

## APPENDIX 3

Changes to Goal 1 shown with tracked changes for easier comparison.

### Goal 1: Mitigation, Aadaptation, ~~mitigation~~ and resilience to climate change

By 2030, we will have increased our ability to mitigate and adapt to climate change through adoption of nature-based solutions...

Working in partnership, we will do this by:

- Contributing to national targets and Wiltshire Council Climate Strategy objectives for cutting greenhouse gas emissions (including from urban and rural land-use, land use change, opportunities for active travel, and the agriculture and waste sectors).
- Considering the best nature-based pathways to help support 'Net Zero' for the county
- Supporting the delivery of Implementing climate change adaptation strategies and management plans, resilience for Wiltshire to improve its resilience to impacts of climate change associated with a 2°C temperature rise and management strategies.
- Reducing risks of harm from natural hazards through adoption of natural flood and water management approaches alongside traditional grey infrastructure at the local and catchment level.
- Improving air quality in locations that fail to meet national standards, thereby contributing to national targets to reduce effects of air pollution on people and wildlife.
- Contributing to national targets for reducing over-abstraction of water, and meeting water quality objectives for biodiversity and drinking water
- By sequestering promoting nature-based carbon removal from the atmosphere through better soil husbandry management, the protection of existing natural carbon sinks and the promotion of tree and woodland establishment.
