to the capability of the Site to accommodating approximately 140 dwellings as part of the H2.2 allocation. In order to effectively put this case before the Inspector and address any questions they may have and to also rebuff any argument the Council may make for proceeding with proposed modification PC60 and its consequential changes we consider it necessary to attend the Examination Hearings in a speaking capacity. For reference, we append a full set of additional details as follows. These reports and drawings concern the proposed development of the Site and provide information regarding constraints: Vision Document Ecology Technical Note Flood Risk &amp; Drainage Technical Note Heritage Technical Note Highways Technical Note Landscape and Visual Appraisal</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>Introduction On behalf of our client, Castlewood Properties Ventures Ltd. (hereafter referred to 'Castlewood'), we write to provide representations to the "Focussed consultation on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan" (WHSAP). We are responding to this consultation in respect of our client's land interest at Land off the A363 at White Horse Business Park Trowbridge, which is proposed allocation H2.2 in the Wiltshire Housing Site Allocations Plan (WHSAP). Castlewood are local developers who can provide greater certainty of delivery, and have a strong track record in delivering development in Wiltshire. We comment specifically in respect of the proposed amendments relating to proposed allocation H2.2, namely PC59 and PC60 and their consequential changes (PC13, PC15, PC17, PC21, PC22, PC25, PC51, PC56). In summary, these proposed amendments seek to reduce the capacity of proposed allocation H2.2 to 'approximately 175 dwellings'. This follows a decision by the Council's Cabinet, relating to perceived coalescence between the proposed allocation site and the village of North Bradley. We consider this in detail in these Representations. These Representations should be viewed alongside the 'Land off the A363 at White Horse Business Park' Vision Document prepared by Tur1ey (November 2018). These Representations should also be read in combination with those from parties who also have an interest in the H2.2 site, on land to the south of Castlewood's parcel.</p> <p>Proposed H2.2 Allocation The Proposed Allocation site H2.2 comprises 18.96ha and extends from Bradley Road at the north to Westbury Road at the south. There are several land interests relating to Proposed Allocation H2.2. Castlewood's interests relate to a 8.37ha parcel at the northern end of the allocation site, closest to the Trowbridge settlement. This northern parcel of land (hereafter referred to 'The Site') is identified in the accompanying Vision Document, The Site fronts onto A363 where the proposed access is to the residential development is to be secured. Trowbridge is a Principal Settlement, situated within the Trowbridge Community Area and located in the North and West Wiltshire Housing Market Area (HMA). Therefore the scope of these representations is focused on the proposed strategy for the North and West Wiltshire HMA, the Trowbridge Community Area and Trowbridge specifically. Previous Representations on behalf of Castlewood were submitted to the Council in September 2017, in response to the WHSAP Pre-Submission consultation, and in February 2018 to provide the Council with an indicative illustrative layout. The following technical reports were all submitted in February 2018 to demonstrate that there are no significant constraints to delivery of residential development in the site: - Baseline Landscape and Visual Appraisal (referred to hereafter as LVA); LVIA Constraints and Opportunities Plan - Flood Risk and Surface Water Drainage Technical Note; - Highways and Transport Technical Note; - Heritage Technical Note; It is not the intention of these Representations to repeat information previously provided, rather to respond to the key changes proposed by this latest consultation. These representations are supported by the following documents, which provide further</p>				

technical information demonstrating the capability of the Proposed Allocation to deliver at least 300 dwellings, of which around 140 dwellings can be provided on the Site: - Land off the A363 at White Horse Business Park Vision Document, prepared by Turley (November 2018) - Ecology Technical Note (November 2018), prepared by Nicholas Pearson Associates. The Ecology Technical Note discusses the ecological considerations which have informed the masterplan, and demonstrates that there are no ecological considerations which do not preclude development of the Site for approximately 140 dwellings, including the need for buffers to be retained as dark corridors. WHSAP Proposed Changes. With respect to the document EXAM0101 Schedule of Proposed Changes (September 2018), the key changes related to the Proposed Allocation are as follows: - PC59 - Amend the boundary of the allocation as set out in Annex C; And first sentence of paragraph 5.52 to read: "Approximately 25.62 18.96 ha of land off the A363 southwest of the White Horse Business Park is allocated for the development" - PC60 - Amend first sentence of paragraph 5.52 as follows: "land off the A363 south-west of the White Horse Business Park is allocated for the development of approximately 150 225 175 dwellings, as identified on the Policies Map." We do wish to object to PC60. This reduction in dwelling numbers is unjustified, and indeed the allocation quantum should be increased to "at least 300 dwellings", based on the technical evidence and other considerations, such as Trowbridge's identified shortfall. The Representation will set out the justification for this. We note that the Council's evidence base has been updated in respect of: - Wiltshire Housing Site Allocations Plan Sustainability Appraisal Revised September 2018 (EXAM/02A, EXAM/02A.1, EXAM/02B and EXAM/02C); - Update to the Wiltshire Housing Site Allocations Pre-Submission Draft (June 2017) Assessment under the Habitats Regulations Assessment Addendum (September 2018) (EXAM/03); - Wiltshire Housing Site Allocations Plan Community Area Topic Paper Trowbridge (July 2018 Submission version - updated September 2018) (CATP/17a); The Community Area Topic Paper Trowbridge has been amended in relation to site ref. 298 (The Proposed Allocation). The amendments are as follows: Whilst this site is not without constraint (including potential effects on protected bat species and the significance of heritage assets), these can be mitigated through on-site measures. To address these matters as a result in any development scheme on the allocation would not involve the whole SHLAA site option but would nonetheless need to deliver all necessary mitigation. Therefore, the potential dwelling capacity stated in the SHLAA/SHELAA would be reduced to approximately 150 175 dwellings (para 5.24, pg 22). This amendment is not supported by the technical information submitted with our previous representations nor the ecology technical note accompanying this Representation. As set out above, the ecological technical note concludes there are no ecological considerations which preclude development of the Site alone for approximately 140 dwellings, including the need for buffers to be retained as dark corridors in respect of the protected bat species. In relation to heritage assets, there are no listed buildings on the Site itself and the Masterplan identifies that appropriate provision can be made for the setting of listed buildings in the vicinity whilst providing c.140 units on the Site, with the remainder of the c.300 units to be provided on the remaining parts of the Proposed Allocation. It should also be noted that the Community Area Topic Paper has also been amended in relation to the immediately adjacent Elm Grove Farm Proposed Allocation. Ecology (protected bat species) and heritage assets are again raised as a potential constraint, however conversely for this site the amendment concludes that these matters can be mitigated through on-site measures and the site's capacity increased. No clear explanation appears to have been provided for the different approach between the sites. It is noted that some of the documents which our previous representations and technical documents commented on, such as the Wiltshire Housing Site Allocations draft plan - Stage 4a Site Landscape Assessment Part 2 (June 2017) (WHSAP/20), have not been updated for the purposes of this consultation. We do not seek to repeat comments previously made in relation to these documents, and would refer you to our previous Representations. In respect of technical considerations we note that the only amendment to the Council's Sustainability Assessment in respect of Proposed Allocation H2.2 (site ref. 298) is in respect of heritage considerations: The Grade II Listed Kings Farmhouse (and its setting), Willow Grove, monuments and gateway to former Baptist Church and Little Common Farm are situated within the site area, and important heritage farmsteads are situated to the north and south of the site. A detailed heritage assessment (building upon the high-level Heritage Impact Assessment prepared by the Council) would be required to support any subsequent planning application. A Heritage Impact Assessment would be required. Archaeological potential of the site is

medium and therefore archaeological assessment would be required (SA Obj. 6). We can confirm that we have no objections to this amended text. It is acknowledged that heritage will be an important consideration for the Proposed Allocation, albeit of less significance to the Site given the location of the Listed Buildings, outwith the Castlewood land interests. Background to Allocation By way of background, the site was submitted to the SHLAA and was assessed under site reference 298. The site passed stage 4a with a stated capacity of 338 dwellings and was progressed as a 'preferred site', however the stated capacity was reduced to 150 dwellings (WHSAP Trowbridge Community Area Topic Paper July 2018, page 18). The assessment of site options (Appendix G) explains this reduction stating "mitigation measures required to address effects on heritage assets, ecology and landscape would result in a reduction to the developable area of the site and a potential reduction in dwelling capacity." (WHSAP Trowbridge Community Area Topic Paper July 2018, page 97). This resulted in the Pre-Submission Draft WHSAP (September 2017) consultation including the site as an allocation for "approximately 150 dwellings" under site reference H2.2. The pre-submission draft was subject to a period of public consultation and subsequent to this consultation, the Council proposed to increase the capacity of the site. This amendment to proposed allocation H2.2 was originally set out in the Council's Cabinet Papers of 15th May 2018, which refer to a capacity increase from approximately 150 to 300 dwellings (Council's Cabinet Papers of 15th May 2018, pages 294, 365). [It is noted that there are inconsistencies in the Council's Cabinet Papers of 15th May 2018, as there is also reference to an increase to 225 dwellings.] This demonstrates that the Council consider that a capacity of approximately 300 dwellings was appropriate for the H2.2 allocation site. The WHSAP was subsequently deferred from consideration at the 15th May 2018 Cabinet meeting to be heard at the 3rd July 2018 Cabinet instead. It is understood this was to allow further consultation on the proposed changes with Wiltshire Councillors and town and parish councils (Minutes of 3rd July 2018 Cabinet, paragraph 257). For the Cabinet Papers of 3rd July 2018, the Council prepared an Addendum following the deferral of the item from Cabinet of 15 May 2018. This Addendum refers to a smaller capacity increase for allocation H2.2 from approximately 150 to 225 dwellings.. At the 3rd July 2018 Cabinet, Cllr Sturgis proposed further changes to the in response to the housing numbers on the Allocation site, understood to be in response to consultation with Wiltshire Councillors and town and parish councils. The following change was proposed: (c) Amend Proposed Change 39 (site allocation H2.2, land off the A363 at White Horse Business Park, Trowbridge) to reduce the proposed dwelling increase by 50 dwellings This proposed change had the effect of reducing the capacity increase further from approximately 150 to 175 dwellings. The minutes of the 3rd July 2018 Cabinet meeting provide further insight into Member's justification for this change: In justifying the further proposed changes, Cllr Sturgis referred to the addendum, and provided clarification as follows ... the reduction in the increase in housing numbers on site H2.2 would provide for landscape buffer for North Bradley. In response to concerns raised by David Feather that insufficient weight had been given to North Bradley's Neighbourhood Plan, Councillor Sturgis stated that other neighbourhood plans were further 'forward, and could therefore be given greater weight. Councillor Sturgis went on to say that: he hoped that the proposed amendments to the White Horse business park site would go some way to maintaining a gap between North Bradley and Trowbridge; and that Wiltshire Council would continue to work to support the North Bradley neighbourhood plan so that it would be better progressed by the time of the examination in public. The issue of alleged coalescence between the Trowbridge and North Bradley settlements is therefore identified to be one of the key issues from the Council's perspective relating to the Proposed Allocation's capacity. It is noted that the Community Area Topic Paper raises concerns regarding ecological (bat species) and heritage constraints, which would require mitigation in order to be satisfactorily addressed. We dispute the Council's concerns regarding the perceived coalescence of Trowbridge and North Bradley, and the limit on capacity created by the ecological and heritage constraints. For the reasons we will set out below we consider the Council's approach to reducing the overall dwelling capacity on site H2.2 to be unsound. The capacity of proposed allocation H2.2 should be reinstated as approximately 300 dwellings, as per the previous view of Planning Officers . Representations We fervently disagree with the Council's position, that the Proposed Allocation is only capable of accommodating approximately 175 dwellings, in order to maintain a gap between the North Bradley and Trowbridge settlements, and provide appropriate mitigation. Our evidence base (and supported by the representations prepared by Linden Homes in relation to a separate parcel of the Allocation Site) supports a higher capacity. Crucially, the Council's own evidence base supports a higher capacity. For example, the WSHAP

Stage 4a Site Landscape Assessment concludes that the capacity of the Site to accommodate change is described as 'moderate-high', This is discussed further below. We feel that the Proposed Allocation is capable of accommodating at least 300 dwellings, without causing issues of coalescence with the North Bradley settlement. Specifically to these Representations, we feel that the Site (the northern parcel of land defined in the accompanying Vision Document) is capable of accommodating approximately 140 dwellings, again without causing issues of coalescence and provide adequate mitigation. This is now considered in full.

**Background on Relationship to Trowbridge** The Site is in close proximity to the existing settlement boundary of Trowbridge to the north (as defined by the Core Strategy 2015, fig 1), less than 50m to the south of the existing boundary. As part of the WHSAP, the Council are undertaking a settlement boundary review (WHSAP Topic Paper 1 Settlement Boundary Review Methodology, refers). This Topic Paper concludes that the White Horse Business Park to the east of the site meets the methodology for being included within the settlement. [MAP INSERT] Accordingly the Draft WHSAP proposes to include White Horse Business Park within the settlement boundary (fig 2). As a result, in addition to being in close proximity to the existing settlement boundary of Trowbridge to the north, the Site also abuts the proposed settlement boundary of Trowbridge - in its extended form - to the east (as defined by the Draft WHSAP, fig 2). The Site therefore relates well to the Trowbridge settlement and in combination with proposed housing allocation 'Elm Grove Farm', would enhance connectivity between the existing Trowbridge settlement and the established White Horse Business Park. Indeed delivery of residential development on the Allocation Site would bridge the separation between the business park and the wider settlement. The potential of the Allocation Site and the adjacent Elm Grove Farm allocation to be successfully integrated into existing and planned developments in the area, while maintaining a defensible buffer to North Bradley is recognised in the Trowbridge Community Area Topic Paper. The relationship between White Horse Business Park, the Proposed Allocation (ref 298) to the SW and proposed allocation 'Elm Grove Farm' (ref 613/248) to the SE is demonstrated in fig 2. The Site is ideally placed to provide improvements to walking and cycling routes through to the town, and the proposed masterplan shows how these improved linkages can be delivered as part of a residential development. The Proposed Allocation would therefore provide a cohesive and logical extension to Trowbridge. It should be noted that the Site would be directly connected to the settlement to the north and east, and would very much look to the north and Trowbridge in terms of connectivity and access to facilities.

**[MAP INSERT] Landscape Evidence and Design Solution** The previous Representations submitted to the Council on behalf of Castlewood in February 2018 provide the Council with an indicative illustrative layout and a Landscape and Visual Appraisal which concludes that there are no significant constraints to the delivery of residential units on the site. The LVA concludes that visually, the Site is relatively well contained on account of the existing hedgerow structure, generally flat topography, the surrounding mature tree belts and surrounding development. The visibility of the site is limited to occasional short distance views from immediate visual receptors. In the wider surrounding landscape, the cumulative effect of field boundary hedgerows and the flat low lying topography provide visual containment. Although, the site is likely to be glimpsed from raised land to the southeast, the intervening distance will prevent its features being discernible. The Site therefore has low visual prominence. There are strong landscape buffers on the edge of North Bradley and the development provides opportunities to reinforce existing landscape features. This will lead to a softening of views towards Trowbridge from North Bradley, especially as the existing settlement edge of Trowbridge is defined by commercial development and the proposed development will provide a softer, more permanent edge. The LVA acknowledges that whilst there would be some physical reduction in the separation between Trowbridge and North Bradley as a result of the Proposed Allocation, the visual effects could be minimised and mitigated. The proposed Masterplan provided in the accompanying Vision Document incorporates such mitigation measures, including:

- The LVA acknowledges that a visual break is experienced between the settlements of Trowbridge and North Bradley when travelling along Woodmarsh. Accordingly the masterplan has not identified development in those areas most significant to the perceived visual separation between North Bradley and Trowbridge, as informed by the LVA. This preserves the setting of North Bradley village and its integrity.
- The northern development parcel is set back considerably from Woodmarsh to reinforce the visual separation from North Bradley and it is proposed that the development in this area will generally be of lower density so as to set the proposed development within a landscape context and that the built form is more visually connected to the south of Trowbridge and visually

buffer the scheme from North Bradley. - The proposed masterplan proposes to implement significant new planting along the south-western boundary, in addition to significant existing planting to reinforce the visual separation between the proposed development and North Bradley. The LVA confirms that the development of the site could be achieved without resulting in significant landscape and/or visual impacts (in relation to the receptors identified in the LVA including the A363, Woodmarsh and residential properties on the eastern edge of North Bradley). In addition, the findings of the Council's own evidence base are significant. The WHSAP Stage 4a Site Landscape Assessment (June 2017) concludes that the overall magnitude of effect on views if the site were to be developed is identified as 'low adverse'. The capacity of Site 298 to accommodate change is described as 'moderate-high'. It is considered, therefore, that the site should be allocated for a much higher number of dwellings given the sustainable location and absence of any constraints which cannot be mitigated against. The overall effect will be to proportionately increase the quantum of market and affordable dwellings, which can be achieved through the Proposed Allocation, whilst simultaneously protecting the integrity of North Bradley as a village. Indeed, the opportunity to achieve a comprehensive design will provide greater opportunities for more meaningful green infrastructure provision, landscaping and open space. In summary, we contend that delivery of approximately 300 dwellings on the Proposed Allocation would not lead to unacceptable coalescence between Trowbridge and North Bradley. Residential development on the site would link, both visually and physically, primarily with Trowbridge and the adjacent White Horse Business Park, which is proposed in the WHSAP to form part of the Trowbridge settlement boundary. As demonstrated in the accompanying Vision Document, development on the site would be sensitively designed with the incorporation of new or strengthened landscape buffers and careful siting of built form to protect visual separation between the two settlements. Utilising the approach set out in the Vision Document, the Site could accommodate c. 140 units, as part of a wider 300 unit allocation.

**Housing Need** As a Principal Settlement, Trowbridge is a primary focus for development. Moreover, the role of the town as a significant employment and strategic service centre will be expected to be strengthened over the Plan period up to 2026 and beyond. There are, however, severe constraints to the growth of Trowbridge. In particular, with Green Belt and Flood Zone designations to the north and west of Trowbridge (Fig 3), opportunities to expand Trowbridge in order to accommodate the identified housing need are limited. In proposing the allocation of this site, the Council identified that development of the site for housing would contribute to the area strategy for the town by boosting the supply of homes to help meet indicative requirements" [MAP INSERT] In the context of Trowbridge being a focus for growth and taking a large proportion of housing need, we wish to comment on PC25, which is a factual update to reflect the latest published Housing Land Supply Statement (March 2018) and to reflect PC55, PC60, PC64 and PC70 that propose higher densities on site allocations to make best use of land. PC25 relates to the following amended paragraph: Unlike Chippenham however, allocations made by the Plan will not be sufficient to ensure that housing provision meets indicative requirements. Six new site allocations provide land for approximately 800 1,050 dwellings and have the potential to increase their capacity to make the best use of land. Nevertheless, housing development at Trowbridge will fall short of the WCS indicative level of 6,810 dwellings by around 1,220 1,297."

In addition, related to the Trowbridge Community Area, the Council's Housing Land Supply Statement Addendum July 2018 Submission Version (ref: TOP/03C) indicates there is still an indicative residual requirement for the remainder of the Trowbridge Community Area of at least 2,230 dwellings during the remainder of the Plan period up to 2026. As things stand therefore the Council are not National planning policy is clear that the Council must look at its residential allocations beyond five years to ensure there is a consistent pipeline for bringing forward new residential development. The Council, despite the amendments, acknowledge that housing development at Trowbridge will fall short of the requirements. By failing to allocate sufficient quantum of new housing in the WHSAP, the Council is currently failing to fully meet its identified housing needs. The Plan has not therefore been positively prepared. To ensure a sound Plan, which is consistent with national planning policy, it is essential that either: a) additional sites are identified and allocated; or b) greater quantum of housing is allocated on existing/ proposed allocations. In relation to option a), as set out above Trowbridge lacks genuine, alternative options to extend the settlement due to constraints, including Green Belt designations and Flood Zone primarily to the north and west. Consideration should therefore be given to intensify allocations proposed by the WHSAP, where technical constraints do not preclude this. As has been demonstrated by these Representations,

	<p>and in those previously submitted, there are no technical constraints which preclude a greater quantum of development than currently proposed in the WHSAP. Indeed, the Council have previously identified the potential of this site to accommodate c 300 dwellings, and the proposed reduction to 175 to accommodate ecology and heritage mitigation measures is unjustified. The technical work undertaken, and submitted to the Council during the WHSAP process demonstrate that the Proposed Allocation is capable of accommodating at least 300 dwellings with the incorporation of necessary mitigation measures. The sustainability appraisal undertaken by the Council identify the Proposed Allocation as a 'more sustainable' site. As such, priority should be maximising the housing numbers on this site in the first instance to address the outstanding house requirement, rather than looking towards 'less sustainable sites. Conclusion In summary, it is contended that proposed modification PC60 (and its consequential changes) to the WHSAP render the document unsound and contrary to paragraph 182 of the NPPF (2012). The proposed modification is inconsistent with the technical information provided to the Council, and the Council's own evidence base documents, which recognises the capability of the Proposed Allocation to accommodate a greater quantum of residential units whilst still maintaining appropriate separation between Trowbridge and North Bradley and providing adequate mitigation. The reduction in dwelling numbers for Proposed Allocation H2.2 does not represent positive preparation of the WHSAP. There is an identified housing need in the Trowbridge Community Area and the WHSAP as currently proposed does not meet the full requirement. It is recognised that mitigation will be required in relation to heritage and ecology matters, however the technical work undertaken has identified that appropriate mitigation can be accommodated with a greater quantum of dwellings than 175. Indeed, the accompanying Vision Document relating specially to our client's interests on the north parcel, identifies around 140 dwellings can be appropriately accommodated on that part of the allocation alone. In order to remedy this and make the WHSAP sound, we request that the capacity of the Proposed Allocation H2.2 is reinstated as "at least 300 dwellings", and consequential changes subsequently amended. Specifically to these Representations, we request that recognition is given to the capability of the Site to accommodating approximately 140 dwellings as part of the H2.2 allocation. In order to effectively put this case before the Inspector and address any questions they may have and to also rebuff any argument the Council may make for proceeding with proposed modification PC60 and its consequential changes we consider it necessary to attend the Examination Hearings in a speaking capacity. For reference, we append a full set of additional details as follows. These reports and drawings concern the proposed development of the Site and provide information regarding constraints: Vision Document Ecology Technical Note Flood Risk &amp; Drainage Technical Note Heritage Technical Note Highways Technical Note Landscape and Visual Appraisal</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>Introduction On behalf of our client, Castlewood Properties Ventures Ltd. (hereafter referred to 'Castlewood'), we write to provide representations to the "Focussed consultation on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan" (WHSAP). We are responding to this consultation in respect of our client's land interest at Land off the A363 at White Horse Business Park Trowbridge, which is proposed allocation H2.2 in the Wiltshire Housing Site Allocations Plan (WHSAP). Castlewood are local developers who can provide greater certainty of delivery, and have a strong track record in delivering development in Wiltshire. We comment specifically in respect of the proposed amendments relating to proposed allocation H2.2, namely PC59 and PC60 and their consequential changes (PC13, PC15, PC17, PC21, PC22, PC25, PC51, PC56). In summary, these proposed amendments seek to reduce the capacity of proposed allocation H2.2 to 'approximately 175 dwellings'. This follows a decision by the Council's Cabinet, relating to perceived coalescence between the proposed allocation site and the village of North Bradley. We consider this in detail in these Representations. These Representations should be viewed alongside the 'Land off the A363 at White Horse Business Park' Vision Document prepared by Tur1ey (November 2018). These Representations should also be read in combination with those from parties who also have an interest in the H2.2 site, on land to the south of Castlewood's parcel.</p> <p>Proposed H2.2 Allocation The Proposed Allocation site H2.2 comprises 18.96ha and extends from Bradley Road at the north to Westbury Road at the south. There are several land interests relating to Proposed Allocation H2.2. Castlewood's interests relate to a 8.37ha parcel at the northern end of the allocation site, closest to the Trowbridge settlement. This northern parcel of land (hereafter referred to 'The Site') is identified in the accompanying Vision Document, The Site fronts onto A363 where the proposed access is to the residential development is to be secured. Trowbridge is a Principal Settlement, situated within the Trowbridge Community Area and located in the North and West Wiltshire Housing Market Area (HMA). Therefore the scope of these representations is focused on the proposed strategy for the North and West Wiltshire HMA, the Trowbridge Community Area and Trowbridge specifically. Previous Representations on behalf of Castlewood were submitted to the Council in September 2017, in response to the WHSAP Pre-Submission consultation, and in February 2018 to provide the Council with an indicative illustrative layout. The following technical reports were all submitted in February 2018 to demonstrate that there are no significant constraints to delivery of residential development in the site: - Baseline Landscape and Visual Appraisal (referred to hereafter as LVA); LVIA Constraints and Opportunities Plan - Flood Risk and Surface Water Drainage Technical Note; - Highways and Transport Technical Note; - Heritage Technical Note; It is not the intention of these Representations to repeat information previously provided, rather to respond to the key changes proposed by this latest consultation. These representations are supported by the following documents, which provide further</p>				

technical information demonstrating the capability of the Proposed Allocation to deliver at least 300 dwellings, of which around 140 dwellings can be provided on the Site: - Land off the A363 at White Horse Business Park Vision Document, prepared by Turley (November 2018) - Ecology Technical Note (November 2018), prepared by Nicholas Pearson Associates. The Ecology Technical Note discusses the ecological considerations which have informed the masterplan, and demonstrates that there are no ecological considerations which do not preclude development of the Site for approximately 140 dwellings, including the need for buffers to be retained as dark corridors. WHSAP Proposed Changes. With respect to the document EXAM0101 Schedule of Proposed Changes (September 2018), the key changes related to the Proposed Allocation are as follows: - PC59 - Amend the boundary of the allocation as set out in Annex C; And first sentence of paragraph 5.52 to read: "Approximately 25.62 18.96 ha of land off the A363 southwest of the White Horse Business Park is allocated for the development" - PC60 - Amend first sentence of paragraph 5.52 as follows: "land off the A363 south-west of the White Horse Business Park is allocated for the development of approximately 150 225 175 dwellings, as identified on the Policies Map." We do wish to object to PC60. This reduction in dwelling numbers is unjustified, and indeed the allocation quantum should be increased to "at least 300 dwellings", based on the technical evidence and other considerations, such as Trowbridge's identified shortfall. The Representation will set out the justification for this. We note that the Council's evidence base has been updated in respect of: - Wiltshire Housing Site Allocations Plan Sustainability Appraisal Revised September 2018 (EXAM/02A, EXAM/02A.1, EXAM/02B and EXAM/02C); - Update to the Wiltshire Housing Site Allocations Pre-Submission Draft (June 2017) Assessment under the Habitats Regulations Assessment Addendum (September 2018) (EXAM/03); - Wiltshire Housing Site Allocations Plan Community Area Topic Paper Trowbridge (July 2018 Submission version - updated September 2018) (CATP/17a); The Community Area Topic Paper Trowbridge has been amended in relation to site ref. 298 (The Proposed Allocation). The amendments are as follows: Whilst this site is not without constraint (including potential effects on protected bat species and the significance of heritage assets), these can be mitigated through on-site measures. To address these matters as a result in any development scheme on the allocation would not involve the whole SHLAA site option but would nonetheless need to deliver all necessary mitigation. Therefore, the potential dwelling capacity stated in the SHLAA/SHELAA would be reduced to approximately 150 175 dwellings (para 5.24, pg 22). This amendment is not supported by the technical information submitted with our previous representations nor the ecology technical note accompanying this Representation. As set out above, the ecological technical note concludes there are no ecological considerations which preclude development of the Site alone for approximately 140 dwellings, including the need for buffers to be retained as dark corridors in respect of the protected bat species. In relation to heritage assets, there are no listed buildings on the Site itself and the Masterplan identifies that appropriate provision can be made for the setting of listed buildings in the vicinity whilst providing c.140 units on the Site, with the remainder of the c.300 units to be provided on the remaining parts of the Proposed Allocation. It should also be noted that the Community Area Topic Paper has also been amended in relation to the immediately adjacent Elm Grove Farm Proposed Allocation. Ecology (protected bat species) and heritage assets are again raised as a potential constraint, however conversely for this site the amendment concludes that these matters can be mitigated through on-site measures and the site's capacity increased. No clear explanation appears to have been provided for the different approach between the sites. It is noted that some of the documents which our previous representations and technical documents commented on, such as the Wiltshire Housing Site Allocations draft plan - Stage 4a Site Landscape Assessment Part 2 (June 2017) (WHSAP/20), have not been updated for the purposes of this consultation. We do not seek to repeat comments previously made in relation to these documents, and would refer you to our previous Representations. In respect of technical considerations we note that the only amendment to the Council's Sustainability Assessment in respect of Proposed Allocation H2.2 (site ref. 298) is in respect of heritage considerations: The Grade II Listed Kings Farmhouse (and its setting), Willow Grove, monuments and gateway to former Baptist Church and Little Common Farm are situated within the site area, and important heritage farmsteads are situated to the north and south of the site. A detailed heritage assessment (building upon the high-level Heritage Impact Assessment prepared by the Council) would be required to support any subsequent planning application. A Heritage Impact Assessment would be required. Archaeological potential of the site is

medium and therefore archaeological assessment would be required (SA Obj. 6). We can confirm that we have no objections to this amended text. It is acknowledged that heritage will be an important consideration for the Proposed Allocation, albeit of less significance to the Site given the location of the Listed Buildings, outwith the Castlewood land interests.

**Background to Allocation** By way of background, the site was submitted to the SHLAA and was assessed under site reference 298. The site passed stage 4a with a stated capacity of 338 dwellings and was progressed as a 'preferred site', however the stated capacity was reduced to 150 dwellings (WHSAP Trowbridge Community Area Topic Paper July 2018, page 18). The assessment of site options (Appendix G) explains this reduction stating "mitigation measures required to address effects on heritage assets, ecology and landscape would result in a reduction to the developable area of the site and a potential reduction in dwelling capacity." (WHSAP Trowbridge Community Area Topic Paper July 2018, page 97). This resulted in the Pre-Submission Draft WHSAP (September 2017) consultation including the site as an allocation for "approximately 150 dwellings" under site reference H2.2. The pre-submission draft was subject to a period of public consultation and subsequent to this consultation, the Council proposed to increase the capacity of the site. This amendment to proposed allocation H2.2 was originally set out in the Council's Cabinet Papers of 15th May 2018, which refer to a capacity increase from approximately 150 to 300 dwellings (Council's Cabinet Papers of 15th May 2018, pages 294, 365). [It is noted that there are inconsistencies in the Council's Cabinet Papers of 15th May 2018, as there is also reference to an increase to 225 dwellings.] This demonstrates that the Council consider that a capacity of approximately 300 dwellings was appropriate for the H2.2 allocation site. The WHSAP was subsequently deferred from consideration at the 15th May 2018 Cabinet meeting to be heard at the 3rd July 2018 Cabinet instead. It is understood this was to allow further consultation on the proposed changes with Wiltshire Councillors and town and parish councils (Minutes of 3rd July 2018 Cabinet, paragraph 257). For the Cabinet Papers of 3rd July 2018, the Council prepared an Addendum following the deferral of the item from Cabinet of 15 May 2018. This Addendum refers to a smaller capacity increase for allocation H2.2 from approximately 150 to 225 dwellings.. At the 3rd July 2018 Cabinet, Cllr Sturgis proposed further changes to the in response to the housing numbers on the Allocation site, understood to be in response to consultation with Wiltshire Councillors and town and parish councils. The following change was proposed:

(c) Amend Proposed Change 39 (site allocation H2.2, land off the A363 at White Horse Business Park, Trowbridge) to reduce the proposed dwelling increase by 50 dwellings This proposed change had the effect of reducing the capacity increase further from approximately 150 to 175 dwellings. The minutes of the 3rd July 2018 Cabinet meeting provide further insight into Member's justification for this change: In justifying the further proposed changes, Cllr Sturgis referred to the addendum, and provided clarification as follows ... the reduction in the increase in housing numbers on site H2.2 would provide for landscape buffer for North Bradley. In response to concerns raised by David Feather that insufficient weight had been given to North Bradley's Neighbourhood Plan, Councillor Sturgis stated that other neighbourhood plans were further 'forward, and could therefore be given greater weight. Councillor Sturgis went on to say that: he hoped that the proposed amendments to the White Horse business park site would go some way to maintaining a gap between North Bradley and Trowbridge; and that Wiltshire Council would continue to work to support the North Bradley neighbourhood plan so that it would be better progressed by the time of the examination in public. The issue of alleged coalescence between the Trowbridge and North Bradley settlements is therefore identified to be one of the key issues from the Council's perspective relating to the Proposed Allocation's capacity. It is noted that the Community Area Topic Paper raises concerns regarding ecological (bat species) and heritage constraints, which would require mitigation in order to be satisfactorily addressed. We dispute the Council's concerns regarding the perceived coalescence of Trowbridge and North Bradley, and the limit on capacity created by the ecological and heritage constraints. For the reasons we will set out below we consider the Council's approach to reducing the overall dwelling capacity on site H2.2 to be unsound. The capacity of proposed allocation H2.2 should be reinstated as approximately 300 dwellings, as per the previous view of Planning Officers .

**Representations** We fervently disagree with the Council's position, that the Proposed Allocation is only capable of accommodating approximately 175 dwellings, in order to maintain a gap between the North Bradley and Trowbridge settlements, and provide appropriate mitigation. Our evidence base (and supported by the representations prepared by Linden Homes in relation to a separate parcel of the Allocation Site) supports a higher capacity. Crucially, the Council's own evidence base supports a higher capacity. For example, the WSHAP

Stage 4a Site Landscape Assessment concludes that the capacity of the Site to accommodate change is described as 'moderate-high', This is discussed further below. We feel that the Proposed Allocation is capable of accommodating at least 300 dwellings, without causing issues of coalescence with the North Bradley settlement. Specifically to these Representations, we feel that the Site (the northern parcel of land defined in the accompanying Vision Document) is capable of accommodating approximately 140 dwellings, again without causing issues of coalescence and provide adequate mitigation. This is now considered in full.

**Background on Relationship to Trowbridge** The Site is in close proximity to the existing settlement boundary of Trowbridge to the north (as defined by the Core Strategy 2015, fig 1), less than 50m to the south of the existing boundary. As part of the WHSAP, the Council are undertaking a settlement boundary review (WHSAP Topic Paper 1 Settlement Boundary Review Methodology, refers). This Topic Paper concludes that the White Horse Business Park to the east of the site meets the methodology for being included within the settlement. [MAP INSERT] Accordingly the Draft WHSAP proposes to include White Horse Business Park within the settlement boundary (fig 2). As a result, in addition to being in close proximity to the existing settlement boundary of Trowbridge to the north, the Site also abuts the proposed settlement boundary of Trowbridge - in its extended form - to the east (as defined by the Draft WHSAP, fig 2). The Site therefore relates well to the Trowbridge settlement and in combination with proposed housing allocation 'Elm Grove Farm', would enhance connectivity between the existing Trowbridge settlement and the established White Horse Business Park. Indeed delivery of residential development on the Allocation Site would bridge the separation between the business park and the wider settlement. The potential of the Allocation Site and the adjacent Elm Grove Farm allocation to be successfully integrated into existing and planned developments in the area, while maintaining a defensible buffer to North Bradley is recognised in the Trowbridge Community Area Topic Paper. The relationship between White Horse Business Park, the Proposed Allocation (ref 298) to the SW and proposed allocation 'Elm Grove Farm' (ref 613/248) to the SE is demonstrated in fig 2. The Site is ideally placed to provide improvements to walking and cycling routes through to the town, and the proposed masterplan shows how these improved linkages can be delivered as part of a residential development. The Proposed Allocation would therefore provide a cohesive and logical extension to Trowbridge. It should be noted that the Site would be directly connected to the settlement to the north and east, and would very much look to the north and Trowbridge in terms of connectivity and access to facilities.

**[MAP INSERT] Landscape Evidence and Design Solution** The previous Representations submitted to the Council on behalf of Castlewood in February 2018 provide the Council with an indicative illustrative layout and a Landscape and Visual Appraisal which concludes that there are no significant constraints to the delivery of residential units on the site. The LVA concludes that visually, the Site is relatively well contained on account of the existing hedgerow structure, generally flat topography, the surrounding mature tree belts and surrounding development. The visibility of the site is limited to occasional short distance views from immediate visual receptors. In the wider surrounding landscape, the cumulative effect of field boundary hedgerows and the flat low lying topography provide visual containment. Although, the site is likely to be glimpsed from raised land to the southeast, the intervening distance will prevent its features being discernible. The Site therefore has low visual prominence. There are strong landscape buffers on the edge of North Bradley and the development provides opportunities to reinforce existing landscape features. This will lead to a softening of views towards Trowbridge from North Bradley, especially as the existing settlement edge of Trowbridge is defined by commercial development and the proposed development will provide a softer, more permanent edge. The LVA acknowledges that whilst there would be some physical reduction in the separation between Trowbridge and North Bradley as a result of the Proposed Allocation, the visual effects could be minimised and mitigated. The proposed Masterplan provided in the accompanying Vision Document incorporates such mitigation measures, including:

- The LVA acknowledges that a visual break is experienced between the settlements of Trowbridge and North Bradley when travelling along Woodmarsh. Accordingly the masterplan has not identified development in those areas most significant to the perceived visual separation between North Bradley and Trowbridge, as informed by the LVA. This preserves the setting of North Bradley village and its integrity.
- The northern development parcel is set back considerably from Woodmarsh to reinforce the visual separation from North Bradley and it is proposed that the development in this area will generally be of lower density so as to set the proposed development within a landscape context and that the built form is more visually connected to the south of Trowbridge and visually

buffer the scheme from North Bradley. - The proposed masterplan proposes to implement significant new planting along the south-western boundary, in addition to significant existing planting to reinforce the visual separation between the proposed development and North Bradley. The LVA confirms that the development of the site could be achieved without resulting in significant landscape and/or visual impacts (in relation to the receptors identified in the LVA including the A363, Woodmarsh and residential properties on the eastern edge of North Bradley). In addition, the findings of the Council's own evidence base are significant. The WHSAP Stage 4a Site Landscape Assessment (June 2017) concludes that the overall magnitude of effect on views if the site were to be developed is identified as 'low adverse'. The capacity of Site 298 to accommodate change is described as 'moderate-high'. It is considered, therefore, that the site should be allocated for a much higher number of dwellings given the sustainable location and absence of any constraints which cannot be mitigated against. The overall effect will be to proportionately increase the quantum of market and affordable dwellings, which can be achieved through the Proposed Allocation, whilst simultaneously protecting the integrity of North Bradley as a village. Indeed, the opportunity to achieve a comprehensive design will provide greater opportunities for more meaningful green infrastructure provision, landscaping and open space. In summary, we contend that delivery of approximately 300 dwellings on the Proposed Allocation would not lead to unacceptable coalescence between Trowbridge and North Bradley. Residential development on the site would link, both visually and physically, primarily with Trowbridge and the adjacent White Horse Business Park, which is proposed in the WHSAP to form part of the Trowbridge settlement boundary. As demonstrated in the accompanying Vision Document, development on the site would be sensitively designed with the incorporation of new or strengthened landscape buffers and careful siting of built form to protect visual separation between the two settlements. Utilising the approach set out in the Vision Document, the Site could accommodate c. 140 units, as part of a wider 300 unit allocation.

**Housing Need** As a Principal Settlement, Trowbridge is a primary focus for development. Moreover, the role of the town as a significant employment and strategic service centre will be expected to be strengthened over the Plan period up to 2026 and beyond. There are, however, severe constraints to the growth of Trowbridge. In particular, with Green Belt and Flood Zone designations to the north and west of Trowbridge (Fig 3), opportunities to expand Trowbridge in order to accommodate the identified housing need are limited. In proposing the allocation of this site, the Council identified that development of the site for housing would contribute to the area strategy for the town by boosting the supply of homes to help meet indicative requirements" [MAP INSERT] In the context of Trowbridge being a focus for growth and taking a large proportion of housing need, we wish to comment on PC25, which is a factual update to reflect the latest published Housing Land Supply Statement (March 2018) and to reflect PC55, PC60, PC64 and PC70 that propose higher densities on site allocations to make best use of land. PC25 relates to the following amended paragraph: Unlike Chippenham however, allocations made by the Plan will not be sufficient to ensure that housing provision meets indicative requirements. Six new site allocations provide land for approximately 800 1,050 dwellings and have the potential to increase their capacity to make the best use of land. Nevertheless, housing development at Trowbridge will fall short of the WCS indicative level of 6,810 dwellings by around 1,220 1,297."

In addition, related to the Trowbridge Community Area, the Council's Housing Land Supply Statement Addendum July 2018 Submission Version (ref: TOP/03C) indicates there is still an indicative residual requirement for the remainder of the Trowbridge Community Area of at least 2,230 dwellings during the remainder of the Plan period up to 2026. As things stand therefore the Council are not National planning policy is clear that the Council must look at its residential allocations beyond five years to ensure there is a consistent pipeline for bringing forward new residential development. The Council, despite the amendments, acknowledge that housing development at Trowbridge will fall short of the requirements. By failing to allocating sufficient quantum of new housing in the WHSAP, the Council is currently failing to fully meet its identified housing needs. The Plan has not therefore been positively prepared. To ensure a sound Plan, which is consistent with national planning policy, it is essential that either: a) additional site are identified and allocated; or b) greater quantum of housing is allocated on existing/ proposed allocations. In relation to option a), as set out above Trowbridge lacks genuine, alternative options to extend the settlement due to constraints, including Green Belt designations and Flood Zone primarily to the north and west. Consideration should therefore be given to intensify allocations proposed by the WHSAP, where technical constraints do not preclude this. As has been demonstrated by these Representations,

	<p>and in those previously submitted, there are no technical constraints which preclude a greater quantum of development than currently proposed in the WHSAP. Indeed, the Council have previously identified the potential of this site to accommodate c 300 dwellings, and the proposed reduction to 175 to accommodate ecology and heritage mitigation measures is unjustified. The technical work undertaken, and submitted to the Council during the WHSAP process demonstrate that the Proposed Allocation is capable of accommodating at least 300 dwellings with the incorporation of necessary mitigation measures. The sustainability appraisal undertaken by the Council identify the Proposed Allocation as a 'more sustainable' site. As such, priority should be maximising the housing numbers on this site in the first instance to address the outstanding house requirement, rather than looking towards 'less sustainable sites. Conclusion In summary, it is contended that proposed modification PC60 (and its consequential changes) to the WHSAP render the document unsound and contrary to paragraph 182 of the NPPF (2012). The proposed modification is inconsistent with the technical information provided to the Council, and the Council's own evidence base documents, which recognises the capability of the Proposed Allocation to accommodate a greater quantum of residential units whilst still maintaining appropriate separation between Trowbridge and North Bradley and providing adequate mitigation. The reduction in dwelling numbers for Proposed Allocation H2.2 does not represent positive preparation of the WHSAP. There is an identified housing need in the Trowbridge Community Area and the WHSAP as currently proposed does not meet the full requirement. It is recognised that mitigation will be required in relation to heritage and ecology matters, however the technical work undertaken has identified that appropriate mitigation can be accommodated with a greater quantum of dwellings than 175. Indeed, the accompanying Vision Document relating specially to our client's interests on the north parcel, identifies around 140 dwellings can be appropriately accommodated on that part of the allocation alone. In order to remedy this and make the WHSAP sound, we request that the capacity of the Proposed Allocation H2.2 is reinstated as "at least 300 dwellings", and consequential changes subsequently amended. Specifically to these Representations, we request that recognition is given to the capability of the Site to accommodating approximately 140 dwellings as part of the H2.2 allocation. In order to effectively put this case before the Inspector and address any questions they may have and to also rebuff any argument the Council may make for proceeding with proposed modification PC60 and its consequential changes we consider it necessary to attend the Examination Hearings in a speaking capacity. For reference, we append a full set of additional details as follows. These reports and drawings concern the proposed development of the Site and provide information regarding constraints: Vision Document Ecology Technical Note Flood Risk &amp; Drainage Technical Note Heritage Technical Note Highways Technical Note Landscape and Visual Appraisal</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>Introduction On behalf of our client, Castlewood Properties Ventures Ltd. (hereafter referred to 'Castlewood'), we write to provide representations to the "Focussed consultation on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan" (WHSAP). We are responding to this consultation in respect of our client's land interest at Land off the A363 at White Horse Business Park Trowbridge, which is proposed allocation H2.2 in the Wiltshire Housing Site Allocations Plan (WHSAP). Castlewood are local developers who can provide greater certainty of delivery, and have a strong track record in delivering development in Wiltshire. We comment specifically in respect of the proposed amendments relating to proposed allocation H2.2, namely PC59 and PC60 and their consequential changes (PC13, PC15, PC17, PC21, PC22, PC25, PC51, PC56). In summary, these proposed amendments seek to reduce the capacity of proposed allocation H2.2 to 'approximately 175 dwellings'. This follows a decision by the Council's Cabinet, relating to perceived coalescence between the proposed allocation site and the village of North Bradley. We consider this in detail in these Representations. These Representations should be viewed alongside the 'Land off the A363 at White Horse Business Park' Vision Document prepared by Tur1ey (November 2018). These Representations should also be read in combination with those from parties who also have an interest in the H2.2 site, on land to the south of Castlewood's parcel.</p> <p>Proposed H2.2 Allocation The Proposed Allocation site H2.2 comprises 18.96ha and extends from Bradley Road at the north to Westbury Road at the south. There are several land interests relating to Proposed Allocation H2.2. Castlewood's interests relate to a 8.37ha parcel at the northern end of the allocation site, closest to the Trowbridge settlement. This northern parcel of land (hereafter referred to 'The Site') is identified in the accompanying Vision Document, The Site fronts onto A363 where the proposed access is to the residential development is to be secured. Trowbridge is a Principal Settlement, situated within the Trowbridge Community Area and located in the North and West Wiltshire Housing Market Area (HMA). Therefore the scope of these representations is focused on the proposed strategy for the North and West Wiltshire HMA, the Trowbridge Community Area and Trowbridge specifically. Previous Representations on behalf of Castlewood were submitted to the Council in September 2017, in response to the WHSAP Pre-Submission consultation, and in February 2018 to provide the Council with an indicative illustrative layout. The following technical reports were all submitted in February 2018 to demonstrate that there are no significant constraints to delivery of residential development in the site: - Baseline Landscape and Visual Appraisal (referred to hereafter as LVA); LVIA Constraints and Opportunities Plan - Flood Risk and Surface Water Drainage Technical Note; - Highways and Transport Technical Note; - Heritage Technical Note; It is not the intention of these Representations to repeat information previously provided, rather to respond to the key changes proposed by this latest consultation. These representations are supported by the following documents, which provide further</p>				

technical information demonstrating the capability of the Proposed Allocation to deliver at least 300 dwellings, of which around 140 dwellings can be provided on the Site: - Land off the A363 at White Horse Business Park Vision Document, prepared by Turley (November 2018) - Ecology Technical Note (November 2018), prepared by Nicholas Pearson Associates. The Ecology Technical Note discusses the ecological considerations which have informed the masterplan, and demonstrates that there are no ecological considerations which do not preclude development of the Site for approximately 140 dwellings, including the need for buffers to be retained as dark corridors. WHSAP Proposed Changes. With respect to the document EXAM0101 Schedule of Proposed Changes (September 2018), the key changes related to the Proposed Allocation are as follows: - PC59 - Amend the boundary of the allocation as set out in Annex C; And first sentence of paragraph 5.52 to read: "Approximately 25.62 18.96 ha of land off the A363 southwest of the White Horse Business Park is allocated for the development" - PC60 - Amend first sentence of paragraph 5.52 as follows: "land off the A363 south-west of the White Horse Business Park is allocated for the development of approximately 150 225 175 dwellings, as identified on the Policies Map." We do wish to object to PC60. This reduction in dwelling numbers is unjustified, and indeed the allocation quantum should be increased to "at least 300 dwellings", based on the technical evidence and other considerations, such as Trowbridge's identified shortfall. The Representation will set out the justification for this. We note that the Council's evidence base has been updated in respect of: - Wiltshire Housing Site Allocations Plan Sustainability Appraisal Revised September 2018 (EXAM/02A, EXAM/02A.1, EXAM/02B and EXAM/02C); - Update to the Wiltshire Housing Site Allocations Pre-Submission Draft (June 2017) Assessment under the Habitats Regulations Assessment Addendum (September 2018) (EXAM/03); - Wiltshire Housing Site Allocations Plan Community Area Topic Paper Trowbridge (July 2018 Submission version - updated September 2018) (CATP/17a); The Community Area Topic Paper Trowbridge has been amended in relation to site ref. 298 (The Proposed Allocation). The amendments are as follows: Whilst this site is not without constraint (including potential effects on protected bat species and the significance of heritage assets), these can be mitigated through on-site measures. To address these matters as a result in any development scheme on the allocation would not involve the whole SHLAA site option but would nonetheless need to deliver all necessary mitigation. Therefore, the potential dwelling capacity stated in the SHLAA/SHELAA would be reduced to approximately 150 175 dwellings (para 5.24, pg 22). This amendment is not supported by the technical information submitted with our previous representations nor the ecology technical note accompanying this Representation. As set out above, the ecological technical note concludes there are no ecological considerations which preclude development of the Site alone for approximately 140 dwellings, including the need for buffers to be retained as dark corridors in respect of the protected bat species. In relation to heritage assets, there are no listed buildings on the Site itself and the Masterplan identifies that appropriate provision can be made for the setting of listed buildings in the vicinity whilst providing c.140 units on the Site, with the remainder of the c.300 units to be provided on the remaining parts of the Proposed Allocation. It should also be noted that the Community Area Topic Paper has also been amended in relation to the immediately adjacent Elm Grove Farm Proposed Allocation. Ecology (protected bat species) and heritage assets are again raised as a potential constraint, however conversely for this site the amendment concludes that these matters can be mitigated through on-site measures and the site's capacity increased. No clear explanation appears to have been provided for the different approach between the sites. It is noted that some of the documents which our previous representations and technical documents commented on, such as the Wiltshire Housing Site Allocations draft plan - Stage 4a Site Landscape Assessment Part 2 (June 2017) (WHSAP/20), have not been updated for the purposes of this consultation. We do not seek to repeat comments previously made in relation to these documents, and would refer you to our previous Representations. In respect of technical considerations we note that the only amendment to the Council's Sustainability Assessment in respect of Proposed Allocation H2.2 (site ref. 298) is in respect of heritage considerations: The Grade II Listed Kings Farmhouse (and its setting), Willow Grove, monuments and gateway to former Baptist Church and Little Common Farm are situated within the site area, and important heritage farmsteads are situated to the north and south of the site. A detailed heritage assessment (building upon the high-level Heritage Impact Assessment prepared by the Council) would be required to support any subsequent planning application. A Heritage Impact Assessment would be required. Archaeological potential of the site is medium and therefore archaeological assessment would be required (SA

Obj. 6). We can confirm that we have no objections to this amended text. It is acknowledged that heritage will be an important consideration for the Proposed Allocation, albeit of less significance to the Site given the location of the Listed Buildings, outwith the Castlewood land interests.

**Background to Allocation** By way of background, the site was submitted to the SHLAA and was assessed under site reference 298. The site passed stage 4a with a stated capacity of 338 dwellings and was progressed as a 'preferred site', however the stated capacity was reduced to 150 dwellings (WHSAP Trowbridge Community Area Topic Paper July 2018, page 18). The assessment of site options (Appendix G) explains this reduction stating "mitigation measures required to address effects on heritage assets, ecology and landscape would result in a reduction to the developable area of the site and a potential reduction in dwelling capacity." (WHSAP Trowbridge Community Area Topic Paper July 2018, page 97). This resulted in the Pre-Submission Draft WHSAP (September 2017) consultation including the site as an allocation for "approximately 150 dwellings" under site reference H2.2. The pre-submission draft was subject to a period of public consultation and subsequent to this consultation, the Council proposed to increase the capacity of the site. This amendment to proposed allocation H2.2 was originally set out in the Council's Cabinet Papers of 15th May 2018, which refer to a capacity increase from approximately 150 to 300 dwellings (Council's Cabinet Papers of 15th May 2018, pages 294, 365). [It is noted that there are inconsistencies in the Council's Cabinet Papers of 15th May 2018, as there is also reference to an increase to 225 dwellings.] This demonstrates that the Council consider that a capacity of approximately 300 dwellings was appropriate for the H2.2 allocation site. The WHSAP was subsequently deferred from consideration at the 15th May 2018 Cabinet meeting to be heard at the 3rd July 2018 Cabinet instead. It is understood this was to allow further consultation on the proposed changes with Wiltshire Councillors and town and parish councils (Minutes of 3rd July 2018 Cabinet, paragraph 257). For the Cabinet Papers of 3rd July 2018, the Council prepared an Addendum following the deferral of the item from Cabinet of 15 May 2018. This Addendum refers to a smaller capacity increase for allocation H2.2 from approximately 150 to 225 dwellings.. At the 3rd July 2018 Cabinet, Cllr Sturgis proposed further changes to the in response to the housing numbers on the Allocation site, understood to be in response to consultation with Wiltshire Councillors and town and parish councils. The following change was proposed: (c) Amend Proposed Change 39 (site allocation H2.2, land off the A363 at White Horse Business Park, Trowbridge) to reduce the proposed dwelling increase by 50 dwellings This proposed change had the effect of reducing the capacity increase further from approximately 150 to 175 dwellings. The minutes of the 3rd July 2018 Cabinet meeting provide further insight into Member's justification for this change: In justifying the further proposed changes, Cllr Sturgis referred to the addendum, and provided clarification as follows ... the reduction in the increase in housing numbers on site H2.2 would provide for landscape buffer for North Bradley. In response to concerns raised by David Feather that insufficient weight had been given to North Bradley's Neighbourhood Plan, Councillor Sturgis stated that other neighbourhood plans were further 'forward, and could therefore be given greater weight. Councillor Sturgis went on to say that: he hoped that the proposed amendments to the White Horse business park site would go some way to maintaining a gap between North Bradley and Trowbridge; and that Wiltshire Council would continue to work to support the North Bradley neighbourhood plan so that it would be better progressed by the time of the examination in public. The issue of alleged coalescence between the Trowbridge and North Bradley settlements is therefore identified to be one of the key issues from the Council's perspective relating to the Proposed Allocation's capacity. It is noted that the Community Area Topic Paper raises concerns regarding ecological (bat species) and heritage constraints, which would require mitigation in order to be satisfactorily addressed. We dispute the Council's concerns regarding the perceived coalescence of Trowbridge and North Bradley, and the limit on capacity created by the ecological and heritage constraints. For the reasons we will set out below we consider the Council's approach to reducing the overall dwelling capacity on site H2.2 to be unsound. The capacity of proposed allocation H2.2 should be reinstated as approximately 300 dwellings, as per the previous view of Planning Officers. Representations We fervently disagree with the Council's position, that the Proposed Allocation is only capable of accommodating approximately 175 dwellings, in order to maintain a gap between the North Bradley and Trowbridge settlements, and provide appropriate mitigation. Our evidence base (and supported by the representations prepared by Linden Homes in relation to a separate parcel of the Allocation Site) supports a higher capacity. Crucially, the Council's own evidence base supports a higher capacity. For example, the WSHAP Stage 4a Site Landscape Assessment

concludes that the capacity of the Site to accommodate change is described as 'moderate-high', This is discussed further below. We feel that the Proposed Allocation is capable of accommodating at least 300 dwellings, without causing issues of coalescence with the North Bradley settlement. Specifically to these Representations, we feel that the Site (the northern parcel of land defined in the accompanying Vision Document) is capable of accommodating approximately 140 dwellings, again without causing issues of coalescence and provide adequate mitigation. This is now considered in full.

**Background on Relationship to Trowbridge** The Site is in close proximity to the existing settlement boundary of Trowbridge to the north (as defined by the Core Strategy 2015, fig 1), less than 50m to the south of the existing boundary. As part of the WHSAP, the Council are undertaking a settlement boundary review (WHSAP Topic Paper 1 Settlement Boundary Review Methodology, refers). This Topic Paper concludes that the White Horse Business Park to the east of the site meets the methodology for being included within the settlement. [MAP INSERT] Accordingly the Draft WHSAP proposes to include White Horse Business Park within the settlement boundary (fig 2). As a result, in addition to being in close proximity to the existing settlement boundary of Trowbridge to the north, the Site also abuts the proposed settlement boundary of Trowbridge - in its extended form - to the east (as defined by the Draft WHSAP, fig 2). The Site therefore relates well to the Trowbridge settlement and in combination with proposed housing allocation 'Elm Grove Farm', would enhance connectivity between the existing Trowbridge settlement and the established White Horse Business Park. Indeed delivery of residential development on the Allocation Site would bridge the separation between the business park and the wider settlement. The potential of the Allocation Site and the adjacent Elm Grove Farm allocation to be successfully integrated into existing and planned developments in the area, while maintaining a defensible buffer to North Bradley is recognised in the Trowbridge Community Area Topic Paper. The relationship between White Horse Business Park, the Proposed Allocation (ref 298) to the SW and proposed allocation 'Elm Grove Farm' (ref 613/248) to the SE is demonstrated in fig 2. The Site is ideally placed to provide improvements to walking and cycling routes through to the town, and the proposed masterplan shows how these improved linkages can be delivered as part of a residential development. The Proposed Allocation would therefore provide a cohesive and logical extension to Trowbridge. It should be noted that the Site would be directly connected to the settlement to the north and east, and would very much look to the north and Trowbridge in terms of connectivity and access to facilities. [MAP INSERT]

**Landscape Evidence and Design Solution** The previous Representations submitted to the Council on behalf of Castlewood in February 2018 provide the Council with an indicative illustrative layout and a Landscape and Visual Appraisal which concludes that there are no significant constraints to the delivery of residential units on the site. The LVA concludes that visually, the Site is relatively well contained on account of the existing hedgerow structure, generally flat topography, the surrounding mature tree belts and surrounding development. The visibility of the site is limited to occasional short distance views from immediate visual receptors. In the wider surrounding landscape, the cumulative effect of field boundary hedgerows and the flat low lying topography provide visual containment. Although, the site is likely to be glimpsed from raised land to the southeast, the intervening distance will prevent its features being discernible. The Site therefore has low visual prominence. There are strong landscape buffers on the edge of North Bradley and the development provides opportunities to reinforce existing landscape features. This will lead to a softening of views towards Trowbridge from North Bradley, especially as the existing settlement edge of Trowbridge is defined by commercial development and the proposed development will provide a softer, more permanent edge. The LVA acknowledges that whilst there would be some physical reduction in the separation between Trowbridge and North Bradley as a result of the Proposed Allocation, the visual effects could be minimised and mitigated. The proposed Masterplan provided in the accompanying Vision Document incorporates such mitigation measures, including:

- The LVA acknowledges that a visual break is experienced between the settlements of Trowbridge and North Bradley when travelling along Woodmarsh. Accordingly the masterplan has not identified development in those areas most significant to the perceived visual separation between North Bradley and Trowbridge, as informed by the LVA. This preserves the setting of North Bradley village and its integrity.
- The northern development parcel is set back considerably from Woodmarsh to reinforce the visual separation from North Bradley and it is proposed that the development in this area will generally be of lower density so as to set the proposed development within a landscape context and that the built form is more visually connected to the south of Trowbridge and visually buffer the scheme from North Bradley.
- The proposed

masterplan proposes to implement significant new planting along the south-western boundary, in addition to significant existing planting to reinforce the visual separation between the proposed development and North Bradley. The LVA confirms that the development of the site could be achieved without resulting in significant landscape and/or visual impacts (in relation to the receptors identified in the LVA including the A363, Woodmarsh and residential properties on the eastern edge of North Bradley). In addition, the findings of the Council's own evidence base are significant. The WHSAP Stage 4a Site Landscape Assessment (June 2017) concludes that the overall magnitude of effect on views if the site were to be developed is identified as 'low adverse'. The capacity of Site 298 to accommodate change is described as 'moderate-high'. It is considered, therefore, that the site should be allocated for a much higher number of dwellings given the sustainable location and absence of any constraints which cannot be mitigated against. The overall effect will be to proportionately increase the quantum of market and affordable dwellings, which can be achieved through the Proposed Allocation, whilst simultaneously protecting the integrity of North Bradley as a village. Indeed, the opportunity to achieve a comprehensive design will provide greater opportunities for more meaningful green infrastructure provision, landscaping and open space. In summary, we contend that delivery of approximately 300 dwellings on the Proposed Allocation would not lead to unacceptable coalescence between Trowbridge and North Bradley. Residential development on the site would link, both visually and physically, primarily with Trowbridge and the adjacent White Horse Business Park, which is proposed in the WHSAP to form part of the Trowbridge settlement boundary. As demonstrated in the accompanying Vision Document, development on the site would be sensitively designed with the incorporation of new or strengthened landscape buffers and careful siting of built form to protect visual separation between the two settlements. Utilising the approach set out in the Vision Document, the Site could accommodate c. 140 units, as part of a wider 300 unit allocation.

**Housing Need** As a Principal Settlement, Trowbridge is a primary focus for development. Moreover, the role of the town as a significant employment and strategic service centre will be expected to be strengthened over the Plan period up to 2026 and beyond. There are, however, severe constraints to the growth of Trowbridge. In particular, with Green Belt and Flood Zone designations to the north and west of Trowbridge (Fig 3), opportunities to expand Trowbridge in order to accommodate the identified housing need are limited. In proposing the allocation of this site, the Council identified that "development of the site for housing would contribute to the area strategy for the town by boosting the supply of homes to help meet indicative requirements" [MAP INSERT] In the context of Trowbridge being a focus for growth and taking a large proportion of housing need, we wish to comment on PC25, which is a factual update to reflect the latest published Housing Land Supply Statement (March 2018) and to reflect PCSS, PC60, PC64 and PC70 that propose higher densities on site allocations to make best use of land. PC25 relates to the following amended paragraph: "Unlike Chippenham however, allocations made by the Plan will not be sufficient to ensure that housing provision meets indicative requirements. Six new site allocations provide land for approximately 800 1,050 dwellings and have the potential to increase their capacity to make the best use of land. Nevertheless, housing development at Trowbridge will fall short of the WCS indicative level of 6,810 dwellings by around 1,220 1,297 ." In addition, related to the Trowbridge Community Area, the Council's Housing Land Supply Statement Addendum July 2018 Submission Version (ref: TOP/03C) indicates there is still an indicative residual requirement for the remainder of the Trowbridge Community Area of at least 2,230 dwellings during the remainder of the Plan period up to 2026. As things stand therefore the Council are not

National planning policy is clear that the Council must look at its residential allocations beyond five years to ensure there is a consistent pipeline for bringing forward new residential development. The Council, despite the amendments, acknowledge that housing development at Trowbridge will fall short of the requirements. By failing to allocate sufficient quantum of new housing in the WHSAP, the Council is currently failing to fully meet its identified housing needs. The Plan has not therefore been positively prepared. To ensure a sound Plan, which is consistent with national planning policy, it is essential that either: a) additional sites are identified and allocated; or b) greater quantum of housing is allocated on existing/ proposed allocations. In relation to option a), as set out above Trowbridge lacks genuine, alternative options to extend the settlement due to constraints, including Green Belt designations and Flood Zone primarily to the north and west. Consideration should therefore be given to intensify allocations proposed by the WHSAP, where technical constraints do not preclude this. As has been demonstrated by these Representations, and in those previously submitted, there are no technical constraints which preclude a

	<p>greater quantum of development than currently proposed in the WHSAP. Indeed, the Council have previously identified the potential of this site to accommodate c 300 dwellings, and the proposed reduction to 175 to accommodate ecology and heritage mitigation measures is unjustified. The technical work undertaken, and submitted to the Council during the WHSAP process demonstrate that the Proposed Allocation is capable of accommodating at least 300 dwellings with the incorporation of necessary mitigation measures. The sustainability appraisal undertaken by the Council identify the Proposed Allocation as a 'more sustainable' site. As such, priority should be maximising the housing numbers on this site in the first instance to address the outstanding house requirement, rather than looking towards 'less sustainable sites. Conclusion In summary, it is contended that proposed modification PC60 (and its consequential changes) to the WHSAP render the document unsound and contrary to paragraph 182 of the NPPF (2012). The proposed modification is inconsistent with the technical information provided to the Council, and the Council's own evidence base documents, with recognises the capability of the Proposed Allocation to accommodate a greater quantum of residential units whilst still maintaining appropriate separation between Trowbridge and North Bradley and providing adequate mitigation. The reduction in dwelling numbers for Proposed Allocation H2.2 does not represent positive preparation of the WHSAP. There is an identified housing need in the Trowbridge Community Area and the WHSAP as currently proposed does not meet the full requirement. It is recognised that mitigation will be required in relation to heritage and ecology matters, however the technical work undertaken has identified that appropriate mitigation can be accommodated with a greater quantum of dwellings than 175. Indeed, the accompanying Vision Document relating specially to our client's interests on the north parcel, identifies around 140 dwellings can be appropriately accommodated on that part of the allocation alone. In order to remedy this and make the WHSAP sound, we request that the capacity of the Proposed Allocation H2.2 is reinstated as "at least 300 dwellings", and consequential changes subsequently amended. Specifically to these Representations, we request that recognition is given to the capability of the Site to accommodating approximately 140 dwellings as part of the H2.2 allocation. In order to effectively put this case before the Inspector and address any questions they may have and to also rebuff any argument the Council may make for proceeding with proposed modification PC60 and its consequential changes we consider it necessary to attend the Examination Hearings in a speaking capacity. For reference, we append a full set of additional details as follows. These reports and drawings concern the proposed development of the Site and provide information regarding constraints: Vision Document Ecology Technical Note Flood Risk &amp; Drainage Technical Note Heritage Technical Note Highways Technical Note Landscape and Visual Appraisal</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>Introduction On behalf of our client, Castlewood Properties Ventures Ltd. (hereafter referred to 'Castlewood'), we write to provide representations to the "Focussed consultation on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan" (WHSAP). We are responding to this consultation in respect of our client's land interest at Land off the A363 at White Horse Business Park Trowbridge, which is proposed allocation H2.2 in the Wiltshire Housing Site Allocations Plan (WHSAP). Castlewood are local developers who can provide greater certainty of delivery, and have a strong track record in delivering development in Wiltshire. We comment specifically in respect of the proposed amendments relating to proposed allocation H2.2, namely PC59 and PC60 and their consequential changes (PC13, PC15, PC17, PC21, PC22, PC25, PC51, PC56). In summary, these proposed amendments seek to reduce the capacity of proposed allocation H2.2 to 'approximately 175 dwellings'. This follows a decision by the Council's Cabinet, relating to perceived coalescence between the proposed allocation site and the village of North Bradley. We consider this in detail in these Representations. These Representations should be viewed alongside the 'Land off the A363 at White Horse Business Park' Vision Document prepared by Tur1ey (November 2018). These Representations should also be read in combination with those from parties who also have an interest in the H2.2 site, on land to the south of Castlewood's parcel.</p> <p>Proposed H2.2 Allocation The Proposed Allocation site H2.2 comprises 18.96ha and extends from Bradley Road at the north to Westbury Road at the south. There are several land interests relating to Proposed Allocation H2.2. Castlewood's interests relate to a 8.37ha parcel at the northern end of the allocation site, closest to the Trowbridge settlement. This northern parcel of land (hereafter referred to 'The Site') is identified in the accompanying Vision Document, The Site fronts onto A363 where the proposed access is to the residential development is to be secured. Trowbridge is a Principal Settlement, situated within the Trowbridge Community Area and located in the North and West Wiltshire Housing Market Area (HMA). Therefore the scope of these representations is focused on the proposed strategy for the North and West Wiltshire HMA, the Trowbridge Community Area and Trowbridge specifically. Previous Representations on behalf of Castlewood were submitted to the Council in September 2017, in response to the WHSAP Pre-Submission consultation, and in February 2018 to provide the Council with an indicative illustrative layout. The following technical reports were all submitted in February 2018 to demonstrate that there are no significant constraints to delivery of residential development in the site: - Baseline Landscape and Visual Appraisal (referred to hereafter as LVA); LVIA Constraints and Opportunities Plan - Flood Risk and Surface Water Drainage Technical Note; - Highways and Transport Technical Note; - Heritage Technical Note; It is not the intention of these Representations to repeat information previously provided, rather to respond to the key changes proposed by this latest consultation. These representations are supported by the following documents, which provide further</p>				

technical information demonstrating the capability of the Proposed Allocation to deliver at least 300 dwellings, of which around 140 dwellings can be provided on the Site: - Land off the A363 at White Horse Business Park Vision Document, prepared by Turley (November 2018) - Ecology Technical Note (November 2018), prepared by Nicholas Pearson Associates. The Ecology Technical Note discusses the ecological considerations which have informed the masterplan, and demonstrates that there are no ecological considerations which do not preclude development of the Site for approximately 140 dwellings, including the need for buffers to be retained as dark corridors. WHSAP Proposed Changes. With respect to the document EXAM0101 Schedule of Proposed Changes (September 2018), the key changes related to the Proposed Allocation are as follows: - PC59 - Amend the boundary of the allocation as set out in Annex C; And first sentence of paragraph 5.52 to read: "Approximately 25.62 18.96 ha of land off the A363 southwest of the White Horse Business Park is allocated for the development" - PC60 - Amend first sentence of paragraph 5.52 as follows: "land off the A363 south-west of the White Horse Business Park is allocated for the development of approximately 150 225 175 dwellings, as identified on the Policies Map." We do wish to object to PC60. This reduction in dwelling numbers is unjustified, and indeed the allocation quantum should be increased to "at least 300 dwellings", based on the technical evidence and other considerations, such as Trowbridge's identified shortfall. The Representation will set out the justification for this. We note that the Council's evidence base has been updated in respect of: - Wiltshire Housing Site Allocations Plan Sustainability Appraisal Revised September 2018 (EXAM/02A, EXAM/02A.1, EXAM/02B and EXAM/02C); - Update to the Wiltshire Housing Site Allocations Pre-Submission Draft (June 2017) Assessment under the Habitats Regulations Assessment Addendum (September 2018) (EXAM/03); - Wiltshire Housing Site Allocations Plan Community Area Topic Paper Trowbridge (July 2018 Submission version - updated September 2018) (CATP/17a); The Community Area Topic Paper Trowbridge has been amended in relation to site ref. 298 (The Proposed Allocation). The amendments are as follows: Whilst this site is not without constraint (including potential effects on protected bat species and the significance of heritage assets), these can be mitigated through on-site measures. To address these matters as a result in any development scheme on the allocation would not involve the whole SHLAA site option but would nonetheless need to deliver all necessary mitigation. Therefore, the potential dwelling capacity stated in the SHLAA/SHELAA would be reduced to approximately 150 175 dwellings (para 5.24, pg 22). This amendment is not supported by the technical information submitted with our previous representations nor the ecology technical note accompanying this Representation. As set out above, the ecological technical note concludes there are no ecological considerations which preclude development of the Site alone for approximately 140 dwellings, including the need for buffers to be retained as dark corridors in respect of the protected bat species. In relation to heritage assets, there are no listed buildings on the Site itself and the Masterplan identifies that appropriate provision can be made for the setting of listed buildings in the vicinity whilst providing c.140 units on the Site, with the remainder of the c.300 units to be provided on the remaining parts of the Proposed Allocation. It should also be noted that the Community Area Topic Paper has also been amended in relation to the immediately adjacent Elm Grove Farm Proposed Allocation. Ecology (protected bat species) and heritage assets are again raised as a potential constraint, however conversely for this site the amendment concludes that these matters can be mitigated through on-site measures and the site's capacity increased. No clear explanation appears to have been provided for the different approach between the sites. It is noted that some of the documents which our previous representations and technical documents commented on, such as the Wiltshire Housing Site Allocations draft plan - Stage 4a Site Landscape Assessment Part 2 (June 2017) (WHSAP/20), have not been updated for the purposes of this consultation. We do not seek to repeat comments previously made in relation to these documents, and would refer you to our previous Representations. In respect of technical considerations we note that the only amendment to the Council's Sustainability Assessment in respect of Proposed Allocation H2.2 (site ref. 298) is in respect of heritage considerations: The Grade II Listed Kings Farmhouse (and its setting), Willow Grove, monuments and gateway to former Baptist Church and Little Common Farm are situated within the site area, and important heritage farmsteads are situated to the north and south of the site. A detailed heritage assessment (building upon the high-level Heritage Impact Assessment prepared by the Council) would be required to support any subsequent planning application. A Heritage Impact Assessment would be required. Archaeological potential of the site is

medium and therefore archaeological assessment would be required (SA Obj. 6). We can confirm that we have no objections to this amended text. It is acknowledged that heritage will be an important consideration for the Proposed Allocation, albeit of less significance to the Site given the location of the Listed Buildings, outwith the Castlewood land interests.

**Background to Allocation** By way of background, the site was submitted to the SHLAA and was assessed under site reference 298. The site passed stage 4a with a stated capacity of 338 dwellings and was progressed as a 'preferred site', however the stated capacity was reduced to 150 dwellings (WHSAP Trowbridge Community Area Topic Paper July 2018, page 18). The assessment of site options (Appendix G) explains this reduction stating "mitigation measures required to address effects on heritage assets, ecology and landscape would result in a reduction to the developable area of the site and a potential reduction in dwelling capacity." (WHSAP Trowbridge Community Area Topic Paper July 2018, page 97). This resulted in the Pre-Submission Draft WHSAP (September 2017) consultation including the site as an allocation for "approximately 150 dwellings" under site reference H2.2. The pre-submission draft was subject to a period of public consultation and subsequent to this consultation, the Council proposed to increase the capacity of the site. This amendment to proposed allocation H2.2 was originally set out in the Council's Cabinet Papers of 15th May 2018, which refer to a capacity increase from approximately 150 to 300 dwellings (Council's Cabinet Papers of 15th May 2018, pages 294, 365). [It is noted that there are inconsistencies in the Council's Cabinet Papers of 15th May 2018, as there is also reference to an increase to 225 dwellings.] This demonstrates that the Council consider that a capacity of approximately 300 dwellings was appropriate for the H2.2 allocation site. The WHSAP was subsequently deferred from consideration at the 15th May 2018 Cabinet meeting to be heard at the 3rd July 2018 Cabinet instead. It is understood this was to allow further consultation on the proposed changes with Wiltshire Councillors and town and parish councils (Minutes of 3rd July 2018 Cabinet, paragraph 257). For the Cabinet Papers of 3rd July 2018, the Council prepared an Addendum following the deferral of the item from Cabinet of 15 May 2018. This Addendum refers to a smaller capacity increase for allocation H2.2 from approximately 150 to 225 dwellings.. At the 3rd July 2018 Cabinet, Cllr Sturgis proposed further changes to the in response to the housing numbers on the Allocation site, understood to be in response to consultation with Wiltshire Councillors and town and parish councils. The following change was proposed:

(c) Amend Proposed Change 39 (site allocation H2.2, land off the A363 at White Horse Business Park, Trowbridge) to reduce the proposed dwelling increase by 50 dwellings This proposed change had the effect of reducing the capacity increase further from approximately 150 to 175 dwellings. The minutes of the 3rd July 2018 Cabinet meeting provide further insight into Member's justification for this change: In justifying the further proposed changes, Cllr Sturgis referred to the addendum, and provided clarification as follows ... the reduction in the increase in housing numbers on site H2.2 would provide for landscape buffer for North Bradley. In response to concerns raised by David Feather that insufficient weight had been given to North Bradley's Neighbourhood Plan, Councillor Sturgis stated that other neighbourhood plans were further 'forward, and could therefore be given greater weight. Councillor Sturgis went on to say that: he hoped that the proposed amendments to the White Horse business park site would go some way to maintaining a gap between North Bradley and Trowbridge; and that Wiltshire Council would continue to work to support the North Bradley neighbourhood plan so that it would be better progressed by the time of the examination in public. The issue of alleged coalescence between the Trowbridge and North Bradley settlements is therefore identified to be one of the key issues from the Council's perspective relating to the Proposed Allocation's capacity. It is noted that the Community Area Topic Paper raises concerns regarding ecological (bat species) and heritage constraints, which would require mitigation in order to be satisfactorily addressed. We dispute the Council's concerns regarding the perceived coalescence of Trowbridge and North Bradley, and the limit on capacity created by the ecological and heritage constraints. For the reasons we will set out below we consider the Council's approach to reducing the overall dwelling capacity on site H2.2 to be unsound. The capacity of proposed allocation H2.2 should be reinstated as approximately 300 dwellings, as per the previous view of Planning Officers .

**Representations** We fervently disagree with the Council's position, that the Proposed Allocation is only capable of accommodating approximately 175 dwellings, in order to maintain a gap between the North Bradley and Trowbridge settlements, and provide appropriate mitigation. Our evidence base (and supported by the representations prepared by Linden Homes in relation to a separate parcel of the Allocation Site) supports a higher capacity. Crucially, the Council's own evidence base supports a higher capacity. For example, the WSHAP

Stage 4a Site Landscape Assessment concludes that the capacity of the Site to accommodate change is described as 'moderate-high', This is discussed further below. We feel that the Proposed Allocation is capable of accommodating at least 300 dwellings, without causing issues of coalescence with the North Bradley settlement. Specifically to these Representations, we feel that the Site (the northern parcel of land defined in the accompanying Vision Document) is capable of accommodating approximately 140 dwellings, again without causing issues of coalescence and provide adequate mitigation. This is now considered in full.

**Background on Relationship to Trowbridge** The Site is in close proximity to the existing settlement boundary of Trowbridge to the north (as defined by the Core Strategy 2015, fig 1), less than 50m to the south of the existing boundary. As part of the WHSAP, the Council are undertaking a settlement boundary review (WHSAP Topic Paper 1 Settlement Boundary Review Methodology, refers). This Topic Paper concludes that the White Horse Business Park to the east of the site meets the methodology for being included within the settlement. [MAP INSERT] Accordingly the Draft WHSAP proposes to include White Horse Business Park within the settlement boundary (fig 2). As a result, in addition to being in close proximity to the existing settlement boundary of Trowbridge to the north, the Site also abuts the proposed settlement boundary of Trowbridge - in its extended form - to the east (as defined by the Draft WHSAP, fig 2). The Site therefore relates well to the Trowbridge settlement and in combination with proposed housing allocation 'Elm Grove Farm', would enhance connectivity between the existing Trowbridge settlement and the established White Horse Business Park. Indeed delivery of residential development on the Allocation Site would bridge the separation between the business park and the wider settlement. The potential of the Allocation Site and the adjacent Elm Grove Farm allocation to be successfully integrated into existing and planned developments in the area, while maintaining a defensible buffer to North Bradley is recognised in the Trowbridge Community Area Topic Paper. The relationship between White Horse Business Park, the Proposed Allocation (ref 298) to the SW and proposed allocation 'Elm Grove Farm' (ref 613/248) to the SE is demonstrated in fig 2. The Site is ideally placed to provide improvements to walking and cycling routes through to the town, and the proposed masterplan shows how these improved linkages can be delivered as part of a residential development. The Proposed Allocation would therefore provide a cohesive and logical extension to Trowbridge. It should be noted that the Site would be directly connected to the settlement to the north and east, and would very much look to the north and Trowbridge in terms of connectivity and access to facilities.

**[MAP INSERT] Landscape Evidence and Design Solution** The previous Representations submitted to the Council on behalf of Castlewood in February 2018 provide the Council with an indicative illustrative layout and a Landscape and Visual Appraisal which concludes that there are no significant constraints to the delivery of residential units on the site. The LVA concludes that visually, the Site is relatively well contained on account of the existing hedgerow structure, generally flat topography, the surrounding mature tree belts and surrounding development. The visibility of the site is limited to occasional short distance views from immediate visual receptors. In the wider surrounding landscape, the cumulative effect of field boundary hedgerows and the flat low lying topography provide visual containment. Although, the site is likely to be glimpsed from raised land to the southeast, the intervening distance will prevent its features being discernible. The Site therefore has low visual prominence. There are strong landscape buffers on the edge of North Bradley and the development provides opportunities to reinforce existing landscape features. This will lead to a softening of views towards Trowbridge from North Bradley, especially as the existing settlement edge of Trowbridge is defined by commercial development and the proposed development will provide a softer, more permanent edge. The LVA acknowledges that whilst there would be some physical reduction in the separation between Trowbridge and North Bradley as a result of the Proposed Allocation, the visual effects could be minimised and mitigated. The proposed Masterplan provided in the accompanying Vision Document incorporates such mitigation measures, including:

- The LVA acknowledges that a visual break is experienced between the settlements of Trowbridge and North Bradley when travelling along Woodmarsh. Accordingly the masterplan has not identified development in those areas most significant to the perceived visual separation between North Bradley and Trowbridge, as informed by the LVA. This preserves the setting of North Bradley village and its integrity.
- The northern development parcel is set back considerably from Woodmarsh to reinforce the visual separation from North Bradley and it is proposed that the development in this area will generally be of lower density so as to set the proposed development within a landscape context and that the built form is more visually connected to the south of Trowbridge and visually

buffer the scheme from North Bradley. - The proposed masterplan proposes to implement significant new planting along the south-western boundary, in addition to significant existing planting to reinforce the visual separation between the proposed development and North Bradley. The LVA confirms that the development of the site could be achieved without resulting in significant landscape and/or visual impacts (in relation to the receptors identified in the LVA including the A363, Woodmarsh and residential properties on the eastern edge of North Bradley). In addition, the findings of the Council's own evidence base are significant. The WHSAP Stage 4a Site Landscape Assessment (June 2017) concludes that the overall magnitude of effect on views if the site were to be developed is identified as 'low adverse'. The capacity of Site 298 to accommodate change is described as 'moderate-high'. It is considered, therefore, that the site should be allocated for a much higher number of dwellings given the sustainable location and absence of any constraints which cannot be mitigated against. The overall effect will be to proportionately increase the quantum of market and affordable dwellings, which can be achieved through the Proposed Allocation, whilst simultaneously protecting the integrity of North Bradley as a village. Indeed, the opportunity to achieve a comprehensive design will provide greater opportunities for more meaningful green infrastructure provision, landscaping and open space. In summary, we contend that delivery of approximately 300 dwellings on the Proposed Allocation would not lead to unacceptable coalescence between Trowbridge and North Bradley. Residential development on the site would link, both visually and physically, primarily with Trowbridge and the adjacent White Horse Business Park, which is proposed in the WHSAP to form part of the Trowbridge settlement boundary. As demonstrated in the accompanying Vision Document, development on the site would be sensitively designed with the incorporation of new or strengthened landscape buffers and careful siting of built form to protect visual separation between the two settlements. Utilising the approach set out in the Vision Document, the Site could accommodate c. 140 units, as part of a wider 300 unit allocation.

**Housing Need** As a Principal Settlement, Trowbridge is a primary focus for development. Moreover, the role of the town as a significant employment and strategic service centre will be expected to be strengthened over the Plan period up to 2026 and beyond. There are, however, severe constraints to the growth of Trowbridge. In particular, with Green Belt and Flood Zone designations to the north and west of Trowbridge (Fig 3), opportunities to expand Trowbridge in order to accommodate the identified housing need are limited. In proposing the allocation of this site, the Council identified that development of the site for housing would contribute to the area strategy for the town by boosting the supply of homes to help meet indicative requirements" [MAP INSERT] In the context of Trowbridge being a focus for growth and taking a large proportion of housing need, we wish to comment on PC25, which is a factual update to reflect the latest published Housing Land Supply Statement (March 2018) and to reflect PC55, PC60, PC64 and PC70 that propose higher densities on site allocations to make best use of land. PC25 relates to the following amended paragraph: Unlike Chippenham however, allocations made by the Plan will not be sufficient to ensure that housing provision meets indicative requirements. Six new site allocations provide land for approximately 800 1,050 dwellings and have the potential to increase their capacity to make the best use of land. Nevertheless, housing development at Trowbridge will fall short of the WCS indicative level of 6,810 dwellings by around 1,220 1,297."

In addition, related to the Trowbridge Community Area, the Council's Housing Land Supply Statement Addendum July 2018 Submission Version (ref: TOP/03C) indicates there is still an indicative residual requirement for the remainder of the Trowbridge Community Area of at least 2,230 dwellings during the remainder of the Plan period up to 2026. As things stand therefore the Council are not National planning policy is clear that the Council must look at its residential allocations beyond five years to ensure there is a consistent pipeline for bringing forward new residential development. The Council, despite the amendments, acknowledge that housing development at Trowbridge will fall short of the requirements. By failing to allocating sufficient quantum of new housing in the WHSAP, the Council is currently failing to fully meet its identified housing needs. The Plan has not therefore been positively prepared. To ensure a sound Plan, which is consistent with national planning policy, it is essential that either: a) additional site are identified and allocated; or b) greater quantum of housing is allocated on existing/ proposed allocations. In relation to option a), as set out above Trowbridge lacks genuine, alternative options to extend the settlement due to constraints, including Green Belt designations and Flood Zone primarily to the north and west. Consideration should therefore be given to intensify allocations proposed by the WHSAP, where technical constraints do not preclude this. As has been demonstrated by these Representations,

	<p>and in those previously submitted, there are no technical constraints which preclude a greater quantum of development than currently proposed in the WHSAP. Indeed, the Council have previously identified the potential of this site to accommodate c 300 dwellings, and the proposed reduction to 175 to accommodate ecology and heritage mitigation measures is unjustified. The technical work undertaken, and submitted to the Council during the WHSAP process demonstrate that the Proposed Allocation is capable of accommodating at least 300 dwellings with the incorporation of necessary mitigation measures. The sustainability appraisal undertaken by the Council identify the Proposed Allocation as a 'more sustainable' site. As such, priority should be maximising the housing numbers on this site in the first instance to address the outstanding house requirement, rather than looking towards 'less sustainable sites. Conclusion In summary, it is contended that proposed modification PC60 (and its consequential changes) to the WHSAP render the document unsound and contrary to paragraph 182 of the NPPF (2012). The proposed modification is inconsistent with the technical information provided to the Council, and the Council's own evidence base documents, which recognises the capability of the Proposed Allocation to accommodate a greater quantum of residential units whilst still maintaining appropriate separation between Trowbridge and North Bradley and providing adequate mitigation. The reduction in dwelling numbers for Proposed Allocation H2.2 does not represent positive preparation of the WHSAP. There is an identified housing need in the Trowbridge Community Area and the WHSAP as currently proposed does not meet the full requirement. It is recognised that mitigation will be required in relation to heritage and ecology matters, however the technical work undertaken has identified that appropriate mitigation can be accommodated with a greater quantum of dwellings than 175. Indeed, the accompanying Vision Document relating specially to our client's interests on the north parcel, identifies around 140 dwellings can be appropriately accommodated on that part of the allocation alone. In order to remedy this and make the WHSAP sound, we request that the capacity of the Proposed Allocation H2.2 is reinstated as "at least 300 dwellings", and consequential changes subsequently amended. Specifically to these Representations, we request that recognition is given to the capability of the Site to accommodating approximately 140 dwellings as part of the H2.2 allocation. In order to effectively put this case before the Inspector and address any questions they may have and to also rebuff any argument the Council may make for proceeding with proposed modification PC60 and its consequential changes we consider it necessary to attend the Examination Hearings in a speaking capacity. For reference, we append a full set of additional details as follows. These reports and drawings concern the proposed development of the Site and provide information regarding constraints: Vision Document Ecology Technical Note Flood Risk &amp; Drainage Technical Note Heritage Technical Note Highways Technical Note Landscape and Visual Appraisal</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	The proposed change to have this development removed from the WHSAP is therefore welcomed and I support it on the basis that: There is no Strategic Need for Wiltshire to allocate housing in Crudwell because supply in the Housing Market Area is good and the Wiltshire Core Strategy states that development in Large Villages should be limited to small sites to meet local needs. The Crudwell Neighbourhood Plan is progressing extremely well (Reg14 Consultation planned for November 2018 and Reg16 planned for early Spring) and will allocate land to meet identified needs. The Councils and Governments Localism agenda is best served by allowing the Parish to determine its own future. I trust that this and similar representations will result in PC92 going ahead and thank you for your consideration in this matter

<b>Identify Proposed Change Reference Number</b>	PC94				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations. Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement and across</p>			

	<p>Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy Bratton is a large enough village as it is. To build more houses outside the village boundary as proposed will change the nature and character of the village. They would put additional pressure on the facilities within the village. Access from the two sites would be unsafe into the centre of the village along already narrow and busy road.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations. Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement and across</p>			

	<p>Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. The number of proposed houses would mean small or no garden/green space. Modern houses are generally built with small, impractical sized rooms causing young people to have to entertain themselves outside - and if no garden, will impose them to seek entertainment in the few village spaces that there are. The sites are suitable for at most 1/2 the proposed dwellings. We need tasteful styled properties to be built in keeping with the existing village feel.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	Barton Willmore LLP previously submitted representations (September 2017) to the pre-submission draft of the Housing Sites Allocations DPD ('draft plan') on behalf of Marlborough College. These representations objected to the draft plan for the following reasons: 1. Relationship to the Neighbourhood Plan 2. Settlement Boundaries The College maintains an objection in respect of the first point. In short, the plan should make express provision and acknowledge that up to date local needs, including housing and social and community facilities, over and above the minimum requirements identified in the draft plan, should be identified and addressed through the neighbourhood plans and that such needs can be accommodated, where necessary, through further release of land. The College welcomes the revisions to the proposed changes to the Marlborough settlement boundary in respect of the College's land and the open space at College Fields. The College supports these changes. The objection in respect of the failure of the draft plan to recognise the role of neighbourhood plans and the relationship between the neighbourhood and draft plan remains. The draft plan therefore remains unsound. The proposed change meets a previous objection which I would now be willing to withdraw - OBJECTION MET IN PART (SEE ABOVE)

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations. Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement and across</p>			

	<p>Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. Why build houses that are not required, putting further pressure on an already stretched infrastructure.</p>

<b>Identify subject of representation</b>	Schedule of Proposed Changes - Consultation Document (September 2018) (EXAM/01)		<b>Do you consider the consultation material you are commenting on is unsound because it is not: Positively prepared; Justified; Effective; Consistent with national policy?</b>	(1) Positively prepared; Justified	
<b>Identify Proposed Change Reference Number</b>	PC64				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>INTRODUCTION 1.1 This statement is submitted on behalf of HGT Developments in response to the focused consultation on proposed changes and associated evidence to the Wiltshire Housing Site Allocations Plan. 1.2 HGT Developments LLP control the land edged red as shown on the enclosed plan ( APPENDIX 1 ). 1.3 Submissions have been made at previous consultations on the draft Allocations Plans and these submissions should be viewed in context of our previous comments. 1.4 An outline planning application has been submitted on the site. The illustrative masterplan submitted as part of the planning application indicatively shows how the site could be developed to deliver up to 170 residential units. The application was validated on 5 February 2016 and given the reference number 16/00672/OUT. 1.5 The outline planning application submission comprises: Cover letter; Planning Statement; Application Forms; Red Line Site Boundary Plan; Illustrative Masterplan; Concept Illustrative Masterplan; Illustrative Landscape Masterplan; Development Framework Plan; Design and Access Statement; Landscape and Visual Impact Assessment; Ecology Appraisal; Habitat Regulations Assessment; Transport Assessment; Tree Survey Assessment; Statement of Community Involvement; Heritage Statement; Archaeology Desk Based Assessment; Archaeology Evaluation; Flood Risk Assessment; Foul Drainage Statement; Utilities Report; Air Quality Assessment; Phase 1 Contamination and Drainage Report; Geotechnical Report; and Noise Impact Assessment. 1.6 The Wiltshire Site Allocations Plan allocates the site for residential development under reference H2.3 (Elizabeth Way). The site is part of a larger allocation site of 355 dwellings. 1.7 HGT are working together with the adjacent landowners which comprise the various landowners for the allocation namely Barratt Homes, Persimmon Homes and Wiltshire Council (as landowners) and Wiltshire Council to prepare a Statement of Common Ground to be submitted in advance of the Examination in Public or the Site Allocations Plan. It is anticipated that a joint Drainage Strategy for the entire allocation will be appended to the Statement of Common Ground. 1.8 The proposed allocation (proposed change ref: PC64) amends the numbers proposed for the allocation site (H2.3, Elizabeth Way, Trowbridge) to 355 dwellings. 1.9 The site at Elizabeth Way (SHLAA 263) has been identified for the allocation of 355 dwellings, which has increased since the Pre-Submission draft plan. The proposed increase to 355 dwellings is welcomed but is lower than what the site could sustainably deliver. This raises the issue of under-development of the site which, in combination with the required housing figures, highlights the fact that the current proposed allocation has not been positively prepared or justified. 1.10 As stated above the current planning application for the site is for 170 dwellings, the remainder of the allocation is in Barratt Homes control and it is understood from their technical assessments that their site can sustainably accommodate approximately 175 dwellings, in combination this would equate to 345 dwellings. In total it is considered that the entire site allocation area could accommodate approximately 450 dwellings. 1.11 This</p>				

allocation is generally supported by HGT Developments LL, however, in order to make the plan sound, the allocation for the land at Elizabeth Way should be increased significantly to properly reflect the true capacity of the site. This will ensure the most efficient use of the site and will ensure that the proposed allocation is positively prepared, effective, justified and consistent with National Policy. 1.12 The continued allocation of the land will: assist the Districts housing need, including a diversity of housing stock for both market and affordable housing; assist in the vitality and viability of small businesses and services within Trowbridge; deliver public open space; enhance the biodiversity credentials on the site; retain and enhance existing vegetation on the site; and Improve accessibility and linkages to local services, in particular pedestrian links.

1.13 In the balance of planning considerations it is submitted the planning advantage lies firmly in continuing to allocate the land for housing to enable a comprehensive planned development to be achieved and to deliver new housing. 1.14 The Hilperton Neighbourhood Development Plan now forms part of the Development Plan and its policies will be given full weight when assessing planning applications that affect land covered by the Plan. Policy 1 states that land west of Elizabeth Way shall be carried out in accordance with the core strategy and the site specific requirements set out in the Wiltshire Site Allocations Plan (i.e. the draft site allocation).

2.0 INDICATIVE HOUSING REQUIREMENT FOR TROWBRIDGE

2.1 The purpose of the planning system is to contribute to the achievement of sustainable development (National Planning Policy Framework 2018 (the Framework) paragraph 6). For plan making this means that local planning authorities should positively seek opportunities to meet the development needs of the area. Local plans should meet the development needs of their areas need, with sufficiently flexibility to adapt to rapid change (the Framework paragraph 11).

2.2 Strategic policy-making authorities should have a clear understanding of the land available in their areas through the preparation of a strategic housing land availability assessment. From this, planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability. Planning policies should identify a supply of: a) Specific, deliverable sites for years one to five for the plan period, and b) Specific, developable sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15 of the plan.

2.3 In terms of Local Plan making it is critical to the success of a plan that the Local Planning Authority positively plan to deliver homes, whilst also allowing for some flexibility. Paragraph 157 of the Framework states that: The planning system should be genuinely plan-led. Succinct and up to date plans should provide a positive vision for the future of each area; a framework for addressing housing needs and other economic, social and environmental priorities and a platform for local people to shape their surroundings. Plans should: a) Be prepared with the objective of contributing to the achievement of sustainable development, b) Be prepared positively, in a way that is aspirational but deliverable, c) Be shaped by early, proportionate and effective engagement between plan makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees, d) Contain policies that are clearly written and unambiguous, so it is evident how a decision maker should react to development proposals, e) Be accessible through the use of digital tools to assist public involvement and policy presentation; and f) Serve a clear purpose, avoiding unnecessary duplication of policies that apply to a particular area (including policies in this Framework, where relevant).

2.4 The Framework is clear that Plans will need to ensure the delivery of their strategy for housing and the main way of doing so is the allocation of specific, sustainable and deliverable sites. Soundness Test

2.5 When assessing whether a plan is considered to be sound, Paragraph 35 of the Framework identifies the 4 main factors which the Council need to consider: Local plans and spatial development strategies are examined to assess whether they have been prepared in accordance with legal and procedural requirements, and whether they are sound. Plans are sound if they are: a) Positively prepared providing a strategy which, as a minimum, seeks to meet the areas objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighboring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development, b) Justified an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence, c) Effective deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidence by the statement of common ground, and d) Consistent with national policy enabling the delivery of sustainable development in accordance with the policies in this framework.

2.6 The deliverability of a Plan features as one of the key tests of soundness and the PINS Procedural Practice in the Examination of Local Plans (June 2016, para 1.1)

stresses this point: ..."the plan should focus relentlessly on the critical issues and the strategies to address them, paying careful attention to deliverability and viability. This approach may raise uncomfortable questions but the whole point of the plan is to address the critical issues as far as possible." (Section 1: Pre-submission, Para. 1.1)

2.7 The Wiltshire Housing Site Allocations Plan is not sound as it is not positively prepared, justified, effective, nor consistent with national policy on housing delivery and plan making. This plan should be prepared based on the Wiltshire Core Strategy objectives which seeks to meet the objectively assessed housing need by the end of the plan period.

2.8 The six draft housing allocations identified within Trowbridge will provide land for approximately 860 dwellings. This figure falls below the indicative minimum requirement of dwellings set for Trowbridge over the plan period, as confirmed in Paragraph 5.11 of Topic Paper 4 Developing Plan Proposals Addendum (2018) of the Housing Site Allocations evidence base which states: the Plan allocations at Trowbridge have helped in offsetting delays at the strategic allocation, however the level of development at the Urban areas remains short of what was anticipated in the WCS Spatial Strategy.

2.9 The purpose of the Wiltshire Housing Site Allocations process is to address the shortfall of housing over the remainder of the plan period, up to 2026. Once adopted, the Plan will become an implementation mechanism to the Wiltshire Core Strategy (WCS) which should ensure that the housing requirements set by the WCS are met. Paragraphs 77-79 of the Inspectors Report for the Wiltshire Core Strategy (dated December 2014) refers to Wiltshires Objectively Assessed Need (OAN) being significantly higher than planned for through the Core Strategy, being in the region of +44,000 dwellings

2.10 The Inspectors Report, Paragraph 80 states: Whilst the achievement of such a figure should be subject to careful monitoring, the evidence indicates the fluctuations that can occur in the delivery of housing but does not conclusively indicate that such a delivery rate cannot be met during the course of the plan period to deliver the significant boost in housing required to go some considerable way to meeting needs. Against this context and mindful of the content of the LDS (partial CS Review), the subsequent intended early review of the CS, the Sites DPD, the Chippenham Site Allocation DPD and the neighbourhood planning processes will enable the Council to proactively seek to meet, and if necessary reassess, its objectively assessed housing need and plan for its provision accordingly.

2.11 Therefore, it is essential that the Wiltshire Housing Site Allocations Plan is positively prepared to allocate sufficient land as required to address the current undersupply of housing within Trowbridge that has arisen due to strategic site delays. The acknowledgement that 1,000 dwellings previously anticipated to be built at Ashton Park will now be delayed until the next plan period is reason to ensure that sufficient flexibility is included through the Site Allocations Plan: Consequently, I consider that at this current time the minimum housing figure within the CS should reasonably equate to at least 42,000 homes over the plan period with the flexibility to deliver more. (Inspectors Report, Paragraph 81)

2.12 In accordance with Paragraph 67 of the Framework, in order for the plan to be sound it must use the baseline evidence gathered to ensure that the full objectively assessed housing needs set out in the Core Strategy are met. This is currently not the case, and is demonstrated by the dwelling shortfall in Trowbridge.

### 3. CONCLUSIONS

3.1 The allocation of Policy H2.3 for Land south of Elizabeth Way is generally supported. The delivery of housing and its associated infrastructure to support future growth would be achieved by the continued allocation of the site for housing which is in a sustainable location for new development. The allocation of the site: is necessary to provide housing that is needed within the local housing market; is of sufficient scale to secure the delivery of new infrastructure including public open space, and upgraded linkages (vehicular and pedestrian); will result in housing that can be viably constructed at an appropriate density to safeguard the setting of the settlement; and will increase public access through the formation of areas of open space and public footpaths.

3.2 In summary, the continued allocation of the site will: result in a deliverable residential development (to assist in meeting the Councils housing targets) in a sustainable location resulting in efficient use of the site; the provision of a range and mix of dwellings to meet housing needs, allowing provision of a balanced a mixed community. A wide range of high quality and well-designed housing will contribute to existing communities and enhance local facilities; assist the Districts housing need, including a diversity of housing stock for both market and affordable housing; achieve development in a sustainable location, with easy access to pedestrian routes, local facilities and amenities and close to public transport including bus routes; assist in the vitality and viability of small businesses and services within the settlement; deliver public open space; enhance the ecology of the site including an increase in tree planting, the ecological enhancements will support a range of species, in particular bats, birds and invertebrates; retain and

	<p>enhance existing vegetation on the site; a substantial area of open space, creating a green network through the site, including a Local Equipped Play Areas (LEAP) and a Local Play Area (LAP) and areas of ecological enhancement are proposed; the public footpaths shall be improved on site to improve existing permeability; and benefits as set out in the draft S106 heads of terms include contributions to local social infrastructure, such as; education, leisure and green infrastructure and affordable housing. 3.3 However, the Housing Site Allocations Document is unsound as it has not been positively prepared and is not justified due to the fact that the indicative housing requirement which has been set for Trowbridge has not been met through the proposed allocations. Further to this, the Plan does not propose to make efficient use of land to be allocated by increasing numbers where possible, which is unsustainable and not consistent with National Policy.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations. Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement and across</p>			

	<p>Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. Is there any way or will there be any pressure applied to WCC to provide better public transport that at this present time is woefully inadequate, perhaps this would alleviate the more than 400 vehicles an hour passing through the village as mentioned within the consultation. If it is the intention for WCC to build on at least one site I would have thought the lack of provision of public transport would be reason enough to raise objections.</p>

Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

	<p>and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. The density of houses proposed speaks ONLY of the greed of the developers, and NOTHING of quality for the prospective inhabitants, or for the village. It would not give space for decent village houses with enough garden which a prospective village dweller could expect to have. Privacy and comfort would be undermined by such overcrowding. I agree that these proposed housing developments would damage the village.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations. Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement and across</p>

There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages" are not promoted by National Policy. Both sites 738 and 321 are inappropriate for the allocation of the proposed number of houses, especially as smaller developments have already been rejected on this site. Access to both sites would be dangerous and will increase traffic on the B3098 and Court Lane, which are both narrow, blind in places and busy roads already, there have been numerous serious accidents in the past year. School children have to walk on the road as there is no pavement on Court Lane to cross the busy lane to access a safe route to school, and increase in traffic on Court Lane will make an already dangerous road to cross an accident hotspot. Any children that may live in the proposed housing will have to cross the top of Court Lane which is a blind spot and very dangerous to cross already with current usage. They will need to do this to access all village facilities, school, park, village hall, shop. Current services and amenities are already overstretched, a new development is not needed in the village and is no benefit to current or new residents. Living on Rosenheim Rise we are very concerned about proposed site 321 as this field currently works as a flood barrier for our road, which when it rains heavily water runs down the road. If the field is developed there is an increased risk of flooding from surface water leading to possible subsidence. Also any development would be higher than our property, cutting out daylight and invading our privacy. There are hundreds of new houses being built in Westbury, Bratton does not need to be developed, links to Westbury need to be upgraded instead of putting strain on already strained amenities.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	Regarding site 738 - 14 houses on land adjacent to Dane's Lye The planned size of development here is for 14 properties, which would give it a similar density to Rosenheim Rise, where I used to live. I have two concerns. Firstly, at this density, I hope that each property would be provided with two parking spaces to prevent parking on pavements and anti-social parking. This has become an increasing problem in Rosenheim Rise, and the other estate developments within the village. Secondly, I would be worried about the access to this site. There appears to be an access point from Castle Road to the land in question, but I suspect that developers wish for access directly onto the B3098. This latter option would be dangerous, as the junction would be on a non-linear approach to the village and visibility would be an issue. The safest access is definitely from Castle Road to the southeast corner of the land in question.

<b>Identify Proposed Change Reference Number</b>	PC94				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations. Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement and across</p>			

	<p>Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. Clearly, Bratton has been 'assessed' for housing development potential using incorrect data. As a community, I'm sure there would be little opposition to a development of, say, 10 houses in small clusters but the current proposed plans are not sustainable. Bratton surgery is now under considerable pressure. It often takes 3 weeks wait to see a GP and if it's really urgent you will be asked to call back the next morning at 8am to achieve a date from the newly released appointments. The B3098 is now a busy and often dangerous thoroughfare thro' Bratton. Speeding is a problem and the number of very large HGV's passing thro' the village has increased dramatically during the last 3 years. Satellite navigation systems are a factor creating this change. Emptying the cars from 2 large housing estates, virtually opposite each other, onto the B3098 at work/school start times in the morning does not sound like good design or planning. Many of the paths and pavements are not continuous at the extremes of the village and therefore would not be safe/suitable to service the proposed plans. Bratton has not adapted well to the requirements of people with disabilities and again, would be inadequate to meet the proposals.</p>

The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. We feel that such extensive development of an urban nature sited at the entrance to the village will degrade the quality of life for all existing residents. The development proposal is designed to generate a high value return for the house builder by cramming as many dwellings as possible into a small area. The result, judging by the many other local examples, will be the loss of rural identity and the establishment of commuter-belt living. Existing sodium street lighting from the edges of Westbury and Trowbridge has polluted the night sky with and orange glow that is impossible to ignore. Bratton is a typical large village in Wiltshire. It is a pity to fill in every green space here as it will change the nature of the village. Already, this has made quite a difference in Bratton with Reeves Piece, the Hyde's garden, and many other infills, and now great concern for the site of Oxford House. The main problem is the addition of at least 2 cars to every new house. Sometimes more. The B3098 is a very busy road, especially at rush hour. This proposed expansion will exacerbate the already difficult situation. There are no pavements for walking children to school from this site without crossing this very busy main road. To provide a pavement will narrow this main road. In addition, hasn't the very extensive housebuilding scheme in Westbury already provided more houses than was originally planned? This has placed a dreadful burden on local medical services. When attempting to make a doctor's appointment, we can expect to wait at least 3 weeks! The surgeries at Bratton are often curtailed so that Westbury patients can have a better (if still abysmal) service. The staff at the White Horse Surgery are concerned about not being able to cope with the massive increase to their work. It would be foolhardy to further exacerbate this failing system.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	Housing settlement policy and distribution of new housing numbers needs to be mindful of the needs of the rural area and rural villages, as well as more urban centres. The Housing Market Areas analysis and distribution of housing across the county's locations ought not to be swayed or disoriented by macro-level sentiment or pressure exerted by stakeholders with more vested interests or policy purpose that is narrower in focus, such as Natural England and the Planning Boards for the various designated A.O.N.B.s in the county. Rural new housing is of vital importance.

Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement and across</p>			

	<p>Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. Access to 738 and 321 sites on the B3098 on the NARROWEST part of the road will cause absolute chaos . These fields are within the green belt for sheep, cows, horses and Llamas and extra people, and dogs will lead to trouble through ignorance of the countryside way of life. Our village school has no more room to expand and is a very good well run school. Doctors surgery under pressure. Bratton Village has already quadrupled in size since 1970 - and how is the Wiltshire Council going to cope with extra refuse collections and the other amenities. How long will the B3098 be closed for and other alternative routes proved to be disastrous; after the closure of two weeks for a small footpath to be installed. Surely all the building in Westbury is enough for all the financially greedy developers to handle; not to mention very large estates all around the Trowbridge and Melksham areas. LEAVE BRATTON ALONE. please</p>

The Housing Market Areas analysis and distribution of housing across the county's locations ought not to be swayed or disoriented by macro-level sentiment or pressure exerted by stakeholders with more vested interests or policy purpose that is narrower in focus, such as Natural England and the Planning Boards for the various designated A.O.N.B.s in the county. Rural new housing is of vital importance.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations.</p> <p>Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

	<p>and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. Is this housing really necessary in the light of the number of new houses in Westbury which are closer to facilities and transportation links? Instead of destroying these green spaces why not use them to enhance the environment e.g. plant trees.</p>

Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. It has always been a criteria in housing development that homes should be provided where they are needed. The local survey has identified that only a small number of properties are likely to be required by people who have need to live in Bratton? There's no source of employment in the village and therefore a very large percentage of these properties will be purchased by people who need to travel daily outside the village to work. Bratton is very poorly served by public transport. (Five buses a day in each direction on a route from Trowbridge to Devizes and one return journey a week to Bath,) Most if not all of the new commuter traffic would therefore take place by car, which is now being actively discouraged. Westbury and Warminster are reached by using the B3098, a very narrow two lane road. Melksham, Bath, Chippenham, M4 and M5 are reached after a considerable distance on narrow, winding country roads.</p>

Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement and across</p>			

Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages " are not promoted by National Policy. I was born in Bratton in 1966 so have seen many changes throughout the years and the two proposed sites are too big for this village. On Court Lane, as already stressed the traffic has risen in volume enormously and a lot of it is coming from Westbury, I believe from all the new houses they are building there, using Court Lane drivers will be more than likely to avoid Yarnbrook roundabout on their way to either Trowbridge, Melksham or Chippenham, the volume is ridiculous now, so anything which would increase it would be awful. There are no job opportunities in Bratton, people would commute, adding to the traffic. Either site would be dangerous to exit from onto the 83098. The surgeries, schools etc would have extra people to cater for, some people would say they are struggling to cope now, with places in schools limited and long waiting times for an appointment at the surgeries. Down Court Lane, when it rains heavily is like a river, the drains cannot cope with the amount of water and building on the fields even more will do away with the natural drainage of that water. I cannot remember as a child the road looking like a river when it rained, this is because of the new houses which have already been built, the water has nowhere to drain through. Noise pollution and light pollution from either of these sites, especially site 321 will affect residents already here. The traffic noise already is bothersome and then you have the noise of families in their gardens, gardeners going about their business etc, it is not peaceful at all at times. All these points would get worse with either site, especially site 321. There is also the noise pollution, dust and general disruption whilst construction is going on. There is the impact on the wildlife, some things quite unique to the area I am sure, would be wiped out. There are tawny owls, little owls, dormice, toads, newts, deer and a Merlin in this immediate area, these sites are part of their habitat and hunting grounds. Irreversible damage to the countryside would take place if these sites were used, meaning a decline of flora and fauna which is a national issue and you would be adding to the problem. There is much talk about needing new housing, but Westbury in my opinion is catering for itself and many outlying villages surrounding it by the volume that is being built there already and having an effect on these villages. And finally, there would be no need for new housing at all if the Councils hadn't sold off all the Council Houses in the 80's. So now residents and the countryside have to suffer the consequences of that decision.

**Please state which of the Sustainability Appraisal documents or Habitats Regulation Assessment document this representation relates to:**

**Please give details of why you support or do not support the updates to the Sustainability Appraisal (September 2018) or the Habitats Regulation Assessment Addendum (September 2018).**

**Please state which evidence document this representation relates to:**

**Please give details of why you support or do not support the updates to the associated evidence documents.**

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations.</p> <p>Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

	<p>and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages" are not promoted by National Policy. Appalled at the changes suggested to the WHSAP - totally inappropriate in the circumstances.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	Re: Crudwell Parish Council in support of the removal of Ridgeway Farm - Wiltshire Housing Site Allocation Proposed Change Reference Number PC92 Crudwell Parish Council fully supports the decision at Cabinet Level to remove the Ridgeway Development from the Housing site allocation plan and would like to restate its comments on the original plan that decisions of this type are best made by local people at a local level with the support of the community. Crudwell Parish Council continues to object to the proposed allocation of Ridgeway Farm for 50 dwellings (or 40 additional dwellings) on the basis that: there is no strategic need for the Housing Site Allocations Plan to identify any housing sites in the Malmesbury Community Area; in that context, Wiltshire Council's own documentation states that "the most appropriate means to assess local needs and plan growth at each Large Village is through the neighbourhood planning process" The emerging Crudwell Neighbourhood Plan is advancing rapidly and has already been the subject of a number of rounds of public consultation and exhibitions; the Crudwell Neighbourhood Plan will identify a housing site or sites to meet its local housing needs as defined by a housing needs assessment produced to inform it; the collaborative and inclusive approach adopted in producing the Crudwell Neighbourhood Plan is intended to achieve public support to a far greater extent than Wiltshire's Housing Site Allocations Plan has achieved; On that basis, we support the Housing Site Allocations Plan removal of any proposed allocations in Crudwell, and allow the Crudwell Neighbourhood Plan to make the decision about Crudwell's growth. <b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	I support the proposed change to remove the Ridgeway Farm site from the Wiltshire Housing Site Allocations Plan because there is no Strategic Need for Wiltshire to allocate housing in Crudwell. It is neither justified, nor necessary - supply in the Housing Market Area is good and the Wiltshire Core Strategy says development in Large Villages should be limited to small sites to meet local needs. Alongside this, Crudwells Neighbourhood Plan is progressing extremely well (Reg14 Consultation planned for November 2018 and Reg16 planned for early Spring), and this will allocate land to meet identified needs. The Councils and Governments Localism agenda is best served by allowing the Parish to determine its own future.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	I only found out today that we could comment on the proposed change to the settlement boundary around Codford. At this present time we disagree as it doesnt go far enough toward the end of Codford st peter end. We have a piece of land on the old A36 just below Ivy cottages .we would love to build our retire home behind the stone wall of old Ashton Gifford house,it would tidy the area up which over the last 10 years has been used as a dumping ground and a parking area for the local Garage. I would like to invite you down to see the area im talking about we have lived in the area over the last 30 years and would love to stay.

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>[REFER TO ATTACHMENT FOR FULL REPRESENTATION] 1.0 INTRODUCTION 1.1 This representation is submitted on behalf of Barratt Homes in respect of their land interests to the south of Elizabeth Way, Trowbridge. It responds to the Focused Consultation on the Schedule of Proposed Changes and evidence base documents which includes updates and addendums to the following; Topic Papers, Technical Reports and Proposed Changes Consultation Documents, and in doing so, outlines how development of the Land at Elizabeth Way would contribute to the achievement of the proposed spatial and sustainability objectives. A location plan for the site has been attached to Appendix 1. 1.2 The Council submitted the draft Wiltshire Housing Site Allocations DPD along with a Schedule of Proposed Changes and supporting evidence to the Secretary of State for independent examination in July 2018. Since this time, Planning Inspector Steven Lee has been appointed to undertake the examination. In August 2018, the Council received a procedural letter from the Inspector requesting Wiltshire Council to undertake consultation on the Schedule of proposed changes as these changes had yet to be consulted upon in public. 1.3 The Representation forms specifically request feedback on whether it is commonly considered that the Site Allocations Plan and evidence base is sound. There is much in the plan that we support, but at present, our response is that the draft Site Allocations Plan is unsound as it has not been positively prepared and is not justified. This is primarily due to the fact that the indicative housing requirement which has been set for Trowbridge has still not been met through the proposed allocations. We have set out our justification for reaching this view in more detail in the following sections. 2.0 SUMMARY OF PROPOSED CHANGES TO THE PLAN 2.1 We have reviewed the Schedule of Proposed Changes relating to the Trowbridge Community Area, and more directly to the proposed allocation at Elizabeth Way, these are set out below: Historic Landscape Classification has now been included within the SA assessment tables against SA Objective 6 which has not affected scoring therefore no changes have been made to the Trowbridge assessments in this regard; SHLAA site 293 Land to the east of Elizabeth Way is to be divided into two parts with the western area to be included as part of the proposed allocation (H2.3) and will help to deliver circa 120 additional dwellings at this location; Proposed quantum of Elizabeth Way Site Allocation (H2.3) has increased from 205 dwellings (July 2017), to 355 dwellings (September 2018) due to this additional SHLAA site 293 being introduced; Wiltshire Council have published the 2017 Housing Land Supply Statement (March 2018) and released calculations based on the current housing land supply prior to applying the proposed allocations. The indicative residual requirement for Trowbridge, excluding proposed allocations, is now 2,230 dwellings up to 2026. This is an increase from the previous indicative figure of 2,050 dwellings; The Council acknowledge that the proposed allocations through the Site Allocations DPD for Trowbridge are not capable of delivering the full indicative requirement, and instead amount to a total of 1,050 dwellings. We have therefore calculated a deficit of 1,180 homes within</p>				

Trowbridge over the plan period up to 2026. It is important to note that PC25 of the Schedule of Proposed changes document highlights a deficit of 1,297 dwellings at Trowbridge which, on review of the evidence base, we have been unable to connect this figure and seek further clarity on this point.

2.2 It is important to note that on behalf of our client Barratt Homes, we have previously engaged with the Wiltshire Housing Site Allocations DPD consultation process and submitted representations to the Pre-submission Consultation which took place between July and September 2017. In addition, discussions with policy officers have taken place to demonstrate the deliverability of land at Elizabeth Way for circa 450 dwellings.

2.3 As this current Schedule of Proposed Changes Consultation is based on whether the Plan is considered to be sound, we have therefore focused this representation to only raise issues based on soundness.

3.0 SOUNDNESS OF THE PLAN

3.1 This section of the representation seeks to review relevant planning policy on a national level relating to the provision for housing, and on this basis, whether the local planning authority has prepared a Local Plan that is sound.

3.2 It is important to raise the point that although the updated NPPF was published in July 2018, the implementation period allows for the previous Framework to be used for those plans submitted for examination before January 2019. Annex 1 Implementation, paragraph 214 of the updated NPPF (2018) states that, "The policies in the previous Framework will apply for the purpose of examining plans, where those plans are submitted on or before 24 January 2019."

3.3 In this case, Wiltshire Council submitted the Sites Allocations DPD plan to the Inspector in August 2018 therefore the previous Framework will still apply. Delivering housing need

3.4 The NPPF (2012) sets out 12 Core Principles which were formed to underpin plan making, one of which is particularly relevant to making provision for housing. This states that planning should, "Proactively drive and support sustainable economic development to deliver the homes, business and industrial units, infrastructure and thriving local places that the country needs. Every effort should be made objectively to identify and then meet the housing, business and other development needs of an area, and respond positively to wider opportunities for growth. Plans should take account of market signals, such as land prices and housing affordability, and set out a clear strategy for allocating sufficient land which is suitable for development in their area, taking account of the needs of the residential and business communities" (NPPF, para 17)

3.5 Further guidance on the delivery of housing is set out in Para 47 of the NPPF and states, "To boost significantly the supply of housing, local planning authorities should: use their evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area, as far as is consistent with the policies set out in this Framework, including identifying key sites which are critical to the delivery of the housing strategy over the plan period; identify and update annually a supply of specific deliverable sites sufficient to provide five years worth of housing against their housing requirements..." (NPPF, para 47)

3.6 In terms of Local Plan making it is critical to the success of a plan that the Local Planning Authority positively plan to deliver homes, whilst also allowing for some flexibility. Paragraph 157 of the NPPF states that, "Crucially, Local Plans should: Plan positively for the development and infrastructure required in the area to meet the objectives, principles and policies of this framework." (Paragraph 157)

3.7 The NPPF emphasizes the need for plans to ensure delivery of their strategy for housing and the main way of doing so is the allocation of specific, sustainable and deliverable sites.

Soundness Test

3.8 When assessing whether a plan is considered to be sound, Paragraph 182 of the NPPF identifies the 4 main factors which the LPA need to consider: "A local planning authority should submit a plan for examination which it considers is sound namely that it is: Positively prepared the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development; Justified the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence; Effective the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and Consistent with national policy the plan should enable the delivery of sustainable development in accordance with the policies in the Framework." (NPPF, para 182)

3.9 The deliverability of a Plan features as one of the key tests of soundness and the PINS Procedural Practice in the Examination of Local Plans (June 2016, para 1.1) document stresses this point: "...the plan should focus relentlessly on the critical issues and the strategies to address them, paying careful attention to deliverability and viability. This approach may raise uncomfortable questions but the whole point of the plan is to address the critical issues as far as possible." (Section 1: Pre-submission, Para. 1.1) Achieving appropriate densities

3.10 A critical update included within the revised NPPF (2018) focuses on the importance of making the most efficient use of land. Paragraph 123 of the revised NPPF states that, Where there is an existing or anticipated shortage of land for meeting identified housing needs, it is especially important that planning policies and decision avoid homes being built at low densities and ensure that development make optimal use of the potential of each site. In these circumstances: a) Plans should contain policies to optimise the use of land in their area and meet as much of the identified need for housing as possible. This will be tested robustly at examination and should include the use of minimum density standards for city and town centres and other locations that are well served by public transport. These standards should seek a significant uplift in the average density of residential development within these areas, unless it can be shown that there are strong reasons why this would be inappropriate. 3.11 Although the examination of the plan is based on the old NPPF, this direction of travel as set out within revised national policy needs to be considered through the examination by the Inspector in order for the plan to be sound. The quantum of housing development proposed at Trowbridge is falling increasingly short of the indicative requirement and needs to be addressed if the plan is to succeed. Deliverability 3.12 The revised 2018 NPPF, sets out the test for determining whether a development site is deliverable. Paragraph 73 of the NPPF states: Local planning authorities should identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of five years worth of housing against their housing requirement set out in adopted strategic policies, or against their local housing need where the strategic policies are more than five years old. 3.13 The NPPFs Annex then defines deliverable as: To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. Sites that are not major development, and sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (e.g. they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans). Sites with outline planning permission, permission in principle, allocated in the development plan or identified on a brownfield register should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years. 3.14 The emphasis on deliverability within the updated NPPF has changed and has given power to Development Management officers when decided applications, paragraph 76 states; To help ensure that proposals for housing development are implemented in a timely manner, local planning authorities should consider imposing a planning condition providing that development must begin within a timescale shorter than the relevant default period, where this would expedite the development without threatening its deliverability or viability. For major development involving the provision of housing, local planning authorities should also assess why an earlier grant of planning permission for a similar development on the same site did not start. 3.15 We do not consider the Wiltshire Housing Site Allocations Plan to be sound in its current form as it is not positively prepared, justified, effective, nor consistent with national policy on housing delivery and plan making. This plan should be prepared based on the Wiltshire Core Strategy objectives which seeks to meet the objectively assessed housing need by the end of the plan period. 3.16 We set out below the reasons why we consider the draft plan to be unsound in its current form: The plan has not been positively prepared due to the fact that more than half of the indicative housing requirement allocated for delivery within Trowbridge has not been met, with a calculated deficit of 1,180 dwellings. At this stage of the plan making process Wiltshire Council should be required to establish how the identified housing need can be met over the plan period, and with regards to Trowbridge Community Area it clearly does not. This proves that the draft proposals have not been consistently prepared using the evidence gathered. The Plan is contradictory to, and does not reflect, the strategy which was set and approved by the Inspector of the Core Strategy in December 2014. The proposed quantum of 355 dwellings currently associated with allocation H2.3, does not meet the full potential capacity of the site, therefore proving that the plan is not justified as it does not make efficient use of land to be allocated through the Site Allocations Plan. 4.0 INDICATIVE HOUSING REQUIREMENT FOR TROWBRIDGE 4.1 The six draft housing allocations identified within Trowbridge will now provide land for approximately 1,050 dwellings. This figure falls significantly short of the updated indicative minimum requirement of 2,230 dwellings set for Trowbridge over the plan period by a total of 1,180 dwellings. It is important to note that PC25 of the Schedule of Proposed changes consultation document highlights a deficit of 1,297 dwellings, we have been unable to reconcile this figure

through the evidence base produced by Wiltshire Council and therefore would like to raise this point to be clarified by the Council. 4.2 The Council have prepared an Addendum report to be read in conjunction with Topic Paper 4 Developing Plan Proposals. The Addendum was produced to review the confirmed 2017 housing land supply position and how this would affect the plan proposals. 4.3 It is important to note that the original purpose of Topic Paper 4 Developing Plan Proposals from the outset was to meet two objectives of the Plan which were: To help demonstrate a rolling five-year supply of deliverable land for housing development; and To allocate sites at the settlement in the County that support the spatial strategy. 4.4 Since the publication of the Pre-submission version of the plan in July 2017, the total amount of dwellings proposed for Trowbridge has not met the indicative requirement set for the area. Although the Schedule of Proposed Changes has increased the capacity of two proposed site allocations (Land at Elizabeth Way and Elm Grove Farm) within Trowbridge, the overall indicative requirement has further increased from 2,050 homes to 2,230 homes, due to the published 2017 housing land supply figures. 4.5 Topic Paper 4 previously identified two reasons for this under provision of housing within Trowbridge: 1. The delay of developing Ashton Park Urban Extension, which was allocated through the Wiltshire Core Strategy for 2,600 dwellings to be built on site within the plan period, up to 2026. It has now resulted in only 1,600 dwellings being built within the plan period and the remaining 1,000 dwellings will be built post 2026. This accounts for 1,000 dwellings out of the 1,220 dwellings shortfall; 2. Inability to identify land free from environmental constraints which could compensate for the consequences of the delay to the Ashton Park development. 4.6 The addendum now states that, the need for detailed Habitats Regulation Assessment, and subsequent bat mitigation strategy have continued to delay delivery of the strategic allocation at Ashton Park, Trowbridge. 4.7 The purpose of the Wiltshire Housing Site Allocations process is to address the shortfall of housing over the remainder of the plan period, up to 2026. Once adopted, the Plan will become an implementation mechanism to the Wiltshire Core Strategy (WCS) and should ensure that the remaining housing requirements set by the WCS are met. Paragraphs 77-79 of the Inspectors Report for the Wiltshire Core Strategy (dated December 2014) referred to Wiltshires Objectively Assessed Need (OAN) being significantly higher than planned for through the Core Strategy, being in the region of +44,000 dwellings, Whilst the achievement of such a figure should be subject to careful monitoring, the evidence indicates the fluctuations that can occur in the delivery of housing but does not conclusively indicate that such a delivery rate cannot be met during the course of the plan period to deliver the significant boost in housing required to go some considerable way to meeting needs. Against this context and mindful of the content of the LDS (partial CS Review), the subsequent intended early review of the CS, the Sites DPD, the Chippenham Site Allocation DPD and the neighbourhood planning processes will enable the Council to proactively seek to meet, and if necessary reassess, its objectively assessed housing need and plan for its provision accordingly. (Inspectors Report, Paragraph 80) 4.8 With this in mind, we consider that it is critical that the Wiltshire Housing Site Allocations Plan is positively prepared to allocate sufficient land as required to address the current undersupply of housing within Trowbridge and meet the direction of travel approach now being sought through National Policy. 4.9 The acknowledgement that 1,000 dwellings previously anticipated to be built at Ashton Park will now be delayed until the next plan period is reason to ensure that sufficient flexibility is included through the Site Allocations Plan, Consequently, I consider that at this current time the minimum housing figure within the CS should reasonably equate to at least 42,000 homes over the plan period with the flexibility to deliver more. (Inspectors Report, Paragraph 81) 4.10 In accordance with Paragraph 47 (bullet point one) of the NPPF (2012) in order for the plan to be sound it must use the baseline evidence gathered to ensure that the full objectively assessed housing needs set out in the Core Strategy are met. This is currently not the case and is demonstrated by the 1,180 dwellings shortfall in Trowbridge. 5.0 FIVE YEAR HOUSING LAND SUPPLY 5.1 The Pre-submission Site Allocations Plan evidence base included Topic Paper 3 Housing Land Supply which demonstrated the Councils land supply position as of June 2017. At this stage of the process the Council had produced an estimated 2017 base position as the 2016/17 annual completions were still being calculated. Since this time, the Council have been able to publish their 2017 housing land supply position (March 2018) which has led to updated indicative requirement figures. 5.2 In order to make the plan sound, the Wiltshire Housing Site Allocations Plan is required to identify sufficient land to meet the overall housing need for Trowbridge. The below table is taken from the Topic Paper 3 addendum report (July 2018) which highlights that following the 2016/17 delivery calculations the indicative requirement for Trowbridge as of 2017 has

increased by 213 dwellings: [TABLE INSERT] 5.3 Wiltshire Council have previously stated that the Liverpool Method appropriately reflects the delivery strategy set out within the Wiltshire Core Strategy for calculating housing supply. The Liverpool method of calculating 5-year supply aims to spread the delivery of housing over the plan period, and not to front-load any under-provision to date. We are of the view that the Sedgfield approach conforms more closely with the requirement to plan positively as it seeks to boost significantly the supply of land for housing in the early part of the plan period. In either method, in order to rectify the current housing shortfall over the remainder of the plan period (up to 2026) the Site Allocations Plan must maximise the identified sustainable development opportunities within Trowbridge, which will in turn help to bolster the housing supply in the area. 5.4 The Topic Paper 3 Addendum report (July 2018) includes table 3.4 (below), which itemises the Councils projected level of housing supply from 2017-2026 for the North and West HMA. As can be seen, it is marginally above 6 years up to 2020/21, when supply then drops to 5.3 years in 2023/2024. [TABLE INSERT] 5.5 On review of the housing trajectory included within the Housing Land Supply Statement published in March 2018 a number of the small sites (less than 10 dwellings) listed within Trowbridge CA considered to be developable within the plan period have permissions dating pre-2015, therefore it would appear to be unclear if these sites will realistically come forward. 5.6 In order to avoid slipping below the 5 years supply the Council need to be more proactive in bringing forward sites early in the plan period. Taking the above into consideration and reviewing the proposed five-year supply figures at Table 3.4 (above) the delivery is only marginally above 5 years, meaning that the plan is not robust or sound in its current form. 5.7 In order to make the plan sound additional evidence needs to be provided as to how the Councils will maintain a 5-year supply. In order to assist them in doing so: Wiltshire Council need to maximize site capacity for the development of housing within each of the identified proposed allocations; Eliminate any small sites which have expired from the 5-year land supply calculations; Ensure that the proposed Allocations are deliverable sites, and able to come forward soon after the adoption of the plan. 6.0 TECHNICAL ISSUES 6.1 The site at Elizabeth Way (Allocation H2.3) encompasses approximately 16.33ha of land and is now proposed to be allocated for a total of 355 dwellings. It is acknowledged that due to the proximity of the site to Hilperton Gap, and the location of the Bradford and Bath Bats SAC to the south of Trowbridge, the site may have constraints which will need to be addressed prior to development. In order to gain a better understanding of these issues Barratt Homes have undertaken various technical assessments on the site, south of Elizabeth Way, which have proven that a higher quantity of housing is possible on the site. 6.2 A Vision Document has been produced, submitted alongside previous representations, which set out the proposed design principles for the site and summarizes the specialist technical input received to date. A summary of the key issues is set out below. Site Boundary 6.3 Since the publication of the Pre-submission Plan the site boundary identified for the proposed allocation at Elizabeth Way was incorrect. Through previous representations and discussions with officers we highlighted that the site boundary identified on the plan did not align with Elizabeth Way Relief Road. From these discussions with Planning Policy Officers we understood that this error would be rectified prior to submission to the Inspector. 6.4 We are in support of the update to the site boundary, which has also been accompanied by the Council proposing that an additional 150 dwellings can be accommodated on the site. Capacity of Site 6.5 The site at Elizabeth Way has been identified for the allocation of 355 dwellings, which is considerably lower than what the site could sustainably deliver. This raises the issue of major under-development of the site which, in combination with the required housing figures, highlights the fact that the current proposed allocation has not been positively prepared or justified. 6.6 Using the evidence gathered by the technical assessments we have calculated that the Barratt site can sustainably accommodate approximately 175 dwellings, which in combination with the current planning application submitted to the west of the site (16/00672/OUT) for 180 dwellings, would equate to 355 dwellings prior to the eastern section of the site allocation even coming forward. Persimmon Homes have submitted earlier representations to suggest that they can deliver circa 150 homes on land to the east of the proposed allocation, meaning that the overall delivery on site could potentially deliver circa 480 dwellings. 6.7 In order to make the plan sound, the allocation for land at Elizabeth Way should be increased to appropriately reflect the true capacity of the site and taking into consideration the NPPF direction of travel approach. Drainage 6.8 From the outset, it was suggested by Wiltshire Councils drainage team that the preparation of a joint drainage strategy would emphasize the deliverability of the site at Elizabeth Way. Since the pre-submission consultation in July 2017, a number of discussions have been undertaken with officers

	<p>and drainage work has been undertaken which has fed into the design and masterplan of the site. 6.9 The work that has been undertaken to date proves that development of this land to the south of Elizabeth Way offers substantial benefits to both the watercourse and the existing residents along Victoria Road as it will help to safeguard against flooding. 6.10 As you can see from the masterplan (Appendix 2) the incorporation of swales and ponds into the design provides a level of security to residential units in terms of offsetting potential flooding and also providing wildlife habitat, thus softening any impact of new development on a whole. Ecological Constraints 6.11 The ecological investigations, including Badger and Bat surveys, carried out to date have not raised any detrimental issues which would affect the delivery of the site, or preclude the site from development. Walked transect surveys were completed in May and July 2017, with a final survey undertaken in September 2017. Automated detectors were deployed for a period of five nights per month between April and August (inclusive). 6.12 The below table presents the results of the automated detector surveys between April and August 2017 (inclusive). The table includes the total number of passes (B) recorded and average passes per night (B/n) for all species. [TABLE INSERT] 6.13 Overall, activity appears to be fairly low with the exception of Serotine, which is higher than would be expected, but we do not consider that this matter acts as a constraint to the development of the site. 6.14 The ecological work undertaken by BSG Ecology Ltd. has been used to inform the Concept Masterplan, and this is reflected through the design of open space on site. The Masterplan of the site is attached at Appendix 2. 7.0 CONCLUSION 7.1 We support the allocation of Policy H2.3 for Land south of Elizabeth Way, but we remain of the view that there are a number of significant issues within the Housing Site Allocations Plan, identified throughout this Representation, that Wiltshire Council need to address. 7.2 The Housing Site Allocation Plan is unsound as it has not been positively prepared and is not justified due to the fact that the indicative housing requirement, which has been set for Trowbridge, has not been met through the proposed allocations. Further to this, the Plan does not propose to make efficient use of land to be allocated, which is unsustainable and not consistent with National Policy. 7.3 Barratt Homes will continue to work with Wiltshire Council and are dedicated to ensuring the deliverability of their site at Elizabeth Way. 7.4 In summary, the plan is unsound in its current form for the following reasons; The plan is not positively prepared because more than half of the indicative housing requirement allocated for delivery within Trowbridge has not been met, proving that the plan has not been consistently prepared using the evidence gathered. The Plan is not justified as it does not propose to make efficient use of land. The Plan is contradictory to, and does not reflect, the strategy which was set and approved by the Inspector of the Core Strategy in December 2014.</p>

It responds to the Focused Consultation on the Schedule of Proposed Changes and evidence base documents which includes updates and addendums to the following; Topic Papers, Technical Reports and Proposed Changes Consultation Documents, and in doing so, outlines how development of the Land at Elizabeth Way would contribute to the achievement of the proposed spatial and sustainability objectives. A location plan for the site has been attached to Appendix 1. 1.2 The Council submitted the draft Wiltshire Housing Site Allocations DPD along with a Schedule of Proposed Changes and supporting evidence to the Secretary of State for independent examination in July 2018. Since this time, Planning Inspector Steven Lee has been appointed to undertake the examination. In August 2018, the Council received a procedural letter from the Inspector requesting Wiltshire Council to undertake consultation on the Schedule of proposed changes as these changes had yet to be consulted upon in public. 1.3 The Representation forms specifically request feedback on whether it is commonly considered that the Site Allocations Plan and evidence base is sound. There is much in the plan that we support, but at present, our response is that the draft Site Allocations Plan is unsound as it has not been positively prepared and is not justified. This is primarily due to the fact that the indicative housing requirement which has been set for Trowbridge has still not been met through the proposed allocations. We have set out our justification for reaching this view in more detail in the following sections. 2.0 SUMMARY OF PROPOSED CHANGES TO THE PLAN 2.1 We have reviewed the Schedule of Proposed Changes relating to the Trowbridge Community Area, and more directly to the proposed allocation at Elizabeth Way, these are set out below: Historic Landscape Classification has now been included within the SA assessment tables against SA Objective 6 which has not affected scoring therefore no changes have been made to the Trowbridge assessments in this regard; SHLAA site 293 Land to the east of Elizabeth Way is to be divided into two parts with the western area to be included as part of the proposed allocation (H2.3) and will help to deliver circa 120 additional dwellings at this location; Proposed quantum of Elizabeth Way Site Allocation (H2.3) has increased from 205 dwellings (July 2017), to 355 dwellings (September 2018) due to this additional SHLAA site 293 being introduced; Wiltshire Council have published the 2017 Housing Land Supply Statement (March 2018) and released calculations based on the current housing land supply prior to applying the proposed allocations. The indicative residual requirement for Trowbridge, excluding proposed allocations, is now 2,230 dwellings up to 2026. This is an increase from the previous indicative figure of 2,050 dwellings; The Council acknowledge that the proposed allocations through the Site Allocations DPD for Trowbridge are not capable of delivering the full indicative requirement, and instead amount to a total of 1,050 dwellings. We have therefore calculated a deficit of 1,180 homes within</p>				

Trowbridge over the plan period up to 2026. It is important to note that PC25 of the Schedule of Proposed changes document highlights a deficit of 1,297 dwellings at Trowbridge which, on review of the evidence base, we have been unable to connect this figure and seek further clarity on this point.

2.2 It is important to note that on behalf of our client Barratt Homes, we have previously engaged with the Wiltshire Housing Site Allocations DPD consultation process and submitted representations to the Pre-submission Consultation which took place between July and September 2017. In addition, discussions with policy officers have taken place to demonstrate the deliverability of land at Elizabeth Way for circa 450 dwellings.

2.3 As this current Schedule of Proposed Changes Consultation is based on whether the Plan is considered to be sound, we have therefore focused this representation to only raise issues based on soundness.

3.0 SOUNDNESS OF THE PLAN

3.1 This section of the representation seeks to review relevant planning policy on a national level relating to the provision for housing, and on this basis, whether the local planning authority has prepared a Local Plan that is sound.

3.2 It is important to raise the point that although the updated NPPF was published in July 2018, the implementation period allows for the previous Framework to be used for those plans submitted for examination before January 2019. Annex 1 Implementation, paragraph 214 of the updated NPPF (2018) states that, "The policies in the previous Framework will apply for the purpose of examining plans, where those plans are submitted on or before 24 January 2019."

3.3 In this case, Wiltshire Council submitted the Sites Allocations DPD plan to the Inspector in August 2018 therefore the previous Framework will still apply. Delivering housing need

3.4 The NPPF (2012) sets out 12 Core Principles which were formed to underpin plan making, one of which is particularly relevant to making provision for housing. This states that planning should, "Proactively drive and support sustainable economic development to deliver the homes, business and industrial units, infrastructure and thriving local places that the country needs. Every effort should be made objectively to identify and then meet the housing, business and other development needs of an area, and respond positively to wider opportunities for growth. Plans should take account of market signals, such as land prices and housing affordability, and set out a clear strategy for allocating sufficient land which is suitable for development in their area, taking account of the needs of the residential and business communities" (NPPF, para 17)

3.5 Further guidance on the delivery of housing is set out in Para 47 of the NPPF and states, "To boost significantly the supply of housing, local planning authorities should: use their evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area, as far as is consistent with the policies set out in this Framework, including identifying key sites which are critical to the delivery of the housing strategy over the plan period; identify and update annually a supply of specific deliverable sites sufficient to provide five years worth of housing against their housing requirements..." (NPPF, para 47)

3.6 In terms of Local Plan making it is critical to the success of a plan that the Local Planning Authority positively plan to deliver homes, whilst also allowing for some flexibility. Paragraph 157 of the NPPF states that, "Crucially, Local Plans should: Plan positively for the development and infrastructure required in the area to meet the objectives, principles and policies of this framework." (Paragraph 157)

3.7 The NPPF emphasizes the need for plans to ensure delivery of their strategy for housing and the main way of doing so is the allocation of specific, sustainable and deliverable sites.

Soundness Test

3.8 When assessing whether a plan is considered to be sound, Paragraph 182 of the NPPF identifies the 4 main factors which the LPA need to consider: "A local planning authority should submit a plan for examination which it considers is sound namely that it is: Positively prepared the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development; Justified the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence; Effective the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and Consistent with national policy the plan should enable the delivery of sustainable development in accordance with the policies in the Framework." (NPPF, para 182)

3.9 The deliverability of a Plan features as one of the key tests of soundness and the PINS Procedural Practice in the Examination of Local Plans (June 2016, para 1.1) document stresses this point: "...the plan should focus relentlessly on the critical issues and the strategies to address them, paying careful attention to deliverability and viability. This approach may raise uncomfortable questions but the whole point of the plan is to address the critical issues as far as possible." (Section 1: Pre-submission, Para. 1.1) Achieving appropriate densities

3.10 A critical update included within the revised NPPF (2018) focuses on the importance of making the most efficient use of land. Paragraph 123 of the revised NPPF states that, Where there is an existing or anticipated shortage of land for meeting identified housing needs, it is especially important that planning policies and decision avoid homes being built at low densities and ensure that development make optimal use of the potential of each site. In these circumstances: a) Plans should contain policies to optimise the use of land in their area and meet as much of the identified need for housing as possible. This will be tested robustly at examination and should include the use of minimum density standards for city and town centres and other locations that are well served by public transport. These standards should seek a significant uplift in the average density of residential development within these areas, unless it can be shown that there are strong reasons why this would be inappropriate. 3.11 Although the examination of the plan is based on the old NPPF, this direction of travel as set out within revised national policy needs to be considered through the examination by the Inspector in order for the plan to be sound. The quantum of housing development proposed at Trowbridge is falling increasingly short of the indicative requirement and needs to be addressed if the plan is to succeed.

Deliverability 3.12 The revised 2018 NPPF, sets out the test for determining whether a development site is deliverable. Paragraph 73 of the NPPF states: Local planning authorities should identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of five years worth of housing against their housing requirement set out in adopted strategic policies, or against their local housing need where the strategic policies are more than five years old. 3.13 The NPPFs Annex then defines deliverable as: To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. Sites that are not major development, and sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (e.g. they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans). Sites with outline planning permission, permission in principle, allocated in the development plan or identified on a brownfield register should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years. 3.14 The emphasis on deliverability within the updated NPPF has changed and has given power to Development Management officers when decided applications, paragraph 76 states; To help ensure that proposals for housing development are implemented in a timely manner, local planning authorities should consider imposing a planning condition providing that development must begin within a timescale shorter than the relevant default period, where this would expedite the development without threatening its deliverability or viability. For major development involving the provision of housing, local planning authorities should also assess why an earlier grant of planning permission for a similar development on the same site did not start. 3.15 We do not consider the Wiltshire Housing Site Allocations Plan to be sound in its current form as it is not positively prepared, justified, effective, nor consistent with national policy on housing delivery and plan making. This plan should be prepared based on the Wiltshire Core Strategy objectives which seeks to meet the objectively assessed housing need by the end of the plan period. 3.16 We set out below the reasons why we consider the draft plan to be unsound in its current form: The plan has not been positively prepared due to the fact that more than half of the indicative housing requirement allocated for delivery within Trowbridge has not been met, with a calculated deficit of 1,180 dwellings. At this stage of the plan making process Wiltshire Council should be required to establish how the identified housing need can be met over the plan period, and with regards to Trowbridge Community Area it clearly does not. This proves that the draft proposals have not been consistently prepared using the evidence gathered. The Plan is contradictory to, and does not reflect, the strategy which was set and approved by the Inspector of the Core Strategy in December 2014. The proposed quantum of 355 dwellings currently associated with allocation H2.3, does not meet the full potential capacity of the site, therefore proving that the plan is not justified as it does not make efficient use of land to be allocated through the Site Allocations Plan.

4.0 INDICATIVE HOUSING REQUIREMENT FOR TROWBRIDGE 4.1 The six draft housing allocations identified within Trowbridge will now provide land for approximately 1,050 dwellings. This figure falls significantly short of the updated indicative minimum requirement of 2,230 dwellings set for Trowbridge over the plan period by a total of 1,180 dwellings. It is important to note that PC25 of the Schedule of Proposed changes consultation document highlights a deficit of 1,297 dwellings, we have been unable to reconcile this figure

through the evidence base produced by Wiltshire Council and therefore would like to raise this point to be clarified by the Council. 4.2 The Council have prepared an Addendum report to be read in conjunction with Topic Paper 4 Developing Plan Proposals. The Addendum was produced to review the confirmed 2017 housing land supply position and how this would affect the plan proposals. 4.3 It is important to note that the original purpose of Topic Paper 4 Developing Plan Proposals from the outset was to meet two objectives of the Plan which were: To help demonstrate a rolling five-year supply of deliverable land for housing development; and To allocate sites at the settlement in the County that support the spatial strategy. 4.4 Since the publication of the Pre-submission version of the plan in July 2017, the total amount of dwellings proposed for Trowbridge has not met the indicative requirement set for the area. Although the Schedule of Proposed Changes has increased the capacity of two proposed site allocations (Land at Elizabeth Way and Elm Grove Farm) within Trowbridge, the overall indicative requirement has further increased from 2,050 homes to 2,230 homes, due to the published 2017 housing land supply figures. 4.5 Topic Paper 4 previously identified two reasons for this under provision of housing within Trowbridge: 1. The delay of developing Ashton Park Urban Extension, which was allocated through the Wiltshire Core Strategy for 2,600 dwellings to be built on site within the plan period, up to 2026. It has now resulted in only 1,600 dwellings being built within the plan period and the remaining 1,000 dwellings will be built post 2026. This accounts for 1,000 dwellings out of the 1,220 dwellings shortfall; 2. Inability to identify land free from environmental constraints which could compensate for the consequences of the delay to the Ashton Park development. 4.6 The addendum now states that, the need for detailed Habitats Regulation Assessment, and subsequent bat mitigation strategy have continued to delay delivery of the strategic allocation at Ashton Park, Trowbridge. 4.7 The purpose of the Wiltshire Housing Site Allocations process is to address the shortfall of housing over the remainder of the plan period, up to 2026. Once adopted, the Plan will become an implementation mechanism to the Wiltshire Core Strategy (WCS) and should ensure that the remaining housing requirements set by the WCS are met. Paragraphs 77-79 of the Inspectors Report for the Wiltshire Core Strategy (dated December 2014) referred to Wiltshires Objectively Assessed Need (OAN) being significantly higher than planned for through the Core Strategy, being in the region of +44,000 dwellings, Whilst the achievement of such a figure should be subject to careful monitoring, the evidence indicates the fluctuations that can occur in the delivery of housing but does not conclusively indicate that such a delivery rate cannot be met during the course of the plan period to deliver the significant boost in housing required to go some considerable way to meeting needs. Against this context and mindful of the content of the LDS (partial CS Review), the subsequent intended early review of the CS, the Sites DPD, the Chippenham Site Allocation DPD and the neighbourhood planning processes will enable the Council to proactively seek to meet, and if necessary reassess, its objectively assessed housing need and plan for its provision accordingly. (Inspectors Report, Paragraph 80) 4.8 With this in mind, we consider that it is critical that the Wiltshire Housing Site Allocations Plan is positively prepared to allocate sufficient land as required to address the current undersupply of housing within Trowbridge and meet the direction of travel approach now being sought through National Policy. 4.9 The acknowledgement that 1,000 dwellings previously anticipated to be built at Ashton Park will now be delayed until the next plan period is reason to ensure that sufficient flexibility is included through the Site Allocations Plan, Consequently, I consider that at this current time the minimum housing figure within the CS should reasonably equate to at least 42,000 homes over the plan period with the flexibility to deliver more. (Inspectors Report, Paragraph 81) 4.10 In accordance with Paragraph 47 (bullet point one) of the NPPF (2012) in order for the plan to be sound it must use the baseline evidence gathered to ensure that the full objectively assessed housing needs set out in the Core Strategy are met. This is currently not the case and is demonstrated by the 1,180 dwellings shortfall in Trowbridge. 5.0 FIVE YEAR HOUSING LAND SUPPLY 5.1 The Pre-submission Site Allocations Plan evidence base included Topic Paper 3 Housing Land Supply which demonstrated the Councils land supply position as of June 2017. At this stage of the process the Council had produced an estimated 2017 base position as the 2016/17 annual completions were still being calculated. Since this time, the Council have been able to publish their 2017 housing land supply position (March 2018) which has led to updated indicative requirement figures. 5.2 In order to make the plan sound, the Wiltshire Housing Site Allocations Plan is required to identify sufficient land to meet the overall housing need for Trowbridge. The below table is taken from the Topic Paper 3 addendum report (July 2018) which highlights that following the 2016/17 delivery calculations the indicative requirement for Trowbridge as of 2017 has

increased by 213 dwellings: [TABLE INSERT] 5.3 Wiltshire Council have previously stated that the Liverpool Method appropriately reflects the delivery strategy set out within the Wiltshire Core Strategy for calculating housing supply. The Liverpool method of calculating 5-year supply aims to spread the delivery of housing over the plan period, and not to front-load any under-provision to date. We are of the view that the Sedgfield approach conforms more closely with the requirement to plan positively as it seeks to boost significantly the supply of land for housing in the early part of the plan period. In either method, in order to rectify the current housing shortfall over the remainder of the plan period (up to 2026) the Site Allocations Plan must maximise the identified sustainable development opportunities within Trowbridge, which will in turn help to bolster the housing supply in the area. 5.4 The Topic Paper 3 Addendum report (July 2018) includes table 3.4 (below), which itemises the Councils projected level of housing supply from 2017-2026 for the North and West HMA. As can be seen, it is marginally above 6 years up to 2020/21, when supply then drops to 5.3 years in 2023/2024. [TABLE INSERT] 5.5 On review of the housing trajectory included within the Housing Land Supply Statement published in March 2018 a number of the small sites (less than 10 dwellings) listed within Trowbridge CA considered to be developable within the plan period have permissions dating pre-2015, therefore it would appear to be unclear if these sites will realistically come forward. 5.6 In order to avoid slipping below the 5 years supply the Council need to be more proactive in bringing forward sites early in the plan period. Taking the above into consideration and reviewing the proposed five-year supply figures at Table 3.4 (above) the delivery is only marginally above 5 years, meaning that the plan is not robust or sound in its current form. 5.7 In order to make the plan sound additional evidence needs to be provided as to how the Councils will maintain a 5-year supply. In order to assist them in doing so: Wiltshire Council need to maximize site capacity for the development of housing within each of the identified proposed allocations; Eliminate any small sites which have expired from the 5-year land supply calculations; Ensure that the proposed Allocations are deliverable sites, and able to come forward soon after the adoption of the plan. 6.0 TECHNICAL ISSUES 6.1 The site at Elizabeth Way (Allocation H2.3) encompasses approximately 16.33ha of land and is now proposed to be allocated for a total of 355 dwellings. It is acknowledged that due to the proximity of the site to Hilperton Gap, and the location of the Bradford and Bath Bats SAC to the south of Trowbridge, the site may have constraints which will need to be addressed prior to development. In order to gain a better understanding of these issues Barratt Homes have undertaken various technical assessments on the site, south of Elizabeth Way, which have proven that a higher quantity of housing is possible on the site. 6.2 A Vision Document has been produced, submitted alongside previous representations, which set out the proposed design principles for the site and summarizes the specialist technical input received to date. A summary of the key issues is set out below. Site Boundary 6.3 Since the publication of the Pre-submission Plan the site boundary identified for the proposed allocation at Elizabeth Way was incorrect. Through previous representations and discussions with officers we highlighted that the site boundary identified on the plan did not align with Elizabeth Way Relief Road. From these discussions with Planning Policy Officers we understood that this error would be rectified prior to submission to the Inspector. 6.4 We are in support of the update to the site boundary, which has also been accompanied by the Council proposing that an additional 150 dwellings can be accommodated on the site. Capacity of Site 6.5 The site at Elizabeth Way has been identified for the allocation of 355 dwellings, which is considerably lower than what the site could sustainably deliver. This raises the issue of major under-development of the site which, in combination with the required housing figures, highlights the fact that the current proposed allocation has not been positively prepared or justified. 6.6 Using the evidence gathered by the technical assessments we have calculated that the Barratt site can sustainably accommodate approximately 175 dwellings, which in combination with the current planning application submitted to the west of the site (16/00672/OUT) for 180 dwellings, would equate to 355 dwellings prior to the eastern section of the site allocation even coming forward. Persimmon Homes have submitted earlier representations to suggest that they can deliver circa 150 homes on land to the east of the proposed allocation, meaning that the overall delivery on site could potentially deliver circa 480 dwellings. 6.7 In order to make the plan sound, the allocation for land at Elizabeth Way should be increased to appropriately reflect the true capacity of the site and taking into consideration the NPPF direction of travel approach. Drainage 6.8 From the outset, it was suggested by Wiltshire Councils drainage team that the preparation of a joint drainage strategy would emphasize the deliverability of the site at Elizabeth Way. Since the pre-submission consultation in July 2017, a number of discussions have been undertaken with officers

	<p>and drainage work has been undertaken which has fed into the design and masterplan of the site. 6.9 The work that has been undertaken to date proves that development of this land to the south of Elizabeth Way offers substantial benefits to both the watercourse and the existing residents along Victoria Road as it will help to safeguard against flooding. 6.10 As you can see from the masterplan (Appendix 2) the incorporation of swales and ponds into the design provides a level of security to residential units in terms of offsetting potential flooding and also providing wildlife habitat, thus softening any impact of new development on a whole. Ecological Constraints 6.11 The ecological investigations, including Badger and Bat surveys, carried out to date have not raised any detrimental issues which would affect the delivery of the site, or preclude the site from development. Walked transect surveys were completed in May and July 2017, with a final survey undertaken in September 2017. Automated detectors were deployed for a period of five nights per month between April and August (inclusive). 6.12 The below table presents the results of the automated detector surveys between April and August 2017 (inclusive). The table includes the total number of passes (B) recorded and average passes per night (B/n) for all species. [TABLE INSERT] 6.13 Overall, activity appears to be fairly low with the exception of Serotine, which is higher than would be expected, but we do not consider that this matter acts as a constraint to the development of the site. 6.14 The ecological work undertaken by BSG Ecology Ltd. has been used to inform the Concept Masterplan, and this is reflected through the design of open space on site. The Masterplan of the site is attached at Appendix 2. 7.0 CONCLUSION 7.1 We support the allocation of Policy H2.3 for Land south of Elizabeth Way, but we remain of the view that there are a number of significant issues within the Housing Site Allocations Plan, identified throughout this Representation, that Wiltshire Council need to address. 7.2 The Housing Site Allocation Plan is unsound as it has not been positively prepared and is not justified due to the fact that the indicative housing requirement, which has been set for Trowbridge, has not been met through the proposed allocations. Further to this, the Plan does not propose to make efficient use of land to be allocated, which is unsustainable and not consistent with National Policy. 7.3 Barratt Homes will continue to work with Wiltshire Council and are dedicated to ensuring the deliverability of their site at Elizabeth Way. 7.4 In summary, the plan is unsound in its current form for the following reasons; The plan is not positively prepared because more than half of the indicative housing requirement allocated for delivery within Trowbridge has not been met, proving that the plan has not been consistently prepared using the evidence gathered. The Plan is not justified as it does not propose to make efficient use of land. The Plan is contradictory to, and does not reflect, the strategy which was set and approved by the Inspector of the Core Strategy in December 2014.</p>

## **1.0 INTRODUCTION**

1.1 This representation is submitted on behalf of Barratt Homes in respect of their land interests to the south of Elizabeth Way, Trowbridge. It responds to the Focused Consultation on the Schedule of Proposed Changes and evidence base documents which includes updates and addendums to the following; Topic Papers, Technical Reports and Proposed Changes Consultation Documents, and in doing so, outlines how development of the Land at Elizabeth Way would contribute to the achievement of the proposed spatial and sustainability objectives. A location plan for the site has been attached to Appendix 1.

1.2 The Council submitted the draft Wiltshire Housing Site Allocations DPD along with a 'Schedule of Proposed Changes' and supporting evidence to the Secretary of State for independent examination in July 2018. Since this time, Planning Inspector Steven Lee has been appointed to undertake the examination. In August 2018, the Council received a procedural letter from the Inspector requesting Wiltshire Council to undertake consultation on the 'Schedule of proposed changes' as these changes had yet to be consulted upon in public.

1.3 The Representation forms specifically request feedback on whether it is commonly considered that the Site Allocations Plan and evidence base is sound. There is much in the plan that we support, but at present, our response is that the draft Site Allocations Plan is unsound as it has not been positively prepared and is not justified. This is primarily due to the fact that the indicative housing requirement which has been set for Trowbridge has still not been met through the proposed allocations. We have set out our justification for reaching this view in more detail in the following sections.

## **2.0 SUMMARY OF PROPOSED CHANGES TO THE PLAN**

2.1 We have reviewed the 'Schedule of Proposed Changes' relating to the Trowbridge Community Area, and more directly to the proposed allocation at Elizabeth Way, these are set out below:

- 'Historic Landscape Classification' has now been included within the SA assessment tables against SA Objective 6 which has not affected scoring therefore no changes have been made to the Trowbridge assessments in this regard;
- SHLAA site 293 'Land to the east of Elizabeth Way' is to be divided into two parts with the western area to be included as part of the proposed allocation (H2.3) and will help to deliver circa 120 additional dwellings at this location;
- Proposed quantum of Elizabeth Way Site Allocation (H2.3) has increased from 205 dwellings (July 2017), to 355 dwellings (September 2018) due to this additional SHLAA site 293 being introduced;
- Wiltshire Council have published the 2017 Housing Land Supply Statement (March 2018) and released calculations based on the current housing land supply prior to applying the proposed allocations. The indicative residual requirement for Trowbridge, excluding proposed allocations, is now 2,230 dwellings up to 2026. This is an increase from the previous indicative figure of 2,050 dwellings;

- The Council acknowledge that the proposed allocations through the Site Allocations DPD for Trowbridge are not capable of delivering the full indicative requirement, and instead amount to a total of 1,050 dwellings. We have therefore calculated a deficit of 1,180 homes within Trowbridge over the plan period up to 2026. It is important to note that PC25 of the 'Schedule of Proposed changes' document highlights a deficit of 1,297 dwellings at Trowbridge which, on review of the evidence base, we have been unable to connect this figure and seek further clarity on this point.

2.2 It is important to note that on behalf of our client Barratt Homes, we have previously engaged with the Wiltshire Housing Site Allocations DPD consultation process and submitted representations to the Pre-submission Consultation which took place between July and September 2017. In addition, discussions with policy officers have taken place to demonstrate the deliverability of land at Elizabeth Way for circa 450 dwellings.

2.3 As this current Schedule of Proposed Changes Consultation is based on whether the Plan is considered to be sound, we have therefore focused this representation to only raise issues based on soundness.

### **3.0 SOUNDNESS OF THE PLAN**

3.1 This section of the representation seeks to review relevant planning policy on a national level relating to the provision for housing, and on this basis, whether the local planning authority has prepared a Local Plan that is sound.

3.2 It is important to raise the point that although the updated NPPF was published in July 2018, the implementation period allows for the previous Framework to be used for those plans submitted for examination before January 2019. Annex 1 'Implementation', paragraph 214 of the updated NPPF (2018) states that,

**“The policies in the previous Framework will apply for the purpose of examining plans, where those plans are submitted on or before 24 January 2019.”**

3.3 In this case, Wiltshire Council submitted the Sites Allocations DPD plan to the Inspector in August 2018 therefore the previous Framework will still apply.

#### **Delivering housing need**

3.4 The NPPF (2012) sets out 12 Core Principles which were formed to underpin plan making, one of which is particularly relevant to making provision for housing. This states that planning should,

**“Proactively drive and support sustainable economic development to deliver the homes, business and industrial units, infrastructure and thriving local places that the country needs. Every effort should be made objectively to identify and then meet the housing,**

**business and other development needs of an area, and respond positively to wider opportunities for growth. Plans should take account of market signals, such as land prices and housing affordability, and set out a clear strategy for allocating sufficient land which is suitable for development in their area, taking account of the needs of the residential and business communities” (NPPF, para 17)**

3.5 Further guidance on the delivery of housing is set out in Para 47 of the NPPF and states,

**“To boost significantly the supply of housing, local planning authorities should:**

- use their evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area, as far as is consistent with the policies set out in this Framework, including identifying key sites which are critical to the delivery of the housing strategy over the plan period;
- identify and update annually a supply of specific deliverable sites sufficient to provide five years’ worth of housing against their housing requirements...” (NPPF, para 47)

3.6 In terms of ‘Local Plan making’ it is critical to the success of a plan that the Local Planning Authority positively plan to deliver homes, whilst also allowing for some flexibility. Paragraph 157 of the NPPF states that,

**“Crucially, Local Plans should:**

- **Plan positively for the development and infrastructure required in the area to meet the objectives, principles and policies of this framework.” (Paragraph 157)**

3.7 The NPPF emphasizes the need for plans to ensure delivery of their strategy for housing and the main way of doing so is the allocation of specific, sustainable and deliverable sites.

Soundness Test

3.8 When assessing whether a plan is considered to be sound, Paragraph 182 of the NPPF identifies the 4 main factors which the LPA need to consider:

**“A local planning authority should submit a plan for examination which it considers is “sound” – namely that it is:**

- **Positively prepared** – the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development;
- **Justified** – the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence;
- **Effective** – the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and
- **Consistent with national policy** – the plan should enable the delivery of sustainable development in accordance with the policies in the Framework.” (NPPF, para 182)

3.9 The deliverability of a Plan features as one of the key tests of soundness and the PINS Procedural Practice in the Examination of Local Plans (June 2016, para 1.1) document stresses this point:

**...“the plan should focus relentlessly on the critical issues and the strategies to address them, paying careful attention to deliverability and viability. This approach may raise uncomfortable questions but the whole point of the plan is to address the critical issues as far as possible.” (Section 1: Pre-submission, Para. 1.1)**

Achieving appropriate densities

3.10 A critical update included within the revised NPPF (2018) focuses on the importance of making the most efficient use of land. Paragraph 123 of the revised NPPF states that,

**“Where there is an existing or anticipated shortage of land for meeting identified housing needs, it is especially important that planning policies and decision avoid homes being built at low densities and ensure that development make optimal use of the potential of each site. In these circumstances:**

**a) Plans should contain policies to optimise the use of land in their area and meet as much of the identified need for housing as possible. This will be tested robustly at examination and should include the use of minimum density standards for city and town centres and other locations that are well served by public transport. These standards should seek a significant uplift in the average density of residential development within these areas, unless it can be shown that there are strong reasons why this would be inappropriate.”**

3.11 Although the examination of the plan is based on the old NPPF, this 'direction of travel' as set out within revised national policy needs to be considered through the examination by the Inspector in order for the plan to be sound. The quantum of housing development proposed at Trowbridge is falling increasingly short of the indicative requirement and needs to be addressed if the plan is to succeed.

Deliverability

3.12 The revised 2018 NPPF, sets out the test for determining whether a development site is deliverable. Paragraph 73 of the NPPF states:

**“Local planning authorities should identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of five years’ worth of housing against their housing requirement set out in adopted strategic policies, or against their local housing need where the strategic policies are more than five years old.”**

3.13 The NPPF’s Annex then defines “deliverable” as:

**“To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. Sites that are not major development, and sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (e.g. they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans). Sites with outline planning permission, permission in principle, allocated in the development plan or identified on a brownfield register should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years.”**

3.14 The emphasis on deliverability within the updated NPPF has changed and has given power to Development Management officers when decided applications, paragraph 76 states;

**“To help ensure that proposals for housing development are implemented in a timely manner, local planning authorities should consider imposing a planning condition providing that development must begin within a timescale shorter than the relevant default period, where this would expedite the development without threatening its deliverability or viability. For major development involving the provision of housing, local planning authorities should also assess why an earlier grant of planning permission for a similar development on the same site did not start.”**

3.15 We do not consider the Wiltshire Housing Site Allocations Plan to be sound in its current form as it is not positively prepared, justified, effective, nor consistent with national policy on housing delivery and plan making. This plan should be prepared based on the Wiltshire Core Strategy objectives which seeks to meet the objectively assessed housing need by the end of the plan period.

3.16 We set out below the reasons why we consider the draft plan to be unsound in its current form:

- The plan has not been positively prepared due to the fact that more than half of the indicative housing requirement allocated for delivery within Trowbridge has not been met, with a calculated deficit of 1,180 dwellings. At this stage of the plan making process Wiltshire Council should be required to establish how the identified housing need can be met over the plan period, and with regards to Trowbridge Community Area it clearly does not. This proves that the draft proposals have not been consistently prepared using the evidence gathered.
- The Plan is contradictory to, and does not reflect, the strategy which was set and approved by the Inspector of the Core Strategy in December 2014.
- The proposed quantum of 355 dwellings currently associated with allocation H2.3, does not meet the full potential capacity of the site, therefore proving that the plan is not justified as it does not make efficient use of land to be allocated through the Site Allocations Plan.

#### **4.0 INDICATIVE HOUSING REQUIREMENT FOR TROWBRIDGE**

4.1 The six draft housing allocations identified within Trowbridge will now provide land for approximately 1,050 dwellings. This figure falls significantly short of the updated indicative minimum requirement of 2,230 dwellings set for Trowbridge over the plan period by a total of 1,180 dwellings. It is important to note that PC25 of the 'Schedule of Proposed changes' consultation document highlights a deficit of 1,297 dwellings, we have been unable to reconcile this figure through the evidence base produced by Wiltshire Council and therefore would like to raise this point to be clarified by the Council.

4.2 The Council have prepared an Addendum report to be read in conjunction with Topic Paper 4 'Developing Plan Proposals'. The Addendum was produced to review the confirmed 2017 housing land supply position and how this would affect the plan proposals.

4.3 It is important to note that the original purpose of Topic Paper 4 'Developing Plan Proposals' from the outset was to meet two objectives of the Plan which were:

- To help demonstrate a rolling five-year supply of deliverable land for housing development; and
- To allocate sites at the settlement in the County that support the spatial strategy.

4.4 Since the publication of the 'Pre-submission' version of the plan in July 2017, the total amount of dwellings proposed for Trowbridge has not met the indicative requirement set for the area. Although the Schedule of Proposed Changes has increased the capacity of two proposed site

allocations (Land at Elizabeth Way and Elm Grove Farm) within Trowbridge, the overall indicative requirement has further increased from 2,050 homes to 2,230 homes, due to the published 2017 housing land supply figures.

4.5 Topic Paper 4 previously identified two reasons for this under provision of housing within Trowbridge:

1. The delay of developing Ashton Park Urban Extension, which was allocated through the Wiltshire Core Strategy for 2,600 dwellings to be built on site within the plan period, up to 2026. It has now resulted in only 1,600 dwellings being built within the plan period and the remaining 1,000 dwellings will be built post 2026. This accounts for 1,000 dwellings out of the 1,220 dwellings shortfall;

2. Inability to identify land free from environmental constraints which could compensate for the consequences of the delay to the Ashton Park development.

4.6 The addendum now states that,

**“the need for detailed Habitats Regulation Assessment, and subsequent bat mitigation strategy have continued to delay delivery of the strategic allocation at Ashton Park, Trowbridge.”**

4.7 The purpose of the Wiltshire Housing Site Allocations process is to address the shortfall of housing over the remainder of the plan period, up to 2026. Once adopted, the Plan will become an implementation mechanism to the Wiltshire Core Strategy (WCS) and should ensure that the remaining housing requirements set by the WCS are met. Paragraphs 77-79 of the Inspector’s Report for the Wiltshire Core Strategy (dated December 2014) referred to Wiltshire’s Objectively Assessed Need (OAN) being significantly higher than planned for through the Core Strategy, being in the region of +44,000 dwellings,

**“Whilst the achievement of such a figure should be subject to careful monitoring, the evidence indicates the fluctuations that can occur in the delivery of housing but does not conclusively indicate that such a delivery rate cannot be met during the course of the plan period to deliver the significant boost in housing required to go some considerable way to meeting needs. Against this context and mindful of the content of the LDS (partial CS Review), the subsequent intended early review of the CS, the Sites DPD, the Chippenham Site Allocation DPD and the neighbourhood planning processes will enable the Council to proactively seek to meet, and if necessary reassess, its objectively assessed housing need and plan for its provision accordingly.” (Inspectors Report, Paragraph 80)**

4.8 With this in mind, we consider that it is critical that the Wiltshire Housing Site Allocations Plan is positively prepared to allocate sufficient land as required to address the current undersupply of housing within Trowbridge and meet the ‘direction of travel’ approach now being sought through National Policy.

4.9 The acknowledgement that 1,000 dwellings previously anticipated to be built at Ashton Park will now be delayed until the next plan period is reason to ensure that sufficient flexibility is included through the Site Allocations Plan,

**“Consequently, I consider that at this current time the minimum housing figure within the CS should reasonably equate to at least 42,000 homes over the plan period with the flexibility to deliver more.” (Inspectors Report, Paragraph 81)**

4.10 In accordance with Paragraph 47 (bullet point one) of the NPPF (2012) in order for the plan to be sound it must use the baseline evidence gathered to ensure that the full objectively assessed housing needs set out in the Core Strategy are met. This is currently not the case and is demonstrated by the 1,180 dwellings shortfall in Trowbridge.

## **5.0 FIVE YEAR HOUSING LAND SUPPLY**

5.1 The Pre-submission Site Allocations Plan evidence base included Topic Paper 3 ‘Housing Land Supply’ which demonstrated the Councils land supply position as of June 2017. At this stage of the process the Council had produced an ‘estimated 2017 base position’ as the 2016/17 annual completions were still being calculated. Since this time, the Council have been able to publish their 2017 housing land supply position (March 2018) which has led to updated indicative requirement figures.

5.2 In order to make the plan sound, the Wiltshire Housing Site Allocations Plan is required to identify sufficient land to meet the overall housing need for Trowbridge. The below table is taken from the Topic Paper 3 addendum report (July 2018) which highlights that following the 2016/17 delivery calculations the indicative requirement for Trowbridge as of 2017 has increased by 213 dwellings:

[TABLE INSERT]

5.3 Wiltshire Council have previously stated that the ‘Liverpool Method’ appropriately reflects the delivery strategy set out within the Wiltshire Core Strategy for calculating housing supply. The ‘Liverpool method’ of calculating 5-year supply aims to spread the delivery of housing over the plan period, and not to front-load any under-provision to date. We are of the view that the ‘Sedgefield approach’ conforms more closely with the requirement to plan positively as it seeks to boost significantly the supply of land for housing in the early part of the plan period. In either method, in order to rectify the current housing shortfall over the remainder of the plan period (up to 2026) the Site Allocations Plan must maximise the identified sustainable development opportunities within Trowbridge, which will in turn help to bolster the housing supply in the area.

5.4 The Topic Paper 3 Addendum report (July 2018) includes table 3.4 (below), which itemises the Councils projected level of housing supply from 2017–2026 for the North and West HMA. As can be seen, it is marginally above 6 years up to 2020/21, when supply then drops to 5.3 years in 2023/2024.

[TABLE INSERT]

5.5 On review of the housing trajectory included within the Housing Land Supply Statement published in March 2018 a number of the small sites (less than 10 dwellings) listed within Trowbridge CA considered to be developable within the plan period have permissions dating pre-2015, therefore it would appear to be unclear if these sites will realistically come forward.

5.6 In order to avoid slipping below the 5 years supply the Council need to be more proactive in bringing forward sites early in the plan period. Taking the above into consideration and reviewing the proposed five-year supply figures at Table 3.4 (above) the delivery is only marginally above 5 years, meaning that the plan is not robust or sound in its current form.

5.7 In order to make the plan sound additional evidence needs to be provided as to how the Councils will maintain a 5-year supply. In order to assist them in doing so:

- Wiltshire Council need to maximize site capacity for the development of housing within each of the identified proposed allocations;
- Eliminate any small sites which have expired from the 5-year land supply calculations;
- Ensure that the proposed Allocations are deliverable sites, and able to come forward soon after the adoption of the plan.

## **6.0 TECHNICAL ISSUES**

6.1 The site at Elizabeth Way (Allocation H2.3) encompasses approximately 16.33ha of land and is now proposed to be allocated for a total of 355 dwellings. It is acknowledged that due to the proximity of the site to Hilperton Gap, and the location of the Bradford and Bath Bats SAC to the south of Trowbridge, the site may have constraints which will need to be addressed prior to development. In order to gain a better understanding of these issues Barratt Homes have undertaken various technical assessments on the site, south of Elizabeth Way, which have proven that a higher quantity of housing is possible on the site.

6.2 A Vision Document has been produced, submitted alongside previous representations, which set out the proposed design principles for the site and summarizes the specialist technical input received to date. A summary of the key issues is set out below.

### Site Boundary

6.3 Since the publication of the 'Pre-submission Plan' the site boundary identified for the proposed allocation at Elizabeth Way was incorrect. Through previous representations and discussions with officers we highlighted that the site boundary identified on the plan did not align with

Elizabeth Way Relief Road. From these discussions with Planning Policy Officers we understood that this error would be rectified prior to submission to the Inspector.

6.4 We are in support of the update to the site boundary, which has also been accompanied by the Council proposing that an additional 150 dwellings can be accommodated on the site.

#### Capacity of Site

6.5 The site at Elizabeth Way has been identified for the allocation of 355 dwellings, which is considerably lower than what the site could sustainably deliver. This raises the issue of major under-development of the site which, in combination with the required housing figures, highlights the fact that the current proposed allocation has not been positively prepared or justified.

6.6 Using the evidence gathered by the technical assessments we have calculated that the Barratt site can sustainably accommodate approximately 175 dwellings, which in combination with the current planning application submitted to the west of the site (16/00672/OUT) for 180 dwellings, would equate to 355 dwellings prior to the eastern section of the site allocation even coming forward. Persimmon Homes have submitted earlier representations to suggest that they can deliver circa 150 homes on land to the east of the proposed allocation, meaning that the overall delivery on site could potentially deliver circa 480 dwellings.

6.7 In order to make the plan sound, the allocation for land at Elizabeth Way should be increased to appropriately reflect the true capacity of the site and taking into consideration the NPPF 'direction of travel' approach.

#### Drainage

6.8 From the outset, it was suggested by Wiltshire Council's drainage team that the preparation of a joint drainage strategy would emphasize the deliverability of the site at Elizabeth Way. Since the pre-submission consultation in July 2017, a number of discussions have been undertaken with officers and drainage work has been undertaken which has fed into the design and masterplan of the site.

6.9 The work that has been undertaken to date proves that development of this land to the south of Elizabeth Way offers substantial benefits to both the watercourse and the existing residents along Victoria Road as it will help to safeguard against flooding.

6.10 As you can see from the masterplan (Appendix 2) the incorporation of swales and ponds into the design provides a level of security to residential units in terms of offsetting potential flooding and also providing wildlife habitat, thus softening any impact of new development on a whole.

#### Ecological Constraints

6.11 The ecological investigations, including Badger and Bat surveys, carried out to date have not raised any detrimental issues which would affect the delivery of the site, or preclude the site from development. Walked transect surveys were completed in May and July 2017, with a final survey undertaken in September 2017. Automated detectors were deployed for a period of five nights per month between April and August (inclusive).

6.12 The below table presents the results of the automated detector surveys between April and August 2017 (inclusive). The table includes the total number of passes (B) recorded and average passes per night (B/n) for all species.

[TABLE INSERT]

6.13 Overall, activity appears to be fairly low with the exception of Serotine, which is higher than would be expected, but we do not consider that this matter acts as a constraint to the development of the site.

6.14 The ecological work undertaken by BSG Ecology Ltd. has been used to inform the Concept Masterplan, and this is reflected through the design of open space on site. The Masterplan of the site is attached at Appendix 2.

## 7.0 CONCLUSION

7.1 We support the allocation of 'Policy H2.3' for Land south of Elizabeth Way, but we remain of the view that there are a number of significant issues within the Housing Site Allocations Plan, identified throughout this Representation, that Wiltshire Council need to address.

7.2 The Housing Site Allocation Plan is unsound as it has not been positively prepared and is not justified due to the fact that the indicative housing requirement, which has been set for Trowbridge, has not been met through the proposed allocations. Further to this, the Plan does not propose to make efficient use of land to be allocated, which is unsustainable and not consistent with National Policy.

7.3 Barratt Homes will continue to work with Wiltshire Council and are dedicated to ensuring the deliverability of their site at Elizabeth Way.

7.4 In summary, the plan is unsound in its current form for the following reasons;

- The plan is not positively prepared because more than half of the indicative housing requirement allocated for delivery within Trowbridge has not been met, proving that the plan has not been consistently prepared using the evidence gathered.
- The Plan is not justified as it does not propose to make efficient use of land.
- The Plan is contradictory to, and does not reflect, the strategy which was set and approved by the Inspector of the Core Strategy in December 2014.

## **1.0 INTRODUCTION**

1.1 This representation is submitted on behalf of Barratt Homes in respect of their land interests to the south of Elizabeth Way, Trowbridge. It responds to the Focused Consultation on the Schedule of Proposed Changes and evidence base documents which includes updates and addendums to the following; Topic Papers, Technical Reports and Proposed Changes Consultation Documents, and in doing so, outlines how development of the Land at Elizabeth Way would contribute to the achievement of the proposed spatial and sustainability objectives. A location plan for the site has been attached to Appendix 1.

1.2 The Council submitted the draft Wiltshire Housing Site Allocations DPD along with a 'Schedule of Proposed Changes' and supporting evidence to the Secretary of State for independent examination in July 2018. Since this time, Planning Inspector Steven Lee has been appointed to undertake the examination. In August 2018, the Council received a procedural letter from the Inspector requesting Wiltshire Council to undertake consultation on the 'Schedule of proposed changes' as these changes had yet to be consulted upon in public.

1.3 The Representation forms specifically request feedback on whether it is commonly considered that the Site Allocations Plan and evidence base is sound. There is much in the plan that we support, but at present, our response is that the draft Site Allocations Plan is unsound as it has not been positively prepared and is not justified. This is primarily due to the fact that the indicative housing requirement which has been set for Trowbridge has still not been met through the proposed allocations. We have set out our justification for reaching this view in more detail in the following sections.

## **2.0 SUMMARY OF PROPOSED CHANGES TO THE PLAN**

2.1 We have reviewed the 'Schedule of Proposed Changes' relating to the Trowbridge Community Area, and more directly to the proposed allocation at Elizabeth Way, these are set out below:

- 'Historic Landscape Classification' has now been included within the SA assessment tables against SA Objective 6 which has not affected scoring therefore no changes have been made to the Trowbridge assessments in this regard;
- SHLAA site 293 'Land to the east of Elizabeth Way' is to be divided into two parts with the western area to be included as part of the proposed allocation (H2.3) and will help to deliver circa 120 additional dwellings at this location;
- Proposed quantum of Elizabeth Way Site Allocation (H2.3) has increased from 205 dwellings (July 2017), to 355 dwellings (September 2018) due to this additional SHLAA site 293 being introduced;
- Wiltshire Council have published the 2017 Housing Land Supply Statement (March 2018) and released calculations based on the current housing land supply prior to applying the proposed allocations. The indicative residual requirement for Trowbridge, excluding proposed allocations, is now 2,230 dwellings up to 2026. This is an increase from the previous indicative figure of 2,050 dwellings;

- The Council acknowledge that the proposed allocations through the Site Allocations DPD for Trowbridge are not capable of delivering the full indicative requirement, and instead amount to a total of 1,050 dwellings. We have therefore calculated a deficit of 1,180 homes within Trowbridge over the plan period up to 2026. It is important to note that PC25 of the 'Schedule of Proposed changes' document highlights a deficit of 1,297 dwellings at Trowbridge which, on review of the evidence base, we have been unable to connect this figure and seek further clarity on this point.

2.2 It is important to note that on behalf of our client Barratt Homes, we have previously engaged with the Wiltshire Housing Site Allocations DPD consultation process and submitted representations to the Pre-submission Consultation which took place between July and September 2017. In addition, discussions with policy officers have taken place to demonstrate the deliverability of land at Elizabeth Way for circa 450 dwellings.

2.3 As this current Schedule of Proposed Changes Consultation is based on whether the Plan is considered to be sound, we have therefore focused this representation to only raise issues based on soundness.

### **3.0 SOUNDNESS OF THE PLAN**

3.1 This section of the representation seeks to review relevant planning policy on a national level relating to the provision for housing, and on this basis, whether the local planning authority has prepared a Local Plan that is sound.

3.2 It is important to raise the point that although the updated NPPF was published in July 2018, the implementation period allows for the previous Framework to be used for those plans submitted for examination before January 2019. Annex 1 'Implementation', paragraph 214 of the updated NPPF (2018) states that,

**“The policies in the previous Framework will apply for the purpose of examining plans, where those plans are submitted on or before 24 January 2019.”**

3.3 In this case, Wiltshire Council submitted the Sites Allocations DPD plan to the Inspector in August 2018 therefore the previous Framework will still apply.

#### **Delivering housing need**

3.4 The NPPF (2012) sets out 12 Core Principles which were formed to underpin plan making, one of which is particularly relevant to making provision for housing. This states that planning should,

**“Proactively drive and support sustainable economic development to deliver the homes, business and industrial units, infrastructure and thriving local places that the country needs. Every effort should be made objectively to identify and then meet the housing,**

**business and other development needs of an area, and respond positively to wider opportunities for growth. Plans should take account of market signals, such as land prices and housing affordability, and set out a clear strategy for allocating sufficient land which is suitable for development in their area, taking account of the needs of the residential and business communities” (NPPF, para 17)**

3.5 Further guidance on the delivery of housing is set out in Para 47 of the NPPF and states,

**“To boost significantly the supply of housing, local planning authorities should:**

- use their evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area, as far as is consistent with the policies set out in this Framework, including identifying key sites which are critical to the delivery of the housing strategy over the plan period;
- identify and update annually a supply of specific deliverable sites sufficient to provide five years’ worth of housing against their housing requirements...” (NPPF, para 47)

3.6 In terms of ‘Local Plan making’ it is critical to the success of a plan that the Local Planning Authority positively plan to deliver homes, whilst also allowing for some flexibility. Paragraph 157 of the NPPF states that,

**“Crucially, Local Plans should:**

- **Plan positively for the development and infrastructure required in the area to meet the objectives, principles and policies of this framework.” (Paragraph 157)**

3.7 The NPPF emphasizes the need for plans to ensure delivery of their strategy for housing and the main way of doing so is the allocation of specific, sustainable and deliverable sites.

Soundness Test

3.8 When assessing whether a plan is considered to be sound, Paragraph 182 of the NPPF identifies the 4 main factors which the LPA need to consider:

**“A local planning authority should submit a plan for examination which it considers is “sound” – namely that it is:**

- **Positively prepared** – the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development;
- **Justified** – the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence;
- **Effective** – the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and
- **Consistent with national policy** – the plan should enable the delivery of sustainable development in accordance with the policies in the Framework.” (NPPF, para 182)

3.9 The deliverability of a Plan features as one of the key tests of soundness and the PINS Procedural Practice in the Examination of Local Plans (June 2016, para 1.1) document stresses this point:

**...“the plan should focus relentlessly on the critical issues and the strategies to address them, paying careful attention to deliverability and viability. This approach may raise uncomfortable questions but the whole point of the plan is to address the critical issues as far as possible.” (Section 1: Pre-submission, Para. 1.1)**

Achieving appropriate densities

3.10 A critical update included within the revised NPPF (2018) focuses on the importance of making the most efficient use of land. Paragraph 123 of the revised NPPF states that,

**“Where there is an existing or anticipated shortage of land for meeting identified housing needs, it is especially important that planning policies and decision avoid homes being built at low densities and ensure that development make optimal use of the potential of each site. In these circumstances:**

**a) Plans should contain policies to optimise the use of land in their area and meet as much of the identified need for housing as possible. This will be tested robustly at examination and should include the use of minimum density standards for city and town centres and other locations that are well served by public transport. These standards should seek a significant uplift in the average density of residential development within these areas, unless it can be shown that there are strong reasons why this would be inappropriate.”**

3.11 Although the examination of the plan is based on the old NPPF, this 'direction of travel' as set out within revised national policy needs to be considered through the examination by the Inspector in order for the plan to be sound. The quantum of housing development proposed at Trowbridge is falling increasingly short of the indicative requirement and needs to be addressed if the plan is to succeed.

Deliverability

3.12 The revised 2018 NPPF, sets out the test for determining whether a development site is deliverable. Paragraph 73 of the NPPF states:

**“Local planning authorities should identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of five years’ worth of housing against their housing requirement set out in adopted strategic policies, or against their local housing need where the strategic policies are more than five years old.”**

3.13 The NPPF’s Annex then defines “deliverable” as:

**“To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. Sites that are not major development, and sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (e.g. they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans). Sites with outline planning permission, permission in principle, allocated in the development plan or identified on a brownfield register should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years.”**

3.14 The emphasis on deliverability within the updated NPPF has changed and has given power to Development Management officers when decided applications, paragraph 76 states;

**“To help ensure that proposals for housing development are implemented in a timely manner, local planning authorities should consider imposing a planning condition providing that development must begin within a timescale shorter than the relevant default period, where this would expedite the development without threatening its deliverability or viability. For major development involving the provision of housing, local planning authorities should also assess why an earlier grant of planning permission for a similar development on the same site did not start.”**

3.15 We do not consider the Wiltshire Housing Site Allocations Plan to be sound in its current form as it is not positively prepared, justified, effective, nor consistent with national policy on housing delivery and plan making. This plan should be prepared based on the Wiltshire Core Strategy objectives which seeks to meet the objectively assessed housing need by the end of the plan period.

3.16 We set out below the reasons why we consider the draft plan to be unsound in its current form:

- The plan has not been positively prepared due to the fact that more than half of the indicative housing requirement allocated for delivery within Trowbridge has not been met, with a calculated deficit of 1,180 dwellings. At this stage of the plan making process Wiltshire Council should be required to establish how the identified housing need can be met over the plan period, and with regards to Trowbridge Community Area it clearly does not. This proves that the draft proposals have not been consistently prepared using the evidence gathered.
- The Plan is contradictory to, and does not reflect, the strategy which was set and approved by the Inspector of the Core Strategy in December 2014.
- The proposed quantum of 355 dwellings currently associated with allocation H2.3, does not meet the full potential capacity of the site, therefore proving that the plan is not justified as it does not make efficient use of land to be allocated through the Site Allocations Plan.

#### **4.0 INDICATIVE HOUSING REQUIREMENT FOR TROWBRIDGE**

4.1 The six draft housing allocations identified within Trowbridge will now provide land for approximately 1,050 dwellings. This figure falls significantly short of the updated indicative minimum requirement of 2,230 dwellings set for Trowbridge over the plan period by a total of 1,180 dwellings. It is important to note that PC25 of the 'Schedule of Proposed changes' consultation document highlights a deficit of 1,297 dwellings, we have been unable to reconcile this figure through the evidence base produced by Wiltshire Council and therefore would like to raise this point to be clarified by the Council.

4.2 The Council have prepared an Addendum report to be read in conjunction with Topic Paper 4 'Developing Plan Proposals'. The Addendum was produced to review the confirmed 2017 housing land supply position and how this would affect the plan proposals.

4.3 It is important to note that the original purpose of Topic Paper 4 'Developing Plan Proposals' from the outset was to meet two objectives of the Plan which were:

- To help demonstrate a rolling five-year supply of deliverable land for housing development; and
- To allocate sites at the settlement in the County that support the spatial strategy.

4.4 Since the publication of the 'Pre-submission' version of the plan in July 2017, the total amount of dwellings proposed for Trowbridge has not met the indicative requirement set for the area. Although the Schedule of Proposed Changes has increased the capacity of two proposed site

allocations (Land at Elizabeth Way and Elm Grove Farm) within Trowbridge, the overall indicative requirement has further increased from 2,050 homes to 2,230 homes, due to the published 2017 housing land supply figures.

4.5 Topic Paper 4 previously identified two reasons for this under provision of housing within Trowbridge:

1. The delay of developing Ashton Park Urban Extension, which was allocated through the Wiltshire Core Strategy for 2,600 dwellings to be built on site within the plan period, up to 2026. It has now resulted in only 1,600 dwellings being built within the plan period and the remaining 1,000 dwellings will be built post 2026. This accounts for 1,000 dwellings out of the 1,220 dwellings shortfall;

2. Inability to identify land free from environmental constraints which could compensate for the consequences of the delay to the Ashton Park development.

4.6 The addendum now states that,

**“the need for detailed Habitats Regulation Assessment, and subsequent bat mitigation strategy have continued to delay delivery of the strategic allocation at Ashton Park, Trowbridge.”**

4.7 The purpose of the Wiltshire Housing Site Allocations process is to address the shortfall of housing over the remainder of the plan period, up to 2026. Once adopted, the Plan will become an implementation mechanism to the Wiltshire Core Strategy (WCS) and should ensure that the remaining housing requirements set by the WCS are met. Paragraphs 77-79 of the Inspector’s Report for the Wiltshire Core Strategy (dated December 2014) referred to Wiltshire’s Objectively Assessed Need (OAN) being significantly higher than planned for through the Core Strategy, being in the region of +44,000 dwellings,

**“Whilst the achievement of such a figure should be subject to careful monitoring, the evidence indicates the fluctuations that can occur in the delivery of housing but does not conclusively indicate that such a delivery rate cannot be met during the course of the plan period to deliver the significant boost in housing required to go some considerable way to meeting needs. Against this context and mindful of the content of the LDS (partial CS Review), the subsequent intended early review of the CS, the Sites DPD, the Chippenham Site Allocation DPD and the neighbourhood planning processes will enable the Council to proactively seek to meet, and if necessary reassess, its objectively assessed housing need and plan for its provision accordingly.” (Inspectors Report, Paragraph 80)**

4.8 With this in mind, we consider that it is critical that the Wiltshire Housing Site Allocations Plan is positively prepared to allocate sufficient land as required to address the current undersupply of housing within Trowbridge and meet the ‘direction of travel’ approach now being sought through National Policy.

4.9 The acknowledgement that 1,000 dwellings previously anticipated to be built at Ashton Park will now be delayed until the next plan period is reason to ensure that sufficient flexibility is included through the Site Allocations Plan,

**“Consequently, I consider that at this current time the minimum housing figure within the CS should reasonably equate to at least 42,000 homes over the plan period with the flexibility to deliver more.” (Inspectors Report, Paragraph 81)**

4.10 In accordance with Paragraph 47 (bullet point one) of the NPPF (2012) in order for the plan to be sound it must use the baseline evidence gathered to ensure that the full objectively assessed housing needs set out in the Core Strategy are met. This is currently not the case and is demonstrated by the 1,180 dwellings shortfall in Trowbridge.

## **5.0 FIVE YEAR HOUSING LAND SUPPLY**

5.1 The Pre-submission Site Allocations Plan evidence base included Topic Paper 3 ‘Housing Land Supply’ which demonstrated the Councils land supply position as of June 2017. At this stage of the process the Council had produced an ‘estimated 2017 base position’ as the 2016/17 annual completions were still being calculated. Since this time, the Council have been able to publish their 2017 housing land supply position (March 2018) which has led to updated indicative requirement figures.

5.2 In order to make the plan sound, the Wiltshire Housing Site Allocations Plan is required to identify sufficient land to meet the overall housing need for Trowbridge. The below table is taken from the Topic Paper 3 addendum report (July 2018) which highlights that following the 2016/17 delivery calculations the indicative requirement for Trowbridge as of 2017 has increased by 213 dwellings:

[TABLE INSERT]

5.3 Wiltshire Council have previously stated that the ‘Liverpool Method’ appropriately reflects the delivery strategy set out within the Wiltshire Core Strategy for calculating housing supply. The ‘Liverpool method’ of calculating 5-year supply aims to spread the delivery of housing over the plan period, and not to front-load any under-provision to date. We are of the view that the ‘Sedgefield approach’ conforms more closely with the requirement to plan positively as it seeks to boost significantly the supply of land for housing in the early part of the plan period. In either method, in order to rectify the current housing shortfall over the remainder of the plan period (up to 2026) the Site Allocations Plan must maximise the identified sustainable development opportunities within Trowbridge, which will in turn help to bolster the housing supply in the area.

5.4 The Topic Paper 3 Addendum report (July 2018) includes table 3.4 (below), which itemises the Councils projected level of housing supply from 2017–2026 for the North and West HMA. As can be seen, it is marginally above 6 years up to 2020/21, when supply then drops to 5.3 years in 2023/2024.

[TABLE INSERT]

5.5 On review of the housing trajectory included within the Housing Land Supply Statement published in March 2018 a number of the small sites (less than 10 dwellings) listed within Trowbridge CA considered to be developable within the plan period have permissions dating pre-2015, therefore it would appear to be unclear if these sites will realistically come forward.

5.6 In order to avoid slipping below the 5 years supply the Council need to be more proactive in bringing forward sites early in the plan period. Taking the above into consideration and reviewing the proposed five-year supply figures at Table 3.4 (above) the delivery is only marginally above 5 years, meaning that the plan is not robust or sound in its current form.

5.7 In order to make the plan sound additional evidence needs to be provided as to how the Councils will maintain a 5-year supply. In order to assist them in doing so:

- Wiltshire Council need to maximize site capacity for the development of housing within each of the identified proposed allocations;
- Eliminate any small sites which have expired from the 5-year land supply calculations;
- Ensure that the proposed Allocations are deliverable sites, and able to come forward soon after the adoption of the plan.

## **6.0 TECHNICAL ISSUES**

6.1 The site at Elizabeth Way (Allocation H2.3) encompasses approximately 16.33ha of land and is now proposed to be allocated for a total of 355 dwellings. It is acknowledged that due to the proximity of the site to Hilperton Gap, and the location of the Bradford and Bath Bats SAC to the south of Trowbridge, the site may have constraints which will need to be addressed prior to development. In order to gain a better understanding of these issues Barratt Homes have undertaken various technical assessments on the site, south of Elizabeth Way, which have proven that a higher quantity of housing is possible on the site.

6.2 A Vision Document has been produced, submitted alongside previous representations, which set out the proposed design principles for the site and summarizes the specialist technical input received to date. A summary of the key issues is set out below.

### Site Boundary

6.3 Since the publication of the 'Pre-submission Plan' the site boundary identified for the proposed allocation at Elizabeth Way was incorrect. Through previous representations and discussions with officers we highlighted that the site boundary identified on the plan did not align with

Elizabeth Way Relief Road. From these discussions with Planning Policy Officers we understood that this error would be rectified prior to submission to the Inspector.

6.4 We are in support of the update to the site boundary, which has also been accompanied by the Council proposing that an additional 150 dwellings can be accommodated on the site.

#### Capacity of Site

6.5 The site at Elizabeth Way has been identified for the allocation of 355 dwellings, which is considerably lower than what the site could sustainably deliver. This raises the issue of major under-development of the site which, in combination with the required housing figures, highlights the fact that the current proposed allocation has not been positively prepared or justified.

6.6 Using the evidence gathered by the technical assessments we have calculated that the Barratt site can sustainably accommodate approximately 175 dwellings, which in combination with the current planning application submitted to the west of the site (16/00672/OUT) for 180 dwellings, would equate to 355 dwellings prior to the eastern section of the site allocation even coming forward. Persimmon Homes have submitted earlier representations to suggest that they can deliver circa 150 homes on land to the east of the proposed allocation, meaning that the overall delivery on site could potentially deliver circa 480 dwellings.

6.7 In order to make the plan sound, the allocation for land at Elizabeth Way should be increased to appropriately reflect the true capacity of the site and taking into consideration the NPPF 'direction of travel' approach.

#### Drainage

6.8 From the outset, it was suggested by Wiltshire Council's drainage team that the preparation of a joint drainage strategy would emphasize the deliverability of the site at Elizabeth Way. Since the pre-submission consultation in July 2017, a number of discussions have been undertaken with officers and drainage work has been undertaken which has fed into the design and masterplan of the site.

6.9 The work that has been undertaken to date proves that development of this land to the south of Elizabeth Way offers substantial benefits to both the watercourse and the existing residents along Victoria Road as it will help to safeguard against flooding.

6.10 As you can see from the masterplan (Appendix 2) the incorporation of swales and ponds into the design provides a level of security to residential units in terms of offsetting potential flooding and also providing wildlife habitat, thus softening any impact of new development on a whole.

#### Ecological Constraints

6.11 The ecological investigations, including Badger and Bat surveys, carried out to date have not raised any detrimental issues which would affect the delivery of the site, or preclude the site from development. Walked transect surveys were completed in May and July 2017, with a final survey undertaken in September 2017. Automated detectors were deployed for a period of five nights per month between April and August (inclusive).

6.12 The below table presents the results of the automated detector surveys between April and August 2017 (inclusive). The table includes the total number of passes (B) recorded and average passes per night (B/n) for all species.

[TABLE INSERT]

6.13 Overall, activity appears to be fairly low with the exception of Serotine, which is higher than would be expected, but we do not consider that this matter acts as a constraint to the development of the site.

6.14 The ecological work undertaken by BSG Ecology Ltd. has been used to inform the Concept Masterplan, and this is reflected through the design of open space on site. The Masterplan of the site is attached at Appendix 2.

## 7.0 CONCLUSION

7.1 We support the allocation of 'Policy H2.3' for Land south of Elizabeth Way, but we remain of the view that there are a number of significant issues within the Housing Site Allocations Plan, identified throughout this Representation, that Wiltshire Council need to address.

7.2 The Housing Site Allocation Plan is unsound as it has not been positively prepared and is not justified due to the fact that the indicative housing requirement, which has been set for Trowbridge, has not been met through the proposed allocations. Further to this, the Plan does not propose to make efficient use of land to be allocated, which is unsustainable and not consistent with National Policy.

7.3 Barratt Homes will continue to work with Wiltshire Council and are dedicated to ensuring the deliverability of their site at Elizabeth Way.

7.4 In summary, the plan is unsound in its current form for the following reasons;

- The plan is not positively prepared because more than half of the indicative housing requirement allocated for delivery within Trowbridge has not been met, proving that the plan has not been consistently prepared using the evidence gathered.
- The Plan is not justified as it does not propose to make efficient use of land.
- The Plan is contradictory to, and does not reflect, the strategy which was set and approved by the Inspector of the Core Strategy in December 2014.

## **1.0 INTRODUCTION**

1.1 This representation is submitted on behalf of Barratt Homes in respect of their land interests to the south of Elizabeth Way, Trowbridge. It responds to the Focused Consultation on the Schedule of Proposed Changes and evidence base documents which includes updates and addendums to the following; Topic Papers, Technical Reports and Proposed Changes Consultation Documents, and in doing so, outlines how development of the Land at Elizabeth Way would contribute to the achievement of the proposed spatial and sustainability objectives. A location plan for the site has been attached to Appendix 1.

1.2 The Council submitted the draft Wiltshire Housing Site Allocations DPD along with a 'Schedule of Proposed Changes' and supporting evidence to the Secretary of State for independent examination in July 2018. Since this time, Planning Inspector Steven Lee has been appointed to undertake the examination. In August 2018, the Council received a procedural letter from the Inspector requesting Wiltshire Council to undertake consultation on the 'Schedule of proposed changes' as these changes had yet to be consulted upon in public.

1.3 The Representation forms specifically request feedback on whether it is commonly considered that the Site Allocations Plan and evidence base is sound. There is much in the plan that we support, but at present, our response is that the draft Site Allocations Plan is unsound as it has not been positively prepared and is not justified. This is primarily due to the fact that the indicative housing requirement which has been set for Trowbridge has still not been met through the proposed allocations. We have set out our justification for reaching this view in more detail in the following sections.

## **2.0 SUMMARY OF PROPOSED CHANGES TO THE PLAN**

2.1 We have reviewed the 'Schedule of Proposed Changes' relating to the Trowbridge Community Area, and more directly to the proposed allocation at Elizabeth Way, these are set out below:

- 'Historic Landscape Classification' has now been included within the SA assessment tables against SA Objective 6 which has not affected scoring therefore no changes have been made to the Trowbridge assessments in this regard;
- SHLAA site 293 'Land to the east of Elizabeth Way' is to be divided into two parts with the western area to be included as part of the proposed allocation (H2.3) and will help to deliver circa 120 additional dwellings at this location;
- Proposed quantum of Elizabeth Way Site Allocation (H2.3) has increased from 205 dwellings (July 2017), to 355 dwellings (September 2018) due to this additional SHLAA site 293 being introduced;
- Wiltshire Council have published the 2017 Housing Land Supply Statement (March 2018) and released calculations based on the current housing land supply prior to applying the proposed allocations. The indicative residual requirement for Trowbridge, excluding proposed allocations, is now 2,230 dwellings up to 2026. This is an increase from the previous indicative figure of 2,050 dwellings;

- The Council acknowledge that the proposed allocations through the Site Allocations DPD for Trowbridge are not capable of delivering the full indicative requirement, and instead amount to a total of 1,050 dwellings. We have therefore calculated a deficit of 1,180 homes within Trowbridge over the plan period up to 2026. It is important to note that PC25 of the 'Schedule of Proposed changes' document highlights a deficit of 1,297 dwellings at Trowbridge which, on review of the evidence base, we have been unable to connect this figure and seek further clarity on this point.

2.2 It is important to note that on behalf of our client Barratt Homes, we have previously engaged with the Wiltshire Housing Site Allocations DPD consultation process and submitted representations to the Pre-submission Consultation which took place between July and September 2017. In addition, discussions with policy officers have taken place to demonstrate the deliverability of land at Elizabeth Way for circa 450 dwellings.

2.3 As this current Schedule of Proposed Changes Consultation is based on whether the Plan is considered to be sound, we have therefore focused this representation to only raise issues based on soundness.

### **3.0 SOUNDNESS OF THE PLAN**

3.1 This section of the representation seeks to review relevant planning policy on a national level relating to the provision for housing, and on this basis, whether the local planning authority has prepared a Local Plan that is sound.

3.2 It is important to raise the point that although the updated NPPF was published in July 2018, the implementation period allows for the previous Framework to be used for those plans submitted for examination before January 2019. Annex 1 'Implementation', paragraph 214 of the updated NPPF (2018) states that,

**“The policies in the previous Framework will apply for the purpose of examining plans, where those plans are submitted on or before 24 January 2019.”**

3.3 In this case, Wiltshire Council submitted the Sites Allocations DPD plan to the Inspector in August 2018 therefore the previous Framework will still apply.

#### **Delivering housing need**

3.4 The NPPF (2012) sets out 12 Core Principles which were formed to underpin plan making, one of which is particularly relevant to making provision for housing. This states that planning should,

**“Proactively drive and support sustainable economic development to deliver the homes, business and industrial units, infrastructure and thriving local places that the country needs. Every effort should be made objectively to identify and then meet the housing,**

**business and other development needs of an area, and respond positively to wider opportunities for growth. Plans should take account of market signals, such as land prices and housing affordability, and set out a clear strategy for allocating sufficient land which is suitable for development in their area, taking account of the needs of the residential and business communities” (NPPF, para 17)**

3.5 Further guidance on the delivery of housing is set out in Para 47 of the NPPF and states,

**“To boost significantly the supply of housing, local planning authorities should:**

- use their evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area, as far as is consistent with the policies set out in this Framework, including identifying key sites which are critical to the delivery of the housing strategy over the plan period;
- identify and update annually a supply of specific deliverable sites sufficient to provide five years’ worth of housing against their housing requirements...” (NPPF, para 47)

3.6 In terms of ‘Local Plan making’ it is critical to the success of a plan that the Local Planning Authority positively plan to deliver homes, whilst also allowing for some flexibility. Paragraph 157 of the NPPF states that,

**“Crucially, Local Plans should:**

- **Plan positively for the development and infrastructure required in the area to meet the objectives, principles and policies of this framework.” (Paragraph 157)**

3.7 The NPPF emphasizes the need for plans to ensure delivery of their strategy for housing and the main way of doing so is the allocation of specific, sustainable and deliverable sites.

Soundness Test

3.8 When assessing whether a plan is considered to be sound, Paragraph 182 of the NPPF identifies the 4 main factors which the LPA need to consider:

**“A local planning authority should submit a plan for examination which it considers is “sound” – namely that it is:**

- **Positively prepared** – the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development;
- **Justified** – the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence;
- **Effective** – the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and
- **Consistent with national policy** – the plan should enable the delivery of sustainable development in accordance with the policies in the Framework.” (NPPF, para 182)

3.9 The deliverability of a Plan features as one of the key tests of soundness and the PINS Procedural Practice in the Examination of Local Plans (June 2016, para 1.1) document stresses this point:

**...“the plan should focus relentlessly on the critical issues and the strategies to address them, paying careful attention to deliverability and viability. This approach may raise uncomfortable questions but the whole point of the plan is to address the critical issues as far as possible.” (Section 1: Pre-submission, Para. 1.1)**

Achieving appropriate densities

3.10 A critical update included within the revised NPPF (2018) focuses on the importance of making the most efficient use of land. Paragraph 123 of the revised NPPF states that,

**“Where there is an existing or anticipated shortage of land for meeting identified housing needs, it is especially important that planning policies and decision avoid homes being built at low densities and ensure that development make optimal use of the potential of each site. In these circumstances:**

**a) Plans should contain policies to optimise the use of land in their area and meet as much of the identified need for housing as possible. This will be tested robustly at examination and should include the use of minimum density standards for city and town centres and other locations that are well served by public transport. These standards should seek a significant uplift in the average density of residential development within these areas, unless it can be shown that there are strong reasons why this would be inappropriate.”**

3.11 Although the examination of the plan is based on the old NPPF, this 'direction of travel' as set out within revised national policy needs to be considered through the examination by the Inspector in order for the plan to be sound. The quantum of housing development proposed at Trowbridge is falling increasingly short of the indicative requirement and needs to be addressed if the plan is to succeed.

Deliverability

3.12 The revised 2018 NPPF, sets out the test for determining whether a development site is deliverable. Paragraph 73 of the NPPF states:

**“Local planning authorities should identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of five years’ worth of housing against their housing requirement set out in adopted strategic policies, or against their local housing need where the strategic policies are more than five years old.”**

3.13 The NPPF’s Annex then defines “deliverable” as:

**“To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. Sites that are not major development, and sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (e.g. they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans). Sites with outline planning permission, permission in principle, allocated in the development plan or identified on a brownfield register should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years.”**

3.14 The emphasis on deliverability within the updated NPPF has changed and has given power to Development Management officers when decided applications, paragraph 76 states;

**“To help ensure that proposals for housing development are implemented in a timely manner, local planning authorities should consider imposing a planning condition providing that development must begin within a timescale shorter than the relevant default period, where this would expedite the development without threatening its deliverability or viability. For major development involving the provision of housing, local planning authorities should also assess why an earlier grant of planning permission for a similar development on the same site did not start.”**

3.15 We do not consider the Wiltshire Housing Site Allocations Plan to be sound in its current form as it is not positively prepared, justified, effective, nor consistent with national policy on housing delivery and plan making. This plan should be prepared based on the Wiltshire Core Strategy objectives which seeks to meet the objectively assessed housing need by the end of the plan period.

3.16 We set out below the reasons why we consider the draft plan to be unsound in its current form:

- The plan has not been positively prepared due to the fact that more than half of the indicative housing requirement allocated for delivery within Trowbridge has not been met, with a calculated deficit of 1,180 dwellings. At this stage of the plan making process Wiltshire Council should be required to establish how the identified housing need can be met over the plan period, and with regards to Trowbridge Community Area it clearly does not. This proves that the draft proposals have not been consistently prepared using the evidence gathered.
- The Plan is contradictory to, and does not reflect, the strategy which was set and approved by the Inspector of the Core Strategy in December 2014.
- The proposed quantum of 355 dwellings currently associated with allocation H2.3, does not meet the full potential capacity of the site, therefore proving that the plan is not justified as it does not make efficient use of land to be allocated through the Site Allocations Plan.

#### **4.0 INDICATIVE HOUSING REQUIREMENT FOR TROWBRIDGE**

4.1 The six draft housing allocations identified within Trowbridge will now provide land for approximately 1,050 dwellings. This figure falls significantly short of the updated indicative minimum requirement of 2,230 dwellings set for Trowbridge over the plan period by a total of 1,180 dwellings. It is important to note that PC25 of the 'Schedule of Proposed changes' consultation document highlights a deficit of 1,297 dwellings, we have been unable to reconcile this figure through the evidence base produced by Wiltshire Council and therefore would like to raise this point to be clarified by the Council.

4.2 The Council have prepared an Addendum report to be read in conjunction with Topic Paper 4 'Developing Plan Proposals'. The Addendum was produced to review the confirmed 2017 housing land supply position and how this would affect the plan proposals.

4.3 It is important to note that the original purpose of Topic Paper 4 'Developing Plan Proposals' from the outset was to meet two objectives of the Plan which were:

- To help demonstrate a rolling five-year supply of deliverable land for housing development; and
- To allocate sites at the settlement in the County that support the spatial strategy.

4.4 Since the publication of the 'Pre-submission' version of the plan in July 2017, the total amount of dwellings proposed for Trowbridge has not met the indicative requirement set for the area. Although the Schedule of Proposed Changes has increased the capacity of two proposed site

allocations (Land at Elizabeth Way and Elm Grove Farm) within Trowbridge, the overall indicative requirement has further increased from 2,050 homes to 2,230 homes, due to the published 2017 housing land supply figures.

4.5 Topic Paper 4 previously identified two reasons for this under provision of housing within Trowbridge:

1. The delay of developing Ashton Park Urban Extension, which was allocated through the Wiltshire Core Strategy for 2,600 dwellings to be built on site within the plan period, up to 2026. It has now resulted in only 1,600 dwellings being built within the plan period and the remaining 1,000 dwellings will be built post 2026. This accounts for 1,000 dwellings out of the 1,220 dwellings shortfall;
2. Inability to identify land free from environmental constraints which could compensate for the consequences of the delay to the Ashton Park development.

4.6 The addendum now states that,

**“the need for detailed Habitats Regulation Assessment, and subsequent bat mitigation strategy have continued to delay delivery of the strategic allocation at Ashton Park, Trowbridge.”**

4.7 The purpose of the Wiltshire Housing Site Allocations process is to address the shortfall of housing over the remainder of the plan period, up to 2026. Once adopted, the Plan will become an implementation mechanism to the Wiltshire Core Strategy (WCS) and should ensure that the remaining housing requirements set by the WCS are met. Paragraphs 77-79 of the Inspector’s Report for the Wiltshire Core Strategy (dated December 2014) referred to Wiltshire’s Objectively Assessed Need (OAN) being significantly higher than planned for through the Core Strategy, being in the region of +44,000 dwellings,

**“Whilst the achievement of such a figure should be subject to careful monitoring, the evidence indicates the fluctuations that can occur in the delivery of housing but does not conclusively indicate that such a delivery rate cannot be met during the course of the plan period to deliver the significant boost in housing required to go some considerable way to meeting needs. Against this context and mindful of the content of the LDS (partial CS Review), the subsequent intended early review of the CS, the Sites DPD, the Chippenham Site Allocation DPD and the neighbourhood planning processes will enable the Council to proactively seek to meet, and if necessary reassess, its objectively assessed housing need and plan for its provision accordingly.” (Inspectors Report, Paragraph 80)**

4.8 With this in mind, we consider that it is critical that the Wiltshire Housing Site Allocations Plan is positively prepared to allocate sufficient land as required to address the current undersupply of housing within Trowbridge and meet the ‘direction of travel’ approach now being sought through National Policy.

4.9 The acknowledgement that 1,000 dwellings previously anticipated to be built at Ashton Park will now be delayed until the next plan period is reason to ensure that sufficient flexibility is included through the Site Allocations Plan,

**“Consequently, I consider that at this current time the minimum housing figure within the CS should reasonably equate to at least 42,000 homes over the plan period with the flexibility to deliver more.” (Inspectors Report, Paragraph 81)**

4.10 In accordance with Paragraph 47 (bullet point one) of the NPPF (2012) in order for the plan to be sound it must use the baseline evidence gathered to ensure that the full objectively assessed housing needs set out in the Core Strategy are met. This is currently not the case and is demonstrated by the 1,180 dwellings shortfall in Trowbridge.

## **5.0 FIVE YEAR HOUSING LAND SUPPLY**

5.1 The Pre-submission Site Allocations Plan evidence base included Topic Paper 3 ‘Housing Land Supply’ which demonstrated the Councils land supply position as of June 2017. At this stage of the process the Council had produced an ‘estimated 2017 base position’ as the 2016/17 annual completions were still being calculated. Since this time, the Council have been able to publish their 2017 housing land supply position (March 2018) which has led to updated indicative requirement figures.

5.2 In order to make the plan sound, the Wiltshire Housing Site Allocations Plan is required to identify sufficient land to meet the overall housing need for Trowbridge. The below table is taken from the Topic Paper 3 addendum report (July 2018) which highlights that following the 2016/17 delivery calculations the indicative requirement for Trowbridge as of 2017 has increased by 213 dwellings:

[TABLE INSERT]

5.3 Wiltshire Council have previously stated that the ‘Liverpool Method’ appropriately reflects the delivery strategy set out within the Wiltshire Core Strategy for calculating housing supply. The ‘Liverpool method’ of calculating 5-year supply aims to spread the delivery of housing over the plan period, and not to front-load any under-provision to date. We are of the view that the ‘Sedgefield approach’ conforms more closely with the requirement to plan positively as it seeks to boost significantly the supply of land for housing in the early part of the plan period. In either method, in order to rectify the current housing shortfall over the remainder of the plan period (up to 2026) the Site Allocations Plan must maximise the identified sustainable development opportunities within Trowbridge, which will in turn help to bolster the housing supply in the area.

5.4 The Topic Paper 3 Addendum report (July 2018) includes table 3.4 (below), which itemises the Councils projected level of housing supply from 2017–2026 for the North and West HMA. As can be seen, it is marginally above 6 years up to 2020/21, when supply then drops to 5.3 years in 2023/2024.

[TABLE INSERT]

5.5 On review of the housing trajectory included within the Housing Land Supply Statement published in March 2018 a number of the small sites (less than 10 dwellings) listed within Trowbridge CA considered to be developable within the plan period have permissions dating pre-2015, therefore it would appear to be unclear if these sites will realistically come forward.

5.6 In order to avoid slipping below the 5 years supply the Council need to be more proactive in bringing forward sites early in the plan period. Taking the above into consideration and reviewing the proposed five-year supply figures at Table 3.4 (above) the delivery is only marginally above 5 years, meaning that the plan is not robust or sound in its current form.

5.7 In order to make the plan sound additional evidence needs to be provided as to how the Councils will maintain a 5-year supply. In order to assist them in doing so:

- Wiltshire Council need to maximize site capacity for the development of housing within each of the identified proposed allocations;
- Eliminate any small sites which have expired from the 5-year land supply calculations;
- Ensure that the proposed Allocations are deliverable sites, and able to come forward soon after the adoption of the plan.

## **6.0 TECHNICAL ISSUES**

6.1 The site at Elizabeth Way (Allocation H2.3) encompasses approximately 16.33ha of land and is now proposed to be allocated for a total of 355 dwellings. It is acknowledged that due to the proximity of the site to Hilperton Gap, and the location of the Bradford and Bath Bats SAC to the south of Trowbridge, the site may have constraints which will need to be addressed prior to development. In order to gain a better understanding of these issues Barratt Homes have undertaken various technical assessments on the site, south of Elizabeth Way, which have proven that a higher quantity of housing is possible on the site.

6.2 A Vision Document has been produced, submitted alongside previous representations, which set out the proposed design principles for the site and summarizes the specialist technical input received to date. A summary of the key issues is set out below.

### Site Boundary

6.3 Since the publication of the 'Pre-submission Plan' the site boundary identified for the proposed allocation at Elizabeth Way was incorrect. Through previous representations and discussions with officers we highlighted that the site boundary identified on the plan did not align with

Elizabeth Way Relief Road. From these discussions with Planning Policy Officers we understood that this error would be rectified prior to submission to the Inspector.

6.4 We are in support of the update to the site boundary, which has also been accompanied by the Council proposing that an additional 150 dwellings can be accommodated on the site.

#### Capacity of Site

6.5 The site at Elizabeth Way has been identified for the allocation of 355 dwellings, which is considerably lower than what the site could sustainably deliver. This raises the issue of major under-development of the site which, in combination with the required housing figures, highlights the fact that the current proposed allocation has not been positively prepared or justified.

6.6 Using the evidence gathered by the technical assessments we have calculated that the Barratt site can sustainably accommodate approximately 175 dwellings, which in combination with the current planning application submitted to the west of the site (16/00672/OUT) for 180 dwellings, would equate to 355 dwellings prior to the eastern section of the site allocation even coming forward. Persimmon Homes have submitted earlier representations to suggest that they can deliver circa 150 homes on land to the east of the proposed allocation, meaning that the overall delivery on site could potentially deliver circa 480 dwellings.

6.7 In order to make the plan sound, the allocation for land at Elizabeth Way should be increased to appropriately reflect the true capacity of the site and taking into consideration the NPPF 'direction of travel' approach.

#### Drainage

6.8 From the outset, it was suggested by Wiltshire Council's drainage team that the preparation of a joint drainage strategy would emphasize the deliverability of the site at Elizabeth Way. Since the pre-submission consultation in July 2017, a number of discussions have been undertaken with officers and drainage work has been undertaken which has fed into the design and masterplan of the site.

6.9 The work that has been undertaken to date proves that development of this land to the south of Elizabeth Way offers substantial benefits to both the watercourse and the existing residents along Victoria Road as it will help to safeguard against flooding.

6.10 As you can see from the masterplan (Appendix 2) the incorporation of swales and ponds into the design provides a level of security to residential units in terms of offsetting potential flooding and also providing wildlife habitat, thus softening any impact of new development on a whole.

#### Ecological Constraints

6.11 The ecological investigations, including Badger and Bat surveys, carried out to date have not raised any detrimental issues which would affect the delivery of the site, or preclude the site from development. Walked transect surveys were completed in May and July 2017, with a final survey undertaken in September 2017. Automated detectors were deployed for a period of five nights per month between April and August (inclusive).

6.12 The below table presents the results of the automated detector surveys between April and August 2017 (inclusive). The table includes the total number of passes (B) recorded and average passes per night (B/n) for all species.

[TABLE INSERT]

6.13 Overall, activity appears to be fairly low with the exception of Serotine, which is higher than would be expected, but we do not consider that this matter acts as a constraint to the development of the site.

6.14 The ecological work undertaken by BSG Ecology Ltd. has been used to inform the Concept Masterplan, and this is reflected through the design of open space on site. The Masterplan of the site is attached at Appendix 2.

## 7.0 CONCLUSION

7.1 We support the allocation of 'Policy H2.3' for Land south of Elizabeth Way, but we remain of the view that there are a number of significant issues within the Housing Site Allocations Plan, identified throughout this Representation, that Wiltshire Council need to address.

7.2 The Housing Site Allocation Plan is unsound as it has not been positively prepared and is not justified due to the fact that the indicative housing requirement, which has been set for Trowbridge, has not been met through the proposed allocations. Further to this, the Plan does not propose to make efficient use of land to be allocated, which is unsustainable and not consistent with National Policy.

7.3 Barratt Homes will continue to work with Wiltshire Council and are dedicated to ensuring the deliverability of their site at Elizabeth Way.

7.4 In summary, the plan is unsound in its current form for the following reasons;

- The plan is not positively prepared because more than half of the indicative housing requirement allocated for delivery within Trowbridge has not been met, proving that the plan has not been consistently prepared using the evidence gathered.
- The Plan is not justified as it does not propose to make efficient use of land.
- The Plan is contradictory to, and does not reflect, the strategy which was set and approved by the Inspector of the Core Strategy in December 2014.

<b>Identify Proposed Change Reference Number</b>	PC93				
<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations.</p> <p>Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages" are not promoted by National Policy. It is disappointing that, having consulted us once, you have ignored the comments made on your previous proposal and have now increased the number of houses that are planned for Bratton. No reasonable person would argue against a few houses say 15 but your proposition needs considerations into the issues surrounding it. When discussing Bratton, what is happening in Westbury must be taken into account since Bratton is part of the infra-structure supporting Westbury. Houses are being thrown up in and around Westbury as though there were a race to cram in as many residents as possible before an imagined finish time. As a consequence, roads, schools and medical services are under enormous pressure. How on earth is the area expected to cope with even more residents? Westbury Rail Station is already having to expand its car park. Where will further cars park? The B3098, which runs through Bratton, is now downright dangerous because of the volume of traffic on it, not to mention cyclists and horses. The road is far too narrow, particularly from the cemetery until the mini roundabout by the Turkish barber in Westbury and, going the other way, going up the hill towards Pickleberry Coffee Shop - I have been in fear of my life on a number of occasions, walking up that hill. I wont mention how dangerous the road is, through Edington and further, towards Market Lavington. It is the volume of traffic that renders it so dangerous (and, of course, the potholes!). How on earth will it cope with the inevitable extra traffic? Court Lane is even more dangerous and there is an increasing number of delivery trucks and lorries using it. How on earth are you proposing that people get to Trowbridge when all routes to Wiltshires major town are log jammed. The queues along the A350 are horrendous at rush hour and have not been helped by the vast housing estates that are continuing to expand there. Bratton Post Office and shop is a valuable resource particularly when the only other Post Office is on The Ham beyond Westbury Station. It is already so cramped that it can be very uncomfortable in there. More pressure on a shop which doesnt have sufficient room as it is would be crazy. Additionally, there is nowhere to park except on the side of the road (thus exacerbating the dangers on the B3098 already mentioned. There is a case for the compulsory purchase of the car park for the Duke public house, I suppose, but that would just cause more irritation in the village. Again, we have a much valued doctors surgery and pharmacy in the village. It is a rare and wonderful thing to have such a service on our doorsteps. There is no way that it will be able to cope with an influx of residents 57 new houses would bring (not to mention the housing project in The Butts). If the Westbury White Horse Surgery is struggling to cope with the number of patients it has and the little Bratton surgery becomes inundated, what will happen to those in dire need of medical attention? How will Bratton primary school cope with, in my estimation, the possible addition of three full classes of students? A) Where will they be accommodated, B) Who will teach them and C) How will the school provide sporting facilities in a limited space? The disruption that will be caused as a result of the building works will be horrendous given, as I have already discussed, the issues with the B3098. Presumably, the road will have to be dug up to lay sewage and water pipes, not to mention the need for gas and electricity and for phone lines. Given how much disruption we have already had to our phone services as OutReach struggles to improve our service, what will happen when the service boxes have to take an even greater load Why do so many of the new houses label themselves executive? They are clearly not aimed at those in need of housing but at building apparently prestigious houses for those with the where-withal to pay for them. And this is being done with the connivance of Wiltshire County Council which is issuing planning permission. Couples who grew up in the area should be able to live in the area and not be forced out by the greed of

	<p>builders. A couple of token cheaper houses for first time buyers simply does not cut the mustard. While we are thrilled that we live on a main line to London and use it frequently it is our downfall because so many folk want to live in this area for that reason. However, that does not justify locking locals out of the housing market in order to facilitate their desires. (Note that I did not say needs.) It seems to me that Wiltshire County Council is taking a piecemeal approach to the development of Wiltshire overall. A look at the wider picture and a plan for development which would create a flow of traffic, business and education across the county would be a good one rather than one which simply congests the system. Planners need to plan intelligently AND WITH COMPASSION, bearing in mind the impact on the quality of life of both current and future residents.</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>		<p>Positively prepared - Development requirements have not been objectively analysed. Westbury Town has an excess of 291 houses against the plan, resulting in the Westbury Community Area being over provisioned by 245 houses. There is no requirement for further allocations.</p> <p>Justified - Development of Site 738 and Site 321 are non-compliant with the Core Strategy, Core Policy 1, Clause 4.15 which states: At Large Villages settlement boundaries are retained and development will predominantly take the form of small housing and employment sites within the settlement boundaries. Small housing sites are defined as sites involving fewer than 10 dwellings (i.e. not a major application). Development outside the settlement boundary will be strictly controlled. The reduction of 5 houses in PC 94 does not cancel the following points. Site 738 and Site 321 individually exceed the housing needs requirement of the village (8 houses were required at the last survey) and are therefore non-compliant with Core Strategy, Core Policy 1 which states: Development at Large and Small Villages will be limited to that needed to help meet the housing needs of settlements and to improve employment opportunities, services and facilities. The Council has made errors in the assessment of Bratton as a "Large Village" by counting 2 Recreation Fields, 1 Children's Play Area and 1 Sports Pitch as facilities. However, there is in fact only 1 Recreation Field which includes a small Children's Play area and 1 Sports Pitch. Both sites are considered "modest" development but this is assessed against an incorrect figure of 819 dwellings. The 2011 census identified 512 households, with 1248 residents. Bratton has experienced growth of 26 houses, or 5.1%, in the last 10 years. The addition of 40 new houses in Bratton will therefore represent a further 7.8% increase, bringing the proposed 15-year growth of the village to 12.9%. Neither development complies with the statements of EXAM/ 02A (WHSAP Sustainability Appraisal Sept 2018), under the title 'Education and Skills', states that 'Policies should seek to match housing allocations to employment opportunities within the county, to assist in reducing trends of out-migration for work.' and under the title 'Economy and Enterprise', states that 'Housing development should be located in close proximity to employment sites in order to reduce out-commuting and promote travel to work using sustainable modes of transport . The latest statistics for cars per household indicate 1.76 for rural locations, which will lead to increased traffic, more out-commuting, vehicle noise and pollution. Community speed watch data shows traffic through Bratton has doubled in the last 3 years. On some days more than 400 vehicles in a hour. Both developments will alter the entrance to the village due to their size and will result in the loss of the rural nature of the village on the western edge, creating a suburban view. Site 738 would alter and harm the views and landscapes of the Village, the slopes of the Salisbury Plain and the White Horse and Bratton Camp hillside. Proposed landscaping with trees and shrubs conflicts with the wide open expanses of the hillside at this part of the Special Landscape Area and Salisbury Plain SPA (Special Protection Area). Existing Pedestrian and bicycle access to the centre of the village along Westbury Road and its pavement</p>			

and across Court Lane is unsafe due to the hazardous road junction at Court Lane, the quantity of traffic using the highway and the inadequacies of the existing pavement. Access to and from Site 738 for vehicles and cyclists will be unsafe due to poor visibility, lack of sufficient sightlines, the narrowness of the highway, quantity of traffic and accessing the highway will be a danger to other traffic. Pedestrian access to and from the village from Site 738 will be unsafe, reaching the pavement on the northern side will mean crossing the highway at a point of poor visibility for pedestrians and drivers. Bicycle access to and from the site is hazardous and there is little opportunity for a bicycle lane on either side of the highway, a point which affects site 321 in the same way but not assessed in Stage 4a. There is loss of green space and agricultural land. Developments of this size will add to the existing pressures on Bratton Surgery. The village is carrying out its own Neighbourhood Plan which will set out the plans for the village, not this Plan. Effective - Large developments at "Large Villages" are less effective in delivering the needs of people moving to the area who require housing where there are employment opportunities. Consistent with national policy - Large scale housing developments in "Large Villages" are not promoted by National Policy. It is disappointing that, having consulted us once, you have ignored the comments made on your previous proposal and have now increased the number of houses that are planned for Bratton. No reasonable person would argue against a few houses say 15 but your proposition needs considerations into the issues surrounding it. <b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>Introduction On behalf of our client, Castlewood Properties Ventures Ltd. (hereafter referred to 'Castlewood'), we write to provide representations to the "Focussed consultation on the Schedule of Proposed Changes to the draft Wiltshire Housing Site Allocations Plan" (WHSAP). We are responding to this consultation in respect of our client's land interest at Land off the A363 at White Horse Business Park Trowbridge, which is proposed allocation H2.2 in the Wiltshire Housing Site Allocations Plan (WHSAP). Castlewood are local developers who can provide greater certainty of delivery, and have a strong track record in delivering development in Wiltshire. We comment specifically in respect of the proposed amendments relating to proposed allocation H2.2, namely PC59 and PC60 and their consequential changes (PC13, PC15, PC17, PC21, PC22, PC25, PC51, PC56). In summary, these proposed amendments seek to reduce the capacity of proposed allocation H2.2 to 'approximately 175 dwellings'. This follows a decision by the Council's Cabinet, relating to perceived coalescence between the proposed allocation site and the village of North Bradley. We consider this in detail in these Representations. These Representations should be viewed alongside the 'Land off the A363 at White Horse Business Park' Vision Document prepared by Tur1ey (November 2018). These Representations should also be read in combination with those from parties who also have an interest in the H2.2 site, on land to the south of Castlewood's parcel.</p> <p>Proposed H2.2 Allocation The Proposed Allocation site H2.2 comprises 18.96ha and extends from Bradley Road at the north to Westbury Road at the south. There are several land interests relating to Proposed Allocation H2.2. Castlewood's interests relate to a 8.37ha parcel at the northern end of the allocation site, closest to the Trowbridge settlement. This northern parcel of land (hereafter referred to 'The Site') is identified in the accompanying Vision Document, The Site fronts onto A363 where the proposed access is to the residential development is to be secured. Trowbridge is a Principal Settlement, situated within the Trowbridge Community Area and located in the North and West Wiltshire Housing Market Area (HMA). Therefore the scope of these representations is focused on the proposed strategy for the North and West Wiltshire HMA, the Trowbridge Community Area and Trowbridge specifically. Previous Representations on behalf of Castlewood were submitted to the Council in September 2017, in response to the WHSAP Pre-Submission consultation, and in February 2018 to provide the Council with an indicative illustrative layout. The following technical reports were all submitted in February 2018 to demonstrate that there are no significant constraints to delivery of residential development in the site: - Baseline Landscape and Visual Appraisal (referred to hereafter as LVA); LVIA Constraints and Opportunities Plan - Flood Risk and Surface Water Drainage Technical Note; - Highways and Transport Technical Note; - Heritage Technical Note; It is not the intention of these Representations to repeat information previously provided, rather to respond to the key changes proposed by this latest consultation. These representations are supported by the following documents, which provide further</p>				

technical information demonstrating the capability of the Proposed Allocation to deliver at least 300 dwellings, of which around 140 dwellings can be provided on the Site: - Land off the A363 at White Horse Business Park Vision Document, prepared by Turley (November 2018) - Ecology Technical Note (November 2018), prepared by Nicholas Pearson Associates. The Ecology Technical Note discusses the ecological considerations which have informed the masterplan, and demonstrates that there are no ecological considerations which do not preclude development of the Site for approximately 140 dwellings, including the need for buffers to be retained as dark corridors. WHSAP Proposed Changes. With respect to the document EXAM0101 Schedule of Proposed Changes (September 2018), the key changes related to the Proposed Allocation are as follows: - PC59 - Amend the boundary of the allocation as set out in Annex C; And first sentence of paragraph 5.52 to read: "Approximately 25.62 18.96 ha of land off the A363 southwest of the White Horse Business Park is allocated for the development" - PC60 - Amend first sentence of paragraph 5.52 as follows: "land off the A363 south-west of the White Horse Business Park is allocated for the development of approximately 150 225 175 dwellings, as identified on the Policies Map." We do wish to object to PC60. This reduction in dwelling numbers is unjustified, and indeed the allocation quantum should be increased to "at least 300 dwellings", based on the technical evidence and other considerations, such as Trowbridge's identified shortfall. The Representation will set out the justification for this. We note that the Council's evidence base has been updated in respect of: - Wiltshire Housing Site Allocations Plan Sustainability Appraisal Revised September 2018 (EXAM/02A, EXAM/02A.1, EXAM/02B and EXAM/02C); - Update to the Wiltshire Housing Site Allocations Pre-Submission Draft (June 2017) Assessment under the Habitats Regulations Assessment Addendum (September 2018) (EXAM/03); - Wiltshire Housing Site Allocations Plan Community Area Topic Paper Trowbridge (July 2018 Submission version - updated September 2018) (CATP/17a); The Community Area Topic Paper Trowbridge has been amended in relation to site ref. 298 (The Proposed Allocation). The amendments are as follows: Whilst this site is not without constraint (including potential effects on protected bat species and the significance of heritage assets), these can be mitigated through on-site measures. To address these matters as a result in any development scheme on the allocation would not involve the whole SHLAA site option but would nonetheless need to deliver all necessary mitigation. Therefore, the potential dwelling capacity stated in the SHLAA/SHELAA would be reduced to approximately 150 175 dwellings (para 5.24, pg 22). This amendment is not supported by the technical information submitted with our previous representations nor the ecology technical note accompanying this Representation. As set out above, the ecological technical note concludes there are no ecological considerations which preclude development of the Site alone for approximately 140 dwellings, including the need for buffers to be retained as dark corridors in respect of the protected bat species. In relation to heritage assets, there are no listed buildings on the Site itself and the Masterplan identifies that appropriate provision can be made for the setting of listed buildings in the vicinity whilst providing c.140 units on the Site, with the remainder of the c.300 units to be provided on the remaining parts of the Proposed Allocation. It should also be noted that the Community Area Topic Paper has also been amended in relation to the immediately adjacent Elm Grove Farm Proposed Allocation. Ecology (protected bat species) and heritage assets are again raised as a potential constraint, however conversely for this site the amendment concludes that these matters can be mitigated through on-site measures and the site's capacity increased. No clear explanation appears to have been provided for the different approach between the sites. It is noted that some of the documents which our previous representations and technical documents commented on, such as the Wiltshire Housing Site Allocations draft plan - Stage 4a Site Landscape Assessment Part 2 (June 2017) (WHSAP/20), have not been updated for the purposes of this consultation. We do not seek to repeat comments previously made in relation to these documents, and would refer you to our previous Representations. In respect of technical considerations we note that the only amendment to the Council's Sustainability Assessment in respect of Proposed Allocation H2.2 (site ref. 298) is in respect of heritage considerations: The Grade II Listed Kings Farmhouse (and its setting), Willow Grove, monuments and gateway to former Baptist Church and Little Common Farm are situated within the site area, and important heritage farmsteads are situated to the north and south of the site. A detailed heritage assessment (building upon the high-level Heritage Impact Assessment prepared by the Council) would be required to support any subsequent planning application. A Heritage Impact Assessment would be required. Archaeological potential of the site is

medium and therefore archaeological assessment would be required (SA Obj. 6). We can confirm that we have no objections to this amended text. It is acknowledged that heritage will be an important consideration for the Proposed Allocation, albeit of less significance to the Site given the location of the Listed Buildings, outwith the Castlewood land interests. Background to Allocation By way of background, the site was submitted to the SHLAA and was assessed under site reference 298. The site passed stage 4a with a stated capacity of 338 dwellings and was progressed as a 'preferred site', however the stated capacity was reduced to 150 dwellings (WHSAP Trowbridge Community Area Topic Paper July 2018, page 18). The assessment of site options (Appendix G) explains this reduction stating "mitigation measures required to address effects on heritage assets, ecology and landscape would result in a reduction to the developable area of the site and a potential reduction in dwelling capacity." (WHSAP Trowbridge Community Area Topic Paper July 2018, page 97). This resulted in the Pre-Submission Draft WHSAP (September 2017) consultation including the site as an allocation for "approximately 150 dwellings" under site reference H2.2. The pre-submission draft was subject to a period of public consultation and subsequent to this consultation, the Council proposed to increase the capacity of the site. This amendment to proposed allocation H2.2 was originally set out in the Council's Cabinet Papers of 15th May 2018, which refer to a capacity increase from approximately 150 to 300 dwellings (Council's Cabinet Papers of 15th May 2018, pages 294, 365). [It is noted that there are inconsistencies in the Council's Cabinet Papers of 15th May 2018, as there is also reference to an increase to 225 dwellings.] This demonstrates that the Council consider that a capacity of approximately 300 dwellings was appropriate for the H2.2 allocation site. The WHSAP was subsequently deferred from consideration at the 15th May 2018 Cabinet meeting to be heard at the 3rd July 2018 Cabinet instead. It is understood this was to allow further consultation on the proposed changes with Wiltshire Councillors and town and parish councils (Minutes of 3rd July 2018 Cabinet, paragraph 257). For the Cabinet Papers of 3rd July 2018, the Council prepared an Addendum following the deferral of the item from Cabinet of 15 May 2018. This Addendum refers to a smaller capacity increase for allocation H2.2 from approximately 150 to 225 dwellings.. At the 3rd July 2018 Cabinet, Cllr Sturgis proposed further changes to the in response to the housing numbers on the Allocation site, understood to be in response to consultation with Wiltshire Councillors and town and parish councils. The following change was proposed: (c) Amend Proposed Change 39 (site allocation H2.2, land off the A363 at White Horse Business Park, Trowbridge) to reduce the proposed dwelling increase by 50 dwellings This proposed change had the effect of reducing the capacity increase further from approximately 150 to 175 dwellings. The minutes of the 3rd July 2018 Cabinet meeting provide further insight into Member's justification for this change: In justifying the further proposed changes, Cllr Sturgis referred to the addendum, and provided clarification as follows ... the reduction in the increase in housing numbers on site H2.2 would provide for landscape buffer for North Bradley. In response to concerns raised by David Feather that insufficient weight had been given to North Bradley's Neighbourhood Plan, Councillor Sturgis stated that other neighbourhood plans were further 'forward, and could therefore be given greater weight. Councillor Sturgis went on to say that: he hoped that the proposed amendments to the White Horse business park site would go some way to maintaining a gap between North Bradley and Trowbridge; and that Wiltshire Council would continue to work to support the North Bradley neighbourhood plan so that it would be better progressed by the time of the examination in public. The issue of alleged coalescence between the Trowbridge and North Bradley settlements is therefore identified to be one of the key issues from the Council's perspective relating to the Proposed Allocation's capacity. It is noted that the Community Area Topic Paper raises concerns regarding ecological (bat species) and heritage constraints, which would require mitigation in order to be satisfactorily addressed. We dispute the Council's concerns regarding the perceived coalescence of Trowbridge and North Bradley, and the limit on capacity created by the ecological and heritage constraints. For the reasons we will set out below we consider the Council's approach to reducing the overall dwelling capacity on site H2.2 to be unsound. The capacity of proposed allocation H2.2 should be reinstated as approximately 300 dwellings, as per the previous view of Planning Officers. Representations We fervently disagree with the Council's position, that the Proposed Allocation is only capable of accommodating approximately 175 dwellings, in order to maintain a gap between the North Bradley and Trowbridge settlements, and provide appropriate mitigation. Our evidence base (and supported by the representations prepared by Linden Homes in relation to a separate parcel of the Allocation Site) supports a higher capacity. Crucially, the Council's own evidence base supports a higher capacity. For example, the WSHAP

Stage 4a Site Landscape Assessment concludes that the capacity of the Site to accommodate change is described as 'moderate-high', This is discussed further below. We feel that the Proposed Allocation is capable of accommodating at least 300 dwellings, without causing issues of coalescence with the North Bradley settlement. Specifically to these Representations, we feel that the Site (the northern parcel of land defined in the accompanying Vision Document) is capable of accommodating approximately 140 dwellings, again without causing issues of coalescence and provide adequate mitigation. This is now considered in full.

**Background on Relationship to Trowbridge** The Site is in close proximity to the existing settlement boundary of Trowbridge to the north (as defined by the Core Strategy 2015, fig 1), less than 50m to the south of the existing boundary. As part of the WHSAP, the Council are undertaking a settlement boundary review (WHSAP Topic Paper 1 Settlement Boundary Review Methodology, refers). This Topic Paper concludes that the White Horse Business Park to the east of the site meets the methodology for being included within the settlement. [MAP INSERT] Accordingly the Draft WHSAP proposes to include White Horse Business Park within the settlement boundary (fig 2). As a result, in addition to being in close proximity to the existing settlement boundary of Trowbridge to the north, the Site also abuts the proposed settlement boundary of Trowbridge - in its extended form - to the east (as defined by the Draft WHSAP, fig 2). The Site therefore relates well to the Trowbridge settlement and in combination with proposed housing allocation 'Elm Grove Farm', would enhance connectivity between the existing Trowbridge settlement and the established White Horse Business Park. Indeed delivery of residential development on the Allocation Site would bridge the separation between the business park and the wider settlement. The potential of the Allocation Site and the adjacent Elm Grove Farm allocation to be successfully integrated into existing and planned developments in the area, while maintaining a defensible buffer to North Bradley is recognised in the Trowbridge Community Area Topic Paper. The relationship between White Horse Business Park, the Proposed Allocation (ref 298) to the SW and proposed allocation 'Elm Grove Farm' (ref 613/248) to the SE is demonstrated in fig 2. The Site is ideally placed to provide improvements to walking and cycling routes through to the town, and the proposed masterplan shows how these improved linkages can be delivered as part of a residential development. The Proposed Allocation would therefore provide a cohesive and logical extension to Trowbridge. It should be noted that the Site would be directly connected to the settlement to the north and east, and would very much look to the north and Trowbridge in terms of connectivity and access to facilities.

**[MAP INSERT] Landscape Evidence and Design Solution** The previous Representations submitted to the Council on behalf of Castlewood in February 2018 provide the Council with an indicative illustrative layout and a Landscape and Visual Appraisal which concludes that there are no significant constraints to the delivery of residential units on the site. The LVA concludes that visually, the Site is relatively well contained on account of the existing hedgerow structure, generally flat topography, the surrounding mature tree belts and surrounding development. The visibility of the site is limited to occasional short distance views from immediate visual receptors. In the wider surrounding landscape, the cumulative effect of field boundary hedgerows and the flat low lying topography provide visual containment. Although, the site is likely to be glimpsed from raised land to the southeast, the intervening distance will prevent its features being discernible. The Site therefore has low visual prominence. There are strong landscape buffers on the edge of North Bradley and the development provides opportunities to reinforce existing landscape features. This will lead to a softening of views towards Trowbridge from North Bradley, especially as the existing settlement edge of Trowbridge is defined by commercial development and the proposed development will provide a softer, more permanent edge. The LVA acknowledges that whilst there would be some physical reduction in the separation between Trowbridge and North Bradley as a result of the Proposed Allocation, the visual effects could be minimised and mitigated. The proposed Masterplan provided in the accompanying Vision Document incorporates such mitigation measures, including:

- The LVA acknowledges that a visual break is experienced between the settlements of Trowbridge and North Bradley when travelling along Woodmarsh. Accordingly the masterplan has not identified development in those areas most significant to the perceived visual separation between North Bradley and Trowbridge, as informed by the LVA. This preserves the setting of North Bradley village and its integrity.
- The northern development parcel is set back considerably from Woodmarsh to reinforce the visual separation from North Bradley and it is proposed that the development in this area will generally be of lower density so as to set the proposed development within a landscape context and that the built form is more visually connected to the south of Trowbridge and visually

buffer the scheme from North Bradley. - The proposed masterplan proposes to implement significant new planting along the south-western boundary, in addition to significant existing planting to reinforce the visual separation between the proposed development and North Bradley. The LVA confirms that the development of the site could be achieved without resulting in significant landscape and/or visual impacts (in relation to the receptors identified in the LVA including the A363, Woodmarsh and residential properties on the eastern edge of North Bradley). In addition, the findings of the Council's own evidence base are significant. The WHSAP Stage 4a Site Landscape Assessment (June 2017) concludes that the overall magnitude of effect on views if the site were to be developed is identified as 'low adverse'. The capacity of Site 298 to accommodate change is described as 'moderate-high'. It is considered, therefore, that the site should be allocated for a much higher number of dwellings given the sustainable location and absence of any constraints which cannot be mitigated against. The overall effect will be to proportionately increase the quantum of market and affordable dwellings, which can be achieved through the Proposed Allocation, whilst simultaneously protecting the integrity of North Bradley as a village. Indeed, the opportunity to achieve a comprehensive design will provide greater opportunities for more meaningful green infrastructure provision, landscaping and open space. In summary, we contend that delivery of approximately 300 dwellings on the Proposed Allocation would not lead to unacceptable coalescence between Trowbridge and North Bradley. Residential development on the site would link, both visually and physically, primarily with Trowbridge and the adjacent White Horse Business Park, which is proposed in the WHSAP to form part of the Trowbridge settlement boundary. As demonstrated in the accompanying Vision Document, development on the site would be sensitively designed with the incorporation of new or strengthened landscape buffers and careful siting of built form to protect visual separation between the two settlements. Utilising the approach set out in the Vision Document, the Site could accommodate c. 140 units, as part of a wider 300 unit allocation.

**Housing Need** As a Principal Settlement, Trowbridge is a primary focus for development. Moreover, the role of the town as a significant employment and strategic service centre will be expected to be strengthened over the Plan period up to 2026 and beyond. There are, however, severe constraints to the growth of Trowbridge. In particular, with Green Belt and Flood Zone designations to the north and west of Trowbridge (Fig 3), opportunities to expand Trowbridge in order to accommodate the identified housing need are limited. In proposing the allocation of this site, the Council identified that development of the site for housing would contribute to the area strategy for the town by boosting the supply of homes to help meet indicative requirements" [MAP INSERT] In the context of Trowbridge being a focus for growth and taking a large proportion of housing need, we wish to comment on PC25, which is a factual update to reflect the latest published Housing Land Supply Statement (March 2018) and to reflect PC55, PC60, PC64 and PC70 that propose higher densities on site allocations to make best use of land. PC25 relates to the following amended paragraph: Unlike Chippenham however, allocations made by the Plan will not be sufficient to ensure that housing provision meets indicative requirements. Six new site allocations provide land for approximately 800 1,050 dwellings and have the potential to increase their capacity to make the best use of land. Nevertheless, housing development at Trowbridge will fall short of the WCS indicative level of 6,810 dwellings by around 1,220 1,297."

In addition, related to the Trowbridge Community Area, the Council's Housing Land Supply Statement Addendum July 2018 Submission Version (ref: TOP/03C) indicates there is still an indicative residual requirement for the remainder of the Trowbridge Community Area of at least 2,230 dwellings during the remainder of the Plan period up to 2026. As things stand therefore the Council are not National planning policy is clear that the Council must look at its residential allocations beyond five years to ensure there is a consistent pipeline for bringing forward new residential development. The Council, despite the amendments, acknowledge that housing development at Trowbridge will fall short of the requirements. By failing to allocating sufficient quantum of new housing in the WHSAP, the Council is currently failing to fully meet its identified housing needs. The Plan has not therefore been positively prepared. To ensure a sound Plan, which is consistent with national planning policy, it is essential that either: a) additional site are identified and allocated; or b) greater quantum of housing is allocated on existing/ proposed allocations. In relation to option a), as set out above Trowbridge lacks genuine, alternative options to extend the settlement due to constraints, including Green Belt designations and Flood Zone primarily to the north and west. Consideration should therefore be given to intensify allocations proposed by the WHSAP, where technical constraints do not preclude this. As has been demonstrated by these Representations,

	<p>and in those previously submitted, there are no technical constraints which preclude a greater quantum of development than currently proposed in the WHSAP. Indeed, the Council have previously identified the potential of this site to accommodate c 300 dwellings, and the proposed reduction to 175 to accommodate ecology and heritage mitigation measures is unjustified. The technical work undertaken, and submitted to the Council during the WHSAP process demonstrate that the Proposed Allocation is capable of accommodating at least 300 dwellings with the incorporation of necessary mitigation measures. The sustainability appraisal undertaken by the Council identify the Proposed Allocation as a 'more sustainable' site. As such, priority should be maximising the housing numbers on this site in the first instance to address the outstanding house requirement, rather than looking towards 'less sustainable sites. Conclusion In summary, it is contended that proposed modification PC60 (and its consequential changes) to the WHSAP render the document unsound and contrary to paragraph 182 of the NPPF (2012). The proposed modification is inconsistent with the technical information provided to the Council, and the Council's own evidence base documents, which recognises the capability of the Proposed Allocation to accommodate a greater quantum of residential units whilst still maintaining appropriate separation between Trowbridge and North Bradley and providing adequate mitigation. The reduction in dwelling numbers for Proposed Allocation H2.2 does not represent positive preparation of the WHSAP. There is an identified housing need in the Trowbridge Community Area and the WHSAP as currently proposed does not meet the full requirement. It is recognised that mitigation will be required in relation to heritage and ecology matters, however the technical work undertaken has identified that appropriate mitigation can be accommodated with a greater quantum of dwellings than 175. Indeed, the accompanying Vision Document relating specially to our client's interests on the north parcel, identifies around 140 dwellings can be appropriately accommodated on that part of the allocation alone. In order to remedy this and make the WHSAP sound, we request that the capacity of the Proposed Allocation H2.2 is reinstated as "at least 300 dwellings", and consequential changes subsequently amended. Specifically to these Representations, we request that recognition is given to the capability of the Site to accommodating approximately 140 dwellings as part of the H2.2 allocation. In order to effectively put this case before the Inspector and address any questions they may have and to also rebuff any argument the Council may make for proceeding with proposed modification PC60 and its consequential changes we consider it necessary to attend the Examination Hearings in a speaking capacity. For reference, we append a full set of additional details as follows. These reports and drawings concern the proposed development of the Site and provide information regarding constraints: Vision Document Ecology Technical Note Flood Risk &amp; Drainage Technical Note Heritage Technical Note Highways Technical Note Landscape and Visual Appraisal</p>

<b>Please give details of why you support or do not support the consultation material. Please let us know whether you think the consultation material is sound and legally compliant, and if not why not</b>	<p>Further to our conversation and your email please find below the B&amp;NES Council officer response to consultation on the proposed changes to the Wiltshire Housing Site Allocations Plan. I trust that these comments are helpful, but please let me know if you have any queries. B&amp;NES Council and Wiltshire Councils engaged meaningfully on the preparation of their respective adopted Core Strategies. Both documents had complimentary spatial strategies that sought to stabilise commuting flows, that result in a net flow of residents from the North &amp; West Wiltshire HMA to work in Bath. The Wiltshire Housing Site Allocations Plan has been prepared in the context of and to deliver the Wiltshire Core Strategy. It is noted that in the proposed changes that are currently subject to consultation that some amendments to the housing capacity figures for allocated sites within these areas, including Trowbridge (which has a close relationship with Bath) are proposed. The overall effect of the proposed changes does not alter the fact that within North &amp; West Wiltshire HMA the site allocations will enable delivery of the housing requirement established in the Core Strategy. Given this Councils agreement with the spatial strategy set out in the Wiltshire Core Strategy there are no outstanding issues or concerns to B&amp;NES Council related to the Housing Site Allocations Plan. Therefore, it is also confirmed that it is not considered necessary to prepare a Statement of Common Ground (as referenced in the NPPF, para 27) beyond what is being prepared for the West of England Joint Spatial Plan. B&amp;NES Council looks forward to engaging with Wiltshire Council on its Core Strategy review and the preparation of the B&amp;NES Local Plan covering the period from 2016 to 2036. This will entail a review of the position on Statements of Common Ground.</p>
