

AGENDA

Meeting: **Cabinet**
Place: **Council Chamber - County Hall, Bythesea Road, Trowbridge, BA14 8JN**

Note - Arrangements are being made to live stream the meeting.

Please check the agenda the day before the meeting for the link.

Please see text in red below for details of what to expect if wishing to attend this meeting in person

Date: **Wednesday 21 July 2021**

Time: **10.00 am**

Please direct any enquiries on this Agenda to Stuart Figini, of Democratic Services, County Hall, Trowbridge, direct line 01225 718221 or email stuart.figini@wiltshire.gov.uk

Press enquiries to Communications on direct lines (01225)713114/713115.

All public reports referred to on this agenda are available on the Council's website at www.wiltshire.gov.uk

Membership:

Cllr Richard Clewer	Leader of the Council and Cabinet Member for MCI, Economic Development, Heritage, Arts, Tourism and Health & Wellbeing
Cllr Laura Mayes	Deputy Leader and Cabinet Member for Children's Services, Education and Skills
Cllr Jane Davies	Cabinet Member for Adult Social Care, SEND, Transition and Inclusion
Cllr Phil Alford	Cabinet Member for Housing, Strategic Assets and Asset Transfer
Cllr Ian Blair-Pilling	Cabinet Member for Leisure, Libraries, Governance, Facilities Management and Operational Assets
Cllr Nick Botterill	Cabinet Member for Development Management, Strategic Planning and Climate Change
Cllr Pauline Church	Cabinet Member for Finance & Procurement, Commissioning, IT, Digital and Commercialisation

Cllr Simon Jacobs

Cabinet Member for Public Health, Public Protection, Licensing, Staffing, Communities and Area Boards

Cllr Dr Mark McClelland

Cabinet Member for Transport, Waste, Street Scene and Flooding

Covid-19 safety precautions for public attendees

To ensure COVID-19 public health guidance is adhered to, a capacity limit for public attendance at this meeting will be in place.

You must contact the officer named on this agenda no later than 5pm on Monday 19 July if you wish to attend this meeting.

Places will be allocated on a first come first served basis.

To ensure safety at the meeting, all members of the public are expected to adhere to the following public health arrangements to ensure the safety of themselves and others:

- Do not attend if presenting symptoms of, or have recently tested positive for, COVID-19
- Follow one-way systems, signage and instruction
- Maintain social distancing
- Wear a face-mask (unless exempt)

Where it is not possible for you to attend due to reaching the safe capacity limit at the venue, alternative arrangements will be made, which may include your question/statement being submitted in writing.

This meeting will also be live streamed for all members of the public to watch online.

Recording and Broadcasting Information

Wiltshire Council may record this meeting for live and/or subsequent broadcast. At the start of the meeting, the Chairman will confirm if all or part of the meeting is being recorded. The images and sound recordings may also be used for training purposes within the Council.

By entering the meeting room you are consenting that you will be recorded presenting this, or this may be presented by an officer during the meeting, and will be available on the public record. The meeting may also be recorded by the press or members of the public.

Any person or organisation choosing to film, record or broadcast any meeting of the Council, its Cabinet or committees is responsible for any claims or other liability resulting from them so doing and by choosing to film, record or broadcast proceedings they accept that they are required to indemnify the Council, its members and officers in relation to any such claims or liabilities.

Details of the Council's Guidance on the Recording and Webcasting of Meetings is available on request. Our privacy policy can be found [here](#).

Parking

To find car parks by area follow [this link](#). A limited amount of parking is available at County Hall, Bythesea Road, Trowbridge, BA14 8JN.

Please note for meetings at County Hall you will need to log your car's registration details upon your arrival in reception using the tablet provided. If you may be attending a meeting for more than 2 hours, please provide your registration details to the Democratic Services Officer, who will arrange for your stay to be extended.

Public Participation

Please see the agenda list on following pages for details of deadlines for submission of questions and statements for this meeting.

For extended details on meeting procedure, submission and scope of questions and other matters, please consult [Part 4 of the council's constitution](#).

The full constitution can be found at [this link](#).

For assistance on these and other matters please contact the officer named above for details

Part I

Items to be considered while the meeting is open to the public

Key Decisions Matters defined as 'Key' Decisions and included in the Council's Forward Work Plan are shown as 

1 **Apologies**

2 **Declarations of Interest**

To receive any declarations of disclosable interests or dispensations granted by the Standards Committee.

3 **Leader's announcements**

4 **Public participation and Questions from Councillors**

The Council welcomes contributions from members of the public.

Please note that as this is an extraordinary meeting of Cabinet only statements and questions relating to items 5 and 6 below will be accepted.

This meeting is open to the public, who may ask a question or make a statement. Questions may also be asked by members of the Council.

Written notice of questions or statements should be given to Stuart Figini of Democratic Services stuart.figini@wiltshire.gov.uk 01225 718221 by 12.00 noon on 15 July 2021. Anyone wishing to ask a question or make a statement should contact the officer named above.

5 **Special Educational Needs and Inclusion Funding** (*Pages 7 - 30*)

 Report of the Chief Executive

6 **Future Chippenham** (*Pages 31 - 2750*)

 Report of the Chief Executive

7 **Urgent Items**

Any other items of business, which the Leader agrees to consider as a matter of urgency.

Part II

Items during consideration of which it is recommended that the public should be excluded because of the likelihood that exempt information would be disclosed

8 **Exclusion of the Press and Public**

This is to give further notice in accordance with paragraph 5 (4) and 5 (5) of the Local Authorities (Executive Arrangements) (Meetings and Access to Information) (England) Regulations 2012 of the intention to take the following item in private.

To consider passing the following resolution:

To agree that in accordance with Section 100A(4) of the Local Government Act 1972 to exclude the public from the meeting for the business specified in Item Number 9 because it is likely that if members of the public were present there would be disclosure to them of exempt information as defined in paragraph 3 of Part I of Schedule 12A to the Act and the public interest in withholding the information outweighs the public interest in disclosing the information to the public.

Reason for taking item in private:

Paragraph 3 - information relating to the financial or business affairs of any particular person (including the authority holding that information).

9 **Future Chippenham** (*Pages 2751 - 2758*)

Report of the Chief Executive

Wiltshire Council

Cabinet

21 July 2021

Subject: Special Educational Needs and Inclusion Funding

Cabinet Member: Cllr Jane Davies, Cabinet Member for Adults Social Care, SEND, Transition and Inclusion; and Cllr Laura Mayes, Deputy Leader and Cabinet Member for Children's Services, Education and Skills

Key Decision: Key

Executive Summary

The current and future demand pressure in services relating to Special Educational Needs and Disability (SEND) is evident both nationally and locally. We need to ensure that we are able to undertake our statutory obligations in a way which is both legally compliant and meets the needs of Wiltshire families. If this is not undertaken efficiently and effectively, it can lead to families reporting not having received a supportive service from the council. It can also result in reputational damage through the publication of LA level data in relation to statutory performance and through the OFSTED/CQC inspection framework. One key issue we need to address is the capacity within SEND and Inclusion (SEND&I). Of significance too is the support needed within the early years sector to support SENCOs within settings to identify and support pre-school aged learners with SEND, leading to effective transitions to school. Efficient place planning is also required to ensure that there is an adequate supply of school places for learners with SEND, including within resource base and enhanced learning support provision.

Proposal(s)

That Cabinet approve an additional £0.861M draw down from the latent demand reserve to fund the required part year investment in 21-22, rising to a total £1.742M in 2022-23 to increase capacity within SEND and Inclusion Services which can be included in the Medium Term Financial Strategy planning.

Reason for Proposal(s)

There are two benefits from the proposed investment.

We need to ensure fit for purpose, efficient, quality sustainable, future proof and secure service across SEND&I to deliver the SEND and Inclusion Strategy, to provide an effective service for families and to achieve a positive outcome at the next Ofsted and CQC Local Area inspection. In addition, there is a significant amount of work to be carried out in the High Needs block recovery plan to aid demand management and reduce the burden on the local authority to cashflow the DSG deficit reserve.

These can only be achieved by increasing the number of workers within the statutory SEND team and associated posts across the SEND&I service to ensure caseloads are at a sustainable level and preventative services increase so we can manage the increase in service demand seen since the implementation of the children and families act (part 3) in 2014. A robust and effective place planning mechanism for SEND places, both in special schools and in resource base and enhanced learning provision is required to ensure that there are sufficient places for learners with SEND and that future planning is undertaken to inform this.

This proposal essentially ensures the Local Authority have the requisite capacity within key statutory and preventative services to deliver on new requests for involvement and to ensure that families who are already known to us receive a service which is timely and compliant.

Terence Herbert
Chief Executive

Wiltshire Council

Cabinet

21 July 2021 21 July 2021

Subject: Special Educational Needs and Inclusion Funding

Cabinet Member: Cllr Jane Davies, Cabinet Member for Adults Social Care, SEND, Transition and Inclusion; and Cllr Laura Mayes, Deputy Leader and Cabinet Member for Children's Services, Education and Skills

Key Decision: Key

Purpose of Report

1. The purpose of this report is to present current risks and mitigations.

The outcome sought is to avoid the following

- Legal Challenge from parents/carers relating to non-compliance with statutory timeframes
- A poor CQC/OFSTED inspection outcome
- Late assessment and support for C&YP with additional needs, including within early years settings
- Lack of ability to challenge and control the high needs block expenditure, including placements required outside of our own schools and settings
- Challenges in retaining a skilled and experienced workforce
- DfE Intervention on the HNB management plan (recovery plan)

In order to mitigate against this, an additional £1.742M annual investment in Special Educational Needs and Inclusion (SEND&I) services is required. Timely investment, with a part year cost increase of £0.861M for 2021-22 will allow posts to be recruited to from September 2021.

Relevance to the Council's Business Plan

2. A key priority in the Wiltshire Business Plan 2017-2027 is protecting the vulnerable. Each element of this priority – early intervention; joined up health and care and empowering and safeguarding has resonance with the work of the SEND&I teams and services. These principles are evident within the SEND Code of Practice (2014) and are central to the Children and Families Act which requires local authorities to ensure that services are effectively jointly commissioned and delivered across education, health and social care teams.

Wiltshire's SEND and Inclusion Strategy (2020-2023) which was co-produced with Wiltshire families further aligns to the wider council priority regarding vulnerable communities.

Background

3. The background to this proposal is the imbalance between the current demand levels within the SEND&I service and the staffing available to support this. The number of Education Health and Care Plans (EHCPs) has more than doubled in Wiltshire since 2015. This has resulted in significant service pressure to complete statutory assessments of SEND within the 20 weeks laid out in statute for this process to be undertaken. It has also resulted in challenges in undertaking key elements of review for existing EHCPs, including attendance and input to the annual review process and a timely response to amendments or changes to EHCPs which are required following these meetings. This has also put significant financial pressure on the Council leading to significant unsustainable on going overspends on the High Needs Budget (HNB) of the Dedicated Schools Grant (DSG). Whilst there are many activities and workstreams in place to understand and support the demand in this area, including intervention at the earliest stage for learners there is little indication that there will be a marked decrease in demand within Wiltshire in the near future.

The early years team are experiencing a marked increase in the number of children within early years presenting with additional needs in pre-schools, nurseries and childminding settings. Many of these pre-school aged children are struggling with early communication, behaviour, anxiety and self-regulation. Some of the behaviours that are being seen in Wiltshire early years settings are quite extreme and settings are needing intensive support to manage the needs of both the children and families.

SEND and Inclusion Strategy

4. The SEND and Inclusion Strategy 2020-2023 was co-produced with parents/carers, children and young people, voluntary sector groups, Wiltshire Parent Carer Council (WPCC) and professionals from across partnership organisations that work with people with SEND.

The vision is to work together to create an environment where:

“All children and young people with SEND and their families will have a voice that is heard. They will know how to access, and be able to access the joined-up support they need to thrive in their communities, to enjoy life and reach their full potential”

The strategy has 6 priorities:

1. Developing holistic plans with children and young people

2. Inclusion and removing exclusion in education
3. Inclusion and wellbeing in the community
4. Improving the range and quality of provision
5. Progress and attainment
6. Well planned transitions

The strategy drives the SEND and Inclusion work and the work to address the High Needs budget deficit. There is a strategy implementation plan, progress against this plan is reported on at the SEND Board. The High Needs plan is extensive and encompasses the development of a system of excellence:

- Early Intervention
 - **Health and education liaison meetings (HELM)** – providing enhanced early intervention and support for early years settings without the need for an EHCP to be in place
 - **Dyslexia friendly schools**- upskilling schools to achieve the national dyslexia quality mark to better meet needs within mainstream schools
 - **School Effectiveness and SEND & I work**- Bringing together schools, school effectiveness, inclusion services and SEND through a range of collaborative projects including Ordinarily available provision (OAP) and Team around the School.
- Statutory processes
 - **Transitions and pathway for adulthood**- championing increased independence, enabling young people to live, work and be active contributors in their community, making the best use of their own and other available resources and opportunities
 - **SEND assessment and EHCP process**- reviewing current panel processes and improving the system to ensure advice and support is timely. Secure appropriate funding from partners
 - **Alternative provision**- Develop/commission provision for EHCP students requiring AP and reducing reliance on costly out of county independent provision
- Quality assurance and monitoring
 - **Resource bases (RB) and Enhanced Learning Provision (ELP)**- re-evaluating and redeveloping, use and allocation of ELP and RB provision to better meet needs
 - **Review of Independent Special Settings** – ensuring appropriate funding from partners, agree specified outcomes and duration of placements, manage age phased transfers, identify and address gaps in the market and systematically review placements and exit plan.

These projects have been impacted by the pandemic. Co-production and collaborative work have been limited and some timescales have had to be extended. Regular progress reports are presented at the Schools' Forum

Statutory SEN Service

5. The increase in demand means that SEND Lead Workers (SLWs) hold an ever rising and very high number of cases with SLW caseloads having doubled since 2015. This has become unsustainable, and means officers are unable to attend annual review meetings when this is required and make sure that the current support packages remain appropriate. This also reduces the time available for SLWs to communicate with families and schools. The ability to challenge schools to encourage learners to be more independent where possible not only reduces cost but facilitates transition into adulthood.

The increase in demand has an impact on other statutory and preventative services within SEND&I, The Educational Psychology Service (EPS) are required to undertake a psychological assessment and write a report as part of each statutory assessment initiated. The demand impacts upon the EPS' capacity to support schools outside of the EHC Needs Assessment (EHCNA) process and work preventatively or with a focus upon early intervention. The demand also results in limiting the range and scope of the EPS' traded offer to schools and other partners.

An increase in demand is also evident for teams who are not required to contribute to the statutory assessment process such as the specialist SEN teams (SSENs). This is a small team of advisory teachers. In the academic year 2019/20 they received over 1000 requests for involvement from Wiltshire schools and settings where concerns were expressed about learning progress and/or behavioural presentation.

Early Years Service

6. The early years team are expecting the number of children that will need support in a mainstream setting to continue to increase into next year. The EYIOs are also being asked to help in schools where children are transitioning into a reception class at a much lower developmental stage than expected and may have had limited support from other professionals/agencies before they have transitioned.

At this point in the year the service has 539 cases open, in over 170 settings. In 2019 (the last time we had data) by the end of the year there had been a total of 340 referrals and by the end of the year only 252 remaining open. This is a significant increase.

A steep increase is being seen in the number of referrals coming in as more children return to their early years setting following lockdown and

practitioners are able to identify their needs. Between January – March 2021 59 new referrals for support were received. From April – June 2021 a further 133 referrals were made.

SEND&I – building a high-quality service

7. There are many positive attributes associated with our current SEND&I service and positive developments which have taken place.

With flexible use of capital receipts funding, the Educational Psychology Service has developed the role of Senior Educational Psychologist (SEP). This enables the service to have a clear management structure which allows for the development and implementation of quality assurance and team development processes within the service as well as increasing the service's ability to take an active role in panels which make key decisions such as SEND panel. The service are also able to take an increasing role in reviewing the progress of learners placed in settings outside of Wiltshire. At a national level, EPs are a challenging practitioner group to recruit and retain. The creation of the senior role means career pathways and the ability to recruit newly qualified staff to further develop and effectively supervise.

Using the same funding, the statutory SEN team has had some additional management positions created which will enable increased oversight and drive in relation to the timeliness and compliance of EHCPs and associated processes. In addition, additional SEND Lead worker roles and an administration post have been made available with an end date of 31/3/22, funded through FACT monies, to enable some notable areas of delay to be supported, including the 'backlog' of annual reviews which has built up over time.

The teams which make up SEND&I have a clear and unwavering focus upon positive outcomes for the children, young people and families who they support in Wiltshire. The desire to 'get it right' is tempered with on-going concerns relating to increases in demand and volumes of work within the area.

Main Considerations for the Council

8. The council's business plan places positive outcomes for children, young people and their families at its centre and this reflects the commitment within Wiltshire to support its residents from the start of life and throughout their life course.

The Families and Children's Transformation (FACT) Programme has been designed to take a whole-system approach with partners, staff, children, young people and their families to both streamline and improve the way we work whilst promoting multi-agency integration and enabling

us to be more efficient in the delivery of our services and more effective at helping families and children achieve positive outcomes at the earliest point. Funding from FACT has been made available to SEND&I which has enabled some pilot schemes and transformational positive activity and fixed term recruitment to take place to assist in work to support learners with SEND and their families. This has included the secondment of an officer to work exclusively around Wiltshire learners who are placed in the independent specialist sector, additional support into the SEN service to assist with administration and support for new EHC assessments and annual reviews and supporting consultancy to undertake key projects relating to the SEN service and statutory delivery.

Whilst assistive to the work of the service and well received by team members and other partners, the funding is not designed nor able to facilitate permanent recruitment to support this area of work. Fixed term roles are not able to support the longer term and significant workload and capacity challenges experienced by the SEN service.

To provide long term support for young people with SEND and their families we require a permanent increase to establishment numbers to be able to manage the demand that we are experiencing and to be able to provide adequate early intervention support.

Workforce

9. In order to manage demand for EHCP requests and to support the ongoing management and review processes for existing EHCPs additional capacity within the SEND&I workforce is required.

We have a statutory duty to undertake EHCNA (needs assessment) within a 20 week timeframe and our EHCPs are open to scrutiny and challenge through the Special Educational Needs and Disability Tribunal (SENDIST) appeal process. An annual review must be undertaken of each EHCP and amendments made accordingly to EHCPs.

An annual data census is requested by the DfE in relation to this (SEN2) and national data is published in relation to performance, with one area being the number of EHCPs issued within the 20 week timeframe.

Wiltshire is in a more favourable position than other Local Authorities in terms of vacancies within key services such as the statutory SEN team and the Educational Psychology Service (EPS). In Wiltshire, there are currently no vacancies in either team whereas in February 2021 from a data return from 85% of Local Authorities, 49% reported a reduced SEND caseworker capacity and 66% reduced Educational Psychologist capacity (Source: DfE Covid-19 LA SEND Service Survey - Wave 5 Results). Anecdotally, both Wiltshire services report that officers in these teams enjoy working for Wiltshire Council and staffing information

indicates a favourable level of staff retention in addition to successful recruitment to advertised roles.

Whilst recruitment and retention to both the SEN service and the EPS is very positive, the establishment numbers of both services have not maintained pace with the EHCP demand experienced in Wiltshire.

The table below shows the number of requests for assessment in Wiltshire

Table 1	2016	2017	2018	2019	2020 (Schools closed to most pupils)	2021 to date
Total Requests for assessment in Wiltshire	503	505	690	722	588	425*

*figure as at 25/6/21

Requests for assessment can be made by parent/carers, schools and settings and other professionals. The consideration which needs to be made when a request is considered is set out in the law (section 36(8) of the Children and Families Act 2014). It is essentially a two-part test:

- whether the child or young person has or may have special educational needs (“SEN”); and
- whether they may need special educational provision to be made through an EHC plan.

If the answer to both of these questions is yes, then the LA must carry out an EHC needs assessment. Whilst the Code of Practice details what support it would expect to have been put into place by a school or setting and reviewed before a request for an EHCP is made, a request cannot be refused if this has not been undertaken. The legal threshold for assessment is considered to be low; if the supporting information is not clear or indicates that the young person has not made good educational progress then that can be indicative of SEN and therefore an assessment should be initiated.

The table below shows the number of EHCPs in Wiltshire since 2015:

Table 2	2015	2016	2017	2018	2019	2020	2021
Total statements and EHCPs combined in Wiltshire	1992	2342	2733	2982	3349	3784	4142

Number of SLWs	25	25	25	25	25	25	25
Average Caseload	80	94	109	119	134	151	166
Number of EPs	13.42	13.42	13.42	13.42	13.42	13.42	17

This illustrates a percentage increase of 108% between 2015 and 2021. The growth in EHCPs in Wiltshire is in excess of that seen nationally over the same time period, 81.64% and across the south west region, 94.82%.

The significant demand places pressure on services to 'front load' capacity to the new requests for EHCPs, diverting resource and capacity away from work which focuses upon early intervention and prevention. This results in support services such as the EPS utilising a significant amount of its time and resource in reactive, statutory driven tasks and processes rather than being able to provide support and intervention at an early stage and in order to prevent difficulties increasing. The lack of visibility of services such as the EPS, due to its statutory workload, can in turn further drive upwards the request for an EHC needs assessment as there is a view held by families and schools that this is the only mechanism to facilitate the involvement of an EP.

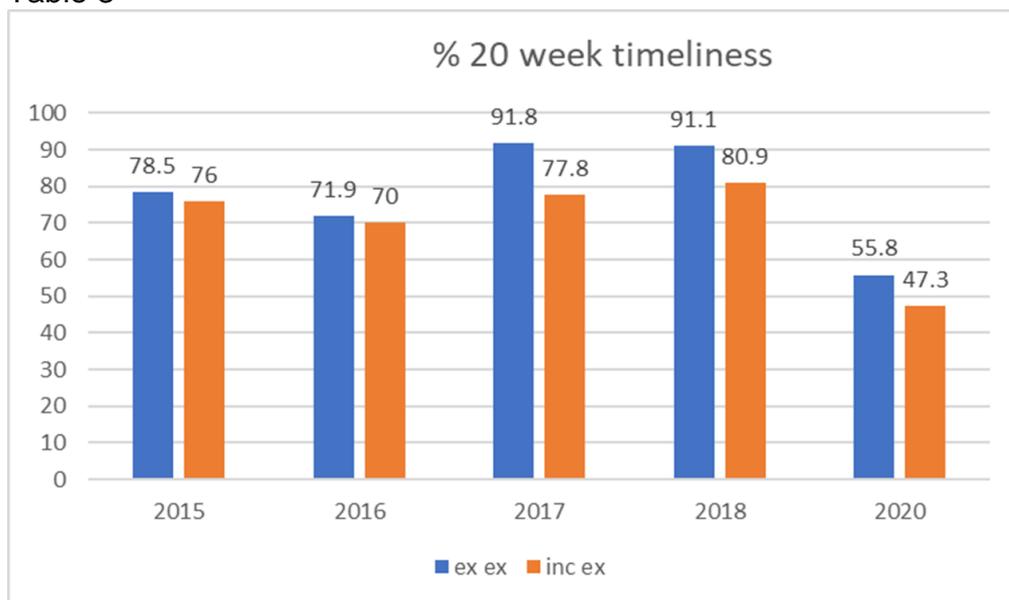

FACT Transformation Staffing (Flexible Use of Capital Receipts funded)

10. SEN & Inclusion has been a major FACT workstream since 2019 and temporary funds used to pilot new schemes. The number of SEND Lead workers had remained at 25fte since 2015. Within the EPS, fte had decreased from 20.4 in 2008/9 to 13.4 in 2019/20. The SEN & inclusion workstreams of the FACT programme have funded the recruitment of 3.68fte SLWs officers and 2.5fte temporary Senior EPs to support and pilot. This funding is not available after this financial year and therefore permanent investment is required to exploit the long-term success of the inclusion workstream.

The numbers of SEND LWs and EPs result in high caseloads for both services, with SEND LWs having a caseload which has doubled in the six years following the introduction of the 2014 Children & Families Act. The EPS estimates that a high proportion of its available time is taken up with undertaking EHC needs assessments. This means that less EP time is available for both preventative and traded services. This pressure also results in a lack of EP resource to support the provision of updated information for annual reviews of EHCPs and to support effectively the oversight and quality assurance of settings outside of Wiltshire where young people with EHCPs are placed.

The result of the demand within Wiltshire and the maintenance of historical establishment numbers is the timeliness and compliance of the EHCP process in the LA. This can be seen in the graph below:

Table 3

The graph shows 20 week timeliness as a percentage for new EHC needs assessments with the blue bars showing the percentage excluding cases where an exception to the timeframe was allowable (as defined in the code of practice) and the orange bars the percentage when these cases are included.

Data collected and collated by the DfE indicates that in 2020 Wiltshire's 20 week timeliness was broadly in line with national and regional performance; the national figure was 58% of EHCPs issued within 20 weeks; the figure in the South West region was 51.4% and Wiltshire's figure was 56.6%.

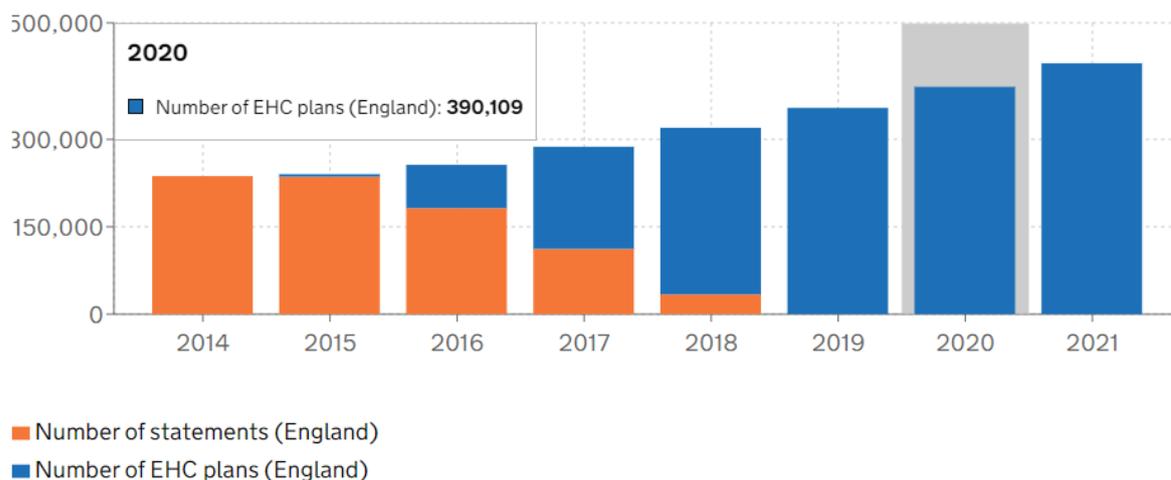

In previous years, the 20 week completion figure in Wiltshire was higher, at 84% in 2019 and 91% in 2018, indicating a decline in 20 week timeliness. Whilst timeliness is carefully and regularly monitored within the SEN team the volume of new requests for assessment, alongside the ongoing need to review and amend existing EHCPs means that 20 week timeliness continues to be a significant concern. Of greatest concern is the impact of delays in this area upon Wiltshire families. Work undertaken recently with Wiltshire Parent Carer Council in relation to the EHC needs assessment process indicated that parent carers can experience the statutory assessment process as being long and arduous and the perception that they need to 'fight' for the issue of an EHCP is reinforced by delays in the process.

Demand for SEND services nationally

11. The number of Education, Health and Care Plans has increased annually since 2010. In January 2021 there were 430 697 EHCPs which represents a 10% from the previous year.

The number of new EHCPs issued nationally in 2020 was 60 097 which is an increase of 11% from 2019.

Number of EHC plans and statements of SEN, 2014 to 2021

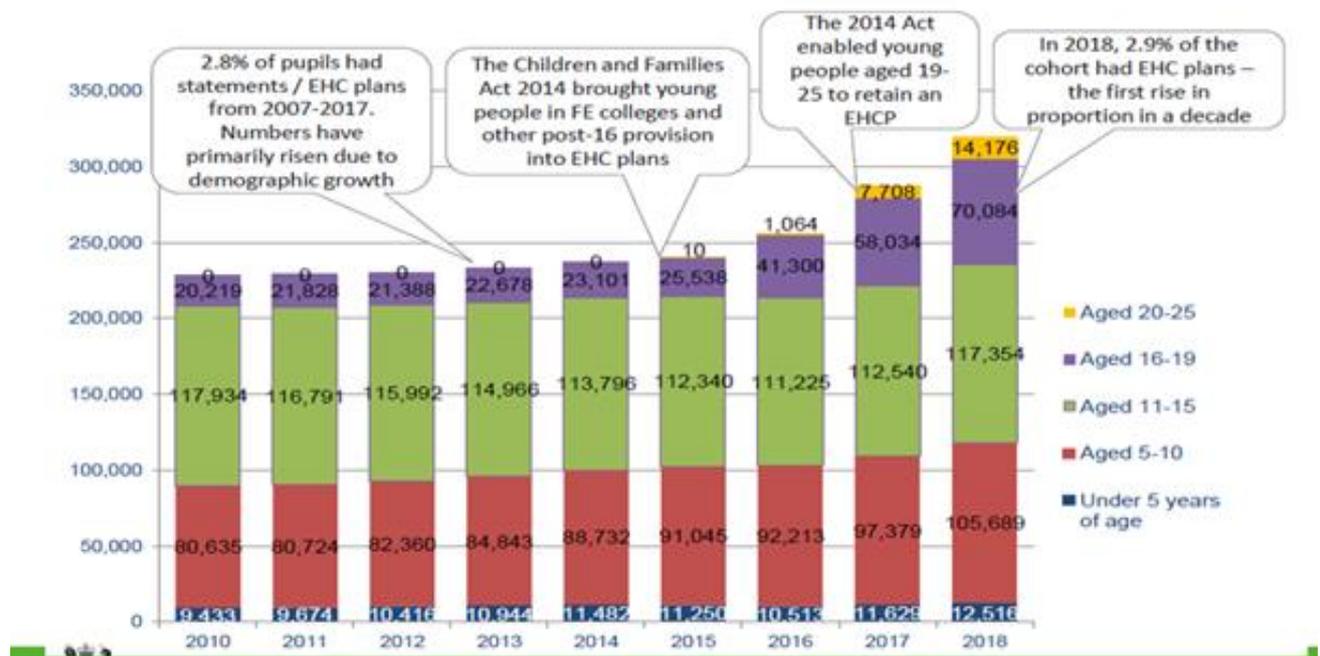

Source: SEN2

Impact of SEN Reforms

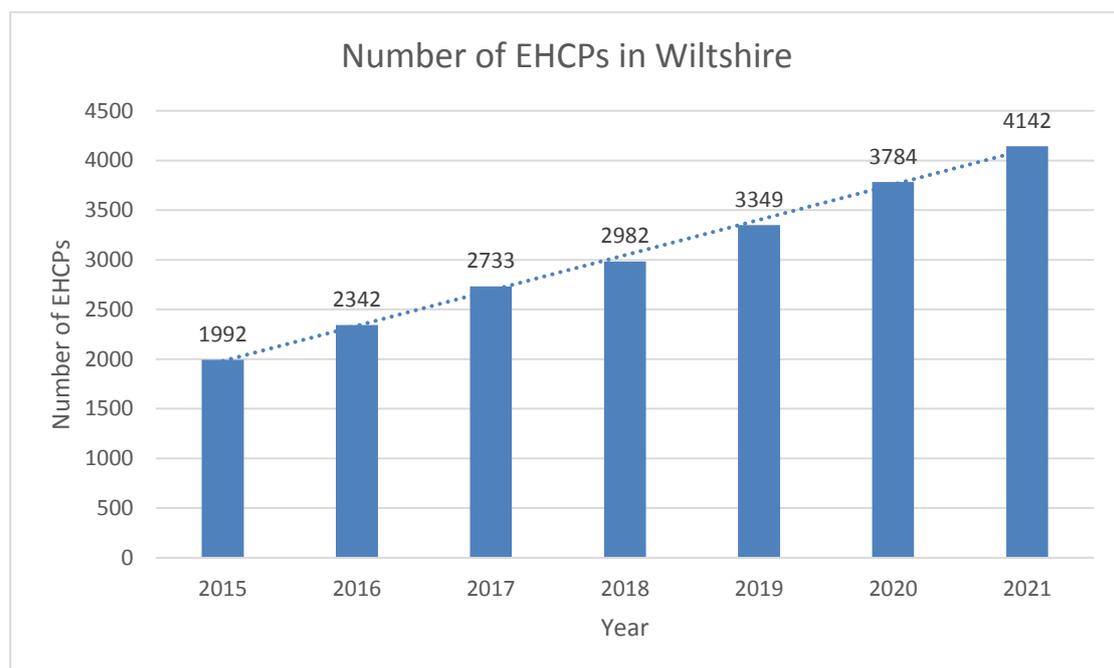

12. The reforms in 2014 included the inclusion of an increased age range, up to 25 for which an EHCP can remain in place. Nationally, in 2015 there were 10 young people with a statement of SEN or an EHCP in this age range and 1064 nationally in 2016. SEN2 data published in 2021 indicates that this figure is now 29532 young people, accounting for 6.9% of all EHCPs. In Wiltshire, we currently maintain 104 EHCPs for young people in this age category. We have a significant number of young people (720) who are currently in the 16-19 age range with an EHCP in Wiltshire, many of whom will continue to have their plan as they move into this age category meaning that the number captured in this age group will continue to grow.

The increase in requests for assessment, the number of EHCPs being issued and the increased age range covered by the relevant legislation have all contributed to the increased workload of the teams detailed above. Whilst emphasis is often placed on the capacity required to undertake initial assessments as part of the EHC needs assessment process, of equal importance is the capacity to provide ongoing, high quality and timely support to children and young people with an EHCP and their families.

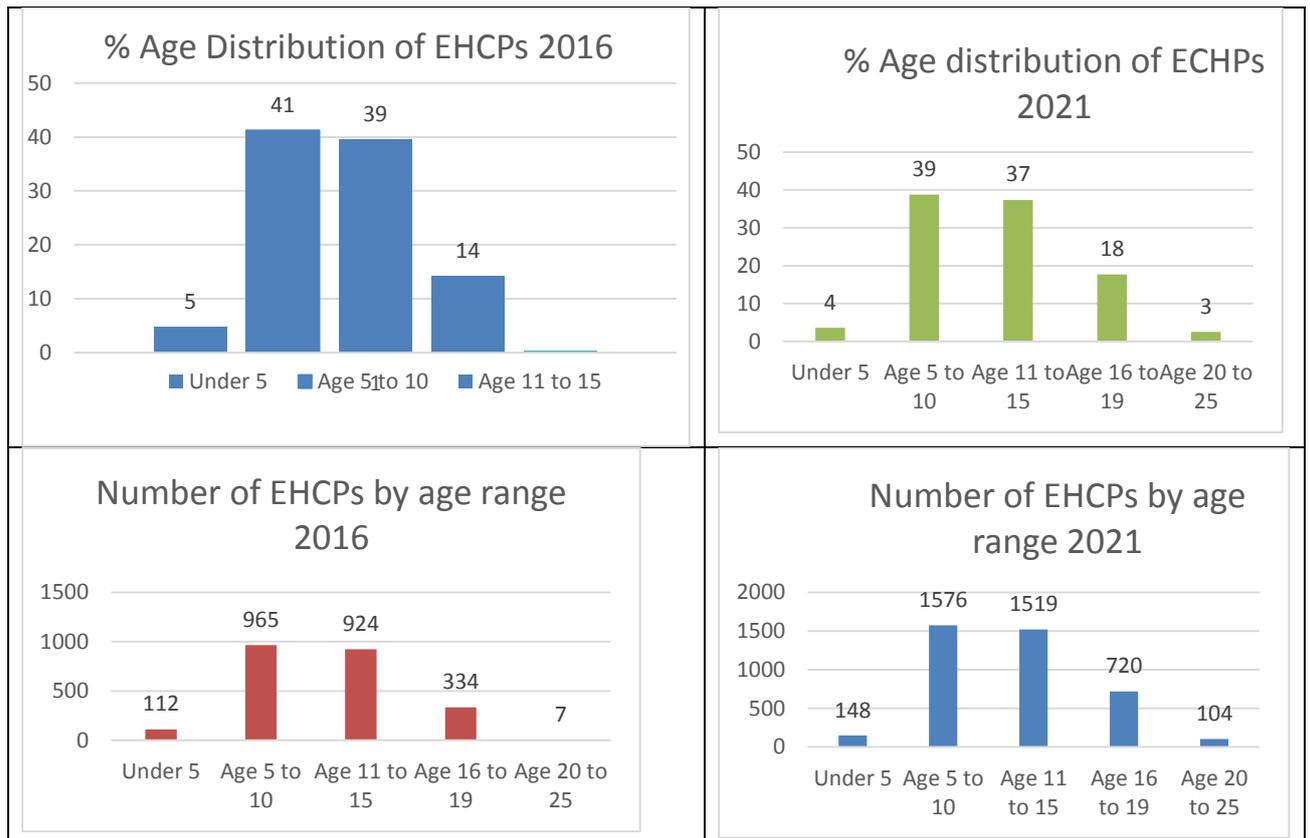

The DfE produced this graph showing the national impact of the 2014 Act:

Over a similar time period, Wiltshire's total number of EHCPs is shown below:

The table below illustrate the change in the age distribution of EHCPs over the 5 years

Request/proposal

13. In order to manage the increase in demand for new EHC needs assessments and to provide high quality and timely support for young people with an existing EHCP an increase to the existing workforce is required.

Additional positions are required for the SEN team. It is proposed that **12 additional SEND Lead Worker** posts are created, adding additional capacity across each of the four area teams. To provide the management and oversight of the additional SEND Lead Workers it is proposed that an additional **2 Senior Send Lead Workers** are created.

The role of SEND caseworker has recently been created within the SEN team and additional resource here would support the processing of annual reviews as well as the organisation of decision-making panels. It is proposed that an additional **2 full time positions** are created to enable a caseworker to be available to support each of the four area teams.

Additional posts are required within the Educational Psychology (EP) service. The newly created Senior EP roles have enabled greater oversight and scrutiny of the work of the team. There are 4 FACT funded

roles currently. It is proposed that these are **permanently funded** and an additional **1.5fte Senior EP positions** are created to add greater management capacity to this service. It is proposed that an additional **6 main grade EP** positions are created to support the increase in demand for EHCPs and to enable a more timely and targeted review process for young people at key points of transition.

Consultancy support has enabled progress to be made in a range of areas this academic year including an overview of the SLA in place between Wiltshire Council and Resource Bases and Enhanced Learning Provisions and the development over a seven month period of the process and pathway associated with Education, Health and Care Needs Assessments. It is proposed that **£30,000** is provided as part of the base budget for SEND&I to enable consultancy to be funded for key elements of development work relating to SEND.

A seconded post has added valuable oversight and scrutiny of placements made in the Independent non-maintained school sector, including the identification of opportunities when it is possible to return young people to education settings more locally. This is a time limited post. This work is on-going and it is proposed that this is made a **permanent 1fte position**.

SEND Place Planning

Additional capacity is required to support SEND place planning. It is proposed that **1fte programme lead post** is created for this which will work across commissioning and SEND&I. This post will ensure that accurate and timely data is collected and analysed to inform the planning of SEND school places, including where these are required within resource base and enhanced learning provision settings. This will reduce the potential for more costly placements needing to be made in the event of capacity not being available within our own schools and settings.

Legal evaluation & quality role

To enable sufficient preparation and challenge for mediation and tribunal, a new post is required to represent the Council and present the case recommendation.

Additional Early Years Inclusion Officer (EYIO) Support for Early Years

To employ an additional **4 EYIOs for the early years team**. The EYIOs offer direct, individual, child-level support for children identified with SEN or awaiting a needs assessment in Early Years; this includes strategising, offering advice and techniques, providing guidance on funding and signposting to partner agencies. They also support with behaviour issues which have been exacerbated in our Early Years

children as a result of the pandemic. Additional headcount would help to reduce the workload for the current EYIOs and mean that they can spend more time supporting the children that are on their caseload so that they get the best possible chance of success in their early years and as they move into school. This would help us to offer more intensive support to individual settings and children as well as have the time to roll out our training programme which will help to upskill SENCO's making capacity for the future within our settings.

These would be regional posts and would be based in the north, south, east and west of the county.

Overview and Scrutiny Engagement

14. The Director of Education and Skills has consulted with Lead Member for Children and the Lead Member for Adults (SEND and Inclusion) regarding these proposals.

Safeguarding Implications

15. The recruitment and retention of appropriately qualified and experienced practitioners supports the safeguarding of vulnerable children and young people with SEND. Practitioners within SEND&I work closely, where appropriate with colleagues from social care teams including where there are safeguarding concerns.

Public Health Implications

16. The effective identification and support of SEND through the statutory assessment process supports health and wellbeing for Wiltshire families.

Procurement Implications

17. There are no procurement implications. Recruitment to the positions detailed above would follow the usual recruitment processes in Wiltshire.

Equalities Impact of the Proposal

18. Additional capacity to support children and young people with SEND in Wiltshire will assist in reducing inequalities for this group.

Environmental and Climate Change Considerations

19. There are no environmental and climate change considerations as a result of the agreed proposals.

Risks that may arise if the proposed decision is not taken

20. The risk associated with not proceeding with this proposal relates to Wiltshire Council's ability to meet its statutory obligations in relation to SEND assessment processes.

If Wiltshire Council does not have sufficient workforce in its SEN and EP teams then this impacts upon its ability to:

- Manage the number of requests for EHCPs being received
- Put in place support mechanisms for schools and settings which could reduce the rate of requests
- Undertake timely assessments
- Issue good quality EHCPs
- Review EHCPs in a timely way, including making amendments where this is required
- Undertake person centred reviews at key points of transition
- Offer families the support and contact that they need, in the way which works best for them
- Have oversight and undertake QA for young people placed outside of Wiltshire schools and settings

If Wiltshire Council does not have sufficient workforce in SEND place planning, then this impacts upon its ability to:

- a. Effectively utilise population data and other information to produce longer term projections of need for SEND places within Wiltshire
- b. Support the age phase transfer process of learners from early years into school and year 6 into year 7
- c. Ensure that sufficient school and setting places are available for learners with EHCPs, resulting in more costly solutions needing to be sourced and resourced from the HNB

If Wiltshire Council does not have sufficient workforce in its early years team then this impacts upon its ability to:

1. Support early years settings to identify and support learners with SEND
2. Support early years settings to develop their understanding and practice in relation to SEND, for example through the provision of training and whole setting support
3. Supporting effective transitions of early years children to school where the receiving school has all the information and support it needs to prepare and plan for the admission of the learners with SEND

This results in a less than optimal experience for Wiltshire families. It can also result in reputational damage for Wiltshire Council; through complaints made by families but also by performance issues and

challenges being noted by the publication of local authority level performance data and through the OFSTED/CQC inspection cycle.

The 'Local Area' OFSTED/CQC inspections commenced in 2016, following the introduction of the children and families act with the aim of holding local areas to account and championing the rights of children and young people. The inspection does not result in a graded outcome, in contrast to the inspection outcomes seen following inspections in schools and other LA services. Local areas can however be issued with a 'written statement of action' following the inspection which details concerns held by the inspection team about the ability of the area to identify, assess and support children and young people with SEND. Where a statement of action has been issued, Local Authorities have further monitoring visits from OFSTED/CQC and letters detailing progress or continuing challenge are published alongside the inspection report.

Wiltshire had a local area OFSTED/CQC inspection in 2018 which was favourable. A further inspection is very likely to be undertaken in the next 2 years. It is possible that the outcome of this will be for a written statement of action to be issued which will then require regular monitoring visits from OFSTED to be made to gauge progress in the areas identified.

OFSTED/CQC inspections which have been published in the last two years and have resulted in a written statement of action for the local area highlight the challenges these local areas have experienced in relation to many of the areas outlined above. For example, the variable quality of EHCPs is mentioned in a number of OFSTED/CQC reports including Bedford, Birmingham, Devon, Kent, Norfolk and Shropshire. Timeliness of the EHC assessment process, and associated elements of practice including the annual review process is also referred to in these reports, as are the challenges relating to the capacity of Educational Psychology services.

Risks that may arise of the proposed decision is taken and actions that will be taken to manage these risks

21. The risk associated with the proposed decision being taken relates to the financial implication of the recruitment associated with it. Careful and ongoing management of this additional spend will need to be in place.

Financial Implications

22. It is important for Cabinet to understand the significant increase in demand for SEND & Inclusion services both nationally and locally and

the extreme pressure on the public purse as a result. It is imperative that we have a fit for purpose service but also that we are in a position to ensure that spending aligns to outcomes for children and therefore provides value for money. The 2019-20 to 21-22 FACT funded programmes including temporary staff increases have helped us to understand the benefit in continuing investment and ensuring future success.

23. The request straddles two financial years. Year 1 From September 2021 to March 2022 with a part year investment of £0.861M – Year 2- 12-month costs estimated at £1.742M.

Summary - SEND Investment	FTE	21-22 Average Cost per FTE incl on costs (30%) £M	Travel £M	TOTAL @ 21-22 Prices £M	Impact on 21-22 Financial Year September 21 to March 22 £M	Full Year Impact 22-23 £M
SEN Professionals	35.50	£0.047	£0.041	£1.708	£0.861	£1.742

Funding the Investment

24. Schools and early years settings are reporting that children are impacted by COVID, either developmentally, academically or in their emotional mental health needs. Wiltshire Parent Carer Council (WPCC) have reported increased calls on the support and signposting services they provide due to concerns around learners' schooling or, return to school as a direct result of the pandemic. Those EHCP learners who have not been in school are struggling to return without transitional support and those who have been in school often thriving in much smaller groups are struggling with the return of the whole school. Advice, guidance and support from the educational psychology service can prevent escalation at school level avoiding exclusion and referral into specialist services.

25. Following the setting of the budget in February 2021 officers are now undertaking a base review of the Councils budget based on the assumptions and metrics available at that time to set the budget. The outcome of that review will be presented to Cabinet in September and will update the current 2021/22 financial year and the future MTFS. At this stage it is therefore proposed in this report that the 21-22 part year cost be approved in principle as a drawdown of the latent demand reserve, which is then confirmed in the quarter one budget monitoring following the Council wide review. The amount held in the reserve is £7.895M.

A recent report from OFSTED highlights the particular challenges faced by children and young people with SEND as a result of the COVID pandemic:

It is evident that children and young people with SEND are now even more vulnerable than they were before. Missing out on education – in some cases, missing vast amounts – means that these children and young people will be further behind their peers. Missed support for physical health, communication needs and mental health has had a seriously detrimental, and in some cases potentially permanent, impact

SEND: old issues, new issues, next steps (June 2021)

The Council is currently refreshing the medium term financial plan for 2022-23 onwards and the full year cost pressure has been captured and included as part of this update which Cabinet will consider in the Autumn.

High Needs Budget Impact (DSG)

26. The direct cost benefit is to the high needs block of the dedicated schools block. The investment is part of a larger strategic response to the High Needs Block Recovery Plan which is managed and monitored through Schools Forum. The recovery plan details activity in the areas of early intervention and prevention, statutory processes and quality assurance and monitoring. This is in acknowledgement of the need to ensure that support is available from the earliest point for families, for example our early years learners and also that our systems and processes require a process of scrutiny and review to ensure that they are of sufficient quality.

Whilst this does not directly impact on local authority budgets, the legal framework is clear when support should be provided and so opportunities to push back on increased requests are limited without sufficient levels of professional scrutiny and the ability to offer alternatives.

SEN Transport Budget (Local Authority)

27. There is a direct implication on the Council's SEN school transport budget. Many EHCP learners are entitled to school transport and even though fewer than 40% take up the entitlement, the annual revenue budget for 21-22 is £12.975M. This budget is based on estimates of current EHCP learners accessing school transport. The more children who are able to access learning in their local community will have a positive impact on both travelling time for children and the cost where parents and carers take up the transport offer. Any demand increase is not anticipated to be extraordinary and will be estimated and taken into

account of in the MTFS in the usual manner. The impact will be presented to Cabinet in September and will update the current 2021/22 financial year and the future MTFS.

Indirect Cost Benefits

28. The indirect benefits of the investment are reduced risk of tribunal and challenge from parents.

Cost Avoidance

29. The avoided cost of a poor Ofsted Inspection, reputational damage and negative publicity could be significant as parental choice may mean many more parents push for more specialist independent education. In addition, where these are subject to legal appeal these cases take up much officer time with little possibility of a ruling in favour of the local authority.

Whole Life Pathway

30. As older young people prepare for transition to adulthood, it is important they are supported to live their best lives where they are as empowered and independent as possible. Planning for this pathway is critical to ensure young people with SEND needs have fulfilling lives. Decisions made in transition care planning have long term financial impact in the adult services and therefore it is imperative to provide the right level of support at transition.

Deficit DSG Reserve

31. The cumulative overspend in the dedicated schools grant is held and cash-flowed by the local authority. The current guidance ringfences the reserve and prevents local authorities from contributing to the deficit however, this does not extend beyond 2022-23 financial year and could be subject to change.
32. At the end of the 2020-21 financial year, the deficit was £18.717M. This is a similar position that other local authorities are facing. The DfE are aware of the funding pressures on local authorities and are being both supportive and challenging. The issue remains that local need, creates demand in the SEN system and under current legislative guidance, the level of funding does not cover demand for the majority of local authorities. Lobbying for additional funding at national level continues, recently through the f40 and Society of County Treasurers. The long awaited DfE SEN Review (anticipated this summer) may provide further guidance.
33. In setting the risk assumptions in the 2021/22 budget, no risk was associated or attributed to dealing with the DSG deficit in terms of the Councils General Fund Reserve balance. In addition to the

uncertainty outlined around changes to Councils contributing to deficits, Government (DFE) has also recently issued bailouts to Councils to assist in addressing deficits, which normally come in the form of debt arrangements.

34. There is therefore a heightened risk that the Council will need to find funds to address the deficit as well as having plans, as set out in this report, to invest to actively address the deficit going forward. In setting the 2022/23 budget the risk associated with the DSG deficit will be recognised and will increase significantly the level being advised to be held in the Councils General fund reserve.

Legal Implications

35. There are no direct legal implications within this proposal. Any recruitment should follow our recruitment policies.

If this is not progressed there is a risk that the Council will not be able to meet its statutory obligations to undertake assessments of SEND according to the SEND regulations and is likely to result in increased challenges and reputational damage and therefore increased costs in time and resources in managing those issues. .

Workforce Implications

36. The recruitment aligns with the aims of the SEN Strategy and the High Needs Block recovery plan.

The proposals to increase headcount are likely to be achievable without additional spend on recruitment campaigns. Typically, we have recruited to these roles very easily.

Senior EPs have been filled through promotion of our existing EPs and recruitment of main grade EPs has previously been successful. Introducing additional Senior EPs adds to robust career pathways and progression opportunities for our existing staff and will also be a strong selling point when recruiting future main grade EPs.

Steps have already been taken to ensure that suitable management structures are in place to support a larger workforce.

One caveat is that recruitment can take some time, for example, with notice periods required of preferred candidates, so expectations need to be managed based on when we can expect to have this larger workforce in place.

Options Considered

37. Other mechanisms to support and develop the SEN and EP team have been put into place. This includes the development of Team Manager roles within the SEN service to have a greater oversight and scrutiny of team performance. The development of the Senior EP roles has also enabled additional capacity to be available within the service which is beneficial to Wiltshire families. The volume of demand however outweighs the capacity of these teams even when the additional capacity is in place.

Conclusions

38. The SEND&I service works to support young people, their families and education settings in Wiltshire. This proposal holds this at its centre- we wish to undertake our statutory duties efficiently and effectively and to be able to meet the needs identified through this process.

Wiltshire Council

Cabinet

21 July 2021

Subject: Future Chippenham

Cabinet Member: Cllr Richard Clewer, Leader of the Council and Cabinet Member for MCI, Economic Development, Heritage, Arts, Tourism and Health & Wellbeing

Key Decision: Key

Executive Summary

The Future Chippenham programme was progressing in accordance with the approval given by Cabinet in October 2020 and the subsequent signing of the Grant Determination Agreement (GDA) for Housing Infrastructure Funding (HIF) with Homes England in December 2020.

On 29th June 2021, Cabinet agreed that further work be undertaken on the Local Plan review (LPR) in response to the consultation on key parts of the evidence base including testing the upper and lower levels and spatial distribution of the range of housing need for the plan period. This has potentially important consequences on the quantum and deliverability of both the road and housing proposed as part of the Future Chippenham programme that have been raised with Homes England.

A separate consultation by Future Chippenham on potential road route options took place between 15th January 2021 and 12th March 2021 and a preferred route has been identified. During this consultation important feedback was received and informed the recommended road route option. However, in addition it is acknowledged a large representation of responses were received objecting to the scheme on the grounds of quantum, transport issues, climate change and environmental issues.

There is a need for the Future Chippenham programme to respond in an appropriate way to the feedback received during its consultation on the road route options as well as to the Local Planning Authority's consultation on the Local Plan review and the obligations under the GDA.

The benefits of both the funding and the ability to deliver infrastructure led development are clear and remain an important consideration to deliver housing within the county and provide a stimulus for growth and regeneration for our communities within Wiltshire.

The Council leadership requested further consideration be given to these matters and a programme review and assurance exercise has been conducted

and identified some significant risks to the delivery of the whole scheme, in particular:

- The LPR timeline
- The land assembly status and associated risks with GDA conditions
- The feedback from the consultation and concerns raised on the quantum of housing proposed in the Local Plan period.

All of the above impact on the potential ability for the current whole scheme to be delivered on time and in budget. However, the review has identified an opportunity to develop an alternative approach to deliver a significant and important part of the scheme that meets the principal strategic objectives and benefits for the town centre and residents of Chippenham. In addition, the alternative approach supports the delivery of a significant housing requirement but with a reduction in the quantum that aligns with the current Local Plan period and leaves the decision on growth beyond that to a future date.

This scheme proposed is the southern section of the distributor road from the A4 through to the A350 junction at Lackham roundabout that would deliver between an estimated 3,800 – 4,200 new homes and associated infrastructure.

Authority is sought from Cabinet to approve the preferred road route for the southern section of the scheme, subject to; the outcome of the Local Plan review; the revised scheme being approved by Homes England and GDA revisions agreed; continuing with the programme of works to complete the road design and master planning necessary to support the revised programme. It is acknowledged that some of this work is completed at risk due to the current status of the LPR but that it remains funded by the HIF Grant.

Authority is also sought to progress the necessary steps to secure delivery of the road scheme in line with the GDA including land assembly, Compulsory Purchase and the appointment of a delivery/JV partner and for cabinet to agree the principle of reinvestment of Community Infrastructure Levy (CIL) receipts generated from the Future Chippenham development into Chippenham (including the regeneration of the town centre) to support a comprehensive approach to development consistent with the objectives of the masterplan.

Liaison and reporting to Homes England on the programme's delivery plan as part of the GDA will keep HE fully apprised of the current status of the LPR and any associated risks this may have on the FC Programme timeline. Both parties have identified that in order to respond to the LPR and other issues there may be a requirement to review the terms of the GDA.

The report sets out the progress to date on delivery of the first phase of the project and key workstreams and identifies the next steps.

Proposal(s)

Cabinet is asked to,

1. Note the consultation response to the Future Chippenham road route options at Appendix B and to agree the preferred road route as set out in Appendix A subject to the Local Plan review, masterplanning, Homes England agreement and an approved scheme.
2. Agree to enter into contract with landowners to facilitate the road delivery, subject to the Local Plan review, masterplanning, Homes England agreement and the approved scheme, should it proceed substantially on the terms as set out in Appendix C and delegate authority to Director of Housing and Commercial in consultation with the Director of Legal and Governance, to agree any non material amendments to the terms outlined in Appendix C.
3. Agree to initiate masterplanning of the approved scheme including entering into detailed design and planning negotiations with other landowners to achieve a high quality and consistent outcome addressing climate change issues.
4. Agree to implement the compulsory purchase order strategy and receive a further report on progress.
5. Agree to contact Homes England to discuss changes to the Grant Determination Agreement to reflect the southern scheme and associated changes to the delivery plan for the scheme and delegate to the Corporate Director Resources and Deputy Chief Executive in consultation with the Leader authority to enter into the revised contract subject to the Local Plan review, masterplanning, Homes England agreement and an approved scheme.
6. Agree to delegate authority to the Corporate Director Resources and Deputy Chief Executive to make representations and agree for revisions to terms and conditions of the Grant Determination Agreement (GDA) with Homes England following consultation with the relevant Cabinet Member and Director of Legal and Governance, as required during the lifetime of the contract.
7. Note work on Chippenham town centre regeneration and agree the principle of reinvestment of Community Infrastructure Levy (CIL) receipts generated from the Future Chippenham development into Chippenham (including the regeneration of the town centre).

Reason for Proposal(s)

To respond appropriately to feedback from the community to the consultation undertaken by Future Chippenham on the road options and separately by the LPA on the Local Plan review and to continue to meet the terms and conditions of the GDA.

Terence Herbert
Chief Executive

21st July 2021

Subject: Future Chippenham

Cabinet Member: Cllr Richard Clewer, Leader of the Council and Cabinet Member for MCI, Economic Development, Heritage, Arts, Tourism and Health & Wellbeing

Key Decision: Key

1. Purpose of Report

- 1.1 The purpose of this report is to provide an update to members on the progress reached on the Future Chippenham programme, seek a decision on the preferred road route for the distributor road, set out in Appendix A and to inform of the required next steps in the project and ensure appropriate strategies and delegations are in place to ensure smooth and efficient progress.
- 1.2 The report considers the implications of the key consultations undertaken since the programme was last reported to Cabinet including that undertaken by the Local Planning Authority into the Local Plan review (reported to Cabinet on 29th June 2021) and that into the route of the distributor road undertaken by Future Chippenham and detailed in this report.
- 1.3 The Council leadership requested further consideration be given to these matters and a programme review and assurance exercise has been conducted and identified some significant risks to the delivery of the whole scheme, in particular:
- The LPR timeline
 - The land assembly status and associated risks with GDA conditions
 - The feedback from the consultation and concerns raised on the quantum of housing proposed in the local plan period.
- 1.4 Recent requests from members in relation to the Local Plan review has also further highlighted the importance of a comprehensive strategic approach when allocating new land for housing. It is suggested that those sites that offer the greatest prospects for delivering sustainable new communities and that support integration with existing settlements, encourage walking and cycling and with ready access to local neighbourhood facilities should be favoured over less well-connected alternatives. The rationale for Future Chippenham has already been developed around these principles and time will be given, as requested by members, to do the necessary work to achieve these key objectives.

- 1.5 Authority is sought from Cabinet to approve the preferred road route for the southern section of the scheme, subject to the outcome of the Local Plan Review and the revised scheme being approved with Homes England and GDA revisions agreed, continue with the programme of works to complete the road design and master planning for the revised programme.
- 1.6 In addition, and subject to the preferred route decision, the report seeks approval for the council to enter into the legal agreements to secure the land required to support delivery of the road with 3rd party landowners contained in part 11 of this report.
- 1.7 In support of the land assembly strategy, the report seeks approval to adopt the CPO Strategy contained in Appendix D to allow implementation of the strategy to run alongside the land assembly discussions.
- 1.8 The report seeks approval to commence the framework master plan for Future Chippenham which will include a requirement to conduct a consultation with stakeholders and members of the public later this year.
- 1.9 The report seeks delegated authority for the Corporate Director of Resources in liaison with the leader to:
 - i. on behalf of the Council, make representations and agree for revisions to terms and conditions of the Grant Determination Agreement (GDA) with Homes England following consultation with the relevant Cabinet Member and Director of Legal Services, as required during the lifetime of the contract. An example of this could be a revision of a milestone date that has been delayed due to COVID implications that did not constitute a material change to the deliverables of the programme and breach the terms of the GDA and within the limitation of the current policy and jurisdiction of the Council.

2. Relevance to the Council's Business Plan

- 2.1 The Council's award from HIF directly contributes to all three priorities in the Business Plan
 - growing the economy – the project provides an opportunity to support growth and economic regeneration in the economy by meeting the housing need in a planned and sustainable way. Provision of land within the proposed settlement will create an opportunity for residents to live and work within the communities providing opportunities to reduce out-commuting
 - creating strong communities – as a significant landowner the Council has an opportunity to support infrastructure led development with a comprehensive masterplan that assures housing and social infrastructure is delivered holistically and in a

sustainable way providing enhanced connectivity to the town centre and existing settlement

- protecting the vulnerable – the project provides opportunities through its development to ensure that the holistic approach to development and social infrastructure provides an environment that promotes well-being through enhanced leisure/recreation facilities, affordable housing and promotes the use of blue and green infrastructure.

3. Background

- 3.1 It has been known for some time that development in and around Chippenham is constrained. Housing delivery is below the number that is needed to keep pace with demand resulting in house price inflation exceeding the national average and a corresponding undersupply of affordable housing.
- 3.2 The lack of infrastructure has been recognised as a major impediment to bringing forward the homes needed to meet the future needs of Chippenham in a sustainable way as required by national planning policy. Indeed, this was concluded by both the Inspector into the Chippenham Housing Allocations DPD and reflected in the published evidence of the Local Plan review. Both conclude that a connection from the A4 and the A350 is essential to the long-term growth future of the town; and safeguarding measures were made within the Allocations DPD to allow for future connections to be made. All growth measures which do not deliver this road, no matter what the scale, raise the very strong prospect of significant traffic congestion in and around the town centre and would therefore potentially fail tests of planning soundness as it would exacerbate rather than solve traffic problems.
- 3.3 Without the provision of up-front infrastructure, development will occur, but in a speculative and piecemeal fashion which owing to viability issues, may not deliver the wider benefits such as education, health, infrastructure, green energy and affordable homes in accordance with the Council's policy requirements. The Council will in effect be at risk of losing control over the key land use decision for the town and become reactive rather than proactive.
- 3.4 To address this the Council sought Housing Infrastructure Fund funding for up-front infrastructure delivery. This funding provides for essential infrastructure in the form of a new distributor road, to be delivered up-front which in turn will support the delivery of the new housing required and the provision of affordable housing at the level required by the Council's policies.
- 3.5 Through the payment of Community Infrastructure Levy receipts from the delivery of the new homes the HIF funding will help unlock funds to deliver new social and community infrastructure (schools, leisure provision, open space etc) both to support the new development within the Future

Chippenham area and the wider town for the benefit of the whole Chippenham community.

- 3.6 In November 2019, the Ministry of Housing Communities and Local Government confirmed that the bid submitted by the Council had been successful. In December 2020, the Council entered into a Grant Determination Agreement (GDA) defining the terms of the funding and ongoing commitments on delivery of infrastructure and housing.

4. Main considerations for the Council

- 4.1 The main considerations for the Council arising from this report are as follows:

- To take account of the implications of the Local Plan review and Cabinet's decision in relation to the recommendations put forward by the LPA on 29th June 2021.
- The feedback from the consultation by Future Chippenham on possible road route options and the recommendation of the preferred route identified.
- The proposal to progress masterplanning, land assembly, a CPO strategy and the procurement of a Joint Venture delivery partner – subject to the Local Planning Authority bringing forward the Future Chippenham sites within its Local Plan review.
- The opportunities for the Future Chippenham Programme to support the delivery of social and community infrastructure and wider economic benefits to the community of Chippenham (including the regeneration of the town centre) through a partnership approach with local stakeholders and the targeted application of Community Infrastructure Levy (CIL).
- Authority is required to continue to engage with Homes England and to make any necessary revisions to the Grant Determination Agreement to facilitate the changes to deliver the southern road route scheme and allow the approved programme to proceed.

- 4.2 The report deals with these issues under relevant headings below.

Implications arising from the Local Plan Review.

- 4.3 On 29th June 2021 a report was taken to Cabinet updating on the consultation undertaken on the Local Plan review (LPR) between January and March 2021.
- 4.4 This report highlighted feedback from communities across Wiltshire including those in Chippenham where it was noted that there was a significant objection from the local community to the scale of growth on a variety of grounds. The most common being environmental harm, traffic congestion, lack of justification and undermining tackling the climate emergency. It also noted that there were considerable objections to the new road proposals.

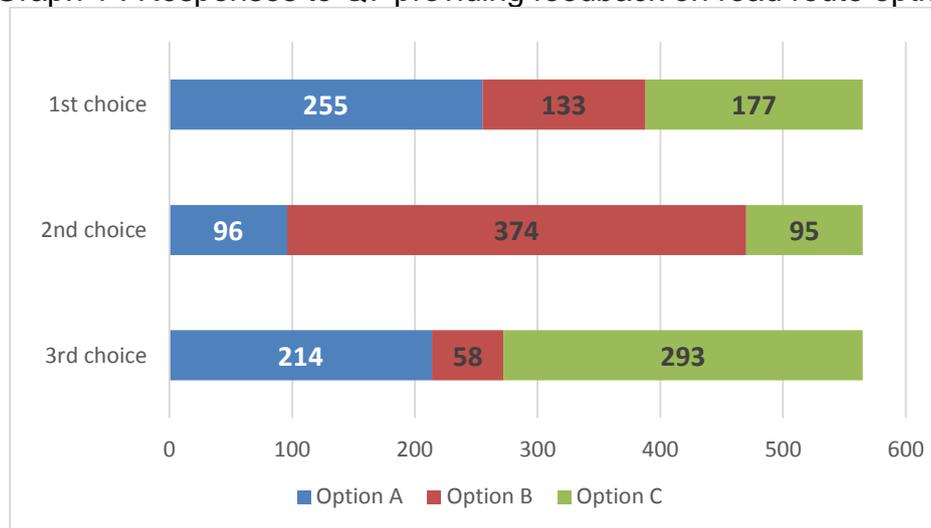

- 4.5 Cabinet agreed that further work be undertaken on the LPR in response to the consultation on key parts of the evidence base including testing the upper and lower levels and spatial distribution of the range of housing need for the plan period. It also agreed that reviews be undertaken in relation to employment need and the potential for renewable energy, zero carbon development and off-grid energy networks.
- 4.6 The feedback from this consultation and the decision by Cabinet to review the evidence base in this way has potential impacts on the Future Chippenham programme. The immediate implications include continued uncertainty over the quantum of housing that will be required within this Local Plan period and by association the potential opportunities to review the delivery strategy for the programme.
- 4.7 These are not questions that can be answered immediately and are ones that will be informed by the review of the evidence base to be undertaken by the LPA, the reporting timescales for which are not currently known. It is noted, however, that members have highlighted the importance of a comprehensive strategic approach when allocating new land for housing. Those sites that offer the greatest prospects for delivering sustainable new communities and that support integration with existing settlements, encourage walking and cycling and with ready access to local neighbourhood facilities should be favoured over less well-connected alternatives. The rationale for Future Chippenham has already been developed around these principles and time will be given, as requested by members, to do the necessary work to achieve these key objectives
- 4.8 The short-term implications for the Future Chippenham programme are that, whilst the justification for an infrastructure led scheme based around a holistic masterplan approach remain as compelling as before, the impact of any further delays in the LPR affect the deliverability of the current HIF scheme and therefore the Future Chippenham team have identified opportunities that could address a number of factors that include delivery timetable, scale of development and benefits delivery through delivery of the southern section of the scheme.
- 4.9 This has implications with regard to the obligations of the Council to Homes England under the GDA which have been raised with them. The parties are working constructively together to respond to the situation as it evolves.

Consultation on the proposed site(s) and identification of the preferred road route option

- 4.10 Consultation on the proposed site(s) and HIF road route options was originally planned in April 2020. However due to the impacts of the COVID-19 restrictions this commenced on 15th January 2021 and concluded on 12th March 2021.

- 4.11 The consultation ran broadly in parallel to that of the Local Plan review (Reg 18). This was unavoidable as this was the latest date the Future Chippenham consultation could take place to achieve the requirements of the GDA. The consultation centred on the road route options and the preferred site identified in the recently published Local Plan review Reg 18 documents to provide context.
- 4.12 Due to COVID-19 restrictions the consultation took place mainly online, in accordance with the Council’s adopted Temporary Arrangements supplement to the Statement of Community Involvement. The consultation took place over eight weeks and received 1,163 responses by email, letter and via the online consultation form.
- 4.13 In addition, over 800 questions were received by the project team during the process of the consultation, and answers were provided. 3 webinars, 9 public meetings, including Area Board meetings, Town and Parish Council meetings, consultation meetings with tenants and landowner all took place in the consultation period.
- 4.14 A total of 565 respondents provided feedback to Question 7 of the consultation feedback form, which asked respondents to rank the three road route options in order of preference. Of those who gave an answer to this question, Option A (the outer route) received the highest number of first choice selections (45%). Option B (the middle route) received the lowest number of first choice selections (24%) but conversely received by far the most second choice selections (66%). Option C (the inner route) received fewer first choice selections than Option A (31%) but a much larger number of third choice selections (52%).

Graph 1 : Responses to Q7 providing feedback on road route options

- 4.15 All responses received have been reviewed and informed the recommendation on the preferred road route option. Where comments were received that were not directly related to the road route options

consultation, these were also analysed, and officer responses provided on how they will feed into the next stages of the programme's development.

4.16 A consultation report which provides detail of the nature of the responses is attached. Cabinet should note:

- A significant number of representations were made by members of the public in opposition to the road infrastructure and associated quantum of housing.
- Concerns were raised around climate change impacts, environmental impact, transport impacts amongst many others.
- Considerable feedback was received to inform the preparation of a Framework Masterplan for the site.
- All directly affected landowners provided feedback into the consultation exercise and has also been included in the report. Representations were received from members of the public from Chippenham and the surrounding areas, statutory stakeholders, interested parties and community groups.

4.17 The analysis did not produce a clear-cut preference for any one of the three routes, but instead the best fit/preferred option comprises a hybrid route alignment that takes account of the consultation feedback and which has the following attributes;

- Good and best fit with the strategic scheme objectives including connectivity and congestion mitigation.
- Coordinates with land developer preferences, including the most suitable location to connect sustainable transport networks with the town.
- Reasonable level of deliverability, subject to formal land agreements.
- Lowest overall environmental impact in majority of assessment zones and potential for mitigation where impacts are identified

4.18 In recognition of the revised scheme proposed above, the recommendation for the preferred road route is for the southern route only subject to the Local Plan review, master planning and Homes England agreement. Whilst feedback on the northern route has been received, this route has been excluded.

4.19 Further survey work will be undertaken and consultation on the Framework Masterplan and information gathered in those exercises will also help to inform the finalised design and route. Subject to the Local Plan review status subsequent planning applications can be made.

Land Assembly for delivery of the HIF works

4.20 The Council has continued to progress the land assembly works to secure the land required to deliver the road. Negotiations with third party landowners have progressed well, and Heads of Terms have been discussed on the anticipated road route and lawyers have been instructed

with all the landowners in the southern sector (from the Lackham roundabout vicinity to the A4 East) although there are some outstanding issues which should not prove insurmountable. It is anticipated that contracts with those landowners ensuring delivery of the land required to deliver the road will be able to be completed (subject to agreement by Cabinet). Heads of Terms have been agreed in principle with landowners in the North, Chippenham 2020 and Summix, although some issues are still outstanding and are contained in Part II as they contain exempt information under schedule 12A of the Local Government Act 1972 (Information relating to the financial or business affairs of any particular person (including the authority holding that information)). Approval to enter into the legal agreements to secure the land required to support delivery of the road with 3rd party landowners contained in Part II of this report is sought.

- 4.21 A summary of those terms is contained in Part II of this report as they contain exempt information under schedule 12A of the Local Government Act 1972 (Information relating to the financial or business affairs of any person (including the authority holding that information)).
- 4.22 If acquisition by private agreement cannot be achieved, a Compulsory Purchase Order (CPO) will be necessary to acquire the remaining land. A CPO will also mitigate against any temptation for last minute renegotiation by any of the landowners, north or south, and is standard practice in similar schemes such to this.

Compulsory Purchase Order Strategy

- 4.24 Heads of Terms have been agreed with the principal landowners and Legal Services are in the process of negotiating the legal documentation required to secure acquisition of the freehold interest in land required for the road and associated infrastructure.
- 4.25 Whilst there appears to be goodwill on the part of all parties to progress to the necessary agreements, there is nonetheless a risk to the programme on land assembly until all the necessary interests required to deliver the road have been secured.
- 4.26 On schemes of this scale and nature it is recommended that land assembly negotiations be backed up with a compulsory purchase process to ensure that where agreement cannot be reached for whatever reason, the Council has the ability to acquire the interests required by compulsion as a last resort.
- 4.27 On identification of the route for the distributor road, the Council will therefore need to implement a CPO strategy to ensure that should CPO be required appropriate legal compliance can be satisfied.
- 4.28 To this end it is proposed that in line with Cabinet's Decision on 8th October 2019 (which provided that where necessary the Council will use its compulsory purchase powers in order to ensure that the infrastructure

site is made available for the delivery of the road) that Cabinet provide authority for the Future Chippenham Programme to appoint specialists to commence the necessary work to support a compulsory purchase process.

- 4.29 On the basis that Members support the principle of proceeding with the CPO Strategy, then a full report will be submitted to Cabinet towards the end of this year.

Framework Masterplanning

- 4.30 The benefits of taking an holistic masterplanning approach are explained in para 3.4 above. A Concept Framework for Future Chippenham was developed by the Council as landowner to both inform the Options Assessment Report process and begin the master planning for the Future Chippenham sites. This has been updated following the information and feedback received during the consultation of the road route options and engagement with stakeholders over the last 12 months.
- 4.31 Approval is sought to undertake a Framework Masterplan for the southern scheme which will provide the detailed context to support the preferred road route and housing delivery for the site. This will also be further informed by continued engagement with statutory consultees.
- 4.32 A public consultation on the masterplan will follow in the Autumn where the framework masterplan for the site will be consulted on. The consultation programme will be provided in due course and adhere to the Council's Statement of Community Involvement together with the Statement of Community Involvement Temporary Arrangements 2020 which have been put in place in light of the COVID-19 pandemic and the Future Chippenham Stakeholder and Community Engagement Strategy.

Delivery Partner

- 4.33 Working with its appointed commercial advisors Avison Young, the Council is engaging in initial and informal 'soft market testing' which involves informal conversations with potential partners to understand their appetite to collaborate with the Council in delivering housing and the best route to present the opportunity to the market. The initial findings from this exercise indicate a keen interest in Future Chippenham from the market and an understanding of the opportunities and challenges.
- 4.34 The conclusions from soft market testing will be provided to Cabinet in an update report, prior to the Council working with its advisory team to produce procurement documentation and proceed with formal steps to procure a delivery partner in line with relevant contracts guidance and regulations.

Town centre regeneration

- 4.35 The link between the Future Chippenham programme and the importance of ensuring that the new homes it delivers are properly and effectively integrated with the existing communities has been acknowledged from the outset. An important aspect of this is the way in which the programme serves to support the long-term vitality and viability of the existing town centre through a coordinated approach to regeneration that acknowledges the need to plan holistically for the economic, social and community infrastructure that the new development will support in locations that best serve the whole of the Chippenham community in the most economic and sustainable way.
- 4.36 Future Chippenham development will provide an opportunity for a significant investment of CIL, some of which can be utilised to invest into the town centre regeneration, as already agreed with the Town Council and publicly stated in the local press by the previous Leader of the Council. The reduction in the scale of the scheme will directly impact on this level of investment available.
- 4.37 Wiltshire Council has important landholdings in Chippenham town centre and discussions on how the Future Chippenham programme can support town centre regeneration have been part of the regular discussions during meetings with the Town Council and have formed part of the early stakeholder discussions with the business community as part of the round table discussions on the masterplan.
- 4.38 These opportunities now need to be progressed in a more detailed way in consultation and partnership with a wider group of stakeholders and the potential explored to establish a group/forum managed independently from the Council that could develop and implement a town centre regeneration strategy for Chippenham. This group would be likely to include Wiltshire Council, Chippenham Town Council, local business representatives (including the Chamber of Commerce) and other relevant community groups and stakeholders with an interest in the economic success and quality of the environment of the town. This may be convened and chaired by the local MP and serve as the forum for assessing the plans and prioritising investment that would arise through CIL receipts from the new housing development.
- 4.39 A possible model for this is the Salisbury Place Board that was convened in response to the nerve agent attack in Salisbury and that developed the now adopted Central Area Framework for the city.

GDA revisions

- 4.40 The GDA outlines key milestones and post contract conditions the Council is required to meet as part of the agreement. From time to time it may be necessary to vary these dates and conditions due to programme timeline changes and potential variations in deliverables that are outside of the control of the project. An example of this would be a delay in meeting a milestone due to slippage in the project and a request to Homes England would be made to move the milestone linked to a piece of work that is delayed.

- 4.41 Delegated authority is sought to make representations to Homes England to seek agreement to deliver the southern scheme and make the required amendments to the GDA including the milestones and post contract conditions, required to keep the programme on track for delivery and to adhere to the overarching commitments within the GDA.

5. Overview and Scrutiny Engagement

- 5.1 The Chairman and Vice-Chairman of the Environment Select Committee will be briefed prior to the cabinet meeting.

6. Safeguarding Implications

- 6.1 There are no safeguarding implications at this stage

7. Public Health Implications

- 7.1 No public health implications arise at this stage

8. Procurement Implications

- 8.1 All procurement associated with the project will take place within the Council's procurement and commercial strategy and in conjunction with the Council's procurement team.

9. Equalities Impact of the Proposal

- 9.1 There are no direct equality impacts from this report however there is an ongoing obligation of Cabinet as the relevant decision maker to keep the impacts that may arise under review. This is being managed by keeping the Equalities Impact Assessment under review and at all stages including consultation ensuring that any identified impacts are considered and appropriately dealt with.

10. Environmental and Climate Change Considerations

- 10.1 Environment and Climate Change Considerations will always be kept to the fore in accordance with the Council's adopted position of declaring a climate emergency. As this report is an update report with requests for approval to allow the project to progress there are no direct environment or climate change considerations to be made at this stage. The terms of the GDA will require the Council to have full regard to all relevant environmental and climate change legislation and requirements in the Local Plan process as the project progresses. The project is cognisant that local planning policy may have requirements on how any development takes place and will, where required, comply with these.

11. Risks that may arise if the proposed decision and related work is not taken

- 11.1 Inability to adhere to the existing GDA terms and conditions resulting in fundamental or general default.

Risks that may arise if the proposed decision is taken and actions that will be taken to manage these risks

- 11.2 There are risks around delivering on the Council's commitment in the GDA, which are mitigated in the project specific terms and conditions pertaining to delivery of the milestones within the agreement. These include robust governance, monitoring and reporting standards which meet government's and the Council's risk management requirements.
- 11.3 There is a risk that the Local Plan review process does not seek to allocate the project site for development and as such planning consent is not achieved for the infrastructure works. In that event, the GDA caters for this as a general default and the HIF funding drawn down by the Council would not need to be repaid, provided that the Council had used best endeavours to secure such allocation and planning permission.

12. Financial Implications

- 12.1 Land Assembly – cost relating to the transaction for land required for the road from 3rd party landowners is provided for in the current programme budget and where this exceeds the allowance, a contingency budget is available to support this. Estimated budget, including additional land acquisition as part of the scheme and fees, is subject to negotiation. It should be noted that if development does take place the majority of these costs are recoverable.
- 12.2 CPO Strategy – the implementation of the CPO Strategy up to and including the CPO application is provided for in the current programme budget. However, the CPO inquiry and subsequent potential compensation is not included, and provision would need to be made from the contingency budget for this which could include provision from land receipts from Council owned land.
- 12.3 Failure to meet draw down conditions will require the Council to fund the programme at risk until conditions and milestones dates can be resolved.
- 12.4 In addition to the delivery costs of the road, further road enhancements already identified as part of the original scheme and delivered through CIL will also be required.
- 12.5 A revised recovery strategy will be required, subject to agreement by Homes England and subsequent cabinet approval.
- 12.6 Delays on delivery of the scheme have a direct impact on inflation costs for the delivery of the infrastructure and housing.

- 12.7 Subject to approval, discussion would commence with Homes England around the amendments to the existing Grant Determination Agreement. To date grant has been drawn down to fund costs incurred on the development of the programme, approximately £4m to date. In addition, further works will be commissioned to progress the programme in line with the approvals in this report that would be earmarked to be funded from the grant.
- 12.8 It should be noted that in the scenario where the negotiations with Homes England are not successful there is a risk that the grant used to cover the costs incurred, and an element of those commissioned, could potentially have to be repaid back to Government. In addition, if that then resulted in the road not proceeding in any form, the capital cost to the Council would then have to be met from revenue sources, representing a pressure in the financial year that decision was then made.

13. Legal Implications (Please see Part II of the report for additional Legal comments)

- 13.1 The determination of the route for the distributor road is one step in the progress of this project. It will allow the project team to consult on the masterplan for the wider development with the detail of where the likely distributor will be if the development goes forward.
- 13.2 It will allow additional work to be done to inform any planning application for the road should it be required.
- 13.3 The Council has undertaken consultation to ensure public participation in the local authority's decision making process. In undertaking a consultation process, the Council is required to adhere to the following 'Gunning' principles:
- (i) consultation must take place when the proposal is still at a formative stage;*
 - (ii) sufficient reasons must be put forward for the proposal to allow for intelligent consideration and response;*
 - (iii) adequate time must be given for consideration and response; and*
 - (iv) the product of consultation must be conscientiously taken into account.*
- 13.4 The consultation process was undertaken at an early stage and provided consultees with appropriate information and enough to provide comment. A number of submissions have been received and a consultation report has been prepared to assist Cabinet to have regard to those comments when making their decision. The full consultation responses are provided as background documents.
- 13.5 A significant number of representations expressed a fundamental opposition to the development of the road and/or the development proposals themselves. A number cited either the climate emergency, the changing patterns of working due to the pandemic and/or opposition to

housing generally or in the areas proposed. These are factors that will need to be considered and most properly in the Local Plan development.

- 13.6 However, they also have to be balanced against the other public interest needs that have been identified including the need for housing and ensuring a ready supply of affordable housing and the public benefits of having a planned development which takes into account climate change needs, well planned and developed infrastructure and sustainable living.
- 13.7 A consultation is not a referendum. When making its decision, Cabinet must give conscientious consideration to the response to the consultation in accordance with the leading case law. Most notably, R (on the applicant of Mosley) (in substitution of Stirling (Deceased)) (AP) v London Borough of Haringey [2014] UKSC 56 states:

[...]

38. Such wide-ranging consultation, in respect of the exercise of a local authority's exercise of a general power in relation to finance, is far removed in context and scope from the situations in which the common law has recognised a duty of procedural fairness. The purpose of public consultation in that context is in my opinion not to ensure procedural fairness in the treatment of persons whose legally protected interests may be adversely affected, as the common law seeks to do. The purpose of this particular statutory duty to consult must, in my opinion, be to ensure public participation in the local authority's decision-making process.

39. In order for the consultation to achieve that objective, it must fulfil certain minimum requirements. Meaningful public participation in this particular decision-making process, in a context with which the general public cannot be expected to be familiar, requires that the consultees should be provided not only with information about the draft scheme, but also with an outline of the realistic alternatives, and an indication of the main reasons for the authority's adoption of the draft scheme. That follows, in this context, from the general obligation to let consultees know "what the proposal is and exactly why it is under positive consideration, telling them enough (which may be a good deal) to enable them to make an intelligent response": R v North and East Devon Health Authority, Ex p Coughlan [2001] QB 213, para 112, per Lord Woolf MR.

[...]

- 13.8 Based on the information provided within this report and background documents a decision by Cabinet to identify a route which a distributor road would take should the development occur would be a legally justifiable decision open to Cabinet.
- 13.9 Section 226 of the Town and Country Planning Act 1990 (TCPA 1990) authorises local authorities to compulsorily purchase land if the authority thinks that the acquisition will facilitate the development, redevelopment or improvement of land, or acquisition is required in order to achieve the proper planning of an area:

- (1) *A local authority to whom this section applies shall, on being authorised to do so by the Secretary of State, have power to acquire compulsorily any land in their area . . .—*
- (a) *if the authority think that the acquisition will facilitate the carrying out of development, re-development or improvement on or in relation to the land, or*
- (b) *which is required for a purpose which it is necessary to achieve in the interests of the proper planning of an area in which the land is situated.*
- (1A) *But a local authority must not exercise the power under paragraph (a) of subsection (1) unless they think that the development, re-development or improvement is likely to contribute to the achievement of any one or more of the following objects—*
 - (a) *the promotion or improvement of the economic well-being of their area;*
 - (b) *the promotion or improvement of the social well-being of their area;*
 - (c) *the promotion or improvement of the environmental well-being of their area.*

13.10 In order to exercise the s.226(1)(a) powers the local authority must be satisfied that the proposed development/improvement is likely to contribute towards any of the following objectives, namely the promotion or improvement of the economic, social or environmental well-being of their area.

13.11 Under section 227 of the Town and Country Planning Act 1990 the Council has the power to acquire by agreement any land which they require for any purpose for which a local authority may be authorised to acquire land under section 226 as aforementioned.

13.12 The approval of a CPO Strategy as proposed will allow the project to ensure that running alongside the negotiations with 3rd party landowners all steps required to utilise CPO powers, if necessary, are taken in a timely fashion and to meet legal compliance.

13.13 Achieving agreed landowner agreements is the preferred methodology for the delivery of the road should it be required and all negotiations and discussions and drawing up of the legal documentation is being taken in conjunction with Wiltshire Council Legal Services.

13.14 Close ongoing monitoring of the terms of the GDA is required to ensure compliance with the terms and the milestones and any changes must be requested in advance to avoid general or fundamental default of the GDA.

13.15 Homes England is under no obligation to agree changes to the GDA. The risk is that any requested changes are not agreed and the Council will ultimately end up in general and/or fundamental default. Decisions made relating to and following consideration of this Report may trigger a requirement under the GDA to “inform” Homes England “immediately”. A failure to do so may result in a general or fundamental default of the GDA, therefore this should be managed accordingly.

14 Workforce Implications

- 14.1 No further workforce implications are reported at this time internally.
- 14.2 All options recommended in this report align to the Grant Determination Agreement and previous representations to cabinet and therefore no change in the options is being considered at this stage.

15 Conclusions

- 15.1 To respond appropriately to feedback from the community to the consultation undertaken by Future Chippenham on the road options and separately by the LPA on the Local Plan review and to continue to meet the terms and conditions of the GDA it is recommended that Cabinet agree to and approve the steps set out in the Proposals in this report.

21st July 2021

Subject: Future Chippenham Road Route Option selection and consultation

1. Purpose of the report

1.1 To provide a summary update on the Future Chippenham distributor road options based upon the feedback from public consultation. To confirm the option proposed following consultation and a programme review and assurance exercise to take forward for delivery subject to agreement with Homes England and the outcome of the Local Plan Review.

2. Recommendations

2.1 That Cabinet agrees

- That the proposed option identified (comprising a hybrid of elements of the options consulted upon) and shown in Diagram 1 below, should be taken forward as the preferred route.
- That, subject to agreement with Homes England and the outcome of the Local Plan Review, that works to progress the identified route to the planning application stage continue in parallel with the development of the framework masterplan for the site.
- That this will inform and form part of the consultation on the framework masterplan for the site which will provide the final refinement for the road route alignment and design.

Diagram 1: Future Chippenham distributor road preferred route.

Appendix A

Background information

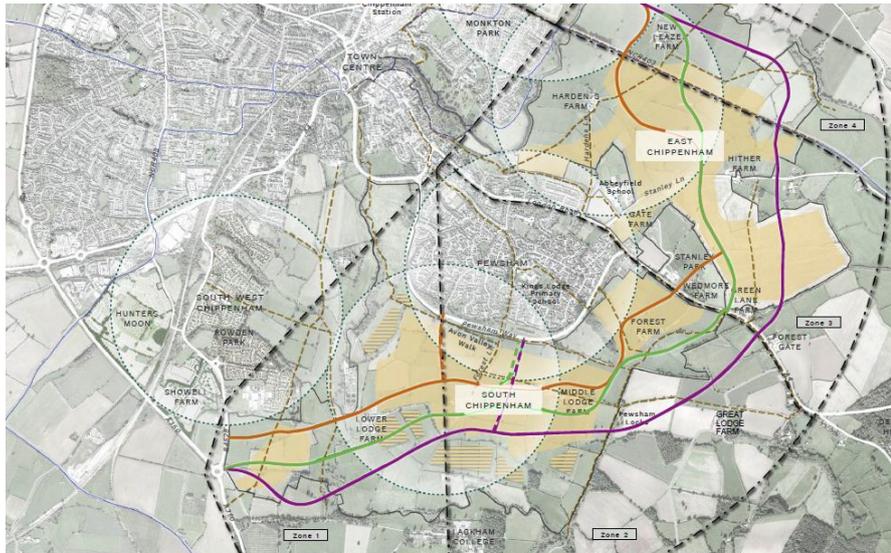

1. In December 2020 the Council entered into a Grant Determination Agreement (GDA) with Homes England.
2. A full options assessment process was conducted by the Council's consultant, Atkins, to identify potential road routes to support the delivery of the project. This identified 3 main distributor road options and 2 Pewsham link road options.
3. A public consultation on the potential road route options took place between 15th January 2021 and 12th March 2021.
4. This consultation covered 3 road route options (inner, middle and outer) as detailed in Diagram 2 below but sought feedback across 5 identified zones as shown in Diagram 3. The zoning approach split the overall site logically by landholdings and/or key features such as existing roads, and this approach allowed the potential development of a hybrid solution across the three identified routes to be considered.

Diagram 2: Future Chippenham consultation road route options

Diagram 3: Future Chippenham consultation road route options zones

Appendix A

5. The Council leadership requested further consideration be given to consultation responses and agreed to take forward more work on the Local Plan review. A programme review and assurance exercise identified some significant risk to the delivery of the whole scheme including;
 - The LPR timeline
 - The land assembly status and associated risks with GDA conditions
 - The feedback from the consultation and concerns raised on the quantum of housing proposed in the Local Plan period.
6. This review identified an opportunity to develop an alternative approach to deliver an important and significant part of the scheme. The scheme proposed is the southern section of the distributor road as detailed in diagram 1 above, subject to the LPR, master planning and Homes England agreement.
7. During this consultation, important feedback was received, and this has informed the recommended road route option. However, in addition it is acknowledged a large representation of responses were received objecting to the scheme on the grounds of quantum, transport issues, climate change and environmental issues.
8. The feedback received has been analysed and this, alongside feedback from statutory consultees, stakeholders and 3rd party landowners, has been assessed and utilised to provide an update to the Options Assessment Report (OAR).
9. The findings of the OAR identified a preferred route option which comprises a hybrid of the routes. A number of next step actions were identified in the update to the OAR one of which was a programme review. Further to the Future Chippenham Programme review and assurance exercise, significant risks to the delivery of the original HIF scheme were identified. The review identified an opportunity to develop an alternative approach to delivery and this is supported by the update to the OAR. An option to deliver the southern section preferred route to progress to planning, subject to LPR, masterplanning and agreement with Homes England as detailed in Figure 6.1 above. The selection of this route has been informed by the wider circumstances as detailed within the main Cabinet report
10. A copy of the update to the OAR summary report is attached for reference as Appendix A

Appendix A

11. This report is presented to cabinet on 21st July 2021.

Attachment: Appendix A: OAR Update Summary report July 2021

Appendix A: OAR update summary report July 2021

OAR Summary report July 2021

Distributor Road - Preferred Option

The following information provides a summary of key points for updates to the Options Assessment Report (OAR) following public consultation.

Table 5-1 summarises the revised scores from the option assessment. Table 5-2 presents the scores of the amended best fit option. **Figure 6.1 presents the amended best fit and preferred option to progress to a planning application for the southern distributor road.**

The updated sifting assessment provides a route alignment with the following attributes:

- Good and best fit with the strategic scheme objectives including connectivity and congestion mitigation.
- Coordinates with land developer preferences, including the most suitable location to connect sustainable transport networks with the town.
- Reasonable level of deliverability, subject to formal land agreements.
- Lowest overall environmental impact in majority of assessment zones and potential for mitigation and where impacts are identified.

Zone 1

Prior to public consultation, the OAR identified Option C as the best fit in Zone 1 due to closest proximity to existing and future development and shortest bridge over the River Avon, with a better score for the strategic case and financial case than the other options.

Following the consultation, a large number of comments from the public were concerned with an additional junction on the B4528 which features in Option C only. Both Option A and B connect directly to the A350 at Lackham roundabout which aligns with public and landowner preference.

In addition to this the landowner/developer for the land east of the B4528 had a preference for Option B. Public and landowner feedback on all of the options adjust the scoring for the delivery case and presents Option B as the most deliverable option in this zone.

Appendix A

Option B also has a better environmental case than Option C due to the avoidance of high archaeological potential areas and proximity to the conservation area at Rowden Manor.

Option A is discounted, it is furthest from existing development, has the longest bridge with poorer scores for the strategic and financial case and similar levels of impact on the environment as Option B

Option B is taken forward as the best fit option in zone 1. It is noted that Option B has a very high cost, higher than Option C. Value Engineering and mitigation will be undertaken on this section, including further discussions with the Environment Agency to review options regarding the structure at this location.

Zone 2

Prior to public consultation, the OAR identified Option C as the best fit in Zone 2 due to the closest proximity to existing and future development. The scoring for Option C was the same as Option B for the strategic, deliverability and environmental cases, with similar cost estimates to the other options.

Following the consultation discussions and formal feedback from landowners and developers, this shows a preference for Option B or C. Two of the three land developers prefer Option B and the other land developer prefers Option C. The delivery case has been adjusted and presents Option B as the most deliverable option in this zone.

Locally notable trees with veteran features have been identified adjacent to Forest Lane that may conflict with Option C, whilst this does not change the previous environmental case scoring for Option C in Zone 2, this does influence the potential for a hybrid option of B / C in this zone that would have provided an alignment meeting all land developer preferences. Environmental impact is similar across all options.

Option B is taken forward as the best fit option in this zone, although it is located approximately 200m further away from the centre of Pewsham and just outside of a 10 minute walking zone, the improved deliverability and lower impact on the environment are considered to be of greater importance in this zone. There are potential opportunities to provide a development centre alongside the Pewsham link road option within a 10 minute walking zone to the centre of Pewsham.

Zone 3

Prior to public consultation, the OAR identified a hybrid of Option B and C as the best fit in Zone 3, avoiding impact on Stanley Park Sports Ground and Great Crested Newt Habitat, which are attributed to Option C.

Whilst it avoids Stanley Park and is further away from existing development in this area than Option C, the Option B/C hybrid is aligned with future land development and therefore provides good connectivity between new and existing developments. Option B/C provides the second highest strategic case score after Option C.

Option B/C also provided the best environmental case score and similar cost estimate to Option A and B in Zone 3.

Following public consultation deliverability case scores have been adjusted following stakeholder and landowner feedback. Land developers in Zone 3 have a preference for a route that aligns close to Hardens Farm, which would be either Option B/C or Option C.

Landowners in Zone 4 have made a clear objection to Option C through their development land. An amendment to the alignment of Option B/C has been included as the best fit option in Zone 3, to meet adjacent land developer preferences and improve deliverability of the scheme.

The environmental case, financial case, strategic and commercial cases are unchanged in this zone.

Zone 4

Following strong objection from the landowner in Zone 4, to ensure deliverability of the scheme, Option C was discounted in favour of Option B. Whilst Option B has a lower environmental case score it is considered that the landscape and visual impact could be mitigated.

Zone 5

Option 5 follows the alignment of the Rawlings Green developer distributor road planning application; all route options follow this alignment and assessment scoring remains unchanged. The rail bridge from

Appendix A

Rawlings Green has full planning permission; the development and associated distributor road are subject to an outline planning permission with decision pending as of 23rd June 2021.

Current assumptions for zone 5:

- It is currently assumed that the rail bridge will be delivered by the Rawlings Green developer; current planning consent indicates that construction must progress before 13th November 2022.
- The distributor and road through Rawlings Green will be delivered as part of the planning permission for the Future Chippenham distributor road.

In the event that the rail bridge is not delivered by the Rawlings Green developer, Future Chippenham will submit their own planning permission for this rail bridge and deliver as part of the Future Chippenham distributor road. Cost recovery for delivery of the distributor road and associated bridge infrastructure will be subject to Wiltshire Council's planning policy.

Pewsham Link Road

Prior to public consultation the OAR identified Pewsham Link Option 3 as the best fit option. This option connects to Pewsham Way at a new junction approximately 150m east of Forest Lane. Although Pewsham Link Option 1 has better connectivity it also has greater potential to impact the environment and is more expensive to construct due to the additional bridge structure. This is reflected in the assessment scoring with Option 1 featuring a higher strategic case score but lower environment case score than Option 3. Environmental mitigation will be included for review as part of the planning application.

Following the consultation discussions and formal feedback, the land developers have suggested that they would consider either link road option, but one of the two land developers would prefer Option 1. The deliverability case scoring has been increased for Pewsham link Option 1.

Both land developers indicated that both link roads could be delivered, and one could be as an access road as part of the future developments.

Both Pewsham Link Options have the opportunity to come forward as the best fit option. Pewsham Link Option 1 has been taken forward as it has the best connectivity and is preferred by land promoters / developers.

Table 0-1 - Amended Second Sift All Options Summary
(Update to Table 10-28 of the OAR)

Appendix A

TRANSPORT OPTION	Strategic Case	Delivery Case	Environmental Assessment Case	Financial Case	Commercial Case	OAR Best Fit Option	Post-consultation Best Fit Option?
	Overall Strategic impact (1 to 5)	Overall Deliverability (1 to 5)	Overall environmental impact (1 to 5)	Affordability and overall cost risk	Flexibility of option		
ZONE 1: Option A	3.3	3.0	2.8	1, Very High Cost + Risk	3, Reasonable level of flexibility	No	No
ZONE 1: Option B	3.7	3.3	2.9	1, Very High Cost + Risk	3, Reasonable level of flexibility	No	Yes
ZONE 1: Option C	4.0	2.3	2.8	2, High Cost + Risk	3, Reasonable level of flexibility	Yes	No
ZONE 2: Option A	3.3	2.7	2.8	4, Medium Cost + Risk	3, Reasonable level of flexibility	No	No
ZONE 2: Option B	4.0	3.2	2.8	4, Medium Cost + Risk	3, Reasonable level of flexibility	No	Yes
ZONE 2: Option C	4.0	3.1	2.8	4, Medium Cost + Risk	3, Reasonable level of flexibility	Yes	No
ZONE 3: Option A	3.3	2.7	2.7	4, Medium Cost + Risk	3, Reasonable level of flexibility	No	No
ZONE 3: Option B	3.7	3.3	2.9	4, Medium Cost + Risk	3, Reasonable level of flexibility	Yes	Yes
ZONE 3: Option C	4.0	2.7	2.8	5, Low Cost + Risk	3, Reasonable level of flexibility	Yes	Yes
ZONE 4: Option A	3.3	2.7	2.7	3, Medium Cost + High Risk	3, Reasonable level of flexibility	No	No
ZONE 4: Option B	3.3	3.3	2.7	3, Medium Cost + High Risk	3, Reasonable level of flexibility	No	Yes
ZONE 4: Option C	4.0	1.0	3.0	3, Medium Cost + High Risk	3, Reasonable level of flexibility	Yes	No
ZONE 5: All Options	4.0	3.7		5, Low Cost + Risk	3, Reasonable level of flexibility	Yes	Yes
Pewsham Link 1	4.0	3.3	2.6	5, Low Cost + Risk	3, Reasonable level of flexibility	No	Yes
Pewsham Link 3	3.7	3.0	2.9	5, Low Cost + Risk	3, Reasonable level of flexibility	Yes	Yes

Table 0-2 - Amended Second Sift Best Fit Options Summary
(Update to Table 10-29 of the OAR)

TRANSPORT OPTION	Strategic Case	Delivery Case	Environmental Assessment Case	Financial Case	Commercial Case	OAR Best Fit Option	Post-consultation Best Fit Option?
	Overall Strategic impact (1 to 5)	Overall Deliverability (1 to 5)	Overall environmental impact (1 to 5)	Affordability and overall cost risk	Flexibility of option

Pewsham Link 1	4.0	3.3	2.6	5, Low Cost + Risk	3, Reasonable level of flexibility	No	Yes

6. Next Steps

The options assessment report identified a number of actions to inform a preferred option to progress to planning. A number of actions are still in progress: -

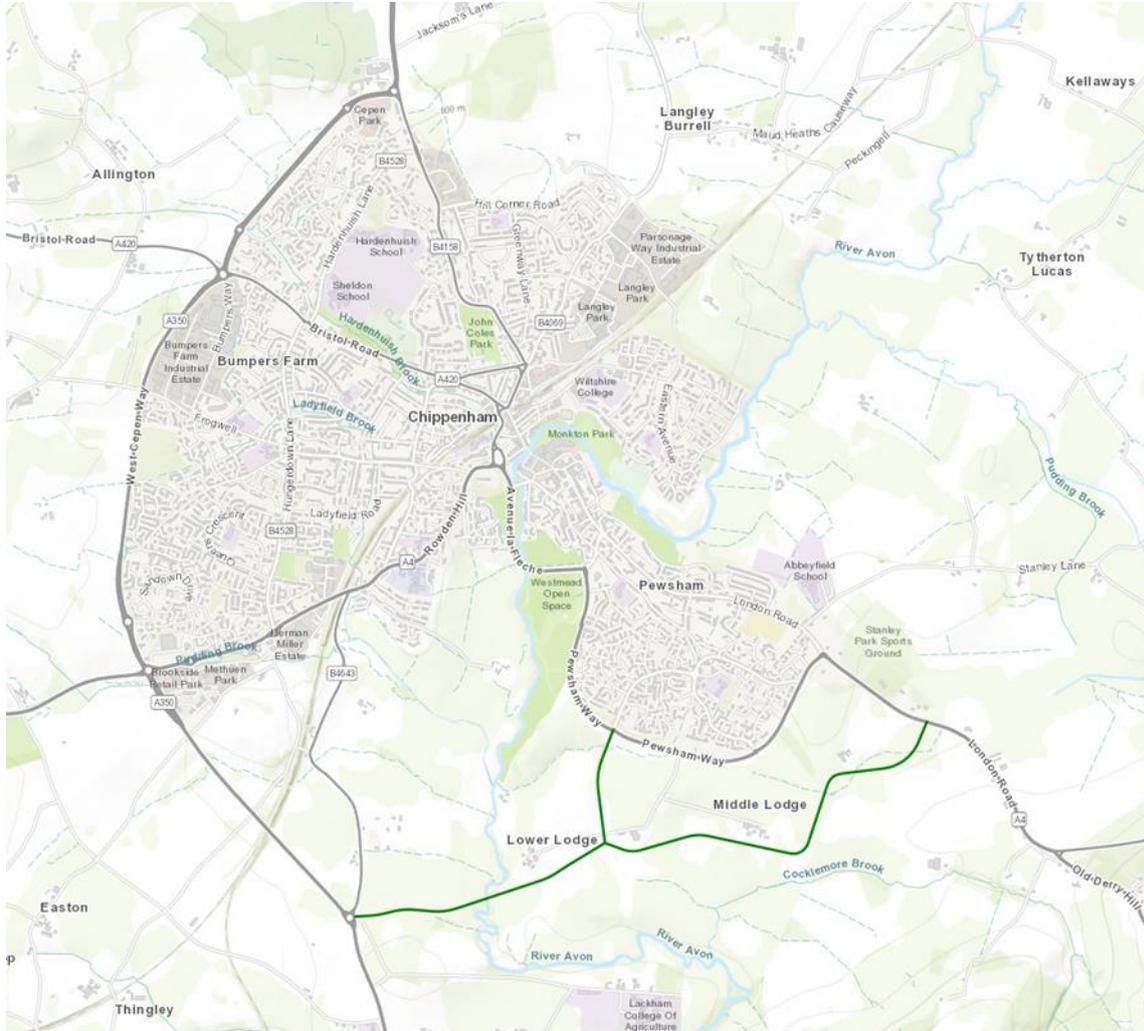

- Field Surveys
- Funding review
- Programme review
- Land agreements

Appendix A

Consultation on the framework masterplan for Future Chippenham is scheduled for late Summer / Autumn 2021.

This further consultation and review may consider a phased or segregated approach to deliver the distributor road / Pewsham link road and may further influence the preferred route option to progress to planning.

1. Executive Summary

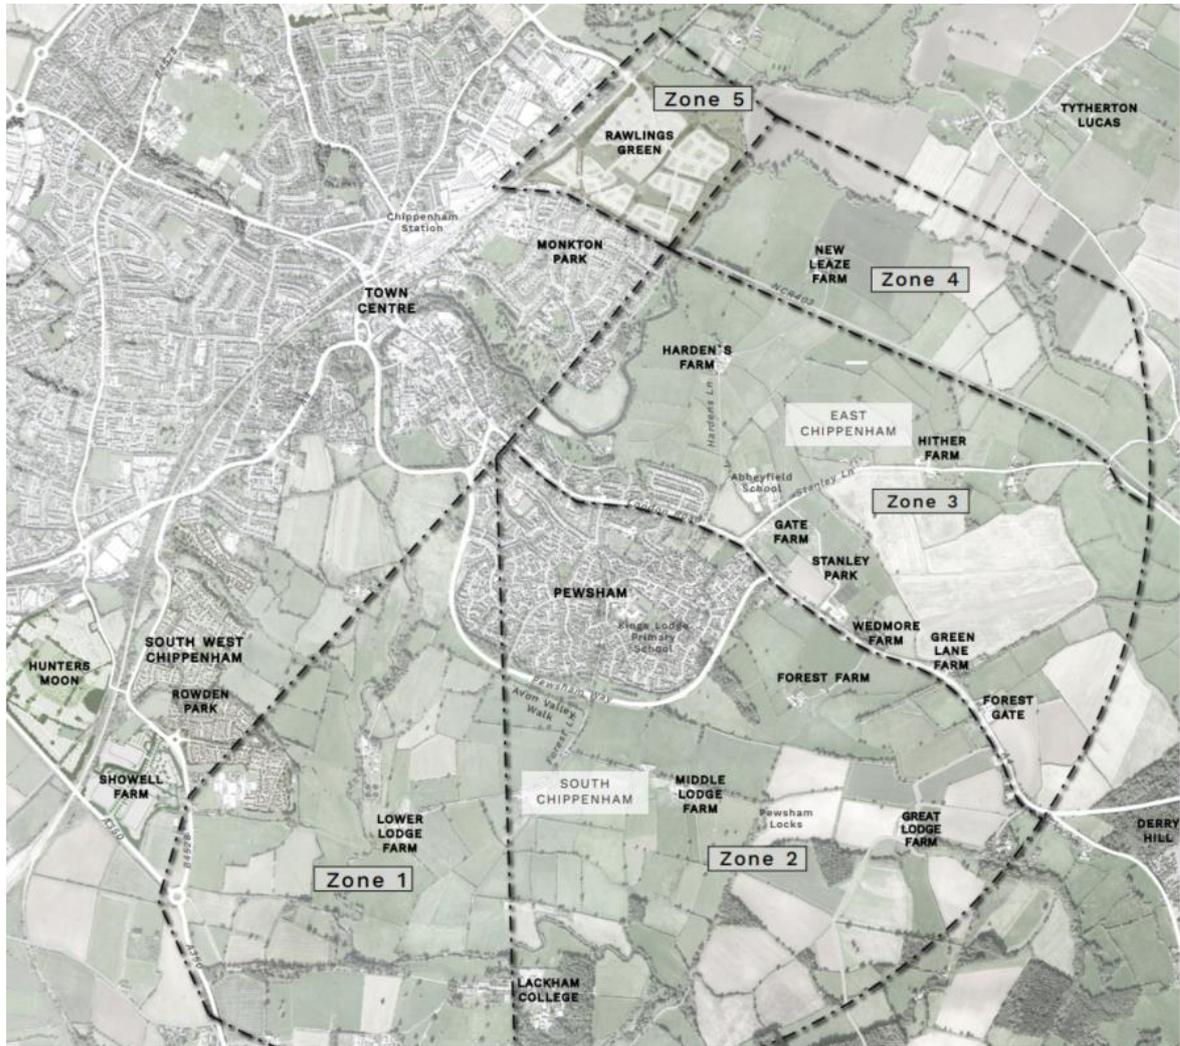

- 1.1. The Future Chippenham programme team are promoting the site known as Future Chippenham for mixed use development, and made representations to this effect to the Local Plan review process in March 2021. As part of these representations, the team developed a draft Concept Framework plan to inform a potential road route options assessment process which identified the above three routes as providing the best options to support the delivery of up to 7,500 homes and associated infrastructure, subject to the Local Plan review and Cabinet approval. The draft Concept Framework plan looked at not only Wiltshire owned land but also third-party land in a holistic approach to the site's development.
- 1.2. Wiltshire Council's Future Chippenham programme team carried out a public consultation relating to a Future Chippenham distributor road between 15th January and 12th March 2021. This report details the feedback that was received during this consultation.
- 1.3. The consultation sought opinions on three road route options to serve a future development to the south and east of Chippenham, including two link roads to the existing highway at Pewsham Way. The three road route and two link road options are illustrated in Figure 1 below:
 - Option A (Outer Route) with Link Road Option 3 - shown in purple
 - Option B (Middle Route) with Link Road Option 3 - shown in green
 - Option C (Inner Route) with Link Road Option 1 - shown in orange

Figure 1: Future Chippenham road route options map

- 1.4. To enable respondents to provide detailed area specific responses the site area was split into 5 zones. This meant that the final preferred route option could be a hybrid of the 3 main routes and 2 link roads.

Figure 2: Consultation zones 1-5

- 1.5. The purpose of the consultation was to gather responses from members of the public and key stakeholders on the potential road route options, the results of which would be used to inform a recommendation on a preferred route. This feedback was requested through submission of a consultation form, or by email or letter. The results of this consultation are summarised in this report.

Background

- 1.6. In addition, and a key consideration, the programme team have been successful in securing a £75 million Housing Infrastructure Fund grant from central government to support the delivery of the proposed distributor road which will unlock land to deliver the housing and associated infrastructure. The draft Concept Framework is part of the early stage of the masterplanning process for Future Chippenham. The draft Concept Framework is currently being developed further into a Framework Masterplan for Future Chippenham which will set out a series of design principles and landscaping requirements to guide the wider mixed use development of the site
- 1.7. From the feedback received during the road route options consultation process it was clear that there was some confusion regarding the role of Wiltshire Council as Local Planning Authority leading the Local Plan review process, as well as the role of the council in its promotion of the Future Chippenham programme. Both the Local Plan review consultation and the Future Chippenham road route options consultation had clearly defined roles and responsibilities in the respective consultation's events and consultation material.
- 1.8. This report acknowledges that a significant number of respondents to the Future Chippenham road route options consultation utilised the road route options consultation to submit objections to development of the proposed site and the distributor road. Whilst this was not the purpose of the consultation, the respondents were able to do this, and the feedback received will be forwarded to the Local Planning Authority within the consultation report.

The road route options public consultation

- 1.9. The purpose of the Future Chippenham road route options consultation was to gather feedback from the public and key stakeholders to inform the selection of a preferred route of a new distributor road to the south and east of Chippenham, to serve a new development of up to 7,500 new homes, supported by local neighbourhood services, essential infrastructure and provide additional employment development land. A brief statistical overview of the process and outcomes is set out below:
 - Wiltshire Council's Future Chippenham team carried out an 8-week period of public consultation on the Future Chippenham road route options between Friday 15th January and Friday 12th March 2021.
 - The Future Chippenham consultation webpage was visited 6,969 times over the consultation period, and the general Future Chippenham webpage was visited 7,717 times.
 - The consultation video, explaining the road route options was viewed 13,182 times during the consultation period.
 - Three online webinar events were hosted during the public consultation period, one during a weekday, one during a weekday evening and one on a Saturday, to provide opportunities for as many people to attend as possible. A total of 201 attendees attended the webinar events live, and recordings of the events that were subsequently made available on YouTube were watched 686 times during the consultation period.
 - Responses to 260 questions asked during the public webinar events were provided.
 - Over the public consultation period, 1,175 consultation responses were received from a range of residents and stakeholders by email, letter and through completion of the online consultation form.

Future Chippenham road route options consultation feedback

- 1.10. The feedback to the consultation is outlined in section 4 of this report, and this is presented in the order that the questions were laid out in the consultation feedback form (see **Appendix T**). Where numerical feedback was provided, e.g. the ranking of the road route options under Questions 7 and 11, this data is arranged into graphs. Where written feedback was provided, this has been broken down into the key points raised and the number of times the same point was raised has been tallied to show which points of feedback were more frequently repeated. Points of feedback are grouped by theme, and an officer response provided for each of these themes. The full lists of summarised feedback can be found at **Appendices A - G**.
- 1.11. The feedback received identified that a significant number of respondents expressed an objection to any development of the Future Chippenham site, including the road and future housing and infrastructure. This included responses from a significant number of residents and several of the local town and parish councils, who voiced objections and concerns about issues including the quantum of proposed development, environmental impacts, climate change considerations, and traffic congestion.
- 1.12. All landowners with interests in the scheme supported the principle of the proposed scheme, some providing feedback with suggested alterations to the road route.
- 1.13. Feedback identified that there was a perceived lack of information about the benefits of the proposed scheme to the whole of Chippenham.

Road route preferences

- 1.14. A total of 565 respondents (48%) provided feedback to Question 7 of the consultation feedback form, which asked respondents to rank the three road route options in order of preference. Of those who gave an answer to this question, Option A (the outer route) received the highest number of first choice selections (45%). Option B (the middle route) received the lowest number of first choice selections (24%) but conversely received by far the most second choice selections (66%). Option C (the inner route) received fewer first choice selections than Option A (31%) but a much larger number of third choice selections (52%).

Figure 3: Responses to consultation form Question 7 – road route option preferences

- 1.15. The consultation output from Question 7 includes feedback from a number of key stakeholders, including Sport England and Abbeyfield School whose preferred route was recorded as being Option A (outer route); Stagecoach West bus providers and various landowners (Hallam Land, Gallagher and Gleeson Homes) whose preferred route was recorded as being Option B (middle route); and the National Trust whose preferred route was recorded as being Option C (inner route).
- 1.16. In addition, written responses from a number of other stakeholders were received, albeit not submitted via the consultation form. This included the Environment Agency who expressed a preference for a hybrid of Options A and B; the Chippenham Chamber of Commerce whose preference was for Option B; landowners (Chippenham 2020) who expressed a preference for Option B, and a landowner at Tytherton Lucas whose preference was for Option A.
- 1.17. A total of 334 respondents (28%) provided feedback to Question 11 of the consultation feedback form, which asked respondents to rank the two Pewsham link road options into order of preference. Of those who gave an answer to this question, Pewsham Link Option 1 was marginally favoured over Pewsham Link Option 3. Pewsham Link 1 received 52% first choice selections and Pewsham Link Option 3 received 48% first choice selections.

Figure 4: Responses to consultation form Question 11 – link road option preferences

Summary of written feedback

- 1.18. Alongside the road route ranking questions, the consultation enabled respondents to submit written feedback to elaborate on their responses and to raise any other issues they wished to bring to the council's attention. A significant volume of responses was received that addressed a broad range of topics. While most concerned matters related to the road route options, a large number also addressed wider issues relating to the masterplanning of the site and the Local Plan review allocation process. All comments received to the consultation have been summarised for the purpose of this report, and officer responses provided.
- 1.19. As noted above, for the purpose of reporting on written feedback this was broken down into the key points raised and the number of times the same point was raised was tallied to show

which points of feedback were more frequently repeated. The full lists of summarised feedback can be found at **Appendices A - G**.

1.20. The main issues raised during the consultation relevant to the road route options were around environmental and climate change and concerns over congestion. A significant number of respondents utilised the consultation to register an objection to the scheme in general, the planning process and quantum of proposed development in Chippenham and the consultation process.

1.21. The table below shows the number of points raised by theme, split by the question that they were raised in response to.

Figure 5: Number of individual points raised, ordered by theme

Blue = Question 6 (Important Issues)/emails or letters

Purple = Question 8 (Option A, Outer Route)

Green = Question 9 (Option B, Middle Route)

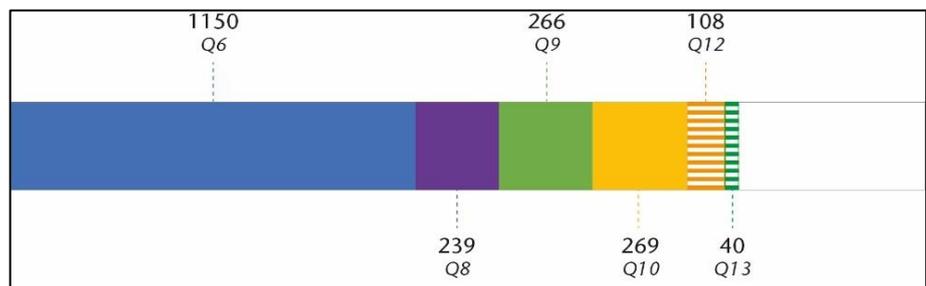

Orange = Question 10 (Option C, Inner Route)

Orange hatching = Question 12 (Pewsham Link 1)

Green hatching = Question 13 (Pewsham Link 3)

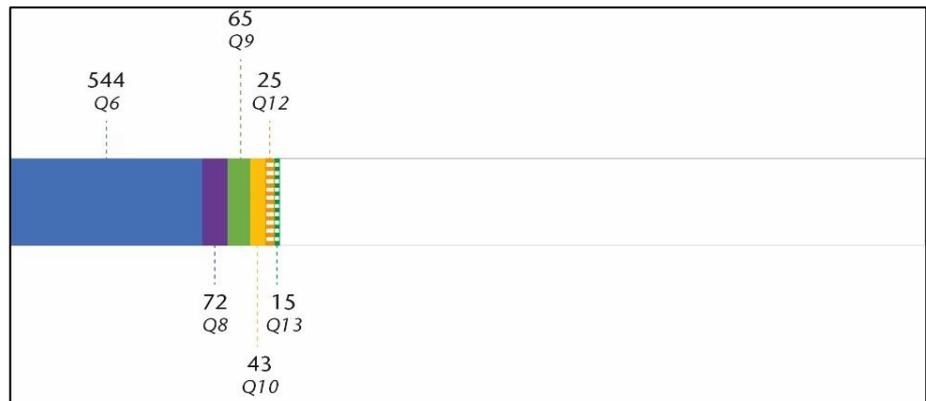

Transport - 2,072 individual points raised

Issues related to transport, connectivity, sustainable transport, congestion, and town centre traffic.

Climate change - 764 individual points raised

Issues related to climate change and the climate emergency, and issues related to flooding.

Pollution and air quality - 410 individual points raised

Issues related to pollution and effects of the road and associated development on air quality, noise, light and other sources of pollution.

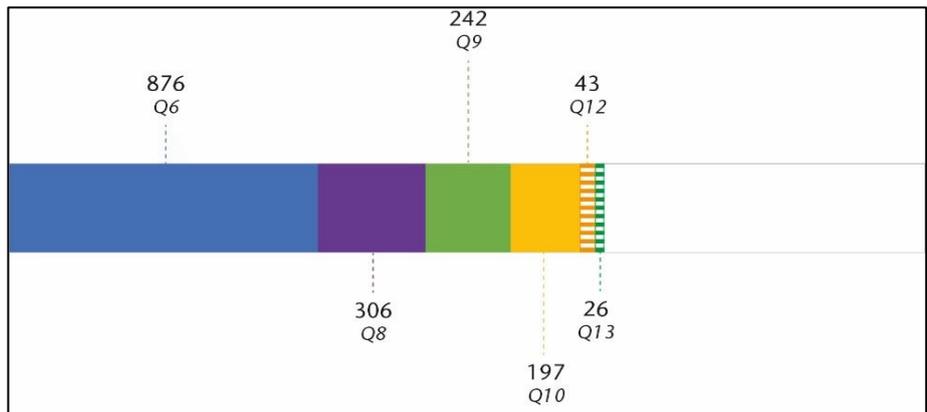

Ecology and environment
- 674 individual points raised

Issues related to the natural environment and ecology.

Landscape - 1,690 individual points raised

Issues relating to landscape and visual impacts, accessible open green space, and coalescence.

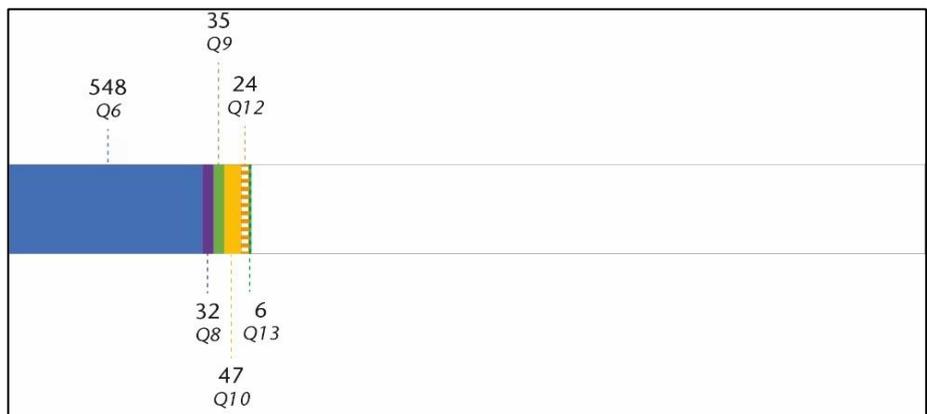

Heritage - 101 individual points raised

Issues relating to heritage assets, archaeology and historic landscape.

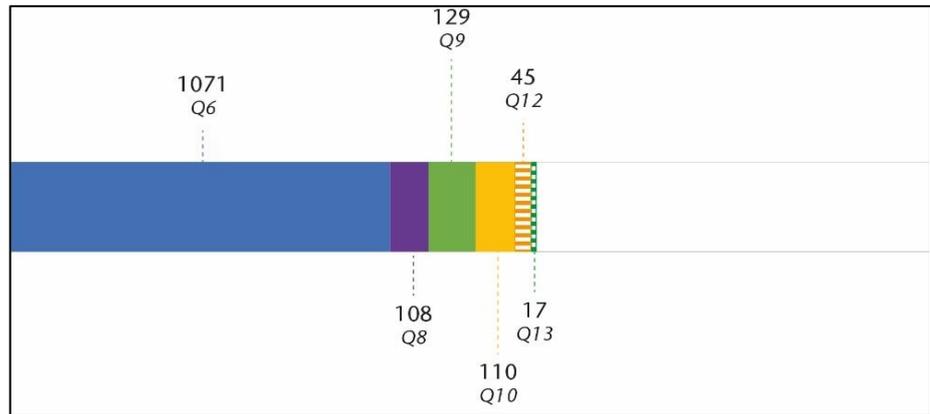

Economy and infrastructure - 692 individual points raised

Issues relating to employment, the economy, infrastructure and services, health, and wellbeing.

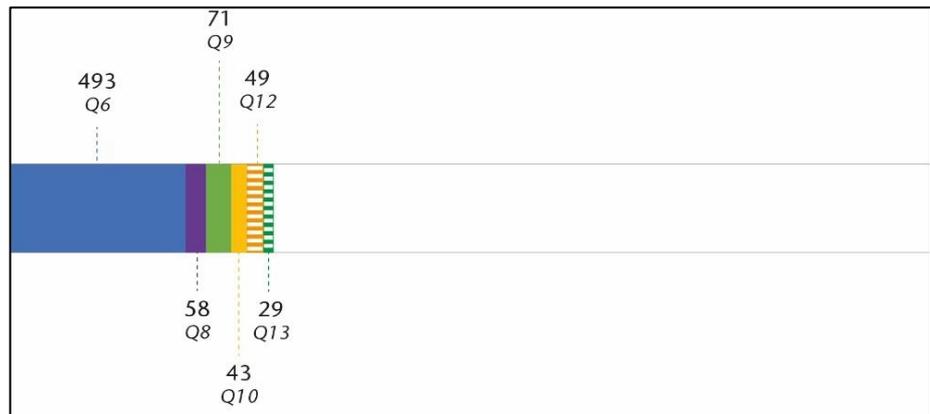

Planning - 1,480 individual points raised

Issues relating to wider principles of development set by the adopted and emerging development plan, the scale of development, matters relating to placemaking and planning process.

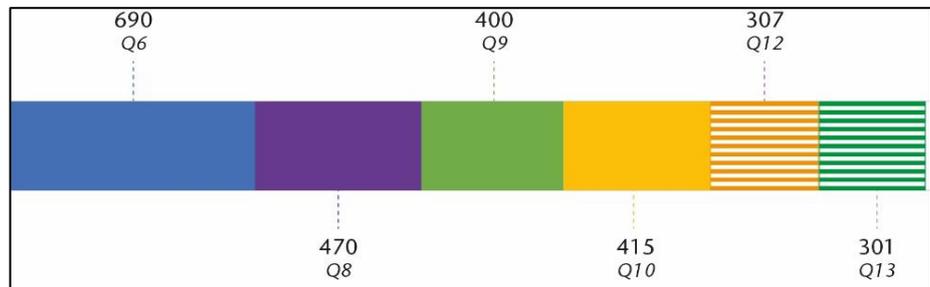

Consultation and process - 743 individual points raised

Issues relating to the processes leading up to and during the Future Chippenham road route options consultation, including feedback on the approach taken to the application for HIF funding, and the administrative detail of the public consultation.

General comments/ objections - 2,583 individual points raised

Issues relating to general in principle objections/general comments on the road and/or associated development.

1.22. The Future Chippenham team acknowledge this feedback and the officer responses contained within this report confirm how these have influenced the recommendation on the preferred route or, where these were not within the scope of the road route selection process, an explanation of how these comments will be considered through other aspects of the project, such as the subsequent masterplanning process for the site.

Clarity of information

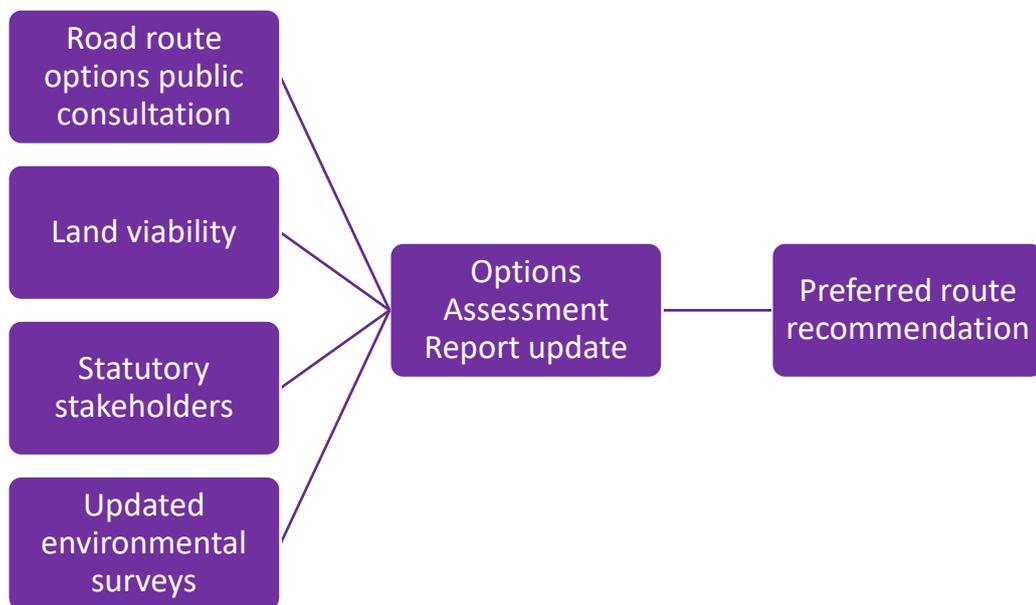

1.23. The significant response to the consultation identified an increased awareness of the scheme and the extended consultation timeframe of 8-weeks allowed for specific questions to be answered to inform consultation feedback responses. However, several concerns were raised

on the overall context of the road within the scheme and wider benefits that it offered and that these could have been communicated more effectively. A number of concerns were raised over the confusion between the Local Plan review consultation and that of the Future Chippenham road route options.

How the consultation feedback has influenced the preferred road route option

- 1.24. The feedback from this consultation is welcomed and provides valuable considerations which has been used to update the Options Assessment Report (OAR) and identify an emerging preferred route to inform the selection of the preferred road route. The diagram below illustrates the factors which have fed into the update to the OAR, illustrating that the outcome of this consultation, along with land viability assessment work, ongoing discussions with statutory stakeholders and updates to environmental surveys have all shaped the recommendations made on the proposed road route option.

Figure 6: Factors influencing the road route recommendation

- 1.25. It should be noted that the road route will continue to be refined during the design stages and within the constraints and opportunities identified as part of this ongoing process including but not limited, land survey results, environmental surveys, flood modelling etc.

Conclusion

- 1.26. The consultation identified a preference for a route more aligned to the outer route Option A (the outer route), although the route that received the least opposition was Option B (the middle route). This feedback will be used to inform the preferred road route selection process.
- 1.27. The consultation identified a considerable level of opposition to the proposed road and scheme. Whilst obtaining feedback on public support or objection to the principle of the project was not the purpose of the consultation, this information has been considered as part of the consultation feedback review and proposed next steps.

- 1.28. The comments that included suggestions and improvements to feed into the preferred route recommendation process have been passed to the design team for further consideration and incorporation into the scheme design, where appropriate.

Next steps

- 1.29. This report has been utilised to update the Options Assessment Report for the road route which in turn will provide a recommended route which will be considered by officers when making their recommendation for a preferred route selection.
- 1.30. Following a decision on a preferred route option the road element of the project will proceed through an outline design process. Alongside this, the project team will be preparing a Framework Masterplan to guide the wider mixed use development of the site. A further pre-application consultation on the Framework Masterplan is expected to take place in late summer/autumn 2021 to support a planning application for the road in winter 2021/22.
- 1.31. The Framework Masterplan for the Future Chippenham area will set out a series of design principles and landscaping requirements to ensure that new development is of a very high quality of design and enhanced by generous and appropriate landscape planting. A design code will also be developed which will set out place specific design standards and criteria that will be delivered through the development.
- 1.32. The Future Chippenham programme team is committed to delivering good design and high-quality place shaping based on national aspirations set out in the government's garden communities guidance¹.
- 1.33. There are no direct equality impacts from this report however there is an ongoing obligation of Cabinet as the relevant decision maker to keep the impacts that may arise under review. This is being managed by keeping the Equalities Impact Assessment under review and at all stages including consultation ensuring that any identified impacts are considered and appropriately dealt with.

¹ Garden Communities Toolkit, <https://www.gov.uk/guidance/garden-communities>

2. Introduction

- 2.1. The strategic vision for Chippenham, set out in the adopted Wiltshire Core Strategy, identifies a vision for Chippenham that meets local needs for jobs and housing while addressing some of the longstanding challenges it faces. This includes strategic issues, such as addressing town centre congestion, that require strategic investment which can be difficult to deliver through piecemeal development. The vision aspires to greater self-sufficiency in the town, so that the community can meet its living, work and leisure needs sustainably into the future.

The Future Chippenham potential site allocation

- 2.2. The long term strategic vision for Chippenham is currently being further explored through the Wiltshire Local Plan review² led by the council as Local Planning Authority, in light of the requirement to roll forward the Wiltshire Core Strategy to the next plan period taking into consideration the most up to date housing requirements. The Local Plan review has been the subject of a recent 'Regulation 18' public consultation which identified land to the south and east of Chippenham as a preferred site allocation with the potential to deliver the most sustainable location for future growth at Chippenham over the plan period up to 2036, and potentially beyond into the next plan period.
- 2.3. In view of the proposed allocation of land to the south and east of Chippenham, the Future Chippenham team are preparing a Framework Masterplan to demonstrate a strategic overview of how the site could be delivered, confirming its deliverability, viability and sustainability well into the future.
- 2.4. By 2046, it is envisioned that the Future Chippenham site could deliver sustainable new communities, essential infrastructure, and green spaces, including up to 7,500 homes, supported by local neighbourhood services and employment opportunities. It is envisaged that, should the Local Plan review allocate the site, the development will be led by a collaborative Framework Masterplan in consultation with all the landowners, to be endorsed or adopted by Wiltshire Council as a material planning consideration in the determination of future planning applications on the site.

Infrastructure led development to support a holistic approach to future growth and development

- 2.5. It is recognised that to deliver the significant growth envisaged will require significant investment into infrastructure supported by a holistic masterplanning approach to ensure that all the objectives and benefits identified can be delivered. These are also recognised as key requirements as part of the emerging Local Plan. The Future Chippenham site was acknowledged as a site that had potential for future development supported by infrastructure during the examination of the Chippenham Site Allocations Plan³.
- 2.6. In March 2019, Wiltshire Council submitted a bid to the Housing Infrastructure Fund (HIF) from Ministry of Housing Communities and Local Government and in November 2019, the

² Wiltshire Council, Local Plan review, available at: <https://www.wiltshire.gov.uk/article/1082/Local-Plan-Review>

³ Chippenham Site Allocations Plan, available at: <https://www.wiltshire.gov.uk/planning-policy-site-allocation-plan-chippenham>

council was successful in the award of a grant of £75 million. The grant ensures funding is available to contribute towards the cost of delivering strategic infrastructure in and around Chippenham to support the potential longer-term growth of the area, should the site be allocated in the Local Plan review. The Future Chippenham team have developed a draft Concept Framework to inform the assessment of potential route options for a new distributor road. Desk based and onsite assessments of the opportunities and constraints have been carried out, including assessments of ecological, flooding and heritage constraints. Based on the evidence prepared up until the start of the consultation period, three distributor road route options emerged along with two link road options which would serve to connect the new distributor road to Pewsham Way. This process and its findings were published in the Options Assessment Report and made available throughout the road route option consultation process.

- 2.7. In addition, as part of its bid process the council sought support from key stakeholders to secure the funding and support the potential development. The redacted HIF bid was published⁴ to support the consultation process.

Consultation on the road route options

- 2.8. In order to provide members of the public with an early and meaningful opportunity to comment and feedback on the road route options, the Future Chippenham team undertook a period of public consultation on the three potential road route options and two link road options between Friday 15th January and Friday 12th March 2021.
- 2.9. The feedback from the responses received has informed an update to the Options Assessment Report process and has fed into the selection of a recommended preferred route for the distributor road and Pewsham link road. This preferred route will continue to be developed as part of the more detailed design and be informed by site constraints and opportunities, and landowner negotiations as more information is gained.
- 2.10. This document provides a summary of the analyses of the feedback received to this consultation and details how this will influence the selection of a recommended preferred route and will influence the shaping of the subsequent Framework Masterplan.

⁴ HIF bid, available at: https://www.wiltshire.gov.uk/media/5439/HIF-FF-000456-BC-01-Chippenham-Urben-Expansion-Final-submitted-business-case-redacted/pdf/HIF_FF_000456_BC_01_Chippenham_Urben_Expansion_Final_submitted_Business_Case_Redacted.pdf?m=637442430691700000

3. Consultation process

- 3.1. The Future Chippenham road route options were the subject of public consultation that took place between Friday 15th January and Friday 12th March 2021.
- 3.2. As it is intended that the forthcoming Future Chippenham Framework Masterplan will be adopted or endorsed by the council to hold material weight in the determination of any future planning applications on the site, the approach to the consultation followed the prescription outlined for the preparation of Supplementary Planning Documents in Wiltshire Council's Statement of Community Involvement (SCI)⁵.
- 3.3. In July 2020, the council adopted a Temporary Arrangements supplement to the SCI⁶ which presents an interim approach to carrying out public consultation considering the restrictions imposed due to the COVID-19 pandemic. This approach is designed to minimise the requirement for face-to-face contact and physical handling of documents.
- 3.4. The programme for public engagement on the Future Chippenham road route options consultation adhered to the provisions set out in the Temporary Arrangements supplement to the SCI. For example, the Future Chippenham team undertook a series of live online webinar events to engage with interested parties rather than organising face-to-face events or exhibitions.

⁵ Wiltshire Council Statement of Community Involvement (SCI), July 2020, available at: https://www.wiltshire.gov.uk/media/4622/Wiltshire-Statement-of-Community-Involvement-2020/pdf/DM20_535_-_Statement_of_Community_Involvement_part_1_online6.pdf?m=637348359568430000

⁶ Wiltshire Council Statement of Community Involvement (SCI), Temporary Arrangements Supplement, July 2020, available at: https://www.wiltshire.gov.uk/media/4223/Statement-of-Community-Involvement-Temporary-Arrangements-2020/pdf/Statement_of_Community_Involvement_Temporary_Arrangements.pdf?m=637335218466200000

Figure 7: Summary overview of consultation statistics

Who was consulted?

- 3.5. Organisations, groups, and individuals set out within the Regulations⁷, the SCI and as outlined through the Future Chippenham Stakeholder and Community Engagement Strategy⁸ were notified of the start of the consultation period and how to comment and feedback into the consultation process.

⁷ The Town and Country Planning (Local Planning) (England) Regulations 2012, available at: <https://www.legislation.gov.uk/uksi/2012/767/contents/made>

⁸ Future Chippenham Stakeholder and Engagement Strategy https://www.wiltshire.gov.uk/media/5394/Future-Chippenham-Stakeholder-and-Community-Engagement-Strategy/pdf/Future_Chippenham_Stakeholder_and_Community_Engagement_Strategy.pdf?m=637436431171570000

- 3.6. This strategy was published by the Future Chippenham programme team at the meeting of Wiltshire Council's Cabinet October 2020 in advance of the consultation.
- 3.7. As the Future Chippenham project would be likely to affect local residents and those who live, work or study within the local area, it was decided that the consultation, whilst open to the public generally, should be focused on parts of Wiltshire that are likely to be most affected by the project. As such, the consultation outreach was focused on the Chippenham, Calne and Corsham Community Areas.
- 3.8. In addition, the Future Chippenham team undertook a considerable number of meetings with targeted consultees to inform key stakeholders about the project, both in the lead up and during the consultation period. This included:
- Abbeyfield School
 - Area Board meetings
 - Local landowners
 - Local land tenants
 - Town & Parish Council meetings
 - Wilts & Berks Canal Trust
- 3.9. A summary of when these meetings took place is set out at **Appendix H**.
- 3.10. The Future Chippenham team have also kept an ongoing and open dialogue with the various landowners and tenant farmers who may be affected by the scheme.

How were people consulted?

- 3.11. Consultees were made aware of the consultation through a variety of channels, including:
- Direct notifications by post to residential and business properties within 250m of the road route options. A copy of the letter can be viewed at **Appendix I**.
 - Direct notification emails to stakeholders where contact details were known, and notifications sent via a webform on stakeholder websites where contact details were not known. Reminder letters and emails were also issued prior to the consultation closing. A copy of the initial notification email and list of recipients can be viewed at **Appendix I**.
 - Announcements about the Future Chippenham road route options consultation on Wiltshire Council's website. See examples at **Appendix J**.
 - Announcements through Wiltshire Council e-newsletters to residents and businesses. See examples at **Appendix K**.
 - Social media communications during the consultation period. See excerpts at **Appendix L**.
 - Notices placed in the Wiltshire Times and Gazette and Herald newspapers. See excerpts and links at **Appendix M**.
 - Briefing note issued to council members and parish/town clerks. See **Appendix N**.
 - Examples of articles published by local media, local parish councils and interest groups during the consultation period. See list of examples at **Appendix O**.
 - Notices placed around the site. See examples at **Appendix P**.
 - Interview with Wiltshire Council's leader on BBC Radio Wiltshire on 15th January 2021.
- 3.12. Consultees were made aware that the consultation material was available to view on Wiltshire Council's website under a general information webpage about the Future Chippenham

project⁹, and a webpage containing specific information about the public consultation on the road route options¹⁰. The webpages also contained wider contextual information about the project, along with a series of answers to Frequently Asked Questions (FAQs).

- 3.13. Consultees were also informed that paper copies of the consultation material were available and could be posted out on request or collected from the council's offices at Monkton Park, by calling the council's Customer Services telephone number or emailing the Future Chippenham team. Over the consultation period, fifteen hard copy consultation packs were sent out on request.
- 3.14. The Future Chippenham road route options consultation was carried out in accordance with Wiltshire Council's Temporary Arrangements supplement to the SCI, with an increased focus of effort placed on reaching out to people online, alongside other permitted COVID-safe outreach methods such as announcements on local radio station, newspaper press releases, and posters placed in key outdoor locations with pedestrian traffic in Chippenham and the surrounding area.

Online webinar events

- 3.15. The Future Chippenham team undertook a series of three one hour-long online webinar events using Microsoft Teams. Attendees were offered the opportunity to ask questions before the webinars either by emailing the Future Chippenham email address, or during the webinars by using the Q&A function within Microsoft Teams. Details about each of the webinar events is set out below:

Webinar on Thursday 28th January at 11am

Webinar hosted by Wiltshire Council officers and consultants at Atkins Global, attended by 94 people. 155 people had registered to attend the event. A presentation was given including a brief contextual overview of the project and a detailed summary of the road route options that were the subject of the consultation. This was followed by a question and answer session where some of the questions that had been submitted in advance or through the webinar Q&A panel were responded to verbally. Following the webinar, written responses to all the questions that had been raised were provided by email to those who had registered and made available on the Future Chippenham webpage. A total of 83 questions were asked during/in advance of this webinar, which covered a broad range of topics. A copy of the question and answer document from this webinar can be viewed at **Appendix Q**. A recording of the webinar, which included subtitles, was also made available on the council's YouTube channel¹¹. At the close of consultation at 5pm on Friday 12th March 2021 the webinar recording had been viewed 414 times.

Webinar on Thursday 11th February at 7pm

Webinar hosted by Wiltshire Council officers and consultants at Atkins Global, attended by 66 people. 112 people had registered to attend the event. A presentation was given including a brief contextual overview of the project and a detailed summary of the road route options that were the subject of the consultation.

⁹ Future Chippenham webpage, available at: <https://www.wiltshire.gov.uk/future-chippenham>

¹⁰ Future Chippenham consultation webpage, available at: <https://www.wiltshire.gov.uk/future-chippenham-consultation>

¹¹ Webinar recording, 28th January 2021: <https://www.youtube.com/watch?v=8hLLK8AGuHo&feature=youtu.be>

This was followed by a question and answer session where some of the questions that had been submitted in advance or through the webinar Q&A panel were responded to verbally. Following the webinar, written responses to all the questions that had been raised were provided by email to those who had registered and made available on the Future Chippenham webpage. A total of 101 questions were asked during/in advance of this webinar, which covered a broad range of topics. A copy of the question and answer document from this webinar can be viewed at **Appendix R**. A recording of the webinar, which included subtitles, was also made available on the council's YouTube channel¹². At the close of consultation at 5pm on Friday 12th March 2021 the webinar recording had been viewed 149 times.

Webinar on Saturday 20th February at 11am (Additional Q&A event)

Webinar hosted by Wiltshire Council officers and consultants at Atkins Global, attended by 41 people. 62 people had registered to attend the event. The event was split into sections dealing with common themes that had arisen from the responses to the consultation so far received. This included, transport and movement, environmental considerations and the masterplanning approach. A brief response was given to the frequently asked questions on each of these themes followed by an extended period answering questions that had been submitted on each of these themes. Towards the end of the webinar, time was allotted to responding to questions on matters that fell outside of the scope of the key themes identified. Following the webinar, written responses to questions that had been raised were provided by email to those who had registered and made available on the Future Chippenham webpage. A total of 76 questions were asked during/in advance of this webinar, which covered a broad range of topics. A copy of the question and answer document from this webinar can be viewed at **Appendix S**. A recording of the webinar, which included subtitles, was also made available on the council's YouTube channel¹³. At the close of consultation at 5pm on Friday 12th March 2021 the webinar recording had been viewed 123 times.

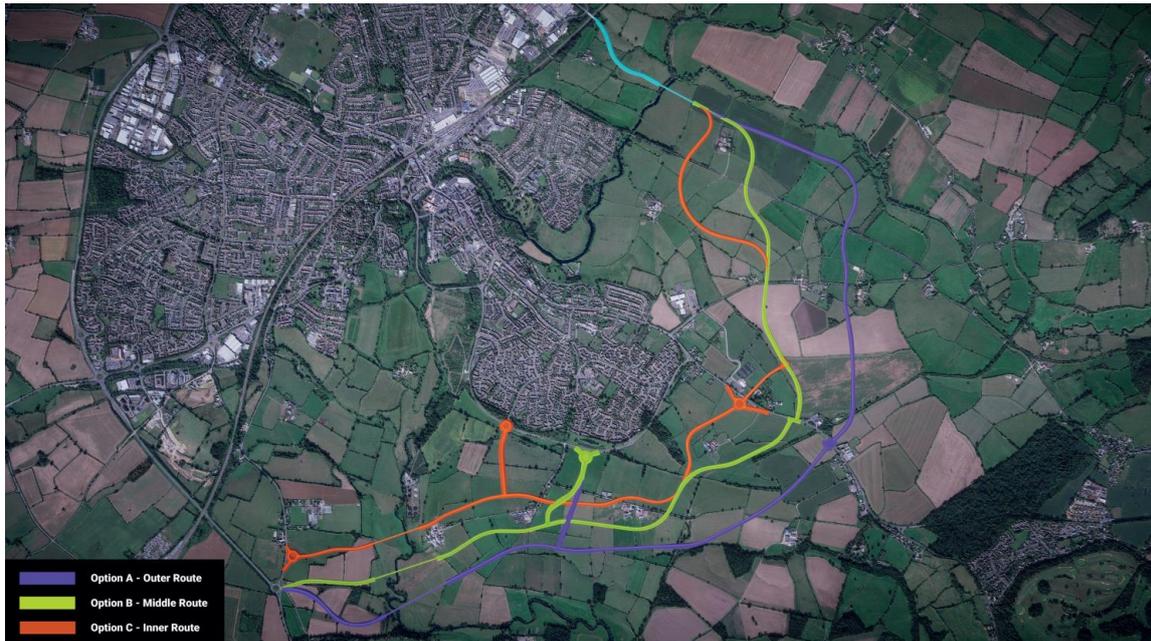

What was being consulted on?

- 3.16. The consultation focused on gaining feedback on the potential road route options for the Future Chippenham distributor road to support development of up to 7,500 homes across the site in the current and next local plan periods.

¹² Webinar recording, 11th February 2021: <https://www.youtube.com/watch?v=IhrsDGzoTs8&feature=youtu.be>

Figure 1: Future Chippenham road route options map

3.17. The consultation sought feedback on the road route options in 5 identified zones.

Figure 2: Consultation zones 1-5

The consultation material

- 3.18. The following consultation material was made available for comment during the consultation period:
- Map showing all road route options (Attached at **Appendix T**)
This provided a map overview of the three road route options and the two link road options that were being consulted on.
 - Public consultation leaflet (Attached at **Appendix U**)
This provided a summary of the context and objectives of the wider Future Chippenham project, its relationship with the Local Plan review process, a non-technical summary of the key considerations surrounding the road route options, and a high-level summary of milestones for the project.
 - Video to explain the road route options¹⁴
The video summarised the content of the public consultation leaflet and included a narrated flyover view of the road route options. The video was made available to use on the Council's YouTube channel and links to the site were available in both the consultation material and on the webpage. Two versions of the video were provided, both with and without subtitles. At the close of consultation at 5pm on Friday 12th March 2021 the two videos had collectively been viewed 13,182 times.
- 3.19. Several other additional evidence base technical reports were also provided to underpin the work that had so far been undertaken to inform the road route options presented through the consultation. This included:
- Options Assessment Report summary¹⁵
 - Future Chippenham Distributor Road - Options Assessment Plans¹⁶
 - Preliminary Environmental Assessment of Options Report (PEAOR) – summary report¹⁷
 - Preliminary Environmental Assessment of Options Report (PEAOR) – full report¹⁸
- 3.20. The consultation webpage also contained a number of Frequently Asked Questions (FAQs) concerning the project, the consultation process, and the decision-making process.

How could people respond to the consultation?

- 3.21. Representors were offered several ways to respond to the consultation. An online consultation feedback form could be completed and submitted via Wiltshire Council's website. Alternatively, a copy of the consultation feedback form could be submitted by email or post. A copy of the consultation feedback form can be viewed at **Appendix V**. Respondents could also submit written comments by letter or email.

- 3.22. The consultation was conducted in accordance with the provisions set out in the Temporary Arrangements supplement to the SCI and therefore was widely accessible to a broad range of consultees allowing all those with an interest in the Future Chippenham road route options to comment.

4. Summary of consultation responses

- 4.1. Over the consultation period 1,175 duly made representations were received. This comprised:
- 951 submitted using the Future Chippenham consultation survey form¹⁹
 - 224 submitted by email or letter only
- 4.2. A full schedule of the responses that were received over the consultation period can be found at **Appendix W**. Personal information has been redacted.

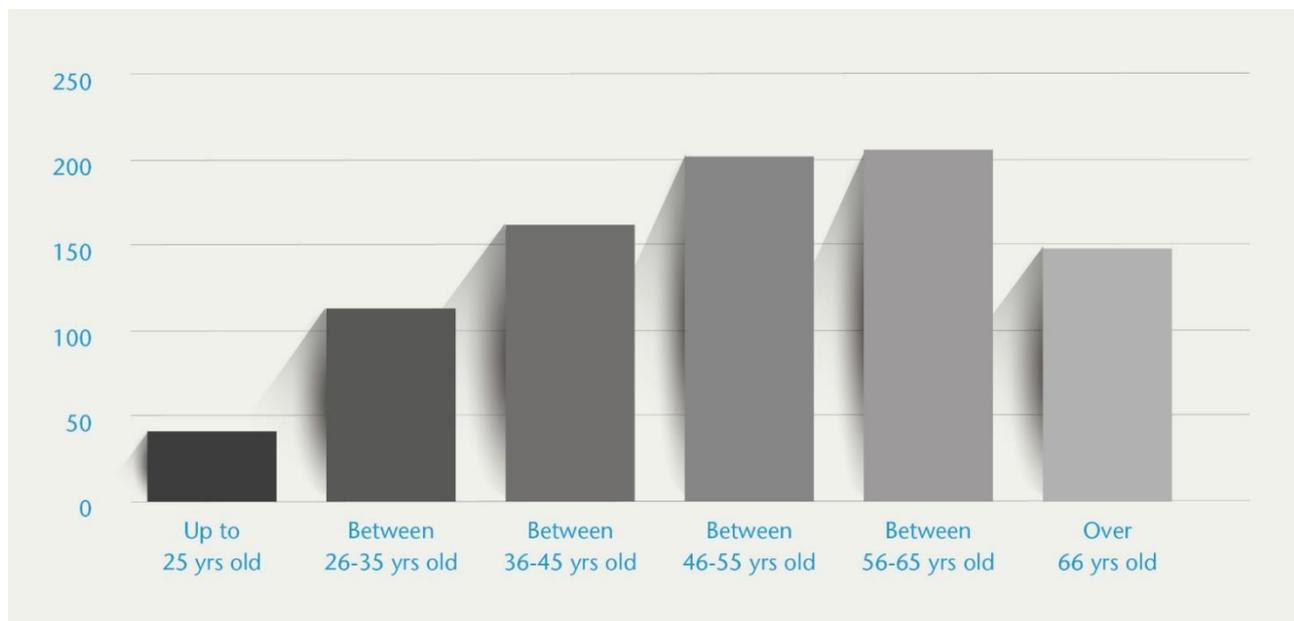

Analysis of respondent demographics

- 4.3. The consultation form invited respondents to provide details about age and location to enable a better understanding of consultee demographics.

Age profile of respondents

- 4.4. There were 872 respondents who answered Question 3 of the consultation form, relating to age demographics. Of those who responded, 41 (4.7%) were aged up to 25 years old, 113 (13%) were between 26-35 years old, 162 (18.6%) were between 36-45 years old, 202 (23.2%) were between 46-55 years old, 206 (23.6%) were between 56-65 years old and 148 (17%) were over 66 years old.

Figure 8: Graph showing respondent demographics by age

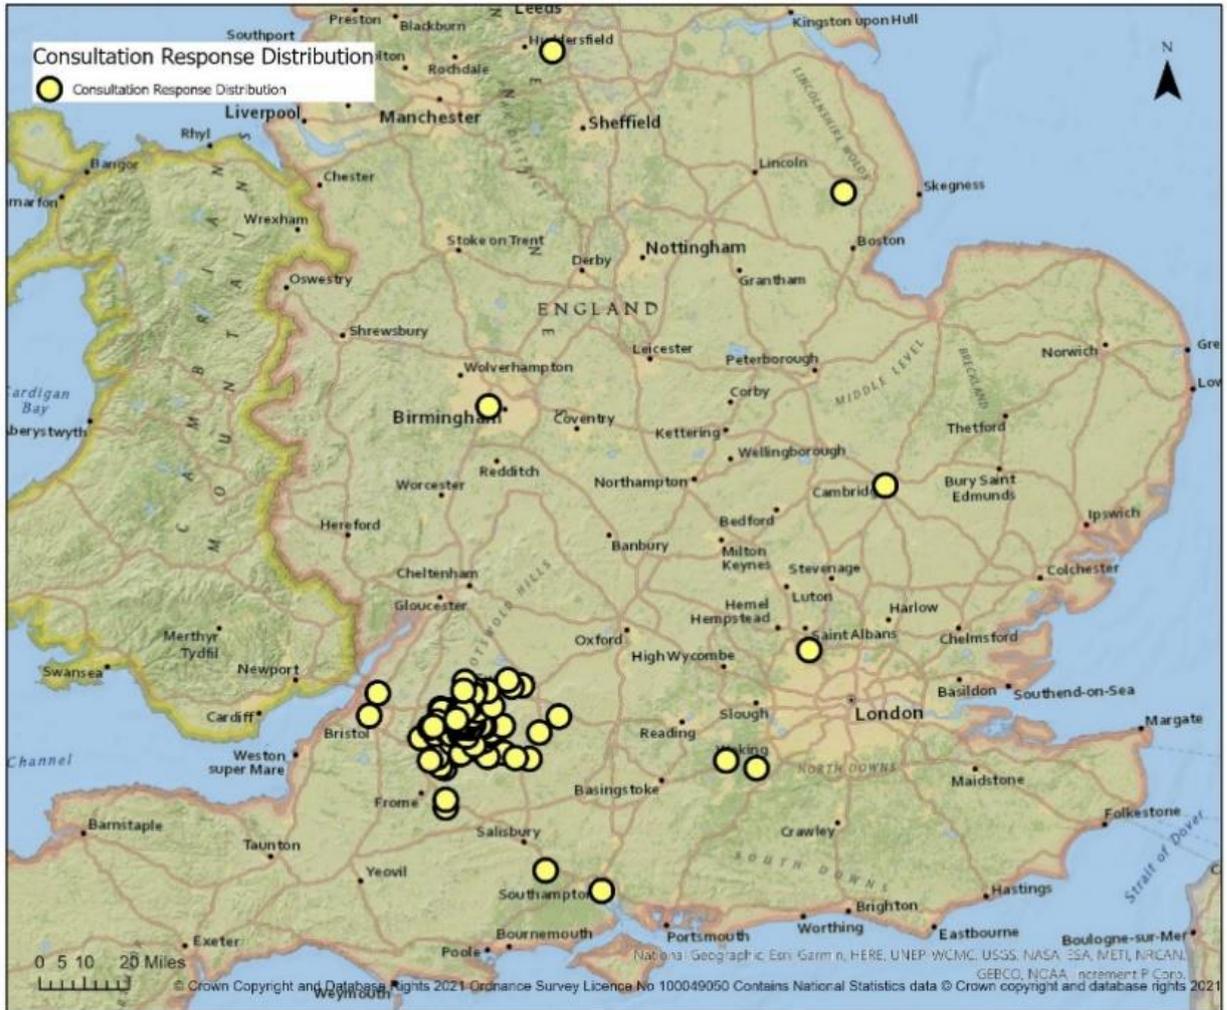

¹⁹ A small number of respondents who completed the consultation form also provided supplementary feedback by email or letter and these were grouped together as a single response where identified. For the purpose of recording, these are counted as responses using the consultation form rather than email or letter.

Profile of respondents by location

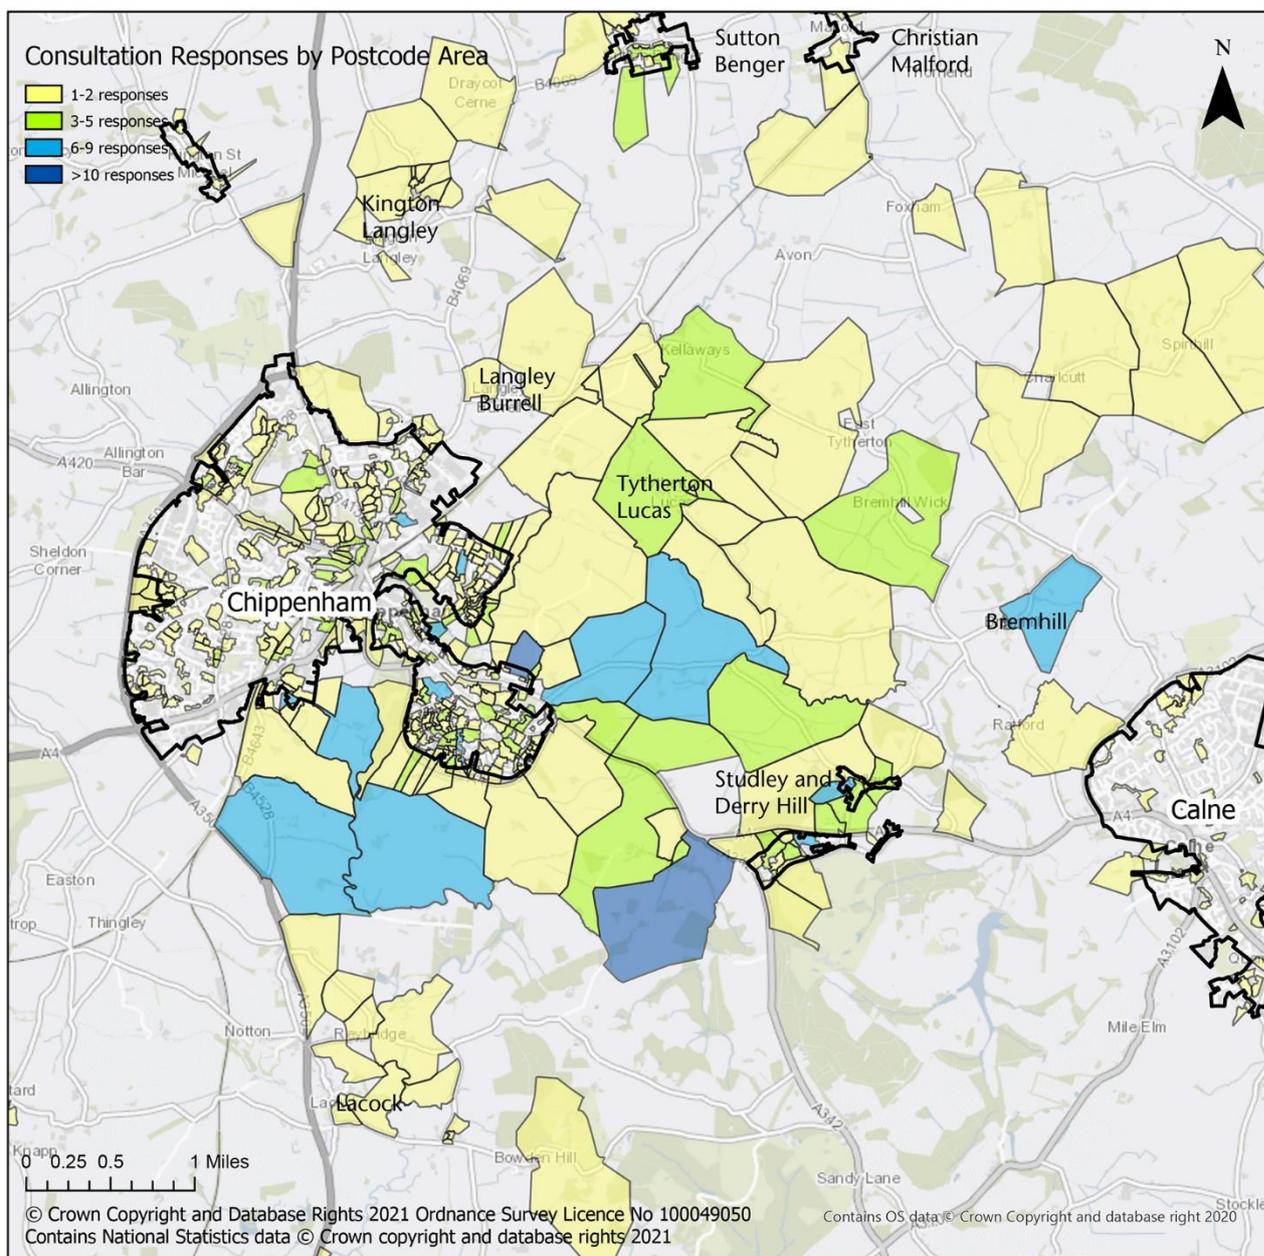

- 4.5. From the post codes that were supplied by respondents answering Question 4 or through representations submitted separately by email or letter, the map below shows the broad spatial distribution of the responses. This shows a cluster of responses in the Chippenham and surrounding area.

Figure 9: Map showing spatial distribution of respondents (England)

- 4.6. From the post codes that were made available, a more detailed picture can be drawn of the spatial distribution and number of responses received in the Chippenham/Calne area. This shows concentrated levels of interest from respondents within and close to the Future Chippenham area, with broad interest from most areas within Chippenham and some areas of Calne and the outlying villages.

Figure 10: Map showing spatial distribution of respondents (Future Chippenham area)

Analysis of consultation responses

4.7. The following section sets out a summary and analysis of the consultation responses that were received in relation to the Future Chippenham road route options consultation. Whilst the purpose of the consultation related to a choice of road route options a number of respondents took up the opportunity to express views on the underlying housing requirement and/or the need for the road. This section is therefore laid out as follows:

- 'No road' feedback submissions
- Summary of responses and officer feedback:

Consultation form question	Feedback
Consultation form questions 5 and 6/Email and letter responses: Key issues	These responses have fed into the decision-making process on the road route options, through an update to the Options Assessment Report. These comments will also be used to inform the development of the Framework Masterplan where relevant.
Consultation form questions 7, 8, 9 and 10/Email and letter responses: Preferred route of the distributor road	
Consultation form questions 11, 12 and 13/Email and letter responses: Preferred route of the Pewsham link road	
Consultation form questions 14, 15, 16, and 17: Statistical data relating to preferred modes of transport	These responses will be used to inform the development of a Framework Masterplan for the site and inform future transport modelling.

'No road' feedback submissions

- 4.8. The Future Chippenham road route options consultation took place broadly in parallel with, but entirely separate from, Wiltshire Council's consultation on the Local Plan review²⁰. The emerging Local Plan review that was subject to recent 'Regulation 18' consultation identifies the Future Chippenham site as possibly the most sustainable option for strategic growth at Chippenham up to 2036, with the potential to deliver into the next plan period. It also confirms that a new road would be required to support this development, in order to avoid unacceptable impacts on the highways network and to facilitate development. The outcome of the Local Plan review process will determine whether the site is to be selected as a preferred site for development.
- 4.9. The Future Chippenham road route options consultation took place around a working assumption that the project could be taken forward should an appropriate allocation be made in the Local Plan review. As such, the consultation form did not include a specific question asking for feedback on whether or not consultees supported the new road in principle, as it had already been confirmed that should there be any such development a new road will be required to avoid insurmountable negative impacts on the existing highways network.
- 4.10. The consultation did enable consultees who wished to record their objection to any road through a number of free text fields built into the consultation form. In addition, consultees could choose to send an email or letter instead of completing the consultation form.
- 4.11. The Future Chippenham team acknowledge that a significant proportion of respondents chose to submit an in-principle objection to any new road, or objection to the principle of development on this scale generally on the site.

²⁰ Wiltshire Local, Local Plan Review consultation, available at: www.wiltshire.gov.uk/planning-policy-local-plan-review-consultation

Summary of responses to consultation survey questions relating to the road route options and officer feedback

- 4.12. The following section sets out a summary of the responses received through the Future Chippenham road route options consultation form and responses that were submitted by email or letter during the consultation period. This section is broadly laid out corresponding to the layout of the consultation form, as follows:

Consultation survey question	Description
<i>Consultation form questions 5 and 6/Email and letter responses: Key issues</i>	This summarises the answers that were provided to questions 5 and 6 of the consultation form and summarises the email and letter responses that provided general comments and feedback on the key issues for the project.
<i>Consultation form questions 7, 8, 9 and 10/Email and letter responses: Preferred route of the distributor road</i>	This summarises the answers that were provided to questions 7, 8, 9 and 10 of the consultation form, and summarises the email and letter responses that made specific comments relating to any of the three road route options presented.
<i>Consultation form questions 11, 12 and 13/Email and letter responses: Preferred route of the Pewsham link road</i>	This summarises the answers that were provided to questions 11, 12 and 13 of the consultation form, and summarises the email and letter responses that made specific comments relating to any of the two link road route options presented.
<i>Consultation form questions 14, 15, 16, 17 and 18: Statistical data relating to preferred modes of transport</i>	This sets out a summary of the statistical data representing respondents preferred modes of travel in the Chippenham area and reasons for making journeys. No analysis of the data is provided, but this will help to inform the project moving forward.

Questions 5 and 6/Email and letter responses: Important issues

Summary of responses to Question 5

- 4.13. There were 899 responses received to Question 5 which asked respondents to consider the following:

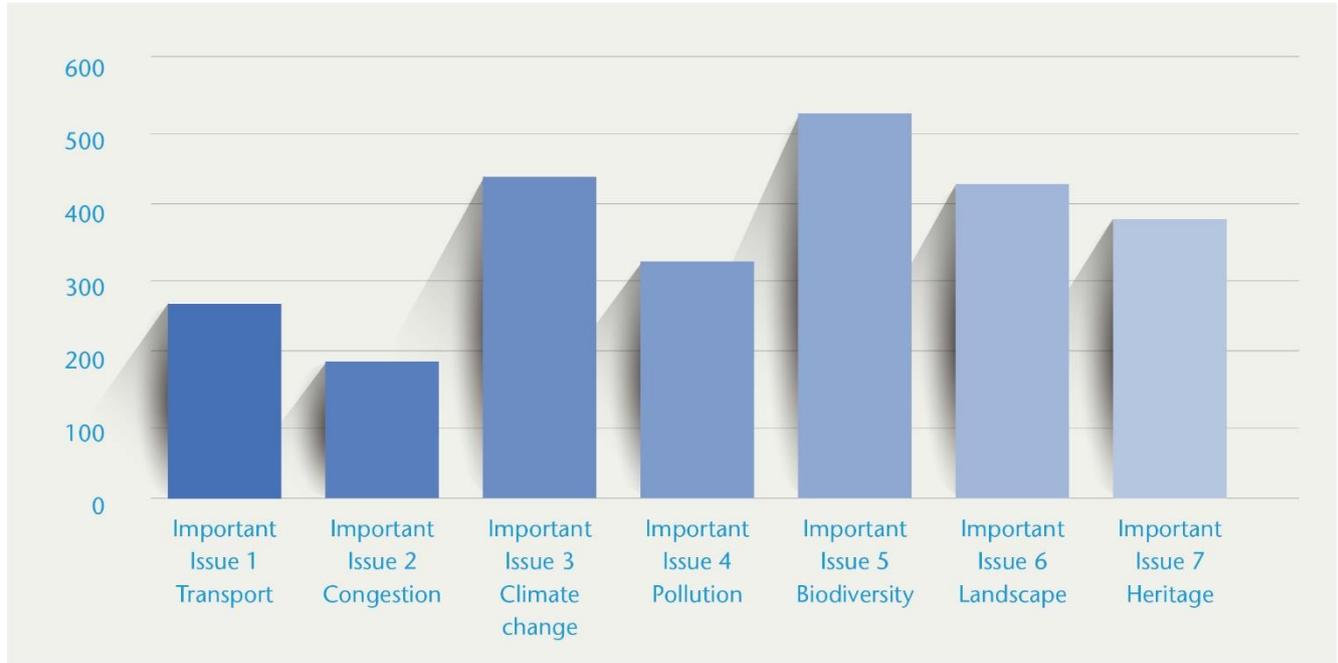

Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Important Issue No.	Descriptions
1.	Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles, and pedestrians
2	Easing traffic congestion and improving journey times
3.	Climate change adaptation/mitigation
4.	Reducing air/noise pollution
5.	Protecting and enhancing biodiversity e.g. animal and plant habitats

6.	Protecting and enhancing landscape and visual amenity
7.	Preserving and protecting heritage assets
8.	Other

4.14. Of the 899 responses received to this question, the following feedback was received:

Figure 11: Graph showing responses to consultation form Question 5

- 4.15. The responses to this question indicated that generally all of the issues identified were considered to be of importance to a significant proportion of respondents who answered this question. However, it was clear that matters relating to the environment – biodiversity, landscape and climate change were of particular importance. Issues surrounding congestion were of less importance to those responding to this question.
- 4.16. Where consultees felt there to be one or more additional Important Issues, these could be provided within a free text field under 'Other'. There were 455 responses received providing additional comments to Questions 5. Of these 455 responses nearly half (221) specifically referenced a preference for there to be no development of a road. Other important issues raised included the need to preserve/avoid impact on landscape setting (36); to not build any new houses (21); to avoid urban sprawl/overdevelopment of Chippenham (15); and to preserve agricultural land (14). Other feedback included more detailed aspects of the road design, connectivity and environmental issues. This is valuable insight which will be fed back to the road design team and used to inform the Framework Masterplan. A full summarised list of responses to Question 5 'Other', alongside the number of times each point was raised can be found at **Appendix A**.
- 4.17. Question 6 provided respondents with a free text field within which they could elaborate on their responses and provide any other comments. A significant number of respondents also provided general comments and feedback on Important Issues and matters of principle via email or letter, and these have been grouped together with responses to Question 6. The feedback provided was reviewed and broken down into a series of separate themes, and listed

as individual points made, alongside a record of the number of times the same point was raised by different respondents. The full lists of summarised points raised under Question 6 can be found at **Appendix B (1-10)**. The comments received were grouped under the following broad themes:

- Transport
- Climate change and flooding
- Pollution and air quality
- Ecology and environment
- Landscape
- Heritage
- Economy and infrastructure
- Planning
- Consultation and process
- General

- 4.18. A high-level summary of the comments received is set out below along with officer responses to the points raised. Where appropriate the officer responses explain how the points raised have and will influence the project going forward, including through road design, road route options decision making, and the subsequent Framework Masterplanning process.

Summary of responses to Question 6

Summary of responses to Question 6 – Important Issues

Theme: Transport (Appendix B1)

Sustainable Transport

There were 557 responses made via Question 6 of the consultation form, or made via email or letter that were judged to fall within the theme of sustainable transport, transport, and connectivity. A significant number of respondents raised concerns over the potential loss of recreation space including footpaths, cycleways etc and raised concerns that the scheme could be promoting unsustainable transport into the future. Other concerns and issues raised were around promotion and investment and promotion is required to support more sustainable modes of transport.

Sustainable Transport: Future Chippenham officer response

Delivering truly sustainable development will be at the heart of the Framework Masterplan and the road, whichever route is preferred, will be designed to promote sustainable transport as a principle objective with the provision of segregated cycling and walking routes as well as seeking to enhance public transport where possible. In particular it is important to provide evidence to enable residents to engage meaningfully in the process when considering the opportunities to deliver sustainable transport solutions for their town.

A draft Concept Framework plan for Future Chippenham identifies sustainable transport opportunities and aspirations and this will be further developed into a Framework Masterplan for the whole area to show how the road will sit in context and deliver benefits to the whole town.

Summary of responses to Question 6 – Important Issues

The responses received provide valuable insight which will be taken into consideration through the subsequent stage of preparing a wider Framework Masterplan for the site. The Framework Masterplan will be accompanied and underpinned by a sustainable transport strategy which will explain how the objectives of optimising sustainable transport patterns can and will be achieved.

This sustainable transport strategy will also address walking, cycling and public transport. Where appropriate, segregated pedestrian and cycle routes will be provided alongside the distributor road and roads through any development that the road unlocks. Public transport links will also be a key consideration. Wherever possible cycle and pedestrian routes will be extended and links to existing networks towards Chippenham town centre, and the surrounding areas will be provided.

Public rights of way will be improved where appropriate, and it will be ensured that safe crossing points are improved where necessary. Responses relating to public rights of way are welcomed and will be taken into consideration through the subsequent stage of preparing a wider Framework Masterplan for the site. The Public Rights of Way network will be protected and, where appropriate, enhanced through the development of the site. Wherever possible, rights of way will be retained in their existing layout, and only where diversions are absolutely necessary to the delivery of the development will suitable diversions to the network be proposed.

Where it is possible, opportunities to extend bus routes will be considered, introduced, and improved with the introduction of any housing development that could be unlocked by the delivery of the distributor road. Some of the responses relating to public transport, provide valuable insight and will be taken into consideration through the subsequent stage of preparing a wider Framework Masterplan for the site.

Sustainable transport will be integral to the development and it will be ensured that space for bus stops is incorporated into the design of the distributor road, where appropriate. The Framework Masterplan will consider as a priority the promotion of sustainable modes of transport including the use of low emission vehicles, cycling and walking and seek opportunities through wider improvements to reduce town centre congestion which has an impact on air quality.

Town centre traffic, congestion and journey time

There were 593 responses made via Question 6 of the consultation form, or made via email or letter that covered issues relating to traffic congestion in and around the site and the town centre, or relating to impacts on journey times. A significant number of respondents expressed a view that the scheme would make traffic and congestion worse on the existing highways network and these concerns were echoed by Calne Town Council and Chippenham Town Council. Some respondents raised issues around potential impacts on work/travel patterns following the COVID-19 pandemic and suggested a requirement to take time to consider these in more detail before progressing with the proposed scheme. Other concerns and issues raised were around accessibility to the train station, additional road schemes and highway safety.

Town centre traffic, congestion and journey time - Future Chippenham officer response

In line with national planning legislation, it is a requirement of the council's Local Plan to identify how and where projected housing needs for the next 20 years can be met in the most environmentally sustainable way.

Therefore, given that Chippenham will need new homes, the function of the new road is to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre, improve connectivity and travel within and around the town. Evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

The traffic modelling for Chippenham identifies existing and future issues regarding congestion and air quality at key points in the town centre for which the Future Chippenham scheme will provide some mitigation. Upgrades to additional existing key junctions such as the Malmesbury roundabout, Chequers etc are also included as part of the scheme, delivering a holistic approach to ensuring the highways network can meet the short medium and long term needs that the Future Chippenham scheme may require. The Framework Masterplan will provide a phased approach to long-term development to ensure the appropriate infrastructure is delivered at the right time.

In addition, the project has secured funding to provide input in the proposed upgrade to Junction 17 of the M4. Although the initial impacts of the COVID-19 pandemic and national and local lockdowns did show an impact on highway use, there is no evidence at this stage that this will continue post lockdown and as we emerge from the pandemic. The distribution of traffic and accessibility to the land to provide housing will remain a necessity and as such it is considered that the distributor road delivers the requirements for the housing and provides additional benefits to address traffic congestion in and around the town.

The aim of the project is not to deliver a bypass. The function of the new road is to unlock land to support the delivery of identified housing and employment needs, and provide a significant distribution route which will provide opportunities alongside other junction improvement to reduce traffic congestion in the town centre, improve connectivity and travel within and around the town as well as alleviating pressure on existing highways.

The road should not be considered a bypass but rather a distributor road that serves development associated with it. The design and the traffic speed will reflect this. Generally, the national speed limit on street lit roads is 30 mph. Roads suitable for a 40-mph limit are generally higher quality suburban roads or those on the outskirts of urban areas where there is little development. As the distributor road is likely to become an urban street lit road it is likely that the speed limit will be 30mph as detailed within the consultation documentation.

There have been a number of concerns raised regarding the impact this development will have on other strategic roads and connector roads around the development site, in particular those around the rural villages, Calne and other neighbouring towns. A further review of the traffic modelling is ongoing and whichever route is identified as the preferred route will inform

Summary of responses to Question 6 – Important Issues

this further. This information will seek to identify opportunities to ensure that primary routes are utilised to distribute traffic where possible, through existing highway powers.

The project includes a critical link road off Pewsham Way, that provides opportunities to reduce traffic congestion on this and linked highway networks and also an additional point of access to the proposed housing development and local centre. Traffic modelling identifies that this is essential to manage congestion and provide important connectivity to the existing Pewsham development.

Theme: Climate change and flooding (Appendix B2)

Climate Change

There were 445 responses made via Question 6 of the consultation form, or made via email or letter that were judged to fall under the broad theme of climate change. Issues raised included that the council should be demonstrating a commitment to meeting the challenges of the climate emergency and there were some concerns about Future Chippenham's ability to address the challenges faced. Concerns were also raised with the perceived carbon cost of the project, and the impacts on ecology, carbon sinks and soils. Requests were also made for any development to be exemplar in terms of sustainability and carbon neutrality.

Climate Change – Future Chippenham officer response

Addressing the climate emergency is an underpinning objective for the Future Chippenham project. Given that Chippenham will need new homes, the function of the new road is to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre and improve connectivity and travel within and around the town.

The Future Chippenham team consider all evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

Part of this will be the focus on supporting self-containment through the delivery of jobs, services and facilities which enable residents to meet their everyday needs within the town itself rather than needing to travel. Futureproofing development so that new builds are constructed to policy compliant carbon standards, alongside a framework of significant green infrastructure, spaces for nature and sustainable transport opportunities will also be critical.

These matters will be addressed through the subsequent stage of preparing the Framework Masterplan for the site. Garden settlement principles will be applied, with decarbonisation and the need to meet the challenges of the climate emergency will be underpinning principles. The Future Chippenham project will seek to be aspirational and identify opportunities to exceed planning policy requirements wherever practicable. Consideration will be given to extend initiatives within the proposed Framework Masterplan area and the wider area so that the town moves towards the same objectives and goals.

Flooding

There were 99 responses made via Question 6 of the consultation form, or made via email or letter commenting about flooding and flood risk. A large proportion of these were general concerns that the development could exacerbate existing issues of flooding in and around the subject area. Others made reference to specific areas of concern that were considered to be put at risk of flooding. Concerns were also raised about impacts on the water table and water quality. The Environment Agency commented that impacts on watercourses should be sought to be addressed by minimising the number and width of river/flood plain crossings in a way that does not impede flood water flow, interfere with the natural behaviour of the channels or create any barrier to the movement of wildlife. The Environment Agency also noted that development of road infrastructure must not increase flood risk elsewhere, and should deliver flood risk betterment overall.

Flooding – Future Chippenham officer response

The rivers in and around the site are important features in the landscape as well as being environmental assets, and will be key considerations in the design and layout of the site in the Framework Masterplan.

Desk based assessments of the water environment were carried out in support of the road route options stage, which set out a number of mitigation measures to be employed to reduce runoff and pollution from construction activities into local watercourses and groundwater receptors. This is further detailed within Section 4.5 of the PEAOR summary report²¹.

Proposals for development of the site will be further supported and informed by detailed flood risk assessments. A principle that will underpin the Framework Masterplan will be to, wherever possible, identify and avoid development in areas at risk of flooding (Flood Zones 2 and 3). Where some impact is seen as unavoidable then suitable mitigation will be discussed and agreed with the appropriate drainage bodies. Ongoing assessment work will identify areas that are more susceptible to flooding, including groundwater flooding, and identify mitigation and drainage strategies to be put in place.

It is expected that the development proposals will include measures to alleviate flood risk in some areas.

The Environment Agency's comments are noted and will be taken into account when considering the final route recommendation.

²¹ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Theme: Pollution and air quality (Appendix B3)

Pollution and air quality

There were 256 responses made via Question 6 of the consultation form, or made via email or letter that addressed matters relating to pollution and air quality. A main concern for many respondents related to the perception that the development would create or exacerbate existing air quality/air pollution issues in and around Chippenham, or lead to issues elsewhere as a result of the development. Similar concerns were raised regarding the potential for exacerbating the impacts of noise pollution, light pollution, and to a lesser degree littering and other contaminants in the environment. Some requests were made for mitigation measures to be introduced such as additional tree planting, and routing away from existing properties.

Pollution and air quality – Future Chippenham officer response

The draft Concept Framework plan that supported the road route options assessment provided the foundations to ensure that pollution and air quality were considered from the outset.

The Framework Masterplan will address the need to minimise the impacts of air pollution, light pollution, and noise pollution. All comments regarding pollution, air quality, noise and light pollution provide valuable information which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the wider site and design of the final road route. All aspects of pollution will be further assessed as part of the development of the wider Framework Masterplan and road design to be accompanied by an overarching Environmental Impact Assessment. This will clearly outline potential impacts and proposed measures identified as necessary to mitigate them. Potential impacts during construction will also be avoided, where possible, and if not possible mitigated by employing best practise construction practice.

Whilst air quality modelling or noise impacts assessments are yet to be undertaken, it is recognised that selection of a route located furthest from pollutant receptors would assist in reducing potential air quality impacts, and there is potential for the use of noise dulling barriers (such as landscape bunding) to help ameliorate the impacts of noise.

Theme: Ecology and environment (Appendix B4)

Ecology

There were 363 responses made via Question 6 of the consultation form, or made via email or letter addressing matters relating to ecology. Key concerns from a large number of respondents revolved around the potential for the development to result in harm to the natural environment, habitats, specific species, and biodiversity more generally. Some expressed a desire to see any development on the site to deliver overall improvement to ecological conditions, or biodiversity net gain, such as provision of spaces for wildlife and

Summary of responses to Question 6 – Important Issues

green corridors and connections. Concerns were also raised regarding the potential for impacts on the ecological condition of the rivers, and the Environment Agency noted that where impacts on river habitats cannot be avoided, this must be appropriately mitigated for.

Ecology – Future Chippenham officer response

An assessment of the biodiversity baseline has been carried out, to inform the road route options assessment process presented in this consultation, including a site-based Extended Phase 1 Habitat survey, a Ground Level Tree Assessment (GLTA) for bats, and wintering bird surveys. Key considerations are the mitigation of any potential impacts on nearby designated sites such as Special Areas of Conservation (SACs), Sites of Special Scientific Interest (SSSIs), Local Nature Reserves (LNRs), County Wildlife Sites (CWSs), Ancient Woodlands, and on any protected or notable species recorded in the area. A range of potential mitigation measures are identified in paragraph 4.4 of the PEAOR summary report²². Further ecological surveys are being carried out, and discussions with Natural England and the County Ecologist are ongoing.

The feedback received identifying individual species (including spotted flycatcher breeding territories and other species such as kites, buzzards, owls and migratory birds, roe deer, voles, hares, rabbits, foxes, badgers, long tailed tits, blue tits, great tits, dunnocks, robins, otters and others) is welcomed, and the Future Chippenham team will ensure that these, plus any others, are taken into account during further ecological evaluations and the design process.

Any development including the road options and wider Framework Masterplan will be further supported and informed by additional detailed ecological surveys, which will form a critical part of the Environmental Impact Assessment for the whole site. The Framework Masterplan will be supported by a suite of ecology assessments that consider impact on all flora, fauna, and their habitat. These studies will identify if important species are present and if so can either be avoided or if avoidance is not possible, identify what mitigation will be needed. Avoidance of impacts will be the preferred option in all cases, and where this is not possible then mitigation may include translocation of species where legislation requires.

The scheme will need to show how a net gain for biodiversity is provided in line with local and national planning requirements. The ability to achieve a biodiversity net gain has been fundamental in informing the draft Concept Framework for the site and will continue to be considered in the development of the Framework Masterplan. It will be ensured that all opportunities for enhancing biodiversity are investigated on a whole site basis and where appropriate on a Chippenham wide basis.

The Future Chippenham team are committed to working in partnership with key environmental stakeholders and statutory consultees in developing the Framework Masterplan, including the Environment Agency, Natural England and Wiltshire Wildlife Trust.

The benefits of developing a whole site Framework Masterplan are key to ensuring that the impacts on ecology can be minimised, and mitigation can be delivered and planned upfront on a holistic scale.

²² Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Theme: Landscape (Appendix B5)

Landscape

There were 594 responses made via Question 6 of the consultation form, or made via email or letter relating to landscape matters. A significant proportion of these comments related to concerns about the impact of the road or wider development on the local landscape setting, impacts on the Marden/Avon valleys and general concerns about resultant harm to natural beauty, green space and loss of countryside on the rural east side of Chippenham. Concerns were also raised by a large number of respondents that the Future Chippenham development would erode the landscape buffer between Chippenham and surrounding settlements. A number of requests for mitigation were made including investment in green infrastructure facilities, riverside areas, country parks etc.

Landscape – Future Chippenham officer response

The draft Concept Framework for the site and the road route options put forward during the consultation were informed by landscape assessments and studies. Further development of the road route option and Framework Masterplan will be supported and informed by a more detailed landscape assessment that will ensure that the most sensitive landscape elements are protected and where possible enhanced. This will include the river corridor and the existing country park. Suitable mitigation such as landscape planting, topography and design will be identified where appropriate. The Framework Masterplan will ensure that a generous amount of open space, over and above locally required standards, is provided for the local community to enjoy in perpetuity.

In support of the road route options, a desk-based landscape and visual impacts study was undertaken and covered a 1km study area surrounding the site/route options as detailed in section 3.6 of the PEAOR summary report²³, This detailed landscape mitigation recommendations that could be implemented, including:

- careful siting of the highway to avoid significant landscape and visual effects.
- avoidance of the loss of mature trees, hedgerows and safeguarding of existing habitats.
- limiting vegetation removal to that required to undertake the works.
- mitigation planting and/or screening bunds being designed to provide both adequate screening of the highway whilst remaining mindful of the character of the existing landscape to enable the new highway to integrate.
- creation of wet woodland in specific locations to provide both biodiversity and amenity benefit.
- ensuring the design of structures and finishes associated with the river crossings be locally distinctive and reflect a high quality of design.

²³ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 6 – Important Issues

- ensure the scheme integrates with local neighbourhoods to provide benefits for walkers and cyclists in the local area.

The consultation identified concerns that the scheme could cause coalescence between Chippenham and existing settlements such as Bremhill and Calne. The development of the Framework Masterplan will be supported by further landscape assessment which will consider this issue in more detail. Where appropriate, landscape buffers and mitigation will be proposed to ensure that separation and preservation of the identity of surrounding settlements is preserved.

Agricultural land

There were 282 responses made via Question 6 of the consultation form, or made via email or letter relating to agricultural land, with the primary concern being with the loss of agricultural land that would result from the development of the Future Chippenham site. It was also raised that agricultural land should be retained in order to safeguard domestic food production in light of international uncertainties surrounding food imports in the future, e.g. impacts of Brexit and climate change. There were a number of objections to the loss of council owned starter farms.

Agricultural land – Future Chippenham officer response

Any development on the site will be supported and informed by a detailed agricultural land assessment, with a key objective being to avoid development that would result in the loss of Best and Most Versatile farmland.

The majority of soils within the study area are known to be classified as grade 3B and therefore are not recorded as the best and most versatile soils for agricultural use. However, there are known pockets of grade 1 and 2 soils (higher quality) in Zone 1, with sections of grade 3A soils interspersed across all zones. This will be considered in further detail through the preparation of the Framework Masterplan for the site.

It is anticipated that, subject to the site being allocated for development in the Local Plan, council owned land will be proposed for the development of the range of uses, potentially including housing, essential infrastructure and public open space. This will require existing farm uses to cease and farm tenants will be served notice to quit in the long term. Whilst some farming activities will remain on licences or other short term arrangements, it is not anticipated that they will remain in the long term.

There are no specific proposals to replace the County Farms at Chippenham, should they be taken out of agricultural use, but the council is committed to the effective management of the remainder of the portfolio and is working with tenants to facilitate opportunities to remain in occupation of undeveloped land on a flexible basis and to relocate to alternative holdings where possible.

Theme: Heritage (Appendix B6)

Heritage

There were 58 responses made via Question 6 of the consultation form, or made via email or letter relating to heritage matters. A primary concern was that the historic value of the site could be lost through the development, and there were specific concerns raised regarding the potential loss of areas of archaeological significance, and harm to heritage assets including the Wilts & Berks Canal, Lacock, and other listed buildings.

Heritage - Future Chippenham officer response

The draft Concept Framework developed to support the road route options assessment sought to ensure the protection of existing heritage sites and integration into any development in the future. This will be further incorporated into the Framework Masterplan which will be supported and informed by detailed heritage assessments that will ensure that the most sensitive historic elements are protected and where possible enhanced. This will include archaeology, buildings of heritage value and historic landscapes, and will consider the assets highlighted by consultees. The principle that will underpin the Framework Masterplan will be to, wherever possible, identify heritage assets and avoid impacts (i.e. plan around them). Where some impact is seen as unavoidable then suitable mitigation will be discussed and agreed with the appropriate heritage bodies.

In support of the road route options, desk-based assessments of archaeological and heritage impacts were carried out as detailed in the PEAOR summary report²⁴. This was presented alongside detailed mitigation recommendations, including careful siting of the highway to avoid significant impacts.

Theme: Economy and infrastructure (Appendix B7)

Employment and economy

There were 171 responses made via Question 6 of the consultation form, or made via email or letter relating to employment/economy matters. This included concerns that there are not enough local jobs to support the development, and there is a lack of evidence that enough/the right type of new jobs would be created.

Employment and economy – Future Chippenham officer response

This consultation was about identifying a preferred road route should the development come forward within the Local Plan. Matters that relate to the economy are not within the scope of the road route options consultation, but nonetheless provide valuable insight which will be

²⁴ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 6 – Important Issues

taken into consideration through the subsequent stage of preparing a Framework Masterplan for the site.

In line with national planning legislation, it is a requirement of the council's Local Plan to identify how and where projected employment needs for the next 20 years can be met in the most environmentally sustainable way. Given that Chippenham will need new homes, then it is sustainable to provide employment opportunities within the same development. This provides local opportunities and cuts down the need for largescale commuting.

A function of the new road will be to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre, improve connectivity and travel within and around the town. Evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

Infrastructure and services

There were 246 comments made via Question 6 of the consultation form, or made via email or letter that related to infrastructure and services. Key issues raised were concerns that infrastructure in the area is insufficient to support the scale of development proposed, and that there do not appear to be benefits offered to the existing town/town centre that would justify the pressure placed on local services. Specific references we made to the perceived squeeze on capacity of GP services, the hospital, schools, leisure and recreation, retail options etc.

Infrastructure and services – Future Chippenham officer response

Any development will need to be supported by infrastructure. This was identified in the draft Concept Framework which informed the road route options assessment process. This will be refined further during the development of the Framework Masterplan and will include both critical and community infrastructure including the following:

- School provision
- Heath facilities
- Open space and play areas
- Indoor and outdoor leisure facilities
- Open spaces
- Country parks
- Local centres/small scale retail
- Community halls
- Public houses
- Churches

Preparation of the Framework Masterplan will be informed by ongoing dialogue between the Future Chippenham team and key stakeholders and service providers to ensure that capacity needs are identified and accommodated for within the plans for the site.

Summary of responses to Question 6 – Important Issues

The submission to the Local Planning Authority to demonstrate that the Future Chippenham site is the most sustainable option to meet the town's future growth needs, will include an Infrastructure Delivery Plan (IDP) setting out the infrastructure that is required to be delivered and by when. This IDP will support future Local Plan representations, masterplan and planning applications.

Health and social wellbeing

There were 131 responses made via Question 6 of the consultation form, or made via email or letter relating to health and social wellbeing. A primary concern was that the development would result in loss of access to the countryside resulting in negative impacts on residents' mental and physical wellbeing, and quality of life. Concerns were also raised regarding the potential impact of increased air pollution on respiratory health. Some concerns were also raised regarding the potential for the development to increase rates of crime.

Health and social wellbeing – Future Chippenham officer response

Health and social wellbeing are a fundamental aspect of the draft Concept Framework that has informed the road route options assessment. The scale of the proposed growth in the draft Concept Framework allows a strategic approach to the provision of landscape and green infrastructure which will deliver social, economic and environmental benefits. The proposed Country Park offers a significant area of open space which will support the future health and wellbeing of existing and future residents. The river and its flood meadows will also become a 'unifying strand' in the green infrastructure network.

Public health matters will be assessed further as part of the development of the Framework Masterplan and road design and there will be a chapter within the Environmental Impact Assessment (EIA) which will accompany all submissions, detailing the assessments undertaken, impacts identified, mitigatory measures to be implemented and opportunities for improvements where practicable. Similarly, the EIA will address social issues including the provision of affordable homes, accessible homes for the mobility impaired, access to education and healthcare services and incorporation of the principles of safe by design. The points regarding potential detrimental impacts on people's health arising from this scheme are noted and accepted as valid. It will be important in the continuing design process for the Framework Masterplan that this issue is addressed and to ensure this the process will include consultation with the NHS and be designed to minimise impacts and optimise opportunities, such as the provision of a new network of public green open space including trim trails and enhanced cycle and walking opportunities.

Theme: Planning (Appendix B8)

Relationship with the Local Plan review/Prematurity

There were 200 responses made via Question 6 of the consultation form, or made via email or letter commenting on the project proposals relationship to the Local Plan review process. The majority of these were matters for consideration through the Local Plan review process, and are not matters that can be addressed through the Future Chippenham project. For

Summary of responses to Question 6 – Important Issues

example, many responses were received objecting to the number of homes proposed to be allocated to Chippenham, querying why government targets appear to have been exceeded. There were also queries regarding the site selection process and broader housing distribution strategy. Queries were also raised as to what would happen to the Future Chippenham proposals should the site not progress to allocation through the Local Plan review process, and a query as to why concept layout plans included within the Local Plan review consultation material appeared to show a road route. With regard to the relationship between the Future Chippenham project and the Local Plan review process, a large number of concerns were raised that consultation on the road route options, while the Local Plan review is in its early stages, was premature and should be delayed.

Relationship with the Local Plan review/Prematurity – Future Chippenham officer response

Matters relating to the Local Plan review are not within the scope of the road route options consultation, although this report will be shared with Wiltshire Council's Spatial Planning team. The comments received do nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing the Framework Masterplan for the site.

While ideally a planning application for the road or any wider development would not be submitted until the Local Plan review is complete, there are many precedents set where applications that accord with an emerging Local Plan which has reached an advanced stage within the process have been permitted, so as to ensure timely delivery of housing and critical infrastructure.

The next stage of the process is to include a Framework Masterplan which will set out the vision and context for the development. This will be subject to full consultation in due course and be supported by a design code which will provide more detail.

Compatibility with made/emerging neighbourhood plans

There were 22 responses made via Question 6 of the consultation form, or made via email or letter commenting on the project proposals compatibility with made and emerging neighbourhood plans. Particular concerns were raised with the regard to compatibility with Bremhill Neighbourhood Plan policy NP3. Others expressed concerns regarding compatibility with the objectives and visions for Calne Neighbourhood Plan and the emerging Chippenham Neighbourhood Plan.

Compatibility with made/emerging neighbourhood plans – Future Chippenham officer response

This consultation related to the preferred road route for road infrastructure should the area be allocated for housing. Matters relating to the acceptability in principle of developing in a particular area will be key considerations for the Local Plan review process. Comments relating to neighbourhood plan policy requirements are also relevant to the masterplanning stage of the project, and relevant neighbourhood plans will be considered as part of the evidence review supporting the production of the Framework Masterplan. The project team

Summary of responses to Question 6 – Important Issues

will ensure further discussion is had with the relevant town and parish councils, or neighbourhood plan steering groups to ensure proposals are as joined up as possible.

Housing/Scale of development

There were 664 comments made via Question 6 of the consultation form, or made via email or letter relating to housing and scale of development. Many of these were matters for consideration through the Local Plan review process, and are not matters that can be addressed through the Future Chippenham project. For example, a considerable number of comments expressed a view that no new housing is needed or wanted in Chippenham or that too many houses were proposed for Chippenham or on this site. It was expressed by a considerable number of respondents that the Future Chippenham site was too large, would result in urban sprawl to the detriment of the market town character of Chippenham. Concerns were also raised that the scale of the site would not support self-sufficiency in the town and risked exacerbating unsustainable patterns of residents out-commuting to other towns for work and leisure. Comments were also raised that the town is in need of more affordable housing options, and other requests were made for homes to be built to a high standard of sustainable construction.

Housing/Scale of development – Future Chippenham officer response

Matters regarding the scale and location of development being proposed are not within the scope of the road route options consultation, but nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the site. This report will also be shared with Wiltshire Council's Spatial Planning team for their information.

In respect of concerns about the development leading to out-commuting, the Framework Masterplan will focus on supporting self-containment through the delivery of jobs, services and facilities which enable residents to meet their everyday needs within the town itself rather than needing to travel. Delivery of housing built to a high standard of sustainable construction will also be a key principle, as well as the commitment to deliver policy compliant levels of affordable housing.

Alternative sites

There were 125 responses made via Question 6 of the consultation form, or made via email or letter relating to alternative sites to the Future Chippenham site. The majority of these responses expressed a view that the council should be focusing on delivering regeneration of centrally located brownfield sites as a priority ahead of the consideration of any greenfield sites. It was noted by some that there may be a greater availability of vacant commercial properties for residential conversion as a result of economic contraction and changing working patterns resulting from the COVID-19 pandemic. Preferences were also expressed for development to take place on other sites around Chippenham, and elsewhere in Wiltshire instead of the Future Chippenham site.

Alternative sites – Future Chippenham officer response

The scale and location of strategic growth is a matter for consideration through the Local Plan review process. Given that Chippenham will need new homes, the function of the new road is to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre, improve connectivity and travel within and around the town. Evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than other options for meeting Chippenham's growth needs for the next 25 years or more.

Placemaking

There were 39 responses made via Question 6 of the consultation form, or made via email or letter relating to placemaking and design. Concerns included that the Future Chippenham development will be unattractive/non-distinct, be of poor quality or poorly integrated with the existing town. Concerns were also raised that new dwellings would have small gardens. In relation to the design of the road, responses were received requesting that bridges be designed to a high quality, distinctive standard, and to avoid antisocial behaviour and include vegetation planting.

Placemaking – Future Chippenham officer response

The draft Concept Framework developed for this site and supported by the Options Assessment Report process seeks to ensure that good design and placemaking will be central to the successful delivery of this site. Comments received will further inform the Framework Masterplan for the site and road design.

Environmental Impact Assessment (EIA)

There were 6 points of feedback made via Question 6 of the consultation form, or made via email or letter relating to EIA, including concerns that no EIA had yet been undertaken, and concerns that the breadth of scope would not be wide enough.

Environmental Impact Assessment (EIA) – Future Chippenham officer response

Evidence, including field-based evidence, to support any future planning application and EIA is currently being undertaken in consultation with statutory consultees. This evidence will be used, together with consultation responses to inform the recommendation on the road route option as well as the Framework Masterplan. All planning submissions will be legally compliant and be accompanied by the full prescribed accompanying documents including EIA when they are required. With respect to seasonality of ecological surveys, these will be carried out during certain months of the year to ensure that they are undertaken when specific species are present.

Construction

There were 15 responses made via Question 6 of the consultation form, or made via email or letter relating to construction, including that the developers should be funding the required spending on major infrastructure. Requests were also made for further detail about the nature of construction, such as how long it would take, what would be delivered, where it would be delivered and who would be responsible.

Construction – Future Chippenham officer response

The new road will be built for the purpose of facilitating the delivery of Chippenham's identified housing and employment needs well into the future. Major infrastructure can be costly to deliver, and the funding that has been secured from central government will help to ensure that the essential road infrastructure is in place to support the viable delivery of the development. The next stage of the process is to produce a Framework Masterplan which will set out the vision for the development and how it can benefit the town. This Framework Masterplan will reflect the overall preferred option for the route of the road and indicate where and how much development may be delivered, strategic landscaping, green corridors, local service centres, schools, cycleways, and walking networks. It will also set out some of the details requested regarding expectations around the construction phases of the development. The Framework Masterplan will be subject to full consultation in due course.

Theme: Consultation and process (Appendix B9)

HIF bid and funding

There were 168 responses made via Question 6 of the consultation form, or made via email or letter relating to matters around funding and the HIF bid. Feedback was received relating to the value for money that the project represents, and a concern that the project was being driven by the availability of funds rather than to meet genuine needs. Comments were also made regarding the process of application for HIF funding, with some respondents expressing a view that more public consultation should have been carried out before the application was submitted, with a perceived lack of transparency around the process. Some requests were made for information on overall costs and expenditure. Requests were also made that funding should be reallocated to other projects, or returned to Homes England.

HIF bid and funding – Future Chippenham officer response

The council acted in a proactive manner to seek funding to ensure that much needed development, on land recognised for potential future growth within the earlier examination of the Chippenham Site Allocations Plan, could be brought forward in a holistic and planned approach ensuring that the strategic objectives and benefits to the whole town of Chippenham could be achieved. The successful bid for central government funding was based on a competitive business case which demonstrated good value for money.

Process/Consultation

There were 325 responses made via Question 6 of the consultation form, or made via email or letter relating to matters of process and the conduct of the public consultation. Concerns were raised that members of the community felt they had not been sufficiently consulted and that there was a perceived lack of transparency in the process. A large number of respondents also felt that the consultation form should have offered a 'no road'/in-principle objection option. It was also felt by some respondents that proposals for the road should not be considered in isolation from the wider scheme proposals, and that the consultation material should have provided this wider context with more information provided. Some concerns were raised regarding the role of council as both developer and decision maker. A number of concerns were raised around the administrative process of the consultation, including that the consultation should have been longer, and should not have been carried out during a period of national lockdown.

Process/Consultation – Future Chippenham officer response

The consultation accorded to the Local Planning Authority's adopted Statement of Community Involvement as amended in July 2020 that implemented an interim approach to public consultation in light of restrictions imposed due to the COVID-19 pandemic. Whilst the unique circumstances of the pandemic meant that face-to-face consultation was not an option, alternative COVID safe methods of outreach, such as online webinars and a video, were employed which enabled effective engagement. The results of the consultation with just under 1,200 individual representations being received indicates that the techniques employed have been successful.

It is not uncommon for councils to take an active role in the development of land within their ownership, and procedures are in place to ensure that there is a clear internal organisational separation between teams promoting a development (in this case Future Chippenham) and teams responsible for undertaking the regulatory functions of the council (the Local Planning Authority). Similarly, the elected councillors who sit on the planning decision making committee (in this case Strategic Planning Committee) will be bound by the law and code of practice to consider the case before them solely upon its planning merits taking into account planning policy and all other material planning considerations, including the results of consultations.

The principle of whether the road and potential wider development should go ahead, including the consideration of alternative options, is for the Local Plan review to address. As explained at the beginning of Section 4, the Future Chippenham road route options consultation took place around a working assumption that the project could be taken forward should an appropriate allocation be made in the Local Plan review. As such, the consultation form did not include a specific question asking for feedback on whether or not consultees supported the new road in principle, as it had already been confirmed that should there be any such development a new road will be required to avoid insurmountable negative impacts on the existing highways network. The consultation did enable consultees who wished to record their objection to any road through a number of free text fields built into the consultation form. In addition, consultees could choose to send an email or letter instead of completing the consultation form.

Summary of responses to Question 6 – Important Issues

If none of the road options are pursued (and the £75 million funding returned to Government), it is not the case that the status quo will be maintained. The council will still be under a statutory obligation to meet its housing and employment needs and hence the same level of development will have to be built at Chippenham either through different site allocations or in a piecemeal, unplanned manner via speculative developments which may not deliver the benefits for the town that the Future Chippenham site could.

Theme: General (Appendix B10)

General

There were 690 responses made via Question 6 of the consultation form, or made via email or letter expressing general objections to the proposals. A significant majority of these were comments that no road should be built, that the road is not needed, wanted, or supported, or that there is a lack of evidence to support the development of the road. A significant number of responses also raised concerns that there is a lack of vision for the future of Chippenham, and that the proposals presented are not fit for purpose. Objections were also received to the perception that the council or developers would profit from the development.

General – Future Chippenham officer response

Objections to the road and options and wider development are noted.

In line with national planning legislation, it is a requirement of the council's Local Plan to identify how and where projected employment needs for the next 20 years can be met in the most environmentally sustainable way. Given that Chippenham will need new homes, then it is sustainable to provide employment opportunities within the same development. This provides local opportunities and cuts down the need for largescale commuting. A function of the new road will be to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre, improve connectivity and travel within and around the town. Evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

If none of the road options are pursued (and the £75 million funding returned to Government), it is not the case that the status quo will be maintained. The council will still be under a statutory obligation to meet its housing and employment needs and hence the same level of development will have to be built at Chippenham either through different site allocations or in a piecemeal, unplanned manner via speculative developments, which may not deliver the benefits for the town that the Future Chippenham site could. Under planning law, where a council cannot demonstrate a deliverable supply of homes to meet local needs there is a presumption in favour of granting planning permission for development, and the council and community could lose control of the process.

Concerns have been raised regarding the timing of the application for the HIF fund by the council and the council benefiting financially from the scheme. The council acted in a

Summary of responses to Question 6 – Important Issues

proactive manner to seek funding to ensure that much needed development, potentially on land acknowledged as having potential to meet future growth needs, supported by the necessary infrastructure, could be brought forward in a holistic and planned way; ensuring that the strategic objectives and benefits to the whole town of Chippenham could be achieved. There was no guarantee that this funding would be awarded which was done so on a competitive award basis. The application was supported by other landowners and key stakeholders. Whilst concerns over the size of the development are acknowledged, the Future Chippenham team considers that evidence indicates the proposed road and development provides the best and most sustainable solution for housing, economic growth and regeneration for the town, which will be considered in its entirety as part of the Framework Masterplan. The council is putting its landholdings into the scheme to support infrastructure led development that provides opportunities for sustainable development for the town both in the short and much longer term.

Questions 7, 8, 9 and 10: Preferred route of the distributor road

Summary of responses to Question 7 - preferred distributor road route

- 4.19. Question 7 of the consultation form asked respondents to rank the three road route options into order of preference. Of the 565 responses received to this question, the following feedback was received:

Figure 3: Responses to consultation form Question 7 – road route option preferences

- 4.20. Of those who gave an answer to this question, Option A (the outer route) received the highest number of first choice selections (45%). Option B (the middle route) received the lowest number of first choice selections (24%) but conversely received by far the most second choice

selections (66%). Option C (the inner route) received fewer first choice selections than Option A (31%) but a much larger number of third choice selections (52%).

- 4.21. The consultation output from Question 7 includes feedback from a number of key stakeholders, including Sport England and Abbeyfield School whose preferred route was recorded as being Option A (outer route); Stagecoach West bus providers and various landowners (Hallam Land, Gallagher and Gleeson Homes) whose preferred route was recorded as being Option B (middle route); and the National Trust whose preferred route was recorded as being Option C (inner route).
- 4.22. In addition, written responses from a number of other stakeholders were received, albeit not submitted via the consultation form. This included the Environment Agency who expressed a preference for a hybrid of Options A and B; the Chippenham Chamber of Commerce whose preference was for Option B; landowners (Chippenham 2020) who expressed a preference for Option B, and a landowner at Tytherton Lucas whose preference was for Option A.
- 4.23. It should be noted that a significant number of respondents who wished to express an in-principle objection to the Future Chippenham project opted not to complete the Question 7 ranking exercise, or explained that while they had completed the Question 7 ranking exercise, their preference was for no road at all.
- 4.24. Questions 8, 9 and 10 provided respondents with free text fields to give any specific feedback on Option A: outer route, Option B: middle route and Option C: inner route. Where comments related to a specific area, respondents were asked to specify which Comparison Zone (1-5) the comments related to. A small number of respondents also submitted specific comments on the three road route options by email and letter.
- 4.25. The feedback provided was reviewed and broken down into a series of separate themes, and listed as individual points made, alongside a record of the number of times the same point was raised by different respondents.

Summary of responses to Question 8 - Option A (outer route)

- 4.26. The full lists of summarised points relating to Option A (outer route) can be found at **Appendix C (1-10)**. The comments received were grouped under the following broad themes:
 - Transport
 - Climate change and flooding
 - Pollution and air quality
 - Ecology and environment
 - Landscape
 - Heritage
 - Economy and infrastructure
 - Planning
 - Consultation and process
 - General
- 4.27. A high level summary of the comments received is set out below along with officer responses to the points raised. Where appropriate the officer responses explain how the points raised have and will influence the project going forward, including through road design, road route options decision making, and the subsequent Framework Masterplanning process.

Summary of responses to Question 8 – Option A (outer route)

Theme: Transport (Appendix C1)

Transport

There were 239 responses to Question 8 (Option A: outer route) that were judged to fall within the theme of transport. A large number of responses were from those who considered that Option A was either too far from Chippenham, too wide, too long or gave too much scope for development within what was perceived to be a new 'boundary' for the town. There were also objections on the grounds that this option would function as a bypass which was not considered to be needed, although a small number of respondents also felt that a new bypass would be beneficial. Concerns were also raised more generally in relation to the potential for this option to add to congestion issues, while others felt this could alleviate congestion. Some respondents expressed a desire to see improvements to sustainable transport infrastructure (including walking and cycling routes), and concerns were raised in relation to the impact of this route on existing cycle routes, such as the Chippenham to Calne route. Comments were received in relation to this route's wider implications for the transport network, including at M4 junction 17, and surrounding towns and villages. Potential impacts for Abbeyfield School and Stanley Park sports ground were also highlighted. Some general comments were received regarding the need for traffic calming, along with comments requesting speed limits of 30 or 40mph.

With specific reference to Option A through Zone 1, comments were received which expressed a preference to the proposed link direct from Lackham roundabout, while some reservations were held regarding potential negative impacts for Lackham College. Concerns were also raised regarding the length of the bridge that would be required by Option A. A concern was raised by Stagecoach West that the south west link section in Zones 1 and 2 is more likely to perform better in its strategic role to divert traffic but in so doing could increase demand on the A350 west of Chippenham.

With specific reference to Option A through Zone 2, a small number of respondents questioned why the existing Pewsham Way road could not be utilised along this stretch. Concerns were also raised regarding the distance from the town, and accessibility to the town for communities, and the need for connection to pedestrian and cycle links. A concern was also raised that this part of the Option A route conflicts with plans for a solar farm by Eden Renewables.

With specific reference to Option A through Zone 3, concerns were expressed about the potential for negative impacts on the Chippenham to Calne cycle route, alongside other comments concerning the pedestrian and cycle network. Concerns also raised regarding potential traffic impacts on Stanley Lane and small local roads at Stanley, Studley and Bremhill. Concerns were also raised regarding accessibility to the town for communities. Stagecoach West also noted that severance of a small portion of developable land in Zone 3 could and should be addressed by reconfiguring the developable area within the line of the route.

With specific reference to Option A through Zone 4, concerns were raised regarding the safety/inconvenience of the crossing of the A4. The distance from the town was also raised.

Summary of responses to Question 8 – Option A (outer route)

Other comments were made suggesting alternative routes, including potential to link up with Calne, or the new road not extending north of the A4. Landowners within Zone 4 noted their support for Option A.

With specific reference to Option A through Zone 5, some concerns were raised regarding amenity impacts of the road on nearby communities, and road safety issues. Queries were raised about the connections to Langley Road and how the crossing of the railway would be delivered in line with the Rawlings Green planning permission. Landowners within Zone 5 noted their support for the route.

Transport: Future Chippenham officer response

Developing a simple range of options for sustainable transport is critical to the success of the Future Chippenham project, especially in providing evidence to support residents in engaging meaningfully in the process when considering the opportunities to deliver sustainable transport solutions for their town. A draft Concept Framework plan identifies sustainable transport opportunities and will be further developed into a Framework Masterplan for the whole area to show how the road will sit in context and how the development opportunities it presents may be delivered in the most beneficial way for the whole town. Delivering truly sustainable development will be at the heart of the Framework Masterplan and the road, whichever route is preferred, will be designed to promote sustainable transport as its principle objective with the provision of segregated cycling and walking routes as well as seeking to enhance public transport.

The responses provide valuable insight which will also be taken into consideration through the subsequent stage of preparing a wider Framework Masterplan for the site. The Framework Masterplan will be accompanied and underpinned by a sustainable transport strategy which will explain how the objectives of optimising sustainable transport patterns will be achieved, including walking, cycling and public transport. Where appropriate, segregated pedestrian and cycle routes will be provided alongside the distributor road and roads through any development that the road unlocks. Public transport links will also be a key consideration. Wherever possible cycle and pedestrian routes will be extended and links to existing networks towards Chippenham town centre, and the surrounding areas will be provided.

Public rights of way will be improved where appropriate and it will be ensured that safe crossing points are improved where necessary. Responses relating to public rights of way are welcomed and will be taken into consideration through the subsequent stage of preparing a wider Framework Masterplan for the site. The Public Rights of Way network will be protected and, where appropriate, enhanced through the development of the site. Wherever possible, rights of way will be retained in their existing layout, and only where diversions are absolutely necessary to the delivery of the development will suitable diversions to the network be proposed.

Where it is possible, opportunities to extend bus routes will be considered, introduced, and improved with the introduction of any housing development that could be unlocked by the delivery of the distributor road. Some of the responses relating to public transport, provide valuable insight and will be taken into consideration through the subsequent stage of preparing a wider Framework Masterplan for the site.

Summary of responses to Question 8 – Option A (outer route)

Sustainable transport will be integral to the development and it will be ensured that space for bus stops is incorporated into the design of the distributor road, where appropriate. The Framework Masterplan will consider as a priority the promotion of sustainable modes of transport including the use of low emission vehicles, cycling and walking and seek opportunities through wider improvements to reduce town centre congestion which has an impact on air quality.

The following section of the officer's response refers to comments made about Option A, Zone 1:

There were a number of comments with a preference for connecting the distributor road directly to the A350 at Lackham roundabout, connecting to the existing highway at this location would form a logical part of the transport network, is likely to operate more efficiently than a new the connection on the B4528. In this scenario a new junction from the highway network to the college would be included in the scheme.

A range of options were included in the Housing Infrastructure Fund bid that include a southern distributor road between Lackham roundabout and the A4, a northern distributor road between the A4 and Parsonage Way and the full eastern distributor road combining both northern and southern routes. This assessment is included in the Options Assessment Report as part of the road options public consultation and indicates land development quantum, cost estimates and benefit cost ratios. Whilst all three of these options indicate good benefit cost ratios the full eastern distributor road indicates the best benefit cost ratio and as such was progressed to public consultation.

The distributor road enables housing development by unlocking land, ensures the transport network has capacity to accommodate housing growth, provides good transport connectivity for sustainable transport between new and existing developments. The proximity of the road and associated new development to existing development is included in the options assessment process where options close to existing development have better connectivity.

It is noted that Stagecoach do not support option A as a route, it operates as a bypass and therefore would perform poorly as a bus route. Route A would not be close to residential developments and as such passengers would not have access to services close to their homes. Meetings are planned with bus network operators to coordinate an appropriate level of bus service provision. Bus stops to serve new developments and Lackham College will be considered as part of this review.

The transport assessment will review impact on the existing road network and include mitigation proposals for the road application and development applications. This includes an assessment of points of connection with the existing transport network (Lackham roundabout, Pewsham Way, A4, Stanley Lane) and the road network further away from the new road but with a forecast change in traffic flows that may have a negative impact on capacity.

Road network signing strategy and speed limits shall be reviewed as part of the planning application.

Concern with the longer length of bridge and road impact on Lackham College farmland is noted, in this regard the option does have a greater impact on the environment and higher

Summary of responses to Question 8 – Option A (outer route)

costs than the other options in zone 1. An Environmental Impact Assessment (EIA) will be included in the planning application which will include appropriate environmental mitigation to be included in the proposals. The form of the bridge will be assessed as part of the planning application and consider landscape and visual impact, buildability, construction costs, maintenance costs, materials and waste, and a review of safety for both construction and long term maintenance.

The following section of the officer's response refers to comments made about Option A, Zone 2:

The distributor road enables housing development by unlocking land, ensures the transport network has capacity to accommodate housing growth, provides good transport connectivity for sustainable transport between new and existing developments. The proximity of the road and associated new development to existing development is included in the options assessment process where options close to existing development have better connectivity.

Cost estimates for each road route have been included in the options assessment report. Viability of the preferred route and development is also considered.

The transport assessment for the planning application includes traffic forecasts that indicate attraction of traffic from the wider transport network, including traffic from Calne. Validation of these forecasts is an essential part of the planning process and will be reviewed by the respective highway authorities. The impact of the road and the development will also be assessed and appropriate mitigation presented as part of this review.

Proposed junction types for connecting the distributor road to the existing transport network will be modelled to ensure they operate within practical capacity and consider motorised and non motorised modes of transport.

Where the distributor road bisects any existing footway and cycleways, new connections shall be made in these locations and road crossings included. These comprise connections to the Wilts & Berks Canal and the footpath linking Middle Lodge Farm to the A4 at Derry Hill. Upgrades and amendments to footpaths and public rights of way will be assessed in further detail as part of the Framework Masterplan for land development. Road crossing types will be reviewed as part of both the road delivery and development and shall be subject to an independent safety audit.

It is noted that Eden renewables do not support Option A as a route, due to the conflict with plans for a renewable energy site.

Road network signing strategy and speed limits shall be reviewed as part of the planning application.

The public consultation notes each individual preference for route options within each zone and Pewsham link roads

The Pewsham link road options and distributor road route options within each zone are reviewed as part of the options assessment. The preferred link and distributor option within each zone shall be linked to form the overall preferred road option.

Summary of responses to Question 8 – Option A (outer route)

The following section of the officer's response refers to comments made about Option A, Zone 3:

Where the distributor road bisects any existing footway and cycleways, new connections shall be made in these locations and road crossings included. These comprise connections to the Wilts & Berks Canal, the footpath linking Middle Lodge Farm to the A4 at Derry Hill, the National Cycle Network, route 403. Upgrades and amendments to footpaths and public rights of way will be assessed in further detail as part of the Framework Masterplan for land development. Road crossing types will be reviewed as part of both the road delivery and development and shall be subject to an independent safety audit.

A 'Movement Framework'/Connectivity plan will be included as part of the development Framework Masterplan. Cycle and pedestrian routes alongside the road will form an integral part of overall site connectivity between new and existing development. The types of route shall be informed by the connectivity plan and the transport assessment and will consider commuting and recreation, and follow current industry design guidance and Wiltshire Council's planning requirements.

Junctions and amendments to the existing transport network will be considered as part of the transport assessment for the planning application. A full review of impacts on the existing network will include mitigation including amendments to speed limits, junction capacity upgrades, access restrictions, and traffic calming and will be subject to the Traffic Regulation Order process.

Comments relating to the development of the land unlocked and accessed from the distributor road are noted and will be considered as part of the Framework Masterplan. The potential for a direct link between Pewsham and Derry Hill is noted although none of the road options on their own actually provide this as part of the road delivery. The Framework Masterplan and associated connectivity plan will consider this comment further.

The following section of the officer's response refers to comments made about Option A, Zone 4:

Comments relating to the development of the land unlocked and accessed from the distributor road are noted and will be considered as part of the Framework Masterplan. Junctions and amendments to the existing transport network will be considered as part of the transport assessment for the planning application. A full review of impacts on the existing network will include mitigation including amendments to speed limits, junction capacity upgrades, access restrictions, and traffic calming and will be subject to the Traffic Regulation Order process.

The A4/A342 junction at Derry Hill is included in the draft list of junctions expected to require amendments to mitigate the impact of the development; the transport assessment will inform the mitigation. This is subject to a review by Wiltshire Council Highways as part of the planning application. The mechanism and timing of any junction amendments would be a condition of planning approval.

The road's primary function is for local transport connectivity and distribution and to enable residential and employment development, it is not a strategic road or bypass. The road is located within the development area identified in the Local Plan review; on this basis an

Summary of responses to Question 8 – Option A (outer route)

extension of the road to Calne is not under consideration. The impact of traffic on the surrounding road network is considered, it is likely that some junctions along the A4 between Chippenham and Calne will be identified for amendments to mitigate the impact of the development.

Development areas to the east of Chippenham within the area identified in the Local Plan review are currently being assessed. The Framework Masterplan and Transport Assessment will provide information to confirm the preferred road option and associated extents. The southern link road from the A4 to the A350 at Lackham roundabout was considered as part of the Housing Infrastructure Fund bid.

Impact on the A350 to the west of Chippenham will be reviewed as part of the distributor road and development road planning design. The transport assessment will inform the mitigation, this is subject to a review by Wiltshire Council Highways as part of the planning application. The mechanism and timing of any junction amendments would be a condition of planning approval.

The deviation of the National Cycle Network route 403 at Stanley where the cycle route currently uses a short section of Stanley Lane could be considered for alignment of option A. This would however require the route to deviate outside of the development area identified in the Local Plan review; The road's primary function is for local transport connectivity and distribution and to enable residential and employment development, it is not a strategic road or bypass. The road alignment is designed to form the main corridor of movement with relatively continuous built frontage, the proximity of the road and associated new development to existing development is included in the options assessment process where options close to existing development have better connectivity.

The potential for a direct link between Pewsham and Derry Hill is noted although none of the road options on their own actually provide this as part of the road delivery. The Framework Masterplan and associated connectivity plan will consider this comment further.

The following section of the officer's response refers to comments made about Option A, Zone 5:

The potential for a direct link between Pewsham and Derry Hill is noted although none of the road options on their own actually provide this as part of the road delivery. The Framework Masterplan and associated connectivity plan will consider this comment further.

The concerns with increased traffic levels on the B4069 and impacts on the residents along this route are noted. Impacts on the existing road network will be identified by the Transport Assessment and mitigation will be proposed as part of the planning application for review and approval by Wiltshire Council Highways.

The North Eastern end of the distributor road follows the alignment of the Rawlings Green distributor road and rail bridge. The distributor road and associated land development for Rawlings Green has submitted an outline planning application under planning reference 15/12351/OUT. At the time of this public consultation response, Wiltshire Council's planning committee have resolved to grant planning permission subject to the signing of a S106 agreement.

Summary of responses to Question 8 – Option A (outer route)

The rail bridge has full planning permission under planning reference 18/02037/FUL, this was granted on 13th November 2019.

The current position of Future Chippenham is that the rail bridge will be delivered by the Rawlings Green developer. In the event that the rail bridge is delivered as part of the Future Chippenham distributor road, planning scope for the distributor road would include the rail bridge as part of this separate application; this would not breach the conditions of application 15/11886/FUL as it would be a separate application.

Negotiations between the Future Chippenham team and other landowners with interests in the site are in progress.

The distributor road alignment presented for public consultation in zone 5 is supported by the landowner/developer.

The impact of the distributor road through Rawlings Green on traffic safety, the environment (including noise and pollution) and walking and cycling will be assessed as part of the Future Chippenham distributor road planning application.

After crossing the rail bridge, the road continues along a new road parallel to Parsonage Way, crosses the B4069 via two junctions and continues along a new distributor road past Birds Marsh to connect to the A350 at Malmesbury roundabout. M4 Junction 17 is then accessed via the A350. The route from the rail bridge is included as part of the other developer planning applications, available on Wiltshire Council's planning portal²⁵.

Theme: Climate change and flooding (Appendix C2)

Climate change

There were 42 responses to Question 8 (Option A: outer route) that covered matters relating to climate change, with most being concerns about the project's climate impacts, concerns regarding carbon costs and compatibility with the council's declaration of a climate emergency. In respect of Zone 1, concerns were raised about the carbon impacts of the bridge that would be required. In Zone 3 concerns were raised about the carbon costs of the two canal crossings required.

Climate change – Future Chippenham officer response

Addressing the climate emergency is an underpinning objective for the Future Chippenham project. Given that Chippenham will need new homes, the function of the new road will be to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre and improve connectivity and travel within and around the town.

²⁵ Wiltshire Council, planning portal, available at: <https://development.wiltshire.gov.uk/pr/s/>

Summary of responses to Question 8 – Option A (outer route)

The Future Chippenham team consider all evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

Part of this will be the focus on supporting self-containment through the delivery of jobs, services and facilities which enable residents to meet their everyday needs within the town itself rather than needing to travel. Futureproofing development so that new builds are constructed to policy compliant carbon standards, alongside a framework of significant green infrastructure, spaces for nature and sustainable transport opportunities will also be critical.

These matters will be addressed through the subsequent stage of preparing the Framework Masterplan for the site. Garden settlement principles will be applied, with decarbonisation and the need to meet the challenges of the climate emergency will be underpinning principles. The Future Chippenham project will seek to be aspirational and identify opportunities to exceed planning policy requirements wherever practicable. Consideration will be given to extend initiatives within the proposed Framework Masterplan area and the wider area so that the town moves towards the same objectives and goals.

Concerns regarding the carbon cost of bridges that would be required to deliver this option are noted. In this regard this option does have a greater impact on the environment and higher costs than the other options in zone 1. An Environmental Impact Assessment (EIA) will be included in any future planning application for the road, which will include appropriate environmental mitigation to be included in the proposals. The form of the bridge will be assessed as part of the planning application.

Flooding

There were 30 responses to Question 8 (Option A: outer route) that covered matters relating to flooding. Two thirds of the responses were general concerns that the development could result in an increased risk of flooding or objection to building on flood plains, albeit one respondent noted a preference for this route as it has the least impact on flood plains of the options presented. Detailed advice was received from Wiltshire Council's drainage team.

The Environment Agency (EA) advised that Option A would be preferable within Zone 2, with a small amendment to the route to provide a greater buffer to the Cocklemore Brook. It was noted by the EA that while the impacts of greater impermeable area due to a longer route weighs against this option, this could be managed through detailed drainage design. Greater emphasis should be given to protecting and maintaining the network of smaller watercourses and waterbodies across the area.

With regard to Zone 3, comments were received noting specific concerns around flooding in this area, such as at Westmead playing fields.

The EA advised that the River Avon crossing in Zone 4 is located at the river section with the shortest floodplain width, which is supported.

Flooding – Future Chippenham officer response

Summary of responses to Question 8 – Option A (outer route)

The rivers in and around the site are important features in the landscape as well as being environmental assets, and will be key considerations in the design and layout of the site in the Framework Masterplan.

Desk based assessments of the water environment were carried out in support of the road route options stage, which set out a number of mitigation measures to be employed to reduce runoff and pollution from construction activities into local watercourses and groundwater receptors. This is further detailed within Section 4.5 of the PEOR summary report²⁶.

Proposals for development of the site will be further supported and informed by detailed flood risk assessments, which will consider flood risk in the areas noted. A principle that will underpin the Framework Masterplan will be to, wherever possible, identify and avoid development in areas at risk of flooding (Flood Zones 2 and 3). Where some impact is seen as unavoidable then suitable mitigation will be discussed and agreed with the appropriate drainage bodies. Ongoing assessment work will identify areas that are more susceptible to flooding, including groundwater flooding, and identify mitigation and drainage strategies to be put in place.

It is expected that the development proposals will include measures to alleviate flood risk in some areas.

The Environment Agency's comments are noted and will be taken into account when considering the final route recommendation.

Theme: Pollution and air quality (Appendix C3)

Pollution and air quality

There were 52 responses to Question 8 (Option A: outer route) that addressed pollution and air quality. Approximately half of these were concerns that this development would result in an increase of air pollution, while others noted a concern about increased noise pollution. A small number of respondents considered that Option A would improve air pollution and could minimise noise and disruption for existing residents. Suggestions were made, including that the road should be as straight as possible to avoid environmental impacts of braking and acceleration, and that the road should be further out to avoid air and noise impacts in Chippenham. In Zone 1, a small number of responses were received regarding concern about the potential impact on pollution of the watercourse e.g. ponds at Plucking Grove. Comments were also raised specific to Zones 2, 3 and 4 about impacts of noise and air pollution.

²⁶ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 8 – Option A (outer route)

Pollution and air quality – Future Chippenham officer response

The draft Concept Framework plan that supported the road route options assessment provided the foundations to ensure that pollution and air quality were considered from the outset.

The Framework Masterplan will address the need to minimise the impacts of air pollution, light pollution, and noise pollution. Comments regarding pollution, air quality noise and light pollution provide valuable information which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the wider site and design of the final road option chosen. All aspects of pollution will be further assessed as part of the development of the wider Framework Masterplan and road design to be accompanied by an overarching Environmental Impact Assessment. This will clearly outline potential impacts and proposed measures identified as necessary to mitigate them. Potential impacts during construction will also be avoided, if possible, and where not possible, mitigated by employing best practise construction practice.

Whilst air quality modelling or noise impacts assessments are yet to be undertaken, it is recognised that selection of a route located furthest from pollutant receptors would assist in reducing potential air quality impacts, and there is potential for the use of noise dulling barriers (such as landscape bunding) to help ameliorate the impacts of noise.

Theme: Ecology and environment (Appendix C4)

Ecology

There were 77 responses to Question 8 (Option A: outer route) that raised issues around ecology. The majority of these were concerns about the development leading to potential negative impacts on biodiversity, wildlife (including protected species) and habitats. The Environment Agency advised that minimal impact on watercourses should be achieved.

Concerns were raised about the ecological impacts of the long bridge required in Zone 1 and the two canal crossing required in Zone 3. Concerns were also raised regarding impacts of habitat fragmentation and pollution of the water course/ponds at Plucking Grove Wood in Zone 1, and impacts on biodiversity of the River Marden in Zones 3 and 4. A concern was raised that desk based ecological assessments have been insufficient.

Ecology – Future Chippenham officer response

An assessment of the biodiversity baseline has been carried out, to inform the road route options assessment process presented in this consultation, including a site-based Extended Phase 1 Habitat survey, a Ground Level Tree Assessment (GLTA) for bats, and wintering bird surveys. Key considerations are the mitigation of any potential impacts on nearby designated sites such as Special Areas of Conservation (SACs), Sites of Special Scientific Interest (SSSIs), Local Nature Reserves (LNRs), County Wildlife Sites (CWSs), Ancient Woodlands, and on any protected or notable species recorded in the area. A range of

Summary of responses to Question 8 – Option A (outer route)

potential mitigation measure are identified in paragraph 4.4 of the PEAOR summary report²⁷. Further ecological surveys are being carried out, and discussions with Natural England and the County Ecologist are ongoing.

The feedback received identifying individual species (including spotted flycatcher breeding territories and other species such as kites, buzzards, owls and migratory birds, roe deer, voles, hares, rabbits, foxes, badgers, long tailed tits, blue tits, great tits, dunnocks, robins, otters and others) is welcomed, and the Future Chippenham team will ensure that these, plus any others, are taken into account during further ecological evaluations and the design process.

Any development including the road options and wider Framework Masterplan will be further supported and informed by additional detailed ecological surveys, which will form a critical part of the Environmental Impact Assessment for the whole site. The Framework Masterplan will be supported by a suite of ecology assessments that consider impact on all flora, fauna, and their habitat. These studies will identify if important species are present and if so can either be avoided or if avoidance is not possible, identify what mitigation will be needed. Avoidance of impacts will be the preferred option in all cases, and where this is not possible then mitigation may include translocation of species where legislation requires. The scheme will need to show how a net gain for biodiversity is provided in line with local and national planning requirements.

The ability to achieve a biodiversity net gain has been fundamental in informing the draft Concept Framework for the site and will continue to be considered in the development of the Framework Masterplan. It will be ensured that all opportunities for enhancing biodiversity are investigated on a whole site basis and where appropriate on a Chippenham wide basis.

The Future Chippenham team are committed to working in partnership with key environmental stakeholders and statutory consultees in developing the Framework Masterplan, including the Environment Agency, Natural England and Wiltshire Wildlife Trust.

The benefits of developing a whole site Framework Masterplan are key to ensuring that the impacts on ecology can be minimised, and mitigation can be delivered and planned upfront on a holistic scale.

Theme: Landscape (Appendix C5)

Landscape

There were 272 responses to Question 8 (Option A: outer route) that raised issues around landscape. A large proportion of these were concerns about the impacts on the landscape and rural setting, that the development would be too visible, would result in too much loss of greenspace in the Avon/Marden Valley. A significant number of responses also noted that all of the options, not just Option A, would be environmentally damaging. Concerns were raised

²⁷ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 8 – Option A (outer route)

about the loss of separation between Chippenham and the surrounding towns and villages, e.g. Tytherton Lucas, Lacock, Old Derry Hill, Pewsham, Stanley, Bremhill, Calne Without, and Lackham. Concerns were also raised regarding impacts on the accessible amenity of walking and cycling routes, and requests were made for tree planting and use of topography to minimise landscape impacts. A small number of responses were received which stated a preference for Option A as this option minimised landscape impacts and protected walking routes/countryside access.

In relation to Zone 1, a concern was raised that the Option A route appears to rise on to higher ground to the south, and would be better heading straight east.

With regard to Zone 2, a number of concerns were raised (including from the Wilts & Berks Canal Trust) regarding the proximity of the route to Pewsham Locks, and the impact this would have on the rural solitude of the canal towpath and this area. Landscape impacts on Lackham were also raised as a concern.

In Zone 3, comments were made in relation to the visual prominence of the road in this area, and concerns raised regarding the wide route of the road.

In Zone 4, comments were made in relation to the visual prominence of the road in this area, and concerns were raised about landscape impacts on Stanley Lane, Tytherton Lucas and the Chippenham – Calne cycle route. A landowner in this zone noted their support, if adequately compensated.

In relation to Zone 5, a concern was raised regarding the landscape impacts of the River Avon crossing.

Landscape – Future Chippenham officer response

The draft Concept Framework for the site and the road options put forward during the consultation were informed by landscape assessments and studies. Further development of the road route option and Framework Masterplan will be supported and informed by a more detailed landscape assessment that will ensure the most sensitive landscape elements are protected and where possible enhanced. This will include the river corridor and the existing country park. Where less sensitive landscape is identified for development then suitable mitigation such as landscape planting, topography and design will be identified accordingly. The Framework Masterplan will ensure that a generous amount of open space, over and above locally required standards, is provided for the local community to enjoy in perpetuity.

In support of the road route options, a desk-based landscape and visual impacts study was undertaken and covered a 1km study area surrounding the site/route options as detailed in section 3.6 of the PEAOR summary report²⁸. This detailed landscape mitigation recommendations that could be implemented, including:

- careful siting of the highway to avoid significant landscape and visual effects.

²⁸ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 8 – Option A (outer route)

- avoidance of the loss of mature trees, hedgerows and safeguarding of existing habitats.
- limiting vegetation removal to that required to undertake the works.
- mitigation planting and/or screening bunds being designed to provide both adequate screening of the highway whilst remaining mindful of the character of the existing landscape to enable the new highway to integrate.
- creation of wet woodland in specific locations to provide both biodiversity and amenity benefit.
- ensuring the design of structures and finishes associated with the river crossings be locally distinctive and reflect a high quality of design.
- ensure the scheme integrates with local neighbourhoods to provide benefits for walkers and cyclists in the local area.

The consultation identified concerns that the scheme could cause coalescence between Chippenham and existing settlements such as Bremhill and Calne. The development of the Framework Masterplan will be supported by further landscape assessment which will consider this issue in more detail. Where appropriate, landscape buffers and mitigation will be proposed to ensure that separation and preservation of the identity of surrounding settlements is preserved.

Agricultural land

There were 34 responses to Question 8 (Option A: outer route) that commented in relation to agricultural land, with the majority of these being an objection to the loss of agricultural land. A specific objection to loss of agricultural land in Zone 4. One respondent expressed a preference for Option A on that grounds that it is further away from farms.

Agricultural land – Future Chippenham officer response

Any development on the site will be supported and informed by a detailed agricultural land assessment, with a key objective being to avoid development that would result in the loss of Best and Most Versatile farmland.

The majority of soils within the study area are known to be classified as grade 3B and therefore are not recorded as the best and most versatile soils for agricultural use. However, there are known pockets of grade 1 and 2 soils (higher quality) in Zone 1, with sections of grade 3A soils interspersed across all zones.

It is anticipated that, subject to the site being allocated for development in the Local Plan, council owned land will be proposed for the development of the range of uses, potentially including housing, essential infrastructure and public open space. This will require existing farm uses to cease and farm tenants will be served notice to quit in the long term. Whilst some farming activities will remain on licences or other short term arrangements, it is not anticipated that they will remain in the long term.

Summary of responses to Question 8 – Option A (outer route)

Theme: Heritage (Appendix C6)

Heritage

There were 11 responses to Question 8 (Option A: outer route) that addressed heritage. A number of concerns were raised regarding the potential to negatively impact on heritage assets, including Tytherton Lucas conservation area, the National Trust's Lacock site, assets at Old Derry Hill, an 18th century stone bridge over the River Marden, Scott's Mill, Maud's Heath monument, Pewsham House, Old Pewsham and Forest Gate.

Heritage - Future Chippenham officer response

The draft Concept Framework developed to support the road route options assessment sought to ensure the protection of existing heritage sites and integration into any development in the future. This will be further incorporated into the Framework Masterplan which will be supported and informed by detailed heritage assessments to ensure that the most sensitive historic elements are protected and where possible enhanced. This will include archaeology, buildings of heritage value and historic landscapes, and will consider the assets highlighted by consultees. The principle that will underpin the Framework Masterplan will be to, wherever possible, identify heritage assets and avoid impacts (i.e. plan around them). Where some impact is seen as unavoidable then suitable mitigation will be discussed and agreed with the appropriate heritage bodies.

In support of the road route options, desk based assessments of archaeological and heritage impacts were carried out as detailed in the PEAOR summary report²⁹. This was presented alongside detailed mitigation recommendations, including careful siting of the highway to avoid significant impacts.

Theme: Economy and infrastructure (Appendix C7)

Employment and economy

There were 21 responses to Question 8 (Option A: outer route) that addressed employment and the economy. Many of the concerns raised revolved around a perceived lack of retail and leisure facilities, and employment opportunities in Chippenham, and reservations about the town's ability to accommodate further growth. It was noted that the town is in need of regeneration, with potential opportunities for brownfield redevelopment following the pandemic.

Employment and economy – Future Chippenham officer response

This consultation was about identifying a preferred road route should infrastructure be required. Matters with respect to the economy were not within the scope of the road route

²⁹ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 8 – Option A (outer route)

options consultation, but nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the site.

In line with national planning legislation, it is a requirement of the council's Local Plan to identify how and where projected employment needs for the next 20 years can be met in the most environmentally sustainable way. Given that Chippenham will need new homes, then it is sustainable to provide employment opportunities within the same development. This provides local opportunities and cuts down the need for largescale commuting. A function of the new road will be to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre, improve connectivity and travel within and around the town. Evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

Infrastructure and services

There were 5 responses to Question 8 (Option A: outer route) addressing infrastructure and services, including similar concerns about the capacity of the town's infrastructure to deal with future growth. Requests were made for a new petrol filling station and that development avoid negative impacts on Stanley Park sports ground.

Infrastructure and services – Future Chippenham officer response

Any development will need to be supported by infrastructure. This was identified in the draft Concept Framework which informed the road route options assessment process. This will be refined further during the development of the Framework Masterplan and will include both critical and community infrastructure including the following:

- School provision
- Heath facilities
- Open space and play areas
- Indoor and outdoor leisure facilities
- Open spaces
- Country parks
- Local centres/small scale retail
- Community halls
- Public houses
- Churches

Preparation of the Framework Masterplan will be informed by ongoing dialogue between the Future Chippenham team and key stakeholders and service providers to ensure that capacity needs are identified and accommodated for within the plans for the site.

The submission to the Local Planning Authority to demonstrate that the Future Chippenham site is the most sustainable option in which to meet the town's future growth needs, will include an Infrastructure Delivery Plan (IDP) setting out the infrastructure that is required to

Summary of responses to Question 8 – Option A (outer route)

be delivered and by when. This IDP will support future Local Plan representations, masterplan and planning applications.

The routing of the road and layout of the future development in a way which protects and supports the strategically important Stanley Park sports ground facility is of critical importance.

Health and social wellbeing

There were 6 responses to Question 8 (Option A: outer route) all noting concerns that the development could have negative implications on health and wellbeing.

Health and social wellbeing – Future Chippenham officer response

Health and social wellbeing are fundamental considerations of the draft Concept Framework that have informed the road route options assessment. The scale of the proposed growth in the draft Concept Framework allows a strategic approach to the provision of landscape and green infrastructure which will deliver social, economic and environmental benefits. The proposed Country Park offers a significant area of open space which will support the future health and wellbeing of existing and future residents. The river and its flood meadows will also become a 'unifying strand' in the green infrastructure network.

Public health matters will be assessed further as part of the development of the Framework Masterplan and road design and there will be a chapter within the Environmental Impact Assessment which will accompany all submissions, detailing the assessments undertaken, impacts identified, mitigatory measures to be implemented and opportunities for improvements where practicable. Similarly, the EIA will address social issues including the provision of affordable homes, accessible homes for the mobility impaired, access to education and healthcare services and incorporation of the principles of safe by design. The points regarding potential detrimental impacts on people's health arising from this scheme are noted and accepted as valid. It will be important in the continuing design process for the Framework Masterplan that this issue is addressed and to ensure this the process will include consultation with the NHS and be designed to minimise impacts and optimise opportunities, such as the provision of a new network of public green open space including trim trails and enhanced cycle and walking opportunities.

Theme: Planning (Appendix C8)

Relationship with the Local Plan review/Prematurity

There were 25 responses to Question 8 (Option A: outer route) making reference to the Future Chippenham project's relationship with the Local Plan review. The majority of these were concerns that the case for the scale of development proposed in Chippenham has not yet been fully debated through the Local Plan review process, and that consultation on the distributor road is premature, with concerns raised about predetermining the outcome of the Local Plan review. Concerns were also raised regarding the Local Plan review site selection process. It was noted there appeared to be a lack of strategic vision for Chippenham, while

Summary of responses to Question 8 – Option A (outer route)

another noted that Route A gives the greatest scope for the council to allocate sites for housing and industry, to avoid piecemeal development.

Relationship with the Local Plan review/Prematurity – Future Chippenham officer response

Matters relating to the Local Plan review are not within the scope of the road route options consultation, although this report will be shared with Wiltshire Council's Spatial Planning team. The comments received do nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing the Framework Masterplan for the site.

While ideally a planning application for the road or any wider development would not be submitted until the Local Plan review is complete, there are many precedents set where applications that accord with an emerging Local Plan which has reached an advanced stage within the process have been permitted, so as to ensure timely delivery of housing and critical infrastructure.

The next stage of the process is to include a Framework Masterplan which will set out the vision and context for the development. This will be subject to full consultation in due course and be supported by a design code which will provide more detail.

Compatibility with made/emerging neighbourhood plans

There were 2 responses to Question 8 (Option A: outer route) raising concerns about the potential conflict between the options in Zones 3 and 4, and the Bremhill Neighbourhood Plan.

Compatibility with made/emerging neighbourhood plans – Future Chippenham officer response

This consultation related to the preferred road route for road infrastructure should the area be allocated for housing. Matters relating to the acceptability in principle of developing in a particular area will be key considerations for the Local Plan review process. Comments relating to neighbourhood plan policy requirements are also relevant to the masterplanning stage of the project, and relevant neighbourhood plans will be considered as part of the evidence review supporting the production of the Framework Masterplan. The project team will ensure further discussion is had with the relevant town and parish councils, or neighbourhood plan steering groups to ensure proposals are as joined up as possible.

Housing/Scale of development

There were 81 responses to Question 8 (Option A: outer route) raising matters surrounding housing and scale of development. A large proportion of these were comments that there is insufficient evidence to support the scale of housing proposed, and questioned whether evidence to support the proposed allocation was out of date. The scale of development was of key concern to a number of respondents, who raised objections about overurbanisation of the area between Chippenham and Calne. Some respondents noted that Option A was

Summary of responses to Question 8 – Option A (outer route)

preferred as this would futureproof the town for development that is required in the future. It was requested by some that brownfield sites be developed ahead of this site.

Housing/Scale of development – Future Chippenham officer response

Matters regarding the scale and location of development being proposed are not within the scope of the road route options consultation, but nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the site. This report will also be shared with Wiltshire Council's Spatial Planning team for their information.

Theme: Consultation and process (Appendix C9)

HIF bid and funding

There were 27 responses to Question 8 (Option A: outer route) addressing matters related to the HIF bid and funding. Over half of these were comments that Option A was the most expensive route to deliver, raising concerns that it is too expensive or not viable, with some specific references being made to the viaducts that would be required to facilitate Option A. Concerns were raised in relation to the HIF bid process, with comments that there was insufficient consultation ahead of the bid being made, that the council should return the funds to Homes England, and that the project appears to be being rushed in order to meet grant timescale conditions. Concerns were also raised regarding the ethics of raising funds by selling council owned farms.

HIF bid and funding – Future Chippenham officer response

The council acted in a proactive manner to seek central government funding to ensure that infrastructure could be in place to unlock housing should the area be allocated through the Local Plan review, on land recognised for potential future growth within the earlier examination of the Chippenham Site Allocations Plan. The successful bid for funding provides a resolution to the potential barriers for the site and enables a holistic approach to the delivery of critical infrastructure to meet the strategic need of the town, alongside other benefits for the town as a whole. At the time of the bid submission it was expected that the Local Plan review would have completed its public consultation on its spatial strategy prior to any awards being made by MHCLG. Delays in the Local Plan review timetable meant that the grant was awarded in advance of this stage of the Local Plan. However, this does not affect the fact that the application for the funding was made based on identified need on a particular site. The successful bid for central government funding was based on a business case which demonstrated good value for money.

Process/Consultation

There were 31 responses to Question 8 (Option A: outer route) addressing Future Chippenham's consultation process. A majority of these were criticisms that there was not a 'no road' option offered on the consultation form. Another view expressed was that the consultation should not have been on the road alone, and should have included opportunity

Summary of responses to Question 8 – Option A (outer route)

to comment on the proposed homes as well. There were also concerns that the options were too similar and did not offer enough choice, and that the material was not clear or that responses to questions raised during the consultation were not clear.

Process/Consultation – Future Chippenham officer response

The consultation accorded to the Local Planning Authority's adopted Statement of Community Involvement as amended in July 2020 that implemented an interim approach to public consultation in light of restrictions imposed due to the COVID-19 pandemic. Whilst the unique circumstances of the pandemic meant that face-to-face consultation was not an option, alternative COVID safe methods of outreach, such as online webinars and a video, were employed which enabled effective engagement. The results of the consultation with just under 1,200 individual representations being received indicates that the techniques employed have been successful.

It is not uncommon for councils to take an active role in the development of land within their ownership, and procedures are in place to ensure that there is a clear internal organisational separation between teams promoting a development (in this case Future Chippenham) and teams responsible for undertaking the regulatory functions of the council (the Local Planning Authority). Similarly, the elected Councillors who sit on the planning decision making committee (in this case Strategic Planning Committee) will be bound by the law and code of practice to consider the case before them solely upon its planning merits taking into account planning policy and all other material planning considerations, including the results of consultations.

The principle of whether the road and potential wider development should go ahead, including the consideration of alternative options, is for the Local Plan review to address. As explained at the beginning of Section 4, the Future Chippenham road route options consultation took place around a working assumption that the project could be taken forward should an appropriate allocation be made in the Local Plan review. As such, the consultation form did not include a specific question asking for feedback on whether or not consultees supported the new road in principle, as it had already been confirmed that should there be any such development a new road will be required to avoid insurmountable negative impacts on the existing highways network. The consultation did enable consultees who wished to record their objection to any road through a number of free text fields built into the consultation form. In addition, consultees could choose to send an email or letter instead of completing the consultation form.

Theme: General (Appendix C10)

General

There were 470 responses raising general issues in response to Question 8 (Option A: outer route). The considerable majority of these were objections to the road, with views expressed that the road is not wanted, not needed or justified, and should not be progressed. A number of respondents commented that Option A was considered to be the best route option, that it would have least impact on existing properties, or be the least disruptive. Others commented that Option A would be least preferable option, or noted that this option scored worst in the

Summary of responses to Question 8 – Option A (outer route)

assessment process. Other general comments were made including concerns about impacts on house prices.

General – Future Chippenham officer response

We note the high number of representations saying that the road is not required. It is important to understand the context for the road.

In line with national planning legislation, every council in the country must be able to demonstrate a positive plan for how it can meet projected housing needs for the next 20 years and more. It is the role of the council's Local Plan to identify how and where this need can be met. The need for a significant number of new homes has been identified in this area by the Local Planning Authority following national planning guidelines. The question is therefore not if we should build new homes (as required by law), but how these can be best located and designed to benefit the wider community and be the most environmentally sustainable they can be. Given that Chippenham will need new homes, the function of the new road is to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre, improve connectivity and travel within and around the town. Evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

If none of the road options are pursued (and the £75 million funding returned to Government), it is not the case that the status quo will be maintained. The council will still be under a statutory obligation to meet its housing and employment needs and hence the same level of development will have to be built at Chippenham either through different site allocations or in a piecemeal, unplanned manner via speculative developments, which may not deliver the benefits for the town that the Future Chippenham site could. Under planning law, where a council cannot demonstrate a deliverable supply of homes to meet local needs there is a presumption in favour of granting planning permission for development, and the council and community could lose control of the process.

Summary of responses to Question 9 - Option B (middle route)

4.28. The full lists of summarised points relating to Option B (middle route) can be found at **Appendix D (1-10)**. The comments received were grouped under the following broad themes:

- Transport
- Climate change and flooding
- Pollution and air quality
- Ecology and environment
- Landscape
- Heritage
- Economy and infrastructure
- Planning
- Consultation and process
- General

- 4.29. A high level summary of the comments received is set out below along with officer responses to the points raised. Where appropriate the officer responses explain how the points raised have and will influence the project going forward, including through road design, road route options decision making, and the subsequent Framework Masterplanning process.

Summary of responses to Question 9 – Option B (middle route)

Theme: Transport (Appendix D1)

Transport

There were 266 responses to Question 9 (Option B: middle route) that were judged to fall within the theme of transport. Comments applicable to all the zones included concerns about increase congestion, and the potential for increased car use and commuter traffic. Comments received also noted concern about negative impacts on pedestrian and cycle recreation routes, and requests were made for investment into improving sustainable transport options including public transport and cycle/pedestrian routes. Some respondents queried the justification for the road, with some comments against the principle of the road, while others felt this road would be beneficial. A small number of respondents felt the new road should be delivered to function as a bypass. Some held the view that the road would help alleviate traffic issues, while others expressed a view that the future development would add pressure to the highways network. There were some concerns regarding the potential for this option to impact on nearby residential areas at Pewsham, while impacts on Monkton Park was felt by one to be less intrusive than other options. Some safety concerns were raised, for example in relation to the proximity of the route to the cycle network. A query was raised as to why the Option B route did not follow the route of the electric pylons, so as to minimise impacts on future residents. A concern was also raised that this option would require two very long bridges.

Landowners Gleeson request to work with the council on delivering an access route to the link road from the A4 London Road, and also comment that the consultation material presents a 'best fit' route which does not align to Option B, which is considered to be unjustified.

A range of views were received as to whether Option B was better or worse than the other road route options, with some suggestions of alternative or hybrid routes. The Environment Agency commented that a hybrid of options A and B would be preferred.

With specific reference to Option B through Zone 1, a number of comments were received which expressed support for the proposed connection with A350 at Lackham roundabout, although a small number of concerns were raised about increased congestion here and whether this could be delivered without removing the Lackham College exit. A number of respondents noted that Option B was the preferred route in this zone, including landowners in this area, albeit Stagecoach West noted that utilising the existing Pewsham Way would be the most logical bus route to support a sufficiently direct and regular service. A concern was also raised about the scale of the bridge that would be required in this zone.

Summary of responses to Question 9 – Option B (middle route)

With specific reference to Option B through Zone 2, comments were received relating to Option B's connection to the Pewsham link road option 3 with some support, but also concerns about the alignments of the road to facilitate efficient connectivity with Pewsham and Chippenham town centre. Comments were also raised about the relationship of the road to Pewsham, with one comment that it was too close to Pewsham and another noting that it is largely parallel to the existing Pewsham Way which should be utilised instead. Landowners in this area supported Option B within Zone 2.

With specific reference to Option B through Zone 3, a large number of objections were raised to the proposed staggered junction with the A4, and it was felt that a roundabout would be preferable, for reasons including less likelihood of congestion and highways safety. A small number of respondents expressed a preference for the staggered junction. Some concerns were raised regarding potential impacts on Stanley Lane, and some suggestions were made that the route should not proceed north of the A4.

With specific reference to Option B through Zone 4, a large number of concerns were raised about the impact this route would have on the Chippenham to Calne cycle route. It was suggested that the route should go over or under the cycle path to avoid disruption. Concern was raised that the route through Zones 4 and 5 would result in increased traffic load at Hill Corner, Jacksom's Lane and Kington Langley.

With specific reference to Option B through Zone 5, queries were raised how the route would effectively tie in with Monkton Park to address congestion around the station, how it would connect with Rawlings Green, and to Langley Road.

Transport: Future Chippenham officer response

Developing a simple range of options for sustainable transport is critical to the success of the Future Chippenham project, especially in providing evidence to support residents in engaging meaningfully in the process when considering the opportunities to deliver sustainable transport solutions for their town. A draft Concept Framework plan identifies sustainable transport opportunities and will be further developed into a Framework Masterplan for the whole area to show how the road will sit in context and how the development opportunities it presents may be delivered in the most beneficial way for the whole town. Delivering truly sustainable development will be at the heart of the Framework Masterplan and the road, whichever route is preferred, will be designed to promote sustainable transport as its principle objective with the provision of segregated cycling and walking routes as well as seeking to enhance public transport.

The responses provide valuable insight which will also be taken into consideration through the subsequent stage of preparing a wider Framework Masterplan for the site. The Framework Masterplan will be accompanied and underpinned by a sustainable transport strategy which will explain how the objectives of optimising sustainable transport patterns will be achieved, including walking, cycling and public transport. Where appropriate, segregated pedestrian and cycle routes will be provided alongside the distributor road and roads through any development that the road unlocks. Public transport links will also be a key consideration. Wherever possible cycle and pedestrian routes will be extended and links to existing networks towards Chippenham town centre, and the surrounding areas will be provided.

Summary of responses to Question 9 – Option B (middle route)

Public rights of way will be improved where appropriate and it will be ensured that safe crossing points are improved where necessary. Responses relating to public rights of way are welcomed and will be taken into consideration through the subsequent stage of preparing a wider Framework Masterplan for the site. The Public Rights of Way network will be protected and, where appropriate, enhanced through the development of the site. Wherever possible, rights of way will be retained in their existing layout, and only where diversions are absolutely necessary to the delivery of the development will suitable diversions to the network be proposed.

Where it is possible, opportunities to extend bus routes will be considered, introduced and improved with the introduction of any housing development that could be unlocked by the delivery of the distributor road. Some of the responses relating to public transport, provide valuable insight and will be taken into consideration through the subsequent stage of preparing a wider Framework Masterplan for the site.

Sustainable transport will be integral to the development and it will ensure that space for bus stops is incorporated into the design of the distributor road, where appropriate. The Framework Masterplan will consider as a priority the promotion of sustainable modes of transport including the use of low emission vehicles, cycling and walking and seek opportunities through wider improvements to reduce town centre congestion which has an impact on air quality.

The following section of the officer's response refers to comments made about Option B, Zone 1:

There were a number of comments with a preference for connecting the distributor road directly to the A350 at Lackham roundabout, connecting to the existing highway at this location would form a logical part of the transport network and is likely to operate more efficiently than the connection on the B4528. In this scenario a new junction from the highway network to the college would be included in the scheme.

A range of options were included in the Housing Infrastructure Fund (HIF) bid that comprise a southern distributor road between the A350 Lackham roundabout and the A4, a northern distributor road between the A4 and Parsonage Way and the full eastern distributor road combining both northern and southern routes. This assessment is included in the Options Assessment Report (OAR) as part of the road options public consultation and provides indicative land development requirements, cost estimates and benefit cost ratios. Whilst all three of these options indicate good benefit cost ratios the full eastern distributor road indicates the best benefit cost ratio and as such was progressed to public consultation. It should be noted that the quantum of development work undertaken for the business case submission to the Housing and Infrastructure Fund (HIF) and the Options Assessment Report (OAR) is subject to further review and quantum of development will be informed and allocated as part of the Local Plan.

Concern with the long length of bridge is noted, this option does have a greater impact on the environment and higher costs than Option C, however it does represent a lower environmental impact and costs than Option A in zone 1. An Environmental Impact Assessment (EIA) will be included in the planning application, appropriate environmental mitigation will be included in the proposals.

Summary of responses to Question 9 – Option B (middle route)

Feedback from Stagecoach is noted with a general preference for Option B throughout the scheme extents but also notes a concern with relevance and effectiveness for this option in zone 1 and 2. Noting that Stagecoach would support a study that provides an alternative distributor road route linking Avenue le Fleche to Bath Road via a shorter link road. This route would connect to the A4 on Rowden Hill via St Luke's Drive. This alternative route would directly cut through the Rowden Park conservation area and would impact the setting of the scheduled ancient monument and listed buildings at Rowden Manor.

Furthermore, consideration would need to be given to the transport modelling and available land for junctions with practical capacity (particularly at Rowden Hill), and providing a road that unlocks housing development through creation of additional transport network capacity but also provides access and distribution for development land. Meetings are planned with bus network operators to coordinate an appropriate level of bus service provision. Bus stops to serve the adjacent development and Wiltshire College & University Centre at Lackham will be considered as part of this review.

It is noted that this is the land developers preferred option in zone 1.

The following section of the officer's response refers to comments made about Option B, Zone 2:

Numerous comments relating to Option B in Zone 2 and Zone 3 relate to the junction with the A4 which is shown as a staggered junction due to potential land constraints to the northwest and southeast of the route alignment where it crosses the A4. Comments suggest a strong preference for a roundabout at this location. Transport modelling has been undertaken and it is likely that a roundabout or double roundabout junction is feasible and is also the preferred junction type at the A4. The transport assessment will progress in further detail following additional feedback from the Framework Masterplan and discussions with landowners prior to submission of the planning application.

Option B through zone 2 links the Future Chippenham development at South Chippenham to the A4, it is necessary to provide access to the development, whilst also providing an additional route to the A350 and the A4. A strategic signing strategy and impact on the existing road network will be reviewed by transport modelling in order to achieve approval by Wiltshire Council Highways as part of the planning application.

Any detrimental impact on the existing road network will be identified and mitigation proposed for review and approval by Wiltshire Council Highways.

It is noted that this is the land developers preferred option in zone 2.

The following section of the officer's response refers to comments made about Option B, Zone 3:

Numerous comments relating to Option B in Zone 2 and Zone 3 relate to the junction with the A4 which is shown as a staggered junction due to potential land constraints to the northwest and southeast of the route alignment where it crosses the A4. Comments suggest a strong preference for a roundabout in this location. Transport modelling has been undertaken and it is likely that a roundabout or double roundabout junction is feasible and is also the preferred

Summary of responses to Question 9 – Option B (middle route)

junction type at the A4. The transport assessment will progress in further detail following additional feedback from the Framework Masterplan and discussions with landowners prior to submission of the planning application.

Junctions and amendments to the existing transport network will be considered as part of the transport assessment for the planning application. A full review of impacts on the existing network will contain mitigation including amendments to speed limits, junction capacity upgrades, access restrictions, and traffic calming will be considered. Speed limit amendments and access restrictions will be subject to the Traffic Regulation Order process. The distributor road is likely to form a roundabout junction with Stanley Lane, with speed limit reductions either side of the new junction and traffic calming or restricted access considered on the western arm to Abbeyfield School; this is subject to further assessment and review with the Framework Masterplan and transport assessment.

Access to the Highway network for all existing residents, schools and businesses will be retained.

A range of options were included in the Housing Infrastructure Fund (HIF) bid that comprise a Southern distributor road between the A350 Lackham roundabout and the A4, a northern distributor road between the A4 and Parsonage Way and the full eastern distributor road combining both northern and southern routes. This assessment is included in the Options Assessment Report (OAR) as part of the road options public consultation and provides indicative land development requirements, cost estimates and benefit cost ratios. Whilst all three of these options indicate good benefit cost ratios the full eastern distributor road indicates the best benefit cost ratio and as such was progressed to public consultation. It should be noted that the quantum of development work undertaken for the business case submission to the Housing and Infrastructure Fund (HIF) and the Options Assessment Report (OAR) is subject to further review and quantum of development will be informed and allocated as part of the Local Plan.

A route option using Stanley Park or Stanley Lane would provide highway access along the existing road network to development land to the north of the A4. Development north of the A4 is likely to be possible but the impact on the existing road network and surrounding schools and residents would need to be considered in more detail. Development growth north of the A4 for this option is likely to be limited.

The following section of the officer's response refers to comments made about Option B, Zone 4:

A number of comments related to the impact on the disused railway line, National Cycle Network (NCN) route 403 are noted. These concerns included the impact of usability and ability to cross a distributor road. For any locations of crossing of this popular walking and cycling route, a signalised crossing will be provided. This will also connect with facilities along the length of the distributor road.

A connectivity plan will be progressed as part of the Framework Masterplan. It is likely that route Option B would retain the use of Hardens Lane for cycle and pedestrian movement which is not crossed by the road but can be accessed via the National Cycle Network (NCN) route 403 from the road. An additional cycle and pedestrian route alongside the road would also be provided. Additional links to other routes to provide a new network of commuting and

Summary of responses to Question 9 – Option B (middle route)

recreation routes for sustainable travel between new and existing developments will be proposed as part of the Framework Masterplan and delivered via the land development applications/contributions depending on Wiltshire Council's Planning Authority policies and conditions.

Cycle and pedestrian infrastructure will be designed to Local Transport Note 1/20 and Wiltshire Council Highways requirements in order to meet planning approval. An independent road safety audit will be undertaken; issues raised will be assessed by the Future Chippenham Highways design team to resolve as part of a design update.

A range of options were included in the Housing Infrastructure Fund (HIF) bid that comprise a southern distributor road between the A350 Lackham roundabout and the A4, a northern distributor road between the A4 and Parsonage Way and the full eastern distributor road combining both northern and southern routes; this assessment is included in the Options Assessment Report (OAR) as part of the road options public consultation and provides indicative land development requirements cost estimates and benefit cost ratios. Whilst all three of these options indicate good benefit cost ratios the full eastern distributor road indicates the best benefit cost ratio and as such was progressed to public consultation. It should be noted that the quantum of development work undertaken for the business case submission to the Housing and Infrastructure Fund (HIF) and the Options Assessment Report (OAR) is subject to further review and quantum of development will be informed and allocated as part of the Local Plan.

The following section of the officer's response refers to comments made about Option B, Zone 5:

The north eastern end of the distributor road follows the alignment of the Rawlings Green distributor road and rail bridge. The distributor road and associated land development for Rawlings Green has submitted an outline planning application under planning reference 15/12351/OUT. The route goes through the middle of the development area shown in the outline planning application. At the time of this public consultation response, Wiltshire Council's planning committee have resolved to grant planning permission subject to the signing of a S106 agreement.

The distributor road alignment presented for public consultation in zone 5 is supported by the landowner/developer.

The impact of the distributor road through Rawlings Green on traffic safety, the environment (including noise and pollution) and walking and cycling will be assessed as part of the Future Chippenham distributor road planning application.

After crossing the rail bridge, the road continues along a new road parallel to Parsonage Way, crosses the B4069 via two junctions and continues along a new distributor road past Birds Marsh to connect to the A350 at Malmesbury roundabout. M4 Junction 17 is then accessed via the A350. All of the route from the rail bridge is included as part of other developer planning applications, details are available on Wiltshire Council's planning portal³⁰.

³⁰ Wiltshire Council, planning portal, available at: <https://development.wiltshire.gov.uk/pr/s/>

Summary of responses to Question 9 – Option B (middle route)

The access road from the Rawlings Green development site through to Darcey Close would be delivered by the Rawlings Green development as part of planning application 15/12351/OUT or an alternative future application for development of the land.

Theme: Climate change and flooding (Appendix D2)

Climate change

There were 40 responses to Question 9 (Option B: middle route) that covered matters relating to climate change, with almost all being concerns about the project's climate impacts, concerns regarding carbon costs and compatibility with the council's declaration of a climate emergency. One respondent noted that Option B is shorter and therefore would have a lower carbon impact.

Climate change – Future Chippenham officer response

Addressing the climate emergency is an underpinning objective for the Future Chippenham project. Given that Chippenham will need new homes, the function of the new road is to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre and improve connectivity and travel within and around the town.

The Future Chippenham team consider all evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

Part of this will be the focus on supporting self-containment through the delivery of jobs, services and facilities which enable residents to meet their everyday needs within the town itself rather than needing to travel. Futureproofing development so that new builds are constructed to policy compliant carbon standards, alongside a framework of significant green infrastructure, spaces for nature and sustainable transport opportunities will also be critical.

These matters will be addressed through the subsequent stage of preparing the Framework Masterplan for the site. Garden settlement principles will be applied, with decarbonisation and the need to meet the challenges of the climate emergency will be underpinning principles. The Future Chippenham project will seek to be aspirational and identify opportunities to exceed planning policy requirements wherever practicable. Consideration will be given to extend initiatives within the proposed Framework Masterplan area and the wider area so that the town moves towards the same objectives and goals.

Flooding

There were 25 responses to Question 9 (Option B: middle route) that covered matters relating to flooding, largely raising general concerns that the development could result in an

Summary of responses to Question 9 – Option B (middle route)

increased risk of flooding or objection to building on flood plains. Detailed advice was received from Wiltshire Council's drainage team.

With regard to Zone 3 a comment noted specific concerns around flooding in this area, such as at Westmead playing fields.

Flooding – Future Chippenham officer response

The rivers in and around the site are important features in the landscape as well as being environmental assets, and will be key considerations in the design and layout of the site in the Framework Masterplan.

Desk based assessments of the water environment were carried out in support of the road route options stage, which set out a number of mitigation measures to be employed to reduce runoff and pollution from construction activities into local watercourses and groundwater receptors. This is further detailed within Section 4.5 of the PEOR summary report³¹.

Proposals for development of the site will be further supported and informed by detailed flood risk assessments, which will consider flood risk in the areas noted. A principle that will underpin the Framework Masterplan will be to, wherever possible, identify and avoid development in areas at risk of flooding (Flood Zones 2 and 3). Where some impact is seen as unavoidable then suitable mitigation will be discussed and agreed with the appropriate drainage bodies. Ongoing assessment work will identify areas that are more susceptible to flooding, including groundwater flooding, and identify mitigation and drainage strategies to be put in place.

It is expected that that the development proposals will include measures to alleviate flood risk in some areas.

The Environment Agency's comments are noted and will be taken into account when considering the final route recommendation.

Theme: Pollution and air quality (Appendix D3)

Pollution and air quality

There were 43 responses to Question 9 (Option B: middle route) that addressed pollution and air quality. The majority of these were concerns that this development would result in an increase of air pollution, while others noted a concern about increased noise pollution. Concerns were raised that mitigation measures would not be enough to address these issues.

³¹ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 9 – Option B (middle route)

Specific concerns were raised in relation to the route through Zones 3 and 4, including air pollution concerns regarding the proposed staggered junction at the A4, and observations that light and noise pollution may not be mitigatable around New Leaze Farm due to the elevated position of the route.

Pollution and air quality – Future Chippenham officer response

The draft Concept Framework plan that supported the road route options assessment provided the foundations to ensure that pollution and air quality were considered from the outset.

The Framework Masterplan will address the need to minimise the impacts of air pollution, light pollution, and noise pollution. Comments regarding pollution, air quality noise and light pollution provide valuable information which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the wider site and design of the final road option chosen. All aspects of pollution will be further assessed as part of the development of the wider Framework Masterplan and road design to be accompanied by an overarching Environmental Impact Assessment. This will clearly outline potential impacts and proposed measures identified as necessary to mitigate them. Potential impacts during construction will also be avoided where possible, and where not possible mitigated by employing best practise construction practice.

Whilst air quality modelling or noise impacts assessments are yet to be undertaken, it is recognised that selection of a route located furthest from pollutant receptors would assist in reducing potential air quality impacts, and there is potential for the use of noise dulling barriers (such as landscape bunding) to help ameliorate the impacts of noise.

Theme: Ecology and environment (Appendix D4)

Ecology

There were 57 responses to Question 9 (Option B: middle route) that raised issues around ecology. The majority of these were concerns about the development leading to potential negative impacts on biodiversity, wildlife (including protected species) and habitats. Some comments were raised that Option B was preferable due to minimised impacts on ecology when compared to the other options. It was also commented that biodiversity net gain should be achieved and suggested that there should be partnership working with the local Wildlife Trust. A concern was raised about potential impacts on wildlife at Baydon's Meadow. Concerns were also raised that there had been no Environmental Impact Assessment carried out.

In relation to Zone 1, comments, including from the Environment Agency (EA), noted that Option B is preferred route in terms of both water environment and biodiversity in this area.

The EA also noted support for the route through Zone 3 due to having the fewest watercourse crossings, although others raised concerns about the potential impacts on wildlife within the zone. A comment was raised that Option B resulted in less impact on great crested newt habitat than other options.

Ecology – Future Chippenham officer response

An assessment of the biodiversity baseline has been carried out, to inform the road route options assessment process presented in this consultation, including a site-based Extended Phase 1 Habitat survey, a Ground Level Tree Assessment (GLTA) for bats, and wintering bird surveys. Key considerations are the mitigation of any potential impacts on nearby designated sites such as Special Areas of Conservation (SACs), Sites of Special Scientific Interest (SSSIs), Local Nature Reserves (LNRs), County Wildlife Sites (CWSs), Ancient Woodlands, and on any protected or notable species recorded in the area. A range of potential mitigation measures are identified in paragraph 4.4 of the PEAOR summary report³². Further ecological surveys are being carried out, and discussions with Natural England and the County Ecologist are ongoing.

The feedback received identifying individual species (including spotted flycatcher breeding territories and other species such as kites, buzzards, owls and migratory birds, roe deer, voles, hares, rabbits, foxes, badgers, long tailed tits, blue tits, great tits, dunnocks, robins, otters and others) is welcomed, and the Future Chippenham team will ensure that these, plus any others, are taken into account during further ecological evaluations and the design process.

Any development including the road options and wider Framework Masterplan will be further supported and informed by additional detailed ecological surveys, which will form a critical part of the Environmental Impact Assessment for the whole site. The Framework Masterplan will be supported by a suite of ecology assessments that consider impact on all flora, fauna, and their habitat. These studies will identify if important species are present and if so can either be avoided or if avoidance is not possible, identify what mitigation will be needed. Avoidance of impacts will be the preferred option in all cases, and where this is not possible then mitigation may include translocation of species where legislation requires. The scheme will need to show how a net gain for biodiversity is provided in line with local and national planning requirements.

The ability to achieve a biodiversity net gain has been fundamental in informing the draft Concept Framework for the site and will continue to be considered in the development of the Framework Masterplan. It will be ensured that all opportunities for enhancing biodiversity are investigated on a whole site basis and where appropriate on a Chippenham wide basis.

The Future Chippenham team are committed to working in partnership with key environmental stakeholders and statutory consultees in developing the Framework Masterplan, including the Environment Agency, Natural England and Wiltshire Wildlife Trust.

The benefits of developing a whole site Framework Masterplan are key to ensuring that the impacts on ecology can be minimised, and mitigation can be delivered and planned upfront on a holistic scale.

³² Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Theme: Landscape (Appendix D5)

Landscape

There were 202 responses to Question 9 (Option B: middle route) that raised issues around landscape. A large proportion of these were concerns about the impacts on the landscape and rural setting, that the development would be too visible, would result in too much loss of greenspace in the Avon/Marden Valley. Requests for landscape mitigation were made. Concerns were also raised about the loss of separation between Chippenham and the surrounding towns and villages, e.g. Studley, Derry Hill, and Bremhill. Some comments noted that Option B presented the best option in terms of mitigating landscape impacts, although it was noted that Option B encroaches into the countryside more than Option C. Concerns were raised about the potential for this route to impact on the historic canal, including comments from the Wilts & Berks Canal Trust who also noted the need for vehicular access to the canal and parking.

In Zone 1 specific concerns were raised about the landscape impacts of the viaducts that would be required, for example in the countryside between Rowden Manor and Reybridge.

In Zone 2, further concerns were expressed about potential landscape impacts on the rural nature of the canal path, and land south of Pewsham. One respondent commented that the route is less visually intrusive in this zone. Stagecoach West commented that this route impinges least on the northern part of Zone 2 at Forest Farm which is considered to be the most suitable land parcel and is already able to take advantage of a frequent direct bus service.

In Zone 3, the impacts on landscape and visual amenity were raised as issues of concern with particular reference to impacts on the Marden Valley from Bremhill parish. Some comments noted that Option B was less visually intrusive in this zone.

In Zone 4 concerns were raised about impacts on the Chippenham – Calne cycle track and impacts from Tytherton Lucas, with concerns about the route on a high ridgeline. Some comments noted that Option B was less visually intrusive in this zone. Wilts & Berks Canal Trust (WBCT) also commented that north of the A4 the route should recognise WBCT's plan to link the canal main line at Stanley to the River Avon.

In relation to Zone 5, a concern was raised regarding the landscape impacts of the River Avon crossing.

Landscape – Future Chippenham officer response

The draft Concept Framework for the site and the road options put forward during the consultation were informed by landscape assessments and studies. Further development of the road route option and Framework Masterplan will be supported and informed by a more detailed landscape assessment that will ensure the most sensitive landscape elements are protected and where possible enhanced. This will include the river corridor and the existing country park. Where less sensitive landscape is identified for development then suitable mitigation such as landscape planting, topography and design will be identified accordingly.

Summary of responses to Question 9 – Option B (middle route)

The Framework Masterplan will ensure that a generous amount of open space, over and above locally required standards, is provided for the local community to enjoy in perpetuity.

In support of the road route options, a desk-based landscape and visual impacts study was undertaken and covered a 1km study area surrounding the site/route options as detailed in section 3.6 of the PEAOR summary report³³. This detailed landscape mitigation recommendations that could be implemented, including:

- careful siting of the highway to avoid significant landscape and visual effects.
- avoidance of the loss of mature trees, hedgerows and safeguarding of existing habitats.
- limiting vegetation removal to that required to undertake the works.
- mitigation planting and/or screening bunds being designed to provide both adequate screening of the highway whilst remaining mindful of the character of the existing landscape to enable the new highway to integrate.
- creation of wet woodland in specific locations to provide both biodiversity and amenity benefit.
- ensuring the design of structures and finishes associated with the river crossings be locally distinctive and reflect a high quality of design.
- ensure the scheme integrates with local neighbourhoods to provide benefits for walkers and cyclists in the local area.

The consultation identified concerns that the scheme could cause coalescence between Chippenham and existing settlements such as Bremhill and Calne. The development of the Framework Masterplan will be supported by further landscape assessment which will consider this issue in more detail. Where appropriate, landscape buffers and mitigation will be proposed to ensure that separation and preservation of the identity of surrounding settlements is preserved.

Agricultural land

There were 40 responses to Question 9 (Option B: middle route) that commented in relation to agricultural land, with the majority of these being an objection to the loss of agricultural land.

Agricultural land – Future Chippenham officer response

Any development on the site will be supported and informed by a detailed agricultural land assessment, with a key objective being to avoid development that would result in the loss of Best and Most Versatile farmland.

The majority of soils within the study area are known to be classified as grade 3B and therefore are not recorded as the best and most versatile soils for agricultural use. However, there are known pockets of grade 1 and 2 soils (higher quality) in Zone 1, with sections of grade 3A soils interspersed across all zones.

³³ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 9 – Option B (middle route)

It is anticipated that, subject to the site being allocated for development in the Local Plan, council owned land will be proposed for the development of the range of uses, potentially including housing, essential infrastructure and public open space. This will require existing farm uses to cease and farm tenants will be served notice to quit in the long term. Whilst some farming activities will remain on licences or other short term arrangements, it is not anticipated that they will remain in the long term.

Theme: Heritage (Appendix D6)

Heritage

There were 6 responses to Question 9 (Option B: middle route) that addressed heritage. Some concerns were raised regarding the potential to negatively impact on listed buildings at Showell Farm and Tytherton Lucas conservation area. Concerns were also raised about archaeological value of the land.

Heritage - Future Chippenham officer response

The draft Concept Framework developed to support the road route options assessment sought to ensure the protection of existing heritage sites and integration into any development in the future. This will be further incorporated into the Framework Masterplan which will be supported and informed by detailed heritage assessments to ensure that the most sensitive historic elements are protected and where possible enhanced. This will include archaeology, buildings of heritage value and historic landscapes, and will consider the assets highlighted by consultees. The principle that will underpin the Framework Masterplan will be to, wherever possible, identify heritage assets and avoid impacts (i.e. plan around them). Where some impact is seen as unavoidable then suitable mitigation will be discussed and agreed with the appropriate heritage bodies.

In support of the road route options, desk based assessments of archaeological and heritage impacts were carried out as detailed in the PEAOR summary report³⁴. This was presented alongside detailed mitigation recommendations, including careful siting of the highway to avoid significant impacts.

Theme: Economy and infrastructure (Appendix D7)

Employment and economy

There were 9 responses to Question 9 (Option B: middle route) that addressed employment and the economy, revolving around a perceived lack of employment opportunities in Chippenham, and reservations about the town's ability to accommodate further growth.

³⁴ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Employment and economy – Future Chippenham officer response

This consultation was about identifying a preferred road route should infrastructure be required. Matters with respect to the economy were not within the scope of the road route options consultation, but nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the site.

In line with national planning legislation, it is a requirement of the council's Local Plan to identify how and where projected employment needs for the next 20 years can be met in the most environmentally sustainable way. Given that Chippenham will need new homes, then it is sustainable to provide employment opportunities within the same development. This provides local opportunities and cuts down the need for largescale commuting.

A function of the new road will be to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre, improve connectivity and travel within and around the town. Evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

Infrastructure and services

There were 14 responses to Question 9 (Option B: middle route) addressing infrastructure and services. Concerns were raised that there is insufficient infrastructure in the area, and this needs improving. A request was made for a new petrol filling station and that development avoid negative impacts on Stanley Park sports ground. Sport England requested that more information is provided about the potential impacts on Stanley Park sports ground. Concerns were also raised about the proximity to Abbeyfield School.

Infrastructure and services – Future Chippenham officer response

Any development will need to be supported by infrastructure. This was identified in the draft Concept Framework which informed the road route options assessment process. This will be refined further during the development of the Framework Masterplan and will include both critical and community infrastructure including the following:

- School provision
- Heath facilities
- Open space and play areas
- Indoor and outdoor leisure facilities
- Open spaces
- Country parks
- Local centres/small scale retail
- Community halls
- Public houses
- Churches

Summary of responses to Question 9 – Option B (middle route)

Preparation of the Framework Masterplan will be informed by ongoing dialogue between the Future Chippenham team and key stakeholders and service providers to ensure that capacity needs are identified and accommodated for within the plans for the site.

The submission to the Local Planning Authority to demonstrate that the Future Chippenham site is the most sustainable option in which to meet the town's future growth needs, will include an Infrastructure Delivery Plan (IDP) setting out the infrastructure that is required to be delivered and by when. This IDP will support future Local Plan representations, masterplan and planning applications.

Health and social wellbeing

There were 12 responses to Question 9 (Option B: middle route) relating to health and wellbeing matters, raising concerns about loss of greenspace and safe environments for exercise.

Health and social wellbeing – Future Chippenham officer response

Health and social wellbeing is a fundamental aspect of the draft Concept Framework that has informed the road route options assessment. The scale of the proposed growth in the draft Concept Framework allows a strategic approach to the provision of landscape and green infrastructure which will deliver social, economic and environmental benefits. The proposed country park offers a significant area of open space which will support the future health and wellbeing of existing and future residents. The river and its flood meadows will also become a 'unifying strand' in the green infrastructure network.

Public health matters will be assessed further as part of the development of the Framework Masterplan and road design and there will be a chapter within the Environmental Impact Assessment (EIA) which will accompany all submissions, detailing the assessments undertaken, impacts identified, mitigatory measures to be implemented and opportunities for improvements where practicable. Similarly, the EIA will address social issues including the provision of affordable homes, accessible homes for the mobility impaired, access to education and healthcare services and incorporation of the principles of safe by design. The points regarding potential detrimental impacts on people's health arising from this scheme are noted and accepted as valid. It will be important in the continuing design process for the Framework Masterplan that this issue is addressed and to ensure this process will include consultation with the NHS and be designed to minimise impacts and optimise opportunities, such as the provision of a new network of public green open space including trim trails and enhanced cycle and walking opportunities.

Theme: Planning (Appendix D8)

Relationship with the Local Plan review/Prematurity

There were 26 responses to Question 9 (Option B: middle route) making reference to the Future Chippenham project's relationship with the Local Plan review. The majority of these

Summary of responses to Question 9 – Option B (middle route)

were concerns that the case for the scale of development proposed in Chippenham has not yet been fully debated through the Local Plan review process, and that consultation on the distributor road is premature, with concerns raised about predetermining the outcome of the Local Plan review. Concerns were also raised regarding the Local Plan review site selection process and housing figures.

Relationship with the Local Plan review/Prematurity – Future Chippenham officer response

Matters relating to the Local Plan review are not within the scope of the road route options consultation, although this report will be shared with Wiltshire Council's Spatial Planning team. The comments received do nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing the Framework Masterplan for the site.

While ideally a planning application for the road or any wider development would not be submitted until the Local Plan review is complete, there are many precedents set where applications that accord with an emerging Local Plan which has reached an advanced stage within the process have been permitted, so as to ensure timely delivery of housing and critical infrastructure.

The next stage of the process is to include a Framework Masterplan which will set out the vision and context for the development. This will be subject to full consultation in due course and be supported by a design code which will provide more detail.

Compatibility with made/emerging neighbourhood plans

There were 6 responses to Question 9 (Option B: middle route) raising concerns about the potential conflict between the options in Zones 3 and 4, and the Bremhill Neighbourhood Plan, as well as general conflicts with Chippenham, Bremhill, Calne and Calne Without neighbourhood plans.

Compatibility with made/emerging neighbourhood plans – Future Chippenham officer response

This consultation related to the preferred road route for road infrastructure should the area be allocated for housing. Matters relating to the acceptability in principle of developing in a particular area will be key considerations for the Local Plan review process. Comments relating to neighbourhood plan policy requirements are also relevant to the masterplanning stage of the project, and relevant neighbourhood plans will be considered as part of the evidence review supporting the production of the Framework Masterplan. The project team will ensure further discussion is had with the relevant town and parish councils, or neighbourhood plan steering groups to ensure proposals are as joined up as possible.

Housing/Scale of development

There were 93 responses to Question 9 (Option B: middle route) raising matters surrounding housing and scale of development. A large proportion of these were comments that there is

Summary of responses to Question 9 – Option B (middle route)

insufficient evidence to support the scale of housing proposed at Chippenham/on this site. Objections were raised to perceived overurbanisation of the area, with some comments stating a preference for smaller development sites. Concerns were raised about the impacts of a development this large on the existing town. Some comments appeared to assume the route would form an outer boundary to any future development and was therefore preferred. Some respondents noted a desire to see brownfield redevelopment prioritised ahead of development of this site. Option A was preferred as this would futureproof the town for development that is required in the future. It was requested by some that brownfield sites be developed ahead of this site.

Housing/Scale of development – Future Chippenham officer response

Matters regarding the scale and location of development being proposed are not within the scope of the road route options consultation, but nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the site. This report will also be shared with Wiltshire Council's Spatial Planning team for their information.

Placemaking

There were 4 responses to Question 9 (Option B: middle route) which raised concerns that the future development will be generic housing.

Placemaking – Future Chippenham officer response

This consultation was about identifying a preferred road route should infrastructure be required. Matters with respect to design and placemaking are not within the scope of the road route options consultation, but nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the site and road design.

The Framework Masterplan which is being produced currently and will be subject to public consultation in due course, will set out in some detail how the building of the road can help deliver a high-quality development with a unique sense of place and which will mark a step-change in previous recent house building around Chippenham. The Framework Masterplan will be accompanied by a Design Code which will ensure that these design standards are maintained throughout the lifetime of the build.

Theme: Consultation and process (Appendix D9)

HIF bid and funding

There were 32 responses to Question 9 (Option B: middle route) addressing matters related to the HIF bid and funding. Approximately half of these commented that this is an improper use of taxpayers' money, while others called for reallocation of funding to other projects such as investment in the current road infrastructure, improving the environment and climate resilience, and improving the town centre. Concerns were raised in relation to the HIF bid

Summary of responses to Question 9 – Option B (middle route)

process, with comments that there was insufficient consultation ahead of the bid being made, that the council should return the funds to Homes England. Concerns were also raised regarding the costs associated with construction of large viaduct structures.

HIF bid and funding – Future Chippenham officer response

The council acted in a proactive manner to seek central government funding to ensure that infrastructure could be in place to unlock housing should the area be allocated through the Local Plan review, on land recognised for potential future growth within the earlier examination of the Chippenham Site Allocations Plan. The successful bid for funding provides a resolution to the potential barriers for the site and enables a holistic approach to the delivery of critical infrastructure to meet the strategic need of the town, alongside other benefits for the town as a whole. At the time of the bid submission it was expected that the Local Plan review would have completed its public consultation on its spatial strategy prior to any awards being made by MHCLG. Delays in the Local Plan review timetable meant that the grant was awarded in advance of this stage of the Local Plan. However, this does not affect the fact that the application for the funding was made based on identified need on a particular site. The successful bid for central government funding was based on a business case which demonstrated good value for money.

Process/Consultation

There were 39 responses to Question 9 (Option B: middle route) addressing Future Chippenham's consultation process. A large proportion of these were criticisms that there was not a 'no road' option offered on the consultation form. Others raised issues with the form and content of the consultation material felt that questions asked had not been provided with sufficient answers. The timing of the consultation during a national lockdown was also criticised. Concerns were raised that the council's dual role in the promotion and determination of this site presented a conflict of interest. There were also concerns that the options were too similar and did not offer enough choice.

Process/Consultation – Future Chippenham officer response

The consultation accorded to the Local Planning Authority's adopted Statement of Community Involvement as amended in July 2020 that implemented an interim approach to public consultation in light of restrictions imposed due to the COVID-19 pandemic. Whilst the unique circumstances of the pandemic meant that face-to-face consultation was not an option, alternative COVID safe methods of outreach, such as online webinars and a video, were employed which enabled effective engagement. The results of the consultation with just under 1,200 individual representations being received indicates that the techniques employed have been successful.

It is not uncommon for councils to take an active role in the development of land within their ownership and procedures are in place to ensure that there is a clear internal organisational separation between teams promoting a development (in this case Future Chippenham) and teams responsible for undertaking the regulatory functions of the council (the Local Planning Authority). Similarly, the elected Councillors who sit on the planning decision making committee (in this case Strategic Planning Committee) will be bound by the law and code of practice to consider the case before them solely upon its planning merits taking into account

Summary of responses to Question 9 – Option B (middle route)

planning policy and all other material planning considerations, including the results of consultations.

The principle of whether the road and potential wider development should go ahead, including the consideration of alternative options, is for the Local Plan review to address. As explained at the beginning of Section 4, the Future Chippenham road route options consultation took place around a working assumption that the project could be taken forward should an appropriate allocation be made in the Local Plan review. As such, the consultation form did not include a specific question asking for feedback on whether or not consultees supported the new road in principle, as it had already been confirmed that should there be any such development a new road will be required to avoid insurmountable negative impacts on the existing highways network. The consultation did enable consultees who wished to record their objection to any road through a number of free text fields built into the consultation form. In addition, consultees could choose to send an email or letter instead of completing the consultation form.

Theme: General (Appendix D10)

General

There were 402 responses raising general issues in response to Question 9 (Option B: middle route). The considerable majority of these were objections to the road, with views expressed that the road is not wanted, not needed or justified, and should not be progressed. A number of respondents commented that Option B was considered to be the best route option, as a balance between the various pros and cons of the road options in respect of the environment, topography, proximity to housing etc. Other general comments were made including concerns about impacts on house prices and amenity to existing residents, and queries regarding how up to date the evidence base is, in light of the impacts of the pandemic.

General – Future Chippenham officer response

We note the high number of representations saying that the road is not required. It is important to understand the context for the road.

In line with national planning legislation, every council in the country must be able to demonstrate a positive plan for how it can meet projected housing needs for the next 20 years and more. It is the role of the council's Local Plan to identify how and where this need can be met. The need for a significant number of new homes has been identified in this area by the Local Planning Authority following national planning guidelines. The question is therefore not if we should build new homes (as required by law), but how these can be best located and designed to benefit the wider community and be the most environmentally sustainable they can be. Given that Chippenham will need new homes, the function of the new road is to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre, improve connectivity and travel within and around the town. Evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities

Summary of responses to Question 9 – Option B (middle route)

for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

If none of the road options are pursued (and the £75 million funding returned to Government), it is not the case that the status quo will be maintained. The council will still be under a statutory obligation to meet its housing and employment needs and hence the same level of development will have to be built at Chippenham either through different site allocations or in a piecemeal, unplanned manner via speculative developments, which may not deliver the benefits for the town that the Future Chippenham site could. Under planning law, where a council cannot demonstrate a deliverable supply of homes to meet local needs there is a presumption in favour of granting planning permission for development, and the council and community could lose control of the process.

Summary of responses to Question 10 - Option C (inner route)

4.30. The full lists of summarised points relating to Option C (inner route) can be found at **Appendix E (1-10)**. The comments received were grouped under the following broad themes:

- Transport
- Climate change and flooding
- Pollution and air quality
- Ecology and environment
- Landscape
- Heritage
- Planning
- Economy and infrastructure
- Consultation and process
- General

4.31. A high level summary of the comments received is set out below along with officer responses to the points raised. Where appropriate the officer responses explain how the points raised have and will influence the project going forward, including through road design, road route options decision making, and the subsequent Framework Masterplanning process.

Summary of responses to Question 10 – Option C (inner route)

Theme: Transport (Appendix E1)

Transport

There were 269 responses to Question 10 (Option C: inner route) that were judged to fall within the theme of transport. Key concerns were raised about worsening pressure on the road network and congestion in and around Chippenham, and the potential for this route to negatively impact on local footpaths, cycle routes and minor lanes. It was also felt by some that Option C came too close to existing housing and could reduce access to the countryside. It was considered by some that Option C is too close to existing roads to be able to offer any congestion alleviation, and a number of queries were raised as to whether the existing road

Summary of responses to Question 10 – Option C (inner route)

on Pewsham Way could be utilised. A small number of comments were made that a road should be built further out to function more like a bypass, while others did not feel a bypass would be necessary. A number of responses were received expressing a preference that funding be reallocated, and more consideration be given to improving current road infrastructure, public transport and sustainable transport options. Some residents were of the view that Option C would provide good connectivity, while others questioned the practicalities of the route, such as linkages to Abbeyfield School, to London Road and driving routes to Corsham and Calne.

Wilts & Berks Canal Trust expressed concern as to how pedestrian and cycle access would be enabled between Chippenham and Lacock. The Trust also requested that provision be made for vehicular access to the canal and parking for visitors.

In relation to Zone 1, a large number of responses noted a preference for the Option C route to join to the existing A350 Lackham roundabout rather than from a new one. A concern was raised about proximity to Lower Lodge Farm. Another comment was that Option C was preferable due to the shortest bridge option.

In Zone 2, concerns were raised regarding the potential impacts from proximity to the canal. It was also a concern that this part of the route was closest to existing properties at Pewsham, while others noted that Pewsham Way could be utilised instead of building a new section of road. Option C was considered by some to have good connectivity with Pewsham because of the link road option available to this route option, while others disagreed that this presented the best option and suggested alternatives.

In Zone 3, concerns were raised regarding proximity and impact on Abbeyfield School and Stanley Park sports ground. Some concerns were also raised about the proposed roundabout layout at the A4, and potential impacts on properties and road safety. Some support for a roundabout was also noted. A request was made that the route not extend north of the A4, and objection to a junction at Stanley Lane. Wilts & Berks Canal Trust (WBCT) requested that the route design should enable the canal north and south of the A4 to be linked, and north of the A4 the selected route should recognise WBCT's plan to link the canal main line at Stanley to the River Avon.

In Zone 4, a number of concerns were raised about the potential of the routing of Option C to impact on the Chippenham – Calne cycle route, which should be mitigated or realigned. Potential impacts on Jubilee Acres was also raised. It was queried why no link is provided to Monkton Park to help alleviate traffic congestion and improve accessibility. Concerns were also raised about added traffic pressure on Hill Corner, Jackson's Lane and Kington Langley. Landowners in Zone 4 commented that this part of the route is not deliverable for legal reasons.

Queries were raised about how the route through Zone 5 links to Langley Road and the railway.

Transport: Future Chippenham officer response

Developing a simple range of options for sustainable transport is critical to the success of the Future Chippenham project, especially in providing evidence to support residents in engaging meaningfully in the process when considering the opportunities to deliver sustainable

Summary of responses to Question 10 – Option C (inner route)

transport solutions for their town. A draft Concept Framework plan identifies sustainable transport opportunities and will be further developed into a Framework Masterplan for the whole area to show how the road will sit in context and how the development opportunities it presents may be delivered in the most beneficial way for the whole town. Delivering truly sustainable development will be at the heart of the Framework Masterplan and the road, whichever route is preferred, will be designed to promote sustainable transport as its principle objective with the provision of segregated cycling and walking routes as well as seeking to enhance public transport.

The responses provide valuable insight which will also be taken into consideration through the subsequent stage of preparing a wider Framework Masterplan for the site. The Framework Masterplan will be accompanied and underpinned by a sustainable transport strategy which will explain how the objectives of optimising sustainable transport patterns will be achieved, including walking, cycling and public transport. Where appropriate, segregated pedestrian and cycle routes will be provided alongside the distributor road and roads through any development that the road unlocks. Public transport links will also be a key consideration. Wherever possible cycle and pedestrian routes will be extended and links to existing networks towards Chippenham town centre, and the surrounding areas will be provided.

Public rights of way will be improved where appropriate and it will be ensured that safe crossing points are improved where necessary. Responses relating to public rights of way are welcomed and will be taken into consideration through the subsequent stage of preparing a wider Framework Masterplan for the site. The Public Rights of Way network will be protected and, where appropriate, enhanced through the development of the site. Wherever possible, rights of way will be retained in their existing layout, and only where diversions are absolutely necessary to the delivery of the development will suitable diversions to the network be proposed.

Where it is possible, opportunities to extend bus routes will be considered, introduced, and improved with the introduction of any housing development that could be unlocked by the delivery of the distributor road. Some of the responses relating to public transport, provide valuable insight and will be taken into consideration through the subsequent stage of preparing a wider Framework Masterplan for the site.

Sustainable transport will be integral to the development and it will ensure that space for bus stops is incorporated into the design of the distributor road, where appropriate. The Framework Masterplan will consider as a priority the promotion of sustainable modes of transport including the use of low emission vehicles, cycling and walking and seek opportunities through wider improvements to reduce town centre congestion which has an impact on air quality.

The following section of the officer's response refers to comments made about Option C, Zone 1:

The alignment of Option C does run close to Lower Lodge Farm. Whilst the road alignment does not conflict with existing buildings some disruption could be expected by Lower Lodge Farm residents during construction. This would be reviewed with the residents in more detail if Option C was selected as the preferred option. The farmland is owned by Wiltshire Council

Summary of responses to Question 10 – Option C (inner route)

and leased to the current occupants. Discussions with farm tenants are currently taking place and will be formalised with affected tenants prior to construction of the distributor road.

Option C connects to the existing road network at a new junction with the B4528 (north of Lackham roundabout) and was included to provide an alternative option for review with land developers. In this scenario the existing Wiltshire College & University Centre junction at Lackham roundabout would be retained.

There were a number of comments with a preference for connecting the distributor road directly to the A350 at Lackham roundabout, connecting to the existing highway at this location would form a logical part of the transport network, is likely to operate more efficiently than the connection on the B4528.

It was suggested that the Future Chippenham distributor road could either connect to developments from Southpoint Park through Rowden Park, or those developments should be revised to remove the through road. The developments in question have already received planning approval; the extents for the route reserved for the eastern distributor road are through Southpoint Park, crossing the B4528 and through the proposed Rowden Park development.

The corridor reserved for the southern distributor road east of the B4528 as part of the planning conditions of the Rowden Park development was not presented for comment as part of the Future Chippenham road route options consultation as the eastern end of this route would go directly through the Rowden Park conservation area, close to the scheduled ancient monument and listed buildings at Rowden Manor, before crossing the River Avon and conflicting with woodland and a local nature reserve to the east. This option was assessed at an early stage of the options assessment report as part of options sift 1 and was referred to as Option D, it was discounted as it was deemed undeliverable.

The corridor provides an opportunity for an additional access and distribution from the A350 to the B4528 and further east of the B4528 a sustainable transport route for cyclists, pedestrians and horse riding, this will be considered as part of the connectivity plan for the framework masterplan.

Option C includes the shortest bridge over the River Avon, this has a lower impact on the environment and lower costs compared to the other route options in this zone. An Environmental Impact Assessment (EIA) will be included in the planning application, appropriate environmental mitigation will be included in the proposals.

Road network signing strategy and speed limits shall be reviewed as part of the planning application. The transport assessment will review the impact on the existing road network and include mitigation proposals for the road application and development applications. This includes an assessment of points of connection with the existing transport network (Lackham roundabout, Pewsham Way, A4, Stanley Lane) and junctions and networks further away from the new road but with a forecast change in traffic flows that may have a negative impact on capacity.

Meetings are planned with bus network operators to coordinate an appropriate level of bus service provision. Bus stops to serve the adjacent development and Wiltshire College & University Centre at Lackham will be considered as part of this review.

The following section of the officer's response refers to comments made about Option C, Zone 2:

A range of options were included in the Housing Infrastructure Fund (HIF) bid that comprise a southern distributor road between the A350 Lackham roundabout and the A4, a northern distributor road between the A4 and Parsonage Way and the full eastern distributor road combining both northern and southern routes; this assessment is included in the Options Assessment Report (OAR) as part of the road options public consultation and provides indicative land development quantum, cost estimates and benefit cost ratios. Whilst all three of these options indicate good benefit cost ratios the full eastern distributor road indicates the best benefit cost ratio and as such was progressed to public consultation. It should be noted that quantum of development work undertaken for the business case submission to the Housing and Infrastructure Fund (HIF) and the Options Assessment Report (OAR) is subject to further review and quantum of development will be informed and allocated as part of the Local Plan.

It was commented that there was a preference for a roundabout junction at the A4. Junction types will be assessed by the transport assessment and proposed layouts assessed by an independent road safety audit.

Comments relating to negative impacts on existing walking routes and access to the Wilts and Berks canal are noted. Pedestrian crossing points will be included where the distributor road meets Forest Lane and Avon Valley Walk. The type of crossing will be informed by the transport assessment and road safety audit.

A connectivity plan will also be progressed as part of the Framework masterplan. A cycle and pedestrian route alongside the road would link to other routes to provide a new network for commuting and recreation for sustainable travel between new and existing developments.

Cycle and pedestrian infrastructure will be designed to Local Transport Note 1/20, considering Sustrans guidance and Wiltshire Council Highways requirements in order to meet planning approval. The core design principles of Local Transport Note 1/20 are that coherent, direct, safe, comfortable and attractive design and consideration given to priority movements for cyclists and pedestrians over cars where appropriate.

An independent road safety audit will be undertaken, issues raised will be assessed by the Future Chippenham Highways design team to resolve as part of a design update to the requirements and policies of Wiltshire Council Highways to meet planning approval.

It was commented that widening of Pewsham Way and connection to Rawlings Green via a junction close to the A4 would be preferred. Widening of Pewsham Way and the existing junctions would provide additional transport capacity; however, it would not provide additional access to development land.

The impact on the existing road network, existing schools and residents and development layouts would also need to be considered in more detail.

Summary of responses to Question 10 – Option C (inner route)

Comments were received noting concern about the close proximity of the road to Pewsham. The close proximity of the road to Pewsham provides benefits to transport connectivity and in particular to non-motorised sustainable transport. Amenities within existing and new developments can then be connected by a network of new sustainable transport routes which would provide opportunities to benefit existing and new residents.

The following section of the officer's response refers to comments made about Option C, Zone 3:

Comments suggest this option is too close to Abbeyfield school, Stanley Park and existing residential properties. An Environmental Impact Assessment (EIA) will be included in the planning application, including appropriate mitigation to existing residents in the proposals. The distributor road will provide increased accessibility to Abbeyfield school and Stanley Park Sports ground. An independent road safety audit will also be undertaken, issues raised will be assessed by the Future Chippenham Highways design team to resolve as part of a design update to the requirements and policies of Wiltshire Council Highways to meet planning approval.

It was commented that joining the distributor road to Stanley Lane at the A4 between zone 2 and 3 would reduce costs and impact. There is some potential with this suggestion. The impact on the existing road network, existing schools and residents and development layouts would need to be considered in more detail and will be reviewed as part of the Framework Masterplan.

Preference for a roundabout junction at the A4 is noted, junction types will be assessed by the transport assessment and proposed layouts assessed by an independent road safety audit.

It was commented that the route should not proceed beyond the A4. A range of options were included in the Housing Infrastructure Fund (HIF) bid that comprise a southern distributor road between the A350 Lackham roundabout and the A4, a northern distributor road between the A4 and Parsonage Way and the full eastern distributor road combining both northern and southern routes. This assessment is included in the Options Assessment Report (OAR) as part of the road options public consultation and provides indicative land development quantum, cost estimates and benefit cost ratios. Whilst all three of these options indicate good benefit cost ratios the full eastern distributor road indicates the best benefit cost ratio and as such was progressed to public consultation. It should be noted that quantum of development work undertaken for the business case submission to the Housing and Infrastructure Fund (HIF) and the Options Assessment Report (OAR) is subject to further review and quantum of development will be informed and allocated as part of the Local Plan.

Consultees have queried the reason for the roundabout to the northeast of Stanley Park; the concept road alignment design includes a junction at this location with potential for access to further development to the east, which may be part of a future local plan. The Framework Masterplan will provide a relevant update and this particular roundabout may not be required.

Impacts on existing residents will be assessed as part of the Environmental Statement for the planning application.

Summary of responses to Question 10 – Option C (inner route)

A number of comments related to the impact on the disused railway line, National Cycle Network (NCN) route 403 are noted. These concerns included the issue of usability and ability to cross a distributor road. For any locations of crossing of this popular walking and cycling route, a signalised crossing will be provided. This will also connect with facilities along the length of the distributor road.

A connectivity plan will be progressed as part of the Framework Masterplan. Cycle and pedestrian routes alongside the road will be provided. A new network of commuting and recreation routes for sustainable travel between new and existing developments will be proposed as part of the Framework Masterplan.

Cycle and pedestrian infrastructure will be designed to Local Transport Note 1/20, considering Sustrans guidance and Wiltshire Council Highways requirements in order to meet planning approval. The core design principles of Local Transport Note 1/20 are that coherent, direct, safe, comfortable and attractive design and consideration given to priority movements for cyclists and pedestrians over cars where appropriate.

It was suggested that there should be no junction between the distributor road and Stanley Lane and that a bridge or a tunnel should be provided. The distributor road is likely to form a roundabout junction with Stanley Lane, with speed limit reductions either side of the new junction and traffic calming or restricted access considered on the western arm to Abbeyfield School; this is subject to further assessment and review with the Framework Masterplan and transport assessment.

It was suggested that the distributor road route could be moved south of the National Cycle Route, which we assume is where the route deviates and uses a short section of Stanley Lane. This would require the route to deviate outside of the development area identified in the Local Plan review. The road's primary function is for local transport connectivity and distribution, and to enable residential and employment development, it is not a strategic road or bypass. The road alignment is designed to form the main corridor of movement with relatively continuous built frontages, the proximity of the road and associated new development to existing development is included in the options assessment process where options close to existing development have better connectivity.

The following section of the officer's response refers to comments made about Option C, Zone 4:

A range of options were included in the Housing Infrastructure Fund (HIF) bid that comprise a southern distributor road between the A350 Lackham roundabout and the A4, a northern distributor road between the A4 and Parsonage Way and the full eastern distributor road combining both northern and southern routes; This assessment is included in the Options Assessment Report (OAR) as part of the road options public consultation and provides indicative land development quantum, cost estimates and benefit cost ratios. Whilst all three of these options indicate good benefit cost ratios the full eastern distributor road indicates the best benefit cost ratio and as such was progressed to public consultation. It should be noted that the quantum of development work undertaken for the business case submission to the Housing and Infrastructure Fund (HIF) and the Options Assessment Report (OAR) is subject to further review and quantum of development will be informed and allocated as part of the Local Plan.

Summary of responses to Question 10 – Option C (inner route)

It was suggested that the distributor road route could be moved south of the National Cycle Route, which we assume is where the route deviates and uses a short section of Stanley Lane. This would require the route to deviate outside of the development area identified in the Local Plan review. The road's primary function is for local transport connectivity and distribution, and to enable residential and employment development, it is not a strategic road or bypass. The road alignment is designed to form the main corridor of movement with relatively continuous built frontages, the proximity of the road and associated new development to existing development is included in the options assessment process where options close to existing development have better connectivity.

We note that landowners have informed Future Chippenham that Option C in zone 4 is not deliverable for legal reasons.

A number of comments relate to the impact on the disused railway line (National Cycleway 403). These concerns included the issue of usability and ability to cross a distributor road. For any locations of crossing of the popular walking and cycling route, a signalised crossing will be provided. This will also connect with facilities along the length of the distributor road.

Impacts on existing residents will be assessed as part of the Environmental Statement for the planning application.

Option C passes under the overhead pylons twice and seeks to follow existing topography to mitigate visual impact. Road route Option C is aligned through development areas identified in the draft Concept Framework.

The following section of the officer's response refers to comments made about Option C, Zone 5:

The impact of the distributor road through Rawlings Green on traffic safety, the environment (including noise and pollution) and walking and cycling will be assessed as part of the planning application for the Future Chippenham distributor road.

After crossing the rail bridge, the road continues along a new road parallel to Parsonage Way, crosses the B4069 via two junctions and continues along a new distributor road past Birds Marsh to connect to the A350 at Malmesbury roundabout. M4 Junction 17 is then accessed via the A350. The route from the rail bridge is included as part of other developer planning applications, details are available on Wiltshire Council's planning portal³⁵.

The access road from the Rawlings Green development site through to Darcey Close would be delivered by the Rawlings Green development as part of planning application 15/12351/OUT or an alternative future application for development of the land.

³⁵ Wiltshire Council, planning portal, available at: <https://development.wiltshire.gov.uk/pr/s/>

Theme: Climate change and flooding (Appendix E2)

Climate change

There were 27 responses to Question 10 (Option C: inner route) that raised concerns about the project's climate impacts, concerns regarding carbon costs and compatibility with the council's declaration of a climate emergency.

Climate change – Future Chippenham officer response

Addressing the climate emergency is an underpinning objective for the Future Chippenham project. Given that Chippenham will need new homes, the function of the new road is to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre and improve connectivity and travel within and around the town.

The Future Chippenham team consider all evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

Part of this will be the focus on supporting self-containment through the delivery of jobs, services and facilities which enable residents to meet their everyday needs within the town itself rather than needing to travel. Futureproofing development so that new builds are constructed to policy compliant carbon standards, alongside a framework of significant green infrastructure, spaces for nature and sustainable transport opportunities will also be critical.

These matters will be addressed through the subsequent stage of preparing the Framework Masterplan for the site. Garden settlement principles will be applied, with decarbonisation and the need to meet the challenges of the climate emergency will be underpinning principles. The Future Chippenham project will seek to be aspirational and identify opportunities to exceed planning policy requirements wherever practicable. Consideration will be given to extend initiatives within the proposed Framework Masterplan area and the wider area so that the town moves towards the same objectives and goals.

Flooding

There were 16 responses to Question 10 (Option C: inner route) that covered matters relating to flooding, with almost all being general concerns that the development could result in an increased risk of flooding. Concerns were raised about the use of costly and visually prominent viaducts. With reference to Zone 1 a concern was raised that Option C crosses one of the lowest points of the floodplain which is susceptible to inundation along the footpath and stile by Wiltshire College & University Centre at Lackham.

Summary of responses to Question 10 – Option C (inner route)

Flooding – Future Chippenham officer response

The rivers in and around the site are important features in the landscape as well as being environmental assets and will be key considerations in the design and layout of the site in the Framework Masterplan.

Desk based assessments of the water environment were carried out in support of the road route options stage, which set out a number of mitigation measures to be employed to reduce runoff and pollution from construction activities into local watercourses and groundwater receptors. This is further detailed within Section 4.5 of the PEOR summary report³⁶.

Proposals for development of the site will be further supported and informed by detailed flood risk assessments, which will consider flood risk in the areas noted. A principle that will underpin the Framework Masterplan will be to, wherever possible, identify and avoid development in areas at risk of flooding (Flood Zones 2 and 3). Where some impact is seen as unavoidable then suitable mitigation will be discussed and agreed with the appropriate drainage bodies. Ongoing assessment work will identify areas that are more susceptible to flooding, including groundwater flooding, and identify mitigation and drainage strategies to be put in place.

It is expected that that the development proposals will include measures to alleviate flood risk in some areas.

The Environment Agency's comments are noted and will be taken into account when considering the final route recommendation.

The concerns regarding impacts of the bridge/viaduct are noted. Option C includes the shortest bridge over the River Avon which would have the lowest impact on the environment and lower costs compared to the other route options in Zone 1. An Environmental Impact Assessment (EIA) will be included in the planning application, and appropriate environmental mitigation will be included in the proposals.

Theme: Pollution and air quality (Appendix E3)

Pollution and air quality

There were 44 responses to Question 10 (Option C: inner route) that addressed pollution and air quality, with most of these being concerns that this development would result in an increase of air, noise and light pollution. Some respondents were of the view that impacts would be greater as a result of this route being closest to the town. Particular areas of concern were along Pewsham Way and Lower Lodge Farm. A concern was also raised about potential increased littering.

³⁶ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 10 – Option C (inner route)

Pollution and air quality – Future Chippenham officer response

The initial Concept Framework plan that supported the road route options assessment provided the foundations to ensure that pollution and air quality were considered from the outset.

The Framework Masterplan will address the need to minimise the impacts of air pollution, light pollution, and noise pollution. Comments regarding pollution, air quality, noise and light pollution provide valuable information which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the wider site and design of the final road option chosen. All aspects of pollution will be further assessed as part of the development of the wider Framework Masterplan and road design to be accompanied by an overarching Environmental Impact Assessment. This will clearly outline potential impacts and proposed measures identified as necessary to mitigate them. Potential impacts during construction will also be avoided where possible, and where not possible mitigated by employing best practise construction practice.

Whilst air quality modelling or noise impacts assessments are yet to be undertaken, it is recognised that selection of a route located furthest from pollutant receptors would assist in reducing potential air quality impacts, and there is potential for the use of noise dulling barriers (such as landscape bunding) to help ameliorate the impacts of noise.

Theme: Ecology and environment (Appendix E4)

Ecology

There were 119 responses to Question 10 (Option C: inner route) that raised issues around ecology. The majority of these were concerns about the development leading to potential negative impacts on biodiversity, wildlife (including protected species) and habitats, although a number of respondents considered that Option C would be least impactful of the options presented.

In Zone 1, concerns revolved around potential impacts on Mortimore's Wood. Zone 3 was noted for ecological value by some, and concerns raised about potential negative impacts/habitat fragmentation for wildlife at Baydons Meadow, and potential impacts on populations of great crested newts. Zone 4 was also noted for its ecological value, albeit some respondents noted that the Option C route was least impactful in this area. Concerns were also raised about impacts on biodiversity in Zone 5.

Ecology – Future Chippenham officer response

An assessment of the biodiversity baseline has been carried out, to inform the road route options assessment process presented in this consultation, including a site-based Extended Phase 1 Habitat survey, a Ground Level Tree Assessment (GLTA) for bats, and wintering bird surveys. Key considerations are the mitigation of any potential impacts on nearby designated sites such as Special Areas of Conservation (SACs), Sites of Special Scientific Interest (SSSIs), Local Nature Reserves (LNRs), County Wildlife Sites (CWSs), Ancient Woodlands, and on any protected or notable species recorded in the area. A range of

Summary of responses to Question 10 – Option C (inner route)

potential mitigation measure are identified in paragraph 4.4 of the PEAOR summary report³⁷. Further ecological surveys are being carried out, and discussions with Natural England and the County Ecologist are ongoing.

The feedback received identifying individual species (including spotted flycatcher breeding territories and other species such as kites, buzzards, owls and migratory birds, roe deer, voles, hares, rabbits, foxes, badgers, long tailed tits, blue tits, great tits, dunnocks, robins, otters and others) is welcomed, and the Future Chippenham team will ensure that these, plus any others, are taken into account during further ecological evaluations and the design process.

Any development including the road options and wider Framework Masterplan will be further supported and informed by additional detailed ecological surveys, which will form a critical part of the Environmental Impact Assessment for the whole site. The Framework Masterplan will be supported by a suite of ecology assessments that consider impact on all flora, fauna, and their habitat. These studies will identify if important species are present and if so can either be avoided or if avoidance is not possible, identify what mitigation will be needed. Avoidance of impacts will be the preferred option in all cases, and where this is not possible then mitigation may include translocation of species where legislation requires. The scheme will need to show how a net gain for biodiversity is provided in line with local and national planning requirements.

The ability to achieve a biodiversity net gain has been fundamental in informing the Concept Framework for the site and will continue to be considered in the development of the Framework Masterplan. It will be ensured that all opportunities for enhancing biodiversity are investigated on a whole site basis and where appropriate on a Chippenham wide basis.

The Future Chippenham team are committed to working in partnership with key environmental stakeholders and statutory consultees in developing the Framework Masterplan, including the Environment Agency, Natural England and Wiltshire Wildlife Trust.

The benefits of developing a whole site Framework Masterplan are key to ensuring that the impacts on ecology can be minimised, and mitigation can be delivered and planned upfront on a holistic scale.

Theme: Landscape (Appendix E5)

Landscape

There were 141 responses to Question 10 (Option C: inner route) that raised issues around landscape. A large proportion of these were concerns about the impacts on the landscape and rural setting of the existing settlements, that the development would be too visible, would result in too much loss of greenspace in the Avon/Marden Valley. Some respondents noted that Option C is closest to the town and therefore considered there would be less landscape

³⁷ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 10 – Option C (inner route)

impact, which would retain the character of Chippenham and surrounding settlements more so than other options, and would also protect the setting of the canal. A concern was raised that this option would leave insufficient space for green space and landscape/noise buffers.

In Zone 1, a concern was raised about the impact of the Option C route on the walking route parallel to Pewsham Way. Comments were received in support of Option C through Zones 2 and 3, as the route would be less visually intrusive and result in less loss of open space. In Zones 4 and 5 concerns were raised about the potential visual impacts from Tytherton Lucas and Kellaways area, and adverse impacts on the Marden and Avon chalk stream valleys. It was also noted that this route was considered to be the least harmful in Zone 4 of the options presented. Concerns were raised about the visual impacts of the river crossing in Zone 5.

Landscape – Future Chippenham officer response

The Concept Framework for the site and the road options put forward during the consultation were informed by landscape assessments and studies. Further development of the road route option and Framework Masterplan will be supported and informed by a more detailed landscape assessment that will ensure the most sensitive landscape elements are protected and where possible enhanced. This will include the river corridor and the existing country park. Where less sensitive landscape is identified for development then suitable mitigation such as landscape planting, topography and design will be identified accordingly. The Framework Masterplan will ensure that a generous amount of open space, over and above locally required standards, is provided for the local community to enjoy in perpetuity.

In support of the road route options, a desk-based landscape and visual impacts study was undertaken and covered a 1km study area surrounding the site/route options as detailed in section 3.6 of the PEAOR summary report³⁸. This detailed landscape mitigation recommendations that could be implemented, including:

- careful siting of the highway to avoid significant landscape and visual effects.
- avoidance of the loss of mature trees, hedgerows and safeguarding of existing habitats.
- limiting vegetation removal to that required to undertake the works.
- mitigation planting and/or screening bunds being designed to provide both adequate screening of the highway whilst remaining mindful of the character of the existing landscape to enable the new highway to integrate.
- creation of wet woodland in specific locations to provide both biodiversity and amenity benefit.
- ensuring the design of structures and finishes associated with the river crossings be locally distinctive and reflect a high quality of design; and
- ensure the Scheme integrates with local neighbourhoods to provide benefits for walkers and cyclists in the local area.

The consultation identified concerns that the scheme could cause coalescence between Chippenham and existing settlements such as Bremhill and Calne. The development of the Framework Masterplan will be supported by further landscape assessment which will

³⁸ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 10 – Option C (inner route)

consider this issue in more detail. Where appropriate, landscape buffers and mitigation will be proposed to ensure that separation and preservation of the identity of surrounding settlements is preserved.

Agricultural land

There were 56 responses to Question 10 (Option C: inner route) that commented in relation to agricultural land, with the majority of these being an objection to the loss of agricultural land. A small number of responses noted that Option C would result in the least dissection of agricultural land. Some concerns were raised that Option C through Zone 1 was routed too close to existing farm buildings, whereas it was also noted that the route was well located due to being further from Lackham. Similar concerns about proximity to existing farm buildings were also raised in relation to Zone 2.

Agricultural land – Future Chippenham officer response

Any development on the site will be supported and informed by a detailed agricultural land assessment, with a key objective being to avoid development that would result in the loss of Best and Most Versatile farmland.

The majority of soils within the study area are known to be classified as grade 3B and therefore are not recorded as the best and most versatile soils for agricultural use. However, there are known pockets of grade 1 and 2 soils (higher quality) in Zone 1, with sections of grade 3A soils interspersed across all zones.

It is anticipated that, subject to the site being allocated for development in the Local Plan, council owned land will be proposed for the development of the range of uses, potentially including housing, essential infrastructure and public open space. This will require existing farm uses to cease and farm tenants will be served notice to quit in the long term. Whilst some farming activities will remain on licences or other short term arrangements, it is not anticipated that they will remain in the long term.

Theme: Heritage (Appendix E6)

Heritage

There were 24 responses to Question 10 (Option C: inner route) that addressed heritage; some of these were responses noting that the inner route would result in least impact on countryside heritage and least impact on the Tytherton Lucas conservation area.

In relation to Zone 1, a number of concerns were raised about the potential for the Option C route to impact on Rowden Park conservation area and listed buildings at Showell Farm. It was also noted that the route passes through a heritage setting area in the Green and Blue Infrastructure Plan, and this area has heritage value. Concerns were raised about potential impacts on archaeology in Zones 2 and 4.

Summary of responses to Question 10 – Option C (inner route)

Heritage - Future Chippenham officer response

The Concept Framework developed to support the road route options assessment sought to ensure the protection of existing heritage sites and integration into any development in the future. This will be further incorporated into the Framework Masterplan which will be supported and informed by detailed heritage assessments to ensure that the most sensitive historic elements are protected and where possible enhanced. This will include archaeology, buildings of heritage value and historic landscapes, and will consider the assets highlighted by consultees. The principle that will underpin the Framework Masterplan will be to, wherever possible, identify heritage assets and avoid impacts (i.e. plan around them). Where some impact is seen as unavoidable then suitable mitigation will be discussed and agreed with the appropriate heritage bodies.

In support of the road route options, desk based assessments of archaeological and heritage impacts were carried out as detailed in the PEAOR summary report³⁹. This was presented alongside detailed mitigation recommendations, including careful siting of the highway to avoid significant impacts.

Theme: Economy and infrastructure (Appendix E7)

Employment and economy

There were 10 responses to Question 10 (Option C: inner route) that addressed employment and the economy. Most of the responses revolved around a perceived lack of employment opportunities in Chippenham, and concerns that a lack of employment could see increased commuting. One respondent noted the renewable industries should be supported.

Employment and economy – Future Chippenham officer response

This consultation was about identifying a preferred road route should infrastructure be required. Matters with respect to the economy were not within the scope of the road route options consultation, but nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the site.

In line with national planning legislation, it is a requirement of the council's Local Plan to identify how and where projected employment needs for the next 20 years can be met in the most environmentally sustainable way. Given that Chippenham will need new homes, then it is sustainable to provide employment opportunities within the same development. This provides local opportunities and cuts down the need for largescale commuting.

A function of the new road will be to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion

³⁹ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 10 – Option C (inner route)

in the town centre, improve connectivity and travel within and around the town. Evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

Infrastructure and services

There were 27 responses to Question 10 (Option C: inner route) addressing infrastructure and services, including a large number of concerns that Option C would cut through Stanley Park sports ground. Concerns were also raised about impacts of the development on infrastructure, including schools and healthcare, which considered to have insufficient capacity to accommodate increased demand. A concern was also raised about the proximity of the route and impact on the nearby water treatment works. A request was made for a petrol filling station.

Infrastructure and services – Future Chippenham officer response

Any development will need to be supported by infrastructure. This was identified in the Concept Framework which informed the road route options assessment process. This will be refined further during the development of the Framework Masterplan and will include both critical and community infrastructure including the following:

- School provision
- Heath facilities
- Open space and play areas
- Indoor and outdoor leisure facilities
- Open spaces
- Country parks
- Local centres/small scale retail
- Community halls
- Public houses
- Churches

Preparation of the Framework Masterplan will be informed by ongoing dialogue between the Future Chippenham team and key stakeholders and service providers to ensure that capacity needs are identified and accommodated for within the plans for the site.

The submission to the Local Planning Authority to demonstrate that the Future Chippenham site is the most sustainable option in which to meet the town's future growth needs, will include an Infrastructure Delivery Plan (IDP) setting out the infrastructure that is required to be delivered and by when. This IDP will support future Local Plan representations, masterplan and planning applications.

Health and social wellbeing

There were 10 responses to Question 10 (Option C: inner route) all noting concerns that the development could have negative implications on health and wellbeing/mental health.

Summary of responses to Question 10 – Option C (inner route)

Health and social wellbeing – Future Chippenham officer response

Health and social wellbeing is a fundamental aspect of the Concept Framework that has informed the road route options assessment. The scale of the proposed growth in the Concept Framework allows a strategic approach to the provision of landscape and green infrastructure which will deliver social, economic and environmental benefits. The proposed country park offers a significant area of open space which will support the future health and wellbeing of existing and future residents. The river and its flood meadows will also become a 'unifying strand' in the green infrastructure network.

Public health matters will be assessed further as part of the development of the Framework Masterplan and road design and there will be a chapter within the Environmental Impact Assessment (EIA) which will accompany all submissions, detailing the assessments undertaken, impacts identified, mitigatory measures to be implemented and opportunities for improvements where practicable. Similarly, the EIA will address social issues including the provision of affordable homes, accessible homes for the mobility impaired, access to education and healthcare services and incorporation of the principles of safe by design. The points regarding potential detrimental impacts on people's health arising from this scheme are noted and accepted as valid. It will be important in the continuing design process for the Framework Masterplan that this issue is addressed and to ensure this process will include consultation with the NHS and be designed to minimise impacts and optimise opportunities, such as the provision of a new network of public green open space including trim trails and enhanced cycle and walking opportunities.

Theme: Planning (Appendix E8)

Relationship with the Local Plan review/Prematurity

There were 28 responses to Question 10 (Option C: inner route) raising concerns that the case for the scale of development proposed in Chippenham has not yet been fully debated through the Local Plan review process, and that consultation on the distributor road is premature, with concerns raised about predetermining the outcome of the Local Plan review.

Relationship with the Local Plan review/Prematurity – Future Chippenham officer response

Matters relating to the Local Plan review are not within the scope of the road route options consultation, although this report will be shared with Wiltshire Council's Spatial Planning team. The comments received do nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing the Framework Masterplan for the site.

While ideally a planning application for the road or any wider development would not be submitted until the Local Plan review is complete, there are many precedents set where applications that accord with an emerging Local Plan which has reached an advanced stage within the process have been permitted, so as to ensure timely delivery of housing and critical infrastructure.

Summary of responses to Question 10 – Option C (inner route)

The next stage of the process is to include a Framework Masterplan which will set out the vision and context for the development. This will be subject to full consultation in due course and be supported by a design code which will provide more detail.

Compatibility with made/emerging neighbourhood plans

There was 1 response to Question 10 (Option C: inner route) raising a concern about potential conflicts with local neighbourhood development plans.

Compatibility with made/emerging neighbourhood plans – Future Chippenham officer response

This consultation related to the preferred road route for road infrastructure should the area be allocated for housing. Matters relating to the acceptability in principle of developing in a particular area will be key considerations for the Local Plan review process. Comments relating to neighbourhood plan policy requirements are also relevant to the masterplanning stage of the project, and relevant neighbourhood plans will be considered as part of the evidence review supporting the production of the Framework Masterplan. The project team will ensure further discussion is had with the relevant town and parish councils, or neighbourhood plan steering groups to ensure proposals are as joined up as possible.

Housing/Scale of development

There were 79 responses to Question 10 (Option C: inner route) raising matters surrounding housing and scale of development. A large proportion of these were comments that there is insufficient evidence to support the scale of housing proposed, and questioned evidence to support the proposed allocation. It was requested by some that brownfield sites be developed ahead of this site, and some respondents noted a preference for smaller housing sites not in remote or edge-of-town locations.

Housing/Scale of development – Future Chippenham officer response

Matters regarding the scale and location of development being proposed are not within the scope of the road route options consultation, but nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the site. This report will also be shared with Wiltshire Council's Spatial Planning team for their information.

Placemaking

There were 2 responses to Question 10 (Option C: inner route) which raised concerns that the future development will be overcrowded, generic housing.

Placemaking – Future Chippenham officer response

This consultation was about identifying a preferred road route should infrastructure be required. Matters with respect to design and placemaking are not within the scope of the road

Summary of responses to Question 10 – Option C (inner route)

route options consultation, but nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the site and road design.

The Framework Masterplan which is being produced currently and will be subject to public consultation in due course, will set out in some detail how the building of the road can help deliver a high-quality development with a unique sense of place and which will mark a step-change in previous recent house building around Chippenham. The Framework Masterplan will be accompanied by a Design Code which will ensure that these design standards are maintained throughout the lifetime of the build.

Theme: Consultation and process (Appendix E9)

HIF bid and funding

There were 19 responses to Question 10 (Option C: inner route) addressing matters related to the HIF bid and funding. Option C was noted by some to be the cheapest of the options. Concerns were raised that the project was not a good use of taxpayer's money and was not justified, costs were too high, and funding should be reallocated to improving the town centre. Concerns were also raised that the case for the road appeared to be focused on the funding that had been secured.

HIF bid and funding – Future Chippenham officer response

The council acted in a proactive manner to seek central government funding to ensure that infrastructure could be in place to unlock housing should the area be allocated through the Local Plan review, on land recognised for potential future growth within the earlier examination of the Chippenham Site Allocations Plan. The successful bid for funding provides a resolution to the potential barriers for the site and enables a holistic approach to the delivery of critical infrastructure to meet the strategic need of the town, alongside other benefits for the town as a whole. At the time of the bid submission it was expected that the Local Plan review would have completed its public consultation on its spatial strategy prior to any awards being made by MHCLG. Delays in the Local Plan review timetable meant that the grant was awarded in advance of this stage of the Local Plan. However, this does not affect the fact that the application for the funding was made based on identified need on a particular site. The successful bid for central government funding was based on a business case which demonstrated good value for money.

Process/Consultation

There were 24 responses to Question 10 (Option C: inner route) raising criticisms that there was not a 'no road' option offered on the consultation form.

Process/Consultation – Future Chippenham officer response

The principle of whether the road and potential wider development should go ahead, including the consideration of alternative options, is for the Local Plan review to address. As

Summary of responses to Question 10 – Option C (inner route)

explained at the beginning of Section 4, the Future Chippenham road route options consultation took place around a working assumption that the project could be taken forward should an appropriate allocation be made in the Local Plan review. As such, the consultation form did not include a specific question asking for feedback on whether or not consultees supported the new road in principle, as it had already been confirmed that should there be any such development a new road will be required to avoid insurmountable negative impacts on the existing highways network. The consultation did enable consultees who wished to record their objection to any road through a number of free text fields built into the consultation form. In addition, consultees could choose to send an email or letter instead of completing the consultation form.

Theme: General (Appendix E10)

General

There were 415 responses raising general issues in response to Question 10 (Option C: inner route). The considerable majority of these were objections to the road, with views expressed that the road is not wanted, not needed or justified, and should not be progressed. A number of respondents commented that Option C was considered to be the best or least worst route option, while a small number noted that Option C was the least preferable.

General – Future Chippenham officer response

We note the high number of representations saying that the road is not required. It is important to understand the context for the road.

In line with national planning legislation, every council in the country must be able to demonstrate a positive plan for how it can meet projected housing needs for the next 20 years and more. It is the role of the council's Local Plan to identify how and where this need can be met. The need for a significant number of new homes has been identified in this area by the Local Planning Authority following national planning guidelines. The question is therefore not if we should build new homes (as required by law), but how these can be best located and designed to benefit the wider community and be the most environmentally sustainable they can be. Given that Chippenham will need new homes, the function of the new road is to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre, improve connectivity and travel within and around the town. Evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

If none of the road options are pursued (and the £75 million funding returned to Government), it is not the case that the status quo will be maintained. The council will still be under a statutory obligation to meet its housing and employment needs and hence the same level of development will have to be built at Chippenham either through different site allocations or in a piecemeal, unplanned manner via speculative developments, which may not deliver the benefits for the town that the Future Chippenham site could. Under planning

Summary of responses to Question 10 – Option C (inner route)

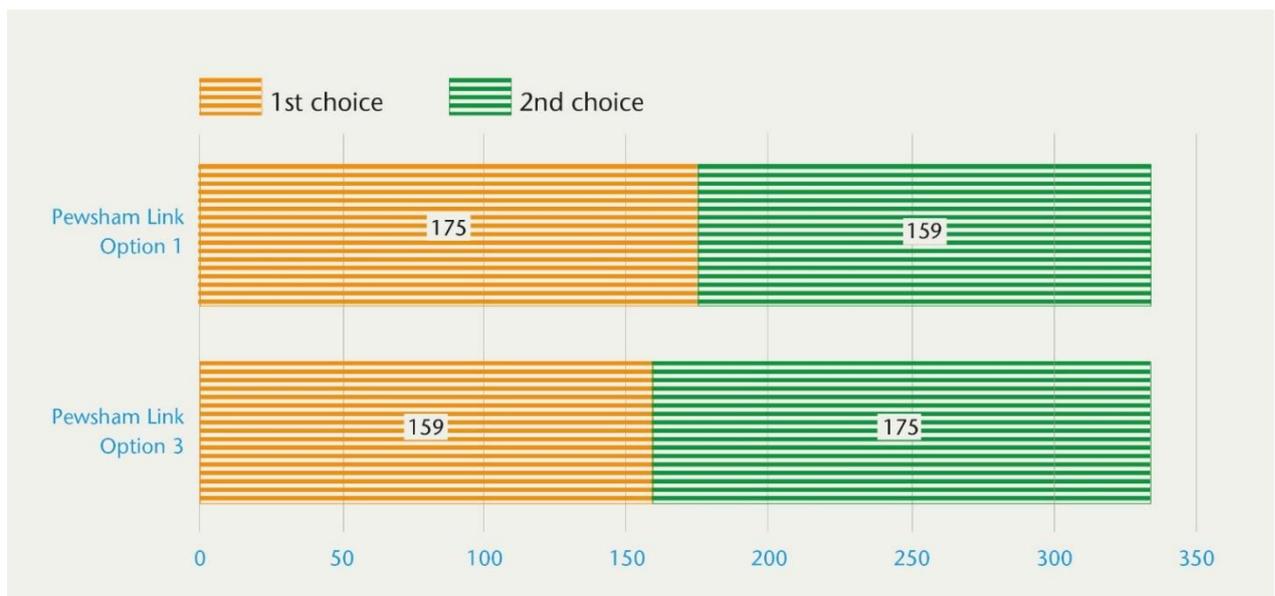

law, where a council cannot demonstrate a deliverable supply of homes to meet local needs there is a presumption in favour of granting planning permission for development, and the council and community could lose control of the process.

Questions 11, 12 and 13: Preferred route of the Pewsham link road

Summary of responses to Question 11 - preferred link road route

- 4.32. Question 11 of the consultation form asked respondents to rank the two Pewsham link road options into order of preference. Of the 334 responses received to this question, the following feedback was received:

Figure 4: Graph showing responses to consultation form Question 11 – link road option preferences

- 4.33. This shows a broadly similar result for each link road option, with Pewsham link route 1 being marginally favoured over Pewsham link route 3.
- 4.34. It should be noted that a significant number of respondents who wished to express an in-principle objection to the Future Chippenham project opted not to complete the Question 11 ranking exercise, or explained that while they had completed the Question 11 ranking exercise, their preference was for no road at all.
- 4.35. Questions 12 and 13 provided respondents with free text fields to give any specific feedback on Pewsham link Options 1 and 3. A number of respondents also submitted specific comments on the three road route options by email and letter.

Summary of responses to Question 12 - Pewsham link Option 1

- 4.36. The full lists of summarised points relating to Pewsham link road Option 1 can be found at **Appendix F (1-10)**. The comments received were grouped under the following broad themes:
- Transport
 - Climate change and flooding
 - Pollution and air quality
 - Ecology and environment
 - Landscape
 - Heritage
 - Planning
 - Economy and infrastructure
 - Consultation and process
 - General
- 4.37. A high level summary of the comments received is set out below along with officer responses to the points raised. Where appropriate the officer responses explain how the points raised have and will influence the project going forward, including through road design, road route options decision making, and the subsequent Framework Masterplanning process.
- 4.38. The tables below summarise the responses that were received relating to Pewsham link Option 1:

Summary of responses to Question 12 – Pewsham link option 1

Theme: Transport (Appendix F1)

Transport

There were 108 responses to Question 12 (Pewsham link Option 1) that were judged to fall within the theme of transport. A number of points raised were concerns about increased congestion pressure on the highways network in general, and in specific areas such as Canal Road, Canal Road roundabout and Pewsham Way. Comments were also received that noted Option 1 would be better connected to the existing highway and town centre, could ease congestion at Avenue La Fleche, the Bridge Centre and Pewsham Way, and would remove the need for the further roundabout that would be required by Option 3. It was also noted that Option 1 is shorter. Concerns were raised that this option would have an adverse impact on the Avon Valley walk that runs south of Pewsham Way, and other comments noted concerns about the impacts and cost of the bridge structure required for Option 1. It was also queried how cycle paths from the new road would connect to the Option 1 road, and how cyclists would re-join the carriageway, noting that there is no cycle path on the A4. It was requested that the link road act as an arterial cycle/walking route providing connectivity to the town centre/station through Pewsham on car free routes. Consideration of low speed limits and traffic signals was requested. A concern was raised that this option is not central enough to Pewsham to be able to distribute traffic from Pewsham and traffic from the eastern areas of the town.

Stagecoach West comment that Option 1 is the only link road option that would allow a bus route to serve a development across this area while also effectively running to and from the

Summary of responses to Question 12 – Pewsham link option 1

town centre, although it does not do this well. Topographic issues that impinge on this option are noted which would make it costly/problematic compared with Option 3. For this reason, Stagecoach West consider that extensive development south of Pewsham Way is inappropriate.

A number of other more general comments and comments linking with the wider road route options were also submitted to the question. Comments were received questioning the evidence that a road was needed, and a number of others responded querying why the existing road network at Pewsham Way could not be utilised within the route. Some suggestions were made that link Option 1 could make this connection from Lackham roundabout to Pewsham Way. A number of requests were made for improvements to existing infrastructure, sustainable transport links, pedestrian and cycle routes.

Transport: Future Chippenham officer response

The inclusion of a link road between Pewsham Way and the Future Chippenham distributor road as part of a comprehensive and holistic solution would serve various functions including providing access to various areas of potential development. It would also provide connectivity by adding to the overall highway network thereby providing enhanced route choice and options and allow for enhanced permeability through the area by a range of transport modes (car, walking, cycling, bus etc.). Comments received through this consultation will be considered in helping identify and determine the optimal location and design for the link road, it's associated infrastructure, and the nature of the junction connection with Pewsham Way. The link road will be considered and developed as part of the overall scheme masterplanning work and will be included in the traffic modelling analysis as part of the transport assessment informing the planning application.

Theme: Climate change and flooding (Appendix F2)

Climate change

There were 20 responses to Question 12 (Pewsham link Option 1) that raised concerns about the project's climate impacts, concerns regarding carbon costs and compatibility with the council's declaration of a climate emergency. A request was made that zero carbon homes be delivered.

Climate change – Future Chippenham officer response

Addressing the climate emergency is an underpinning objective for the Future Chippenham project. Given that Chippenham will need new homes, the function of the new road is to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre and improve connectivity and travel within and around the town.

The Future Chippenham team consider all evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated

Summary of responses to Question 12 – Pewsham link option 1

place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

Part of this will be the focus on supporting self-containment through the delivery of jobs, services and facilities which enable residents to meet their everyday needs within the town itself rather than needing to travel. Futureproofing development so that new builds are constructed to policy compliant carbon standards, alongside a framework of significant green infrastructure, spaces for nature and sustainable transport opportunities will also be critical.

These matters will be addressed through the subsequent stage of preparing the Framework Masterplan for the site. Garden settlement principles will be applied, with decarbonisation and the need to meet the challenges of the climate emergency will be underpinning principles. The Future Chippenham project will seek to be aspirational and identify opportunities to exceed planning policy requirements wherever practicable. Consideration will be given to extend initiatives within the proposed Framework Masterplan area and the wider area so that the town moves towards the same objectives and goals.

Flooding

There were 5 responses to Question 12 (Pewsham Link Option 1) that raised general concerns that the development could result in an increased risk of flooding.

Flooding – Future Chippenham officer response

The rivers in and around the site are important features in the landscape as well as being environmental assets and will be key considerations in the design and layout of the site in the Framework Masterplan.

Desk based assessments of the water environment were carried out in support of the road route options stage, which set out a number of mitigation measures to be employed to reduce runoff and pollution from construction activities into local watercourses and groundwater receptors. This is further detailed within Section 4.5 of the PEAOR summary report⁴⁰.

Proposals for development of the site will be further supported and informed by detailed flood risk assessments. A principle that will underpin the Framework Masterplan will be to, wherever possible, identify and avoid development in areas at risk of flooding (Flood Zones 2 and 3). Where some impact is seen as unavoidable then suitable mitigation will be discussed and agreed with the appropriate drainage bodies. Ongoing assessment work will identify areas that are more susceptible to flooding, including groundwater flooding, and identify mitigation and drainage strategies to be put in place.

It is expected that that the development proposals will include measures to alleviate flood risk in some areas.

⁴⁰ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 12 – Pewsham link option 1

The Environment Agency's comments are noted and will be taken into account when considering the final route recommendation.

Theme: Pollution and air quality (Appendix F3)

Pollution and air quality

There were 13 responses to Question 12 (Pewsham Link Option 1) that addressed pollution and air quality, with most of these being concerns that this development would result in an increase of air, noise and light pollution. One respondent noted concerns about gas odour in the area.

Pollution and air quality – Future Chippenham officer response

The initial Concept Framework plan that supported the road route options assessment provided the foundations to ensure that pollution and air quality were considered from the outset.

The Framework Masterplan will address the need to minimise the impacts of air pollution, light pollution, and noise pollution. Comments regarding pollution, air quality, noise and light pollution provide valuable information which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the wider site and design of the final road option chosen. All aspects of pollution will be further assessed as part of the development of the wider Framework Masterplan and road design to be accompanied by an overarching Environmental Impact Assessment. This will clearly outline potential impacts and proposed measures identified as necessary to mitigate them. Potential impacts during construction will also be avoided where possible, and where not possible mitigated by employing best practise construction practice.

Whilst air quality modelling or noise impacts assessments are yet to be undertaken, it is recognised that selection of a route located furthest from pollutant receptors would assist in reducing potential air quality impacts, and there is potential for the use of noise dulling barriers (such as landscape bunding) to help ameliorate the impacts of noise.

Theme: Ecology and environment (Appendix F4)

Ecology

There were 40 responses to Question 12 (Pewsham link Option 1) that raised issues around ecology. The majority of these were concerns about the development leading to potential negative impacts on biodiversity, wildlife (including protected species) and habitats. Concern was also raised about the proximity of this link road option to a nature reserve and concern that insufficient assessment of biodiversity impacts has been undertaken.

Ecology – Future Chippenham officer response

An assessment of the biodiversity baseline has been carried out, to inform the road route options assessment process presented in this consultation, including a site-based Extended Phase 1 Habitat survey, a Ground Level Tree Assessment (GLTA) for bats, and wintering bird surveys. Key considerations are the mitigation of any potential impacts on nearby designated sites such as Special Areas of Conservation (SACs), Sites of Special Scientific Interest (SSSIs), Local Nature Reserves (LNRs), County Wildlife Sites (CWSs), Ancient Woodlands, and on any protected or notable species recorded in the area. A range of potential mitigation measures are identified in paragraph 4.4 of the PEAOR summary report⁴¹. Further ecological surveys are being carried out, and discussions with Natural England and the County Ecologist are ongoing.

The feedback received identifying individual species (including spotted flycatcher breeding territories and other species such as kites, buzzards, owls and migratory birds, roe deer, voles, hares, rabbits, foxes, badgers, long tailed tits, blue tits, great tits, dunnocks, robins, otters and others) is welcomed, and the Future Chippenham team will ensure that these, plus any others, are taken into account during further ecological evaluations and the design process.

Any development including the road options and wider Framework Masterplan will be further supported and informed by additional detailed ecological surveys, which will form a critical part of the Environmental Impact Assessment for the whole site. The Framework Masterplan will be supported by a suite of ecology assessments that consider impact on all flora, fauna, and their habitat. These studies will identify if important species are present and if so can either be avoided or if avoidance is not possible, identify what mitigation will be needed. Avoidance of impacts will be the preferred option in all cases, and where this is not possible then mitigation may include translocation of species where legislation requires. The scheme will need to show how a net gain for biodiversity is provided in line with local and national planning requirements.

The ability to achieve a biodiversity net gain has been fundamental in informing the Concept Framework for the site and will continue to be considered in the development of the Framework Masterplan. It will be ensured that all opportunities for enhancing biodiversity are investigated on a whole site basis and where appropriate on a Chippenham wide basis.

The Future Chippenham team are committed to working in partnership with key environmental stakeholders and statutory consultees in developing the Framework Masterplan, including the Environment Agency, Natural England and Wiltshire Wildlife Trust.

The benefits of developing a whole site Framework Masterplan are key to ensuring that the impacts on ecology can be minimised, and mitigation can be delivered and planned upfront on a holistic scale.

⁴¹ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Theme: Landscape (Appendix F5)

Landscape

There were 43 responses to Question 12 (Pewsham link Option 1) that raised issues around landscape. A large proportion of these were concerns about the impacts on the landscape and visual amenity in the Avon Valley, loss of countryside and agricultural land. Concern was also raised about proximity to Mortimore's Wood, Westmead Open Space, the Wilts and Berks canal and Borough Lands spaces. Landscape mitigation measures were requested, along with further assessment carried out to determine impacts.

Landscape – Future Chippenham officer response

The Concept Framework for the site and the road options put forward during the consultation were informed by landscape assessments and studies. Further development of the road route option and Framework Masterplan will be supported and informed by a more detailed landscape assessment that will ensure the most sensitive landscape elements are protected and where possible enhanced. This will include the river corridor and the existing country park. Where less sensitive landscape is identified for development then suitable mitigation such as landscape planting, topography and design will be identified accordingly. The Framework Masterplan will ensure that a generous amount of open space, over and above locally required standards, is provided for the local community to enjoy in perpetuity.

In support of the road route options, a desk-based landscape and visual impacts study was undertaken and covered a 1km study area surrounding the site/route options as detailed in section 3.6 of the PEAOR summary report⁴². This detailed landscape mitigation recommendations that could be implemented, including:

- careful siting of the highway to avoid significant landscape and visual effects.
- avoidance of the loss of mature trees, hedgerows and safeguarding of existing habitats.
- limiting vegetation removal to that required to undertake the works.
- mitigation planting and/or screening bunds being designed to provide both adequate screening of the highway whilst remaining mindful of the character of the existing landscape to enable the new highway to integrate.
- creation of wet woodland in specific locations to provide both biodiversity and amenity benefit.
- ensuring the design of structures and finishes associated with the river crossings be locally distinctive and reflect a high quality of design; and
- ensure the Scheme integrates with local neighbourhoods to provide benefits for walkers and cyclists in the local area.

⁴² Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 12 – Pewsham link option 1

Theme: Heritage (Appendix F6)

Heritage

There were 2 responses to Question 12 (Pewsham link Option 1) raising concerns about potential harm to historic value of the area, and to the Wilts & Berks Canal.

Heritage - Future Chippenham officer response

The Concept Framework developed to support the road route options assessment sought to ensure the protection of existing heritage sites and integration into any development in the future. This will be further incorporated into the Framework Masterplan which will be supported and informed by detailed heritage assessments to ensure that the most sensitive historic elements are protected and where possible enhanced. This will include archaeology, buildings of heritage value and historic landscapes, and will consider the assets highlighted by consultees. The principle that will underpin the Framework Masterplan will be to, wherever possible, identify heritage assets and avoid impacts (i.e. plan around them). Where some impact is seen as unavoidable then suitable mitigation will be discussed and agreed with the appropriate heritage bodies.

In support of the road route options, desk based assessments of archaeological and heritage impacts were carried out as detailed in the PEAOR summary report⁴³. This was presented alongside detailed mitigation recommendations, including careful siting of the highway to avoid significant impacts.

Theme: Economy and infrastructure (Appendix F7)

Employment and economy

There were 11 responses to Question 12 (Pewsham link Option 1) that addressed employment and the economy. Most of the responses revolved around a perceived lack of employment opportunities in Chippenham, and queries as to what investment would be made to improve the town centre. One commented that this option would enable the town to grow, while another expressed concern about impacts on farmers livelihoods.

Employment and economy – Future Chippenham officer response

This consultation was about identifying a preferred road route should infrastructure be required. Matters with respect to the economy were not within the scope of the road route options consultation, but nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the site.

⁴³ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 12 – Pewsham link option 1

In line with national planning legislation, it is a requirement of the council's Local Plan to identify how and where projected employment needs for the next 20 years can be met in the most environmentally sustainable way.

Given that Chippenham will need new homes, then it is sustainable to provide employment opportunities within the same development. This provides local opportunities and cuts down the need for largescale commuting.

A function of the new road will be to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre, improve connectivity and travel within and around the town. Evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

Infrastructure and services

There were 4 responses to Question 12 (Pewsham link Option 1) that expressed concern that there is insufficient infrastructure in place to cope with increased population.

Infrastructure and services – Future Chippenham officer response

Any development will need to be supported by infrastructure. This was identified in the Concept Framework which informed the road route options assessment process. This will be refined further during the development of the Framework Masterplan and will include both critical and community infrastructure including the following:

- School provision
- Heath facilities
- Open space and play areas
- Indoor and outdoor leisure facilities
- Open spaces
- Country parks
- Local centres/small scale retail
- Community halls
- Public houses
- Churches

The submission to the Local Planning Authority to demonstrate that the Future Chippenham site is the most sustainable option in which to meet the town's future growth needs, will include an Infrastructure Delivery Plan (IDP) setting out the infrastructure that is required to be delivered and by when. This IDP will support future Local Plan representations, masterplan and planning applications.

Health and social wellbeing

There were 9 responses to Question 12 (Pewsham link Option 1) relating to health and wellbeing, the majority raising concerns about loss of green spaces countryside and

Summary of responses to Question 12 – Pewsham link option 1

subsequent impacts on wellbeing/mental health. One response raised concern about potential for increased crime.

Health and social wellbeing – Future Chippenham officer response

Health and social wellbeing is a fundamental aspect of the Concept Framework that has informed the road route options assessment. The scale of the proposed growth in the Concept Framework allows a strategic approach to the provision of landscape and green infrastructure which will deliver social, economic and environmental benefits. The proposed country park offers a significant area of open space which will support the future health and wellbeing of existing and future residents. The river and its flood meadows will also become a 'unifying strand' in the green infrastructure network.

Public health matters will be further assessed as part of the development of the Framework Masterplan and road design and there will be a chapter within the Environmental Impact Assessment (EIA) which will accompany all submissions, detailing the assessments undertaken, impacts identified, mitigatory measures to be implemented and opportunities for improvements where practicable. Similarly, the EIA will address social issues including the provision of affordable homes, accessible homes for the mobility impaired, access to education and healthcare services and incorporation of the principles of safe by design. The points regarding potential detrimental impacts on people's health arising from this scheme are noted and accepted as valid. It will be important in the continuing design process for the Framework Masterplan that this issue is addressed and to ensure this process will include consultation with the NHS and be designed to minimise impacts and optimise opportunities, such as the provision of a new network of public green open space including trim trails and enhanced cycle and walking opportunities.

The points regarding potential increased anti-social behaviour arising from this scheme are noted. It will be important in the continuing design process for the Framework Masterplan that this issue is addressed and to ensure this the process will include consultation with the police and be designed to Safe by Design national standards to discourage anti-social behaviour. Potential impacts on social issues will be further assessed as part of an overarching Environmental Impact Assessment, to accompany the project work, which will clearly outline potential impacts and proposed measures identified as necessary to mitigate them.

Theme: Planning (Appendix F8)

Relationship with the Local Plan review/Prematurity

There were 14 responses to Question 12 (Pewsham link Option 1) raising concerns that the case for the scale of development proposed in Chippenham has not yet been fully debated through the Local Plan review process, and that consultation on the distributor road is premature, with concerns raised about predetermining the outcome of the Local Plan review. A concern was also raised that there are technical and viability challenges which have implications for the soundness of the Local Plan.

Relationship with the Local Plan review/Prematurity – Future Chippenham officer response

Matters relating to the Local Plan review are not within the scope of the road route options consultation, although this report will be shared with Wiltshire Council's Spatial Planning team. The comments received do nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing the Framework Masterplan for the site.

While ideally a planning application for the road or any wider development would not be submitted until the Local Plan review is complete, there are many precedents set where applications that accord with an emerging Local Plan which has reached an advanced stage within the process have been permitted, so as to ensure timely delivery of housing and critical infrastructure.

The next stage of the process is to include a Framework Masterplan which will set out the vision and context for the development. This will be subject to full consultation in due course and be supported by a design code which will provide more detail.

Housing/Scale of development

There were 26 responses to Question 12 (Pewsham link Option 1) relating to housing and the scale of development, with the majority of these expressing that too much development is proposed, or that no new housing was wanted or needed. It was requested that focus be on developing vacant or brownfield areas of the town centre.

Housing/Scale of development – Future Chippenham officer response

Matters regarding the scale of development being proposed are not within the scope of the road route options consultation, but nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the site. This report will also be shared with Wiltshire Council's Spatial Planning team for their information.

Placemaking

There were 5 responses to Question 12 (Pewsham link Option 1) relating to placemaking and design matters. Concerns were raised that the future development will be poorly designed, with specific mention made to the design of bridges. One respondent noted no objection, providing good design principles would be adhered to. Stagecoach West commented that the extensive development south of Pewsham Way, demanding the SW Link Road through Zones 1 and 2 and this kind of link, is inappropriate as urban design would be compromised, due partly to topographic issues, on a number of counts.

Placemaking – Future Chippenham officer response

This consultation was about identifying a preferred road route should infrastructure be required. Matters with respect to design and placemaking are not within the scope of the road

Summary of responses to Question 12 – Pewsham link option 1

route options consultation, but nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the site and road design.

The Framework Masterplan which is being produced currently and will be subject to public consultation in due course, will set out in some detail how the building of the road can help deliver a high-quality development with a unique sense of place and which will mark a step-change in previous recent house building around Chippenham. The Framework Masterplan will be accompanied by a Design Code which will ensure that these design standards are maintained throughout the lifetime of the build.

Theme: Consultation and process (Appendix F9)

HIF bid and funding

There were 6 responses to Question 12 (Pewsham link Option 1) addressing matters related to the HIF bid and funding. Concerns were raised that the project was not a good use of taxpayer's money or was not viable. It was expressed by one respondent that there had not been enough consultation before the HIF bid was submitted, while another requested the HIF funding be returned to Homes England.

HIF Bid and funding – Future Chippenham officer response

The council acted in a proactive manner to seek central government funding to ensure that infrastructure could be in place to unlock housing should the area be allocated through the Local Plan review, on land recognised for potential future growth within the earlier examination of the Chippenham Site Allocations Plan. The successful bid for funding provides a resolution to the potential barriers for the site and enables a holistic approach to the delivery of critical infrastructure to meet the strategic need of the town, alongside other benefits for the town as a whole. At the time of the bid submission it was expected that the Local Plan review would have completed its public consultation on its spatial strategy prior to any awards being made by MHCLG. Delays in the Local Plan review timetable meant that the grant was awarded in advance of this stage of the Local Plan. However, this does not affect the fact that the application for the funding was made based on identified need on a particular site. The successful bid for central government funding was based on a business case which demonstrated good value for money.

Process/Consultation

There were 43 responses to Question 12 (Pewsham link Option 1) concerning the process and consultation. A large number of these were criticisms that there was not a 'no road' option offered on the consultation form, along with complaints that the consultation material was not clear in relation to the link road options. Some respondents also felt there was a lack of clarity over the function of the new road, and others felt the consultation process was inadequate with not enough opportunities to ask questions, the consultation being too short, taking place concurrently with the Local Plan review consultation, and taking place during a national lockdown.

Process/Consultation – Future Chippenham officer response

The consultation accorded to the Local Planning Authority's adopted Statement of Community Involvement as amended in July 2020 that implemented an interim approach to public consultation in light of restrictions imposed due to the COVID-19 pandemic. Whilst the unique circumstances of the pandemic meant that face-to-face consultation was not an option, alternative COVID safe methods of outreach, such as online webinars and a video, were employed which enabled effective engagement. The results of the consultation with just under 1,200 individual representations being received indicates that the techniques employed have been successful.

It is not uncommon for councils to take an active role in the development of land within their ownership, and procedures are in place to ensure that there is a clear internal organisational separation between teams promoting developments (in this case Future Chippenham) and teams responsible for undertaking the regulatory functions of the council (the Local Planning Authority). Similarly, the elected Councillors who sit on the planning decision making committee (in this case Strategic Planning Committee) will be bound by the law and code of practice to consider the case before them solely upon its planning merits taking into account planning policy and all other material planning considerations, including the results of consultations.

The principle of whether the road and potential wider development should go ahead, including the consideration of alternative options, is for the Local Plan review to address. As explained at the beginning of Section 4, the Future Chippenham road route options consultation took place around a working assumption that the project could be taken forward should an appropriate allocation be made in the Local Plan review. As such, the consultation form did not include a specific question asking for feedback on whether or not consultees supported the new road in principle, as it had already been confirmed that should there be any such development a new road will be required to avoid insurmountable negative impacts on the existing highways network. The consultation did enable consultees who wished to record their objection to any road through a number of free text fields built into the consultation form. In addition, consultees could choose to send an email or letter instead of completing the consultation form.

Theme: General (Appendix F10)

General

There were 307 responses raising general issues in response to Question 12 (Pewsham link Option 1). The considerable majority of these were objections to the road, with views expressed that the road is not wanted, not needed or justified, and should not be progressed. A number of respondents commented that they had no preference between the link road options, while others commented in favour or against this option. It was noted that Option 1 appears to be most closely aligned to route Option C (the inner route).

Summary of responses to Question 12 – Pewsham link option 1

General – Future Chippenham officer response

Objection to the road and options and wider development is noted. As was explained in the consultation, the principle of whether the road and wider development it will serve should go ahead will be taken as part of the Local Plan process and the Local Planning Authority will be made aware of the level of objection to this consultation. This consultation was stating that should the development proceed then what form and route should it take. Nevertheless, the level of objection is noted and will be considered by the Future Chippenham team. Concerns regarding amenity to existing residents will be key considerations through the masterplanning stages. The comments relating to the link road options and their connections to each of the road route options are noted, and it is confirmed that there will be a reassessment of the published route options presented in light of the feedback received or new evidence coming to light.

Summary of responses to Question 13 - Pewsham link Option 3

- 4.39. The full lists of summarised points relating to Pewsham link road Option 3 can be found at **Appendix G (1-9)**. The comments received were grouped under the following broad themes:
- Transport
 - Climate change and flooding
 - Pollution and air quality
 - Ecology and environment
 - Landscape
 - Planning
 - Economy and infrastructure
 - Consultation and process
 - General
- 4.40. A high level summary of the comments received is set out below along with officer responses to the points raised. Where appropriate the officer responses explain how the points raised have and will influence the project going forward, including through road design, road route options decision making, and the subsequent Framework Masterplanning process.
- 4.41. The tables below summarise the responses that were received relating to Pewsham link Option 3:

Summary of responses to Question 13 – Pewsham link option 3

Theme: Transport (Appendix G1)

Transport

There were 40 responses to Question 13 (Pewsham link Option 3) that were judged to fall within the theme of transport. A number of these concern the roundabout junction proposed under Option 3, with some comments that Pewsham should not have any more roundabouts, comments that existing roundabout should be utilised, while others noted that a roundabout

Summary of responses to Question 13 – Pewsham link option 3

junction should be constructed. Some concern was raised about the potential for increased congestion pressure on the highways network, such as at Canal Road. One respondent noted a preference for Option 3 as it would encourage traffic between the distributor road and Pewsham to use both Canal Road and King Henry Drive, whereas Option 1 would direct all traffic to Canal Road. It was also noted that Option 3 could help to ease congestion at the Bridge Centre. The connectivity benefits of Option 3 were noted by some whilst others commented that the shortest option was preferable. Some suggestions were made that link Option 3 could form a connection to Pewsham Way, which should form part of the distributor road instead of a new road. Some comments were made regarding the relationship of the link Option 3 with the cycle network, including that this would appear to be the safer option for pedestrians and cyclists as the roundabout may help to control vehicle speeds, although it was to be unclear how cyclists would re-join the carriageway, noting that there is no cycle path on the A4. Concerns were raised that this option would have an adverse impact on footpaths.

A number of other more general comments and comments linking with the wider road route options were also submitted to the question. Requests were made for an alternative sustainable transport strategy, and investment into the public transport.

Transport: Future Chippenham officer response

The inclusion of a link road between Pewsham Way and the Future Chippenham distributor road as part of a comprehensive and holistic solution would serve various functions including providing access to various areas of potential development. It would also provide connectivity by adding to the overall highway network thereby providing enhanced route choice and options, and allow for enhanced permeability through the area by a range of transport modes (car, walking, cycling, bus etc.). Comments received through this consultation will be considered in helping identify and determine the optimal location and design for the link road, it's associated infrastructure, and the nature of the junction connection with Pewsham Way. The link road will be considered and developed as part of the overall scheme masterplanning work and will be included in the traffic modelling analysis as part of the Transport Assessment informing the planning application.

Theme: Climate change and flooding (Appendix G2)

Climate change

There were 12 responses to Question 13 (Pewsham link Option 3) of which most raised concerns about the project's climate impacts, concerns regarding carbon costs and compatibility with the council's declaration of a climate emergency. It was also commented that link Option 3 has the lowest environmental impact.

Climate change – Future Chippenham officer response

Addressing the climate emergency is an underpinning objective for the Future Chippenham project. Given that Chippenham will need new homes, the function of the new road is to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to

Summary of responses to Question 13 – Pewsham link option 3

boost local opportunities, reduce traffic congestion in the town centre and improve connectivity and travel within and around the town.

The Future Chippenham team consider all evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

Part of this will be the focus on supporting self-containment through the delivery of jobs, services and facilities which enable residents to meet their everyday needs within the town itself rather than needing to travel. Futureproofing development so that new builds are constructed to policy compliant carbon standards, alongside a framework of significant green infrastructure, spaces for nature and sustainable transport opportunities will also be critical.

These matters will be addressed through the subsequent stage of preparing the Framework Masterplan for the site. Garden settlement principles will be applied with decarbonisation and the need to meet the challenges of the climate emergency as the underpinning principles. The Future Chippenham project will seek to be aspirational and identify opportunities to exceed planning policy requirements wherever practicable. Consideration will be given to extend initiatives within the proposed Framework Masterplan area and the wider area so that the town moves towards the same objectives and goals.

Flooding

There were 3 responses to Question 13 (Pewsham link Option 3) that raised general concerns that the development could result in an increased risk of flooding.

Flooding – Future Chippenham officer response

The rivers in and around the site are important features in the landscape as well as being environmental assets and will be key considerations in the design and layout of the site in the Framework Masterplan.

Desk based assessments of the water environment were carried out in support of the road route options stage, which set out a number of mitigation measures to be employed to reduce runoff and pollution from construction activities into local watercourses and groundwater receptors. This is further detailed within Section 4.5 of the PEAOR summary report⁴⁴.

Proposals for development of the site will be further supported and informed by detailed flood risk assessments. A principle that will underpin the Framework Masterplan will be to, wherever possible, identify and avoid development in areas at risk of flooding (Flood Zones 2 and 3). Where some impact is seen as unavoidable then suitable mitigation will be discussed and agreed with the appropriate drainage bodies. Ongoing assessment work will identify areas that are more susceptible to flooding, including groundwater flooding, and identify mitigation and drainage strategies to be put in place.

⁴⁴ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Summary of responses to Question 13 – Pewsham link option 3

It is expected that that the development proposals will include measures to alleviate flood risk in some areas.

The Environment Agency's comments are noted and will be taken into account when considering the final route recommendation.

Theme: Pollution and air quality (Appendix G3)

Pollution and air quality

There were 2 responses to Question 13 (Pewsham link Option 3) raising concerns that the development would result in an increase of air and noise pollution.

Pollution and air quality – Future Chippenham officer response

The initial Concept Framework plan that supported the road route options assessment provided the foundations to ensure that pollution and air quality were considered from the outset.

The Framework Masterplan will address the need to minimise the impacts of air pollution, light pollution, and noise pollution. Comments regarding pollution, air quality noise and light pollution provide valuable information which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the wider site and design of the final road option chosen. All aspects of pollution will be further assessed as part of the development of the wider Framework Masterplan and road design to be accompanied by an overarching Environmental Impact Assessment. This will clearly outline potential impacts and proposed measures identified as necessary to mitigate them. Potential impacts during construction will also be avoided where possible, and where not possible mitigated by employing best practise construction practice.

Whilst air quality modelling or noise impacts assessments are yet to be undertaken, it is recognised that selection of a route located furthest from pollutant receptors would assist in reducing potential air quality impacts, and there is potential for the use of noise dulling barriers (such as landscape bunding) to help ameliorate the impacts of noise.

Theme: Ecology and environment (Appendix G4)

Ecology

There were 18 responses to Question 13 (Pewsham link Option 3) that raised issues around ecology. The majority of these were concerns about the development leading to potential negative impacts on biodiversity, wildlife (including protected species) and habitats. Concern was also raised that insufficient assessment of biodiversity impacts has been undertaken.

Ecology – Future Chippenham officer response

Summary of responses to Question 13 – Pewsham link option 3

An assessment of the biodiversity baseline has been carried out, to inform the road route options assessment process presented in this consultation, including a site-based Extended Phase 1 Habitat survey, a Ground Level Tree Assessment (GLTA) for bats, and wintering bird surveys. Key considerations are the mitigation of any potential impacts on nearby designated sites such as Special Areas of Conservation (SACs), Sites of Special Scientific Interest (SSSIs), Local Nature Reserves (LNRs), County Wildlife Sites (CWSs), Ancient Woodlands, and on any protected or notable species recorded in the area. A range of potential mitigation measures are identified in paragraph 4.4 of the PEAOR summary report⁴⁵. Further ecological surveys are being carried out, and discussions with Natural England and the County Ecologist are ongoing.

The feedback received identifying individual species (including spotted flycatcher breeding territories and other species such as kites, buzzards, owls and migratory birds, roe deer, voles, hares, rabbits, foxes, badgers, long tailed tits, blue tits, great tits, dunnocks, robins, otters and others) is welcomed, and the Future Chippenham team will ensure that these, plus any others, are taken into account during further ecological evaluations and the design process.

Any development including the road options and wider Framework Masterplan will be further supported and informed by additional detailed ecological surveys, which will form a critical part of the Environmental Impact Assessment for the whole site. The Framework Masterplan will be supported by a suite of ecology assessments that consider impact on all flora, fauna, and their habitat. These studies will identify if important species are present and if so can either be avoided or if avoidance is not possible, identify what mitigation will be needed. Avoidance of impacts will be the preferred option in all cases, and where this is not possible then mitigation may include translocation of species where legislation requires. The scheme will need to show how a net gain for biodiversity is provided in line with local and national planning requirements.

The ability to achieve a biodiversity net gain has been fundamental in informing the Concept Framework for the site and will continue to be considered in the development of the Framework Masterplan. It will be ensured that all opportunities for enhancing biodiversity are investigated on a whole site basis and where appropriate on a Chippenham wide basis.

The Future Chippenham team are committed to working in partnership with key environmental stakeholders and statutory consultees in developing the Framework Masterplan, including the Environment Agency, Natural England and Wiltshire Wildlife Trust.

The benefits of developing a whole site Framework Masterplan are key to ensuring that the impacts on ecology can be minimised, and mitigation can be delivered and planned upfront on a holistic scale.

Theme: Landscape (Appendix G5)

⁴⁵ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Landscape

There were 26 responses to Question 13 (Pewsham link Option 3) that raised issues around landscape. A large proportion of these were concerns about the impacts on the landscape and visual amenity, loss of countryside and agricultural land. Concerns were raised about the potential for impacts on the walking routes near the canal, although others noted a preference for this option due to it being further from Mortimore's Wood, having less impact on green space, and not requiring a bridge.

Landscape – Future Chippenham officer response

The Concept Framework for the site and the road options put forward during the consultation were informed by landscape assessments and studies. Further development of the road route option and Framework Masterplan will be supported and informed by a more detailed landscape assessment that will ensure that the most sensitive landscape elements are protected and where possible enhanced. This will include the river corridor and the existing country park. Where less sensitive landscape is identified for development then suitable mitigation such as landscape planting, topography and design will be identified accordingly. The Framework Masterplan will ensure that a generous amount of open space, over and above locally required standards, is provided for the local community to enjoy in perpetuity.

In support of the road route options, a desk-based landscape and visual impacts study was undertaken and covered a 1km study area surrounding the site/route options as detailed in section 3.6 of the PEAOR summary report⁴⁶. This detailed landscape mitigation recommendations that could be implemented, including:

- careful siting of the highway to avoid significant landscape and visual effects.
- avoidance of the loss of mature trees, hedgerows and safeguarding of existing habitats.
- limiting vegetation removal to that required to undertake the works.
- mitigation planting and/or screening bunds being designed to provide both adequate screening of the highway whilst remaining mindful of the character of the existing landscape to enable the new highway to integrate.
- creation of wet woodland in specific locations to provide both biodiversity and amenity benefit.
- ensuring the design of structures and finishes associated with the river crossings be locally distinctive and reflect a high quality of design; and
- ensure the Scheme integrates with local neighbourhoods to provide benefits for walkers and cyclists in the local area.

⁴⁶ Preliminary Environmental Assessment of Options Report (PEAOR) summary report, available from: <https://www.wiltshire.gov.uk/media/5740/Preliminary-Environmental-Assessment-of-options-PEAOR-report-summary/pdf/PEOR.pdf?m=637462609557400000>

Theme: Economy and infrastructure (Appendix G6)

Employment and economy

There were 2 responses to Question 13 (Pewsham link Option 3) that commented on a perceived lack of employment opportunities in Chippenham.

Employment and economy – Future Chippenham officer response

This consultation was about identifying a preferred road route should infrastructure be required. Matters with respect to the economy were not within the scope of the road route options consultation, but nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the site.

In line with national planning legislation, it is a requirement of the council's Local Plan to identify how and where projected employment needs for the next 20 years can be met in the most environmentally sustainable way. Given that Chippenham will need new homes, then it is sustainable to provide employment opportunities within the same development. This provides local opportunities and cuts down the need for largescale commuting.

A function of the new road will be to facilitate this growth in the most beneficial and sustainable way for the town. It will unlock land to support the requirement to meet housing needs, allow employment development to boost local opportunities, reduce traffic congestion in the town centre, improve connectivity and travel within and around the town. Evidence shows that this development can deliver more benefits, be much more sustainable and provide opportunities for better integrated place shaping than any other options for meeting Chippenham's growth needs for the next 25 years or more.

Health and social wellbeing

There were 4 responses to Question 13 (Pewsham link Option 3) that expressed concerns about loss of green spaces, countryside and subsequent impacts on wellbeing/mental health, and concerns about antisocial behaviour.

Health and social wellbeing – Future Chippenham officer response

Health and social wellbeing is a fundamental aspect of the Concept Framework that has informed the road route options assessment. The scale of the proposed growth in the Concept Framework allows a strategic approach to the provision of landscape and green infrastructure which will deliver social, economic and environmental benefits. The proposed country park offers a significant area of open space which will support the future health and wellbeing of existing and future residents. The river and its flood meadows will also become a 'unifying strand' in the green infrastructure network.

Public health matters will be further assessed as part of the development of the Framework Masterplan and road design and there will be a chapter within the Environmental Impact Assessment (EIA) which will accompany all submissions, detailing the assessments

Summary of responses to Question 13 – Pewsham link option 3

undertaken, impacts identified, mitigatory measures to be implemented and opportunities for improvements where practicable. Similarly, the EIA will address social issues including the provision of affordable homes, accessible homes for the mobility impaired, access to education and healthcare services and incorporation of the principles of safe by design. The points regarding potential detrimental impacts on people's health arising from this scheme are noted and accepted as valid. It will be important in the continuing design process for the Framework Masterplan that this issue is addressed and to ensure this the process will include consultation with the NHS and be designed to minimise impacts and optimise opportunities, such as the provision of a new network of public green open space including trim trails and enhanced cycle and walking opportunities.

Theme: Planning (Appendix G7)

Relationship with the Local Plan review/Prematurity

There were 6 responses to Question 13 (Pewsham link Option 3) relating to the Local Plan review, most of which raised concerns that the case for the scale of development proposed in Chippenham has not yet been fully debated through the Local Plan review process, and that consultation on the distributor road is premature, with concerns raised about predetermining the outcome of the Local Plan review. A request was also made that the council should introduce planning policies that require climate change impact assessment of proposed developments set against the council's carbon reduction targets.

Relationship with the Local Plan review/Prematurity – Future Chippenham officer response

Matters relating to the Local Plan review are not within the scope of the road route options consultation, although this report will be shared with Wiltshire Council's Spatial Planning team. The comments received do nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing the Framework Masterplan for the site.

While ideally a planning application for the road or any wider development would not be submitted until the Local Plan review is complete, there are many precedents set where applications that accord with an emerging Local Plan which has reached an advanced stage within the process have been permitted, so as to ensure timely delivery of housing and critical infrastructure.

The next stage of the process is to include a Framework Masterplan which will set out the vision and context for the development. This will be subject to full consultation in due course and be supported by a design code which will provide more detail.

Housing/Scale of development

There were 10 responses to Question 13 (Pewsham link Option 3) relating to housing the scale of development, with the majority of these expressing that too much development is

Summary of responses to Question 13 – Pewsham link option 3

proposed, or that no new housing was wanted or needed. It was requested that focus be on developing vacant or brownfield areas of the town centre.

Housing/Scale of development – Future Chippenham officer response

Matters regarding the scale of development being proposed are not within the scope of the road route options consultation, but nonetheless provide valuable insight which will be taken into consideration through the subsequent stage of preparing a Framework Masterplan for the site. This report will also be shared with Wiltshire Council's Spatial Planning team for their information.

Placemaking

There was 1 response to Question 13 (Pewsham link Option 3) raising a concern that the future development will be unattractive.

Placemaking – Future Chippenham officer response

The Framework Masterplan which is being produced currently and will be subject to public consultation in due course, will set out in some detail how the building of the road can help deliver a high-quality development with a unique sense of place and which will mark a step-change in previous recent house building around Chippenham. The Framework Masterplan will be accompanied by a Design Code which will ensure that these design standards are maintained throughout the lifetime of the build.

Theme: Consultation and process (Appendix G8)

Process/Consultation

There were 29 responses to Question 13 (Pewsham link Option 3) concerning the process and consultation. A large number of these were criticisms that there was not a 'no road' option offered on the consultation form, along with complaints that the consultation material was not clear in relation to the link road options. Some respondents also felt there was a lack of clarity over the function of the new road, and other felt the consultation process was inadequate with the consultation taking place during a national lockdown, presentation of information, and format of webinars. A concern was also raised that the project appeared to be motivated by the availability of funding.

Process/Consultation – Future Chippenham officer response

The consultation accorded to the Local Planning Authority's adopted Statement of Community Involvement as amended in July 2020 that implemented an interim approach to public consultation in light of restrictions imposed due to the COVID-19 pandemic. Whilst the unique circumstances of the pandemic meant that face-to-face consultation was not an option, alternative COVID safe methods of outreach, such as online webinars and a video, were employed which enabled effective engagement. The results of the consultation with just

Summary of responses to Question 13 – Pewsham link option 3

under 1,200 individual representations being received indicates that the techniques employed have been successful.

It is not uncommon for councils to take an active role in the development of land within their ownership and procedures are in place to ensure that there is a clear internal organisational separation between teams promoting the development (in this case Future Chippenham) and teams responsible for undertaking the regulatory functions of the council (the Local Planning Authority). Similarly, the elected Councillors who sit on the planning decision making committee (in this case Strategic Planning Committee) will be bound by the law and code of practice to consider the case before them solely upon its planning merits taking into account planning policy and all other material planning considerations, including the results of consultations.

The principle of whether the road and potential wider development should go ahead, including the consideration of alternative options, is for the Local Plan review to address. As explained at the beginning of Section 4, the Future Chippenham road route options took place around a working assumption that the project could be taken forward should an appropriate allocation be made in the Local Plan review. As such, the consultation form did not include a specific question asking for feedback on whether or not consultees supported the new road in principle, as it had already been confirmed that should there be any such development a new road will be required to avoid insurmountable negative impacts on the existing highways network. The consultation did enable consultees who wished to record their objection to any road through a number of free text fields built into the consultation form. In addition, consultees could choose to send an email or letter instead of completing the consultation form.

Theme: General (Appendix G9)

General

There were 301 responses raising general issues in response to Question 12 (Pewsham link Option 1). The considerable majority of these were objections to the road, with views expressed that the road is not wanted, not needed or justified, and should not be progressed. A number of respondents commented that they had no preference between the link road options, while others commented in favour or against this option. It was noted that Option 3 appears to be most closely aligned to route Options A and B (the outer and middle routes). Concerns were also raised about potential negative impacts on residents, and a request was made to build in adequate separation from existing properties.

General – Future Chippenham officer response

Objection to the road and options and wider development is noted. As was explained in the consultation, the principle of whether the road and wider development it will serve should go ahead will be taken as part of the Local Plan process and the Local Planning Authority will be made aware of the level of objection to this consultation. This consultation was stating that should the development proceed then what form and route should it take. Nevertheless, the level of objection is noted and will be considered by the Future Chippenham team. Concerns regarding amenity to existing residents will be key considerations through the masterplanning

Summary of responses to Question 13 – Pewsham link option 3

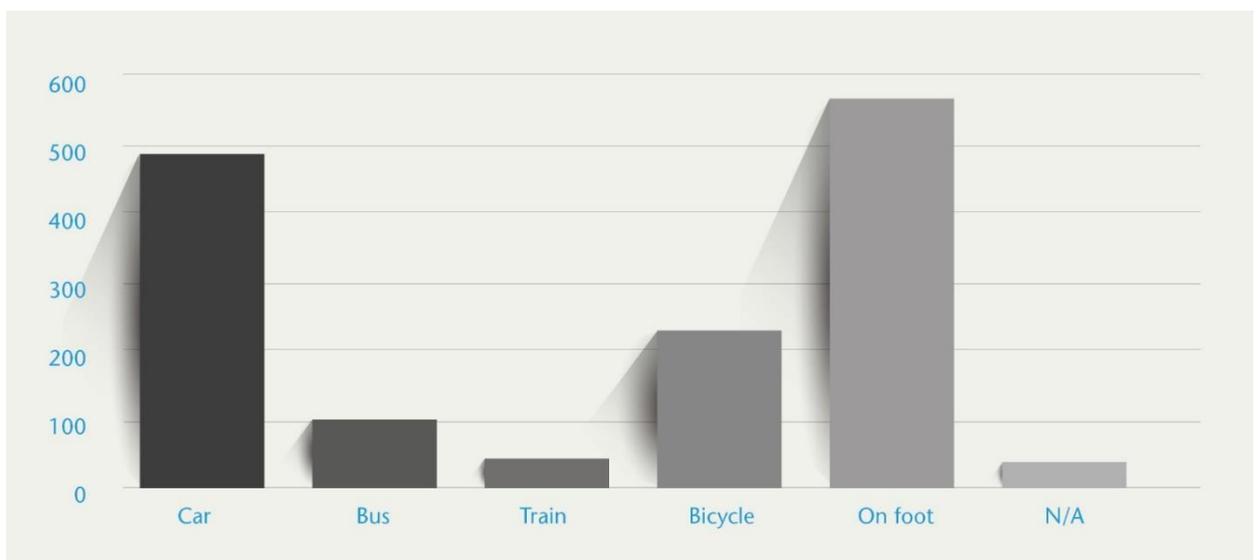

stages. The comments relating to the link road options and their connections to each of the road route options are noted, and it is confirmed that there will be a reassessment of the published route options presented in light of the feedback received or new evidence coming to light.

Questions 14, 15, 16, and 17: Statistical data relating to preferred modes of transport

Summary of responses to Question 14

- 4.42. The following graphs summarise the responses that were received to questions 14 – 18 of the consultation form concerning respondents preferred modes of transport and their reasons for making journeys in the Chippenham area. This data will be used in taking forward further transport assessment for the project.
- 4.43. Question 14 of the consultation form asked how respondents travel to/from Chippenham town centre. Respondents were able to give more than one answer, if applicable. Of the 904 responses received to this question, a considerable majority of respondents travel on foot (569) or by car (488), with travel by bicycle (230) also representing a key transport mode. Travel by bus (100) and train (43) were less common amongst those responding to this question.

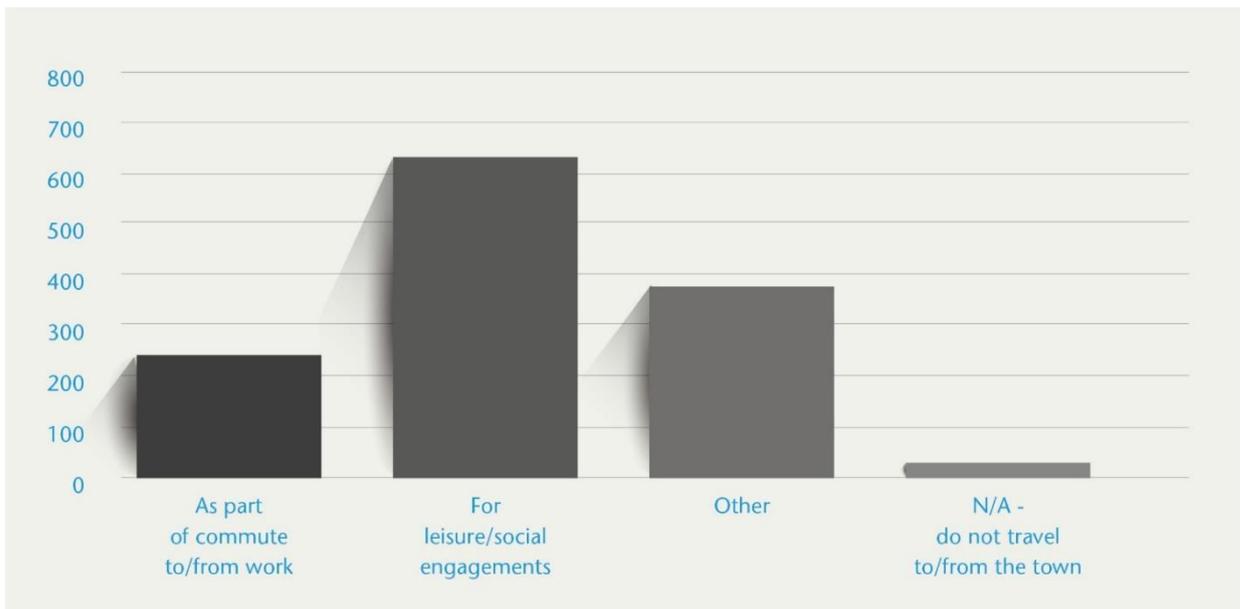

Figure 12: Graph showing responses to consultation form Question 14

Summary of responses to Question 15

- 4.44. Question 15 of the consultation form asked why respondents travel to/from Chippenham town centre. Respondents were able to give more than one answer if applicable and could also offer alternative reasons within a free text field. Of the 893 responses received to this question, many respondents noted their reasons for visiting the town being for leisure/social engagements (632), with a smaller number visiting the town for work or as part of a commute (242). Of those that reported their reasons for visiting the town centre as 'Other' (377), a significant majority of these were shopping, retail, and banking. Other reasons included being a resident in the town centre, for exercise, for religious reasons, for healthcare, part of an onward journey, for education, or for disabled access.

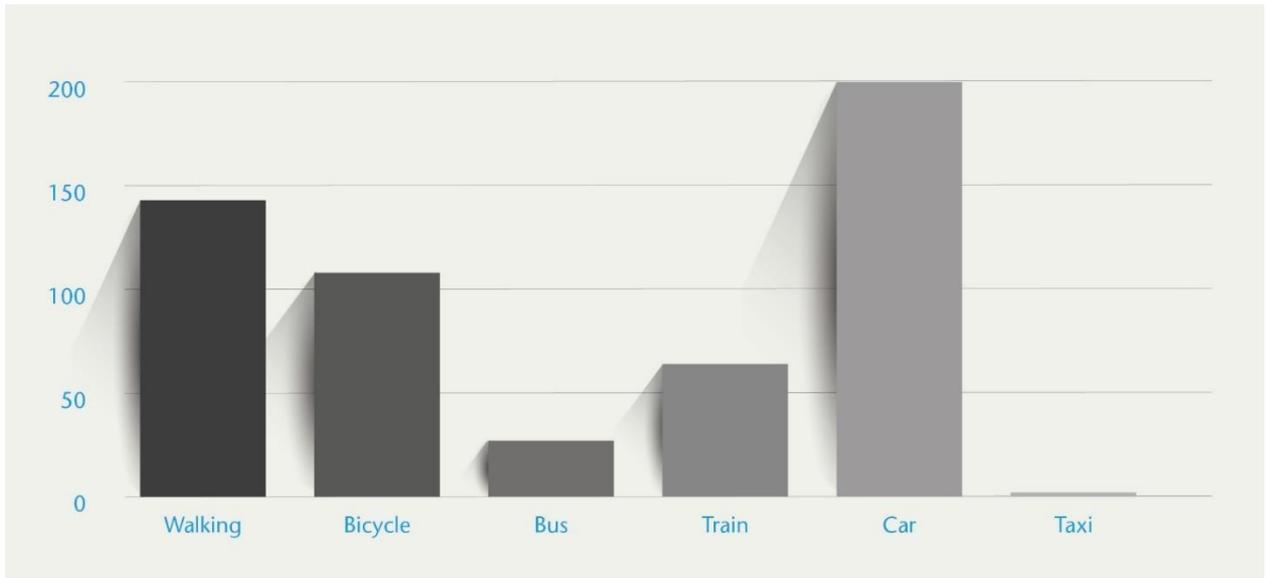

Figure 13: Graph showing responses to consultation form Question 15

Summary of responses to Question 16

- 4.45. Question 16 of the consultation form asked if respondents travel to/from Chippenham as part of a commute for work, what is the preferred mode of transport. Respondents were able to give more than one answer, if applicable. There were 744 responses to this question, of which 352 clarified that the question was not applicable as the respondent did not travel to/from Chippenham as part of a commute for work. Of the remaining 392 responses, the most frequently cited mode of transport was by car (200), with large numbers also reporting travel on foot (143) and by bicycle (108). A smaller number included train (64) and bus (27) amongst their modes of transport for this purpose.

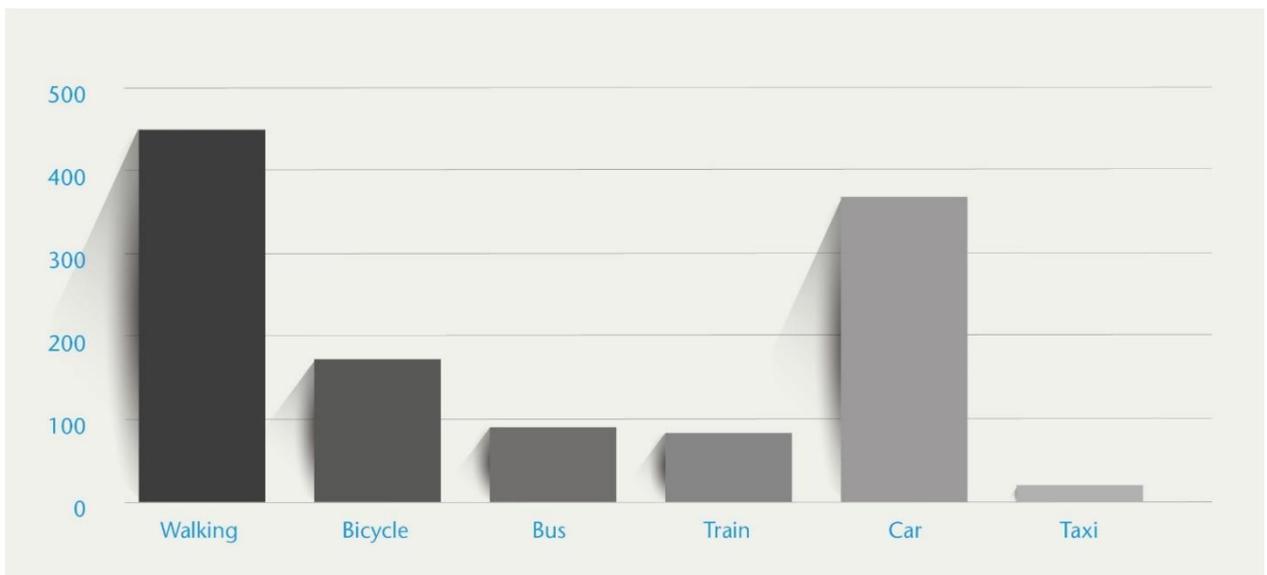

Figure 14: Graph showing responses to consultation form Question 16

Summary of responses to Question 17

- 4.46. Question 17 of the consultation form asked if respondents travel to/from Chippenham for social engagements, what is the preferred mode of transport. Respondents were able to give more than one answer, if applicable. There were 864 responses to this question, of which 74 clarified that the question was not applicable as the respondent did not travel to/from Chippenham for social engagements. Of the remaining 790 responses, the most frequently cited mode of transport was on foot (449), with large numbers also reporting travel by car (368). A smaller number included travel by bicycle (173), bus (90) and train (83) amongst their modes of transport for this purpose.

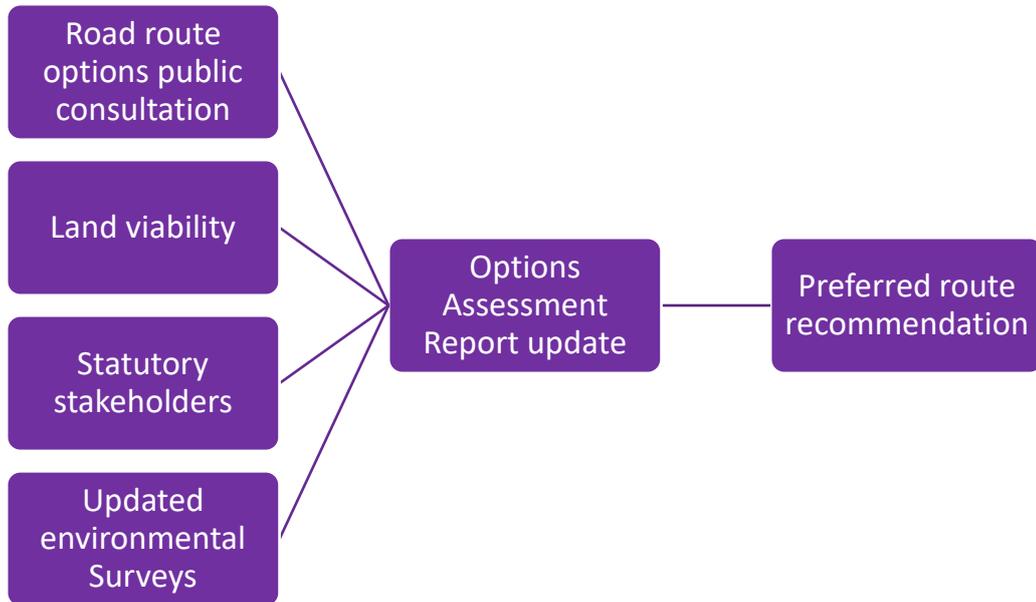

Figure 15: Graph showing responses to consultation form Question 17

5. Conclusions

- 5.1. The purpose of the consultation on the Future Chippenham road route options was to gain feedback from members of the public and stakeholders of the project on the road route options presented in the consultation itself and in addition gain insight into potential opportunities/ issues/concerns from the stakeholders in the project. The consultation survey feedback received was reviewed and all feedback utilised to inform the update to the options assessment process and will inform a decision on the preferred road route option.
- 5.2. Where responses were not directly related to the road route options but could be considered as part of the wider project these have been acknowledged and passed on to the workstream teams for consideration e.g. road design team, traffic modelling team, Framework Masterplan team.
- 5.3. The consultation generated a high level of interest in Chippenham and the surrounding area. Responses covered a wide range of issues, many of which addressed points that were beyond the scope of the road route options consultation.
- 5.4. The emerging Framework Masterplan for the site will consider the feedback related to this area and this in turn will ultimately be informed by the Local Plan review process. This project cannot resolve issues raised with regard to quantum of housing proposed merely respond to the needs by providing a development that is supported by the required infrastructure from the outset and is holistically planned in its entirety providing greater opportunities to address the strategic objectives, priorities for Chippenham and ultimately provide a more self-sustainable town in the future.
- 5.5. The consultation feedback is welcomed and provides helpful direction which will be used to inform the selection of the preferred road route, through the Options Assessment Report (OAR) process. Alongside the consideration of feedback received through the consultation process, the updated OAR will also incorporate the following:
 - Updates relating to **Land Viability**, to include discussions and feedback from landowners impacted by the project.
 - Updates responding to issues and considerations raised through ongoing dialogue with **Statutory Stakeholders** who have interests in the project.
 - **Updated Environment Surveys**, reflecting new data and assessments carried out since the OAR was last completed in June 2020.

Figure 6: Factors influencing the road route recommendation

- 5.6. It should be noted that the road route will continue to be refined during the design stages and within the constraints and opportunities identified as part of this ongoing process including but not limited to, land survey results, environmental surveys, flood modelling etc.

Responses to Question 5 – ‘Other’

The table below itemises the individual points raised in answer to Question 5, ‘Other’. The number of times the same point was raised is denoted in the right hand column of the table. An individual consultation response may have included a number of separate points and in these instances all points are recorded separately.

Question 5: ‘Other’ feedback	Number of responses
To not build the road.	221
To avoid landscape impacts/preserve landscape setting.	36
To not build any new houses.	21
To stop urban sprawl/prevent overdevelopment of Chippenham.	15
To preserve agricultural land.	14
To reduce/avoid increasing traffic.	9
To prioritise the climate emergency response.	9
To protect wildlife and habitats.	9
To reduce vehicle usage/reduce commuting.	8
To consider impacts on existing residents’ quality of life	6
To preserve the Green Belt	5
To support, facilitate and invest in walking	5
To support public health/wellbeing.	5
To protect footpaths and cycle paths.	4
To consider the latest evidence.	4
To await the outcome of the Local Plan review before proceeding.	3
To prioritise brownfield land.	3
To maintain the market town character of Chippenham.	3
To protect the Chippenham/Calne cycle track.	3
To invest in sustainable transport/public transport infrastructure.	3
To support, facilitate and invest in cycling.	3
To make Chippenham a sustainable town.	3
To consider the impacts of/reduce light pollution.	3
To prioritise food security.	3
To avoid impacts on existing businesses/farms.	3
To avoid impacting amenity for nearby residents.	3
To provide new homes.	2
To proceed only if there is local support.	2
To avoid impacts on surrounding villages.	2
To reduce cross town traffic.	2
To utilise/maintain the existing highways.	2
To give due consideration to the appearance of the new road/bridges.	2
To avoid impacts on flooding/water quality downstream.	2
To avoid heritage impacts/preserve heritage assets.	2
To consider impacts on existing services and infrastructure.	2

To consider costs and value.	2
To present the development proposals as a whole, not just the road element.	2
To ensure the route of the road is deliverable.	1
To ensure compliance with made neighbourhood plans.	1
To maintain village identity of Pewsham.	1
To maintain access to the countryside.	1
To consider likely future trends in car ownership and ways of working.	1
To promote safe, healthy, and environmentally sustainable travel to/from Abbeyfield School.	1
To facilitate rational, efficient, and reliable public transport access to new development.	1
To reallocate road space in and approaching the town centre on key routes to buses and cycling priority, in line with the Local Plan Transport Review report.	1
To invest in electric vehicle infrastructure.	1
To improve links around Chippenham.	1
To clarify whether the road will function as a distributor road or a link road.	1
To provide underpasses or bridges crossing Stanley Lane, rather than pedestrian crossings.	1
To make Monkton Park more accessible for emergency services.	1
To consider alternative route as per 2017 planning permission for Rowden Park.	1
To consider alternative link route from Avenue La Fleche to A4 Bath Road at Rowden Surgery.	1
To make the southern element of the road capable of carrying high traffic volumes.	1
To improve availability/accessibility of town centre parking.	1
To enable future proofing.	1
To ensure green credentials of new development.	1
To reduce reliance on fossil fuels.	1
To reduce carbon emissions.	1
To reduce pollution.	1
To preserve the canal.	1
To take into account a lack of local jobs.	1
To improve recreational facilities in Chippenham.	1
To protect Stanley Park.	1
To consider evidence arising from the results of the 2021 Census.	1
To consider alternative town expansion to the west.	1
To delay the consultation until face-to-face meeting restrictions are lifted.	1

Appendix B

Responses to Question 6/email or letter responses relating to Important Issues and other matters

The tables below itemise the summarised individual points raised in answer to Question 6 or submitted by email or letter, addressing the Important Issues and other matters. The tables are split by theme, and the number of times the same point was raised is denoted in the right hand column of each table. An individual consultation response may have included a number of separate points under multiple themes and in these instances all points are recorded separately.

Question 6/Email/letter responses: Theme – Transport Appendix B1	No of responses
<i>Sustainable Transport</i>	
Concerns about the loss of/dissection of accessible leisure, recreation space, footpaths, and cycle ways etc. in the area, e.g. the old railway line, Wilts and Berks canal and towpath, the 403 Sustrans cycle path/North Rivers cycle path.	159
Concern that the proposals promote unsustainable commuting patterns/promote a high level of car dependency/concerns shared by Calne Without Parish Council.	99
Delivery of sustainable transport/modal shift is a high priority/A sustainable transport strategy should be developed for this site/for Chippenham/The council should be seeking ways reduce the number of cars on the road.	54
Investment is needed on improving public transport and cycle and walking routes/sustainable transport, e.g. improving existing routes, removing congestion, improving/segregating cycling routes, upgrading bridle paths and byways for active travel improving bus services, subsidising and improving train connections.	36
Concern that because of the development people will have to drive/travel further to be able to access the countryside.	27
The needs of pedestrians and cyclists must be accommodated for, improved and well maintained/cycling and walking should be encouraged, to support green local travel and improve connectivity.	26
Support people to get out of their cars by investing in better and affordable public transport.	24
Any new housing needs to deliver public transport infrastructure so that fewer cars are required.	11
Concern that none of the road route options prioritise sustainable transport objectives.	8
Request the delivery of extensions/improvements to bus lanes and bus routes/ Concern that the plans make no mention of improving public transport links.	8
There is a need to ensure that safe accesses are provided for existing footpaths/cycle paths across the new roads, e.g. overpasses/underpasses/Request for no at grade crossings.	7
The move to electric vehicles alone cannot be relied on as a means of reducing carbon emissions.	6

Did not support/Did not feel enough consultation was carried out on recent installation of a cycle paths at Bristol Road/Station Hill.	4
Concern that parts of the site/the south of the development site will be too far from the station to walk or cycle.	4
Corsham train station should be re-opened.	4
Electric cars should be supported/subsidised.	3
There should be incentives for/encouragement of shared car ownership.	2
It is unclear if the new road will include a segregated cycle lane along its whole route/The new road should have dedicated separate cycle paths.	2
Request that investment be made on the protection/upgrade local connectivity assets like the route between Calne and Chippenham, old railway line, canal.	2
Accessibility to PROWS should be improved.	2
Concern that footpaths and cycle ways may be closed/rerouted for long periods of time during construction.	2
Investment and modernisation of bus and train infrastructure is needed to improve its appeal.	2
The proposals should consider and accommodate for the potential future reinstatement of the former railway line between Chippenham and Calne/concern that this could be blocked.	2
Concern that trains are already full and there is little scope to increase capacity without significant investment.	2
It is not clear how Stanley Lane will be crossed.	2
Concern that Wiltshire Council has a track record of failed road schemes/developments/other new developments in the area have narrow and poor quality roads, and suffer from overcrowding of parked cars	2
Query as to whether the rail and river authorities have agreed to the construction of new bridges/concern that there has not been agreement.	2
Request that the council work with the Chippenham cycling network group to deliver their cycle route plan for Chippenham	1
Concern that the presence of the river Avon, the railway line, and the flood plain present barriers to delivering direct/efficient sustainable transport links.	1
The development of the southern element of the distributor road should be delayed while sustainable transport measures are prioritised.	1
Changes are needed at national level to how sustainable transport is delivered and achieved.	1
The Environment Agency request that the road scheme contribute to green infrastructure links for pedestrians, cyclists, and public transport.	1
The council should encourage cycling uptake through training, travel plans, bike clubs, route maps, events, and physical infrastructure.	1
It is not clear what funding is available for delivery of sustainable travel improvements.	1
Request that at least 10% of the cost of the distributor road be secured for sustainable travel improvements.	1

There should be a target of at least 50% of all journeys and 80% of school children going to school being either walking or cycling within 10 years.	1
Abbeyfield School draw attention to the sustainable transport objectives of their adopted Travel Plan (Dec 2020).	1
Greater investment in carbon neutral sustainable transport infrastructure is needed.	1
Concern that the new road will have no pavements.	1
Query whether the funding will provide for safe cycle routes from Rawlings Green and the new development site to the town centre and train station.	1
The National Trust would like to see improved off-road/safe walking and cycling routes from Chippenham rail station to Lacock	1
Calne Parish Council consider that investment should be made into improving bus services and cycle infrastructure.	1
It is anticipated that because of changing working patterns following COVID-19, a reduced demand for trains will be experienced over the long term with a subsequent drop in town centre traffic as a result.	1
North West Wiltshire Ramblers raise concerns regarding potential restrictions to access/disconnections to the right of way network because of the development of a major road.	1
Concern that adding any junctions at Stanley Lane will make the Chippenham Half Marathon route no longer possible. Bridges or tunnels should be built here instead to facilitate the crossing.	1
All common land should be publicly assessable.	1
Wilts & Berks Canal Trust comment that the current and potentially extended Canal provides important opportunities to increase public access to the countryside. The Trust would welcome engagement with the Future Chippenham team to identify walking and cycling access improvements that could be incorporated.	1
Concern that inadequately consideration has been given to the requirements of the RTPI's research paper 'Net Zero Transport: The role of spatial planning and place-based solutions'.	1
Request for improvement to cycle/pedestrian infrastructure in Showell.	1
Comment that there is not a safe way for cyclists from the town centre to Langley Road; Cocklebury Lane is not practical in the winter or when wet.	1
Concern that cycling from the town centre to the Bath Road feels unsafe.	1
Disappointed that the bike lane on Bristol Road was removed.	1
North West Wiltshire Ramblers note that on the A429 there is only one pedestrian refuge (at Lower Stanton St Quintin) between M4 and Malmesbury – 8km of road. Only short sections of pavement, usually within settlements, so impossible to walk from one to the next (ditches on either side of road).	1
North West Wiltshire Ramblers note that on the A350 there are no pedestrian crossings at Lacock, Frogwell (Chippenham Rugby Club), Malmesbury Road, Plough Lane – that is 4 safe crossings in over 12km of road. Wide verges but mainly too rough to walk along.	1

North West Wiltshire Ramblers notes that on the A420 there are no safe crossing points between county boundary and Hathaway medical centre – 11.2km. Wide verges but overgrown and often impassable.	1
North West Wiltshire Ramblers note that on the A4 there is no footway between Corsham and Chippenham, 2.3km; Pewsham Way bypass – pedestrian refuges do not align with rights of way; between Stanley Lane (access to Abbeywood School) and new pedestrian crossing at Derry Hill, there are no safe crossing points - 3.3km of road. Footway between Pewsham and Derry Hill and on to Calne (although changes side of road at Chilvester Hill with no safe crossing and missing section between Greenacres Way and Springfields Academy, 170m). Footway along most of A4 from Calne to Beckington except 730m section north of White Horse plantation. Footway from BANES County boundary into Box, missing 0.5km section through Box Hill then resumes to Corsham. North Chippenham Spine road – first section crosses three footpaths – campaigning has led to one pedestrian refuge on the route.	1
North West Wiltshire Ramblers note that the M4 is crossed/underpassed by 12 roads, 6 bridleways, 2 footpaths, 1 track. M4 truncates 4 bridleways, 7 footpaths and 1 cycleway. Some footpaths rerouted to other crossings; 3 diversions of over a kilometre, one of 2 kilometre.	1
Request the delivery of Park & Ride facility.	1
Concern that the site will have an unsuitable layout for bus transport due to low densities and indirect routes. Bus routes will be slow/indirect.	1
Stagecoach West note that there are tensions between the function of the new road as a means to relieve traffic congestion from the town centre, and the need to serve a large new development site, which will have implications for bus infrastructure. The capability of accommodating a well functioning bus network should be a key consideration in the design process. Detailed design recommendations are provided.	1
Any new bus stops need to be within a close enough walking distance to encourage people to opt for this form of transport.	1
Bus services need to be frequent enough to encourage people to opt for this form of transport.	1
Concern that even with available bus services if people have the availability/convenience of their own transport, they will not use buses, especially if they combine commuting with shopping.	1
Consider implementing a tram system, to link the new development to the town centre.	1
Concern that the PEAOR assessment criteria are unrelated to the Local Transport Plan objectives.	1
In terms of transport, the development should be guided by the 'decide and provide' principle rather than 'predict and provide' (Ref. TRICS Guidance 20121 Decide and Provide).	1
Concern that Wiltshire Council spend a disproportionate amount of funding on road schemes.	1
Query whether there will only be one relief road to serve 7,500 houses, or whether more roads might be introduced in the future.	1

An additional road crossing over the river is needed.	1
The PAEOR should cite the objective that the road “Better the Case for an A350 dual carriageway Poole to M4” as this lies behind this scheme.	1
Concern figures for the number of extra car, van and lorry journeys that will result from the development have not been shared. Worst case scenario figures should be included in the PEOR.	1
Request to know what distance the new road will cover.	1
A landowner/developer comments that the route of the link road must be deliverable and so must follow a route that enables it to be viably constructed.	1
Do not support highway works undertaken at Little George roundabout.	1
Concern that more new roads will result in more potholes.	1
The road should have capacity for a high volume of traffic at a low speeds, suitable for residential and commercial areas.	1
Query whether the development will deliver low traffic neighbourhoods, and where these will be.	1
Concern that the proposed roundabouts will impede access to Spires View.	1
Request to know how many roundabouts and sets of traffic lights are proposed.	1
If traffic congestion was an issue, Wiltshire Council should have refused planning permission for the recycling facility at Lower Compton.	1
In 2017 when outline planning permission for the Rowden Park development was granted it reserved a right of way for a southern link road. Query why this option was not considered and assessed in the Options Assessment Report.	1
Request to know if the 2018 CIHT guidance on Buses in Urban Developments has been/will be taken into consideration.	1
<i>Town centre traffic, congestion, and journey times</i>	
Concern that the road and large number of new homes will worsen congestion in Chippenham/make through traffic worse/Concerns shared by Chippenham Town Council, Calne Without Parish Council, Bremhill Parish Council.	185
Concern that the evidence does not reflect changing work/travel patterns e.g. the COVID-19 pandemic has changed the way people work/The need for the development/evidence papers should be reviewed in light of this/Concern also shared by Calne Parish Council.	84
Concern that there is published evidence to demonstrate that new roads create more traffic rather than reducing congestion/Concern also raised by Calne Without Parish Council.	35
The council have been unclear about the functional purpose of the road as either a relief road/bypass or a distributor road.	24
There is already a functioning relief road/bypass (A350)/A new bypass is not needed.	24
There is not currently a problem with congestion in Chippenham/other towns have worse congestion, and so the new road is not justified.	22
Problems of accessibility and congestion in the Monkton Park/Train Station/Station Hill area need to be addressed.	18

Concern that the development will increase congestion in other places (Pewsham, Calne, Derry Hill, Studley, Sandy Lane, Melksham, Beanacre, Semington, Devizes, routes to Bath/Bristol)	13
There is a need to ease congestion/air pollution in the town centre.	11
Constructing new highways and increasing the capacity of the road network/decreasing road journey times could encourage more people to drive, counter to the goals of meeting the climate emergency.	10
Suggestion that the new road should just provide a short link road from the A350/Lackham roundabout to Avenue La Fleche.	9
Concern that the development will increase congestion on local country/rural roads which are unsuitable for an increase in traffic/concerns regarding traffic impacts on rural roads shared by Calne Parish Council.	8
Concern that traffic impacts have not been assessed or are out of date/Insufficient traffic modelling information is provided/Calne Town Council and Calne Without Parish Council raise concern about the lack of available information regarding traffic impacts.	8
The new road needs to resolve traffic congestion in Chippenham centre (e.g. the Bridge Centre/New Road bottlenecks).	7
The cost/impact of the project could be reduced by utilising and integrating the Pewsham A4 ring road more effectively into the proposals.	7
The better/easier/cheaper option would be to upgrade the whole of the A350 making it dual carriageway.	7
Do not agree that the road will give better access to the A350 and M4 because by design it will have a low speed limit and a longer route through residential areas, away from the M4/A350.	7
Concern that congestion in the town centre and on Station Hill/Cocklebury Road will be made worse because of commuter traffic/Concern also shared by Calne Parish Council.	5
Kington St Michael Parish Council/Langley Burrell Without Parish Council/Dauntsey Parish Council/Seagry Parish Council/Chippenham Without Parish Council considers the proposals for Chippenham's expansion served by single carriage distribution road are flawed and the Local Plan should instead determine a long term policy aspiration for an eastern relief link road similar to the A350.	5
Concern about highways safety from speeding traffic/potential increase in accidents and road deaths.	5
There is a lack of alternative route options for HGVs routing through Chippenham.	4
Concern that the new road will create a shortcut between the A4 East and M4 junction 17, leading to additional traffic routing through Calne.	3
The project should not be justified by improving journey times.	3
An alternative option of a short link road from St. Luke's Drive/A4 Bath Road/Rowden Hill to Avenue La Fleche should be considered.	3
The project needs to demonstrate that the impacts on wider parts of North Wilts area have been considered, not just at Chippenham/Concern also shared by Calne Parish Council.	3
Evidence must reflect the rising popularity of online shopping and the resultant reduction in shopping trips as a result.	3

The only road needed is from A350 (south of Chippenham) to A4, to ease traffic east to west.	3
A new road will alleviate pressure of traffic using country lanes to bypass the town e.g. East Tytherton, Tytherton Lucas, Studley.	2
Consideration should be given to the fact that the site is closer to Derry Hill and Studley than to Chippenham town centre, and these areas already have major capacity issues/Concern also shared by Calne Parish Council.	2
Concern that the phased development of the new road means the development will not immediately alleviate congestion, meaning more congestion as houses and the road are built.	2
Congestion and infrastructure are the most significant issue and by addressing this, the other issues listed can also be addressed.	2
All that may be needed is an improvement to the A4 Bridge roundabout to the new improved A350 roundabout.	2
Through traffic needs to be taken away from the town centre/Avenue La Fleche to reduce congestion/improve journey times.	2
Request to know what modelling has been undertaken to assess impact of traffic joining at Lackham roundabout and onwards on the A350.	2
The transport modelling described in the Economic Assessment section is inadequate/Concerns also shared by Calne Parish Council.	2
Concerns about increased use of Hill Corner Road as a rat run.	2
Concern that the new road will be used as a cut through/rat run.	2
All that is needed is a road from the north/Birds Marsh/Parsonage Way to the A4.	2
The current bypass has not helped with connection in Chippenham	2
Concern that the road would be used by people travelling between the M4 and A4, which result in a busy/noisy route, in an unsuitable location.	2
Concern that speeds limits are unlikely to be adhered to.	2
Calne Town Council raise concerns about the impact of the wider development on businesses and congestion in Calne.	1
Much of the traffic congestion in the centre of Chippenham is down to commuting and people working in Chippenham, and therefore the new road would have little impact.	1
Concern that the development/road will increase congestion on the A350 southwards, particularly in peak periods for those commuting to places south of Chippenham.	1
Concern that the development would lead to an increase in traffic on the north and south edges where the 2 bypass roads join/split.	1
Concern that the development will exacerbate the problem of Lowden being used as a rat run.	1
Concern that the development will exacerbate the problem of Bath Road being used as a rat run.	1
Congestion would be better in town if the High Street was not closed to traffic and would be better for businesses.	1
The roads through central Chippenham are too narrow to be able to take additional traffic generated by this development.	1
The infrastructure that accompanies any new houses should be designed to significantly improve traffic flow.	1

There is a need to reduce traffic through the town centre to enhance the quality of the environment and benefit the environment along the river corridor.	1
The distributor road is critical to ensure the region can support growth and relieve pressure of traffic across Chippenham.	1
An alternative option of a short link road between Pewsham Way to behind the hospital should be considered.	1
Suggestion that the new road should just provide is a short link road south of the courthouse roundabout to Lackham.	1
An essential part of this road scheme is crossing the river from Lackham to Pewsham bypass, taking south and west-bound traffic away from the town centre, stopping Lacock being used as a cut through to Calne, Marlborough, Devizes, and Salisbury.	1
Journey times and congestion between Chippenham and Calne, Bath, Pewsham, Bath could be improved.	1
The new road will make travelling to/from Corsham easier.	1
Calne Parish Council note a concern that the transport modelling does not account for traffic implications associated with employment development.	1
Shuttle bus services should be provided to Chippenham train station to alleviate traffic congestion in the town centre.	1
Traffic congestion is a problem in the Park Lane area due to a lack of options for crossing the railway line. A railway crossing on the east side of town could alleviate congestion.	1
Concern about congestion on London Road between Avenue La Fleche and Pewsham Way, which would become the most direct route from a large part of the north eastern development to the town centre. The street is residential and an important walking route to town and Abbeyfield school. It is a high speed road. Will there be measures put in place to manage traffic on this road?	1
Concern that the development will create congestion/bottle neck outside Lackham Campus.	1
Concern that the road will increase traffic use along the B4069, with negative impacts on Hill Corner, Jacksom's Lane, and Kington Langley.	1
All the distributor road options run North-South whereas Chippenham's main source of congestion is West-East traffic on the A4 coming into the Bridge Centre gyratory system.	1
A distribution road cannot alleviate the current rush hour situation experienced at well known congestion points, such as existing roundabouts close to Morrisons Supermarket, Bumpers Farm, McDonalds, Lackham.	1
The proposed new roundabout on the London Road A4 will only serve to move congestion from Pewsham roundabout a short distance further along A4.	1
Concern that the development will lead to more traffic on London Road, not on the new road.	1
Taking traffic off the A420 is vital as becoming increasingly residential in character. Road is heavily used by commuters and school traffic, already creating traffic and noise. Further increases in traffic will make the route even more congested.	1
There are pedestrian road safety issues to be resolved on the A420 which is heavily used by pedestrians (incl. school children). E.g. footpaths not wide enough, lack of cycle ways. They are unsuitable for its present use, let alone an increase in use.	1

London road is often road of choice rather than Avenue La Fleche.	1
It is unclear what the need is for the new road route to link up with the A4 towards Calne as this isn't a busy route and is well served by the road running around the Pewsham estate.	1
Suggestion that it would be cheaper to reconfigure the A4 through central Chippenham to give priority to the A4, thus promoting the use of the A350. This would need some widening of the road past B&Q and under the railway.	1
Safety concerns for cyclists and pedestrians in Showell due to high instance of speeding and lack of crossing facilities.	1
Expanding the A4 route would be a better solution.	1
It is not clear what the justification is for the road link from the A4 to the A350 to the south.	1
Linking the A4 east of Chippenham to the A350 south near Lackham is not justified due to the majority of A4 west-bound through-traffic wanting to access either the M4 via M4 J17, the A420 or A4, not the A350 south.	1
In place of any of the proposals a new road should link Forest Gate to the A350 at Lackham, to enable A4 traffic towards Bath and A350 South avoiding the centre of Chippenham.	1
If a bypass is needed, this should come off the A350 just before Lackham Agricultural College, a continued road from the motorway going west.	1
The A350 was recently duelled and has already relieved traffic congestion.	1
A ring road would help to move traffic out of built up areas to the benefit of all residents.	1
Chippenham must have a complete outer ring road before further housing is built.	1
The distributor road should act as a link/artery for Chippenham to serve new and existing residential/employment areas. It should not act as a bypass or exaggerate historic 'donut' development model around the town.	1
If the road is built it should be built as a bypass with higher speed limits and proper grade separation, to serve people coming from A4 Calne direction to the A350/M4.	1
Instead a bypass should be delivered taking traffic from Eastern A4 to a connection with the M4	1
There is a case for a bypass in this location. It should go here to avoid the need for a wider route around this development in future.	1
Money should be spent on a bypass around Westbury instead.	1
A new road around Devizes should also be considered.	1
The only place that needs an eastern bypass is Calne.	1
The new route needs to be well aligned and capable of a safe speed, e.g. 40mph.	1
Development of the road must be future proofed to accommodate technological advancements in travel, e.g. automated vehicles.	1

Question 6/Email letter responses: Theme – Climate change and flooding Appendix B2	No of responses
<i>Climate change</i>	

The council need to respond to the climate and ecological emergencies, which means not building the road/The scheme does not align with the council's climate emergency commitments/The project is incompatible with meeting a sustainable zero carbon future by 2030/the development is unsustainable/Concerns shared by Calne Parish Council.	229
Concern that the carbon cost of the project will be high/carbon emissions/greenhouse gas emissions will be high/Concern also shared by Chippenham Town Council, Calne Parish Council.	94
The council should leave a better legacy to future generations/countryside and wildlife should be protected for future generations/reflects badly on the commitment of the council to acting on the climate and ecological emergency.	41
To address the climate emergency, humans need to change behaviour/continued growth is not sustainable.	15
Developing this area will remove a natural carbon sink.	14
Concern that the overall carbon and ecological costs of the scheme have not been provided/carbon emission impacts are unknown and cannot be assessed/a detailed carbon budget setting out climate damage, impacts on carbon absorption etc. should be provided.	13
The high carbon cost of the project undermines efforts made by local people to cut their own carbon footprints.	5
It is not clear how the project will deliver the stated Environmental Objective 'through infrastructure-led delivery seek opportunities to reduce the carbon footprint of the road and scheme'.	4
Climate change and biodiversity are the most important priorities.	4
Concern that the consultation material is greenwashing/cannot achieve the green credentials stated.	3
Concern that the construction of roads over flood plain will greatly increase the monetary and carbon cost of the project.	2
Any negative environmental impacts need to be minimised/offset.	2
Request that no solar farms are built.	2
Query whether the council have calculated a strategy to net zero emissions in 9 years' time, and yearly carbon budgets.	2
Concern that since the declaration of the climate emergency there has been insufficient communication to the public on how the council plans to address this/no published Climate Strategy.	2
The project reports do not address the UN Sustainable Development Goals (SDGs) which are fundamental to demonstrating how a project is contributing to sustainable development.	1
If the council proceed with the Future Chippenham project, then it should withdraw its declaration of a climate emergency.	1
The road must facilitate exemplary, environmentally sustainable development offering zero carbon development.	1
The carbon impacts of the road could be minimised by keeping the speed limit to a minimum, 30mph or less.	1
Request that the carbon cost of the project be made clear enough for the average person to fully understand.	1

The National Trust comment that climate change is the biggest threat to historic landscapes and houses cared for by the National Trust and would like to see tackling climate change and minimising environmental impact as key to decision-making.	1
Concern about soil degradation caused by the development.	1
Request that the figures quoted in para 3.12 of the PEAOR are expressed in term are that are easy to understand by the average person, in terms of the scale of change needed to address the climate crisis.	1
At para 3.12.1 of the PEAOR, reference should be added to the Global Total and the UK Background annual CO2e emissions.	1
At para 3.12.12 of the PEAOR, reference should be added to preliminary CO2 emissions estimations of each of the road schemes presented alongside a Negative Emissions (CO2e sequestration) estimation and a Carbon cost estimation. To include estimations from carbon emitted from site clearance, excavation, materials, and construction prior to opening and then all emissions from annual operation to 2050.	1
Concern about the word 'could' in the statement the new road could offer opportunities for sustainable communities.	1
Concern that climate change is one the 'next steps' proposed in Section 4.4 of the Transport Review, suggesting that carbon impacts of the proposed road have not been considered.	1
The Local Transport Plan is based on out-dated assumptions and does not mention how climate change policies could affect future traffic patterns.	1
Flooding	
General objection to development on flood plains/General concerns that the development will exacerbate flood risk/is not suitable in light of increasing flood risk as a result of climate change.	64
Concerns that the development may result in increased surface water runoff/flood risk in specific areas, e.g. Maud Heath's Causeway, Langley Burrell, the Westmead area of Chippenham, and the bottom of Chippenham High Street and town centre, Lacock, Reybridge, upstream of the Avon and Marden rivers, towards Melksham, towards Bath, towards Bradford on Avon, Spires View, Hardens Mead.	16
Concerns raised about the impact of the development on the water table/concern about impact of further water being sourced from boreholes and subsequent impacts on the water table and local flora and fauna.	4
Concern about the effectiveness of sustainable drainage systems /emerging technology.	4
Concern about the development's impact on water quality.	2
Concern that there has been no flood risk assessment undertaken, including assessment of impacts of climate change.	2
The Environment Agency advise that the development should seek to minimise impacts on watercourses by aiming for fewest overall river crossings with the smallest possible width crossing the channels/floodplain in a way that does not impede flood flow, interfere with the natural behaviour of the channels or create any barrier to the movement of wildlife. To achieve this a hybrid of options A and B is preferred.	1

The Environment Agency note that development of road infrastructure must not increase flood risk elsewhere, and under the NPPF should deliver flood risk betterment overall.	1
Concern that some of the development area is on land that is designated for use as a flood plain.	1
Concern that housing built on flood-prone land can be at risk of subsidence in the future.	1
Object to the council draining land to help developers avoid costs, a misuse of public money.	1
Concern that this project will be counterproductive to the Avon Needs Trees tree planting scheme on the outskirts of Calne that seeks to increase water absorption/storage capacity downstream.	1
Wilts & Berks Canal Trust (WBCT) welcome engagement regarding the Canal's potential to accept additional surface water run-off.	1

Question 6/Email letter responses: Theme – Pollution and air quality Appendix B3	No of responses
<i>Pollution and air quality</i>	
Concerns that the development/new road will create or exacerbate air pollution in the area/Concerns about impacts on air quality also shared by Calne Parish Council and Bremhill Parish Council.	151
Concern that the development will create or add to noise pollution issues for humans and wildlife/impacts on tranquillity/Concerns shared by Calne Parish Council and Bremhill Parish Council.	59
Development/the road will create light pollution with negative impacts for humans/wildlife/Concern also shared by Calne Without Parish Council and Bremhill Parish Council.	23
Concern about the potential increase in litter in the environment/more waste generated.	6
Concerns surrounding the risk of toxic/harmful water run off on the land and rivers.	4
Concern that the impacts of increased air pollution will be felt in Chippenham due to predominant south/southwest winds.	3
Chippenham has no Air Quality Management Areas and no locations recorded as failing current UK Air Quality Standards, so there is no sustainable air quality improvement argument to support the construction of the distributor road.	1
Request that trees be retained to curtail air pollution.	1
Improved access to safe sustainable transport options would improve air quality as a result of less traffic on the roads.	1
The new road should be routed around newly built-up areas rather than through them to minimise noise/air pollution impacts.	1
A reduction in air/noise pollution should be intrinsic in the design.	1
Currently, noise from the A roads in and around Chippenham blights many parts of the town – future development should mitigate this so far as possible.	1
Concern that the development will create too much disruption to existing residents.	1

The consultation material makes no reference to the potential visual/noise/pollution impacts on Monkton Park.	1
At para 3.9.1 of the PEAOR, the word “may” should be replaced by “will”, as the scheme will lead to greater quantities of waste being generated.	1
The council should implement clean air zones/limit the number of vehicles traveling through Wiltshire/introduce a road pricing scheme for the most polluting vehicles.	1

Question 6/Email letter responses: Theme - Ecology Appendix B4	No of responses
Ecology	
Concern that the development/road will harm the natural environment/biodiversity/habitats relied on by UK plant, animal and insect species/Will result in further decline of at risk species/Concerns shared by Chippenham Town Council, Calne Town Council, Calne Without Parish Council, Bremhill Parish Council.	285
The assessment of suitability of the development site should consider in the balance the loss of valuable ‘natural capital’/value as an asset not linked to GDP.	12
Roads are barriers to connectivity and hazardous to wildlife and can destroy/fragment wildlife habitats/isolate gene pools/Habitat fragmentation concerns are also shared by Calne Parish Council.	11
The development should achieve biodiversity net gain/overall improvements to biodiversity/Concern that this won’t be achieved.	8
Concern that field surveys have not been carried out, e.g. on key species of concern/key habitats.	8
Chippenham/Wiltshire is already depleted of biodiversity, which will be made worse by this project/Recent developments at Chippenham have already resulted in irreversible damage to wildlife and the environment.	5
It is considered that schemes such as Future Chippenham are the reason for the ecological crisis.	4
Habitat mitigation or moving wildlife is not a reasonable alternative to maintaining existing habitats in situ.	4
Green corridors should connect green spaces and wildlife areas for both wildlife and people.	3
Consideration needs to be given to economic costs associated with collisions between vehicles and wildlife.	3
Concern that bird and mammal populations will be put at risk from domestic cats from the new development.	3
Concern that the road plans do not provide any alternative space for biodiversity as mitigation for loss of habitat.	2
Concern that the development could negatively impact on foraging habitat for bat populations recorded within the Bath and Bradford on Avon Special Area of Conservation.	2
Concern about the impacts of the project in terms of nitrate deposition/nitrate content.	2

Concern about the potential for harmful habitat disturbance, injury, and death during works in the construction phase.	1
Chippenham Sailing & Canoeing Club express concerns about potential impacts on the ecology of the river in wilder areas away from publicly accessible areas.	1
The Environment Agency comment that where impacts on river habitats cannot be avoided, these will need to be mitigated for and net gains to biodiversity provided. River restoration and expanding the river park through the town and beyond are some of the ways this could be achieved. Mitigation could include a contribution to longer term options to replace the radial gate and weir in the town centre that are near the end of their design lives. This would improve biodiversity (especially fish passage), provide increased amenity value and enable increased planting within the river corridor. It would reduce the risk of flooding to the town centre if the radial gate were to fail in the future and also help mitigate the impacts of climate change.	1
Request that the new road include green avenues on both sides for people and wildlife, to be managed by funded rangers or wardens.	1
Improving access to safe sustainable transport options (e.g. walking, running, and cycling) would benefit biodiversity because of less traffic on the roads.	1
Building the road would be against the recommendations in the Lawton 2010 report Making Space for Nature.	1
Concern that increased population will lead to increase visitor pressure on designated and local wildlife sites in the area.	1
Concern that the development will undo the remedial works that have been undertaken to improve the river Marden habitat for brown trout.	1
An 'Ecological Death Budget' should be provided to quantify and assess impact of harm to biodiversity.	1
Concern that the PEAOR does not assess the 'significant negative effects' of developing on open countryside and subsequent removal of biodiversity, soil carbon sequestration, energy potential, community asset value.	1
The PEAOR's assessment of population at para 3.10 should also account for the biosphere population e.g. flora, fauna, insects, birds, bacteria, and fungus.	1
Object to the approach set out in the PEAOR which considers environmental value only from the perspective of humans, not other life forms.	1
Terminology used in the PEAOR, 'development land' and 'unlocking the delivery of homes in Chippenham for the next 30 years'... shows a bias in favour of the development. The document fails to recognise value in nature, only value in development.	1
Concern about the impacts of the project in terms of phosphate release into the environment.	1
The Environment Agency note that there are several smaller 'ordinary' watercourses on the site which benefit biodiversity and water quality and would be impacted by all route options. Impacts on these water courses must be avoided and then minimised. A Water Framework Directive (WFD) assessment will be required considering all the affected watercourses. Where crossings are required these should be designed with the natural environment in mind, with consideration to the Nature Recovery Network and provide suitable access for wildlife.	1
Concern that enforcement of planning conditions does not routinely happen which allows developers to cut corners with respect to biodiversity.	1

Concern that the proposals conflict with WCS Core Policy 50 'Biodiversity and Geodiversity'	1
Concern that the development could have a detrimental/isolating impact on the Monkton Park wildlife area being looked at by the Town Council and the Wiltshire Wildlife Trust.	1
Concern that environmental impacts are assessed by zone, leading to 'salami-slicing' of the assessment and understatement of effects.	1
Concern that assessments of biodiversity have been carried out over winter when there are fewer species prevalent.	1
Request for partnership working with Bee the Change Project, to benefit pollinator conservation, promotion of natural beekeeping and connection to nature through bee conservation and community led projects.	1

Question 6/Email letter responses: Theme - Landscape Appendix B5	No of responses
Landscape	
Concerns about the impact of the road/development on the local landscape setting/impacts on the Marden/Avon valleys/natural beauty/green space/loss of countryside/Concern about loss of rural character of east Chippenham/Landscape and loss of green space concerns shared by Calne Town Council, Calne Without Parish Council, Bremhill Parish Council.	415
Concern that the development of the Future Chippenham site will remove the landscape buffer between Chippenham and surrounding settlements e.g. Calne, Studley, Derry Hill and Bremhill/potential harm to their distinctiveness and identity/Concern shared by Calne Town Council	56
The COVID-19 pandemic/lockdown has shown we need to value our open spaces/footpaths/local wildlife more.	50
Objection to building on the Green Belt.	19
Areas around Chippenham should be rewilded/afforested.	11
Recent developments at Chippenham have already resulted in irreversible damage in terms of loss of green space.	7
Investment is needed on green infrastructure/riverside areas/habitats.	6
It is not clear how the project will deliver the stated Environmental Objective of 'minimising the impact on the quality of the environment'.	4
Concern that the new road would compromise or limit access to specific valued areas around Chippenham, e.g. the Borough Lands Trust areas, Jubilee Acres, Monkton Park, the Cocklebury area, Mortimore's Wood, the area of countryside behind the hospital.	4
Concern that the proposals would be contrary to Core Policies 51 (ii and iii)'Landscape' and 57 (i, iv and ix) 'Ensuring High Quality Design and Place Shaping' of the Wiltshire Core Strategy (Jan 2015) and 15 'Conserving and enhancing the natural environment' of the National Planning Policy Framework (June 2019).	3
Concern that wildlife corridors/integrated landscaping will be land-locked and featureless.	3
Concern that the development of this site will affect local residents' views.	3

The protection of the landscape/environment is more important than meeting the government's housing targets.	2
Resources should be committed to protect large areas of open land, woodland, green spaces, wildlife habitats, country parks, and play areas.	2
Objection to building in an area of outstanding natural beauty.	2
Concern that the proposals would conflict with NPPF section on 'Conserving and enhancing the natural environment'.	1
The development must have regard to the NPPF requirements affording the highest protection to veteran trees and ancient woodland.	1
Would prefer to see green space inside the new road than for the road to be close to housing and schools.	1
Concern that other examples of country parks in the area have not been well managed and the same could happen to country parks delivered through this development.	1
The site should be used for tree planting under the Government's tree planting agenda, funded by national tree planting funds.	1
Mature landscape planting must be provided to mitigate the visual impacts effectively.	1
Concern about the potential impact of the new road on land behind Hardens Mead.	1
<i>Agricultural land</i>	
Concerns about/objection to building on good quality farmland/working farms/Calne Without Parish Council raise concern regarding loss of agricultural land.	175
Agricultural land should be retained to ensure future local food security e.g. because of unknown impacts from climate change/Brexit.	78
Concern about/objection to the loss of several County Council Starter Farms – these are public assets/should not be sold off.	21
Concern that the farms have been run down and made commercially unviable to support the argument for redevelopment	1
Query whether farmland will be divided by the new road and whether it will be accessible to farm owners.	2
The council should support local small scale agriculture/local business and producers.	2
The PEAOR should list farms, native mammals, birds, and insects as community assets at para 3.10.2.	1
Concern about the ethics of serving tenants with a notice to quit with no suitable alternative sites provided.	1
Request to know if an agricultural land survey has been carried out.	1

Question 6/Email letter responses: Theme - Heritage Appendix B6	No of responses
<i>Heritage</i>	
Concern that the landscape around Chippenham has historic value which could be lost through this development/Concern shared by Calne Parish Council.	23

Concern about the potential loss of areas of archaeological significance (e.g. Anglo Saxon, Roman sites, deserted medieval village/settlement close to Hither Farm, battlefields)/not adequately addressed in the PEAOR report.	9
Preserving, protecting, and enhancing the Wilts/Berks Canal and the historic railway course should be important considerations.	5
The council should seek to develop in a way that retains/capitalises on heritage assets for future generations.	3
Concern that the development proposals continue a trend of mismanagement of heritage assets in Chippenham.	3
Query whether the council have consulted archaeology bodies to establish which areas will need preserving.	2
Concern about the impacts on historic buildings, e.g. the setting of listed buildings at Showell Farm.	2
Concern that the proposals conflict with WCS Core Policy 58 'Ensuring the conservation of the historic environment'.	1
Wiltshire Council's archaeology team comment that the final route option will require extensive and tailored archaeological evaluation and mitigation, to address the areas of potential archaeological activity across each of the route options. A programme of archaeological evaluation trenching would have to be agreed prior any planning decision being made, followed by further mitigation where required. Conditions may be applied.	1
Wiltshire Council's archaeology team note that any evidence for remains of regional or national importance may require preservation in situ at which may affect the routing of the road.	1
Wiltshire Council's archaeology team note that some areas were not subject to geophysical survey due to site constraints and these areas will require survey as well as trenching prior to determination.	1
Calne Without Parish Council comment that a full survey of heritage assets should be undertaken to ensure the preservation of key assets	1
Query whether the development of the road would be halted if found to transgress a historic site of national importance.	1
The land has links to the rebuilding of Pewsham Locks, which should be considered.	1
Concern for impact on the view over to Maud Heath's monument.	1
Bremhill Parish Council raise concern about the potential impacts of the proposed elevated bridge crossing the River Avon on the conservation area of Tytherton Lucas.	1
The National Trust comment that any new road infrastructure should avoid adverse effects on the wider landscape setting of Lacock, on the views and setting of Bowden Hill Conservation Area, and on any views from Naish Hill.	1
Development of any roads or houses should ensure no adverse impact on the National Trust's Lacock site.	1

Question 6/Email letter responses: Theme – Economy and infrastructure Appendix B7	No of responses
--	----------------------------

Employment and economy	
Concern that there are not enough local jobs/no new jobs being created locally to justify growth at Chippenham/there is no employment plan to address the economic future of the town.	57
Investment should be made on improving the existing town and town centre/encouraging business in the town centre/improving town centre services, infrastructure, leisure, and the high street/the station.	38
Shopping/retail/leisure options in the town centre are too limited/offer little attraction, needs improvement.	22
Concern that employment opportunities will not be delivered in a timely way to keep up with demand from housing.	6
No new industrial/retail sites are needed in Chippenham.	6
Chippenham does not need any more supermarkets/too many supermarkets developed.	6
Concern that the road will make it easier for people to avoid the centre of Chippenham/make it easier to get to other towns and further accelerate the economic decline of Chippenham town centre.	6
Concern that the development of new shops/leisure on the site will encourage people to avoid the centre of Chippenham and further accelerate the economic decline of the town centre.	5
Request to know how many new jobs/how much employment land will be created and where it will go and when it will be delivered.	4
Concern that the development will harm local tourism due to removal of green spaces/harm to historic landscape setting.	3
There is no evidence that the road/housing proposals will create any highly paid professional employment opportunities.	3
Investment should be made on encouraging people to work locally or from home.	2
Request for the creation of office-hubs in town for people to work at a hot-desk without having to travel.	2
It is unclear how the new road will enhance the 'economic potential for other settlements on the A350 corridor' as stated in the HIF bid.	1
Concern that construction companies will not employ local people, so the local economy won't benefit.	1
Request that for each house built two local jobs be provided.	1
Chippenham would benefit from more employment land to decrease out commuting.	1
An alternative town centre regeneration plan should be developed by council officers to save money, rather than by consultants.	1
Do not agree that viability and vitality of businesses will be improved by increasing the number of residents.	1
Retail development should be designed to be immersive, experience based, with elevated aesthetic.	1
Concern that the increased population brought about by this development could put pressure on existing retail outlets and facilities who may not have space to expand on their existing sites.	1
Chippenham needs better publicised town events.	1

The development must provide maximum benefit to the town centre and address current infrastructural and structural shortfalls.	1
Concerns regarding the potential negative impacts on a nearby employment site because of proposals for a new road and rail bridge at Rawlings Green.	1
Infrastructure and services	
Concern that there are not enough existing infrastructure services to support the scale of new housing that the Future Chippenham site would deliver.	71
None of the options presented offer benefit/enough benefit to Chippenham town centre or existing residents/Concern shared by Chippenham Town Council.	64
Concern about impact on local GP services/Chippenham hospital/healthcare provision.	19
To support a development of this scale it will need primary and secondary schools, health services, supermarkets, leisure facilities etc.	17
Concern about the impact on the local schools.	13
Chippenham does not provide adequate leisure, recreation and entertainment facilities for its existing population and needs investment/Request that CIL funding remain in Chippenham to support town centre development and improved leisure facilities.	10
Concern that due to lack of local provision, new residents will be forced to travel to reach key leisure and service infrastructure.	10
Chippenham does not have enough parking.	9
Concern that CIL funding won't/can't be fully spent in Chippenham and therefore the key infrastructure Chippenham required will be underfunded.	6
Amenities promised with other housing developments in Chippenham have not been delivered, sceptical about them being delivered on this site e.g. schools, surgeries, shops, community hubs, leisure amenities.	4
Chippenham does not have enough play areas/parks.	3
Parking in Chippenham should be made free/cheaper.	3
Investment is needed in providing reliable internet access throughout urban and rural communities, to support sustainable home working.	2
Calne Parish Council raise a concern that the consultation focuses on the benefits that will be derived for Chippenham with not enough regard for the negative impacts on Derry Hill/Studley.	1
Wiltshire Council should be looking to develop in places that already have the necessary infrastructure to support it.	1
Consideration should be given to town centre sites to be converted to performance/exhibition spaces.	1
Concern that there is a financial assumption that later development will finance up front publicly funded building of roads which means large scale housing development, with limited infrastructure to support it.	1
Concern that the developers will be unwilling to make the level of contribution to infrastructure that will benefit the residents.	1
Concern that the new development will be too far from healthcare services.	1
Request that the development include the provision of community spaces, e.g. churches, schools with community rooms.	1

Wiltshire Council's leisure services team note that Stanley Park sports ground is of strategic importance to the leisure offer and the new homes proposed will put extra pressure on the facilities, leading to a probable need for expansion on and off the existing site, which would need to be addressed and accommodated.	1
Object to the loss of Stanley Park sports ground.	1
Concern that the number of new homes proposed will put pressure on the availability of parking spaces at Chippenham Station.	1
Request to provide more free on-street parking to encourage quick trips into town.	1
The council should apply parking charges at large workplaces and edge of town retail parks to reduce private car usage.	1
Concern that Chippenham Sewage Treatment Works is already operating at capacity and cannot be expanded.	1
Concern that the development will not address health and social wellbeing inequalities, e.g. provision of social care, adaptable housing, care for the elderly.	1
Concern that the new road proposals facilitate social exclusion, with those most in most need of reasonable transport facilities being increasingly denied them.	1
<i>Health and social wellbeing</i>	
Concern that loss of countryside/access to countryside would have a negative impact on mental/physical health.	74
Concern that the development will be harmful to the quality of life of existing residents.	29
Increasing air pollution will have knock on negative impacts in terms of respiratory health/pressure on NHS/premature deaths. Concern also shared by Calne Parish Council.	10
Increasing population density will reduce community spirit.	6
Concern that increasing population density will increase crime.	5
The council should be considering ways to facilitate increase in people's activity levels considering the obesity crisis in the UK.	2
Concern that the proposals do not appear to comply current best practice set out in Spatial Planning for Health document.	2
The proposals should be supported by a health impact assessment looking at active travel.	1
Improving access to safe sustainable transport options (e.g. walking, running, and cycling) will improve public health and reduce demand on the NHS.	1
Request to know if any EDI impact assessments have been carried out.	1

Question 6/Email letter responses: Theme - Planning Appendix B8	No of responses
<i>Relationship with the Local Plan review/prematurity</i>	

Concern that progressing the Future Chippenham proposals is premature and that there is predetermination of the outcome of the Local Plan review/the consultation should be delayed until the outcome of the Local Plan review is known and there is an established housing need that will inform whether or not the road is needed/Concerns shared by Chippenham Town Council, Bremhill Parish Council, Calne Without Parish Council.	93
Objection to the Local Plan review housing target for Chippenham being approx. 5000 more than the government target.	55
It appears that a decision on whether this development will take place has already been decided.	28
Concern that the Local Plan review site selection process is biased in favour of the Future Chippenham site/Do not agree with the findings of the site selection process.	9
It is considered that if the development proposal is to be considered prior to the adoption of the new Local Plan it should be considered as a speculative development and judged against the currently adopted development plan.	3
Request to know what will happen to the Future Chippenham project if the site is not allocated in the Local Plan.	2
The strategy of focusing all housing in the larger settlements/Chippenham risks stifling development in other settlements e.g. outlying villages, where development/affordable homes may be needed.	2
The council should not be planning for housing beyond the end of Local Plan review plan period.	2
The decision on the routing of a new road should be taken alongside the development of the local plan to ensure that it is proportionate and will complement it.	1
Concern that the Local Plan concept plans for the site appear to already show a preferred road route.	1
Bremhill Parish Council comment that the currently adopted Local Plan and the emerging Local Plan do not require the road.	1
It is illogical that the council must evidence an available supply of housing land for the full plan period, as this weakens the chances of swapping in brownfield and more sustainable sites should they become available at a later point in the plan period.	1
Request to know the minimum number of houses required for the new road to be developed.	1
Request to know if the site is approved for development, how this will affect the council's five-year housing land supply position.	1
<i>Compatibility with made/emerging neighbourhood plans</i>	
Concern that the proposals contradict Bremhill Neighbourhood Plan policy NP3 which does not allow for development north of the North Rivers Cycle Route.	10
Concern that the proposals are generally in conflict with the policies/visions of local Neighbourhood Plans.	5
Concern that the proposals conflict with the objectives and policies of the Calne Neighbourhood Plan.	4
Concern that the HIF bid was submitted without any reference to the affected Neighbourhood Plans.	1

Chippenham Town Council comment that the proposal does not accord with public feedback during early consultations for the Chippenham Neighbourhood Plan.	1
The decision on the routing of a new road should be taken alongside the development of neighbourhood plans to ensure that it is proportionate and will complement them.	1
<i>Housing/Scale of development</i>	
No new housing is needed or wanted/too many houses proposed for Chippenham/Chippenham has already had enough housing allocations/other towns in Wiltshire should take some of the housing to satisfy targets/Concerns shared by Chippenham Town Council.	288
Concern that the development site is excessive or on too large a scale/concern about urban sprawl/Object to Chippenham being turned into a large urban town.	130
Concern that Chippenham will lose its small market town atmosphere/character	81
Concern that Chippenham will become/is becoming a dormitory or commuter town/concern that the scheme will not support self-sufficiency/self-containment.	50
Concern that the proposed routes would establish a new outer boundary for Chippenham, making land within the boundary more vulnerable to housing applications.	23
More affordable housing options are needed in Chippenham.	13
Would prefer to see smaller scale development to meet local housing needs.	11
Concern that the housing requirement figures are incorrect, e.g. do not account for impacts of Brexit, impacts of the pandemic, changing birth rates	11
Wiltshire has a poor record of delivering affordable housing/sceptical that enough affordable housing would be delivered.	8
Concern that the housing will not be sustainable construction/new homes need to be built to high standards of sustainability.	7
Empty homes/second homes should be encouraged/incentivised back into full use.	6
Object to the development of housing for Chippenham taking place outside of the Chippenham Community Area/ expanding into other parish areas.	4
Concern that planning policies do not require housing to be built to zero carbon standards and will need to be retrofitted at much greater expense in the future.	4
The housing demand is for smaller units rather than larger detached houses and larger detached houses should be split into smaller units.	3
The UK population is increasing, and housing is needed/access to housing is crucial for the next generation.	3
There is too much development of retirement homes.	3
The government's levelling up agenda will focus new jobs in the north of England, not the south. A further 7500 houses in Chippenham is unneeded in this context.	2
The council should reject government led housing targets which are not aligned with meeting the challenges of the climate emergency.	2
A national solution is needed to address increasing populations and subsequent increasing demand for housing.	2
The council should be investing money in better housing insulation.	2

Query whether the new road would act as a new boundary to new development, i.e. the inner route leading to higher density building within its confines/the outer route confining all building to within the enclosed area.	1
Disagree that there is a housing crisis, as new housing only serves to support GDP growth.	1
To address the country's severe housing crisis the route that provides the most houses should be given more weight.	1
To provide equality in housing the development must include council-owned properties with fixed low rents.	1
Chippenham has some very poor housing stock that should be regenerated and redeveloped within its existing boundaries.	1
Concern that housing will not have inbuilt renewable energy generation.	1
Residents do not wish to live on edge-of-town sites, far from the train station, high street & existing amenities.	1
Request that the council share its housing infrastructure plan to determine what types of housing are required to meet current demands.	1
To meet NPPF sustainable development objectives, higher density housing/mixed development should be delivered, supporting walkability and active travel.	1
Concern that houses proposed in Comparison Zone 3 on rising land approaching Chippenham, will overlook the solar power station.	1
Concern that some of the proposed homes will be too close to the Chippenham Sewage Treatment Works.	1
Alternative sites	
Brownfield sites/underutilised spaces in Chippenham should be prioritised for redevelopment ahead of the Future Chippenham site.	74
Preference for any expansion of Chippenham to take place on the west side of the town for reasons including: avoiding ecological damage associated with the east side of the town, avoiding carbon cost bridges that would be required, avoiding flood risk impacts, accessibility to employment, schools and supermarkets, accessibility to key existing transport infrastructure.	16
There are likely to be more vacant commercial spaces following the COVID-19 pandemic, which could be redeveloped for housing.	15
Homes should be built in the town/near public transport options so that walking and cycling are better options.	8
The same reasons for refusal given for other planning applications in this area should be equally applied to this development proposal.	5
Developing at Corsham instead would allow for the station to be re-opened and would support people getting to Chippenham town centre without the need for a car.	2
Development should instead be focused on the north side of the town, which has better links to the motorway.	2
The council should remove car parks and build homes with no parking.	1
A new settlement should be built on Salisbury Plain to meet housing needs.	1
Future development should be on the east side of Chippenham as the town is disproportionately developed on the west side.	1
Placemaking	

Concern that the development will be unattractive/non-distinct.	16
Concern about poor quality designed homes.	8
Concern that houses will have small gardens.	4
Concern that the new housing will not integrate well with the rest of Chippenham.	2
Request that any new bridges are designed to be attractive, iconic, and distinctive to Chippenham, e.g. stone viaducts, suspensions bridge, modern cable stayed designs.	2
Request to know how the plan will enable 'placemaking' as one of its key objectives?	1
The council should look to the Mulberry Park estate in Bath as a good example of development that adds value to a community in terms of design, open spaces, and access to retail/leisure.	1
The road design should minimise exposed concrete surfaces to avoid graffiti.	1
The road design should include planting to obscure the visual appearance of the road and assist wildlife and cut air pollution.	1
Concern that the new road will be unattractive.	1
Request for high-density development, maximising land use and allowing more rural areas to be kept free from development.	1
Query whether terrace housing will be developed.	1
Environmental Impact Assessment	
Concern that there has been no environmental impact assessment (EIA) for this proposal /It is premature to select any road route option until an EIA is completed	4
Concern that the EIA process that will be employed with this project does not require consideration of effects on underground soil food webs or organic soil content. The development proposals do not meet UK Law commitments made by the Paris Climate agreement in Article2. The legality of the project (climate impacts) will be called into question.	1
Concern that the full environmental assessment of the route options quoted as appended to the Options Appraisal Report has not been made available for scrutiny.	1
Construction	
The developers should be paying for the road infrastructure.	6
Request further information regarding the housing companies/local development companies involved in the project and detailed regarding funding.	3
Request to know how long the development will take to deliver.	2
Request to know if plans for the development to the east of Chippenham have already been drawn up.	1
Concern that different developers for each plot will make different interpretations of local policy which will result in a disjointed development.	1
Request to know how many hectares of land will be built on.	1
Concern that the funded new distributor road will allow the developer of Rawlings Green to avoid having to pay for the new bridge access that is required by the Rawlings Green allocation policy.	1

Question 6/Email letter responses: Theme – Consultation and process Appendix B9	No of responses
<i>HIF bid and funding</i>	
The project does not represent good value for money/bad use of taxpayer's money.	47
Concern that the justification for the road/housing appears to be driven by the HIF funding than genuine need/concern shared by Bremhill Parish Council.	27
Residents/parish councils should have been consulted before an application for HIF funding was submitted.	24
The funding allocated to this project should not be spent/should be spent on other projects.	9
The council should not be spending £75 million pounds on this project when nationally there is such economic uncertainty.	9
The people of Chippenham/the MP were misled when told the council would be given the money for the road/no initial mention of the 7,500 homes that would come with it.	6
It appears that the council applied for funding that was required to be spent in a short time frame so that the plan could evade proper scrutiny/appears to be a land grab avoiding planning law/avoiding the need to provide proper justification.	6
The allocation of HIF funding to a new road/new development is misaligned with local preferences expressed in the recent town survey, which highlighted other preferred priorities such as green spaces, public transport, potholes, and better cycle lanes.	6
The council's bid to the HIF was made under false pretences and the money should be returned to Homes England.	5
The HIF bid is now three years out of date/it is based on assumptions made before COVID-19 and therefore should be reviewed.	5
Concern that beyond the HIF grant of £75 million towards a distribution road the remaining costs to be met are unknown.	4
Concern that the £75m grant is not free and this will have to be paid for via council tax increases and central government budgets cuts to Wiltshire as a whole.	2
Query what the overall cost of the project will be.	2
One of the stipulations for the HIF grant is demonstration of local support, which this project does not have.	2
The council should not have applied for the HIF funding with an application that included proposals that did not accord with the currently adopted development plan or strategy documents.	2
Request to know how much the council have spent on the road project.	1
The HIF grant offers the opportunity to improve transport infrastructure of Chippenham, while supporting inevitable growth.	1
Request to know how much money the consultants have been paid for the involvement in the project.	1
Query whether the council's cost have factored in inflation, as construction is not to take place for some time.	1
Query whether costings include compensation for compulsory purchasing of land as well as compensation to others who will be affected by the new road.	1

The public engagement report of 13 th January 2020 was conducted after the HIF bid was confirmed and was not open and honest in its design.	1
Concern that the letters of support for the HIF bid included identical wording suggesting parties had been given a brief to follow.	1
Concern that the HIF bid did not include any assessment of alternative sites that could have been developed adjacent to existing roads.	1
Concern that the financial case within the HIF bid is redacted, depriving the public of such information.	1
There is a discrepancy between the 22,500 homes quoted in the HIF bid and the 7,500 homes now quoted.	1
There are numerous unresolved obstacles to overcome to keep spending within the timeframe set by National Government.	1
Westbury Town Council express disappointment that the HIF bid submission did not include any proposals to address issues surrounding the A350 through Westbury.	1
<i>Process/consultation</i>	
The road route options consultation form should have included a 'no road'/in-principle objection option/Concern shared by Chippenham Town Council, Calne Town Council.	105
The local community have not been sufficiently consulted/have been left out of this process/should be listened to.	72
The road and the housing proposals should not be considered separately, as one facilitates the other/concern about the legality of asking for comments on one element of the project without its wider context/Calne Without Parish Council raise concerns that the road should not be consulted on in isolation from the wider development	28
The proposals are put forward in an undemocratic way and lack transparency.	21
Concern that responses to the road route options will be skewed in favour of a road/people will be put off giving an honest answer as a 'no road' option was not provided/Concern shared by Chippenham Town Council.	17
Carrying out consultation online during a national lockdown does not empower residents to provide effective feedback/request for face-to-face consultation after the lockdown/Calne Without Parish Council raise concerns about the process of consultation during national lockdown.	15
Communication has been inadequate/Concern that no letter was sent out advising residents about the process.	12
Concern that there is a conflict of interest for Wiltshire Council as landowner, developer and local planning authority who appear to be unduly influenced by financial gains.	10
Advertising the consultation on the council's website is inadequate for a project of this magnitude/concerns about the accessibility of the online consultation information/Concerns shared by Calne Without Parish Council.	7
The assessment of options should have included more options, e.g. a 'no road' option/the range of options and assessment criteria are too narrow.	6
A development of this scale requires more than 2 months consultation/Concerns shared by Calne Without Parish Council.	5

Concern that the concurrent consultation process of the Future Chippenham Road Route Options and the Local Plan review is confusing.	4
There is a lack of clarity about how to voice opposition to all the proposals.	3
Concern that the consultation should not have accepted anonymous responses.	3
Concern that the consultation form questions are misleading.	3
The consultation information provided is insufficient to be able to provide an opinion as to which route should be built.	3
The consultation process does not accord with the Gunning Principles.	2
Concern that issues raised during public consultation meetings were evaded by stating that “this was a matter for the planning department/local plan” and therefore concerns have never been adequately addressed or responded to.	2
That the Options Assessment Report was published a year after the successful HIF bid suggests the report was designed to justifying the eastern/southern distributor road rather than finding the best future transport options for Chippenham.	1
A Community Liaison Group should not be necessary as the council should be consulting with the public as a matter of course.	1
It is unclear how the council sought to engage with hard to reach groups.	1
Insufficient time was provided during the webinars to address people's questions.	1
Insufficient time was given to the public to review the council's responses to questions raised in the webinars, before the close of consultation.	1
Request that a referendum be held on whether to build the new road and housing.	1
The road route options consultation form should have offered a ‘no preference’ option.	1

Question 6/Email letter responses: Theme – General Appendix B10	No of responses
General	
None of the road options should be built/the road is not wanted/there is no evidence that the road is needed/Chippenham Town Council, Calne Without Parish Council, Bremhill Parish Council object to the development of the new road	503
No local support for the proposals/Comment that there is a well supported local petition against the proposals/Comment that there is opposition from the local MP/Comment that local councillors and local parish councils do not support the proposals.	75
Objection to developers/the council profiting from the development.	48
The distributor road/wider project is not compatible with/will have negative impacts on the important issues listed under Q5 of the consultation form.	19
The project represents an outdated approach to development/not fit for the 21 st century.	18
There is a lack of strategic vision for Chippenham/Proposals are designed to resolve short term issues, without positive/sustainable vision for the longer term (e.g. 20,50, 100 years' time)/Unclear how the proposal fits with the ‘emerging strategy’ for Chippenham.	18

Request to know whether any decision makers on this project live near Chippenham.	3
Concern that the development will negatively affect existing house values in the area.	2
The council should be considering all the issues listed under Q5 as a matter of course.	1
Objection to decisions about Chippenham being made in Trowbridge.	1
Query which organisations will benefit financially from the project and what connections they have to any officials at the council.	1
Concern that the project is only being implemented to recoup the loss of revenue when Swindon Borough Council was formed.	1

Appendix C

Responses to Question 8 relating to Option A (outer route)

The tables below itemise the summarised individual points raised in answer to Question 8, addressing Option A – the outer route. The tables are split by theme, and the number of times the same point was raised is denoted in the right hand column of each table. An individual consultation response may have included a number of separate points under multiple themes and in these instances all points are recorded separately.

Question 8 (outer route): Theme – Transport Appendix C1	No of responses
<i>Transport (Option A - All zones)</i>	
This option is too far out, too wide, too long, giving builders too much space to expand	47
Concerns about increased congestion.	37
Request that the route include pavements and cycle routes on both sides/segregated routes/An alternative sustainable transport strategy should be developed.	15
Concern that Option A would function as a ring road or bypass/bypass not needed.	11
Concern that the route would cut through/destroy parts of the Chippenham/Calne cycle route.	6
The road option will help to address congestion/town centre congestion.	5
A bypass is needed but this is not what is proposed.	2
It is considered that linking the A4 east of Chippenham to the A350 south near Lackham is not justified due to the majority of A4 west-bound through-traffic wanting to access either the M4 via M4 J17, the A420 or A4, not the A350 south.	2
This option is preferred as it is further away from Abbeyfield School.	2
This option would make access to M4 difficult.	2
Query whether the impacts on increased numbers of vehicles and HGVs using this route between J17, Calne, Marlborough, Devizes will be considered.	2
The distributor road should go as far out as possible to accommodate the new housing.	1
Request that the road be located further out, tracking closer to the river Avon closer in order impact the least number of people possible.	1
If a Chippenham bypass is intended then this is the route to choose, however if the intention is to support leisure, heritage, housing developments that connect together then this option is too far out. It would be interesting to know how this may link to	1
Stagecoach West do not support the Option A route. This route would most likely support and "edge road" or bypass function. The route would perform poorly as a bus route on all sections. It is recognised that there are higher costs for this option and the likelihood that it will have greater environmental impacts.	1

Option A is the only feasible option to act as a bypass with the aim being to ease town centre traffic congestion as was suggested by the consultation. Building a distributor road (as in option B/C) will have the opposite effect and will end up encouraging even more cars onto the already busy roads.	1
Concern that this option lacks connection to the existing areas/roads.	1
Good urban link roads will need to be provided as developments progress.	1
Query whether the new road will have housing on either side of it, or if there will be feeder roads of this new road.	1
This option is preferred as avoids too much impact on cycle paths.	1
Concern that there is a lack of radial links to Chippenham town centre, resulting in possible congestion on London Road between Avenue La Fleche and Pewsham Way, which would become the most direct route to the town from a large part of the proposed North Eastern developments. This is a residential street and important walking route to town/Abbeyfield School. Safety concerns.	1
This option should enable good linkage between Radial routes.	1
The option A zones 3, 4 and 5 route would inevitably be used as the preferred route for through traffic between Calne & Devizes and the M4 J17. For this reason, the outer route is preferred as it will reduce impact of traffic noise and pollution on the town and new housing developments.	1
Option A provides a perimeter road to the residential development removing possible conflicts with non-vehicle traffic that will occur with options B and C.	1
Option A provides the furthest junction at the A4 from the Pewsham Way/London Road round about. This will minimize the risk of traffic congestion between the 2 junctions.	1
Concern about impacts on Abbeyfield School and Stanley Park sports ground where it is busy enough already.	1
Option A provides the furthest junction of Stanley Lane at the new road with Abbeyfield school. Stanley Lane will likely add more non-school traffic which will aggravate an already dangerous situation outside the school at drop-off/pick-up times. The further away from the school the better.	1
Concern that this makes Stanley Lane a major route from both Pewsham and Bremhill directions, with cars trying to access the distributor road.	1
This option is supported as has good access to the M4.	1
Option A is considered to be the most efficient way of moving increased volume of traffic around Chippenham.	1
Being outside the area of proposed developments may make this road suitable for higher speed traffic flows.	1
Concern that the proposed 30mph limit will make rat running through town a more attractive option at times.	1
It is unclear how an outer route would work as 30mph 'distributor road' with some frontage development and safe multi modal access.	1
Any roads built should be low speed 30mph.	1
This option should offer reasonable alignment for say 40 mph.	1
It would require significant policing to ensure that traffic remained within the proposed 30mph speed limit	1
Install speed bumps.	1

The nature of the proposed adjacent cycle path is unclear, how it will cross roundabouts/junctions, will cycles have priority?/Not enough consideration given to how non-motorised traffic will integrate.	1
Request for walkability/cyclability analysis of Chippenham to help guide the design of the future development.	1
Consider committing to create a 'Green Ring Road' around the town to attract long-distance walkers and cyclists.	1
The new road footpath and cycle path should connect with NCR 403; funding should be used to improve the route in both directions and ensure that it is well buffered and protected.	1
Request to know whether footbridges will be built over the road to enable pedestrians to carry on using footpaths.	1
Concern that access to footpaths and cycle tracks are likely to be significantly affected while construction activity is being carried out.	1
Request for better car parking at the national cycle route intersection, with a cafe.	1
Request to keep cycle route open.	1
Better cycle routes are needed.	1
Cycle/pedestrian routes should be next to housing.	1
This option is not consistent with providing easy pedestrian and cycle access, particularly from the extremities of any development.	1
Request to widen Avenue La Fleche instead and provide new road connection with the Bath Road.	1
Widen existing road instead.	1
The distributor road should be delivered in two phases, with the southern (Pewsham to Lackham) section done to be used as a bypass for east/west traffic removing cross town traffic from the town centre. The northern more environmentally sensitive area may not be delivered at all depending on future growth needs.	1
Query why no link road to Monkton Park is included, which would relieve town centre/station traffic and improve accessibility.	1
This option could be better placed.	1
No objection to this if it is well designed.	1
Request for at least two Park & Ride facilities adjacent to the distributor road, planned for and costed as part of the overall programme. The ideal place for the southern P&R would be adjacent to the Junction with the Link Road to Pewsham. Buses should run at frequent/regular/convenient times from the P&R, through the southern half of the development to Chippenham town centre and the railway station.	1
Transport (Option A – Zone 1)	
Comment that the route option in Zone 1 is supported/preferred/link to existing Lackham roundabout supported.	4
It is not clear how this Option works going through Lackham College, and whether the college is expected to move/Splitting of Lackham college land in Zone 1 is undesirable.	2

No need for the road through Zones 2, 3 & 4, as existing Pewsham Road can be used with connection between Lackham roundabout and Canal Road roundabout. Would save cost and impact.	2
Concern that a much longer bridge is required in this Zone.	1
In Zone 1 the use of the Lackham roundabout is supported, however the right-hand turn appears worse than the Option B route in Zone 1. Would prefer Zone 1 and 2 of Option B with the rest of the Zones following Option A	1
In Zone 1, this route will be difficult to tie in to Lackham Roundabout unless the Lackham College exit is removed.	1
The Outer route Option A should have the Pewsham Link Road Option 1 leading off it and should be in Zone 1.	1
The connection from Pewsham Way to the A350 does eliminate the bottleneck at the Bridge Centre and does have some merit but should be reviewed in isolation to the road planned to the North of the A4.	1
Request that the viaduct (southern crossing of the River Avon, near Lackham) be a celebrated design feature/could become a destination for engineering/education.	1
In Zones 1 and 2 the outer route is preferred as Pewsham Way road already provides a good distributor road, there's no need for the new road to be quite so close.	1
In Zones 1 and 2 it would be an idea to "adopt" the A4 numbering and route the A4 from Chequers, down Cepen Way A350 as a dual carriageway and then across Option A to the A4 at Stanley. Can be renumbered from there to the A350 at Jacksons Lane. This would remove traffic from Bath Road and Ivy Lane, which would act as a backup route, which is an improvement on the current situation.	1
Stagecoach West notes that the SW link section in Zones 1 and 2 is much more likely to perform better in its strategic role to divert traffic but in so doing could end up unhelpfully contributing to adding demands on the A350 west of Chippenham, accelerating the process of re-saturating junctions that have only just been enlarged.	1
Do not agree that access should be extended beyond the Lackham roundabout. It is the natural starting point with flat approaches to improve visibility at approach for an infrastructure project of this size. The Whitehall traffic lights already create significant congestion During peak times and a further link road beyond the Lackham roundabout with compound the issue and create further unintended consequences because of this plan.	1
Transport (Option A – Zone 2)	
Concern than in Zone 2 the section south of the A4 is largely a duplication of Pewsham Way and so environmentally redundant.	1
In Zones 1 and 2 the outer route is preferred as Pewsham Way road already provides a good distributor road, there's no need for the new road to be quite so close.	1
Concern that adding a roundabout on the A4 will increase congestion due to increased traffic coming from the Calne area.	1

Support the roundabout at Pewsham as will make access easier from the A350 to Calne without going near town centre and traffic will flow better than if there were traffic lights at a junction.	1
The new footpaths and cycle paths should connect with the canal Cycle Route, and with the east-west footpath from Middle Lodge Farm to the A4 (and Derry Hill).	1
Concern that the Zones 2 route will cut communities off from the town centre by walking/cycling.	1
With reference to Zone 2 this Option is too far from Chippenham.	1
Landowners (Gleeson) comment that within zone 2, the land to deliver the road in Option A is outside of their control, but if this can be used to facilitate development of the Gleeson parcel then this is considered acceptable.	1
Landowners (Gleeson) comment that this appears to be the most expensive option (due to its excessive length), so viability needs to be considered.	1
Concerns that the route option in this zone conflicts with plans for a 49.9MW solar farm by Eden Renewables. It is not available for a new road route.	1
In Zones 1 and 2 it would be an idea to "adopt" the A4 numbering and route the A4 from Chequers, down Cepen Way A350 as a dual carriageway and then across Option A to the A4 at Stanley. Can be renumbered from there to the A350 at Jacksons Lane. This would remove traffic from Bath Road and Ivy Lane, which would act as a backup route, which is an improvement on the current situation.	1
Would prefer Zones 1 and 2 of Option B with the rest of the Zones following option A	1
Concern that the Pewsham link road to this option doesn't align with any of the roads into Pewsham.	1
Transport (Option A – Zone 3)	
Concern about negative implications on the popular railway path recreation route/makes this less attractive route between Chippenham and Calne.	3
If the road must cross the railway line, then this is the least bad option.	2
Highway safety concerns regarding the crossing of the old railway track/cycle path between Chippenham and Calne/a bridge or tunnel should be provided.	2
Request that the development fund the extension of the cycle path/footpath along this stretch of the canal, connection to the canal towpath delivered as part of the council's Green initiative.	1
Concern that the route crosses Stanley Lane between Hither Farm and Middle Farm. Is it on a bridge or will there be a junction/roundabout? If the latter, what will be done to prevent Stanley Lan becoming a rat run?	1
Concern that the Zones 3 route will cut communities off from the town centre by walking/cycling.	1
The impact on the cycle track could be partially mitigated by including a safe cycle path running alongside the new road to improve leisure access to the surrounding area.	1
This option would negatively affect the canal as a walking route.	1

Comment that this Zone 3 should not be considered as it would bisect the settlement of Stanley, leading to additional traffic on local lanes in Studley and Bremhill.	1
By routing through Zone 3 development will eventually expand out to the road so this route is too far out.	1
In Zones 3, Option A is preferred as it gives better links to the Pewsham and the Derry Hill area.	1
Stagecoach West notes that the severance of a small portion of developable land in Zone 3 could and should be addressed by reconfiguring the developable area within the line of the route.	1
Transport (Option A – Zone 4)	
Strongly support for the route in Zone 4 avoiding going through the middle of a housing development area.	1
The section of road through Zone 4 is too far out.	1
The junction of the A4 and A342 is a major accident blackspot. Adding a roundabout to connect the new road will not improve matters, by itself, but will be an opportunity to carry out other roadworks to slow down traffic descending towards it from both Derry Hill and Calne.	1
Concern that the crossing of the A4 will inconveniencing drivers there.	1
This Option should be altered with Zone 4 continuing and joining up with Calne. removing Zones 3,2 and 1. This would have the same effect overall and it would drop to local traffic on the A4 and areas around Pewsham, as inter-town traffic would go along this new extended option which causes the congestion today.	1
Zones 4 and 5 are not required. A link road from the A4 near Stanley Park to Lackham Roundabout would take traffic away from Avenue La Fleche & out of the town. The bypass started in the 1990s could be finished (made dual carriageway) for the entire length.	1
Although this is the option that causes least impact to the cycle route in Zone 4, it could be routed through the natural gap in the cycle route at Stanley.	1
In Zones 4, Option A is preferred as it gives better links to the Pewsham and the Derry Hill area.	1
Landowners within Zone 4 note that Option A in this area would be acceptable to them.	1
Transport (Option A – Zone 5)	
In Zone 5, Option A is preferred as it gives better links to the Pewsham and the Derry Hill area.	1
In Zones 4 and 5, the Eastern end of the road will link to the B4069. This passes through and past small communities that will be impacted detrimentally by additional traffic. There is no means to link the two northern ends of the routes and Hill Corner, Jackson's Lane and Kington Langley will suffer significant increased traffic as people will not travel all the way to jct17 to cross to the west, nor will they circumvent Chippenham to do so.	1

Strongly disagree with the route in Zone 5 going through the middle of the development area, due to traffic safety issues, barrier to walking/cycling, noise, and pollution.	1
How does this link in Zone 5 to the Langley Road?	1
Zone 5 exactly what is the connection to the railway?	1
With reference to planning application 15/2351/OUT for 650 houses, the agreement is that the developer funds the bridge across the railway, in any event needed for the 450 new houses where access for building can only be through Parsonage Way and said new railway bridge. The Government funded new road appears to mean no developer funding for the new railway bridge, which would be a breach of planning permission already granted for it - 15/11886/FUL.	1
Landowner (Summix) supports the route through Zone 5 (Rawlings Green) which is common to all options	1
With reference to their comments concerning Zone 3, Stagecoach West notes that this would not be possible in Zone 5 through Rawlings Green where the route is already fixed within the existing proposed development. As such this would be anomalous, and a higher level of induced traffic might well create unacceptable amenity as well as environmental and safety impacts on this section.	1

Question 8 (outer route): Theme – Climate change and flooding Appendix C2	No of responses
<i>Climate change (Option A – All zones)</i>	
Concern about climate change/impact on carbon footprint and environment/conflict with the council's declaration of a climate emergency.	38
This route has a worse option for crossing the River Avon, requiring a longer viaduct and two canal crossings which has negative implications in terms of sustainability.	1
<i>Climate change (Option A – Zone 1)</i>	
Zone 1 has the longest bridge over the Avon, which would be costly in terms of carbon impacts.	2
<i>Climate change (Option A – Zone 3)</i>	
Concern that two canal crossings are required in Zone 3, costly in terms of impact on ecology.	1
<i>Flooding (Option A – All zones)</i>	
Concerns about risk of increased flooding/building on a floodplain/drainage.	20
Wiltshire Council's drainage team note that all 3 routes will engage with flood zones 2 & 3 at the southernmost and northernmost points, it is expected that this is well known and therefore has not been commented on further at this stage.	1

In respect of groundwater Wiltshire Council's drainage team comment that there are groundwater concerns around the Lackham roundabout junction in the South West Corner, levels are predicted to be just below the surface here. However, the ground conditions are expected to improve quickly and should not present any further issues throughout the remainder of the route.	1
In respect of surface water Wiltshire Council's drainage team comment that Option A does the best to avoid surface water flow risks. The outer ring avoids severe surface water flood risks on London road, Pewsham. It does however encounter surface water risks at known watercourse locations and appears to follow the boundary of a surface water flow path around the North West of the route. The maps appear to show an area of high risk close to the North Wiltshire Rivers Route.	1
Wiltshire Council's drainage team note that the council have records of highway flooding reports on Lackham Roundabout. From the information available Option A appears to offer the simplest solution in terms of drainage implications.	1
Option A is preferred as it doesn't impact on as many floodplains.	1
Viaducts over a floodplain is unjustified and unnecessary as the loss of flood storage is infinitesimal whilst the cost of viaducts is significant, and cost better utilised on other aspects of Future Chippenham.	1
<i>Flooding (Option A – Zone 2)</i>	
The Environment Agency comment that from a biodiversity and water environment perspective, option A would be the best option in Zone 2, with a small amendment to the route to provide a greater buffer to the Cocklemore Brook. Option A is identified as having the least impact on surface water bodies and is ranked second in terms of the impact on the water environment. The impacts of having a greater impermeable area due to a longer route is stated as the reasons option A is not preferred, however this could be managed through detailed drainage design and greater emphasis should be given to protecting and maintaining the network of smaller watercourses and waterbodies across the area.	1
<i>Flooding (Option A – Zone 3)</i>	
Concerns about flooding in this area.	1
With regard to zones 3-5, concerns are raised about flooding, e.g. at Westmead Playing Fields. Storm events are happening much more frequently due to climate change. Rapid floods are due to the Oxford clay along the West bank of the Avon and along the Marden.	1
<i>Flooding (Option A – Zone 4)</i>	
The Environment Agency note that the River Avon crossing proposed for each option in zone 4 is the same. It appears that the crossing point chosen for this section is located at the river section with the shortest floodplain width, which is supported. In terms of the other aspects assessed the EA agree with the conclusion to support option C from a biodiversity perspective. The EA's preferred route would be a hybrid of the three routes proposed.	1

Question 8 (outer route):
Theme – Pollution and air quality
Appendix C3

No of responses

<i>Pollution and air quality (Option A – All zones)</i>	
Concern that this will increase air pollution	29
Concern that this will increase noise pollution.	10
This option will improve air pollution.	2
Option A is preferred as it won't create so much noise and disruption for existing residents.	2
Concern that this will increase light pollution	1
Given that cars will increasingly become electric with no emissions there will be no air pollution issues with the inner route.	1
The straighter the route, the less environmental impact there will be from braking, acceleration, tyre wear and noise.	1
Request that the road be located further out, tracking closer to the river Avon closer in order reduce air and noise pollution closer to Chippenham.	1
<i>Pollution and air quality (Option A – Zones 2/3)</i>	
Concern that the option in Zones 2 and 3 will increase noise and air pollution, with implications for climate change	4
<i>Pollution and air quality (Option A – Zone 4)</i>	
Concern about noise pollution in Zone 4 on the Marden Valley and Tytherton Lucas. The outer route is the most detrimental to this.	1

Question 8 (outer route): Theme - Ecology Appendix C4	No of responses
<i>Ecology (Option A – All zones)</i>	
Concern about negative impacts on biodiversity/wildlife species and habitats.	53
Concern about ecological impacts/impacts on protected species from cutting over the canal south of Pewsham Locks.	4
Route option A considered to have the greatest adverse impact on biodiversity of the options.	1
Option A is preferred as it has less impact on ecology.	1
Concern that the route passes close to known locations of great crested newts.	1
Preferred route as it doesn't cross ponds with populations of great crested newts.	1

Concern that while this route has been assessed to have the biggest impact on biodiversity, full assessments of impact are yet to be undertaken. This is needed to provide feedback.	1
Concern about negative impacts/fragmentation of habitat connectivity in Baydons Meadow wildlife	1
The Environment Agency advise that minimal impact on watercourses should be achieved.	1
Ecology (Option A – Zone 1)	
Zone 1 has the longest bridge over the Avon, which would be costly in terms of impacts on ecology.	2
Concern about habitat fragmentation at Plucking Grove Wood and harm/pollution at ponds at Plucking Grove.	4
Ecology (Option A – Zone 2)	
With reference to Zone 2 this Option would be damaging to the environment/biodiversity.	3
Ecology (Option A – Zone 3)	
Concern that two canal crossings are required in Zone 3, costly in terms of impact on ecology.	1
Concern that desk based assessments that have been carried out omit a significant amount of wildlife present in Zone 3.	1
With regard to Zones 3, 4 and 5, effects on the environment would be detrimental and shouldn't proceed beyond the A4.	1
Ecology (Option A – Zone 4)	
The route through Zone 4 would devastate the natural biodiversity of the River Marden.	1

Question 8 (outer route): Theme - Landscape Appendix C5	No of responses
Landscape (Option A – All zones)	
Concern about impact on the landscape/rural setting/too visible/destruction of greenspace/destruction of Avon/Marden Valley.	120
All routes are an environmentally damaging.	49
Concern about the loss of rural setting and character/separate identities of surrounding villages e.g. Tytherton Lucas, Lacock, Old Derry Hill, Pewsham village, Stanley, Bremhill, Calne Without, Lackham.	11
Object due to loss of accessible amenity/walking and cycling routes.	6

Request for commitment to significant tree cover/landscape mitigation to mitigate the impact of the road.	4
Concern that this option isolates the road from the development, and in doing so locks the town off from its environment and removes access to green infrastructure for the town's residents.	2
This option is preferred as it follows the natural landscape/minimises impact on landscape.	2
This option fragments too much greenbelt land.	1
Visibility to the East is a concern especially above Tytherton Lucas. Request that the route use the topography and follow the inner route at this point where the hill would shield the development from the surrounding countryside.	1
Option A Outer Route is the only option that protects walking routes/countryside access.	1
Concern that this option will create an urban extension along the cycle track between the river Avon and Stanley.	1
Option A cuts through CALW80 walking route in a very rural area which is enjoyed by the public. Having a 'ring road' there will spoil the tranquillity, views, and air quality of this area.	1
This option takes away the enjoyment of Stanley Lane and the Sustrans cycle route from the existing residents of Chippenham, meaning they will get in their cars to get out into the countryside.	1
Considered to make the most sense in terms of traffic and disruption to landscape.	1
Request for a White Horse carving on Derry Hill.	1
Considered that concerns about visibility are misplaced as future housing would be visible from everywhere anyway and would likely obscure the road itself in many places.	1
This option has least impact on greenspace.	1
This option is preferred since it is further out of Chippenham.	1
Concern that the proposed viaducts will be visually harmful to the unspoilt stretches of the Avon river valley, especially the stretch between Rowden Manor and Reybridge.	1
Concern that these proposals will be visually harmful to the lower reaches of the Marden and the canal.	1
Chippenham needs improved access to the countryside, sensible pedestrian road crossings, car parks set up at rights of way intersections and allocated greenspaces without and outside of the road.	1
A good sized car park, and pub/restaurant, is needed at the Pewsham Locks.	1
Fully supported, but must include greenspaces, accessibility, destinations that are interesting (engineering/heritage/leisure) for people to learn from and enjoy.	1

Landscape (Option A – Zone 1)	
In Zones 1, 2 and 3, this option has a much lower visual impact.	1
Concern that this route would kink south from Lackham roundabout onto higher ground, would prefer a route that headed straight east.	1
Landscape (Option A – Zone 2)	
The proximity to Pewsham Lock is of concern/Adverse visual and physical impact on the Wilts and Berks canal line in Zone 2 and 3/destroys the rural solitude of the well used canal towpath.	14
This route unnecessarily crosses the canal/adverse impacts on the locks that are in the process of being restored.	6
Concern that the outer route in this zone is too visually intrusive/visually prominent/cuts across too much open countryside.	4
Concern about the landscape impacts on the old Pewsham locks/too close to Pewsham locks.	2
Object to the bridge over the canal which would destroy an historic spill weir and be very close to a wharf which would disturb the enjoyment of a current tranquil setting.	2
The route in this zone is considered to have a much lower visual impact.	1
Zone 2 would be harmful to local beauty spot popular for recreation and important for wildlife.	1
While the route in Zone 2 would have negative impact on the canal south of Pewsham Locks, it would have less impact on the overall access to this recreational asset than the Zone 2 route for Options B and C.	1
If this route ran parallel to the canal across the A4 area this would be preferred.	1
This option would destroy the character and peace of the Wilts & Berks canal path.	1
Accessible parts of the canal are an important local amenity.	1
The route of the canal should be protected.	1
Wilts and Berks Canal Trust comment that the southern crossing would destroy the environment around the former wharf and the historic restored spill weir immediately to the south of Pewsham Locks.	1
Wilts and Berks Canal Trust comment that the requirement for a roundabout or staggered junction crossing on the A4 should be coupled with a design that enables the Canal north and south of the A4 to be linked. North of the A4 the selected Route should recognise WBCT's plan to link the Canal main line at Stanley to the River Avon.	1
Zone 2 and 3 are too close to Lackham and the surrounding area/would destroy natural surroundings.	1
Visual blight on important rural areas around Stanley Lane.	1
The combination of the proposed solar farm and this route option would devastate the area.	1

The Avon Valley walk will be blighted by a flyover	1
Landscape (Option A – Zone 3)	
Concern that the outer route in this zone is too visually intrusive/visually prominent/cuts across too much open countryside.	5
In Zones 3-5 Option A is preferred as it minimises the impact on the local countryside.	1
In Zone 3 the second crossing of Wilts & Berks Canal would be costly.	1
In Zone 3 the second crossing of Wilts & Berks Canal would negatively impact on visual/landscape setting. Seems a very 'wide' routeing around the east side.	1
This option seems a very wide routeing around the east side.	1
Landscape (Option A – Zone 4)	
Concern that the outer route in this zone is too visually intrusive/visually prominent/cuts across too much open countryside.	4
Concern about landscape impact on important rural areas around Stanley Lane.	1
This route is considered to be less visually impactful to residents of Tytherton Lucas as it is lower down the slope down to the River Marden.	1
Option A impinges most on the Chippenham to Calne cycleway in zones 4 and 5.	1
A landowner comments that this option runs through one of their fields in this zone, and there are no objections if they are compensated for it.	1
Landscape (Option A – Zone 5)	
Concern about impact on the countryside in this zone.	1
Comment that in Zone 5 the Avon river crossing will be a scar on the landscape, it should be as far from the River Marden as possible.	1
Agricultural land (Option A – All zones)	
Object to loss of agricultural land.	30
This option is preferred as it is further away from farms.	2
Concerns about impacts on farmers livelihoods.	1
Agricultural land (Option A – Zone 4)	
Housing in zone 4 should not be developed as it will spoil the productive countryside.	1

Question 8 (outer route): Theme - Heritage Appendix C6	No of responses
Heritage (All zones)	

This will destroy/impact on heritage.	2
Considered that this route is worse in terms of crossing the River Avon, requiring a longer viaduct and two canal crossings which has negative implications in terms of heritage impacts.	1
Concern that Option A will impact on listed buildings at Old Pewsham and Forest Gate.	1
Heritage (Zone 2)	
This option is closest to conservation areas and heritage assets, potential harm, e.g. Pewsham House, Old Derry Hill	3
Heritage (Zone 4)	
This option is closest to conservation areas and heritage assets, potential harm e.g. to Tytherton Lucas conservation area, 18th century stone bridge over the river Marden, Scott's Mill.	3
Concern that in Zone 4 all three options impact archaeological sites.	1
Concern for impact on the view over to Maud Heath's monument.	1
Development of any roads or houses should ensure no adverse impact on the National Trust's Lacock site.	1

Question 8 (outer route): Theme – Economy and infrastructure Appendix C7	No of responses
Employment and economy (All zones)	
Concern that Chippenham currently offers poor choice for retail/leisure/services. The town needs regeneration.	9
Concern that Chippenham does not have the jobs to support the development.	4
Concern that there is only a small amount of employment land compared to the potential numbers of houses.	2
More employment land should be provided to decrease outward migration of people commuting to work each day.	2
Repurposing empty shops and commercial properties left post-pandemic should be looked at.	2
Jobs should come first, then entry point housing.	1
Comment that it will destroy the town centre.	1
Infrastructure and services (All zones)	
Concern that Chippenham does not have the infrastructure to support the development.	1
The distributor road should be kept away from the football grounds.	1

Would support a small amount of development shared equally across the county based on land area, if there was a substantial improvement in Chippenham's facilities to take account of the Chippenham development which has already happened.	1
The new road should include a filling station as there is not one on this site of Chippenham.	1
Infrastructure and services (Zone 3)	
In Zone 3, this route is advantageous as it avoids impacting on Stanley Park.	1
Health and social wellbeing (All zones)	
Concerns about negative impacts on human health.	6

Question 8 (outer route): Theme - Planning Appendix C8	No of responses
Relationship with the Local Plan review/prematurity (All zones)	
Concern that the case for building this number of houses in Chippenham has not been fully debated/Consultation on the distributor road predetermines the outcome of the Local Plan and so is premature.	20
Concern that the Local Plan review site selection process is biased in favour of the Future Chippenham site/Do not agree with the findings of the site selection process.	2
There is lack of strategic vision for the future of Chippenham.	1
Route A gives the greatest scope for the council to allocate sites for housing and industry, to avoid piecemeal development.	1
It appears that a decision on whether this development will take place has already been decided.	1
Compatibility with made/emerging neighbourhood plans (Zones 3/4)	
Concern regarding potential conflict of options for Zones 3 and 4 and the Bremhill Neighbourhood Plan.	2
Housing/Scale of development (All zones)	
There is no evidence to support the house building/evidence is out of date and flawed/houses aren't needed.	36
Concerns/objections about urbanisation of the area between Calne and Chippenham.	20
The outer route is preferred as this will futureproof the town for future development that is required in the future.	8
Focus should be on developing brownfield sites first.	4
It will encourage building either side of the road.	2

This option offers the best scope for development within the "envelope" so that attractive estates can be built without too many intermediate junctions on the through route/Provides good eastern and southern boundary for Chippenham.	2
Land west of the A350 should be developed instead.	1
None of the options are preferable as Chippenham already has enough housing development underway.	1
Too much development is planned for Calne, Chippenham, Corsham, Trowbridge.	1
The right type of housing must be delivered.	1
Concern that this option surrounds an area one assumes is considered available for development; therefore, this should be reduced.	1
Option A is preferred if it is planned take another swathe of land for housing, otherwise it is not supported.	1
Would like to know how this may link to any future development plans of the A350.	1
Housing/Scale of development (Zone 2)	
This option will encourage development up to the boundary of the road, which is not supported.	2

Question 8 (outer route): Theme – Consultation and process Appendix C9	No of responses
HIF bid and funding (All zones)	
Most expensive route/too expensive/not viable.	15
The Future Chippenham project is being rushed through the design and approval of the distributor road, to meet the grant timescale conditions, not because there is a determined need for a road.	4
This appears to only be an option so that the council can benefit from selling off the council farms.	3
Concern that there was no consultation prior to the HIF bid application.	2
The council must return the HIF grant to Homes England.	1
HIF bid and funding (Zone 2)	
The proposed viaduct in this Zone is not supported due to huge cost in building.	2
Process/consultation (All zones)	
A 'no road' option should have been provided.	20
Concern that this consultation doesn't discuss the 7500 homes, there has been no consultation on the houses. Consultation on road and houses should happen together.	3
Request that the views of residents be listened to and acted upon.	3
Concern that the three options are too similar and do not offer genuine choice.	1

Many issues raised during public consultation meetings were evaded by stating that “this was a matter for the planning department/local plan” and consequently significant concerns have never been adequately addressed or responded to.	1
Comment that the consultation material was not clear enough.	1
Comment that the consultation material shows image of a parent and child cycling on an idyllic country cycle track, which would be destroyed by this proposal.	1
Concern that the approach of running the road consultation in parallel to the Local Plan consultation is disingenuous and poses a conflict of interest for Wiltshire Council who appear to be unduly influenced by the funding opportunity and their conflicting roles as landowner, developer and local planning authority.	1

Question 8 (outer route): Theme – General Appendix C10	No of responses
General (All zones)	
The road is not wanted/not needed or justified/should not be progressed.	408
This option would have least impact on existing properties/least disruptive.	25
This option is the worst option/least preferred/Option A scored worst in the assessment categories.	16
This option is considered to be the best route.	14
While this route is preferred the middle route would provide better access for the new housing.	2
Calne Without Parish Council does not support the distributor road.	1
Resident concerns regarding potential negative impact on house values.	1
It is considered that the evidence should be re-examined post pandemic.	1
This option rides rough shot over people’s land/jobs and homes.	1
Road building is outdated, should not be encouraging more cars.	1

Appendix D

Responses to Question 9 relating to Option B (middle route)

The tables below itemise the summarised individual points raised in answer to Question 9, addressing Option B – the middle route. The tables are split by theme, and the number of times the same point was raised is denoted in the right hand column of each table. An individual consultation response may have included a number of separate points under multiple themes and in these instances all points are recorded separately.

Question 9 (middle route): Theme – Transport Appendix D1	No of responses
<i>Transport (Option A - All zones)</i>	
Concern that the road will worsen traffic and congestion	17
The road will worsen congestion in Chippenham and its surrounding areas	13
Concern that the road will increase the number of car journeys/increase commuting	8
Comment that this option is better than Option A	6
Concern re the destruction of recreation/safe exercise areas	6
Comment that this is the least bad route/best route	5
Comment that this option is better than Option C	5
Comment that the route too wide	5
Comment that this is the worst of the three routes	4
Concern that the road will sever minor lanes, footways, and the railway path	4
Comment that this is worse than Option C	3
Comment that public transport, cycle lanes should be improved instead	3
Comment that this is worse than Option A	2
Concern about the lack of decent bus links on this route	2
Comment that Increased traffic flow from M4 should use existing roads on the west side of town	2
Linking the A4 east of Chippenham to the A350 south near Lackham is not justified due to the majority of A4 west-bound through-traffic wanting to access either the M4 via M4 J17, the A420 or A4, not the A350 south	2
Comment that existing roads should be widened/improved	2
Comment regarding future travel options and working from home mean new roads not required, automated cars - smarter journeys.	2
Comment that the road scheme should make a positive contribution to green infrastructure for Chippenham to provide for pedestrians, cyclists, and public	2

transport. This would align with a likely shift in working and travel habits and contribute to climate change mitigation	
Comment that this route would help traffic	2
Comment that suggested benefit re congestion in the town centre must be outweighed by the proposals for a further 7500 houses.	2
Bypass likely to be needed in the future due to development/what is the point it's not a bypass	2
Comment that the proposed distributor road is to have a 30mph single lane, intended for access to the new properties, will not be able to ease existing traffic pressures and accommodate 10,000 new cars and at the same time, and any traffic using it to bypass the town will only exacerbate the problems caused.	2
Query if Footpaths & Cycle Routes will be maintained, whichever Option is chosen.	2
Query why the route doesn't follow the line of the electricity pylons rather than moving away in a sweeping bend immediately east of the flood plain crossing. Future residents will not want to live next to a distributor road nor pylons, so running both alongside each other more closely minimises the impact both have on the landscape and people's lives.	2
Concern about the safety impact of the proximity of major road to cycle path	2
Comment that an amendment to the outer route would be better.	1
The Environment Agency comment that a hybrid of options A and B is preferred.	1
Comment that a hybrid option would be better.	1
Comment that a good compromise would be to combine route option C from zone 1 and 2 with zone 3 and 4 from route option B.	1
Comment that the route should follow the route of the outer options through zones 1 and 2 before coming back towards the route shown for the inner route through zones 3, 4 and 5.	1
This Option should be altered with Zone 4 continuing and joining up with Calne, removing Zones 3,2 and 1. This would have the same effect overall and it would just drop to local traffic on the A4 and areas around Pewsham, as inter-town traffic would go along this new extended option which causes the congestion today.	1
Respondent having no strong feelings/no preference	1
Concern that as there is little difference between option B and C this makes it more likely that option A will be chosen. Option B/C should be treated as the same option.	1
Option B should become the "outer route" with option A disregarded.	1
Concern that the route option neither delivers the long-term benefits of the outer route; nor the potential 'development containment' of the inner route.	1
Comment that there seems little to choose between this and the inner route	1
Comment that this route would assist with congestion on the A4.	1

Comment that existing traffic problems in the town centre are limited to short periods of slow-moving traffic	1
A suitable route in terms of mitigating effects to residents on which is already a difficult road to (A4) to use.	1
Comment that this route seems excessive	1
Comment that route option B is too inward.	1
Comment about the lack of clarity about function of the road	1
Stagecoach West comment that the route sits centrally through potential housing parcels allowing it to efficiently perform a local access and bus route functions, more so in Zones 3-5	1
Concern that road shouldn't be routed through the housing development area due to safety concerns of mixing people with traffic	1
Option B has some connectivity advantages.	1
Comment that there needs to be further consultation on the exact route of the road and connections to it as the current proposal clearly does not consider established and well used cycleways and walks.	1
Comment supporting the need for this new level of connectivity	1
Concern that there are too many new link roads into quieter, residential areas of Pewsham.	1
Comment that the road will provide no benefits to the remaining Chippenham residents.	1
As the housing stock is built up, this road will fall outside of the housing area and so will be inefficient for many years to come	1
Comment that this route is better for pedestrians and cyclists than outer route, but affects pedestrians and cyclists more than inner route.	1
Comment that there is no evidence that it will reduce car use.	1
Comment that facilities for cycling and walking journeys from any housing developments into the town will be provided. If the council is serious about meeting climate change requirements then suggest that start putting in such facilities, establishing the routes early.	1
Comment that if additional housing is needed to the south of Chippenham it should be served by better non vehicular transport routes such as footpaths and cycle routes which integrate the housing into local services and the community. We should not be building additional roads to encourage and increase the use of cars.	1
The connection to existing roads, particularly roundabouts, will help traffic flow	1
The road must be built because of the known congestion within Chippenham.	1
Comment that congestion in the town isn't a problem	1
Comment that the route should be further out from the city to act as a bypass but could still be used to access Chippenham.	1

Comment that building the road in advance of development is absurd; in the event of any delay or cancellation of the proposed developments we will be left with a road whose only purpose is to encourage more road traffic and pollution.	1
Chippenham would benefit from a relief road/bypass to the south between the A350 and A4 to reduce traffic through the town area, but this is not what is proposed.	1
Option B runs through the middle of the residential areas, which is not compatible with the likely ring road characteristics of the new road	1
Comment that the road is unlikely to be used	1
The single lane 30mph road will make rat running through town more attractive at times	1
Concern that no consideration has been given to how non-motorised traffic - including cycles, pedestrians, horses - would integrate with non-road routes such as footpaths, bridle ways etc.	1
Concern as to how pedestrian and cycle access will be enabled between Chippenham and Lacock.	1
Comment that this route is less intrusive on Monkton Park	1
Concern that the additional impact of houses, side roads etc isn't shown.	1
Comment that there is no evidence that it will reduce car use	1
Comment that more information on cycle path alongside this route is needed - will it be segregated, on both sides of the road, how will it cross the proposed roundabouts/junctions (prioritisation or give way to traffic)	1
Comment that this requires 2 very long bridges	1
Concern that there is a lack of radial links to Chippenham town centre, resulting in possible congestion on London Road between Avenue La Fleche and Pewsham Way, which would become the most direct route to the town from a large part of the proposed North Eastern developments. This is a residential street and important walking route to town/Abbeyfield School. Safety concerns.	1
Gleeson welcome opportunity to work with the council on the detailed alignment of the link road through the site, and the location and form of the access onto the link road from the A4 London Road, and note that this appears to be the route shown in the Wiltshire Local Plan consultation masterplan for Chippenham.	1
Gleeson comment that the 'best fit' route shown in this consultation does not follow option B within Gleeson's control, and instead follows option C, which does not appear to be justified.	1
Transport (Option A – Zone 1)	
Connection with A350 (not a B-road) is good/connection with existing Lackham roundabout on A350 provides a strong link and avoids unnecessary junctions.	7
Considered to be the preferred option/least bad option in this Zone.	3
Hallam Land consider this to be the best route option through Zone 1.	1

The connection from Pewsham Way to the A350 does eliminate the bottleneck at the Bridge Centre but should be reviewed in isolation to the road planned to the North of the A4.	1
Stagecoach West express preference for this route in the main, while remaining sceptical as to its relevance and effectiveness in Zones 1 and 2.	1
Comment that this is less effective as a distributor than option C, since it passes outside of developments in zones 1, 2 and north of zone 3.	1
Stagecoach West comment that in zones 1 and 2, where the existing Pewsham Way would be the most logical bus route picking up existing and new demands and creating a critical mass of hinterland to support a sufficiently direct and regular service.	1
Comment that use of existing Lackham roundabout would cause more congestion in an already sometimes congested area.	1
Comment that this route will be very difficult to tie in to Lackham Roundabout unless the Lackham College exit is removed.	1
Concern about the scale of bridge construction in Zone 1	1
Comment that the route doesn't link to an existing roundabout (Zone 1).	1
Transport (Option A – Zone 2)	
Concern that the Pewsham link is not a direct route into town/doesn't align with any of the roads into Pewsham	2
Within zone 2, Gleeson supports Option B as it appears to be the most sensible route.	1
Support route in zone 2.	1
Support link road 3	1
Comment that the route should connect to an existing roundabout (not additional) at Pewsham Way	1
This option is largely parallel to Pewsham Way, therefore considered to be redundant.	1
Concern that there are too many new link roads into quieter, residential areas of Pewsham.	1
Comment that the route is too close to the Pewsham estate.	1
No need for the road through Zones 2, 3 & 4, as existing Pewsham Road can be used with connection between Lackham roundabout and Canal Road roundabout.	1
Transport (Option A – Zone 3)	
Comment the that the junction with the A4 should be a roundabout rather than a staggered junction.	26
Concern that traffic congestion/accidents will increase unless roundabout used at connection with A4.	3

Query whether traffic will have to join A4 for a short distance at the junction.	2
Comment that the respondent prefers the way this road links to the A4	2
Comment that the routing from Zone 3 onward to Rawlings Green would be the most sensible of the options	1
Strongly disagree with the route through Zone 3.	1
Concern that a roundabout would encourage through traffic to take the distributor road in either direction, rather than continuing straight through to the Bridge Centre.	1
Comment that the crossing of the A4 will inconvenience drivers in this location	1
Concern that the proximity of the junction with Stanley Lane will encourage through traffic.	1
comment that the route utilises a 'gap' on A4	1
Comment that the location of junction on A4 is poor	1
Comment that through access should be provided along Stanley Lane, e.g. via bridge or tunnel.	1
Zone 5 would need to join the Stanley Park road to the proposed new road end point. Would save cost and impact.	1
Comment that the route doesn't need to proceed beyond the A4	1
The road should be removed from zones 3 and 4	1
Transport (Option A – Zone 4)	
Concern that this will destroy/sever the old railway walk/Chippenham-Calne cycle path which is well used by community.	19
Strongly disagree with the route through Zone 4.	2
Request the route be passed over or under the Chippenham-Calne cycle path to minimise impact.	2
Concern that proximity of major road to cycle path which is used by people of all ages will affect safety.	1
Comment that the route should not go through the middle of the development area in this zone.	1
Comment that the route doesn't need to proceed beyond the A4.	1
In Zones 4 and 5, the Eastern end of the road will link to the B4069. This passes through and past small communities that will be impacted detrimentally by additional traffic. There is no means to link the two northern ends of the routes and Hill Corner, Jackson's Lane and Kington Langley will suffer significant increased traffic as people will not travel all the way to jct17 to cross to the west, nor will they circumvent Chippenham to do so.	1
Transport (Option A – Zone 5)	

Query how this links to a new road out of Monkton Park to alleviate traffic on Station Hill and Darvey Close (once Rawlings Park development underway).	3
Strongly disagree with the route through Zone 5.	2
Access through to Monkton Park is requested/query why this link is not provided.	2
How will the link road progress once connected to the Rawlings Farm development?	2
Query how this route links to the Langley Road.	1
Concern that routing through the development area will cause safety issues from traffic and be a barrier to walking/cycling.	1
Comment that the route should not go through the middle of the development area in this zone.	1

Question 9 (middle route): Theme – Climate change and flooding Appendix D2	No of responses
<i>Climate change (Option A – All zones)</i>	
Concern about climate change/impact on carbon footprint and environment/conflict with the council's declaration of a climate emergency/commitment to zero carbon development	36
Concern about high levels of carbon emissions/loss of an important carbon sink.	3
Comment that this option is shorter than option A so would have a lower carbon impact.	1
<i>Flooding (Option A – All zones)</i>	
Concern that route will increase the risk of flooding	11
Concern that this route is closer to the flood plains	2
Concern that no comprehensive impact assessment has been conducted on communities downstream Lacock and the hamlet of Reybridge, despite plans to build houses and the road route on land surrounded by fields that are prone to flooding.	1
The use of viaducts across flood plains is unjustifiable and unnecessary due to loss of flood storage and high cost.	1
The Environment Agency comment that this route needs the fewest overall river crossings, with the smallest possible width crossing the channels/floodplain in a way that does not impede flood flow	1
<i>Flooding (Option A – Zone 1)</i>	

Wiltshire Council's drainage team note that there are records of highway flooding reports on Lackham Roundabout	1
Wiltshire Council's drainage team raise that groundwater level around the Lackham roundabout junction in the South West Corner are predicted to be just below the surface here.	1
Flooding (Option A – Zone 2)	
Concern that route crosses a lot of surface water as depicted in PEAOR. Fields intended to be built on serve as rainwater sinks during wet weather	1
Wiltshire Council's drainage team comment that the connection into Pewsham Way is shown to be at risk of surface water flooding.	1
Wiltshire Council's drainage team comment regarding groundwater, that ground conditions are expected to improve quickly and should not present any further issues throughout the remainder of the route.	1
Flooding (Option A – Zone 3)	
Concern regarding flooding in the area	1
With regard to zones 3-5, concerns are raised about flooding, e.g. at Westmead Playing Fields. Storm events are happening much more frequently due to climate change. Rapid floods are due to the Oxford clay along the West bank of the Avon and along the Marden. Development in this area will increase water run off/flooding south of Chippenham. Concern that SUDS can be bypassed during storm events. May lead to flooding of Lacock Abbey.	1
Concern that the route crosses a lot of surface water as depicted in PEAOR. Fields intended to be built on serve as rainwater sinks during wet weather	1
Wiltshire Council's drainage team note that at London road, Pewsham the route passes through an area of higher risk surface water activity.	1

Question 9 (middle route): Theme – Pollution and air quality Appendix D3	No of responses
Pollution and air quality (Option A – All zones)	
Comment that this route increases/creates pollution (air/noise/light)	35
Comment that this route would result in less noise and air pollution.	2
Comment that noise mitigation measures will not solve the problem.	1
Comment that the route shouldn't be routed through the housing development area due to noise and air pollution impacts	1
Pollution and air quality (Option A – Zones 3/4)	
Concern about detrimental impacts pollution levels (noise/air/light) in Zones 3 & 4.	2

Light/noise pollution would be issues which cannot be mitigated because the route is elevated on the side of the hill next to New Leaze farm.	1
Concern that a staggered junction on A4 will have detrimental effect on air quality in this area.	1

Question 9 (middle route): Theme - Ecology Appendix D4		No of responses
<i>Ecology (Option A – All zones)</i>		
Concern about negative impacts on biodiversity/wildlife species and habitats.		38
Comment that the route is not too close to the river/ saves natural habitat		4
Comment that the road development needs to prove a net gains for biodiversity/biodiversity mitigation.		3
Concern that there has been no environmental impact assessment for this proposal.		2
The council should work with the local Wildlife Trust on wildlife habitat creation.		1
Concern about negative impacts/fragmentation of habitat connectivity in Baydons Meadow wildlife.		1
Option B has some environmental advantages.		1
<i>Ecology (Option A – Zone 1)</i>		
Comment that the Route appears to remove less natural habitat in this zone than other options.		1
The Environment Agency comment that option B is the preferred route in terms of both water environment and biodiversity in this area.		1
<i>Ecology (Option A – Zone 3)</i>		
Comment that this route does not impact on great crested newts in this area, as other options do.		1
Concern that desk based assessments that have been carried out omit a significant amount of wildlife present in Zone 3.		1
The Environment Agency comment that option B is the preferred route here, having the fewest watercourse crossings and lengths of channel impacted.		1
Route options A & B not supported Zones 3 & 4 as they are too impactful on natural habitats.		1
<i>Ecology (Option A – Zone 4)</i>		
Comment that this route does not impact on great crested newts in this area, as other options do.		1

**Question 9 (middle route):
Theme - Landscape
Appendix D5**

**No of
responses**

Landscape (Option A – All zones)

Concern about impact on the landscape/rural setting/too visible/destruction of greenspace/destruction of Avon/Marden Valley.	106
Comment that the route has more potential to destroy the river valley/have a negative impact on the countryside/be more visually unappealing.	24
Comment that this is the most sensible route option in terms of mitigating impact on the overall landscape	4
Comment that this route is too close/too impactful on the old canal.	3
Comment that any new road here will destroy the distinct rural villages of surrounding villages, e.g. Studley, Derry Hill, and Bremhill/coalescence with Chippenham.	3
Significant mitigating measures are needed to mitigate impact on local views.	2
Concern that this route will prevent access to the countryside	2
Support for proposals to assist the Wilts & Berks Canal access, etc.	2
This route encroaches into the countryside more than Option C.	1
Comment that this route is closer to Chippenham boundaries and impact to environment too significant and wholly unnecessary.	1
Concern that this route is closer to the development area which will have a greater negative impact on the housing development	1
Comment that the route avoids current dwellings and therefore no impact on current housing	1
Comment that this route should not cross the canal.	1
Wilts & Berks Canal Trust raise concern about the proximity of the Canal and suggest careful and detailed design would be needed.	1
Wilts & Berks Canal Trust comment that provision needs to be made for vehicular access to the Canal and parking for visitors.	1
Concern that this route has more of a negative impact on quality of access to the canal path recreational asset than the Zone 2 route for Option A	1
Comment that this route avoids interaction with Pewsham Lock, provides better access to the Lock.	1
Comment that this route doesn't cut up the Wilts and Berks canal	1

Landscape (Option A – Zone 1)

Comment that the river valley viaducts will adversely affect natural beauty in this zone.	1
Concern that the viaducts will have negative impact on currently unspoilt stretches of the Avon river valley, especially the stretch between Rowden Manor and Reybridge.	1
Landscape (Option A – Zone 2)	
Concern about the adverse impact on canal with destruction of the rural aspect of the canal towpath	4
Comment that route avoids the Wilts & Berks Canal	2
Concern that the character of the fields south of Pewsham would be destroyed	1
Comment that the route is less visually intrusive in this Zone.	1
Comment that time saved on journeys is not worth the destruction of the surrounding landscape	1
Stagecoach West comment that this route impinges least on the northern part of Zone 2 - Forest Farm - allowing that site to come forward independently, as a very important contribution to housing land supply that is already able to take direct advantage of a frequent direct bus service - Stagecoach 55. this makes it stand apart from any of the other major land parcels being considered for Local Plan allocation.	1
Concern about loss of peace and quiet in the countryside	1
Comment that the route would offer good access to Pewsham Locks, the canal, and walks. Route is close to existing footpath	1
Landscape (Option A – Zone 3)	
Comment that this route option is less visually intrusive in this zone.	2
Concern about loss of green space/amenity for very large number of Chippenham residents	2
Comment that the route shows total disregard for the land and wildlife across the Marden Valley	1
Concern that the route is highly visible from Bremhill Parish and located in the Marden Valley thereby impacting on the natural habitat	1
Concern that the route is highly visible from Bremhill Parish and nearby villages	1
Route options A & B are not supported Zones 3 & 4 as they are too visible from Bremhill Parish/Marden Valley.	1
Landscape (Option A – Zone 4)	
Concern about impact on cycle path (access to nature) which is used by people from a wide geographical area and by people of all ages	5
Concern about the visual impact on conservation area/Marden Valley/Tytherton Lucas, cannot be mitigated by earth bunds	3

Concern that the road rises and follows the ridgeline which makes it highly visible, and will increase light and noise pollution	2
Concern about loss of green space/amenity for very large number of Chippenham residents	2
This route destroys the peace of main walk along the old railway to Calne (Zone 3)	2
Wilts & Berks Canal Trust comment that north of the A4 the route should recognise WBCT's plan to link the Canal main line at Stanley to the River Avon.	1
Comment that this route option is less visually intrusive in this zone.	1
The river valley viaducts will adversely affect the natural beauty of these places	1
Comment that Zone 4 should not be developed to save more productive countryside.	1
Route is highly visible from Bremhill Parish and located in the Marden Valley thereby impacting on the natural habitat	1
Route is highly visible from Bremhill Parish and nearby villages	1
Whilst this route has some amelioration of the interface with Tytherton Lucas, it would still be very significant	1
This route is too near Tytherton Lucas	1
Some negative impact on the experience of leisure users from crossing the former cycle track near where it becomes the old canal path. Potential to partially mitigate this by prioritising non car users in the design of the road, ensure crossing points are designed with pedestrian safety as a priority. Probably more of a negative impact on the overall quality of access to the canal path recreational asset than the Zone 2 route for Option A	1
Landscape (Option A – Zone 5)	
Zone 5 - the Avon river crossing will be a scar on the landscape and the bridge should not be built. If it must be built, it should be as far from the River Marden as possible.	1
Agricultural land (Option A – All zones)	
Concern that that route irrevocably/unnecessarily damages farmland	21
Comment that agricultural land should be retained to ensure future local food security.	15
Comment that the route runs through Council owned farmland, which is preferable to land required from private landowner	1
Concern that zone 1-4 cross various farms, query whether access to these fields has been considered.	1
Concern that there is little regard to existing farm buildings	1
Concern that farms will be lost	1

Question 9 (middle route): Theme - Heritage Appendix D6		No of responses
Heritage (All zones)		
It would be too visible from the conservation village of Tytherton Lucas.		1
Concern that this route will ruin heritage sites		1
Heritage (Zone 1)		
Significant mitigating measures are needed to mitigate impact on the setting of multiple heritage sites along the route e.g. listed buildings of Showell Farm (Zone 1).		2
Heritage (Zone 2)		
Comment that there is a heavy impact on archaeology.		1
Heritage (Zone 4)		
Impacts on archaeological sites.		1

Question 9 (middle route): Theme – Economy and infrastructure Appendix D7		No of responses
Employment and economy (All zones)		
Comment that there are insufficient local employment/ proposals do not generate any significant new employment opportunities, particularly when the additional 7500 houses are factored in.		5
Comment that the route is not justified by the current economic environment.		1
Comment that the development is not required until jobs demand it		1
Concern that the only new jobs that the development will create are the ones required to build the road and houses.		1
Comment that this will not benefit the local economy		1
Infrastructure and services (All zones)		
Concern about lack of town centre/Pewsham facilities and infrastructure. Shop, schools etc, lack of town centre development means unnecessary road trips to out of town shopping. The town needs upgrading and expanding providing jobs to the locals before providing more homes.		5
Comment that the new road should include a filling station as there is none on the SE side of town until you get to Calne.		1
Infrastructure and services (Zone 3)		

Concern that the route is too close to Abbeyfield school	3
Comment that the route avoids Stanley Park and therefore has no impact on current sporting facilities	2
Concern that the route is too close to Stanley Park/Lane and will negatively impact the green space	2
Sport England request that more information is provided about the potential impact on Stanley Park.	1
Health and social wellbeing (All zones)	
Concern about loss of safe environment for exercise	4
Opposed to this road on a wellbeing standpoint	4
Comment that loss of green space and noise and pollution are not good for health	3
Concern that the proposals do not appear to comply with current best practice e.g. Spatial Planning for Health document.	1

Question 9 (middle route): Theme - Planning Appendix D8	No of responses
Relationship with the Local Plan review/prematurity (All zones)	
Comment that this consultation predetermines the results of the Local Plan review/if the proposals are considered prior to the adoption of Local Plan they should be judged as speculative development and against the currently adopted development plan.	20
Query why the housing target for Chippenham nearly 5000 more than the Government is requesting.	5
Comment that the route is not justified by the current planning situation	1
Compatibility with made/emerging neighbourhood plans (All zones)	
Comment that this conflicts with Chippenham, Bremhill, Calne and Calne Without neighbourhood plans.	3
Compatibility with made/emerging neighbourhood plans (Zones 3/4)	
Land between the North Rivers cycle path and the River Marden is protected from development in the Bremhill Neighbourhood Plan and this should be respected.	3
Housing/Scale of development (All zones)	
Comment that no more housing is wanted or required/There is no credible evidence of need for the number of new homes proposed.	40
Concern about leading to urban sprawl/further expansion/urbanisation/industrialisation/turning Chippenham into a dormitory town	10

Comment that brownfield land within Chippenham town centre should be considered for development first including empty offices.	8
Comment that there is no need to expand Chippenham to the east or south	3
Comment that the route is not too close to current housing but links to the proposed new housing	3
The route shouldn't be within the development area	2
Comment that Chippenham isn't and won't be attractive to encourage young people to stay	2
Prefer to see smaller scale/'organic' growth.	2
Comment that both options B and C are seen as a road purely for additional housing and will not provide a diversion around Chippenham and hence ease congestion	2
Concern that this will overdevelop Chippenham without due consideration of consequences.	2
Concern that this option opens too much area for development	2
This option gives sensible room for later/future housing/development 'infill'	2
Comment that this route marginally reduces the destruction and increase in urbanisation.	1
Comment that this route balances all aspects of future developments	1
Concern that this route is within the current urban boundary, it would lead to more unnecessary development	1
Comment for this route to be anything other than a ring road there would have to be development on both sides of the road.	1
Comment that this road seems too large given that development areas for over 2000 houses have already been identified west of the river.	1
Concern that Chippenham will become a conurbation of suburbs which will have to have their own amenities to support the residents, which is likely to do very little for the town centre.	1
Concern that Chippenham has had major development in recent years. the development in the north of town has had a spine road built to improve access there.	1
Comment that there are other areas which can be developed such as west of the A350	1
Request for much reduced area for development within the town envelope.	1
Concern that the town is already over-populated.	1
Concern about suitability of route in 20 years' time - traffic/housing	1
Comment that it is unclear where the housing is intended to go, outside of flood plains.	1

Comment that new build properties within Chippenham aren't being filled.	1
Comment that new homes should be more evenly distributed around the county.	1
Concern that this route will destroy existing homes.	1
Placemaking (All zones)	
Concern that the future development will be generic housing.	4

Question 9 (middle route): Theme – Consultation and process Appendix D9	No of responses
HIF bid and funding (All zones)	
Comment that this is an improper use of taxpayers' money.	15
Comment that this is unnecessary spending when there should be investment in the current road infrastructure/environment/town centre.	7
Query why consultation was not carried out before funding was agreed.	4
Comment that Wiltshire Council must return the HIF grant intact to Homes England.	1
The road was initially misleadingly described as a relief road in the Cratus report.	1
Comment that the cost for road could not be afforded/needed without the additional housing	1
Comment that the money should be invested in protecting the environment and working towards climate neutral by 2030	1
Comment that the cost of viaducts is unjustified.	1
HIF bid and funding (Zone 1)	
Concern about the expensive crossing of the river.	1
Process/consultation (All zones)	
Comment that the consultation does not allow consultees to select no road.	13
Comment that the consultation materials are misleading; the consultation is not meaningful; consulting during a national lockdown does not empower residents	11
Comment that the additional ecological, physical, or social impact of houses, side roads etc isn't shown.	5
Comment that there is conflict of interest for Wiltshire Council as landowner, developer, and local planning authority.	4
Concern that issues raised during public consultation meetings were evaded by stating that "this was a matter for the planning department/local plan" and consequently significant concerns have never been adequately addressed or responded to.	2

A consultation on the number of houses needed by Chippenham should be undertaken first	2
Alternative options to routes A B and C should be offered.	1
The three options do not offer real choices, are too similar.	1

Question 9 (middle route): Theme – General Appendix D10	No of responses
General (All zones)	
Comment that the road option is not wanted; not needed; not sustainable; not acceptable; not viable; not suitable; unacceptable; shouldn't be built	349
Comment that this is the preferred route/sensible/logical/balances the various pros and cons of the road options/best route for the environment/topography/proximity to housing/looks to satisfy all requirements	28
Concern about damage to the character and amenities of the town and the damage to residents	9
Comment that the supporting evidence is out of date.	3
Resident concern that this route option will negatively affect their property/outlook.	2
Route has greater impact on residential areas	2
Concern that the road proposals are motivated by money rather than needs/well-being of existing residents	1
Comment that respondent would like to see what impact the option of no road would have	1
Comment that all parts of Chippenham are within a reasonable distance for this road option.	1
Comment that this route keeps the road within the proposed new neighbourhoods which makes sense.	1
Comment that this is a long overdue infrastructure project	1
Comment that future planning should not encourage car use	1
Comment that that daily number of commuters is likely to reduce post-Covid	1

Appendix E

Responses to Question 10 relating to Option C (outer route)

The tables below itemise the summarised individual points raised in answer to Question 10, addressing Option C – the outer route. The tables are split by theme, and the number of times the same point was raised is denoted in the right hand column of each table. An individual consultation response may have included a number of separate points under multiple themes and in these instances all points are recorded separately.

Question 10 (outer route): Theme – Transport Appendix E1	No of responses
<i>Transport (Option C - All zones)</i>	
Concern that the Future Chippenham development will worsen pressure on road network/congestion/air pollution in Chippenham and its surrounding areas.	37
Concerns about the impacts on existing popular and well used footpaths/cycleways, e.g. from Hardens Farm, Chippenham-Calne cycleway and path alongside the Avon/have played important role in providing opportunities for exercise through the lockdown/detriment to resident's ability to access the countryside.	29
This route is too close to existing housing, negative impacts on existing properties.	14
Concern that this does not address congestion in the town centre/potential to add to town centre congestion as it draws traffic too close to the centre of Chippenham.	8
This option is too close to existing routes to be of use/to be able to relieve congestion.	6
Invest instead into current road infrastructure, town centre environment.	6
Additional funding should be aimed at enhancing public transport/sustainable transport.	5
Would prefer to see Pewsham Way widened instead of building this new road.	4
This option is parallel to Pewsham Way, therefore considered to be redundant.	3
Concern that the road will sever minor lanes and the railway path.	2
The nature of the proposed adjacent cycle path is unclear, how it will cross roundabouts/junctions, will cycles have priority?/Not enough consideration given to how non-motorised traffic will integrate.	2
This option connects to the B4528, which means drivers from Corsham way would need to drive down the A350 and then back on themselves to get to it. Where it joins the A4, it's too close to Chippenham, so drivers from Calne will need to travel quite close to Chippenham to use the road, at which point it is questionable if the road was worth using or if they should just use Pewsham Way.	2
Concern that this route will soon become integrated into the town centre and go back to causing congestion, albeit in a different location.	2

This option provides the better connectivity.	2
The only desirable thing about this option is how it links to Pewsham Way at the Canal Road roundabout	2
The Inner Route Option should be shorter and more direct - should run from Rawlings Green directly past Abbeyfield school, closer to Pewsham Way (or widen and use existing road) then run straight to Lackham roundabout.	2
Linking the A4 east of Chippenham to the A350 south near Lackham is not justified due to the majority of A4 west-bound through-traffic wanting to access either the M4 via M4 J17, the A420 or A4, not the A350 south.	2
A much shorter link should be built between Pewsham Way/A350 to help with the traffic congestion at the Bridge Centre.	2
The road should not be built in advance of development, in case of any delays/cancellation of the proposed development.	2
This route proves better scope for walking and access to public transport.	1
The proposals are unclear about what facilities for cycling and walking will be provided linking new housing to the town.	1
WBCT express concern as to how pedestrian and cycle access will be enabled between Chippenham and Lacock.	1
Concern that there is a lack of radial links to Chippenham town centre, resulting in possible congestion on London Road between Avenue La Fleche and Pewsham Way, which would become the most direct route to the town from a large part of the proposed North Eastern developments. This is a residential street and important walking route to town/Abbeyfield School. Safety concerns.	1
This option has poor connection to London Road, Option A is better.	1
Concern that this will lead to more traffic routing through country lanes to the east of Chippenham.	1
The option appears to tight and twisty for a 'main road'.	1
Consider that Route C is the best route up to Pewsham, after which Route B should be taken.	1
WBCT notes that routes provision needs to be made for vehicular access to the Canal and parking for visitors. This route option would provide the opportunity for WBCT to take responsibility for public access to Brickworks Wood (the remaining part of the Chippenham Branch).	1
Concern that this option will become an internal linkage surrounded by new developments within 15 years, resulting in a later need for the outer route.	1
This Option should be altered with Zone 4 continuing and joining up with Calne, removing Zones 3,2 and 1. This would have the same effect overall and it would just drop to local traffic on the A4 and areas around Pewsham, as inter-town traffic would go along this new extended option which causes the congestion today.	1

There is little need for a road from Lackham to Monkton Park/North East Chippenham as motorway-bound traffic would be best using the A350.	1
Trams should be provided.	1
If housing is to be built, a bypass further out is needed.	1
Do not wish to see a linking road to the east as part of these proposals.	1
Transport (Option C – Zone 1)	
The route should join with the A350/existing roundabout i.e. Lackham Roundabout.	44
It is not clear why this route does not start at Lackham College like the other two routes.	2
Concern that in Zone 1 this route passes very close to properties at Lower Lodge Farm.	1
Best option as in zone 1 it has the shortest bridge - this would relieve traffic congestion at the bridge centre and give direct access to the A350.	1
In Zone 1, this route should be connected to the existing proposed developments in the area or those developments revised to remove the through road.	1
Do not support the extra roundabouts in Zone 1.	1
Agree with route shown in zone 1.	1
Transport (Option C – Zone 2)	
Concern about negative impacts in Zone 2 on the walking route to the canal.	3
The route is too close to the outer edge of Pewsham in Zone 2.	3
This option has best connectivity with Pewsham because of the link road connection at Canal Roundabout.	2
Do not support the Option C link road to Canal Road roundabout/safety concerns about the junction.	2
Agree with route shown in zone 2.	1
With regard to Zone 2, the route should be changed to tie in to Pewsham Way at Lodge Road roundabout, then use Pewsham Link Option 1 and the Zone 1 Option C route.	1
The connection between zone 2 and 3 is through a roundabout which is one of the safest options to regulate traffic, especially around this traffic artery west of Chippenham.	1
No need for the road through Zones 2, 3 & 4, as existing Pewsham Road can be used with connection between Lackham roundabout and Canal Road roundabout. Would save cost and impact.	1
In Zone 2 there is potential to partially mitigate impacts on the walking route by making the interests of non-car users a priority in the design of the road.	1

Would rather the Option C link to Pewsham be similar routing to options A or B.	1
Support the connection of Pewsham with Lackham roundabout but would prefer if Pewsham Way was widened through Zone 2 with another connecting road from somewhere closer to the existing A4 roundabout to Rawlings Green.	1
Transport (Option C – Zone 3)	
Concern about negative impacts on the popular railway path recreation route linking Chippenham to Calne.	6
Concerns about proximity to the school	4
Concern that the at A4 crossing, the road routes too close to existing housing.	4
Concern about loss of amenity/house prices for properties close to the route in Zone 3.	3
The inner route in the northern section of Zone 3 and southern section of Zone 4 is preferred, compared with the other two routes.	2
The addition of a roundabout north east of Stanley Park seems pointless/chaotic	2
WBCT note that the requirement for a roundabout or staggered junction crossing on the A4 should be coupled with a design that enables the Canal north and south of the A4 to be linked.	1
WBCT note that north of the A4 the selected Route should recognise WBCT's plan to link the Canal main line at Stanley to the River Avon.	1
Concern that the roads will be busier around Abbeyfield School and Stanley Park football ground.	1
This zone cuts too close to Pewsham Way and is of concern for road safety.	1
The connection between zone 2 and 3 is through a roundabout which is one of the safest options to regulate traffic, especially around this traffic artery west of Chippenham.	1
The route should not proceed beyond the A4.	1
Concern with proposals for staggered junction, a roundabout would make more sense.	1
Do not support the extra roundabouts in Zone 3.	1
Strongly disagree with route shown in zone 3.	1
Concern that property will be forced to be sold to accommodate this route.	1
Do not think there should be any kind of junction at Stanley Lane, access should be provided via bridge or tunnel.	1
Do not support a roundabout equivalent to a 90 degree turn, would prefer a turning instead.	1
Do not support this element of the road.	1

Transport (Option C – Zone 4)	
Concern about negative impacts on the popular railway path recreation route linking Chippenham to Calne.	3
Query why there is no link road to Monkton Park, which would relieve traffic congestion and improve accessibility to the town centre/station. Concern that there will be added traffic pressure on Hill Corner, Jackson's Lane and Kington Langley.	3
Do not agree that routes through Zones 4 & 5 are required/should not be built.	2
The inner route in the northern section of Zone 3 and southern section of Zone 4 is preferred, compared with the other two routes.	2
Concern about negative impacts on Jubilee acres.	2
Zone 3/4 - The route should be moved south to cross south of the Chippenham to Calne national cycle route.	1
Strongly disagree with route shown in zone 4.	1
Landowners note that Option C is not deliverable in Zone 4 due for legal reasons	1
This impact on the cycle track could potentially be partially mitigated by including a safe cycle path running alongside the new road to improve leisure access to the surrounding area.	1
It is not clear why the option C route crosses under the line of the pylons twice - would make more sense to stay on the outside of the pylons passing between the pylons and New Leaze Farm.	1
Transport (Option C – Zone 5)	
Support Zone 5 route	1
Strongly disagree with route shown in zone 5.	1
It is not clear how the route links to the Langley Road.	1
It is not clear how the route in Zone 5 connects with the railway.	1

Question 10 (outer route): Theme – Climate change and flooding Appendix E2	No of responses
Climate change (Option C – All zones)	
Concern about climate change/impact on carbon footprint and environment/conflict with the council's declaration of a climate emergency.	27
Flooding (Option C – All zones)	
Concern about the potential for increased risk of flooding.	14

The use of viaducts across flood plains is unjustifiable and unnecessary due to loss of flood storage and high cost.	1
Flooding (Option C – Zone 1)	
Concern that Option C crosses one of the lowest points of the floodplain which is susceptible to inundation along the footpath and stile by Lackham College. Concern that this requires a visually intrusive long elevated section of road.	1

Question 10 (outer route): Theme – Pollution and air quality Appendix E3	No of responses
Pollution and air quality (Option C – All zones)	
Concern about the air/noise/light pollution impacts resulting from traffic resulting from the road/contrary to national and local policy/implications for public health.	37
Do not agree that the new road will ease congestion in the town, the road will worsen congestion and air pollution in Chippenham and its surrounding areas.	2
Concern that building of bridges will increase pollution and rubbish being discarded, adverse impacts on residents.	1
Considered to be the least desirable option as it will have the most impact on existing communities with more air pollution and noise pollution.	1
Visual and noise impacts of greatest concern.	1
Pollution and air quality (Option C – Zone 1)	
Concern that properties at Lower Lodge Farm will be blighted with noise and air pollution by this route/request to know what measures would be taken to screen the road and provide noise barriers from existing properties.	1
Pollution and air quality (Option C – Zone 2)	
Too much noise pollution, Pewsham Way is noisy enough as it is.	1

Question 10 (outer route): Theme - Ecology Appendix E4	No of responses
Ecology (Option C – All zones)	
Concern about negative impacts on biodiversity/wildlife habitats.	83
Considered to have the least impact on the environment of the three options/least impact on wildlife and rivers	14

Would destroy the pond for great crested newts, must be protected, choose another route.	3
Ecology (Option C – Zone 1)	
Concern about the proximity of the proposed inner route to Mortimores Wood, which is ancient woodland much valued by local people.	2
Ecology (Option C – Zone 3)	
Concern about impacts on ecology in this zone.	5
Concern that the route in this zone requires relocation of protected newts.	3
Concern about negative impacts/fragmentation of habitat connectivity in Baydons Meadow wildlife.	1
Ecology (Option C – Zone 4)	
Concern about impacts on ecology in this zone.	3
Least impact from a biodiversity perspective.	1
While it is considered that none of the road should be built, this option results in less damage to biodiversity to land north of the cycle track/protected under the Bremhill Neighbourhood Plan.	1
Ecology (Option C – Zone 5)	
Concern about impacts on ecology in this zone.	3

Question 10 (outer route): Theme - Landscape Appendix E5	No of responses
Landscape (Option C – All zones)	
Concern that this will ruin the countryside setting and amenity of the countryside. Destruction of countryside and environment/Harden & Avon Valleys.	73
Concern about the loss of rural setting and character/identity of Chippenham and surrounding villages.	27
This option is preferred as it is closest to the town centre/furthest from the countryside, therefore less landscape impact.	12
This option maintains small town character of Chippenham.	4
The outer options are preferred as they will leave space for green space/a noise buffer between the distributor road and housing developments.	2
This option has less impact in terms of keeping away from the restored canal.	1
This option is preferred as it will be less visible from surrounding villages.	2

Landscape (Option C – Zone 1)	
Concern that this option would require link to Pewsham cutting across a pleasant walking route that is parallel to Avenue La Fleche.	1
Landscape (Option C – Zone 2)	
This option would be less visually intrusive in the landscape in zones 2 and 3.	1
This option is further from Lackham area, preventing destruction of greater areas of land.	1
Landscape (Option C – Zone 3)	
This option would be less visually intrusive in the landscape in zones 2 and 3.	1
Landscape (Option C – Zone 4)	
Object to this part as too visible from Tytherton Lucas and Kellaways area.	3
No development should take place in Zone 4 due to adverse impacts on the Marden and Avon chalk stream valleys.	2
While it is considered that none of the road should be built, this option results in less landscape damage to land north of the cycle track/protected under the Bremhill Neighbourhood Plan.	1
Landscape (Option C – Zone 5)	
Object to this part as too visible from Tytherton Lucas and Kellaways area.	3
Concern about the visual impact of the river crossing bridge in Zone 5. If it must be built it should be as far from the River Marden as possible. This needs to be reassessed.	1
Concern about landscape impacts on the Marden and Avon chalk stream valleys.	1
Agricultural land (Option C – All zones)	
Concern about the loss of/dissection of working farms/farming should be supported.	36
Agricultural land should be retained to ensure future local food security.	10
This option results in the least loss of/splitting of farmland	3
Agricultural land (Option C – Zone 1)	
Too close to existing farm buildings in this zone.	3
Further away from Lackham area preventing destruction of greater areas of land.	1
Agricultural land (Option C – Zone 2)	
Too close to existing farm buildings in this zone.	3

Question 10 (outer route): Theme - Heritage Appendix E6		No of responses
Heritage (Option C – All zones)		
The inner route has the least environmental impact on the countryside heritage of Chippenham.		4
This option is preferred as it will have the least impact on Tytherton Lucas conservation area.		1
Heritage (Option C – Zone 1)		
Concern that Option C will have visual impacts on Rowden Park conservation area due to its connection to the high ridge line at Lower Lodge Farm.		7
Concern about detrimental impacts on the setting of listed buildings at Showell Farm.		5
Concern that the route of Option C goes through land identified in the draft Green and Blue Infrastructure Plan as heritage setting and QW flooding.		1
Concern that the roundabout junction proposed off the B4528 does not consider landscape and heritage value of this area, and should be located further west, directly off the existing Lackham roundabout.		1
Heritage (Option C – Zone 2)		
Concern about impacts on archaeology in this zone.		2
Heritage (Option C – Zone 4)		
Concern about impacts on archaeology in this zone.		2
While it is considered that none of the road should be built, this option results in less visibility from the Tytherton Lucas conservation area/protected under the Bremhill Neighbourhood Plan.		1

Question 10 (outer route): Theme – Economy and infrastructure Appendix E7		No of responses
Employment and economy (Option C – All zones)		
The statistics may change regarding the amount of new housing that is required. Building huge estates of housing in areas with low employment opportunities like Chippenham where the work force must travel large distances to work seems environmentally unacceptable. People would most likely be working elsewhere and commuting.		6
There are few employment opportunities in Chippenham so housing not required or should only be looked at if employment opportunities grow.		3

Renewable industry is needed.	1
Infrastructure and services (Option C – All zones)	
Concerns about impacts on current infrastructure (schools, healthcare etc.) which is already poor, concern there is not capacity to cope with increased population.	7
This option is too close to water treatments/query if treatment works will need to expand.	1
Least preferred option due to potential impacts on Stanley Park Sports Ground.	1
The new road should include a filling station as there is not one on this site of Chippenham.	1
Infrastructure and services (Option C – Zone 3)	
Do not support the route cutting through Stanley Park sports ground.	16
If this option is approved, then a new site to replace Stanley Park should be fully completed and replacement facilities fully installed before works on the road commence.	1
Health and social wellbeing (Option C – All zones)	
Concern about negative implications on health and wellbeing/mental health of developing the site.	10

Question 10 (outer route): Theme - Planning Appendix E8	No of responses
Relationship with the Local Plan review/prematurity (Option C – All zones)	
The case for building this number of houses in Chippenham has not been fully debated/Consultation on the distributor road predetermines the outcome of the Local Plan and so is premature.	28
Compatibility with made/emerging neighbourhood plans (Option C – All zones)	
Concerns regarding potential conflict with policies in local neighbourhood development plans.	1
Housing/Scale of development (Option C – All zones)	
Too much development is proposed/too much for Chippenham/No extra housing wanted/needed.	57
Focus should be on regeneration of the town centre/brownfield development.	14
Would prefer to see significantly scaled-back housing /residents do not wish to live on edge-of-town sites that are far from the train station and town amenities.	7

Concern that the route shown goes directly through the respondent's house.	1
Placemaking (Option C – All zones)	
Concern that the future development will be overcrowded, generic housing.	2

Question 10 (outer route): Theme – Consultation and process Appendix E9	No of responses
HIF bid and funding (Option C – All zones)	
The project is considered to be a waste of money/bad use of taxpayer's money	6
This option would appear to be the cheapest option.	4
Costs are too high/Money should be reallocated to improving the town centre.	4
The case for the road appears to be primarily driven by the funding from the Housing Infrastructure Fund	3
This route is not justified by the current economic environment.	2
Process/consultation (Option C – All zones)	
A 'no road' option should have been provided.	24

Question 10 (outer route): Theme – General Appendix E10	No of responses
General (Option C – All zones)	
Comment that the road option is not wanted/not needed or justified/not sustainable/detrimental to the countryside and surrounding rural area/shouldn't be an option/too close to Chippenham/would allow for too much urban sprawl.	373
Comment that this is the preferred route/least bad of the three options.	35
This is the least favourable option.	3
Concern that this provides no benefits to existing Chippenham residents.	3
Calne Without Parish Council does not support the distributor road, but if the Options presented Option C is the preferred route, modified to the 'best fit' proposal. This is the shortest practical route but does give rise to environmental concerns that require further investigation and potential mitigation.	1
Concern that the appraisal of this route has ignored the linked development proposals, despite the road being dependent on development going ahead.	1

Appendix F

Responses to Question 12 relating to Pewsham Link Option 1

The tables below itemise the summarised individual points raised in answer to Question 12, addressing Pewsham Link Option 1. The tables are split by theme, and the number of times the same point was raised is denoted in the right hand column of each table. An individual consultation response may have included a number of separate points under multiple themes and in these instances all points are recorded separately.

Question 12 (Pewsham Link 1): Theme – Transport Appendix F1	No of responses
<i>Transport (Pewsham Link 1)</i>	
Concern that this will increase congestion in Chippenham and surrounding areas.	18
Option 1 provides the best access to the existing highway and removes need for a further roundabout/associated stop-start pollution of an additional roundabout.	10
Concern about congestion/increased traffic on Canal Road roundabout.	6
There is a lack of evidence for the road; transport and commuting models used to establish need are out of date and do not take into account changes in working practice and traffic movements that are likely to result from the Covid 19 pandemic	6
There is adequate road structure through Chippenham already/already a link road round Pewsham/duplicating the function	5
Concern that this option would need a bridge/bridge would be expensive/higher impact/unnecessary when the other option doesn't require one.	4
Concern that this will add to incidents of speeding traffic, e.g. on Canal Road.	3
Option 1 has better connectivity.	2
Option 1 will help traffic avoid Avenue la Fleche and the Bridge Centre roundabout	2
Request to widen existing road/ improve the existing road and the bridge centre junction.	2
Comment that congestion in Chippenham is not a problem/unlikely to be a problem due to working from home patterns.	2
Concern that as the new road will have a speed limit of 30mph, road users will continue to opt to use Pewsham Way where the speed limit is 50mph.	2
The new distributor road should be stopped here, linking the A350 to Pewsham.	2
A short additional section of road between the Lacock College roundabout and Pewsham Way Link Road Option 1 would open up the identified development land and reduce congestion in the Town Centre at Bridge Centre junction.	2
It is unclear how cycle paths from the ring road will connect to this link road, and how cyclists will re-join the carriageway as there is no cycle path on existing road (A4).	2

Safer routes for walkers and cyclists should be prioritised, concern that a road would disrupt this.	2
Concern that this option has the greatest adverse impact on the Avon Valley Walk, Rivers Route/Dissects the walk that runs parallel to Avenue la Fleche.	2
Concern about impact on local cycle paths; link road would destroy the cycle path along the brook.	2
Investment should be made into current road infrastructure.	2
An advantage of Chippenham is that is it a small town where you don't need to drive/Concern that the development will lead to out-commuting.	2
The Pewsham link is a highly desirable part of the scheme as it will means to access the distributor without cluttering up the existing radial routes.	1
Option 1 preferred as it is shorter.	1
Concern that Option 1 will further contribute towards congestion on the distributor road.	1
Any further links connecting to Pewsham Way will make it even busier and exacerbate rush-hour build-up of traffic.	1
Option 3 is better than Option 1 in terms of managing concentration of traffic congestion.	1
The proposed connection to Forest Road is less appealing.	1
This option will ease congestion.	1
The connection from Pewsham Way to the A350 eliminates the bottleneck at the Bridge Centre and has some merit but should be reviewed in isolation to the road planned to the North of the A4.	1
Any roads built should be low speed 30mph and have segregated walking/cycling routes (Dutch style).	1
The link to the Pewsham A4 should be provided where there is the best safety and visibility/where there is the lesser risk to persons utilising the current car park close to these links.	1
Option 1 is preferred as the new road should link to existing roads at roundabouts rather than junctions.	1
Option 1 preferred as it has a better located junction with Pewsham Way.	1
There is an existing roundabout on the Webbington Road entrance to the estate which would help with the flow of traffic in that area.	1
Traffic signals would ease access onto the main road. It is noted that farm lorries often struggle to exit that lane.	1
The road should just go from Pewsham bypass to the Lackham roundabout as prerequisite for Rowden Park development. This would remove A4 through traffic from town centre and provide alternative route for Pewsham/East Chippenham residents to go north on A350.	1
This Option should form part of the main distributor road Option C linking to Pewsham Way, on to Lodge Road roundabout and returning to Option C in Zone 3.	1

Comment that reducing traffic on Pewsham Way should allow improved connectivity to the countryside, but any link must act as an arterial cycle/walk route bringing people into the town centre/station through Pewsham on car free routes.	1
This option is not central enough to Pewsham to be able to distribute traffic from Pewsham and traffic from the eastern areas of the town.	1
There appears to be relatively little benefit of this over the existing A4 road, other than a slightly shorter route to the southern link road. Seems to be duplicating the function.	1
Suggest just using the first part of Pewsham Way as part of the main route, and not building a new section of road. The linking part could break off from Pewsham Way (just to the right of the letter "y" on map).	1
The scheme should be planned in line with active communities and zero carbon bus, cycle, and walking routes, with community ride share schemes.	1
This option is further away from the footpath, preserves a larger section of Avon Valley Walk.	1
Any extra funding should be aimed at enhancing public transport.	1
New homes should be built closer to town to promote cycling and walking.	1
Stagecoach West comment that Option 1 is the only link road option that would allow a bus route to serve a development across this area while also effectively running to and from the town centre, although it does not do this well. Topographic issues that impinge on this option are noted which would make it costly/problematic compared with Option 3. For this reason, Stagecoach West consider that extensive development south of Pewsham Way is inappropriate.	1
Focus should instead be on improving public transport.	1
Option 1 provides the most direct route to the town centre making it more useful and attractive for cyclists and pedestrians.	1
The road should be kept away from new walking areas.	1
Concern that raising the road level will be costly.	1
Would prefer to see development of the existing road at the farm rather than a new road through a field.	1

Question 12 (Pewsham Link 1): Theme – Climate change and flooding Appendix F2	No of responses
<i>Climate change (Pewsham Link 1)</i>	
Concern about climate change/impact on carbon footprint and environment/conflict with the council's declaration of a climate emergency.	19
Zero carbon homes should be built.	1
<i>Flooding change (Pewsham Link 1)</i>	
Concern about the potential for increased risk of flooding.	5

Question 12 (Pewsham Link 1): Theme – Pollution and air quality Appendix F3		No of responses
<i>Pollution and air quality (Pewsham Link 1)</i>		
Concern about air pollution levels/pollution/noise pollution		12
Comment that there have been numerous reports of a strong smell of gas in this area for many years.		1

Question 12 (Pewsham Link 1): Theme - Ecology Appendix F4		No of responses
<i>Ecology (Pewsham Link 1)</i>		
Concern about the impacts on environment/ecology.		37
This option is too close to the nature reserve.		1
Concern that assessment on biodiversity & environment impact are yet to be undertaken.		1
Without an EIA, it is premature to consider the proposals.		1

Question 12 (Pewsham Link 1): Theme - Landscape Appendix F5		No of responses
<i>Landscape (Pewsham Link 1)</i>		
Concern about loss of/impact on countryside/agricultural land.		18
Concern about impacts on the local landscape/visual impacts/on the Avon Valley.		7
Concern that this option is too close to the Mortimore's Wood and Westmead Open Space/Additional roads and cars nearby will impact negatively on this.		5
Concern about the road enabling further building on farmland, contrary to the need to grow more locally, support self-sufficiency.		3
Concern that compared to Option 3 this option will have more of an impact on popular green space areas such as Wilts and Berks Canal, Borough Lands and Mortimore's Wood; should stay away from old canal.		2
Request for an environmental impact study of this option to see the impact on the wood's nature reserve.		1
Concern about impact on Chippenham Town centre green zone.		1

Concern that raising the road level will be visibly apparent	1
Lower visibility of this option with Middle route B	1
Landscaping mitigating measures are essential for all options. The option with the least impact on the landscape and views is critical. It is not clear which has greater impact.	1
Option 1 is more harmful to countryside than Option 3.	1
Option 1 keeps the road away from the existing farms	1
Any development behind this option should have more green spaces than housing - the road should be totally screened by trees and hedges, especially raised sections.	1

Question 12 (Pewsham Link 1): Theme - Heritage Appendix F6	No of responses
Heritage (Pewsham Link 1)	
Concerns about harm to the historic area.	1
Note that some of the Wilts/Berkshire Canal has already disappeared.	1

Question 12 (Pewsham Link 1): Theme – Economy and infrastructure Appendix F7	No of responses
Employment and economy (Pewsham Link 1)	
Query what investment is being made into improving the town centre/sites in the town centre.	6
There are few employment opportunities in Chippenham.	2
This option allows the town to grow.	1
Chippenham would benefit from more employment land to decrease the outward migration of people commuting to work each day.	1
Concern that this option is too near farms/concern about impact on farmers livelihood.	1
Infrastructure and services (Pewsham Link 1)	
There is insufficient infrastructure in place to cope with increased population.	4
Health and social wellbeing (Pewsham Link 1)	

Concern about losing green spaces/countryside and impact on well-being/mental health.	8
Concern that this will add to crime.	1

Question 12 (Pewsham Link 1): Theme - Planning Appendix F8		No of responses
Relationship with the Local Plan review/prematurity (Pewsham Link 1)		
The case for building this number of houses in Chippenham has not been fully debated/Consultation on the distributor road predetermines the outcome of the Local Plan and so is premature.		12
Request to know why Chippenham's housing target is nearly 5000 more than the Government is requesting.		1
Stagecoach West raise concern that technical and viability challenges of this proposal have implications for soundness of Local Plan		1
Housing/Scale of development (Pewsham Link 1)		
Too much development is proposed/No extra housing wanted/needed.		20
Focus should instead be on regenerating and repurposing vacant/brownfield areas of the town centre with better access to the town's facilities.		6
Placemaking (Pewsham Link 1)		
Concern that this will draw in more generic, poorly designed housing.		2
Concern that the design of bridges will be unattractive.		1
Stagecoach West comment that extensive development south of Pewsham Way, demanding the SW Link Road through Zones 1 and 2 and this kind of link, is inappropriate as overall, urban design will be excessively compromised (due partly to topographic issues) on a large number of counts.		1
No objection to one or both roads being proposed, providing the matters around good design principles.		1

Question 12 (Pewsham Link 1): Theme – Consultation and process Appendix F9		No of responses
HIF bid and funding (Pewsham Link 1)		
Concern that this will be expensive; additional cost is a waste of money.		2
Concern that this option is not viable.		2

The views of local people and businesses should have been sought before submitting a bid to the HIF in 2019.	1
Wiltshire Council must return the HIF grant to Homes England.	1
Process/consultation (Pewsham Link 1)	
The consultation should offer a 'no road' option.	18
Could not find/differentiate the options/Poorly presented.	16
Inadequate consultation - lack of opportunity to discuss reasons for the road; lack of time to ask questions during webinar; short funding timeframe means inadequate scrutiny; consultation took place during a national lockdown	5
The fact that the new road is not a bypass, but a road to service a new housing development should be advertised more transparently.	2
Concern that running the road consultation in parallel to the Local Plan consultation is disingenuous; poses a conflict of interest for Wiltshire Council	1
Concern that by putting option 1 at the top the results will be biased towards this option.	1

Question 12 (Pewsham Link 1): Theme – General Appendix F10	No of responses
General (Pewsham Link 1)	
Comment that that road is not wanted/not needed/not sustainable/should not be built/none of the options are acceptable.	278
No preference/no strong feeling/nothing to add.	12
Comment that Link Road 1 is not available road route options A & B, it is tied to option C.	4
Option 1 is less impactful option, e.g. impacts on Pewsham estate.	4
Option 1 would work best with the Inner route (option C).	3
Option 1 is the best of a poor choice.	2
The Outer route Option A should have the Pewsham Link Road Option 1 leading off it and should be in Zone 1.	1
Request for new road to be well separated from existing properties.	1
Option C and option 1 shouldn't be available options.	1
Option 1 appears to be the most invasive.	1

Appendix G

Responses to Question 13 relating to Pewsham Link Option 3

The tables below itemise the summarised individual points raised in answer to Question 13, addressing Pewsham Link Option 3. The tables are split by theme, and the number of times the same point was raised is denoted in the right hand column of each table. An individual consultation response may have included a number of separate points under multiple themes and in these instances all points are recorded separately.

Question 12 (Pewsham Link 3): Theme – Transport Appendix G1		No of responses
Transport (Pewsham Link 3)		
Pewsham doesn't need more roundabouts.		7
A roundabout junction should be constructed instead of an intersection connecting the link road to the route being constructed, otherwise this will result in congestion issues.		6
Concern that the new road will worsen congestion and air pollution in Chippenham and its surrounding areas.		3
This option is considered enable better access/connectivity benefits.		2
Shortest route, therefore advantageous.		2
Request that a new exit on the existing roundabout, rather than a new roundabout, e.g. at King Henry Drive.		2
It would make more sense for link option 3 to follow the purple Option A path, whether option A, B or C for the distributor road was selected. The shortest link would encourage use of the outer distributor road, rather than travelling through the town centre.		1
Concern that link road option 3 pulls traffic further away from the town than option 1.		1
Concern that because the link road leads away from the town centre, this is likely to discourage active travel and encourage car use.		1
The new distributor road should be stopped at link option 3, linking the A350 to Pewsham.		1
Would prefer to see alternative option of expanding Pewsham Way.		1
Concern that the new junction will lead to congestion.		1
This option appears to offer a larger more manageable roundabout.		1
Option 3 would be safer for pedestrians and cyclists, as roundabouts on Pewsham Way may help to control vehicle speeds, especially as cyclists must cross Pewsham Way to get to cycle path.		1
Although this means another roundabout on Pewsham Way the location of it is preferable.		1

A neater solution which connects to the perimeter road in an area which is used as a temporary car park for walkers, especially if Inner or Middle routes provide better access to Pewsham Locks.	1
The distributor road project should be cancelled, and an alternative sustainable transport strategy should be developed for Chippenham instead.	1
It is unclear how cycle paths from the ring road will connect to this link road, and how cyclists will re-join the carriageway as there is no cycle path on existing road (A4).	1
Don't like that that the link road crosses over footpaths. Safety for walkers and cyclists should be prioritised to encourage green travel and the road would disrupt that.	1
As the proposed link road only considers motorised traffic and not non-motorised road users, it is impossible to consider which route might be better.	1
Focus should instead be on improving public transport.	1
Concern that link option 3 will increase congestion on Pewsham Way because of a new roundabout and would increase use of London Road/Avenue la Fleche as rat runs.	1
Concern about increasing traffic on Canal Road which is already the busiest road in Pewsham.	1
Preference for Option 3 as it will encourage traffic between the distributor road and Pewsham Estate to use both Canal Road and King Henry Drive, whereas Option 1 would direct all traffic to Canal Road.	1
The Option 3 link could be used for relieving congestion at the Bridge centre.	1

Question 12 (Pewsham Link 3): Theme – Climate change and flooding Appendix G2		No of responses
Climate change (Pewsham Link 3)		
The road should not be built, as conflicts with the council's climate change commitments/the council should instead focus on addressing the climate emergency.		11
This option has a lower environmental impact.		1
Flooding change (Pewsham Link 3)		
Concern about the potential for increased risk of flooding.		3

Question 12 (Pewsham Link 3): Theme – Pollution and air quality Appendix G3		No of responses
---	--	-----------------

Pollution and air quality (Pewsham Link 3)	
Concern about implications of air pollution.	1
Concern about implications of noise pollution.	1

Question 12 (Pewsham Link 3): Theme - Ecology Appendix G4	No of responses
Ecology (Pewsham Link 3)	
Concern about the impacts on the environment/ecology/wildlife.	16
Concern that biodiversity & environmental impacts and mitigation have yet to be assessed, this is needed to be able to feed back.	2

Question 12 (Pewsham Link 3): Theme - Landscape Appendix G5	No of responses
Landscape (Pewsham Link 3)	
Concern about the road enabling further building on farmland, contrary to the need to grow more locally, support self-sufficiency.	9
Object to landscape impacts/loss of countryside.	5
This option is preferred as it is further from Mortimores Wood.	5
This option is considered to have the least impact on public green space.	1
Landscaping mitigating measures are essential for all options and the option with the least impact on the landscape and views will be critical.	1
It is not clear which option has greater landscape impact.	1
Concern that this route would ruin the peaceful walk along the newly renovated canal with noise and views affected.	1
The Pewsham link should stay away from the old canal.	1
This route is preferred as it avoids building a bridge across the valley.	1
This option is too near farms.	1

Question 12 (Pewsham Link 3): Theme – Economy and infrastructure Appendix G6	No of responses
---	------------------------

Employment and economy (Pewsham Link 3)	
Concern that there are too few employment opportunities in Chippenham to serve the new development.	2
Health and social wellbeing (Pewsham Link 3)	
Concern about impacts on public health because of loss of open space and increased pollution.	3
Concern about antisocial behaviour, drug taking, abuse and lack of feeling safe.	1

Question 12 (Pewsham Link 3): Theme - Planning Appendix G7	No of responses
Relationship with the Local Plan review/prematurity (Pewsham Link 3)	
The case for building this number of houses in Chippenham has not been fully debated/Consultation on the distributor road predetermines the outcome of the Local Plan and so is premature.	4
Request to know why Chippenham's housing target is nearly 5000 more than the Government is requesting.	1
The council should introduce planning policies that require climate change impact assessment of all proposed developments, in advance, against the council's carbon reduction targets.	1
Housing/Scale of development (Pewsham Link 3)	
Chippenham needs no more housing.	6
Too much development.	2
Whilst this link road option is the less far from the current urban boundary it would still potentially lead to more unnecessary development.	1
Focus should instead be on regenerating and repurposing vacant areas of the town centre.	1
Placemaking (Pewsham Link 3)	
Concern that it will be unattractive.	1

Question 12 (Pewsham Link 3): Theme – Consultation and process Appendix G8	No of responses
Process/consultation (Pewsham Link 3)	

The consultation should offer a 'no road' option.	14
Concerns about the consultation process, availability of consultation documents, presentation, format of webinars.	12
The fact that the new road is not a bypass, but a road to service a new housing development should be advertised more transparently.	1
Concern that the project is motivated by money/revenue/profit rather than the wellbeing of the residents of Chippenham.	1
Consultation during national lockdown does not empower residents to effectively engage or provide sufficient information.	1

Question 12 (Pewsham Link 3): Theme – General Appendix G9	No of responses
General (Pewsham Link 3)	
Comment that that road is not wanted/not needed/not sustainable/should not be built/none of the options are acceptable.	278
No preference.	4
While neither option is supported, this option is better than Option 1.	4
Preference for option 3.	3
Do not support route option C and therefore this is the only option for the link road.	3
Concern about negative impacts on existing residents.	3
Query why there is no link road option 3 connection to route option c.	2
no objection to either link road subject to good design	1
While Calne Without Parish Council does not support the distributor road, Pewsham Link 3 is the preferred option given it has lower environmental impact and provides good connectivity.	1
This is the only link road connecting to the outer route, which is the preferred route.	1
Request for new road to be well separated from existing properties.	1

Appendix H

Summary schedule of meetings with key stakeholders and landowners

Stakeholder meeting with:	Date of meeting:
Chippenham Town Council	21/01/2021
Calne Without Parish Council	25/01/2021
Calne Town Council	26/01/2021
Bremhill Parish Council	01/02/2021
Corsham Town Council	03/02/2021
Lacock Parish Council	04/02/2021
Langley Burrell Without Parish Council	08/02/2021
Chippenham Area Board	10/02/2021
Chippenham Without Parish Council	10/02/2021
Abbeyfield School	01/03/2021

18 January 2021

Dear resident

Consultation on the Future Chippenham distributor road route options Friday 15 January 2021 to 5 pm Friday 12 March 2021

We have now launched the public consultation on the Future Chippenham distributor road route options.

Located to the south and east of Chippenham, the road would provide a high-quality road link connecting the north east and southern parts of the town to the A350 and improvements to Junction 17 of the M4.

To support the development of the scheme, the Council has been successful in securing £75 million of government funding.

As you have been identified as a resident adjacent to one of the preferred routes, we would like to hear your views to help inform a decision about which of the three route options within each zone should be taken forward to the next stage of the development process.

You can provide feedback by

- completing the online consultation form at www.wiltshire.gov.uk/future-chippenham
- downloading a consultation form from the above webpage and emailing to futurechippenham@wiltshire.gov.uk
- downloading and posting your consultation form to Future Chippenham team, Wiltshire Council, County Hall, Bythesea Road, Wiltshire BA14 8JN

Our project webpage www.wiltshire.gov.uk/future-chippenham provides additional information on the project. This includes a video flyover of the site detailing the road route options and details of online webinars where you can find out more about the proposals and ask any questions you may have.

If you would like to be kept informed on the progress of this project, you can sign up to receive our new Future Chippenham newsletter which we will be launching soon. Details are available on the above webpage.

We look forward to receiving your feedback.

Yours sincerely
Future Chippenham Team

Consultation on the Future Chippenham distributor road route options

We have today launched a public consultation on the Future Chippenham distributor road route options.

Located to the south and east of Chippenham, the road would provide a high-quality road link connecting the north east and southern parts of the town to the A350 and improvements to Junction 17 of the M4.

To support the development of the scheme, the Council has been successful in securing £75 million of government funding.

You/your organisation has been identified as a key stakeholder and therefore we would like to hear your views to help inform a decision about which of the three route options within each zone could be taken forward to the next stage of the development process.

You can provide feedback by

- completing the online consultation form at www.wiltshire.gov.uk/future-chippenham
- downloading a consultation form from the above webpage and emailing to futurechippenham@wiltshire.gov.uk
- downloading and posting your consultation form to Future Chippenham team, Wiltshire Council, County Hall, Bythesea Road, Wiltshire BA14 8JN

Our project webpage www.wiltshire.gov.uk/future-chippenham provides additional information on the project. This includes a video flyover of the site detailing the road route options and details of online webinars where you can find out more about the proposals and ask any questions you may have.

If you would like to be kept informed on the progress of this project, you can sign up to receive our new Future Chippenham newsletter which we will be launching soon. Details are available on the above webpage.

Thank you for considering this request, we look forward to receiving your feedback on the proposals by 5pm on Friday 12 March 2021.

Yours sincerely

Future Chippenham Team

Residents' Newsletter: 15 January 2021

Consultation on the Future Chippenham road route options opens today (Friday 15 January)

We have unveiled road route options for a potential distributor road in Chippenham and want to hear from you on the proposals.

During an eight-week public consultation period, which starts today (Friday 15 January 2021), you can view and comment on three distributor road options and two link road options to Pewsham Way.

The distributor road route options have been split into five geographical zones so you can comment on sections of the road options within that zone.

https://www.gazetteandherald.co.uk/announcements/public_notices/notice/150696.N
[otice of public consultation on the road route options for the Future Chippenham programme - Friday 15 January 2021 to 5pm on Friday 12 March 2021/](#)

Notice of public consultation on the road route options for the Future Chippenham programme – Friday 15 January 2021 to 5pm on Friday 12 March 2021

Wiltshire Council has been awarded £75 million from the Government's Housing Infrastructure Fund. This means funding is available to contribute towards the cost of delivering the strategic infrastructure in and around Chippenham to support the potential longer-term growth of the area. This will only happen if planning consent is granted for development to proceed.

The strategic infrastructure includes the creation of a new distributor road to the east and south of Chippenham. Several road route options have been developed and assessed against alignment with strategic objectives, environmental impact, deliverability and cost. As the project is developed climate change and bio-diversity will form an integral part of the considerations. Three distributor road options and two link road options to Pewsham Way have emerged as potential options.

We are inviting you to view and comment on these proposals.

How to find out more information

Details on the road route options and supporting documentation will be available on Wiltshire Council's website at www.wiltshire.gov.uk/future-chippenham from Friday 15 January 2021.

If you need any help completing the survey form or would like the consultation material provided as a paper copy or a different format, please contact Wiltshire Council Customer Services on 0300 456 0100.

Wiltshire Council will be hosting 2 online webinars where a presentation about the project will be given, along with an opportunity for you to ask questions. These will take place during the consultation period and the dates and how to register will be published on www.wiltshire.gov.uk/future-chippenham early in the new year.

How to comment

Comments are invited until **5pm Friday 12 March 2021**. Comments can be made:

- Using our online survey at: www.wiltshire.gov.uk/future-chippenham
- By email to: futurechippenham@wiltshire.gov.uk
- By post to: Future Chippenham team, Wiltshire Council, County Hall, Bythesea Road, Trowbridge, Wiltshire BA14 8JN

A survey form can also be downloaded from www.wiltshire.gov.uk/future-chippenham to be returned by email or post.

Should you require further information, please email futurechippenham@wiltshire.gov.uk

Wiltshire Council

Future Chippenham programme Public consultation Briefing Note No. 21-01

Service: Future Chippenham programme, Major Projects team

Further Enquiries to: [REDACTED]

Date Prepared: 14 January 2021

Direct Line: [REDACTED]

Background

In March 2019, Wiltshire Council submitted a bid to the Housing Infrastructure Fund (HIF) from Ministry of Housing Communities and Local Government. In November 2019, the council was awarded a grant of £75 million subject to entering into the grant agreement.

The grant ensures funding is available to contribute towards the cost of delivering the strategic infrastructure in and around Chippenham to support the potential longer-term growth of the area, should development come forward as part of the Local Plan process.

This includes supporting the delivery of a new distributor road to the east and south of Chippenham, linking the A350 at the northern and southern ends of the town, as well as specific improvement to J17 on the M4.

Future Chippenham programme update

Since the grant was awarded, Wiltshire Council has been negotiating terms and conditions with Homes England in order to enter into a funding agreement. Contracts were signed in December 2020 securing the £75 million grant.

The following progress has also been made on the project:

- Stakeholder and Engagement Strategy approved
- Strategic transport modelling discussions
- Environmental/ecology investigation and surveys
- Work to support the Environmental Impact Assessment across the whole site
- Draft sustainability strategy for the delivery of strategic infrastructure works
- Options assessment report for infrastructure works carried out
- Completion of strategic flood modelling and flood mitigation plan
- Draft Concept Framework for the site including strategic infrastructure works, utilities, parks and road bridges
- Development of a procurement strategy to support delivery of the infrastructure works

Future Chippenham

Connecting our communities

We now need to carry out a public consultation on the road route options. It was originally planned for the public consultation to take place in Spring 2020, but this was delayed because of COVID-19. The public consultation that will start tomorrow, will adhere to COVID-19 safety guidance. As we are unable to hold face-to-face events, we will be utilising virtual and digital consultation methods that meet Wiltshire Council's and Government's guidance.

We are however, committed to ensuring that every effort is made to gain input from as many consultees as possible throughout the consultation period.

Public consultation timeframe

We are carrying out an eight-week public consultation on the Future Chippenham proposals from Friday 15 January 2021 until 5pm on Friday 12 March 2021.

Several road route options have been developed and assessed against alignment with strategic objectives, environmental impact, deliverability and cost. As the project is developed climate change and biodiversity will form an integral part of the considerations. Three distributor road options and two link road options to Pewsham Way have emerged as potential options. Local people will be able to view and comment on these proposals to help shape the preferred route option for the road.

Details on these road route options and supporting documents will be available on www.wiltshire.gov.uk/future-chippenham

People will be able to complete the consultation response form online, email the consultation response form to futurechippenham@wiltshire.gov.uk or post the consultation response form to the Future Chippenham team, Wiltshire Council, County Hall, Bythesea Road, Trowbridge, Wiltshire BA14 8JN.

If people need any help completing the consultation response form or would like the consultation material provided as a paper copy or a different format, they can contact Wiltshire Council's Customer Services on 0300 345 0100.

Hard copies of the consultation material and survey form will also be available from the reception desk at the Monkton Park office.

As we are unable to hold public exhibitions, two live online public webinars will be held to explain the proposals in more detail. People interested in attending these free events can register via Eventbrite. The first webinar is being held on:

Thursday 28 January 2021 at 11am

To register: <https://future-chippenham-webinar-28-01-2021.eventbrite.co.uk>

A second webinar is being arranged for February 2021. Once registered a link will be sent to access the briefing which will be broadcast via Microsoft Teams.

Anyone wishing to ask questions about the proposals will be encouraged to submit these in advance by emailing futurechippenham@wiltshire.gov.uk stating 'Questions for Webinar' in the heading and which of the two webinars they will be attending.

Future Chippenham

Connecting our communities

The briefings will be recorded and will be available via the council's [YouTube channel](#).

During the eight-week consultation period, the level of responses and interest will be assessed to determine whether a further public webinar should be held.

In addition, the Future Chippenham team have been contacting Area Boards, local Town and Parish Councils and other key stakeholders to provide an update on the proposals.

Communications

A communications plan has been prepared to promote the consultation, including the public webinars. This will include a letter to residents living along the road route options, direct contact with specific organisations and stakeholders, news releases, posters, social media, e-newsletter promotions and updated webpages etc.

This will be regularly reviewed throughout the consultation period to ensure as many people as possible have the opportunity to comment on the proposals.

Next steps

- Public consultation to be held from Friday 15 January to 5pm on Friday 12 March 2021
- The preferred route will be announced Summer 2021
- Public consultation on Future Chippenham Masterplan Summer 2021
- Planning application submitted Winter 2021/22

**Public webinar on 28 January 2021
Questions and answers**

The council is receiving £75 million from government for a new road and will be making money from the uplifting value from its land along the route of the road - is this what is driving the project financial benefits to the council?

Firstly, the council has secured the government funding and has entered into a funding cost recovery strategy with Homes England who are managing that from the government's perspective. That includes use of council resources although over time the expectation is that overall, the scheme would not be a cost to the council.

Secondly, if development does come forward the funding will enable infrastructure to be forward funded so as to help more strategic planning and that is one of the main driving aspects of this project.

Lastly, the council will be making best use of its land and assets as part of this process and it is required to make best use of its land and assets. If in so doing we achieve value from those assets, that value released will be used to support delivery of services to communities.

Why is the council spending money on more road infrastructure rather than spending money on public transport?

The council secured the funding to ensure that if development comes forward there is infrastructure in place. The government funding is required to support development and bring forward housing plans in strategic ways, so the council doesn't have discretion on what it spends that money on.

This consultation is focused on the potential road route options and the council's wider approach to investment for example public transport is a different matter and would have to be considered in the light of the council's responsibilities and budget requirements and available resources.

Please can you confirm how many junctions and or roundabouts and or traffic lights will be included on the distributor road to facilitate access to or from the additional homes to be delivered?

We have identified junctions with the existing transport network which includes the A350 or the B4528 Pewsham Way and the A4. There will obviously be other junctions with other bits of existing network and indeed junctions with emerging adjacent developments, but these will be considered as part of the relevant planning applications.

Future Chippenham

Connecting our communities

The distributor road would provide a high quality road link connecting the north east and southern parts of the town to the A350 and improvements to junction 17 of the M4 yet the detailed information does not seem to explain how the road connects to the A350 to Rawlings Farm in zone five?

The webinar presentation explains which sections of the eastern distributor road are being led by other developers and which sections are actually the Future Chippenham project. Broadly speaking if you think of Chippenham as a clock face from 12 o'clock due north through to around about two o'clock that element of the distributor road is other developer-led; many aspects of that are obviously on the ground at the moment. Coming forward the residual part from two o'clock down to six o'clock is the focus of this particular scheme.

You have given us 3 options to consider. Is the 4th option (no new road) still possible, or does a road have to be built under one of these 3 options?

We need to make clear that the Local Plan Review will determine type and nature of development; we are consulting on options should that development come forward. Any proposals will have to be considered against the Local Plan and policies. Your views need to be made as part of that consultation and we would encourage you to do so.

Re Middle Route B, why is the junction with the A4 beyond Stanley Park a staggered junction rather than the roundabout in the other two options?

The reason for the staggered junction is associated with land ownership; the staggered arrangement requires one less landowner agreement. This will be refined as the road design and landowner negotiations progress.

Is the distributor road envisaged as a two-lane or four-lane road with limited access via roundabout and is there a difference between options?

The potential road is a two-way, single carriageway throughout. Access will be controlled by junctions and/or roundabouts and these will be designed in more detail at the next stage.

I am confused about why we are being asked to consider alternatives for the route of the proposed distributor road before the Local Plan has been approved, which I understand may not be until 2023. The Local Plan will set the number of new houses to be built in Chippenham. This may be the 7,500 upon which the plan for the distributor road was predicated in the HIF bid. But what if the final figure in the Local Plan is fewer than 7,500, and possibly considerably fewer – say 4,500?

The Housing Infrastructure Fund bid identified up to 7,500 homes by 2046 which is over two Local Plan periods. In answer to your question, if the number in this plan was say 4,500 as

Future Chippenham

Connecting our communities

you suggest, that would be supported by the Future Chippenham's housing delivery forecast.

When do you expect work to start on making the distributor road? Will it, or can it, begin before the Local Plan is approved?

The potential distributor road will be built when planning permission is gained for its construction. The earliest the project team have estimated the road construction could start is Autumn/Winter 2022/23.

Please could you state why your consultation document has no option to reject all or even parts of proposed route? This document is so pointed to receiving positive comments in itself, it is not fit for purpose.

The consultation form does enable people to object to the road. Question 5 seeks your views on what you consider are the important issues relating to the proposed distributor road route options. Question 6 has a free text box to allow you to go into more details. So, you can answer questions 5 stating your objection in the 'other' box and in question 6 set out fully your objection and reasons if you wish. You can also choose whether you wish to complete the road route options part of the form before submitting your response.

Alternatively you can object in principle by either emailing futurechippenham@wiltshire.gov.uk or sending a written response to the Future Chippenham team, Wiltshire Council, County Hall, Bythesea Road, Trowbridge, Wiltshire BA14 8JN.

We would encourage you to use any of the above means to submit your feedback to us.

Why have you proposed a Southern link road between the A4 and A350 South when there is no reason whatsoever to spoil the landscape, apart from Councils need to develop council owned farms?

The distributor road, between the A4 and A350 south, provides a number of benefits including:

- mitigating transport congestion from the town centre by providing an alternative route to access the A350 to the south of Chippenham, this would predominately be used by residential areas to the south of Chippenham and also from traffic using the A4
- providing a transport network for land development to the south of Chippenham

Why has Wiltshire Council added 5,000 to the housing need figure for the county other than to support this project?

Future Chippenham

Connecting our communities

The Future Chippenham programme has identified that up to 7,500 homes could be delivered on the sites that are supported by the distributor road up to 2046+.

When will Wiltshire Council be open and upfront about the Stone Circle Businesses it has set up to act as land agents and developers, also that they have already been funded with £5 million from Wiltshire Council and that the council state in their HIF bid documents that they are to borrow another £100 million for Stone Circle Businesses to progress this scheme?

The council will employ the model that provides the best oversight, minimum risk and return for its assets as it is required to do. There are no plans at this stage for the Stone Circle companies' involvement despite the inclusion in the bid document. The council would have to consider any proposed business plan from the Stone Circle company in terms of development and this currently takes place on an annual basis for one year in advance.

I am concerned that still no traffic impact assessment has been done for Calne and the villages near the proposed development. 7,500 homes = potentially c15,000 additional cars + many extra delivery vehicles using the local roads. If eg a roundabout is going to be needed at Lower Derry Hill, or a footbridge crossing the A4 linking Derry Hill with Studley, these should be being planned for simultaneously, not as an afterthought to 'mitigate' what could well be a predictable increase in the volume of traffic at these points. In Calne both the junction of the A4 and Curzon St, and the junction of the A4 and Silver Street (A3102) are AQMAs – the latter recording the second highest level of nitrogen dioxide in Wiltshire. Residents are rightly worried at the prospect of any more traffic passing through these points during busy times.

If I wanted to build an extension to my house, my next door neighbours quite rightly would be concerned at how it might affect them. Will they be overlooked, will it put their garden into shade, what about its bulk and design for example. It seems to me that the proposals for expanding Chippenham are being promoted by Wiltshire Council without regard to whatever impact these might have on the villages to the east and south of the town and to Calne. This has to be addressed.

The model used is the Wiltshire Strategic Area model and this has been cordoned to initially assess the impact on the main routes through the town centre. The model will assess the impact on the wider transport network and appropriate mitigation will be included as part of the planning application; unclassified roads will also be considered where affected.

Can the redevelopment of the Bridge Centre area be a condition of this road proposal? One of the major benefits of an east-west alternative transit, is surely to simplify and improve this area. If these plans are approved, can it be conditional on fixing the Bridge Centre area and preventing the A4 from passing through the town, as we have already done with the A350.

Future Chippenham

Connecting our communities

In response to the questions you raised regarding the Bridge Centre and the no road option, these questions are best placed to be answered by the council's Spatial Planning team. We have therefore forwarded a copy of your email to them.

The documents I have read make no reference to the fact that the proposed road crosses several County Farms. These farms are active dairy producers and it is not just 'empty land' although at any one time due to cattle being moved around the pastures may give the impression of being unused to non-farmers. The acreage of County Farms across England has dramatically fallen from 426,695 acres in 1977 to just 215,155 acres in 2017. Thus, the proposed road further reduced farming land available for rent.

An assessment of the impact of the loss of agricultural soils and the impact on farming businesses is made in the Preliminary Environmental Options Assessment Report (PEAOR) in the Soils and Geology and Population and Health chapters respectively.

Agricultural land classification (ALC) surveys undertaken previously covered land west of the River Avon in the south and north of Stanley Lane in the north and this was used to inform this assessment. This survey information found a close correlation between surface geology, soil series and ALC grade which then allowed us to make an informed judgement of what soil types are likely to be present on site. The combination of the existing survey information, and the estimated soil types found that 'Best and Most Versatile Soils' (BMV) which include grades 1, 2a, 2b and 3a are largely focused in the western and northern extent of the scheme area, with pockets of grade 3a soils scattered across zones 2 and 3.

The key findings of the assessment are that Option A generally affected less 'BMV Soils', but this is largely due to avoiding the grade 1 and 2 soils east and north-east of Lackham roundabout. When a preferred route option is selected, an ALC survey of the route will be undertaken to ensure the loss of agricultural soils is fully reported within the Environment Statement for the project.

What provision is made for the replacement of these County Farms in the Council's proposals?

The County Farms portfolio is managed in accordance with a list of well established objectives and on the basis that part is to be retained and part disposed over time with properties categorised according to their capital, revenue and development potential. This is set out within the Rural Estate Asset Management Framework V1.5 which was approved by the Council in August 2019. There are no specific proposal to replace the County Farms at Chippenham, should they be taken out of agricultural use, but the Council is committed to the effective management of the remainder of the portfolio and is working with tenants to facilitate opportunities to remain in occupation of undeveloped land on a flexible basis and to re-locate to alternative holdings where possible.

Future Chippenham

Connecting our communities

Chippenham used to be proud to be called a "Market Town" and all its connections, you only have to take a look at all the statues of cattle etc placed around the town. Now with the proposed new houses and roads etc, what will it turn into - a new town having lost its identity forever, so sad especially when there isn't the employment to uphold these new builds, Chippenham will be what? Bath, Swindon and Bristol have far better infrastructure to withhold if and when future development is required after COVID.

A Masterplan for Future Chippenham is currently being prepared. This includes detailed consideration of what the vision for the future of Chippenham is as well as ensuring that all the necessary social, and green and blue infrastructure is provided.

Given that this road is dependent on the approval of development sites in the Local Plan, how do you expect the meet the deadline for using the £75 million funds from the government, whilst the Local Plan is still under consultation and not due to be decided and accepted for a couple of years?

The HIF grant of £75 million is available to support the work required to plan and deliver the proposed distributor road, subject to planning permission being achieved.

Of the three options proposed, only option A presents a true bypass to take traffic away from the town. Options B and C are combined distributor and bypass - leading to high volume traffic through residential areas. Whilst option A has been stated as not favoured, it appears the strategic objectives of option A are entirely different from B and C and so they can't be compared. Option A makes sense. B and C do not. Please comment.

Transport modelling for all three options forecasts reduction of commuting traffic travelling through Chippenham.

The distributor road provides alternative routes for traffic to access the A350, the inner route option C performs better than option B and A. Further information is available in chapter 10.8 of the Options Assessment Report which is available on www.wiltshire.gov.uk/future-chippenham-consultation

The function of the proposed road to the east of Chippenham is for local transport connectivity and distribution, to enable residential and employment development, it is not a strategic road or bypass. The strategic objectives of the scheme are appropriate.

The A350 to the west of Chippenham will remain the primary strategic transport route and is in fact a bypass.

The outer purple route would involve two additional bridges over the canal . . . so that isn't an option, is it?

Future Chippenham

Connecting our communities

Option A does include two bridges over the Wilts & Berks Canal, one in assessment zone 2, near Pewsham Locks and one in assessment zone 3, near Green Lane Farm. At both of these locations the historic canal feature is still present.

It is an option but does have clear disbenefits in terms of costs and impact on the historic canal.

Option B and C both include one canal bridge in assessment zone 2. Crossing the historic alignment of the canal and Avon Valley walk near Forest Farm, the canal feature is no longer present at this location. However, the Wilts and Berks Canal Trust is looking to extend the redevelopment of Pewsham Locks and restore the canal. Our development team are in discussions with Wilts and Berks Canal Trust and a coordinated approach with other landowners could enable and expedite the restoration of the canal.

We are asking for feedback on all road route options that are part of this consultation.

You say questions not answered will be answered after but when? I have been told for the housing one last week it will be weeks as they have so many consultations going on which will limit the time between answers and deadline?

The project team aim to respond to questions raised within 10 working days where possible.

Where are the consultation documents with the public for the HIF bid?

There is no requirement for Wiltshire Council to consult on its bid application process. Information on the consultation process for the distributor road route options and how to get involved, including all consultation documentation can be found at www.wiltshire.gov.uk/future-chippenham-consultation

Is the purpose of route Option A to make Option B and Option C look less bad?

All options presented for public consultation meet the strategic objectives of the scheme, for instance to mitigate traffic congestion in the town centre to enable development growth.

All options are routed through the area allocated for development in the Local Plan for 2036, currently being consulted on, although Option A does indeed follow the outer perimeter of this area.

A range of options is necessary to compare each assessment case. The options provide alternative routes through a range of different landowners. Discussions with landowners continue in parallel with the public consultation and both of these will be considered for the update to the delivery case which will be presented as part of the options assessment update in summer 2021.

Future Chippenham

Connecting our communities

We can see already we have a good chance of success with a legal challenge like Oxford, this isn't included in your timeline?

In developing the timeline to support the programme delivery, a number of potential contingencies have been accounted for.

As the road crosses the busy A4 in Option B, why have you chosen a staggered junction?

The reason for the staggered junction is associated with land ownership; the staggered arrangement requires one less landowner agreement. This will be refined as the road design and landowner negotiations progress.

Who is funding the delivery of the Rawlings Green part of the road? Is it the Rawlings Green developer or is it the HIF money?

The HIF bid included funding for the road required to connect to the railway bridge funded through the Rawlings Green development.

Why was the Sadlers Mead car park built on the wrong side of the station adding to congestion and the traffic lights installed at Hathaway Retail park added causing further issues when not needed apart from for pedestrians, is this so you could say there was congestion and push the plans through?

This is not part of this project.

What is the timescale for the construction of the housing developments shown?

Any housing delivery will be contingent on the planning process. However, it is envisaged that housing could be delivered over 20+ years.

40 minute presentation of what we already know and 20 minutes of questions when you know you have so many questions is not ethical?

The Future Chippenham team has added an additional webinar that will provide more opportunities for questions to be raised and answered.

Will the road be dual carriageway at any stage?

The potential road is a two-way, single carriageway throughout.

Option 2 Forest Lane Link road option you said is no longer being considered is this correct?

Future Chippenham

Connecting our communities

This is correct. The two Pewsham Link options being considered as part of this consultation are Pewsham link options 1 and 3. Land discussions are ongoing and are running parallel to the public consultation, these are likely to require some relatively minor changes to route alignments and would not have a significant impact on the options assessment.

I would like to see exactly where option C starts, this presentation shows a different location to the YouTube video entitled ‘Consultation of the Future Chippenham road route options.

The options assessment plans available for public consultation are located on the consultation web page

[https://www.wiltshire.gov.uk/media/5746/Future-Chippenham-Distributor-Road-Options-Assessment-Plans/pdf/Future Chippenham Distributor Road Options Assessment Plans.pdf?m=637466574344500000](https://www.wiltshire.gov.uk/media/5746/Future-Chippenham-Distributor-Road-Options-Assessment-Plans/pdf/Future%20Chippenham%20Distributor%20Road%20Options%20Assessment%20Plans.pdf?m=637466574344500000)

How big is the area to be developed compared with the current built area of Chippenham? By our map it looks like almost a doubling.

The potential road could unlock land for potential development of approximately 1600 acres.

For the 3 options, will there be different speed limits associated with each option? For instance the outer route will have a higher speed limit due to not being routed through a potential residential area?

The speed of the road will be defined as part of the ultimate highway development. It is envisaged it will be low speed.

A desk study of the environment does not fit in with climate change targets? I can supply thousands of photos of all the wildlife you will destroy.

Whilst the overall environmental assessment undertaken at this options appraisal stage was largely based off desk-study information, certain topic areas such as landscape and biodiversity did include the use of site survey information. When a preferred option has been selected and the scheme progresses towards a planning application, a detailed Environmental Impact Assessment (EIA) will be undertaken and reported within an Environmental Statement. This assessment will be based off detailed site surveys and a more in-depth study of environmental impacts than the proportional assessment undertaken at this stage, although the assessment in the Preliminary Environmental Assessment Options Report (PEAOR) can be considered the initial step of this EIA process.

Future Chippenham

Connecting our communities

The biodiversity chapter of the PEAOR which informed the Options Appraisal Process was informed by an extended Phase 1 habitat survey undertaken across the site to record habitats present and evidence of the presence of, and the potential of each habitat to support, protected and priority species. This was further supported by wintering bird surveys and preliminary bat roost assessments undertaken across this area in winter 2019/2020. The assessment carried out in the PEAOR used this data, alongside Environment Record data and the locations of priority habitats and designated sites to form an assessment of the impact of each of the road options in each zone.

The extended Phase 1 habitat survey has also informed the likely protected species on site and set the scope for further species specific surveys that are currently ongoing. These surveys are being undertaken in alignment with current survey guidance and will tell us what protected species are likely absent or present on the site, how species present are using the site and therefore what the potential impact of the scheme would be on these species. From this point, mitigation will then be designed in-line with the mitigation hierarchy and current guidance to ensure the development does not lead to significant adverse impacts.

Given the Grade 2 listed property at Rowden Manor was given as part of the reason for eliminating option D why is the same not true for Option C which starts with a western roundabout just 200 metres from the three Grade 2 listed buildings at Showell Farm?

The key reasons for eliminating Option D was a combination of factors based on both ecological and cultural heritage impacts. The heritage concerns for which Option D was discounted were that the route was aligned through the Rowden Park Conservation Area within a visually prominent location and in close proximity to the Scheduled Monument south-east of Rowden Farm. This would alter the setting of both the conservation area and potentially the Scheduled Monument. These potential impacts on cultural heritage receptors was also combined with the potential impact on the local wildlife site at Mortimore's Wood. Whilst the option avoided travelling through the designated wildlife site, it ran through an area of new planting put in place to extend the site. Because of the potential impacts on these biodiversity and heritage assets, Option D was discounted at the first options sift.

Option C was maintained as an option through to the second sift and more detailed environmental assessment despite some potential setting impacts on the Grade II Listed Buildings at Showell Farm identified at the Sift 1 stage, as these were deemed less likely to be significant in comparison to the Cultural Heritage impacts on the Rowden Park Conservation Area and the Scheduled Monument at Rowden Manor, associated with Option D above. Option C was however scored less favourably in Zone 1 in the cultural heritage assessment in the Preliminary Environmental Assessment Options Report (PEAOR) compared to Option B, in part due to its greater proximity to the Rowden Park conservation area and the listed buildings at Showell farm.

Future Chippenham

Connecting our communities

There is a good deal of talk about carbon cost for example, but what about offset? What is being planned regarding tree-planting for example, on a large scale, to make up for all this concrete?

The emerging vision for Future Chippenham will seek to include the delivery of an environmentally sustainable development that minimises carbon emissions and provides net environmental and biodiversity gain.

Why are you proposing to submit a planning application before the Chippenham Local Plan, which will approve strategic housing sites and housing numbers, has been agreed?

Details of the preferred route will be shared during a public consultation in summer 2021 alongside a Masterplan for Future Chippenham which will set the overall context.

How many people are on this webinar?

94 people attended this webinar.

Is the purpose of route Option A to make Option B and Option C look less bad?

All road route options presented provide the opportunity to support up to 7,500 homes across the sites and we would welcome your feedback on these.

Please can you publish the terms of the £75 million grant - either the Grant Agreement (redacted for commercially sensitive sections) or a summary of the terms such as Essex Council did recently for their HIF grant. And in the meantime, what are the commitments on timescale for building the road and what are the commitments on housing numbers and timescale?

The Grant Determination Agreement is a commercially sensitive document and on the clear advice from Homes England will not be published at this stage.

The high-level timeline for the programme identifies that the road will be completed by early 2026. Housing delivery will be subject to planning process but is estimated to be delivered in a phased approach over 20+ years.

Will the road be future proofed by including the potential to be dualled in the future?

The function of the proposed low speed road to the east of Chippenham is for local transport connectivity and distribution, to enable residential and employment development, it is not a strategic road or bypass.

Future Chippenham

Connecting our communities

If the roads are dual carriageway throughout, how do you envisage people walking into the countryside? I'm asking from someone who lives in Cepen Park south who risks life and limb at Chequers roundabout to walk to Corsham.

The potential road is a two-way, single carriageway throughout and cycle and pedestrian paths will be included with the delivery of the road. Cycle and pedestrian networks will be influenced by the adjacent land development and associated transport assessments.

Option C seems to have a lot to recommend it (compared to the others), but why not start it at the Lackham college roundabout?

Option C starts on the B4528 to provide an option to support landowner discussions.

It is possible that following landowner discussions option C could connect at Lackham roundabout before crossing the River Avon between the Sewage Treatment Works and Lower Lodge Farm, effectively a combination of route options B and C.

Following public and stakeholder consultation, transport modelling and land discussions this will be progressed in further detail to inform the requirements for junction types/positions and layouts.

Will the road be provided with a separate dedicated cycle path?

Cycle and pedestrian paths will be included with the delivery of the road. Cycle and pedestrian networks will be influenced by the adjacent land development and associated transport assessments.

What arrangements will be made for footpaths, bridleways and cycle routes where the new road crosses them?

Crossings will be provided where any Public Rights of Way (PRoW) are bisected. Details of these crossing will be determined following the preferred options election.

A full detailed review of PRoW will be undertaken following selection of the preferred road option. This will be coordinated with adjacent land development.

PRoW will be improved where appropriate as part of the development planning applications.

Where the new road bisects an existing PRoW, traffic flows for both the road and PRoW will be assessed and an appropriate diversion or crossing included in the road planning application.

Future Chippenham

Connecting our communities

It is likely that either informal or formal (controlled for example traffic signals or zebra) will be appropriate to provide safe crossings of the road; as mentioned above the form and type of these crossings is informed by the transport assessments for the planning applications.

Why is there no reference to the fact that outline planning permission has already been granted for a new link road and roundabout from the A350 to the B4528 across land at Showell Farm with access into the approved Rowden Park development?

This is not part of this scheme.

Across zones can the option be switched or is it just option A, B or C across all zones decision?

Yes. The road route options have been split into zones to allow for feedback for the preferred route within each zone. This could result in a preferred route that is combination of the different routes.

How will the proposed routes cross the national cycle way? Will this be bridging or will people have to cross the road?

All 3 options propose crossings at grade with the National Cycleway, meaning a crossing of the road will be included here to facilitate this. The type of crossing implemented will be informed by the transport assessment and forecast flows for traffic permitted to use the road and traffic permitted to use the national cycleway (cyclists, pedestrians, horses).

What is the point of any link road between the A4 and the A350 south?

The distributor road, between the A4 and A350 south, provides a number of benefits including:

- mitigating transport congestion from the town centre by providing an alternative route to access the A350 to the south of Chippenham, this would predominately be used by residential areas to the south of Chippenham and also from traffic using the A4
- providing a transport network for land development to the south of Chippenham

Zone 1 has been stated as having a preference for option C on basis of carbon footprint and cost grounds, though is clearly discounting recognised archaeological and historic setting of Showell Farm. Surely all efforts should be focused on reduction of historical impact for future generations. Despite the aspiration for walking distances for instance what is the rationale to introduce a new roundabout rather than connecting option C to the existing Lackham roundabout as for the other options with benefit of minimising impact to archaeology and historical settings?

Future Chippenham

Connecting our communities

As outlined in the presentation, across the environmental assessment, Option B was seen as slightly 'best fit' than Option C. This was in part due to the reduced impact upon the historical setting of Showell Farm and also the lower alignment of Option B in the existing landscape than Options A or C allowing it to be better shielded from view.

However, the assessment scoring criteria in the Options Assessment Report (OAR) considers not just all environment topics, but also connectivity and cost. In this respect, Option C was a significantly lowest cost and provided greater connectivity benefits, whilst also providing some environmental benefits over Option B and A such as a reduced amount of greenhouse gas emissions during construction and operation. This meant that at this stage it is identified as the 'best fit' route through Zone 1. However, as noted in the consultation documents and the presentation, the options appraisal process is not complete. Following the consultation, the OAR will be updated to consider:

- consultation feedback
- deliverability through the engagement of a construction contractor
- information being received from ongoing environmental site surveys
- progression of landowner agreements and
- cost estimates updates

The incorporation of the above may lead to a change in the 'best fit' alignment outlined at this stage, which may lead to a different option being 'best fit' in that zone, or alternatively an amalgamation of two options to seek the benefits and avoid the dis-benefits of both.

Why is Option A on here at all? You have dismissed it in every zone by every measure

All options presented for public consultation meet the strategic objectives of the scheme, for instance to mitigate traffic congestion in the town centre to enable development growth.

All options are routed through the area allocated for development in the Local Plan for 2036, currently being consulted on, although Option A does indeed follow the outer perimeter of this area.

A range of options is necessary to compare each assessment case. The options provide alternative routes through a range of different landowners. Discussions with landowners continue in parallel with the public consultation and both of these will be considered for the update to the delivery case which will be presented as part of the options assessment update in the summer of 2021.

There was no mention about the visual impact from the Monkton Park area for Options A and B?

Future Chippenham

Connecting our communities

In zone 3, Option A is aligned higher in the landscape than Options B and C. This is because Option A is routed largely behind existing landform south of Hither Farm and is also located further away from Monkton Park making it less visible from this location, although it remains prominent in views from the East and South. Option B lies slightly higher in the landscape than Option C so is more visible from Monkton Park, but the distance of view would mean the route is not a dominant feature in the landscape, whilst Option C follows slightly lower ground. Both are well naturally screened from views to the south and east.

Mitigation including planting, localised earthworks and strengthening of existing field margins has been considered to understand the likely residual visual effects of each option. Option A's prominent location in the landscape makes it harder to mitigate in this regard, although views from Monkton Park are aided by the distance. Option B is similarly aided by its offset distance from Monkton Park, and with careful planting improvements of existing field margins and localised earthworks, would not have a significant impact on views from this location. Option C is the closest option to Monkton Park but follows a lower alignment. This makes the use of localised mounding and screening vegetation as mitigation easier to implement without affecting local landscape character. With likely mitigation to be implemented, Option C is not likely to have significant effects on views from Monkton Park.

Why cannot elements of the Options be combined to produce a less impactful development? For example, Option A being combined with Option B in Zone 2 and Option B combining into C further eastward in Zone 2.

Elements of each option within each zone can be combined to provide the most appropriate option, an example of this is presented with the current 'best fit' option for zone 3, where the first part of this route between the A4 and Stanley Lane follows the alignment of Option B and the second part of the route from Stanley Lane to the National Cycle Network 403 follows the alignment of Option C. This example mitigates specific environmental impact on Stanley Park and habitats for Great Crested Newts.

Please provide reasons for combining routes within specific zones for further review. Details for providing this information are provided on the Future Chippenham consultation webpage www.wiltshire.gov.uk/future-chippenham via the online survey or email.

What can we do to stop all the options?

By filling out our consultation form which can be found on our webpage www.wiltshire.gov.uk/future-chippenham. The consultation form has a free text box in question 6 that can be utilised for this. Feedback can also be emailed to futurechippenham@wiltshire.gov.uk or posted to the Future Chippenham team, Wiltshire Council, County Hall, Bythesea Road, Trowbridge, Wiltshire BA14 8JN.

Future Chippenham

Connecting our communities

Do your environmental impact assessments on route options include the requirement to build housing and amenities? You're discussing saving a hedge when whole fields will be turned into housing.

At this early route optioneering stage, the preliminary environmental assessment of options did not consider the development of housing and amenities around the options. The concept framework used to inform the strategic assessment of the options outlined that housing would be in similar locations regardless of the location of the new road development. With this in mind, at this early optioneering stage, the preliminary environmental assessment of options considered the road independently of the housing.

Whilst the housing that comes forward will lead to the removal of some of the fields themselves as habitat, the field are generally species poor due to their use for agriculture. The hedgerows and boundary features of the fields are however, more likely to provide opportunities for biodiversity than the fields themselves as they provide a network of green corridors throughout the landscape which can be used by a variety of species for sheltering, foraging and/or commuting. Some of these hedgerows could also potentially screen any development in these fields. As this is the case, the development of the housing will likely come forward by maintaining and strengthening many of these boundary features to provide green corridors maintaining connectivity, allowing species to navigate the landscape whilst having the dual purpose of providing visual screening of the development.

Doesn't your preferred route use part of the A4 to avoid Stanley Lane? Won't this create a bottleneck?

The current 'best fit' option does indeed use a section of the A4 to connect the distributor road from assessment zone 2 to assessment zone 3. The transport assessment for the road and development planning applications will review this and provide greater detail on new junction types and any mitigation required to sections of existing transport network and existing junctions. The distance between the two junctions is circa 400m, at this optioneering stage we are confident that any mitigation along this section of the A4 is viable.

When will you start listening to residents?

The Future Chippenham project team is seeking your feedback on the road route options and confirm that all feedback received will be considered when identifying the preferred route.

I missed some of the presentation, has it been recorded so I can see it?

A recording of the presentation can be viewed at www.youtube.com/watch?v=8hLLK8AGuHo

Future Chippenham

Connecting our communities

On the penultimate page by using the A4 you create two crossings rather than just one. Will this not significantly interfere with traffic flow and safety on the A4?

The current 'best fit' option does indeed use a section of the A4 to connect the distributor road from assessment zone 2 to assessment zone 3. The transport assessment for the road and development planning applications will review this and provide greater detail on new junction types and any mitigation required to sections of existing transport network and existing junctions. The distance between the two junctions is circa 400m, at this optioneering stage we are confident that any mitigation along this section of the A4 is viable.

Will the road be built before any housing development begins?

Yes, but planning permission could be gained for housing prior to the completion of the road.

Has coalescence between Chippenham and Studley/Derry Hill been considered? The development and the solar farm will result in the complete loss of open space on the A4 and sees the town coalesce with the settlements to the East.

The emerging Masterplan takes into detailed consideration the landscape character of the area and identifies where important views will need to be maintained or mitigated, for example, through woodland planting.

Which body is responsible for reviewing the planning application?

Wiltshire Local Planning Authority.

Travelling south down the A350, onto this road doesn't it make much more sense to have an almost straight on option rather than making part of the B road at Showell Farm part of the new road?

Option C starts on the B4528 to provide an option to support landowner discussions, this option affects one landowner. Option A affects one landowner. Option B affects two landowners. Following public and stakeholder consultation, transport modelling and land discussions this will be progressed in further detail to inform the requirements for junction types/positions and layouts.

In the 'masterplan', what is the vision for Chippenham's employment proposition (for example leisure, distribution, retail and others) - this affects employment density and commuting?

Future Chippenham

Connecting our communities

Work on the Masterplan is currently ongoing and will be subject to public consultation in the summer 2021.

Why didn't my question appear?

Questions raised are published when they are answered in the webinar itself. All remaining questions are published later with answers.

Past Chippenham developments have roughly been based on access to the railway station that was historically located to serve the Cattle Market and Westinghouse both of which are no more. Has Wiltshire Council considered that present and future development should be located adjacent to the A350 and a replacement station built to remove the need for transit through the town centre? A new school could be located behind B&Q to serve all the housing in that area. The proposed road(s) would not be required.

This consultation relates to specific distributor road route options. Comments in relation to the location of future developments at Chippenham can be made to the separate consultation being undertaken on the Local Plan Review which closes on 9 March 2021.

www.wiltshire.gov.uk/planning-policy-local-plan-review-consultation

It is hoped that the canal will be restored from Pewsham Top Lock, north to the A4, so why is the old canal route there marked as new woodland?

The road options assessment does not include new woodland as part of this consultation. Requirements for planting will be reviewed in more detail prior to the planning application.

If you are referring to the Local Plan Review, Planning for Chippenham, Figure 6, Concept Plan, then please email this question to the Local Plan consultation at spatialplanningpolicy@wiltshire.gov.uk

Traffic modelling will have taken place using pre-COVID data and assertions. COVID will change future travel needs – my company employs 300 people in west Chippenham and has already stated a long term post-COVID work from home policy leading to reduced travel. How has this been factored into the modelling that has led to the justification for the proposed roads?

Traffic modelling reflects base traffic levels pre-COVID and future growth without COVID restrictions (for instance no reduced traffic levels to reflect travel behaviour during COVID) which provides a robust assessment and is in line with modelling guidelines/practices. Furthermore, the potential change in traffic behaviour post-COVID is unknown. However, there will still be a need for many businesses or educational institutions to operate as they did pre-COVID for instance employees, customers, students, visitors travelling to or from a

Future Chippenham

Connecting our communities

place or work, education or as part of it. Similarly, delivery vehicles, industry vehicles, trades vehicles for example are all likely to continue to exhibit travel behaviours as per pre-COVID.

Why doesn't Option B exactly follow the high voltage cable route rather than deviating south of Lower Lodge Farm?

Option B follows along lower slopes of topography south of Lower Lodge Farm and also south of Middle Lodge Farm and provides an alternative route to option C for landowner discussions.

It should be noted that Option B in assessment zone 1 could be linked to option C in assessment zone 2, if these are the preferred routes in each zone following public and stakeholder consultation.

Continuing along the alignment of the high voltage overhead cable route is not desirable for a number of reasons. Woodland east of Kings roundabout would be affected, all options avoid direct conflict with this woodland. This woodland also contains the historic route of the Wilts and Berks Canal. The location of the bridge for route options B and C consider the historic alignment of the canal and there are ongoing discussions with landowners and the Wilts & Berks Canal Trust to consider future restoration.

7,500 houses and 1 million square feet of employment land at benchmark employment densities implies a significant amount of out-commuting. Has the transport modelling assessed the impact of A4 East – and is that report on the consultation site – can't see it?

Please refer to section 10.8 of the Options Assessment Report for further information on the modelling of the route options.

The strategic model for Wiltshire is built with numerous data sources, including Automatic Number Plate Recognition (ANPR) data. This ANPR data, in conjunction with other data sources such as Census 2011, is used to derive the distribution of traffic flows on the network. As such a level of out-commuting by car is reflected in the base model in line with existing commuting patterns. Analysis of the Census 2011 Data, presented in the Chippenham Transport Strategy 2016, indicates that "64% of people travelling to work from Chippenham out-commute, while the remaining 36% of people live and work in the town."

It would be expected that out-commuting levels would be lower for the Future Chippenham site with a range of additional employment opportunities provided within the town and the development site. The distribution in the strategic model assumes a level of internalisation of trips within the development and the town. The assumption applied in the model is that 54% of trips generated from the site would stay within Chippenham. This is on the

Future Chippenham

Connecting our communities

assumption that a significant employment would be provided on the Future Chippenham site. It is assumed that the remaining 46% would travel beyond the town, but it should be noted that not all of these would be journeys on the M4 (as such using M4 J17).

Further detail will be provided within the Transport Assessment which will be prepared in line with appropriate local and national guidelines and submitted through the development planning application process.

Much of this discussion is concentrating on the negative aspects reference visibility and cost. What has been done to consider the Opportunities to carry out landscaping and improvements to the greater Chippenham area? Strengths – Weaknesses – Opportunities – Threats assessments are not just about Weaknesses and Threats.

As outlined in the presentation, the potential for visual screening and planting is embedded within the concept design of the highway shown within the cross-section drawings. Whilst planting and landscaping will be part of the design of the highway, this needs to be in-keeping with the existing landscape character of the site. Initial reviews of the use of landscaping mounds as well as planting was factored into the assessment of both cost and visibility, but regardless of these activities, Option A remains more visible in all zones by nature of its location in the existing landscape.

When a preferred option has been selected and design progresses, the landscaping design will also be progressed in a collaborative manner with all teams to enable the design to provide both visual screening and biodiversity and drainage benefits.

How would the road be built across the old railway track to mitigate the environmental impact?

If you mean the Great Western Rail line then this is being delivered by the Rawlings Green developers.

If you are referring to the National Cycle Network Route 403 (former rail line) then the following information is relevant:

Locations for these at grade crossings seek to minimise impact on existing trees and vegetation whilst also minimising visual impact of the works.

Ecology surveys are currently progressing to confirm species types, populations, locations and movement corridors; ecological mitigation measures will be included in the Environmental Impact Assessment for the planning application but could include fencing, hedgerow strengthening, wildlife tunnels and bat bridges.

Strikes me that this comes down to a simple comparison between Cost of Construction versus Cost of Environmental Impact. How do you Cost/Quantify the Monetary (£s) Value/Cost of Environmental Impact?

Benefit cost ratios for route options are provided in section 10.8.6 of the Options Assessment Report (OAR). For the purposes of this OAR Level 1 and 2 impacts have been considered as this is most appropriate for the consideration of the differences between the options. The Level 1 and 2 impacts assessed are:

- Level 1 - User impacts (travel times), Vehicle Operating Costs (VOC), Indirect tax, Greenhouse gas (CO₂)
- Level 2 - Increased economic output in imperfect competitive market

The cost of construction is assessed as part of the financial case, with route options ranked in order of preference / lowest delivery cost.

Environmental impact is assessed as part of the environmental case with route options ranked in order of preference / lowest environmental impact.

There are clear differences between the options in terms of costs. Clear differences between the options are presented in the OAR and OAR summary and also in the public consultation webinars.

The Preliminary Environmental Options Assessment Report provides details of each option's potential impact on the environment, prior to environmental mitigation. The route alignments seek to avoid conflict with any obvious rich ecological habitats and cross agricultural open landscape. Generally, the main differences are associated with the length and scale of infrastructure (road and bridges) and landscape and visual impact.

We have not provided a cost of environmental impact vs cost of construction, this would not provide any added benefit to the assessment process / further influence selection of the preferred route.

The process for ranking each option will provide an option that aligns best with the assessment criteria.

The assessment process not only considers scheme costs and environmental impact it also considers alignment with strategic scheme objectives and deliverability. Updates to the Options Assessment will be undertaken following public consultation and landowner / developer discussions.

How would the road be built over the old railway track to mitigate the environmental and visual/noise impact, and ensure user safety when connecting to it?

Future Chippenham

Connecting our communities

All three options propose crossings at grade with the National Cycleway, meaning a crossing of the road will be included here to facilitate this.

The type of crossing implemented will be informed by the transport assessment which will include forecast flows for traffic permitted to use the road and traffic permitted to use the national cycleway (cyclists, pedestrians, horses).

Locations for these at grade crossings seek to minimise impact on existing trees and vegetation, crossing at grade reduces visual impact.

Ecology surveys are currently progressing to confirm species types, locations and movement corridors; ecological mitigation measures will be included in the Environmental Impact Assessment for the planning application but could include fencing, wildlife tunnels and bat bridges.

In terms of safety, a full independent road safety audit will be undertaken on proposals for the scheme.

Isn't it the case Chippenham will be the largest town in the entire county and as such desperately needs a complete ring road?

The options assessment process identified the need for a distributor road and not a ring road.

What is modelled traffic impact at J17 in terms of delays, and also on A4 East?

Please refer to section 10.8.4 of the Options Assessment Report (OAR). Further detail on specific traffic impacts at these junctions/locations will be provided within the Transport Assessment which will be prepared in line with appropriate local and national guidelines and submitted through the development planning application process.

Where does the economic benefit to Chippenham come from?

The economic benefits come from a number of different areas which are unfortunately too long to detail here. However, these are detailed in our HIF bid which can be found on the Future Chippenham webpage https://www.wiltshire.gov.uk/media/5439/HIF-FF-000456-BC-01-Chippenham-Urben-Expansion-Final-submitted-business-case-redacted/pdf/HIF_FF_000456_BC_01_Chippenham_Urben_Expansion_Final_submitted_Business_Case_Redacted.pdf?m=637442430691700000

It's impossible to judge a preferred route without understanding the overall development ideas. What have you done to identify development sites?

Future Chippenham

Connecting our communities

The Local Plan consultation currently underway identifies preferred sites that the potential distributor road would support. In addition, to support the options assessment process, the Future Chippenham team has a draft concept framework which identifies what development of the sites it has identified could look like to inform the road route options.

How is traffic congestion for Chippenham improved if an additional 7,500 properties, employment sites and additional road use from the M4?

Please refer to section 10.8 of the Options Assessment Report (OAR) which recognises that wider transport network mitigation would be required to mitigate the impact of 7,500 homes and this would be considered in further detail in the work on the Transport Assessment to support a planning application.

https://www.wiltshire.gov.uk/media/5745/Full-options-assessment-report/pdf/Future_Chippenham_-_Options_Assessment_Report_January_2021.pdf?m=637463272933430000

Atkins say roundabouts and traffic lights considered as part of planning application. What has been assumed in models – it will affect delays/traffic flow, carbon emissions?

Please refer to section 10.8.1 of the Options Assessment Report (OAR). The core model includes planned schemes identified by Wiltshire Council and identified within the Chippenham Transport Strategy. Further assessment of mitigation in addition to the core model would be considered as part of the Transport Assessment for the planning application.

How have you identified the housing need? Future Chippenham is aspirational and unproven.

This is a consideration for the Local Plan. The Future Chippenham programme has identified that up to 7,500 homes could be delivered on the sites that are supported by the distributor road up to 2046+.

5 March 2021

Future Chippenham

Connecting our communities

Public webinar on 11 February 2021 Questions and answers

Wiltshire Council has declared that we are in a climate emergency. Why do the strategic objectives for this new road and development not acknowledge this as the top consideration?

The council has set a very ambitious target of becoming a carbon neutral county by 2030 and to achieve carbon neutrality the council will, amongst other things, need to account for carbon in its development plans. The council also looks at ways of delivering new development with reduced carbon emissions and will investigate offsetting any residual carbon emissions so that net input into the atmosphere as close to zero carbon emissions as possible can be achieved. The carbon impact and environmental impact has been taken into account and is one of the key considerations as set out in the presentation. A programme such as Future Chippenham will need to demonstrate its commitment to policies in the Local Plan and how they will be met in any of the planning applications that it makes.

By having planned development, the council can also have a better opportunity to ensure development takes this into account and is a stronger way to ensure the target stays on track.

Is the road going to be a dual carriageway?

The proposed road will be low speed, two-way single lane carriageway.

Why are all the options on the east side of Chippenham?

If the question is alluding to why the road options are on the side of Chippenham, then the Future Chippenham development area lies in that vicinity and the road that we are consulting on is to serve those developments. It may be that actually the questioner is perhaps thinking more about the housing and perhaps this is something that would be better directed to the Local Plan consultation, if the thought is why is all the housing being depicted through this consultation on the east side.

Can you advise of any comparable sized market towns which have been surrounded/locked in by a de-facto ring road?

This question seems to be suggesting that we are trying to build a ring road and encapsulate Chippenham within a severance of all the way around, that is not what we are trying to do. The distributor road as part of Future Chippenham really is envisaged that it is going to be part of the development, it is going to be integral to the development. It is not

Future Chippenham

Connecting our communities

going to be a border around the outside and that is not really what we are trying to achieve. This is about place making it is not about creating a ring road in the traditional concept of ring roads in other locations.

What assessment has been made of the total increase in carbon emissions over, say, the next 10 years as a result of this new road—not just the embodied emissions of the road building but also the increased traffic and road use?

At this stage no quantified assessment of operational carbon has been undertaken. An assessment comparing the options in respect to their potential carbon emissions was undertaken for the Preliminary Environmental Options Assessment Report (PEOAR). Using experience and understanding it is quite simple to make a comparison assessment at this stage. Undertaking a quantified assessment would require significant traffic modelling which we shouldn't have for each of the options, so we've undertaken a quantitative assessment essentially which found that the shorter option would be most efficient from a carbon perspective. As the scheme progresses towards the planning permission once we have selected a preferred route the Environmental Impact Assessment (EIA) process will be required to provide a quantification of those carbon emissions as part of the Environmental Impact Assessment process.

What consideration has been made for the future impact of greater working from home, and therefore less rush hour congestion, on the requirement for this new road?

The transport assessment for the road planning application will certainly consider forecasts for all modes of transport and the impact of COVID-19. We need to remember that the road is not just for motor vehicles it is a transport network enabling opportunities to travel by cyclists, pedestrians, buses and cars so the reforecasting will be reforecast of all modes of transport.

Whichever route we end up with, will the route have pavements for safe pedestrian use, or will these be without pavements like Avenue La Fleche and Pewsham Way?

The cross sections shared as part of this presentation include paved pedestrian and cycle routes. There will be further focus on and a review of the Public Rights of Way networks and an overall connectivity plan that will be developed as part of the masterplans for the adjacent developments. So yes, they will be paved but there will be a network of paved footways and cycleways as part of the overall masterplan.

The cross-sections clearly depict the longitudinal connection along the route itself but the importance of access to the countryside clearly is very high on the agenda at the moment. So as this scheme is being developed, we need to look out from the road into the wider country to ensure that we have got connectivity with the wider public rights of way going out

Future Chippenham

Connecting our communities

of town and also very importantly the masterplan needs to be thinking about connections into the town. The whole question of footways and cycleways needs to be looked at holistically not just along the route itself but as part of the wider scheme.

What's happening to the tenanted farmers currently working the land?

Meetings have taken place so all tenant farmers have been made aware of the impact these potential road options would have on their tenancies. We will continue to liaise with them about their options as the scheme progresses.

Aren't these proposals simply 'business as usual'? How do these options plan for a future that reduces car dependency and commuting, given the pandemic and climate emergency?

It could be a step change in delivery of housing, and it could have a holistic approach to Chippenham. One of the overriding objectives is to try and improve the self-containment of Chippenham, so actually it becomes a sustainable and vibrant town in his own right moving forward so people can work and live and meet their service needs without a need to travel. That is the overarching principle of trying to plan for sustainable development, it is about delivering a critical mass. This road could potentially unlock development which could meet Chippenham's housing and job needs well into the future. It is also backed by government.

The Masterplan for the proposed development supported by the distributor road will seek to encourage more sustainable methods of transport by its design. This will be consulted on in Summer 2021.

All options provide opportunities for increased connectivity to the town centre and local centres through existing footpaths, cycle routes and potential new routes.

Will the consultation consider the option of not building a new road and looking for more innovative and future-facing options to meet the town's needs whilst reducing carbon emissions?

Just to be clear we are consulting on possible road routes if a road is needed to support the development proposed in the Local Plan. We accept that a lot of people may not want to see the development or the level of development that would necessitate the need for that new distributor road. If that is the case there are two ways in which they can register their objection, either via this consultation but also via the Local Plan Review consultation www.wiltshire.gov.uk/planning-policy-local-plan-review-consultation

To specifically register their objection as part of the Future Chippenham consultation, the webpage www.wiltshire.gov.uk/future-chippenham-consultation provides the link to the consultation form. On this form they are not required to give their views on options around

Future Chippenham

Connecting our communities

the road, they can move straight to saying 'other' on question number five and then question number six provides free text option for them to register their objections and why they object. This will all be captured as part of the consultation that we will be reporting on. Over and above that, on that webpage there is a link that provides an email address where they can email us directly their objection that will again be captured and recorded.

So just to summarise either through the consultation form and specific questions that exist and have existed from the start of the consultation or directly via the Future Chippenham email address that exists to capture that objection and again that's been there in place since the beginning of the consultation.

Because this question has been raised a number of times, we've taken the opportunity to put a frequently asked question on the consultation page, at the very top, to make sure that people are very clear in terms of how they can raise their objection if they want to.

What will be done to ensure residents of Chippenham can still access the countryside?

With the current lockdown provisions because of the pandemic, we are all valuing the importance of access to the countryside and open space. We have not included in this presentation the infographic which sets out the overall milestones but this can be viewed at www.wiltshire.gov.uk/future-chippenham. We are currently consulting on road route options. After that and once through the consultation and there is a preferred road route established, we will be consulting on detailed master planning across the area. Part of that will be looking at the blue and green infrastructure network that will exist over potential development, ensuring that links are maintained or created to Public Rights of Way, cycleways and canal towpath and to look at the location and scale of green space within development as well to make sure that they are protected.

Is there any consideration of the River Marden's status as a rare chalk stream?

The River Marden's status as a rare chalk stream was not assessed in the Preliminary Environmental Assessment of Options report (PEAOR) due to the design stage when the assessment was undertaken. The River Marden's status as a rare chalk stream will be assessed as part of the full environmental impact assessment to be undertaken for the road as part of the planning application if a suitable pathway for impacts on the watercourse (and its rare chalk stream designation) exists.

The assessment in the PEAOR did not find any potential effects on the River Marden as a receptor as there are no crossing proposed as part of the scheme, and because the implementation of an approved drainage design would ensure water quality in the river is maintained at existing levels.

Future Chippenham

Connecting our communities

Has there/will there be any reassessment of the proposals for the new road given the massive change to peoples work/ commuting that is underway as a result of COVID? The rush hour commute and associated congestion will be significantly reduced in the future.

The transport connectivity enabled by the distributor road provides opportunities for travel by cyclists, pedestrians, buses and cars between new and existing developments and associated infrastructure.

The transport assessment for the planning application will consider forecasts for all modes of transport and the impact of COVID-19.

I understand that much of the land in question is owned by Wiltshire Council so how much money is the council set to gain from the sale of this land?

The council has been successful in securing £75 million out of the government's Housing Infrastructure Fund. As part of that the council has had to enter into an agreement with Homes England, the government body that administers that, about how that money would be recovered if development took place. The council, as part of that recovery strategy, had to commit to land sales receipts and borrowing as part of that strategy. Now clearly that information is commercially sensitive so we cannot share that. If a scheme does proceed then obviously more detailed costs and phasing will become defined and as that happens then the council will be able to establish what the potential gain could be from any sale of land receipts. The important point that needs to be made over and above all of this, is that the whole recovery strategy is premised on the basis that there is no cost to the council in relation to the recovery strategy of the funding.

You say the plan sets out to meet the need for jobs and housing – what jobs? You also talk about “employment opportunities”, but what exactly does that mean?

It is important to understand that as we move forward as proposers of the site we will be working on a detailed Masterplan and that would include talking to Economic Regeneration team and identifying what employment needs and gaps, but also importantly what opportunities there are within Chippenham as a whole. There will also be jobs from the development and, if planned well to reduce out-commuting, the services will build up in the town itself. We have already assessed capacity and it is indicatively showing about one million square foot of commercial space if the development proceeds as possible. We need to work to investigate a deeper layer of that to find out what sectors, what the market is like, there's no good just allocating employment if the market is not there. We really have to, in this post-COVID world, dig deep but it is an important question and it is one that we want to balance communities and which matches decent affordable homes for people to jobs so they can work and live in the local vicinity.

Future Chippenham

Connecting our communities

I understand that this consultation is specifically about the road, but in the video you mention “sustainable communities”. Please define what you mean by “sustainable communities”.

Sustainable communities have broad definitions but, in this instance, it is about a planned community, so it means it is supported by essential infrastructure from the outset. It is supported by the roads but also the power, the drains, the schools, the medical facilities and so it promotes a more sustainable way of living so actually people can live and meet their needs and receive the services they want in the local area without having to travel many miles for those. It is also about having actually a very green community itself and building green so things are energy efficient, use energy efficient materials, use energy efficient building techniques. You have a choice and a range of sustainable transport modes rather than just solely relying on the car so it is about social equality, opportunity and economic sustainability for example. Basically, it is about trying to boost that resilience and self-containment of Chippenham as a standalone settlement rather than a satellite to other bigger settlements.

Have any of the Planning Committee actually visited the Marden Valley?

This is an important question as it drives the issue that we raised at the very top of the meeting the distinction between the consultation that we are taking part in now and presenting around road route options and the consultation that is taking place at the moment in relation to the Local Plan Review. A number of members of the Future Chippenham team will have visited proposed sites in the Marden Valley. It is not really our place to talk in relation to the Planning Committee, that might feel quite strange to some of the people asking the questions, but it does emphasise there is a very clear distinction in the council between this programme and the Planning Committee and the Local Planning Authority and the officers that support that.

If the houses are rejected by the residents will the road go away.

The funding for the road is predicated on the land coming forward for development as part of the Local Plan.

How does this square with Wiltshire Council announcing a climate emergency last year? This appears to be highly contradictory. Wiltshire Council will apparently be "Supporting the natural environment and biodiversity within Wiltshire through development of a Green and Blue Infrastructure Strategy".

The council has set a very ambitious target of becoming a carbon neutral county by 2030 and to achieve carbon neutrality the council will, amongst other things, need to account for carbon in its development plans. The council will also look at ways of delivering new development with reduced carbon emissions and will investigate offsetting any residual

Future Chippenham

Connecting our communities

carbon emissions, so that net input into the atmosphere is as close to zero carbon emissions as possible.

A programme such as Future Chippenham will need to demonstrate its commitment to policies in the Local Plan and how they will be met in any of the planning applications it makes.

By having planned development, the council can also have a better opportunity to ensure development takes this into account and is a stronger way to ensure the target stays on track.

We have 296 houses for sale and 32 business properties, why do we need more?

This question is better placed to be answered by Wiltshire's Spatial Planning team. We would suggest you email this question to spatialplanningpolicy@wiltshire.gov.uk

In responses to the consultation form, we are asked to give our preference on the 3 road options. Many people strongly oppose the road altogether, so why wasn't an option of 'No Road' included? Any statistics compiled as a result of these "consultation" answers will be skewed because of this

If people wish to give feedback on the consultation and object to the road in principle, they are able to do so in the free text box as part of question 6 in the consultation form, or via e-mail at futurechippenham@wiltshire.gov.uk. All feedback will be considered by the team as part of the consultation process.

You note that this scheme is all subject to the outcome of current consultation, yet you have already published a PIN notice for a contractor. How is this justified and what is the supporting business case and CBR?

If the road goes ahead the council is on a very strict timescale required by Homes England as part of the funding arrangements and therefore some of preliminary work (which doesn't commit the council at this stage) is being undertaken to assist the council to meet those tight timescales if the project goes ahead.

Why was addressing climate emergency not a strategic objective?

The council has set a very ambitious target of becoming a carbon neutral county by 2030 and to achieve carbon neutrality the council will, amongst other things, need to account for carbon in its development plans. The council also looks at ways of delivering new development with reduced carbon emissions and will investigate offsetting any residual carbon emissions so that net input into the atmosphere as close to zero carbon emissions as possible can be achieved. The carbon impact and environmental impact has been taken

Future Chippenham

Connecting our communities

into account and is one of the key considerations has been set out by Tom a programme such as Future Chippenham and we'll need to demonstrate its commitment to policies in the Local Plan and how we've been met in any of the planning applications that it makes.

What happens if those other developers don't deliver that other part/phase of the road (to the A350 north of Chippenham)? The rest of it becomes pretty pointless doesn't it?

The desire is to develop a comprehensive and holistic network for road and wider transport connections as part of Future Chippenham. Clearly the delivery of facilities by other developers will add to that. If those elements do not come forward, then the Future Chippenham project would still seek to deliver a network of connections, including the distributor road, to serve and access the Future Chippenham areas.

What evidence do you have that local people want any road at all?

This public consultation is the method we're using to gain that local feedback, if people wish to feedback, positive or negative representations on any of the routes, or no route they can complete the consultation form found at www.wiltshire.gov.uk/future-chippenham-consultation or email us at futurechippenham@wiltshire.gov.uk.

You mention the scheme would include 'employment space'. We don't need any more employment space - we have lots of empty business/warehouses already.

In the detailed master planning phase we will work with our Economic Regeneration team identifying the employment gaps and opportunities within Chippenham as a whole. At present we have assessed that there is the capacity to provide around 1 million sq ft of commercial space if the development proceeds. Future work will need to investigate the sort of commercial activity that could support.

You say on your video that this road will help us face some of the long-standing challenges such as town centre congestion, but studies conclude that building new roads, increases congestion (especially where thousands of houses are being built). Can you agree that this statement is factually incorrect?

Roads themselves do not actually increase traffic, it is the development that comes alongside the roads that are increasing the traffic. Clearly a scheme of this nature which will be seeing housing coming forward and commercial use as well, there will be traffic generation associated with the new developments; it is not necessarily the roads themselves that increase the traffic. What will have to happen is clearly there will be a full planning application, there will be a planning process for this, there will be a full transport assessment that will need to come forward looking at the scheme overall and that will look

Future Chippenham

Connecting our communities

at the transport situation and identify what particular measures need to be taken. So that type of question will be dealt with through the planning process.

Please can you say how the new road interchanges with other roads, cycle path, etc in its path, eg level-crossings, viaducts, etc?

All junctions with the existing transport network are subject to review by the transport assessment for the road planning application. This will be designed in more detail once the preferred road route option is identified.

The slides are very small and hard to read, is the PowerPoint going to be available?

A recording of the presentation can be viewed at <https://www.youtube.com/watch?v=lhrsDGzoTs8>

Will there be space to make the road a dual carriageway later?

The proposed road is being designed as a single carriageway. We are not anticipating making an allowance for potential dualling in the way that the A350 to the west of Chippenham has come forward.

How were environmental impacts that span zones assessed?

A summary of the Preliminary Environmental Assessment Options Report identifies how the zones were assessed. This information can be found on the consultation webpage www.wiltshire.gov.uk/future-chippenham-consultation.

What benefits will the road deliver to the Town Centre?

Please refer to section 10.8.3 of the Options Assessment Report (OAR) which provides information on town centre traffic flow changes for each option.

Has the road and housing been agreed and the road options are just a distraction from the bigger questions that have already been agreed?

The proposed road and any housing would be subject to planning consent and no planning application has been made by the Future Chippenham team at this stage.

What consideration has been made for the future impact of greater working from home, and therefore less rush hour congestion, on the requirement for this new road?

Future Chippenham

Connecting our communities

The transport assessment for the road planning application will certainly consider forecasts for all modes of transport and the impact of COVID-19. We need to remember that the road is not just for motor vehicles it is a transport network enabling opportunities to travel by cyclists, pedestrians, buses and cars so the reforecasting will be reforecast of all modes of transport.

Please can you confirm the road is to ease future congestion from the new houses rather than any existing issues?

The distributor road is being developed to:

- Support long term growth of the town. Transport evidence indicated that future growth of the town couldn't happen without the delivery of such infrastructure. Without it, future growth would be expected to cause unacceptable impacts on the existing road network.
- It is expected that the scheme, along with appropriate wider network mitigation, could help address some existing issues on the transport network in the town, for example providing an alternative route for those travelling through the centre of the town to access the A350 and potentially providing road capacity to improve provision for pedestrians, cyclists and buses within the town.
- Provide access to the development sites in accordance with development control requirements for transport access to large development sites.

The only time we have congestion is when there are roadworks or an accident, how will this help over the years and years of building work proposed?

An Environmental Statement will be prepared which will provide further details on Construction Traffic and Routing as well as materials. Through the development planning process, a construction traffic management plan will be provided which will provide specific details on construction traffic and how it will be managed through the construction phase. The distributor road is not expected to have any weight restrictions, however this is subject to confirmation at the next stage where the distributor road will be designed in more detail.

What biodiversity offsetting will you be doing?

The emerging vision for Future Chippenham will seek to include the delivery of an environmentally sustainable development that minimises carbon emissions and provides net environmental and biodiversity gain.

Why is 'no road' not presented as an option, and what evidence have you that local people want any road?

Future Chippenham

Connecting our communities

If people wish to give feedback on the consultation and object to the road in principle, they are able to do so in the free text box as part of question 6 in the consultation form, or via e-mail at futurechippenham@wiltshire.gov.uk. All feedback will be considered by the team as part of the consultation process.

What about option 4, reject the houses and the road goes away, with the houses already built and taking off the 5,000 extra houses Wiltshire Council added to the Government numbers it is not required?

The need for a road to support housing development has been identified within the Local Plan. Future Chippenham is consulting on three possible options for a road that could unlock the identified sites for housing development. Sustainable transport use will be a key consideration as part of the master planning work as will supporting the council's commitment to becoming carbon neutral by 2030.

You can register your objection, either via the Local Plan Review consultation www.wiltshire.gov.uk/planning-policy-local-plan-review-consultation or through the Future Chippenham consultation www.wiltshire.gov.uk/future-chippenham-consultation.

On the Future Chippenham consultation form you are not required to give your views on options around the road, you can move straight to 'other' on question number five and then question number six provides free text option for you to register your objections and why you object. You can also email your objection in principle to futurechippenham@wiltshire.gov.uk.

I have cycled around Chippenham for years and rarely use any of the cycle paths as there is no need. So why do we need more? The one on Bristol road is totally useless and wasted money.

The Future Chippenham programme will seek to improve the use of more sustainable transport methods which would include the use of cycles. Cycle routes and pathways provide connectivity to existing developments and between any potential new development.

The urban cross sections indicate that housing is proposed on both sides of the road alignment. Is this the intention?

The preliminary design for the road has identified that housing could be built on either side of the road.

Have you consulted with any users of the River Avon/Marden, such as the Canoeing Club, Sea Scouts, Angling association?

Future Chippenham

Connecting our communities

We have directly advised as many local groups and business as we were aware of at the beginning of the consultation itself and are actively seeking feedback from the whole community including any interest groups. In addition, to capture residents and other groups we have published the consultation in the media and via our website and social media and through consultation events throughout Chippenham and the outlying areas.

Do you not think it is dangerous to have cycle and pedestrian routes as one?

Road schemes of this nature would be subject to a full independent safety audit process as the scheme evolves from feasibility through preliminary and then into detailed design. The safety audit process also involves assessment post scheme opening. Clearly the design will take on board the views and recommendations coming through that safety audit process.

Would the route be lit? The indicative x-sections do not show lighting.

The road will need to accord with the relevant design standards. As a general rule, urban areas are lit and rural areas are not, but the exact details and extent of street lighting will be addressed at detailed design stage.

Does anyone who has proposed any of these plans actually live in Chippenham?

The Local Plan Review will determine the type and nature of development. Many members of the team are residents of Wiltshire.

Approximately what year is work likely to start on building this road please? Thank you

The commencement of the build for the potential road would be subject to gaining planning consent. Our initial programme has identified that this could commence in Winter 2022/23 if planning consent is gained.

By removing the farms how is sustainable local food being covered?

Thank you for your question into the Future Chippenham road route options consultation. This question is best placed to be answered by the council's Spatial Planning team. We have therefore forwarded your question to them.

How much has the work so far on the road bid and consultation cost, why wasn't the public involved earlier?

The Future Chippenham programme has secured £75 million of Housing Infrastructure Fund (HIF) funding to support the delivery of the potential distributor road. This includes the preliminary work required to develop the design and consultation on the road.

Future Chippenham

Connecting our communities

The council does not as a matter of course consult on seeking funding from government.

We had originally planned for the public consultation on road route options to take place in Spring 2020, but this was delayed because of COVID-19.

Do we actually need these roads/houses? Look what happened to the court which is now being torn down.

This question is more appropriate to the Council's Spatial Planning team, who are progressing the Local Plan Review on behalf of the council as Local Planning Authority. Please email this question to spatialplanningpolicy@wiltshire.gov.uk

Bearing in mind most single carriageway roads are being widened, will there be allowance for widening in the future?

The function of the proposed low speed road to the east of Chippenham is for local transport connectivity and distribution, to enable residential and employment development, it is not a strategic road or bypass.

You assume further growth needs more road links. Have you considered different scenarios for how people could live and work in a post-pandemic future - given the urgent need to reduce carbon emissions and the likely increase in remote working?

One of the overriding objectives is to try and improve the self-containment of Chippenham, so actually it becomes a sustainable and vibrant town in his own right moving forward so people can work and live and meet their service needs without a need to travel. That is the overarching principle of trying to plan for sustainable development, it is about delivering a critical mass. This road could potentially unlock development which could meet Chippenham's housing and job needs well into the future.

Was the survey carried out recently? Over this winter we have had a large amount of flooding over all this area, has the future modelling accounted for this or just an average amount of rainfall?

The scheme is utilising the Environment Agency model of flooding across the River Avon catchment. The model was built a few years ago, following a topographical survey. It included a hydrological analysis based on data gathered over the years. Although the storm events over the last winter were subsequent to the model, these events will be used to check the goodness (for example calibrate) of the model for Future Chippenham.

The scheme will be designed aiming to have negligible impact on flooding even under the 1 in a 100 year storm scenario with both the 35% and 70% climate change allowances

Future Chippenham

Connecting our communities

included. These climate change adjustment factors are dictated by the Environment Agency based on the predicted rise in severity of storms as climate change becomes greater and more apparent.

From an environmental point of view, you're talking a lot about visual impact, but what about the impact to the wildlife and biodiversity in the area? You have hardly mentioned them.

Whilst the overall environmental assessment undertaken at this options appraisal stage was largely based off desk-study information, certain topic areas such as landscape and biodiversity did include the use of site survey information. When a preferred option has been selected and the scheme progresses towards a planning application, a detailed Environmental Impact Assessment (EIA) will be undertaken and reported within an Environmental Statement. This assessment will be based off detailed site surveys and a more in-depth study of environmental impacts than the proportional assessment undertaken at this stage, although the assessment in the Preliminary Environmental Assessment of Options Report (PEAOR) can be considered the initial step of this EIA process.

The biodiversity chapter of the PEAOR which informed the Options Appraisal Process was informed by an extended Phase 1 habitat survey undertaken across the site to record habitats present and evidence of the presence of, and the potential of each habitat to support, protected and priority species. This was further supported by wintering bird surveys and preliminary bat roost assessments undertaken across this area in winter 2019/2020. This assessment carried out in the PEAOR used this data, alongside Environmental Record data and the locations of priority habitats and designated sites to form an assessment of the impact of each of the road options in each zone.

The extended Phase 1 habitat survey has also informed the likely protected species on site and set the scope for further species specific surveys that are currently ongoing. These surveys are being undertaken in alignment with current survey guidance and will tell us what protected species are likely absent or present on the site, how species present are using the site and therefore what the potential impact of the scheme would be on these species. From this point, mitigation will then be designed in-line with the mitigation hierarchy and current guidance to ensure the development does not lead to significant adverse impacts.

How will the roads cross the public rights of way (for instance will bridges be provided to pedestrians to get across the road)?

Equally important is the consideration of connections to the wider public rights of way network, and indeed with connections coming in towards Chippenham town centre. These matters will be considered as part of the overall scheme development.

Future Chippenham

Connecting our communities

Which option delivers the most traffic benefits to the town centre?

Please refer to section 10.8.3 of the Options Assessment Report (OAR) which provides information on town centre traffic flow changes for each option.

Will you commit to reinstate the Wilts & Berks canal crossing with the A4 as part of this scheme? This will future proof the canal regeneration.

We are committed to working with Wilts & Berks Canal Trust and its members to seek opportunities to support the aspirations for the Canal now and in the future.

How does this fit in with the government's legally binding obligations on the net zero emissions enshrined in law June 2019? Proved through the Heathrow story.

The construction of the road scheme would be unlikely to lead to a significant increase in greenhouse gas emissions on its own, when compared against the government's legally binding climate reduction obligations and would not include a large percentage of carbon emissions compared to the reduction targets. We are nonetheless committed to drive carbon reduction in construction and operation through our design in light of our own greenhouse gas reduction targets.

The road itself is unlikely to actually generate substantially more emissions during operation as it will be unlikely to generate further traffic movements on its own outside of when maintenance works are required. However, the housing it will bring forward does have the potential to increase traffic movements and therefore greenhouse gas emissions in the local area. The amount of movements and therefore greenhouse gases the housing will generate from travel will be mitigated through the careful integration of public transport and active travel connectivity to existing services to reduce emissions, as well as further measures to encourage efficient vehicle usage.

Could you separate out the environmental impacts so that ecological and climate impacts are considered separately to heritage and aesthetic impacts?

The options were all assessed separately per environmental topic per zone within the Preliminary Environmental Assessment of Options Report (PEAOR). The environmental topics assessed were:

- Air quality
- Noise
- The water environment
- Landscape
- Cultural heritage
- Biodiversity

Future Chippenham

Connecting our communities

- Soils and geology
- Materials and Waste
- Population and health
- Climate change effects

Vulnerability to climate change (no option preferences selected)

A summary of the main findings of these assessments is outlined in the PEAOR Non-technical summary document that was produced for this consultation and is available on the webpage <https://www.wiltshire.gov.uk/future-chippenham-consultation>

The assessments in the PEAOR attempted to define the potential significance of effects of environmental impacts of the various options as well as a preference of options per zone based on that specific topic area. This meant that options were scored wherever possible to understand the preference even if slight, between them. The Options Assessment Report (OAR) took the findings of the PEAOR and gave them a scoring. This scoring was equally weighted between topics, but it focused on avoiding more significant potential environmental effects and focused on key differentiators between the options. To make best use of the time available, focusing on the key differentiators in environmental effects was the approach also used for the webinar. As noted above, summaries of the key preferences per topic area per zone are available in Chapter 5 of the PEAOR Non-Technical Summary document.

Please explain in terms easier to understand. Will this and the housing go ahead in some form and so this is just a minor exercise in road planning as a distraction?

The Local Plan Review will determine the type and nature of development. We are consulting on options should that development come forward. Any proposals will have to be considered against the Local Plan and policies. Your views need to be made as part of the Local Plan consultation too and we would encourage you to do so.

You repeatedly refer to environmental "screening" as an environmental impact. But what impact does each route have on environmental habitat and introducing infrastructure that will irreversibly affect the landscape forever?

References to screening were generally made to note how visual impacts can potentially be mitigated through the design of the scheme.

During the webinar, it was outlined that across all zones, Option A has the potential to cause significant impacts on landscape character, and on views from the south and east due to its generally higher alignment and location within the local landscape. Whilst minor adverse impacts are likely under Options B and C, these are unlikely to be significant in assessment terms as the way they follow the topography allows them to be better

Future Chippenham

Connecting our communities

integrated within the existing environment. Generally speaking, Options B and C follow low points in the existing topography so they do not stand out in long-term views, which, when combined with matured screening vegetation, would make them not significant in landscape terms.

In respect of impacts on biodiversity, this was not discussed in detail due to the time limitations of that event and that the discussion was focusing on the differentiators in the options that led to the current identified preferred route in the options appraisal process thus far. In most zones, the biodiversity impacts between the options was found to be broadly similar, which means they were not referenced as much in the webinar. Whilst we have identified some potential impacts on biodiversity in the Preliminary Environmental Assessment of Options Report largely focused on the loss of existing hedgerow and field boundary features, it is hoped that with the careful integration of mitigation measures in our design that these impacts can be mitigated.

Which consultation is for representations on the principle of the Future Chippenham housing and commercial development and this distributor road, and when is its deadline?

The Local Plan Review is for representations on the principle of the Future Chippenham housing and commercial development. This consultation ends at 23:59 on Tuesday 9 March 2021. www.wiltshire.gov.uk/planning-policy-local-plan-review-consultation
Future Chippenham is consulting on the potential distributor road route options. This consultation ends at 5pm on Friday 12 March 2021. www.wiltshire.gov.uk/future-chippenham-consultation

The majority of people are totally unaware of these plans. To ensure a full consultation, why hasn't a letter been sent out to each household giving details of how they may object?

Letters were sent out to those residents who would be directly affected by each of the potential road route options to make them aware of the consultation. Whilst this consultation has been more digitally focused due to COVID restrictions, so as well as our public webinars, we have been to Area Board meetings, Town and Parish Council meetings where we have asked for suggestions on ways to reach people especially those residents who may not have access digitally. Hard copies of the consultation materials can be collected from Monkton Park or we can send them by post. We have advertised the consultation through promotional posters and flyers in the town, through the media and on social media. We also extended the consultation period to eight weeks to take account of the current COVID restrictions.

Future Chippenham

Connecting our communities

Why build any of this on the flood plain? 1 in 1000 year events have become 1 in 10 thanks to global warming. Surely nothing should be built below the 50m contour line?

The designs presented in the consultation do not include any structures within the floodplain. In terms of flood risk, the preferred option would be to have a viaduct structure over the entire length of the 100 year + climate change floodplain, to allow water to pass underneath the highway. Should any embankments be built within the floodplain, accurate flood mitigation measures will be implemented to avoid increase flood risk across the site and/or elsewhere, as per Environment Agency guidance.

Your plans will damage to the character of Chippenham – a small market town - as well as surrounding villages. It will destroy much of what local people value about living here, with absolutely no guarantee of any future benefits for the town.

The Local Plan Review will determine the type and nature of development. We are consulting on options should that development come forward. Any proposals will have to be considered against the Local Plan and policies. Your views need to be made as part of the Local Plan consultation too and we would encourage you to do so.

Are there going to be segregated crossings where cycle routes cross the proposed route for instance where cyclists will not need to dismount and cross at different levels?

Cycle and pedestrian paths will be included with the delivery of the road. Cycle and pedestrian networks will be influenced by the adjacent land development and associated transport assessments.

Why don't Chippenham's views count and only the village's views?

This consultation is seeking feedback from all residents and other stakeholders in and around Chippenham and welcome all feedback.

Will there be cycle routes along all road options?

The initial designs for the potential road and potential housing will seek opportunities for cycle paths alongside the road and through the developments themselves.

How was relative carbon cost of non-infrastructure alternatives to a road accounted for in the options sifting?

Future Chippenham

Connecting our communities

The relative cost of a non-infrastructure alternative was not explored as part of the preliminary environmental assessment of options as the road is proposed should it be required to unlock and deliver anticipated future housing needs.

How will you ensure pedestrian and cyclist safety along the national cycle network between Chippenham and Calne? This is very well used and where options B and C cross in particular have many families with children and dogs walking and cycling. Bridges or underpasses would definitely be needed! Has Sustrans been involved/informed?

Crossings will be provided where any Public Rights of Way (PRoW) are bisected. Crossing types will be determined following the preferred options selection.

A full detailed review of PRoW will be undertaken following selection of the preferred road option. This will be coordinated with adjacent land development.

Public Rights of Way will be improved where appropriate as part of the development planning applications.

Where the new road bisects an existing PRoW, traffic flows for both the road and PRoW will be assessed and an appropriate diversion or crossing included in the road planning application.

It is likely that either informal or formal (controlled for example traffic signals or zebra) will be appropriate to provide safe crossings of the road; as mentioned above the form and type of these crossings is informed by the transport assessments for the planning applications.

The information above very much informs the process that will take place and following selection of the preferred distributor road route we will be advancing the design of the road and coordinating this with the Masterplan layouts for the adjacent land developments, and liaising with Sustrans. The preliminary design for the planning application for the distributor road will also be subject to an independent road safety audit.

What's the proposal for how the road would cross the Chippenham-Calne cycle path? Will there be a bridge over it?

All 3 options propose crossings at grade with the National Cycleway, meaning a crossing of the road will be included here to facilitate this. The type of crossing implemented will be informed by the transport assessment and forecast flows for traffic permitted to use the road and traffic permitted to use the national cycleway (cyclists, pedestrians, horses).

Have you surveyed the area for bombs? Abbeyfield School had bombs and these obviously had to be removed before construction could go ahead.

Future Chippenham

Connecting our communities

As part of the Preliminary Environmental Assessment of Options Report (PEAOR), the likelihood of unexploded ordnance being found on site was scored low following a search with ZeticaUXO.com. At this stage, as the desk study found a low risk of Unexploded Ordnance on site, no further surveys are anticipated to be required.

Can a record of all the questions asked and the answers please be made available?

A record of all questions asked with answers will be sent to all those registering to attend this webinar. This will also be published on our website.

If the intention is to in-fill with housing why is so much attention being given to visual impact to existing housing such as Monkton Park?

As part of the Options Assessment Report a visual impact assessment is completed on the existing environment.

What is proposed for the junction with Stanley Lane?

All junctions with the existing transport network are subject to review by the transport assessment for the road planning application. Layouts for the surrounding residential developments will influence the type of junction and designated use of Stanley Lane, any changes will be subject to planning approval.

Harden's Farm is from 1781, how can you destroy that?

The Preliminary Environmental Assessment of options and Options Assessment Report considers in detail the impact on cultural heritage. These documents can be found here: www.wiltshire.gov.uk/future-chippenham-consultation. Consultation is also being undertaken with statutory consultees, English Heritage.

Considering the 3 proposed routes I would like to know the cost, in cash terms, for each. Does the projected cost of any of them come in below the £75 million HIF grant? Where will the additional cost of the road be funded from?

The potential costs for each of the road route options is detailed in the Options Assessment Report which can be found on the consultation webpage in section 10.10 and are budgets at this stage.

None of the potential budgets come in below the value of the Housing Infrastructure Fund (HIF) grant. The recovery of the HIF grant will ultimately be reinvested back into the scheme to fund any costs above the initial grant.

Future Chippenham

Connecting our communities

Considering the 3 proposed routes I would like to know the cost, in social terms, for each. I am interested in the social cost to Chippenham and the wider community, and how this has been calculated.

The Options Assessment Report assesses each route option in terms of environmental impact, deliverability, transport network impacts and value for money. The environmental impact of each route includes detailed consideration of impact on Population and Health. This report can be found here: www.wiltshire.gov.uk/future-chippenham-consultation.

Considering the 3 proposed routes I would like to know the comparative costs for each in terms of carbon emissions. It is almost 2 years since Wiltshire Council declared a climate emergency and pledged to become carbon neutral by 2030. This proposed road could have a considerable impact on this pledge, so, I would like to know the comparative emissions for each route, including emissions in excavated the ground, emissions for construction, including manufacturing materials and bringing materials to site and any other associated emissions.

The assessment of carbon emissions during construction included in the Preliminary Environmental Options Assessment Report which informed the Options Assessment Report did not include quantification of the carbon emissions of the scheme during construction or operation. The quantification of these emissions during construction and operation of the road will be done as part of the Environmental Impact Assessment process that will inform and Environmental Statement to be submitted as part of the planning application.

However, it was still possible to undertake a comparison-style carbon assessment using the experience gained from numerous other projects, and using key indicators provided by the design team. For example, concrete is an incredibly carbon dense construction material and therefore it is simple to identify the potential better solutions in respect of carbon emissions by looking at this indicator. Similarly, the identification of route lengths is also a key indicator. Whilst the assessment was undertaken in zones, generally speaking Option C was the 'best fit' route from a carbon emissions perspective due to its combination of having the shortest route and also decreased concrete requirements as a result of the shorter southern viaduct.

I would like to ask the same questions for a 4th option of no road at all. What would be its cost in cash, social and carbon emissions.

Without a road it is likely that Wiltshire's housing need would not be met for 2036. If housing need is not met, then it leaves the community open to ad hoc development with less ability to develop a co-ordinated and planned community.

So your offering options before a survey has taken place? Is that allowed?

Future Chippenham

Connecting our communities

Preliminary surveys have taken place and further surveys will follow. We are consulting on three road options and would welcome your feedback and comments either by filing in our consultation survey, found on our consultation webpage www.wiltshire.gov.uk/future-chippenham-consultation or email us at futurechippenham@wiltshire.gov.uk or alternatively send a written response to the Future Chippenham team, Wiltshire Council, County Hall, Bythesea Road, Trowbridge, Wiltshire BA14 8JN.

Will the source data for the options assessment scoring be made publicly available?

Relevant source data for the options assessment scoring can be made available to the public. Please advise if there is a specific set of data required and note that the options assessment will be updated to consider feedback from the public, feedback from other stakeholders including landowners and developers and input from environmental field surveys and flood modelling.

Option C keeps being mentioned as better for less visual impact. Surely option C followed by B would have greater visual impact for existing residents of Chippenham. Is this assessment considering existing residents and impact on them or just considering impact on those living outside Chippenham or travelling through?

There has been understandable interest in views from Chippenham out towards the site. The main receptor groups for views out from Chippenham are at Pewsham and Monkton Park respectively. These receptor groups are considered in the assessment in the options appraisal.

The semi-circular edge of the residential development in Pewsham has a well-defined vegetation screen that largely prevents views across the study area in question although some properties do retain views above this. However, Options B and C still remain visually un-obtrusive due to their location within the existing topography. Option C approaches from the west parallel to Pewsham Way, it is screened by the existing topography by being on the other side of a small hill behind the lane to Middle Lodge Farm. Likewise, Option B is on the other side of this rise and is even lower in the existing topography before both options combine east of Middle Lodge Farm. The scheme may be partially within some views at this location as it bridges the proposed regenerated Wilts and Berks Canal route, but this would be a small section, and is also well-screened by existing field boundaries in the area. After bridging the proposed canal route, the scheme again falls behind existing vegetation cover between the options and Pewsham.

The edge of Monkton Park development is again vegetated along the rear end of the development and along the River Avon corridor, but views across farmland are greater than in Pewsham. Options B and C will be largely shielded from views by following lower lying topography to come partially within views from Monkton Park behind Harden's Farm and

Future Chippenham

Connecting our communities

existing vegetation as the scheme approaches the National Cycle Route. With mitigation in the form of localised landscape screening mounds, and compensatory screening planting in keeping with current field boundary vegetation, the impact of the road is expected to not be significant in views as it would not dominate the existing landscape.

What considerations and mitigations have been considered to protect the vast local wildlife and ancient trees/established hedgerows we have in this area please?

At this early optioneering stage, mitigations to prevent impacts on protected species have largely focused on avoidance measures to avoid locations of likely better habitat and distinguishable features like mature hedgerows. However, the assessment in the Preliminary Environmental Assessment Options Report (PEAOR) assessed the potential impacts of the scheme on protected species and found that generally, the worst impacts from the various options were likely to come from segregation of existing commuting routes used by protected species to navigate their way across the field network. With this identified, mitigation in the Environmental Statement will largely be focused around maintaining and improving existing field margins across the site and ensuring connectivity either side of the road is possible for these protected species. Habitat creation through integration with the Sustainable Urban Drainage System and landscape planting will also be used to further provide opportunities for biodiversity to flourish.

Shouldn't next steps include alignment with Core Strategy review as the need may not be demonstrated through that exercise?

The Local Plan Review is a parallel exercise and subject to a separate consultation. The Masterplan for the Future Chippenham development will consider alignment with the Local Plan Review and as a developer Future Chippenham will provide comments on this separate consultation where we feel this is appropriate.

Proposals for the Future Chippenham development will be consulted on later in 2021 and will use the preferred road route as part of the input data to inform the Masterplan.

Will these assessments be better advertised better than the other consultations with a better time frame?

The Stakeholder and Community Engagement Strategy for the Future Chippenham programme was published at October 2020 Cabinet. The programme team will continue to provide details of the forward plan of events in advance wherever possible on its webpage.

It seems like you have already made up your minds. Is there an option for no road at all?

Future Chippenham

Connecting our communities

The consultation form does enable people to object to the road. Question 5 seeks your views on what you consider are the important issues relating to the proposed distributor road route options. Question 6 has a free text box to allow you to go into more details. So, you can answer questions 5 stating your objection in the 'other' box and in question 6 set out fully your objection and reasons if you wish. You can also choose whether you wish to complete the road route options part of the form before submitting your response.

Alternatively, you can object in principle by either e-mailing futurechippenham@wiltshire.gov.uk or sending a written response to the Future Chippenham team, Wiltshire Council, County Hall, Bythesea Road, Trowbridge, Wiltshire BA14 8JN.

We would encourage you to use any of the above means to submit your feedback to us.

The council is acting as landowner, strategic planner and scheme promoter. How is it demonstrating that conflicts of interest are being appropriately managed?

The Future Chippenham Programme team encompass the role of landowner and promoter and this is completely separate from the Local Planning Authority role. The governance of the programme is robust and ensures that no conflicts of interest occur.

Is there something I am missing? A good road study, planned for 2022/23, but no application for the road or the housing? Tell me I am wrong?

The planning application for the road and associated Masterplan will be submitted in Winter 2021. This consultation is to gain feedback to inform the road route that will be selected to form that planning application.

How do you analysis the feedback, how do we know what to aim for?

This question is unclear. However for clarity, all responses received via the consultation survey or in writing to the Future Chippenham team will be considered to inform the road route option selection. Feedback is being sought from all stakeholders, residents, landowners and commercial businesses.

How can you offset carbon emissions when you will destroy important habitat and biodiversity in the building of this road?

At this stage no quantified assessment of carbon emissions has been undertaken. An assessment comparing the options in respect of their potential carbon emissions has been undertaken for the Preliminary Environmental Options Assessment Report (PEOAR). When a preferred route has been announced and the scheme progresses towards a planning application, quantification of carbon emissions from the scheme will be undertaken as part

Future Chippenham

Connecting our communities

of the Environmental Impact Assessment (EIA) to be undertaken to support this planning application.

This is a really clear presentation thank you. Why are we not following route C from start to finish and why can it not be 2 lanes with an optional 3rd (overtaking lane)?

All feedback received as part of this consultation will be considered in deciding on the preferred route. We would encourage you to feedback on the consultation form or in writing by email or letter to the address on the webpage www.wiltshire.gov.uk/future-chippenham-consultation.

Chippenham lacks an east-west distributor road. It already has a north-south route in the A350. Why is the Eastern link road needed for improving traffic flow and congestion?

The potential road provides a link to the existing A350 to the North and South of Chippenham. The road options being consulted upon all lie to the east because that is where the Future Chippenham development areas are located.

In working out the carbon budget has the impact of digging the ground and carbon stored being released been calculated and if not, why not?

The scheme has not undertaken any quantitative assessment of carbon emissions from the construction of the scheme at this point in time due to the early optioneering design stage where we are consulting on this scheme. At this optioneering design stage, there is typically not enough robust information regarding material quantities and types to allow an accurate carbon cost of the scheme to be made, so a comparative assessment between the different options is the most appropriate and proportionate method. When a preferred option has been selected, carbon reduction will be a key factor of ongoing design development to ensure construction carbon costs are as minimal as possible, as well as designing infrastructure itself to be operationally efficient. The greenhouse gas emissions from construction and operation of the highway will be presented in the Environmental Statement that will accompany the planning application.

Wiltshire Council is consulting about this because of an ageing population leading to 7500 homes. All of this way in the days before COVID. Should the whole consultation not be rethought in light of the new world we live in?

COVID implications will continue to be reviewed throughout the lifecycle of the programme. However, the need for housing is unlikely to significantly change.

Off-setting carbon is being increasing viewed as a bit of a cop out. Should Wiltshire simply not be increasing any carbon to meet its climate emergency commitments?

Future Chippenham

Connecting our communities

Any development including Future Chippenham will need to be policy compliant.

Have any of the 'experts' actually visited the area?

We can confirm that members of the Future Chippenham team and its design team have visited the proposed site.

Why build to the South and East, so prone to floods, and complicated by the canal, when the North and West don't have these issues? Where is the evidence for Chippenham needing 7500 houses?

These questions are best placed to be answered by the council's Spatial Planning team. Please email spatialplanningpolicy@wiltshire.gov.uk

I thought the road was meant to open up Monkton Park. Can you outline how the road will allow further road networks in and out of Monkton?

The access road connecting from the eastern distributor road to Monkton Park is part of a separate planning application for the Rawlings Green development site and is delivered by other developers. Further details for this are available on Wiltshire Council's planning portal.

How does thinking regressively and building a huge new road (plus associated houses) on green land, destroying carbon sinks and emitting huge amounts of carbon during construction, align with Wiltshire Council's work to become carbon neutral by 2030?

As mentioned above, the council has set an ambitious target of becoming a carbon neutral county by 2030. To achieve carbon neutrality the council will, amongst other things, need to account for carbon in its development plans. The council will also look at ways of delivering new developments with reduced carbon emissions and will investigate offsetting any residual carbon emissions, so that the net input into the atmosphere is as close to zero carbon emissions as possible.

A programme such as Future Chippenham will need to demonstrate its commitment to policies in the Local Plan and how they will be met in any of the planning applications it makes.

What speed limit be on the road?

The speed of the road will be defined as part of the ultimate highway development. It is envisaged it will be low speed.

Is there any compulsory purchase required for and part of this scheme?

Future Chippenham

Connecting our communities

Compulsory Purchase Orders will be considered at the appropriate time in the programme and will be only be implemented as a last resort.

**Public webinar on 20 February 2021
Questions and answers**

What is the purpose of the distributor road and its high-level design?

The road's primary function is for local transport connectivity and distribution and this is to enable residential and employment development. It is not a strategic road or a bypass. The road is a single carriageway and includes transport infrastructure for cyclists, pedestrians, buses and cars. The road can be described as a primary street running through the future development.

What is the speed of the road?

The road will be low speed. It's likely at this stage to be 30 miles an hour through the development, but this will be subject to agreement with Wiltshire Council highways and it will also be subject to a Road Traffic Order as part of a separate decision-making process.

Does housing front onto the road?

It's intended that houses will front onto the road corridor with pedestrian access directly from the primary street. At this stage we are considering that motor vehicles will access to rear parking courtyards, although there may be some limited direct access onto the road for shops and retail.

What structures are included in the scheme?

There are two large structures over the River Avon flood zones to the north of the scheme. The bridge over the River Avon is 258 metres long and that is common to all distributor road options. To the south of Chippenham, the lengths of bridge viaducts vary depending on the distributor road options; so Option A has a 468 metre long viaduct, Option B has a 444 metre long viaduct and Option C, which is the inner route, has a 336 metre long viaduct.

In addition to those structures there are bridges over the Wilts and Berks Canal, which are much shorter at 30 metres in length. Option A has two bridges, one at Pewsham Locks which is close to the restoration so it would need to be very carefully designed and it has another bridge just north of the A4 at Green Lane Farm. The inner and middle routes have the same bridge location near Pewsham Way and close to the Pewsham Locks restoration and could potentially provide access to future development at that location. The final bridge is dependent on the Pewsham link option that is taken forward; Pewsham link option one has a bridge that is currently 80 metres long bridging the valley at Avon Valley Walk to connect to canal roundabout, the other Pewsham link road option doesn't require a bridge.

Future Chippenham

Connecting our communities

Are you intending to build the whole road at the same time would not it be better to build it in stages as the houses are built over a period of years?

The current thinking is that the road would be delivered as a single project, which will allow for efficiencies of scale. There may be elements of the road that would open slightly in advance of other elements of the road, but certainly it won't be more than maybe a few months apart.

The programme for delivery is really being driven by the funding availability which is coming through the Housing Infrastructure Fund (HIF).

What will happen at the points where the public rights of way intersects with the distributor road?

There are several Public Rights of Way (PRoW) that will be intersecting with the route. Accessibility is a key issue for the design; we want to develop that permeability and that connectivity. Our current thoughts are that we will be trying and aiming for at grade crossings to allow people to pass across the new route as easily as possible. We are not really anticipating subways or footbridges at this stage. The final types of crossings will be informed by the transport assessment for the scheme at planning stage and these will be reviewed by an independent Road Safety Audit.

What examples might there be of similar roads that we can see elsewhere that give us some sense of what this might look like?

We have presented a number of cross sections in previous webinars which give a good indication as to the elements of the carriageway and the surrounding infrastructure.

One of the better examples you could visit is not actually in Wiltshire; there is a location at Lobley's Drive in Brockworth in Gloucester which is the section that is east of the M5 and that is quite similar. There are parts of Upton Meadows in Northampton that are also similar.

An example within Wiltshire would be Eastern Way in Melksham as the road size and the scale of the infrastructure there is in line with what we are envisaging, the separated footways and cycleways. Eastern Way though does not have the tree lining, the landscape planting and it obviously doesn't have the buildings fronting onto it.

What influence do individual stakeholders have on the route selected, for instance is there more weight from one to another?

We are interested to hear the views of everyone, and we will take all views into account. If you think about engineering design, there are particular disciplines that we need to think

Future Chippenham

Connecting our communities

about and certain stakeholders have particular influence in those particular disciplines. The Environment Agency might be an example, their discipline clearly is the rivers, the floodplains and how we deal with the question of water and drainage on this scheme, so their views in that discipline area will be key. The views of major stakeholders with key areas of involvement such as the Environment Agency will have key influence in their particular discipline area.

Clearly the views of the public, the views of local people and local knowledge is of importance to us and we want to hear those local views.

We are interested to hear the views of all and will take all views into account.

What is the evidence base used for the scheme?

The Wiltshire strategic traffic model has been used and includes future forecast years for 2024, which could be an opening year, 2036 which is the Local Plan year and 2051 for future forecast year. The base count data that was available in this and also informed the Housing Infrastructure Fund (HIF) bid was taken during 2018 which was obviously pre COVID-19. The influence of COVID-19 will certainly be considered as part of the transport assessment for the planning application. At the moment it's a very difficult thing to predict but it will be something that is included in the process. The modelling for the options assessment builds on previous evidence from the Chippenham Site Allocations Plan which was for the previous Local Plan up to 2026 and also builds on evidence that was undertaken as part of the HIF application, so these two documents support the selection of the eastern distributor road as the most appropriate option to enable the housing growth.

What are the current findings?

The Options Assessment Report for the road the modelling focuses on comparing the traffic impacts of each route option. In terms of current findings, the results are quite similar for each option as there's minimal difference in traffic modelling terms although Option C, which is the inner route, does perform better than the other two in terms of reducing traffic in the town and reducing pressure on existing junctions.

What is the process and how is this linked to designing a new road?

Transport modelling and the associated forecast flows inform the route types and widths for all modes of transport and that's including cycles, pedestrians and motor vehicles. It also informs the new road junction types and scale and it will also inform amendments to existing roads and junctions and requirements to mitigate the impact of future housing and employment developments. All of the transport modelling will be summarised in a transport assessment as part of the planning application.

Future Chippenham

Connecting our communities

Does your traffic modelling allow for the expansion of other areas of Chippenham or just the development that you want to promote?

The traffic modelling undertaken to date reviews the housing development to the east of Chippenham. This was initially undertaken to inform the Housing Infrastructure Fund (HIF) bid.

Future Chippenham will seek to promote development on Wiltshire Council land to the east of Chippenham. All landowners and developers will be responding to the Local Plan Review process and where their land is allocated this will provide a good basis for progression of a planning application.

It is logical that improvements to the transport network will provide greater opportunities for other areas to be developed and indeed there are a variety of landowners located along the eastern distributor road route and potentially other areas in the town that may also benefit.

The traffic model and the transport modelling does include for other developments that are in the pipeline so we're not just looking at the existing situation and then Future Chippenham, we are looking at it more globally.

What is the model coverage and which roads are included, for example is the modelling including the A4 to Calne A342 Derry Hill and the various country lanes in the area?

The model used is the strategic model for Wiltshire; it's an area-wide model so it has all of these roads within it.

The model has been cordoned to initially assess the impact on the main routes through the town centre. So, a lot of the output data that you'll see in the summary and the Options Assessment Report does focus on unlocking that congestion in the town centre as an enabler for housing growth. The model will assess the impact on the wider transport network and appropriate mitigation will be included as part of the planning application; unclassified roads will also be considered where affected.

What do the results show, or what are you anticipating in terms of traffic increases?

The model includes a number of assessment categories and shows significant in over capacity queues and delay when compared to a no road scenario. This model summary is presented in section 10.8 of the Options Assessment Report.

Will the intersecting Public Rights of Ways such as the national cycle route be resurfaced as part of the scheme?

Future Chippenham

Connecting our communities

We're not anticipating wholesale changes to the existing Public Rights of Way infrastructure.

The needs of and provision for walking and cycling will be considered as an integral part of the design development. There may be opportunities to provide some local resurfacing, perhaps vegetation clearance or maybe some street lighting upgrades but it's going to be relatively local to the new route and the national cycle routes will be considered as part of this process.

Will the whole road open at the same time and if not, could the existing road network end up as rat runs?

The intent is that the construction of the road will be a single project and broadly speaking it will all open within a short period of time.

There could be some local routing that develops as elements come forward and one consideration that we will need to have as we go into the construction phase, which obviously is sometime into the future, will be construction traffic. How we deal with that, how we route that, how we access the site are all questions which will need to be considered as we develop the transport assessment for planning; the planning conditions will help to mitigate this concern.

Why have you proposed a southern link road between the A4 and A350?

The distributor road, between the A4 and A350 south, provides a number of benefits including mitigating transport congestion from the town centre by providing an alternative route to access the A350 to the south of Chippenham; this would predominately be used by residential areas to the south of Chippenham and also from traffic using the A4.

How has the impact of the road route options on biodiversity been assessed?

The biodiversity assessment for the options appraisal process has been informed by a Phase 1 habitat survey undertaken on site which basically identifies what types of habitat are on site and what protective species are likely to be on site. That's been combined with a review of the environment records so that gives us details of what previous species have been found on site and where they've been located.

The Phase 1 habitat survey found that generally speaking the biodiversity of the majority of site is actually relatively poor because its land type is semi-improved grassland or arable land which does not encourage high biodiversity. This has been supported by the findings of the species specific surveys we've undertaken to date. There are some pockets of better habitat across the site located around the River Avon, the River Marden and also along the minor water course Cocklemore Brook. Small patches of woodland, some ponds and the

Future Chippenham

Connecting our communities

hedgerows on the site are also relatively species poor and lacking woody vegetation, but at the same time they are an important asset for protected species we do have on site to commute and get to these areas of better habitat and obviously they're also used for foraging and occasional sheltering.

How will the scheme ensure local biodiversity is not ruined?

The main impact in the scheme on biodiversity is likely to come from cutting across these hedgerows and varying the landscape we are moving through. However, these effects should be mitigatable through careful design and vegetation planting as the scheme progresses. We can strengthen existing hedgerows and other solutions for connectivity such as wildlife tunnels or green bridges to cross the roads as required. More detailed assessment based off surveys undertaken for specific species will be undertaken to inform the design and the environmental impact assessment for the planning application so essentially more information will come forward.

How will landscape and local views from property be affected?

The first two webinars largely focused on Option A in the sense of there was potential significant effects identified for views from south and east of that option which weren't felt under Options B and C because there weren't any significant impacts on landscape associated with those options. Obviously, there is a lot of interest from people, particularly from Monkton Park and Pewsham, about what the visual effect of the scheme will be.

Pewsham and Monkton Park both have quite dense vegetation strips around the outside of the development towards our site which does give us a natural screen to work into. The existing topography Options B and C run behind existing landform, they allow it to be naturally screened and when there would be an occasional bit where you would potentially be in views it's within the landscape character where vegetation screening and small landscape bunds will be appropriate to help screen the road, so these effects were seen as non-significant.

What are the quantified carbon costs of the proposals?

At this stage, the project has not quantified the carbon cost of the scheme, with the assessment for options appraisal being a comparative assessment which has been based off experience of carbon emissions from construction of these schemes and looking at the usual key indicators such as scheme length and requirement for structures. The reason this approach was taken forward is that we are at such an early design stage that there is not enough robust quantifiable data about the scheme design to allow an accurate quantified assessment of construction carbon to be made. When a preferred option has been selected, the scheme design will progress to allow a planning application to be made. As part of this design process, opportunities for carbon reduction will be explored and there will

Future Chippenham

Connecting our communities

be a quantified assessment of construction carbon provided as part of the environmental impact assessment for the scheme submitted alongside the planning application.

Won't this development increase the flooding downstream?

The development of the road scheme and housing development will not cause additional flooding of homes or property either within existing settlements or within the new development.

As visible on the cross-sections shown during the presentations, the road and housing development is planned on being drained using a sustainable urban drainage system. This will ensure that all additional water run-off from the increase in hardstanding in the area as a result of the new highway will be collected using swales and discharged into settlement ponds. These ponds will be allowed to fill up during periods of heavy rainfall and discharged into local watercourses and rivers at rates agreed with the Local Lead Flood Authority and the Environment Agency. These discharge rates will ensure that the schemes will not lead to a much faster discharge of water into local rivers which causes river 'storm flow' which then lead to flooding therefore, the scheme will not cause additional flooding on land downstream.

The road or the housing development will not involve construction of houses within the existing floodplain. The housing will be, as evidenced by the Local Plan Review consultation, located outside of the existing floodplains of the River Marden and River Avon as well as tributary watercourses such as Cocklemore Brook.

As part of the planning process for both the highway and the housing developments, the schemes will be required to produce a flood risk assessment (FRA) of the scheme. This FRA will include modelling of the development under various different storm scenarios adapted for climate change, to ensure that the scheme does not produce a worse effect on flooding than would occur if the development did not take place.

How will the natural habitats be managed during the construction phase?

The ongoing specific species surveys will tell us what species there are on site, their commuting routes and the size of populations. This information will be used when assessing the impact of the scheme upon these species and will drive the mitigation necessary to protect these species and natural habitats during construction.

Depending on the findings of the surveys, protected species licenses may be required to undertake the works, and these will need to be granted prior to the start of construction. These protected species licenses will only be granted if certain activities to demonstrate how the site will be managed are brought forward. This may include the confirmation works can be undertaken under a precautionary method of working, or whether trapping and translocation of species is required.

Future Chippenham

Connecting our communities

This type of information as well as other environmental controls, are normally included within a Construction Environmental Management Plan (CEMP) which will detail the measures by which the site must be managed to protect the environment. A CEMP will be produced at the planning application stage for approval by the local planning authority, before then being further refined by the contractor for the works.

We have otters in the river what's going to happen to them and their habitat?

Specific species surveys on the site are ongoing. The impact on protected species, such as otter, will be assessed in detail in the environmental impact assessment (EIA) for the planning application and appropriate mitigation will then be put in place. In the specific case of otters, their habitats on the River Avon and Marden should be largely undisturbed.

The design of the bridges over the River Avon will be clear span of the watercourse and banks, so as to avoid any permanent impact on otter and water vole commuting along the river corridor. There is potential for construction impacts on these species, but as noted above, suitable mitigation will be put in place through the EIA process, and if necessary, protected species licenses will be applied for which will stipulate further mitigation measures.

How are you going to manage the carbon footprint of this development?

The carbon footprint in the design of the scheme is generally reduced using the following principles: avoid, reduce, remediate and compensate.

An example of an avoidance measure on this scheme would be the use of flood modelling to understand the total length of viaducts required. Concrete is a very carbon dense material, and reducing the amount of concrete required to bring the scheme forward will reduce the overall carbon footprint of the scheme. Flood modelling is ongoing to understand what the shortest length of viaduct is to maintain the same level of flood prevention, as this would allow us to avoid using as much concrete, and therefore reducing our carbon footprint. Similarly, choosing a shorter route option, would avoid the use of as much tarmac and type 1 material in road construction, which would again save both transport costs in delivery as well as the carbon costs of its production.

An example of a reduce mitigation is the use of alternative lower carbon materials for the job. The use of recycled materials or low carbon alternatives will be examined to see if they can be utilised on the scheme and check that they are appropriate across a 'whole lifecycle basis'.

In respect of remediation/compensation, an example of this would be to maximise vegetation cover to provide carbon sequestration, with special thought given to species ability to sequester carbon and the management of this; the use of grasses may be less appropriate if it needs to be mowed for example.

Future Chippenham

Connecting our communities

Further savings can be made during the scheme implementation phase, with requirements set on the contractor to use low carbon practices such as car-pooling for work and using batteries and electric plant and machinery on-site instead of more typical diesel versions.

Carbon footprint during operation will be managed by ensuring a thought-out development which encourages the use of active travel and public transport as low carbon transport modes to reduce vehicle emissions. This will be supplemented by good original road design to maintain consistent traffic flow to avoid stop/start travel which typically is less efficient for vehicles.

What is master planning?

The questions of if this development should proceed, if we should build on the east of Chippenham are for the Local Plan, the policy document for Wiltshire. The process of master planning will be about asking if it does go ahead what form should that development take, how can the area be best developed to produce the best place and the best benefits for the community. In very simple terms a masterplan describes and also maps out an overall development concept for an aerial site. It will include all future land uses, it will include the urban design, what the place will look and feel like, the landscaping, the built form, the essential infrastructure and the services needed to provide services to the future residents. Master planning is based on a really in-depth understanding of a place, it provides a clear and consistent framework for the development of a particular site. It is important that a large site particularly is master planned to ensure the development on the ground provides a more sustainable and effective development for that particular place. Master planning should be produced objectively based on firm evidence such as the constraints that operate on the site and the on-ground assessments such as ecology, water, landscape, topology for instance these things all together dictate the layout and capacity of the site. It is likely that a masterplan for the site could meet Chippenham's housing needs, employment needs well into the future and provide some good certainty about how the town will develop probably beyond the Local Plan period currently being reviewed.

When will the masterplan be drafted?

A masterplan showing the distribution of land uses, the connectivity, the design concepts and essential infrastructure will be drafted this spring by the Future Chippenham team.

When will the full public consultation on the masterplan take place?

There will be full public consultation on the Future Chippenham Masterplan which is currently planned for the summer 2021.

How will feedback be responded to?

Future Chippenham

Connecting our communities

All representations that we receive will be included in a written report which will be published on the council's website. All comments we will show how they've influenced the revisions to the masterplan, it will be a meaningful consultation process.

Will there be a planning application and if so, when?

It is envisaged that a planning application will be submitted winter 2021/22.

How does the rest of the town in particular the town centre benefit from this development?

This consultation is about possible road route options. The consultation leaflet on our consultation webpage www.wiltshire.gov.uk/future-chippenham-consultation contains the strategic objectives of delivering the distributor road. More information can also be found in the Housing Infrastructure Fund bid which is available at www.wiltshire.gov.uk/future-chippenham

Will there be allocation of space for self builds?

It is a great suggestion, and yes, we can certainly take that forward as a requirement of the masterplan.

Will you be considering heating networks and how we manage things like waste?

Yes. The masterplan will look at opportunities to deliver the clean energy where that is practicable and viable.

In accordance with adopted policy the masterplan will make it clear that any planning applications will need to be accompanied by a full waste audit detailing the sustainable management of waste.

What is meant by blue and green infrastructure?

This refers to water and natural environment. One of the benefits of master planning is we can plan to ensure that water features and landscaping form a central part of the future development area providing important ecological, recreational and aesthetic contributions to place making.

Can anything realistically be built in zone four especially with the Bremhill Neighbourhood Plan?

A masterplan for an area explores all of an area and sets out where development is and isn't acceptable. These decisions are made considering constraints, evidence from

Future Chippenham

Connecting our communities

assessments, consultations and analysis of existing plans and strategies. The content of Neighbourhood Plans will be a material consideration in this process.

Please can the council share its housing infrastructure plan which determines what type of housing for instance number of bedrooms and in what quantities are required to meet the current demand of housing in and around the town?

This evidence is produced in a document known as a Strategic Housing Needs Assessment. Every council by law has to carry out a Strategic Housing Assessment, Land Availability Assessment and also Housing Needs Assessment which shows the demand in the area for the type of dwellings the size of dwellings number of bedrooms for example. It is available to view on the planning policy pages of the Wiltshire Council website and it will set out exactly what the quantified and evidence need is for this area.

How people who don't have such easy access to the internet to keep up with this consultation?

Our approach for consultation was agreed by the council's cabinet last year. At the beginning of this presentation, we made it clear that we do have the ability to provide hard copies of consultation materials to those who do not have access digitally and paper copies can be requested from Customer Services on 0300 456 0100 or collected from the reception desk at the council's Monkton Park office. In addition, we have engaged with local Town and Parish Councils and they have made information available.

As the A350 is already built and sites have been identified why cannot they be developed without the huge cost of the distributor road?

The potential road provides a link to the existing A350 to the north and south of Chippenham. The road options being consulted upon all lie to the east because that is where the Future Chippenham development areas are located.

The distributor road will direct traffic to the A350 at Lackham and will merely exacerbate the long queues trying to get to Melksham. Has this been considered? Some traffic will use the A3102 causing havoc in Sandy Lane and Derry Hill plus adding to the congestion already in the approach to Melksham from that direction. Has that been considered?

Please refer to section 10.8 of the Options Assessment Report for further information on the modelling of the route options.

The strategic model for Wiltshire is built with numerous data sources, including Automatic Number Plate Recognition (ANPR) data. This ANPR data, in conjunction with other data

Future Chippenham

Connecting our communities

sources such as Census 2011, is used to derive the distribution of traffic flows on the network.

Further detail will be provided within the Transport Assessment which will be prepared in line with appropriate local and national guidelines and submitted through the development planning application process.

If the road is built it will not ease the traffic in the Centre of Chippenham. How will people get to railway and bus stations, town centre shops (few that are left), Bumpers Farm, Hathaway Park, Chippenham Hospital, Hathaway Health Centre, Sheldon and Hardenuish Schools, Rowden Surgery, Olympiad and Council Offices at Monkton Park (Police Office), petrol stations in Bath Road area and Bath Road outlets?

Any planning application made will be considered and tested by Wiltshire Council as Local Planning Authority in exactly the same way as those from other interested parties. Any mitigations required form part of this process.

It is clear from the comments on your YouTube presentations (none in favour) that the residents of Chippenham clearly are all against this destructive scheme. Will Wiltshire Council please take this onboard and not waste anymore public money?

The Future Chippenham team will be taking onboard all the feedback received as part of this consultation and we encourage everyone to make representation into the scheme as well as to the Local Plan Review process.

What considerations and mitigations are in place to protect wildlife and ancient trees/hedgerows please? Thank you

At this stage, the main mitigations have focused upon avoidance mitigation to avoid areas of better habitat that we have currently identified.

We are in the process of identifying further ecological assets, such as veteran trees and important hedgerows through the undertaking of our species specific surveys, and an arboricultural survey to be undertaken in the coming months.

Likely mitigation that we have already identified will be required will be the improvements of existing hedgerows across site to provide greater connectivity between the better areas of habitats. This connectivity impact will be further mitigated through the use of other solutions, such as wildlife tunnels and green bridges, although the requirement for these structures is still to be defined as species specific surveys continue and when detailed design begins to commence.

Future Chippenham

Connecting our communities

Beyond this, we also aim to produce new habitat through the scheme which will integrate with other key design features such as the drainage design.

Why weren't the residents of Chippenham consulted prior to all the money being spent on the road bid? Just because they didn't have to doesn't make it right.

The council does not as a matter of course consult on seeking funding from government.

Why is the distributor road not considered as a bypass?

The function of the proposed low speed road to the east of Chippenham is for local transport connectivity and distribution, to enable residential and employment development, it is not a strategic road or bypass.

What is there to stop motorists from using the road as an east west, north south bypass to Chippenham town?

Any planning application made will be considered and tested by Wiltshire Council as Local Planning Authority in exactly the same way as those from other interested parties. Any mitigations required form part of this process.

How close to the Wilts and Berks Canal will the housing development be?

The location and proximity of any housing or employment land to the Wilts and Berks Canal will be determined through the master planning process and then subsequently individual planning applications. We acknowledge the setting and heritage of the canal and the importance of its ecological and recreational value. It is a key consideration in our place shaping and we are working with members of the Wilts and Berk Canal Trust as we would want to make it an attractive part of any development going forward. The master planning will be consulted on in due course later this summer.

Will we receive a written copy of the questions answered on the webinar as we are being given a lot of good information but it's not on the slides?

A recording of this webinar is available on the council's YouTube channel and can be accessed via www.wiltshire.gov.uk/future-chippenham-consultation

A copy of all questions asked at this webinar and the responses will be sent to everyone who registered to attend this event, and a copy will also be published on the above webpage.

It's not clear if there is real need for the additional housing in Chippenham and therefore the road. Or is this a case that Wiltshire Council need to distribute their

Future Chippenham

Connecting our communities

housing requirement and thus building a road will permit this to happen even if Chippenham does not actually require it?

Housing need is assessed as part of the Local Plan process. This evidence is produced in a document known as a Strategic Housing Needs Assessment and is carried out regularly by the council as Local Planning Authority. It is available to view on the planning policy pages of the Wiltshire Council website.

It does identify the need for significant new housing over the next 25 years. The driver for new housing include factors such as increased life expectancy, people occupying homes in smaller family units and affordability/access to the market.

You've mentioned the length of the bridges. How high are they likely to be?

We will be seeking to follow the natural topography of the land and keep the scale in terms of the height and the visual impact as low as we can; so fairly low level in terms of height impact.

The concept designs that we have undertaken so far consider the flood zone three and so it is the 1 in 100 year flooding plus climate change for the river and then add extra on to that, which is called freeboard, so when the river is at the highest level for the 100 year event effectively driftwood and trees that float down do not conflict with the underside of the bridge. There is actually a design standard that you would apply but that is the minimum level you would set it up, but it has to clear the flood zone. It does sit lower in the landscape and as low as we can as long as we clear that particular flood zone.

What plans are there relating to the sequencing of infrastructure and housing development? We're currently experiencing the significant issues of housing coming before necessary roads etc at Birds Marsh and would want to ensure that this sequencing isn't repeated.

Should the Local Plan Review confirm housing to be delivered in this area, then it will be subject to an overarching masterplan which will show the distribution of land uses. This will be accompanied by an Infrastructure Delivery Plan to ensure all essential infrastructure (roads, drainage, power, schools, services for example) are in place at the right time to serve the new residents. This will be part of a subsequent consultation later this year.

Where is the example of a town which has had its cycle path ruined when we are all enjoying the outside areas more, a cycle path through a housing estate with only a courtyard between it? Currently we have a 7 mile cycle route through valuable farmland. It's against the Government's 10 point climate plan to destroy it.

Future Chippenham

Connecting our communities

Cycle route networks will be designed as part of the master planning process, we would be seeking to enhance this infrastructure and improve connectivity.

The routes are likely to utilise existing Public Rights of Way, and we will certainly be considering recreational routes and commuting routes, including links to the canal, the national cycle network and new crossings of the River Avon.

The cycle networks won't be just alongside the road.

How can we go to Melksham from Chippenham to look at the road when it is against lockdown rules or are you authorising this?

We are not endorsing any breach of the lockdown rules. However, Google maps provide good street views of Eastern Way in Melksham:

https://www.google.com/maps/@51.3716226,-2.1138005,3a,75y,16.83h,90t/data=!3m7!1e1!3m5!1sYmLnUccQlxSdSHJUm-aLjw!2e0!6s%2F%2Fgeo3.ggpht.com%2Fcbk%3Fpanoid%3DYmLnUccQlxSdSHJUm-aLjw%26output%3Dthumbnail%26cb_client%3Dmaps_sv.tactile.gps%26thumb%3D2%26w%3D203%26h%3D100%26yaw%3D10.695478%26pitch%3D0%26thumbfov%3D100!7i16384!8i8192

Great to ease congestion in the town centre but will diverting people away from it result in the end of the town centre and Chippenham High Street?

The master planning process is also critical to this. It will be planned to improve access and choice of travel modes to the town centre. It will increase the critical mass of people using the town centre and will, if planned properly, boost its viability and vitality.

Does any of this thinking take into account changing behaviours as a result of climate change, efforts to get to zero carbon and / or the COVID pandemic?

Yes, it does. Carbon reduction is a key part of the design progress going forward both for the road and also for the potential housing. We've previously mentioned opportunities and potential methods for the road around avoidance reduce compensate but obviously master planning has similar opportunities in respect of planning for people to use more electric cars and planning for the fact that more people can use active transport to get into the centres to get into the train station and maintaining good public transport access. It's all those sorts of things that's the real key of this the whole design to come forward; it's all going to be future proofed towards where both Wiltshire Council and nationally we're trying to aim to achieve the net zero target.

Future Chippenham

Connecting our communities

Last time we were told the environmental review was a desktop exercise and now we are being told it is a proper review, which is correct? Can I have a copy of the wildlife report as I have photographic evidence against what is being said?

Desk based and onsite assessments of the opportunities and constraints have been carried out, including assessments of ecological, flooding and heritage constraints. These surveys will inform a more detailed assessment of impact of the scheme which will be produced within an environmental statement to be submitted alongside the planning application.

The Wilts & Berks Canal is a haven for a diverse range of wildlife including an array of bird life, bats, deer, foxes for example. How will this road / housing development impact on this and what mitigations are in place to prevent adverse impacts?

The assessment in Preliminary environmental assessment of options report (PEAOR) was undertaken based on an extended Phase 1 habitat survey, review of survey data collected for over-wintering birds, and preliminary bat assessments of trees and buildings on the site undertaken in winter 2019/2020. This was supplemented by the Environment Record data held by Wiltshire Council which gave us information regarding previous protected species found on the site.

The review of this data found that, as a 'baseline' environment, the site area is generally of quite poor ecological value as it generally passed through agricultural fields which are recorded as 'semi-improved grassland or arable land'. Whilst this habitat has some benefits, it is generally species poor and is considered sub-optimal for many species as the fields are managed to drive agricultural output rather than increase biodiversity. As a result, the effect of the scheme passing through the centre of these fields is from a biodiversity standpoint, relatively low impact.

There are pockets of better habitats located at various locations within the general scheme area focused around watercourses, ponds and small areas of woodland, but the scheme options generally avoid these. Where better biodiversity is expected within direct impact from the scheme is at field margins along hedgerows, as these are utilised by species to travel between these pockets of better habitat, as well as being used for sheltering and foraging. The field margins within the survey area are of mixed quality, but a fair extent of them are narrow, species poor and lacking in woody vegetation that would provide better foraging, sheltering and commuting abilities for protected species.

The road will need to intersect field margins and this does have the potential to cause impacts on local biodiversity when un-mitigated as it may segregate species from the pockets of better habitat mentioned above as well as the loss of the hedgerow itself as a commuting, sheltering and foraging resource.

Future Chippenham

Connecting our communities

However, we know at an early design stage that this is a potential impact of the scheme on protected species and this allows us time to design suitable mitigation to prevent significant impacts wherever possible and aim for the scheme to actually achieve Biodiversity Net Gain. In this respect, there is benefit that the future housing development of the site will be designed alongside the road development as it will allow for a more joined-up approach in providing long-term biodiversity benefits. This will allow for more opportunities for the designs of the highway and housing to integrate and provide a better result for biodiversity. For example, the Sustainable Urban Drainage (SUDS) systems that will be used to drain the highway and the development land can be combined to provide large new wetland habitat features within the scheme area. The housing can then be designed to include dense hedgerow features along existing alignments to connect in with these new habitat features which will allow existing species commuting corridors to be maintained and improved, whilst also providing better habitats than what is currently available to them. The suitability of methods to support habitat connectivity across the road such as green bridges and wildlife tunnels will also be investigated as part of design progression to minimise impacts. These features being integrated as part of highway and housing design will clearly have additional benefits, such as providing locations for walkers, acting as visual screening of the housing and improving the visual amenity of the area, as well as their function as supporting drainage of the development to prevent flooding both within the immediate area and downstream.

The requirement and design of these features will be informed by additional information about current species populations across the site. Species specific surveys have been undertaken throughout 2020 and are ongoing across the scheme area to inform this. These surveys will also inform a more detailed assessment of impact of the scheme which will be produced within an environmental statement to be submitted alongside the planning application.

Why do you state that the building of the road will reduce congestion in the town centre of Chippenham, when your other colleagues have stated that the road is not being constructed as a bypass, but is being built to support future housing development?

By building the road it will have benefits for the town centre traffic. The transport modelling conducted for the Housing Infrastructure Fund (HIF) bid demonstrated that, as well as serving the Future Chippenham new housing build, a distributor road would deliver benefits to the Chippenham transport network by providing an alternative route for existing and future users, including those travelling from the east or west of Chippenham, who currently have to travel through the town centre. Such data was scrutinised by the Department for Transport (DfT) and Highways England as part of the bid process and accepted as valid. It was based on the DfT's Transport Appraisal Guidance (TAG) on highway scheme appraisal and modelled through the Wiltshire Base SATURN model itself calibrated against the DfT's TAG guidance.

Future Chippenham

Connecting our communities

How can it be a proper consultation if we are judged on strength of replies and evidence when we are not experts?

We are seeking your opinion as residents/users of the area who are likely to be familiar with where you live and can advise on your view of where the best route for the road may lie.

When will we see this webinar on the council YouTube site? I cannot see the previous one from 15 February 2021 yet?

Recordings of both webinars are available on the council's YouTube channel and can be accessed via www.wiltshire.gov.uk/future-chippenham

How many people are attending this webinar?

41 people attended this webinar.

How do you put more value on the canal area than the farm and cycle route area?

We are unclear about the meaning of this question and require further clarification / information in order to be able to provide a response.

Why build a new road to support more housing, when the land to the west of the A350 could support the housing, without the need to build a road and destroy the habitat of the Marden Valley?

Future Chippenham development area lies in that vicinity and the road that we are consulting on is to serve those developments.

Are you not putting the cart before the horse, by building the road before you have decided if there is a need for more housing in the area?

The need for a road to support housing development has been identified within the Local Plan. Any road will need to receive planning permission before it can be built.

What consultation has been done with the Wilts & Berks Canal Trust with respect to the road and the housing development?

Wilts & Berks Canal Trust are one of our stakeholders and have been contacted as part of the consultation.

Why have you proposed a Southern link road between the A4 and A350 South when there is no reason whatsoever to spoil the landscape, apart from the council's need to develop council owned farms?

Future Chippenham

Connecting our communities

The distributor road, between the A4 and A350 south, provides a number of benefits including mitigating transport congestion from the town centre by providing an alternative route to access the A350 to the south of Chippenham, this would predominately be used by residential areas to the south of Chippenham and also from traffic using the A4.

The southern distributor road section from A4 to A350 has been stated as taking traffic away from the town centre – so effectively will be used as a bypass route and instead take through traffic via residential areas on low-speed roads. This sounds like a poorly thought through proposition – if the road is a low speed residential distributor road (as has been stated) it cannot also meet the needs of an A4-A350 southern link road to bypass Chippenham town centre. Please can you explain how the road can serve both purposes of alleviating town centre congestion whilst also not being a bypass and being designed as a residential low-speed distributor road?

The new distributor road will form part of the public highway network and will provide additional route choices for users. The proposed road's primary function is to provide local transport distribution between existing and new developments, this includes cycle and pedestrian routes. However, the road will also provide transport benefits within the town centre, reducing through traffic by providing alternative routes to access the A350 Chippenham bypass to the north and south of the town. The assessment of the route options to date have been conducted using the strategic traffic model for Wiltshire. The assessment presented in the Options Assessment Report (OAR) (section 10.8) was conducted with a distributor road design and as shown in the reduction in traffic flows in the town centre (please refer to section 10.8.3 of the OAR) the distributor road provides another route option for traffic travelling from the A4 east to the A350.

What is the planned budget for this A4 to Lackham road and the Pewsham way folly?

The indicative budget for the potential road and link road is identified in the Options Assessment Report, section 10, which can be found on www.wiltshire.gov.uk/future-chippenham-consultation

Why has Wiltshire council added 5000 to the housing need figure for the county other than to support this project?

Your response: _The Future Chippenham programme has identified that up to 7,500 homes could be delivered on the sites that are supported by the distributor road up to 2046+.

This does not in any way answer my question in fact I could add to your reply and say as there are no road boundaries given, therefore the size of development could be in excess of 15,000+ so please answer the question.

Housing need is assessed as part of the Local Plan process.

Future Chippenham

Connecting our communities

It is not for the Future Chippenham programme to determine housing need – initial work by the Future Chippenham programme has identified that there is potential for up to 7,500 homes to be delivered in the area, but it will be the role of the masterplan to determine that in more detail. This will take account of evidence, constraints, assessments, consultation and design issues.

Should the Local Plan determine that development is acceptable in principle then the masterplan will guide subsequent planning applications setting out the number and distribution of houses.

It is possible that a well-planned development area could meet Chippenham's needs well into the future beyond the new local plan period of 2045.

When will Wiltshire Council be open and upfront about the Stone Circle Businesses it has set up to act as land agents and developers, also that they have already been funded with £5 million from Wiltshire Council and that the council state in their HIF bid documents that they are to borrow another £100 million for Stone Circle Businesses to progress this scheme?

At the moment there are no plans for Stone Circle companies' involvement if this development comes forward, despite the fact that there was some reference to that in the HIF bid. The council would have to consider any proposed business plans from Stone Circle development company against any other possible way in which the council's interests could be developed and would need to assure itself that the council is achieving best value for its interests and also issues around governance and risk so at this point in time there are no plans for the use of Stone Circle.

If it is not the intention to use Stone Circle Businesses to progress this scheme could you please advise why the council put the following provision into the 2021/22 budget?

Agree the Stone Circle development company business plan 2021/22

Agree the Stone Circle holding company business plan 2021/22

Subject to agreeing the business plans to allocate the £34.40m loan finance required for the Stone Circle housing company business plan and £2.657m for the Stone Circle development company business plan in the 2021/22 capital programme

These companies are wholly owned by the council and under the shareholders agreement the council agrees the business plan for the companies one year in advance. The money and the business plan that the council has agreed is for 2021/22. Clearly these proposals, if they do come forward, are significantly in the future and any proposals from the development company would have to be considered in line with those time scales.

The council has agreed the company business plans for 2021/22. If development comes forward as part of this programme it will be in future years, not in 2021/22.

Future Chippenham

Connecting our communities

If you have no intention of using Stone Circle Businesses, why have they been mentioned in the HIF document with planned borrowing for the same in 2024/25 mentioned have you told untruths in this HIF bid document, or are you hiding behind the various names for what is basically a council tax payers funded Stone Circle (WC)?

The Housing Infrastructure Fund bid identified potential delivery mechanisms for the housing.

Your current consultation form is not fit for purpose, as it is open to abuse and fraud, what is to stop roadbuilders, council employees, housebuilders and many others with much to gain ensuring your consultation is completed in the positive and in their favour? The fact that you ask for a post code means very little unless of course you intend to weight various responses from those living in SN15 postcodes differently than say an SN11 or BA1 postcode.

The consultation approach is in accordance with the council's approved strategy, that was agreed by the council's cabinet. Post codes have been requested to help us better understand the geographic pattern of the responses we receive.

Why does your consultation document not require personal details, and signature?

The consultation approach is in accordance with the council's approved strategy, that was agreed by the council's cabinet, and also takes into account any obligations we might have under data protection.

Why when the council has fought and won a 7 day appeal with Gleeson to develop land at Forest Farm then ignore its own and 2 HMG Planning Inspectors advise that the site is inappropriate for development?

This is a planning matter and not relevant to this consultation on potential road route options.

Out commuting is a very important factor on this development

**How many residents of Chippenham are shown as employed in the 2011 Census?
How many of those residents work in Chippenham?
How many of those residents work elsewhere in Wiltshire?
How many of those residents work outside Wiltshire's boundaries?
How many people were recorded as working in Chippenham jobs in the Census?
What are your latest pre COVID estimates of these figures?**

We would refer you to the Wiltshire Intelligence website: [Census Wiltshire Intelligence](#)

Future Chippenham

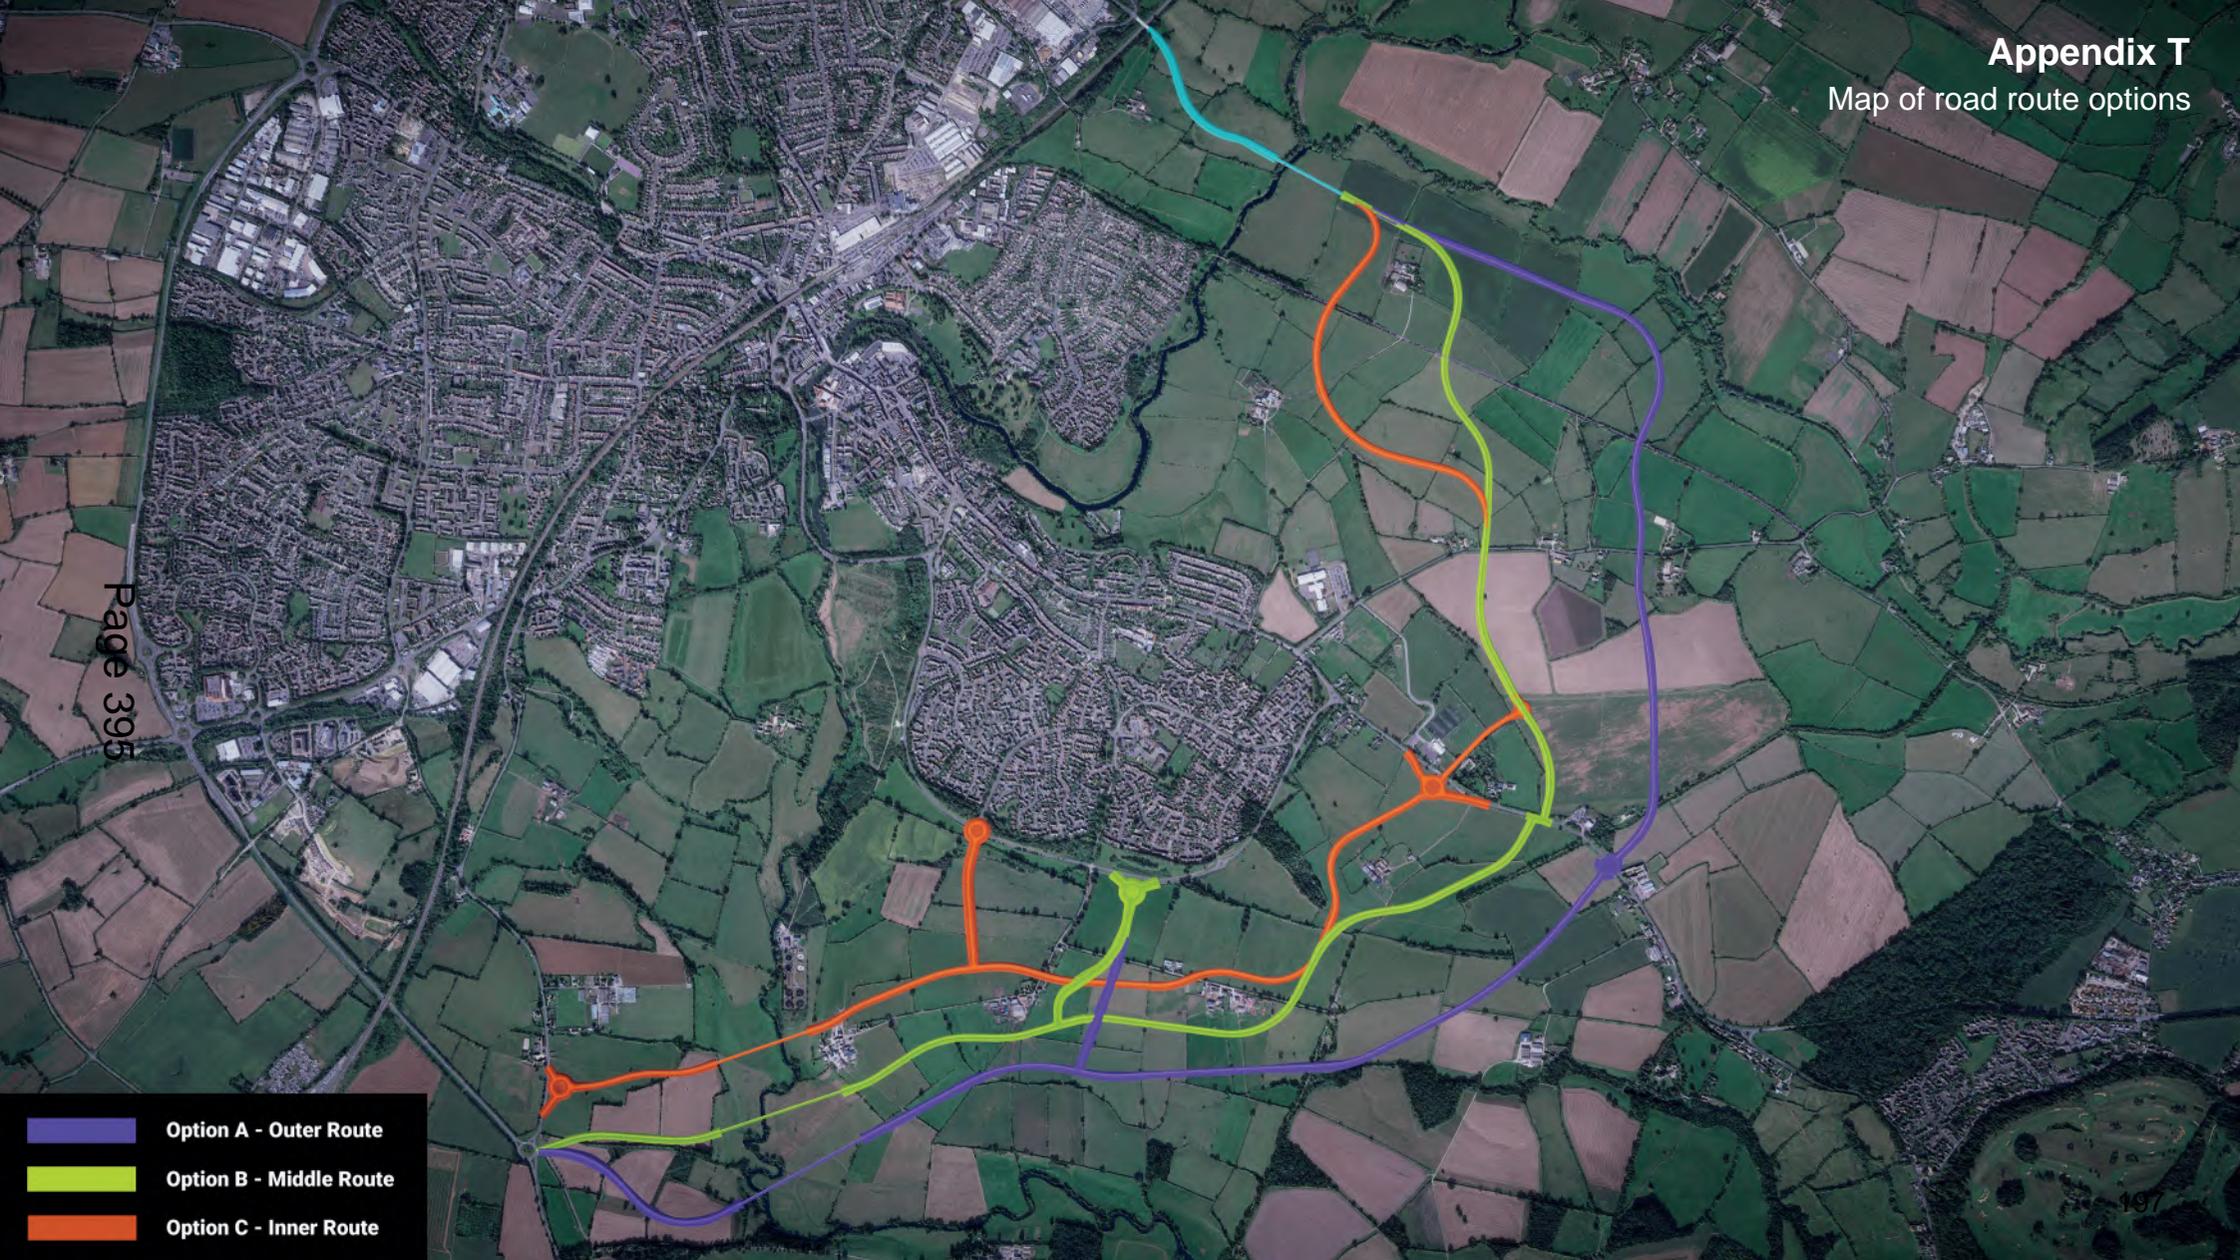

Connecting our communities

Analysis of the Census 2011 Data is also presented in the Chippenham Transport Strategy 2016.

Why as a property owner who is going to be greatly affected to all three options, but mainly by option C, have I never been consulted by our council out of common courtesy prior to it becoming public?

We ensured that letters were sent out to those residents who would be directly affected by each of the potential road route options to make them aware of the consultation. We will follow this approach again for the consultation on the Future Chippenham Masterplan which we are aiming to hold summer 2021.

-  Option A - Outer Route
-  Option B - Middle Route
-  Option C - Inner Route

Future Chippenham

Connecting our communities

Consultation on the

Future Chippenham

distribution and route options

About the project

Wiltshire Council is seeking your views on three road route options for a potential new distributor road located to the south and east of Chippenham. The road would provide a high-quality road link connecting the north east and southern parts of the town to the A350 and improvements to Junction 17 of the M4.

Initial work indicates that a distributor road could bring significant benefits; it would directly unlock land to support much needed housing development and reduce traffic congestion in the town centre, improving connectivity and travel within and

around the town. These benefits would help underpin the future sustainable growth of Chippenham and increase opportunities for residents and businesses. We have called this programme Future Chippenham.

To support the development of the scheme, the Council has been successful in securing £75 million of government funding.

We would like to hear your views to help inform a decision about which of the three route options within each zone could be taken forward to the next stage of the development process.

This document covers

- How we got to this point
- Details of the three road route options
- Explanation of the next steps
- The timeline
- Details of the consultation events and how you can get involved and provide feedback

Local Plan review

Wiltshire Council as Local Planning Authority is currently consulting on its Local Plan. The Wiltshire Local Plan review process considers the level of growth in the town through to 2036 including where new homes could be allocated, and **is an entirely separate consultation from the Future Chippenham road route options consultation featured in this leaflet.**

Any new distributor road would be subject to the outcome of a future planning application and progress of the Local Plan Review.

To find out more about the Local Plan Review and how to comment please go to the Wiltshire Council website or use the following link:

www.wiltshire.gov.uk/planning-policy-local-plan-review-consultation

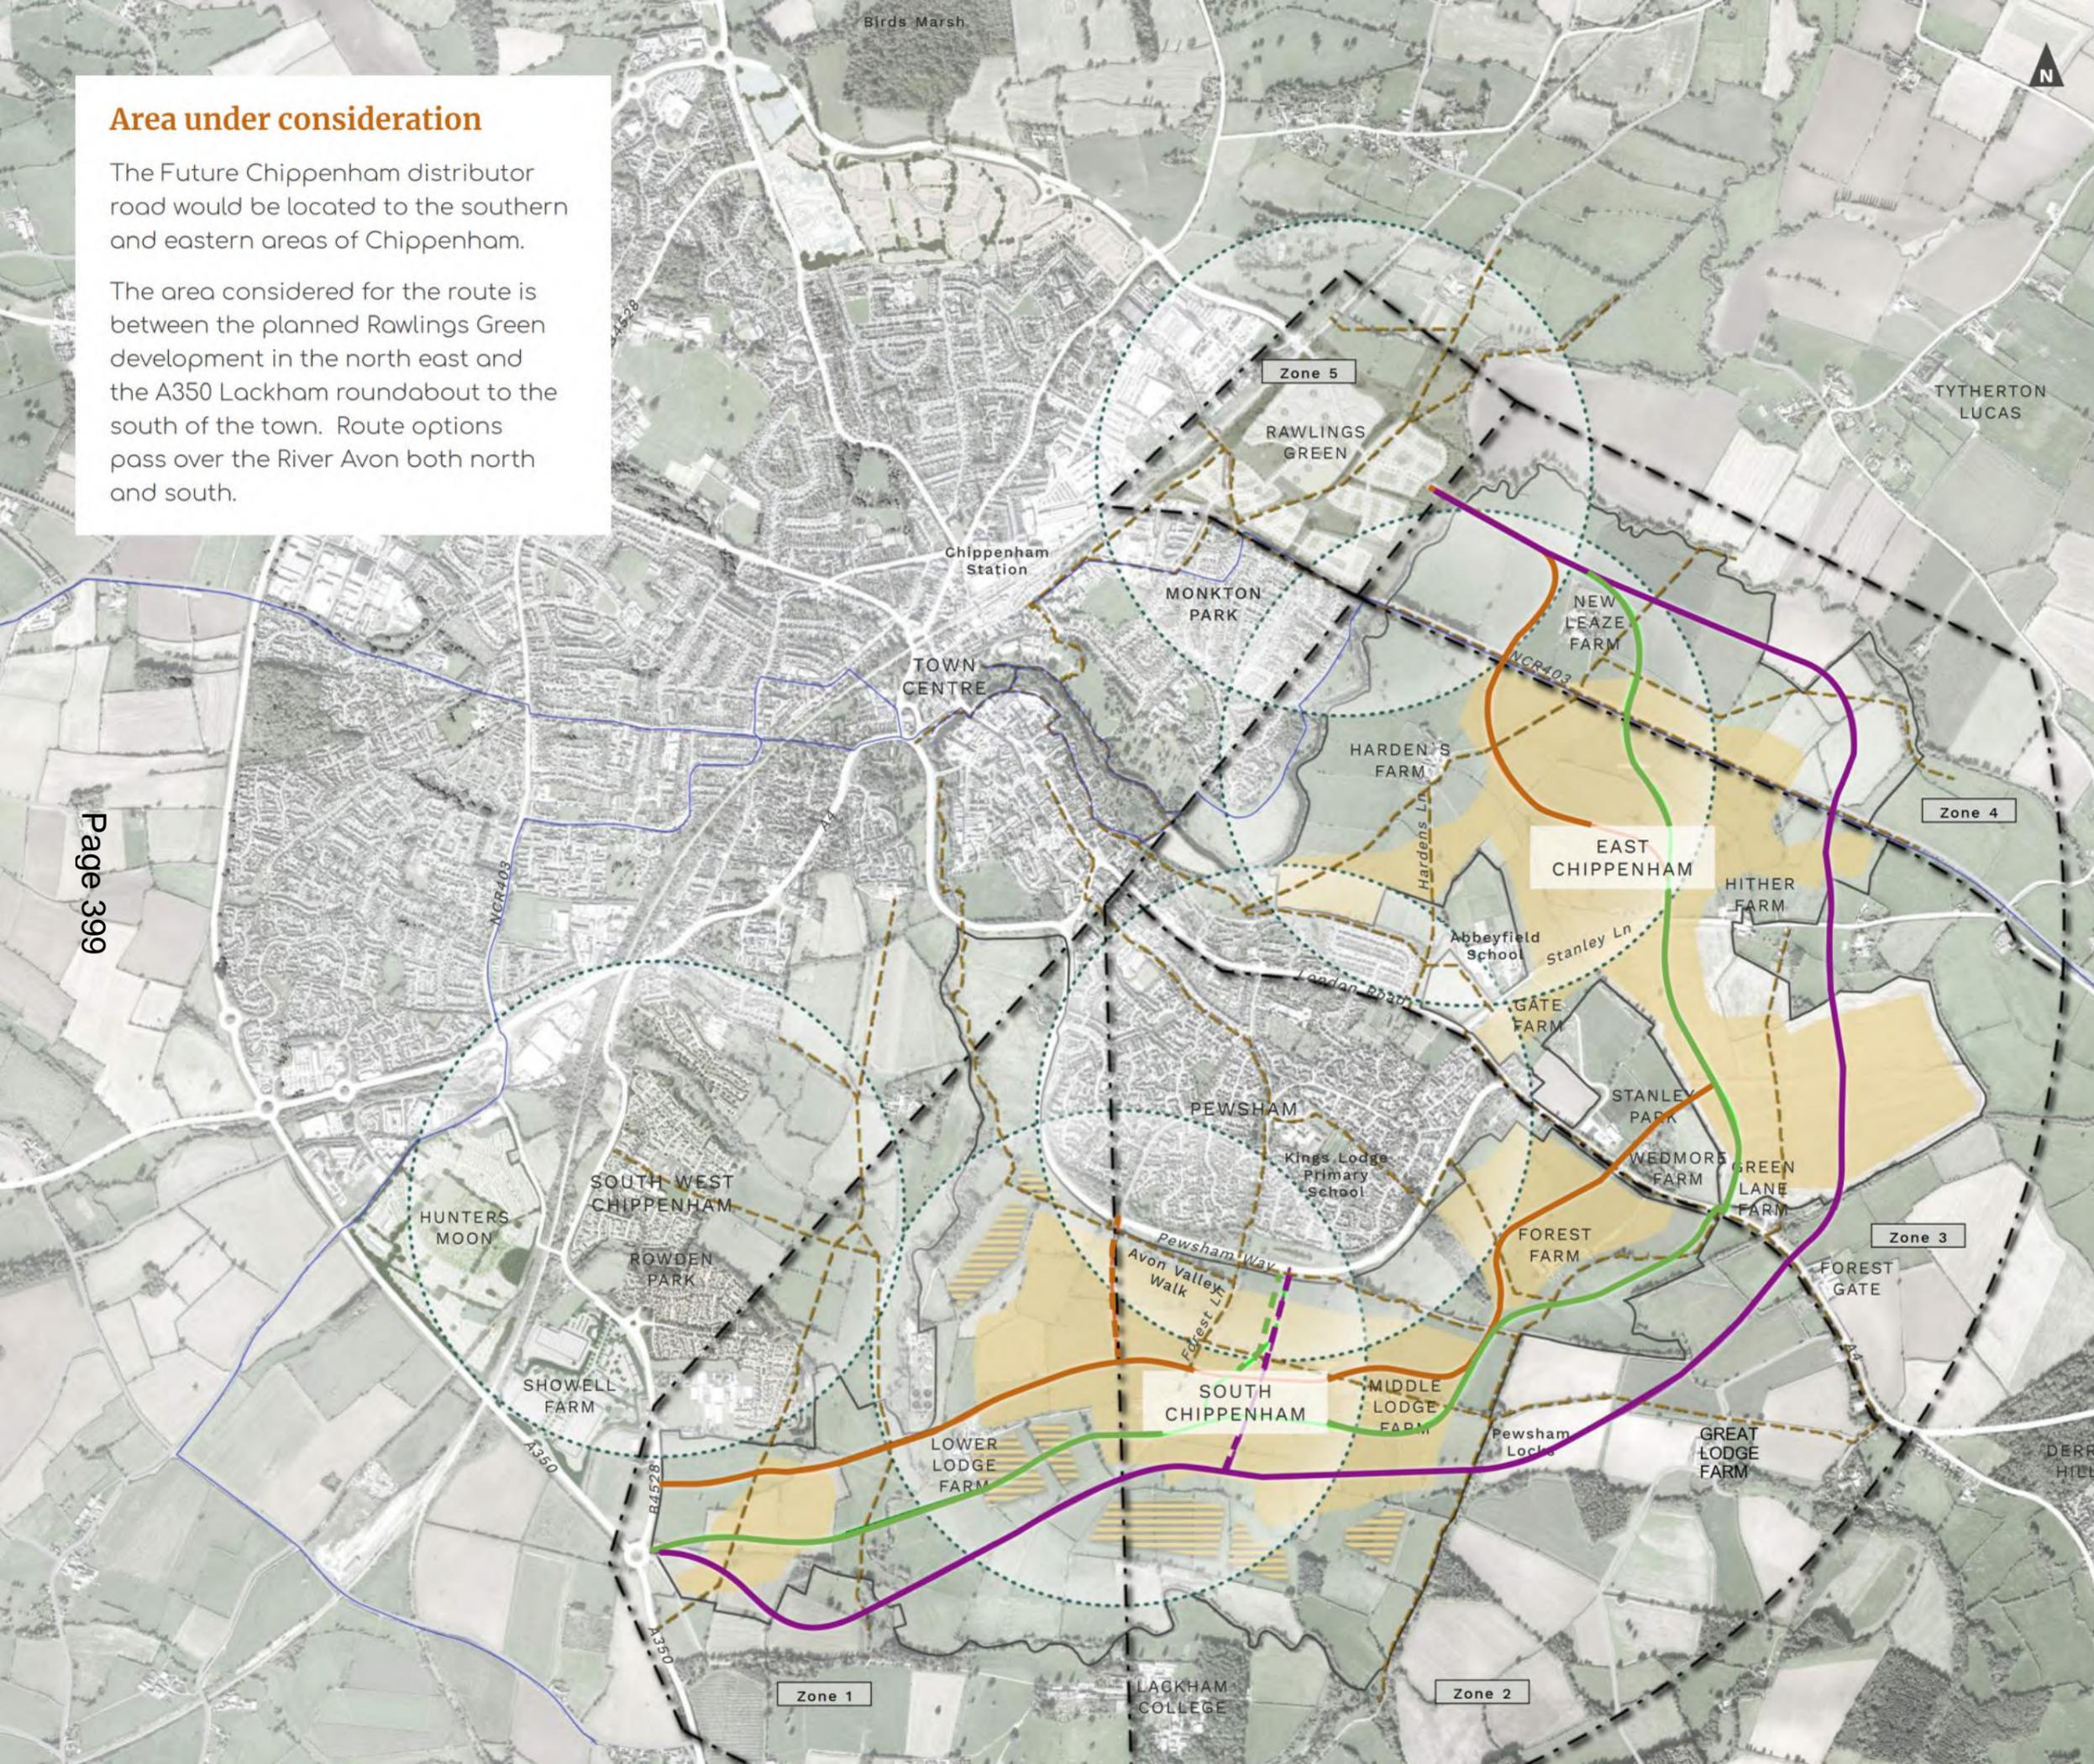

Area under consideration

The Future Chippenham distributor road would be located to the southern and eastern areas of Chippenham.

The area considered for the route is between the planned Rawlings Green development in the north east and the A350 Lackham roundabout to the south of the town. Route options pass over the River Avon both north and south.

I. Future Chippenham Distributor Road – Options Assessment – Transport Connectivity

- KEY
- Preferred Development Sites Boundary Identified in Local Plan Review (Regulation 18)
 - Residential Area Identified in Local Plan Review (Regulation 18)

 - Link Road Option 3
 - Public Footpath/Rights of Way
 - Bridge/Viaduct
 - National Cycle Route
 - 800m/10mins Walking Radius
 - Assessment Zone

Why is the road needed?

Working to deliver the vision of a more sustainable Chippenham

The adopted strategic plan for Chippenham sets out a future vision for the town that meets local needs for jobs and housing while addressing some of the longstanding challenges it faces such as town centre congestion and new developments delivered in a piecemeal way. It aims for a more self-sufficient status for the town, so that the community can meet its living, work and leisure needs locally.

Employment and housing development will be highly sustainable and balanced, with early delivery of key infrastructure and key services to support growth.

There is a goal to encourage young people to choose to stay and both live and work in the town because of the employment opportunities, access to housing and other available facilities.

The Core Strategy provides a spatial expression of the Wiltshire Community Plan 2011-2026: People, places and promises, and will be focused on delivering the three overarching priorities:

1. creating an economy that is fit for the future
2. reducing disadvantage and inequalities
3. tackling the causes and effects of climate change.

Evidence for Chippenham has indicated that one of the best options to deliver the vision for a sustainable future could be through the building of a significant new road both to relieve through traffic but also unlock potential development sites.

Infrastructure led development: The Housing Infrastructure Fund (HIF) bid and Future Chippenham Project

In March 2019, Wiltshire Council submitted a bid to the Housing Infrastructure Fund (HIF) from Ministry of Housing Communities and Local Government. In November 2019, Wiltshire Council was awarded a grant of £75 million.

The grant ensures funding is available to contribute towards the cost of delivering the strategic infrastructure in and around Chippenham to support the potential longer-term growth of the area, should development come forward.

The £75 million grant will support the delivery of a new distributor road to the east and south of Chippenham, linking the A350 at the northern and southern ends of the town, as well as specific improvement to J17 on the M4.

By 2046, it is envisioned that the road could unite sustainable new communities and green spaces, including up to 7,500 homes, supported by local neighbourhood services and employment opportunities.

What are the benefits from delivery of the Future Chippenham distributor road?

By planning strategically, Future Chippenham could enable the strategic plan for Chippenham. This provides opportunities to meet the following objectives:

Strategic objectives

- unlocking land to support delivery of up to 7,500 homes up to 40% of which will be affordable, specifically planned to meet local needs including first time buyers so essential to the local economy
- improving the viability and vitality of the town by providing homes and jobs to provide increased local customers for businesses and services
- transforming the town's housing offer
- ensuring that economic development and regeneration is delivered in step with the homes to increase the self-containment of the town
- providing much better connectivity and help to reduce congestion in the town centre.

Page 401

What has been completed so far

Initial road route options and link road options (connections to the existing Pewsham Way) emerged from an options generation process. An assessment of these options was then undertaken to ensure that all options presented for this public consultation are deliverable and meet the strategic scheme objectives.

The process identified three potential routes for the distributor road and two link road options and shows a potential outer, middle and inner route.

These route options have been assessed based on:

- Strategic case

- Delivery case
- Environment / Economic case
- Financial case
- Commercial case

For the purposes of this consultation the distributor road route options have been split into five zones so you can comment on sections of the road options within each zone. Further information about the Options Appraisal process can be found in the OAR Findings Summary.

Further details are available on the Future Chippenham public consultation webpage www.wiltshire.gov.uk/future-chippenham.

Economic objectives

- enabling economic development along the strategic M4 corridor
- improving access to training and employment opportunities.

Transport objectives

- providing an improved corridor for the movement of people and goods
- reducing town centre traffic congestion providing opportunities to improve reliability of transport

- enhancing transport resilience in Wiltshire by providing connectivity to the M4 Junction 17 and A350.

Environmental objectives

- minimising the impact on the quality of the environment
- improving accessibility for non-car users by promoting sustainable forms of transport
- through infrastructure led delivery seek opportunities to reduce the carbon footprint of the road and scheme.

Road route options for consultation

Three potential road route options have been identified for the Future Chippenham distributor road. Two Pewsham link road options are also included in the consultation.

We have completed initial assessments to compare the route options.

Option A: Outer route

Option A, the outer route is 8.3km long and could function as a traditional ring road for the development area. It connects the A350 Lackham roundabout to the south of Chippenham, to the Rawlings Green development to the northeast, crossing the A4 between Forest Gate and the motorcar dealership. The outer route crosses the River Avon at two locations, requiring two bridge viaducts, one to the south spanning 468m and one to the northeast spanning 268m, ensuring river flood levels are not affected by the scheme. Further bridges will be required to cross the Wilts & Berks Canal in two locations, one near Pewsham Locks and one north of the A4 near Green Lane Farm.

Option A is the most visually prominent of the three options through the landscape following higher ground and is therefore more likely to remain within views from Derry Hill, Bencroft Hill and surrounding villages.

Option A - Outer route

Option B: Middle route

Option B, the middle route is 7.4km long and could function as an urban distributor road running through the development area. It connects the A350 Lackham roundabout to the south of Chippenham, to the Rawlings Green development to the northeast, crossing the A4 between Wedmore Farm and the motorcar dealership. Similar to the outer route, the middle route crosses the River Avon at two locations, requiring two bridge viaducts, one to the south spanning 444m and one to the northeast spanning 268m, ensuring river flood levels are not affected by the scheme. A further bridge is included to cross Avon Valley Walk and the historical route of the Wilts & Berks Canal.

Option B - Middle route

Option C: Inner route

Option C, the inner route is 7.3km long and similar to the middle route and could function as an urban distributor road running through the development area. It connects from the B4528 near Lackham roundabout to the south of Chippenham, to the Rawlings Green development to the northeast, crossing the A4 to the east side of Stanley Parks Sports Ground. Similar to the other routes, the inner route crosses the River Avon at two locations, requiring two bridge viaducts, one to the south spanning 336m and one to the northeast spanning 268m, ensuring river flood levels are not affected by the scheme. A further bridge is included to cross Avon Valley Walk and the historical route of the Wilts & Berks Canal.

Option C - the inner route is less visually prominent from surrounding views to the north and east than option B - the middle route.

Option C would require mitigation to Stanley Park Sports Ground and additional habitat creation to mitigate any habitat loss to Great Crested Newts.

Option C - Inner route

Pewsham link roads

An additional road linking the proposed distributor road at South Chippenham to Pewsham Way is included in the scheme extents and the HIF bid. This is to ensure connectivity between the two areas. Two route options have been progressed for the Pewsham link road.

Pewsham link option 1

Option 1 provides a link road from the proposed distributor road near Lower Lodge, traversing over the ridgeline towards Pewsham, bridging over a valley in the topography and crossing Avon Valley Walk before connecting to Pewsham Way at Canal roundabout. This brings the scheme in closer proximity to Mortimore's Wood Local Nature Reserve.

Pewsham link road option 1, connected to option C is 0.47km long.

Pewsham link option 3

Option 3 provides a link road from the proposed distributor road near Lower Lodge Farm, crossing a public footpath that links to Forest Lane, Pewsham and the Wilts & Berks canal, and follows around lower landscape levels before crossing Avon Valley walk and connecting to a new junction with Pewsham Way at a point 150m east of Forest Lane.

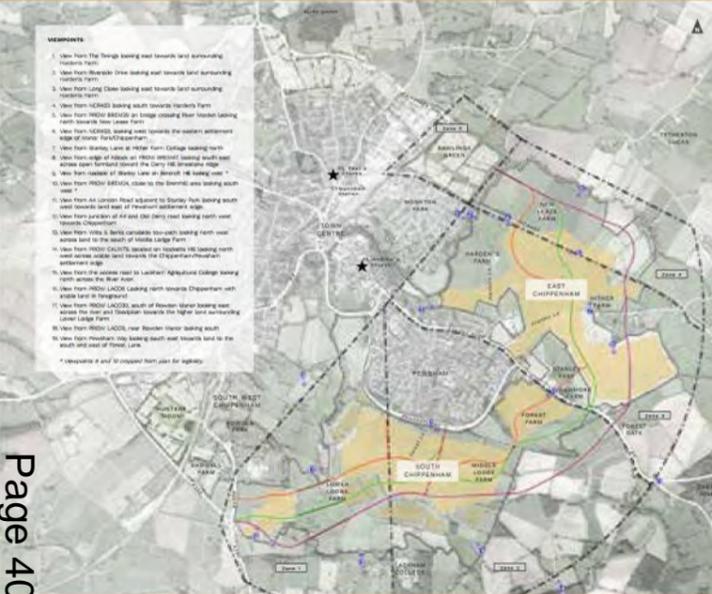

Pewsham link road option 3, connected to the option A distributor road is 0.73km long.

Pewsham link road option 3, connected to the option B distributor road is 0.64km long.

Cost and affordability

Cost estimates to deliver the distributor and link road range between £88.5 million and £120 million including risk budget estimates. The distributor and link road will be delivered with a phased programme to prioritise key sections and infrastructure to unlock development land. Any shortfall in funding will be met by contributions from developers and governed by relevant planning policy.

Landscape character and visual impact

II. Future Chippenham Distributor Road - Options Assessment - Landscape setting and Visual Impact receptors

All options have an impact on the agricultural landscape. The inner and middle route have less impact overall, although the Pewsham link road for the inner route is more visible. Earth bunds and planting would be utilised to screen views of the road.

Transport and connectivity

I. Future Chippenham Distributor Road - Options Assessment - Transport Connectivity

All options provide an opportunity for increased connectivity to the existing town centre and local centres through existing footpaths and cycle routes and potential new routes. The outer route fares least against the inner and middle due to its location on the perimeter of potential development.

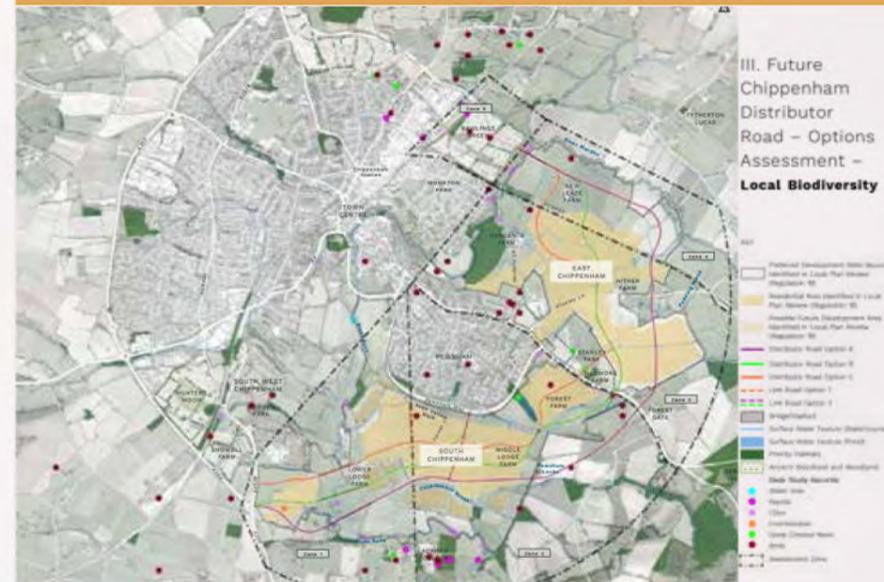

River flood risk

IV. Future Chippenham Distributor Road - Options Assessment - River Flood Risk

All three routes cross the River Avon and will require the construction of two new bridge viaducts to mitigate any increase in existing flood risk. Option A has the greatest capacity for effects on water quality due to its greater length, and location of crossing the River Avon in the south.

Local biodiversity

III. Future Chippenham Distributor Road - Options Assessment - Local Biodiversity

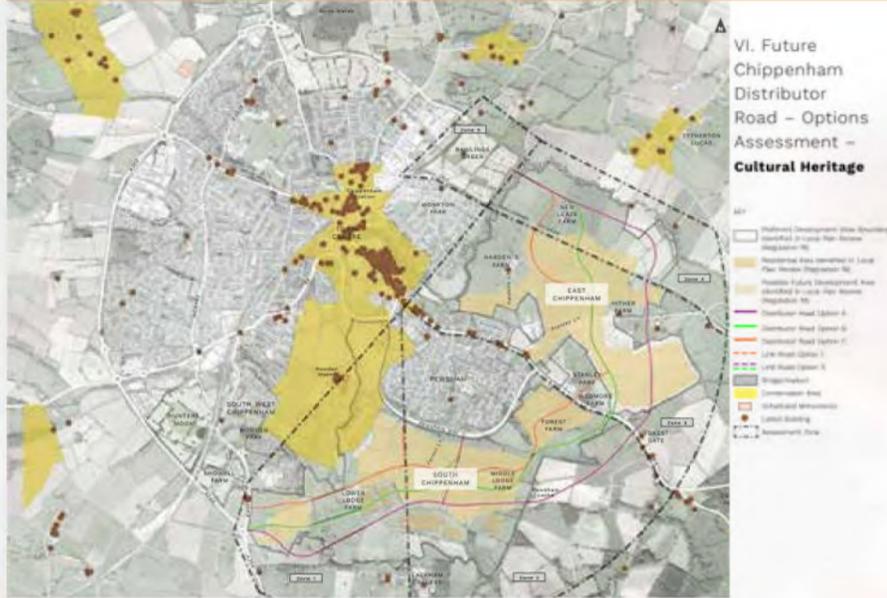

All routes would aim to minimise the impact of a distributor road on local biodiversity where possible.

At the options appraisal stage, a study of local habitat types and previous records of protected species was undertaken. Some of this information is provided below.

Through the development of the design of the preferred option, further surveys will be undertaken to increase our understanding of species currently inhabiting the site.

This will be used to create scheme specific mitigation to increase habitat connectivity across the site and improve local habitats through the sustainable integration of drainage systems, landscape planting and biodiversity measures.

Cultural heritage

There are many cultural heritage assets in the Chippenham area, including Rowden Park conservation area, the scheduled monument at Rowden Manor and numerous listed buildings including country houses, farmhouses and farm buildings, churchyards and cemeteries, mills, an old brewery, bridges, cottages and milestones.

All of the route options presented for public consultation avoid direct conflict with heritage assets.

What could the road look like?

The concept design of the route options includes:

- a 30mph speed limit single carriageway road with roundabouts
- pedestrian and cycle routes along the transport corridor
- bridges or diversions for existing footpaths
- earth mounds to reduce noise or screen the route from housing
- ponds to control water and give opportunity for habitat creation
- hedgerows, shrubs and trees planted to replace any lost during construction.

How to take part in this consultation

The consultation is open from Friday 15 January to 5 pm on Friday 12 March 2021. Information on the route options for the Future Chippenham distributor road is included in this document. Additional supporting information is available on our webpage www.wiltshire.gov.uk/future-chippenham.

You can respond to the consultation in the following ways:

- Complete the online consultation form at www.wiltshire.gov.uk/future-chippenham
- Download a consultation form from the above webpage and email to futurechippenham@wiltshire.gov.uk
- Download and post your consultation form to Future Chippenham, Wiltshire Council, County Hall, Bythesea Road, Wiltshire BA14 8JN
- Attend a public consultation event (currently being held online due to COVID-19 national restrictions and in line with government recommendations on consultation)

About the events

Public webinar - Thursday 28 January, 11 am

A second webinar is being arranged for February 2021

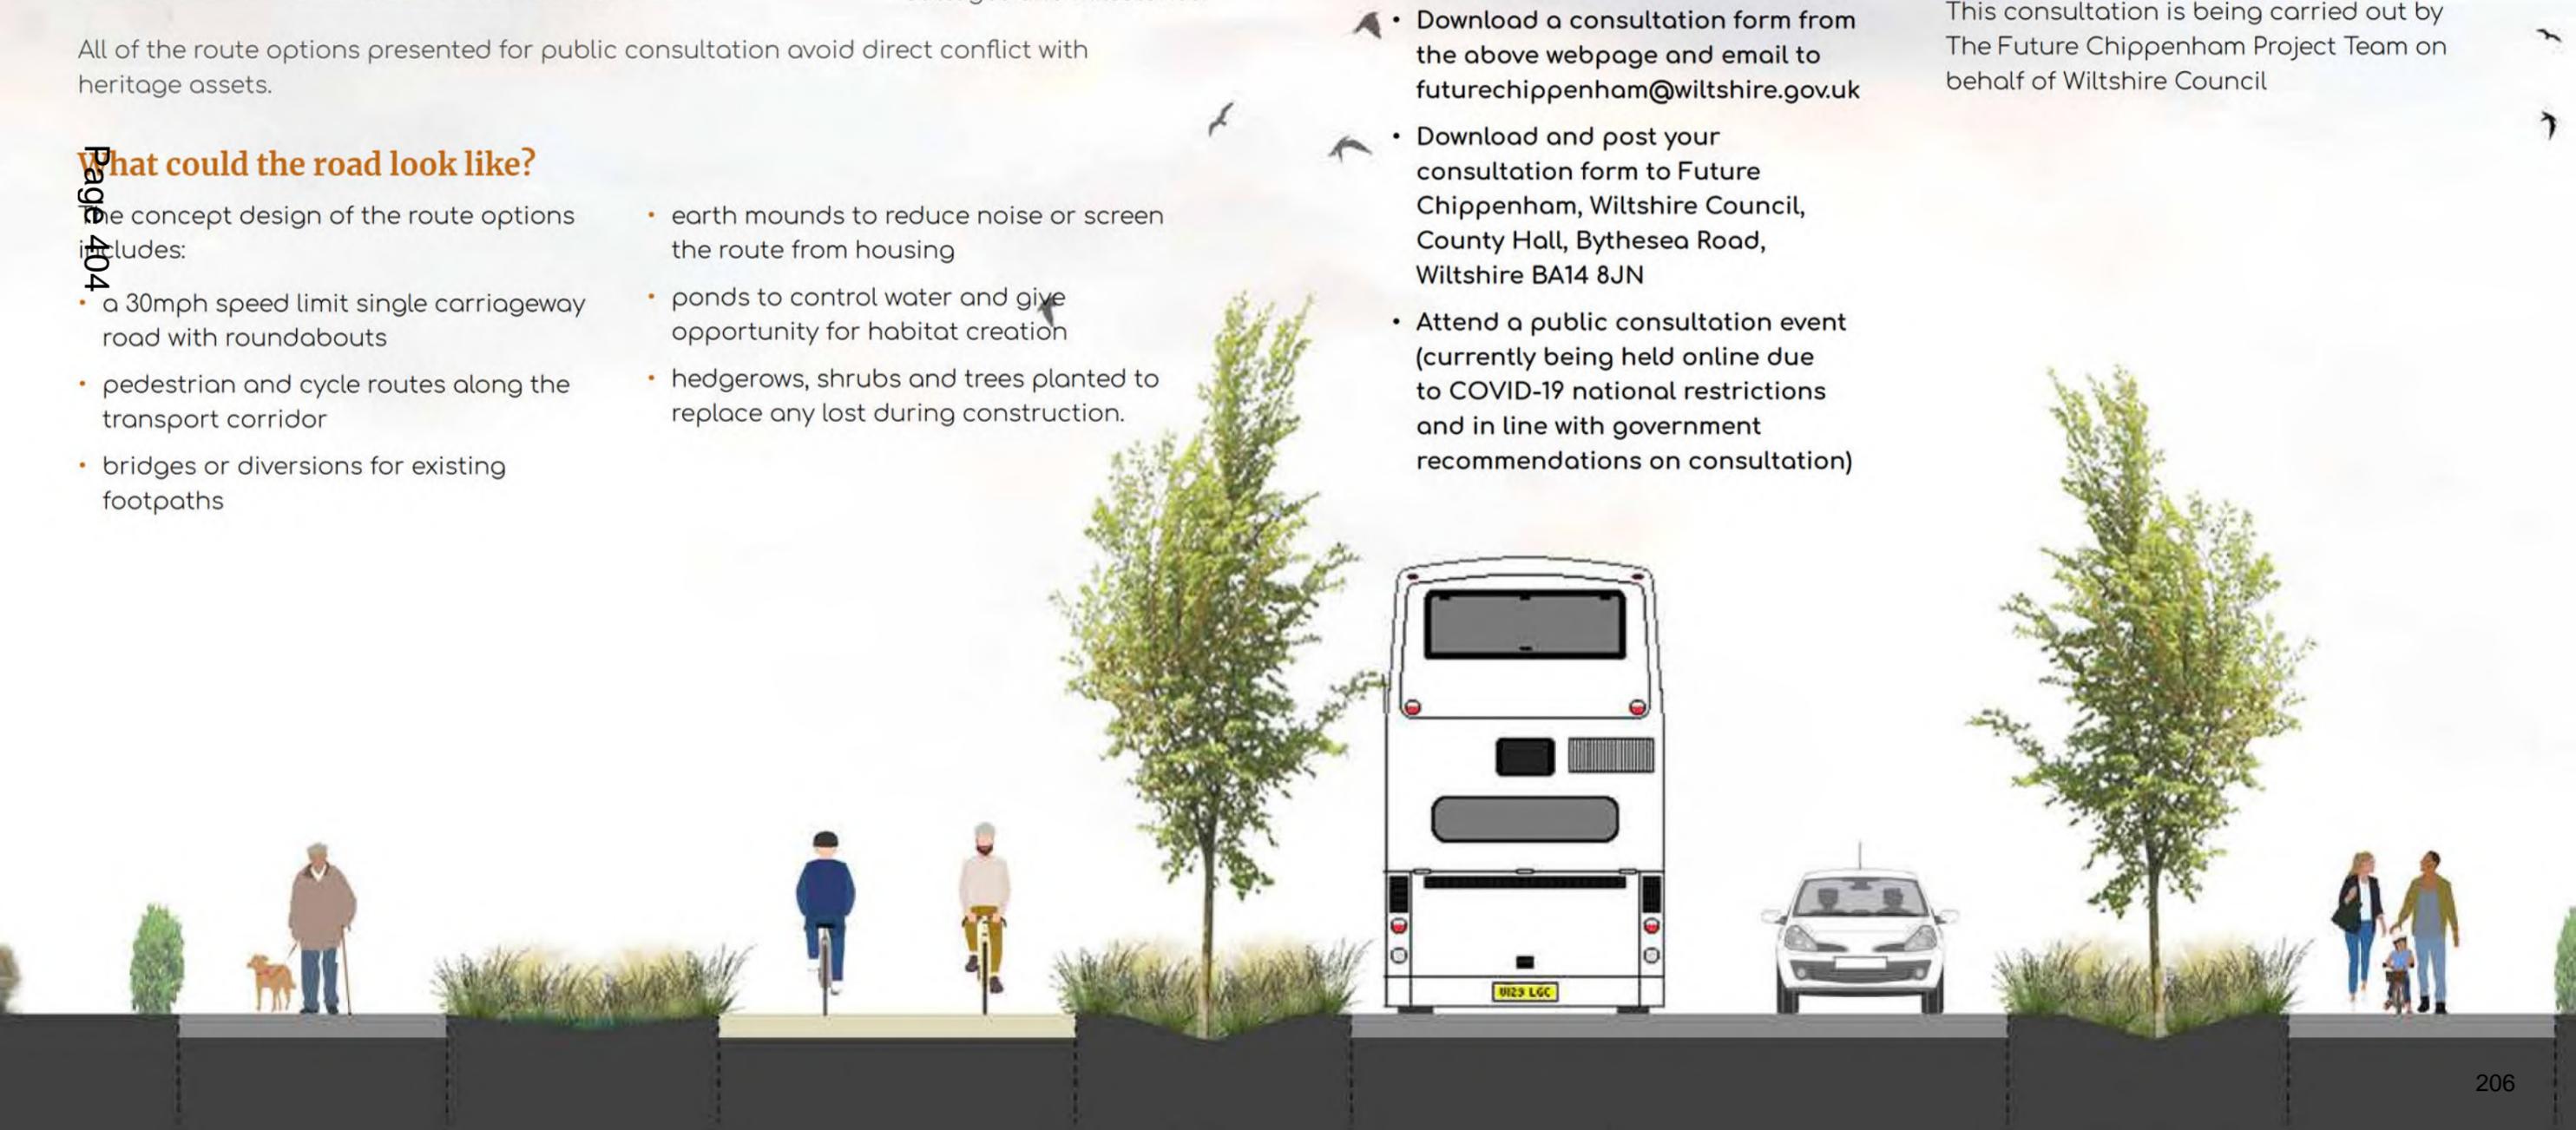

Please visit www.wiltshire.gov.uk/future-chippenham to reserve your place.

Additionally, the Future Chippenham team will be providing an overview of the road route options at Area Boards, Parish and Town Councils during the consultation period.

Consultation on the Future Chippenham distributor road route options

Before completing this consultation form please ensure you have viewed the Future Chippenham road route options consultation material, which can be accessed at www.wiltshire.gov.uk/future-chippenham

1 Are you responding as an individual or on behalf of a business or organisation?

- As an individual
- On behalf of a business or organisation

2 If you are responding on behalf of a business or organisation, please tell us which one.

3 Which age bracket do you fall into?

We are asking for this information to help us to better understand the demographics of those responding to this consultation.

- Up to 25 years old Between 26-35 years old Between 36-45 years old
- Between 46-55 years old Between 56-65 years old Over 66 years old
- I'd rather not say

4 Please let us know your post code.

We are asking for this information to help us to better understand the geographic pattern of the responses we receive.

5 Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Please select all that apply

- Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians
- Easing traffic congestion and improving journey times
- Climate change adaptation/mitigation
- Improving air/noise pollution
- Protecting and enhancing biodiversity e.g. animal and plant habitats
- Protecting and enhancing landscape and visual amenity
- Preserving and protecting heritage assets

Other

6 Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

If more space is required please continue on a separate sheet, referencing the question number.

7 Please rank the three potential road route options in order of preference.

Details about the potential road route options can be found in the consultation leaflet (page 7) available on the website www.wiltshire.gov.uk/future-chippenham

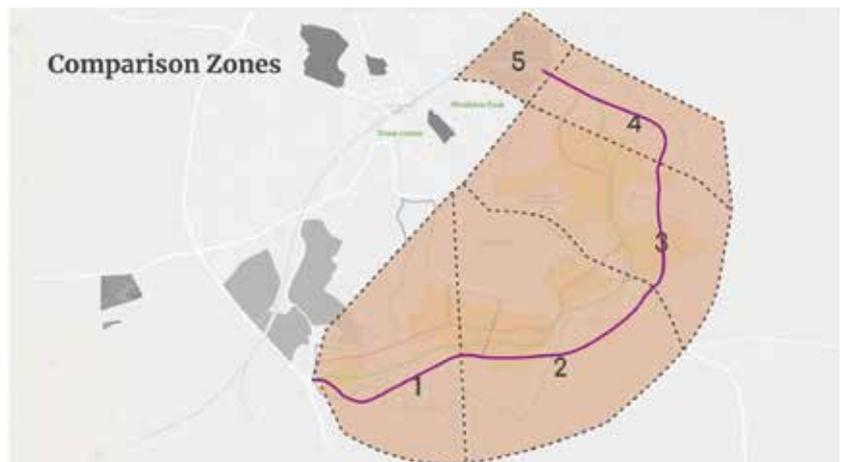

1 = most preferred option; 3 = least preferred option

Option A - Outer route Option B - Middle route Option C - Inner route

8 Please provide any specific feedback you would like to give about 'Option A - Outer route'.

To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

- 9 Please provide any specific feedback you would like to give about 'Option B - Middle route'.

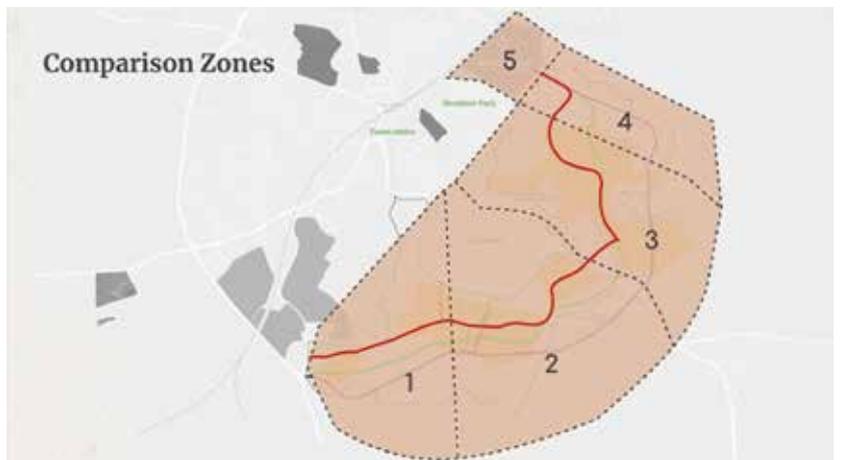

To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

If more space is required please continue on a separate sheet, referencing the question number.

- 10 Please provide any specific feedback you would like to give about 'Option C - Inner route'.

To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

If more space is required please continue on a separate sheet, referencing the question number.

11 Please rank the potential Pewsham link road options into order of preference.

Details about the potential Pewsham link road options can be found in the consultation leaflet (page 7) available on the website www.wiltshire.gov.uk/future-chippenham

1 = most preferred option; 2 = least preferred option

Pewsham link option 1 Pewsham link option 3

12 Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

If more space is required please continue on a separate sheet, referencing the question number.

13 Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

Future Chippenham Road Route Options

Consultation Feedback Report

Appendix: W

Page 415
July 2021

Part 1

MSF 8

Q1. Are you responding as an individual or on behalf of a business or organisation?

As an individual

Q2. If you are responding on behalf of a business or organisation, please tell us which one.

Q3. Which age bracket do you fall into?

Between 36-45 years old

Q4. Please let us know your post code.

■■■■ ■■■■

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Reducing air/noise pollution; Preserving and protecting heritage assets; Climate change adaptation/mitigation; Not building the road at all!;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

I'm sure you're just ignoring any comments against this scheme now you have your 3 options, but there is so much anger and worry for residents in the villages and houses to the east of Chippenham at the moment because you've just left them out of this process altogether. Why did you never consult on whether people actually wanted a road and take that into account before submitting the funding? You're forcing housing into the land you own and building this road first to justify it (in my opinion). There are local plans in place that forbid any building or development on most of the land above the cycle track, yet this apparently means nothing at the moment. Who wants this road apart from the landowners? The local MP is against it, all the parish councils are against it and 3,500 people have indicated already that they are against it (<https://you.38degrees.org.uk/petitions/stop-urban-sprawl-and-destruction-of-wiltshire-countryside>). A question you never thought to ask people (11 positive responses at the poorly organised events in 2019 is not a proper consultation...you had already submitted the application for funding). Please please re-consider (or significantly scale this back) or you'll turn Chippenham into another Swindon and ruining surrounding countryside for ever.

Q7. Please rank the three potential road route options into order of preference.

Option C - Inner route; Option B - Middle route; Option A - Outer route ;

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

This (2,3 and 4) is so far out of Chippenham into the beautiful countryside it's almost hard to believe you're proposing it. You say yourself it's the most visually prominent. It also goes closest to conservation areas, other villages and heritage assets. This would create a ring road, something you've been very keen to say this road would absolutely not be in the past, yet you use the term in your PDF now.

Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

The only reason I chose this as first preference is that it's the least bad of 3 bad options...Any option that is as close to Chippenham town centre as possible and away from the (so far) unspoilt countryside surrounding the east of the town is preferable...but no linking road to the east and a significantly scaled-back housing is my preference.

Q11. Please rank the potential Pewsham link road options into order of preference.

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

I don't get why you don't just use the first part of Pewsham way as part of the main route? Why build another road when you have one there already. The linking part could break off from Pewsham Way (just to the right of the letter "y" on your map).

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

Q14. How do you travel to/from Chippenham town centre?

Bicycle;On foot;

Q15. Why do you travel to/from Chippenham town centre?

As part of my commute to/from work;For leisure/social engagements;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Bicycle;Walking;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

Bicycle;Walking;

MSF8 (cont.)

I'm sure this is buried somewhere in one of the longer PDFs, but can you point me to any detail on what will happen when your proposed road crosses Stanley Lane?

I'm sure you're aware that, at the point which the inner and middle routes seem to cross, the road is a small country road and not in brilliant condition. There is a very narrow bridge over pudding brook that can only accommodate one car at a time.

It (and connected roads like Studley Hill a bit further down) certainly wouldn't be suited to any significant increase in traffic.

I've already filled in the two Chippenham local plan consultations and expressed my concern at the scale of growth around Chippenham (especially to the east).

My question was around the concept plans you've shown. It seems to show the proposed link road in the middle route option. Is there a reason for this? (Is it the council's preferred route for example?).

I think a great deal of residents have an issue with running consultation on the road routes before the local plan is agreed, but if public option is clearly for a different route (or no road), won't that make any consultation about the concept plans, etc pointless.
I suppose the inner route isn't that much different, but the outer route would mean a fairly drastic change in how those plans looked surely?

How can I complete your public consultation and indicate that I object to all of the routes you've presented and the project as a whole?

We've watched in horror at the increasing scale and speed these plans are being pushed through with seemingly no regard for, amongst many other things, local opinion and we want you to know we absolutely can't support it.

A great deal of other people locally including MP James Gray, local parish councils and thousands and thousands of others

- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I feel this is the best route as it takes away from the development, let the developers join the estates in the middle. The one draw bak of this and the reason I've voted it as a second route is the crossing of the wilts and Berk canal. if this route ran parallel to the canal across the A4 area it would be my preferred route
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
A decent route but I don't feel it should be within the development area but as it doesn't cut up the wilts and berks canal it is my favoured route. I still feel an amendment on the outer route would be better. the a4 crossing looks ridiculous, why a staggered junction and not a roundabout?
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
It should join with the A350 not a link back in towards patter down, I can see this being the most congested route of the options due to how much would be built outside of it.
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 3;Pewsham Link Option 1;

- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Canal road roundabout would be a traffic nightmare
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
The new roundabout should help to spread the traffic better than option 1
- Q14. How do you travel to/from Chippenham town centre?**
On foot;

For leisure/social engagements;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Walking;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Walking;

MSF10 (cont.)

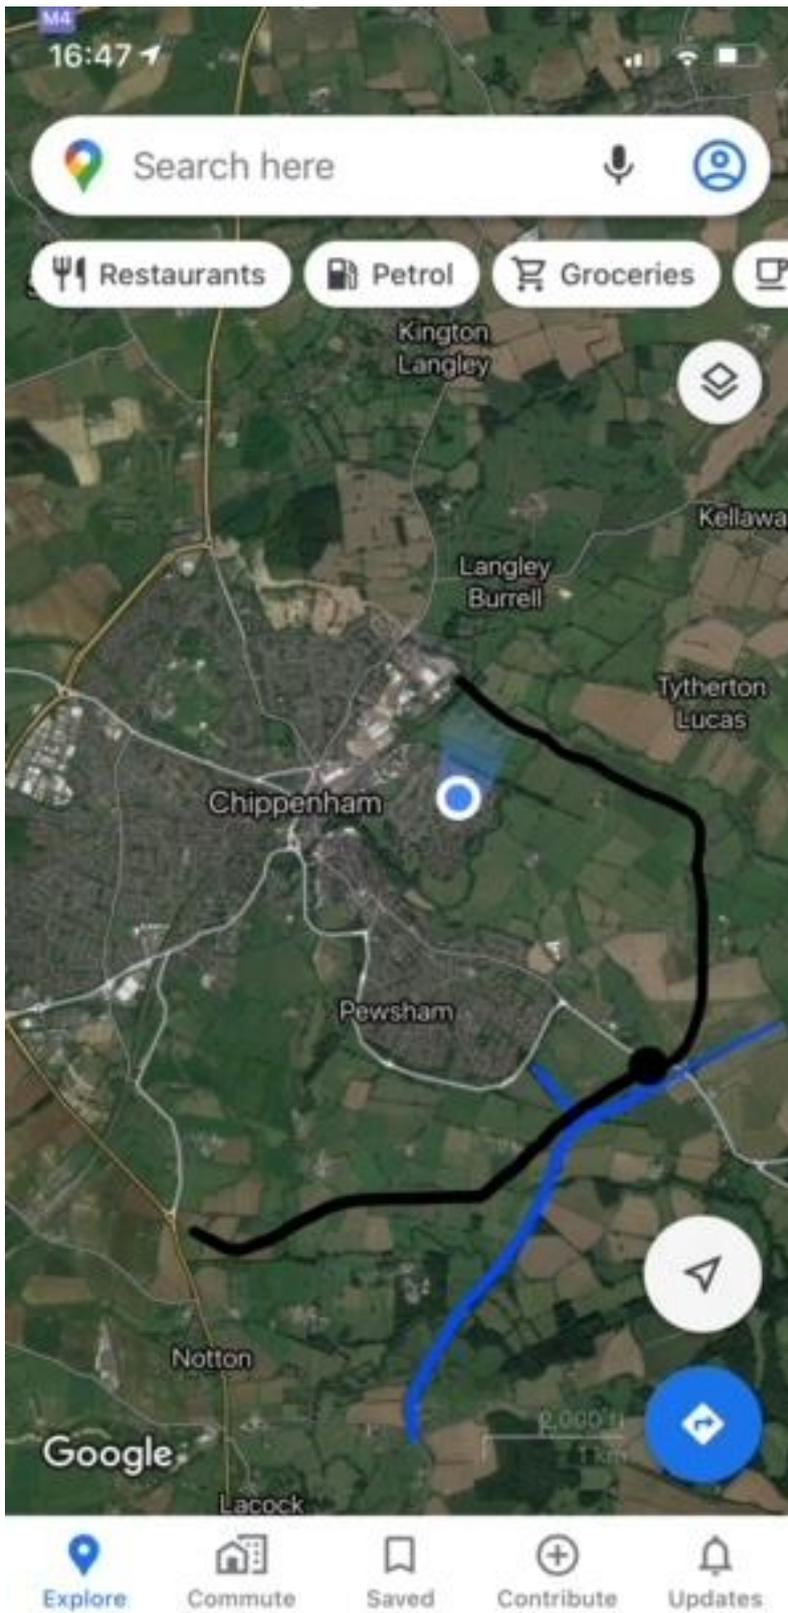

I've already filled out the consultations for both future chippenham and the local plan, I support the growth of Chippenham and as a resident of Monkton park i support the road. I should have probably added this in my consultation reply but after walking most of the route today and studying, to the best of my ability, I can't understand the routes.

The inner route is terrible, the link from pewsham would drop into a valley and wouldn't work for any heavy traffic. The 2 links for the middle and the outer are far better. I assume this has been added as an option with the hope of it never surfacing! I understand the shorter road would allow for the bridge from the roundabout but it just feels like half an idea.

The middle route is largely good but lacking the bypass feel that would benefit the town, let the developers build the link roads for the estate and keep the road more to the outer route. Here's where the outer route fails in my mind, you cross the canal, twice, completely unnecessarily? Why not use the outer route but when it comes close to the canal follow the canal on the chippenham side to the A4, have a roundabout and then again follow the canal until onto the outer route again? Get rid of that stupid staggered junction which will be an issue going forward! That way you have the bypass which benefits the town more than an estate road and you save a lot of money on bridges and save desecrating what is a beautiful stretch of canal. Along with that has any funding been earmarked so the wilts and berks can restore the section north of pewsham locks to the A4 North, which they have leases on or pending? A bridge over the route on the A4 near to the car sales would also mean a large section of the canal could be joined on to what the developers earlier proposed for a route to the area down from Rawlings green and a route to the town centre. There's nothing stopping the restoration and the canal opening with the route from the town centre to lacock, imagine the tourist appeal that could bring the town and the canal side developments that would allow. Not to mention the green corridor it would create, the cycle ways, the non car transport options you so commonly talk about in your environmental pledges. Let's see you take action whilst allowing the town to boom rather than hiding behind a fake desire and doing nothing about it. Now is the time to prove both can be done.

Attached is a quick sketch up in case my description was unclear, blue is the canal including the branch to the edge of pewsham. Appendix D

Thank you for your time and I look forward to the next stages of planning, let's hope too many Nimbys don't come out of the woodwork!

Option B - Middle route;Option A - Outer route ;Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This would be heavily impactful on the landscape and heavily visible.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This seems the most suitable route in terms of mitigating impact on the overall landscape also without effecting the local residents on which is already a difficult road to (A4) to use. This would slow said road down and easily assist with congestion throughout, while being sympathetic to the surroundings.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This option would be impactful for both local areas and Stanley Park. To have a road this close to the playing fields would be a waste of that development. To connect such a road to the small minor b road would clearly still result in congestion along the route.

Zones 1 and 2 - It would be an idea to "adopt" the A4 numbering and route the A4 from Chequers, down Cepen Way A350 as a dual carriageway and then across Option A to the A4 at Stanley. You can then renumber from there to the A350 at Jacksons Lane. This would remove traffic from Bath Road and Ivy Lane, which would act as a backup route, which is an improvement on the current situation.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
It would be better if you can link this route to Lackham Roundabout rather than along the B4528, unless you plan to improve the road between the two points, as this will then become the preferred route for HGVs coming up the A350 from Melksham going to Langley Park / Parsonage Way.
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 3;Pewsham Link Option 1;

Far enough out not to be too noisy for existing houses and far enough away from abby field school. Seems like this option follows the natural landscape and is further away from farms.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This option doesn't seem to follow natural ridge ways as option a however still seems to be a good distance from existing houses which is good
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This is an awful option. I am completely against this. Its too close to hardens farm and the walk ways around it, it destroys natural beauty and habitat. I don't know how this option is even an option and should be taken off the table completely. all options will destroy at least 8 farms!!! I hope that they will be redistributed and given other land if the UK is to be food sustainable and self sufficient. Option c the inner route is too close to natural beauty surrounding hardens farm and goes to near to the pond. This route shouldn't even be an option
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 1; Pewsham Link Option 3;

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

Too close to the wood and needs a bridge. Option c and option 1 shouldn't even be an option. Completely against this.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

This option is the better out of the two. Further from the wood. As I am against option c this is the only option for the link road

- Q1. Are you responding as an individual or on behalf of a business or organisation?**
As an individual
- Q2. If you are responding on behalf of a business or organisation, please tell us which one.**
- Q3. Which age bracket do you fall into?**
Over 66 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Easing traffic congestion and improving journey times; Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
The solution should provide for minimal impact and absorption of agricultural land whilst achieving the objective of easing traffic congestion
- Q7. Please rank the three potential road route options into order of preference.**
Option C - Inner route; Option B - Middle route; Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Unnecessary length of overall road through Zones 1-4 and scale of bridge construction in Zone 1. Splitting of Lackham college land in Zone 1 is undesirable. Adverse visual and physical impact on the Wilts and Berks canal line in Zone 2 and 3. This option totally destroys the rural solitude of the well used canal towpath.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Scale of bridge construction in Zone 1. Adverse impact on Wilts and Berks canal line in Zone 2 with destruction of the rural aspect of the canal towpath.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This proposal has the most minimal impact on the rural environment in all Zones whilst still achieving the objectives of the proposal
- Q11. Please rank the potential Pewsham link road options into order of preference.**

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

This option provides the best access to the existing highway and eliminates the need for a further roundabout which would create additional pollution through stop start traffic.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

Q14. How do you travel to/from Chippenham town centre?

Car;

Q15. Why do you travel to/from Chippenham town centre?

For leisure/social engagements;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Not applicable - I do not travel to/from Chippenham as part of a commute for work;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

MSF20 (cont.)

I live at ■ Spires View, Pewsham. My property is in the firing line for the proposed inner route of the new road. I own the drive from the A4 to the three properties at Spires View which is beside Stanley Park (which don't really get a mention on the various documents) I have several concerns about this route:

1. Flooding of my property. Ever since Stanley Park was built we have increased flooding - several times each year. This has been caused by the superb drainage they have put in which shifts the saturation to us. The road would worsen this - please consider that we are all on septic tanks here which struggle with the flooding too.

Also consider that the proposed area of Stanley parks by the A4 is a drainage area and for most of the year is unusable because of the high water table.

2. The problems of access caused by the proposed roundabout for the Spires View Properties.

3. The increase in road noise and pollution to the established properties at Spires View. We have all moved here with the knowledge of the A4 but the inner route plan would put the noise and pollution within a few meters of our actual houses - where as presently we are set back from the A4.

4. We have had no direct communication from Wiltshire council.

I have watched the video, attended the Teams meeting and read through the bump on the website

Interestingly, I am not against the road and progress totally - I just think squeezing it in on the inner route affects more existing housing and will be essentially unfair to existing residents

As residents and homeowners of Spires View next to Stanley park we would appreciate more details about the impact of Option C on us. We already have increased flooding every year caused by Stanley park. We would also have increased noise and traffic pollution from Option C. No one has spoken to us directly.

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Climate change adaptation/mitigation;Protecting and enhancing biodiversity e.g. animal and plant habitats;Protecting and enhancing landscape and visual amenity;Preserving and protecting heritage assets;Reducing air/noise pollution;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
I would like to know why a road is needed? Why do we need to speed everything up at the expense of the environment, habitats, plants and animals, why so we always have to try and make everything bigger, faster and apparently 'better' why can't we be satisfied with what we have. This type of human behaviour will ultimately bring about our ending. There are so many under utilised industrial areas in chippenham, the site opposite sainsburys for example. Always office space to let? Derelict and empty housing all of this needs sorting and using properly before this is considered as essential.
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ;Option B - Middle route;Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I can't believe the amount of greenbelt land this fragments. Has habitat fragmentation been considered at all? Runs very close to Lackhams only remaining peice of ancient woodland (plucking grove wood) a North facing woodland right next to the Avon.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Runs through alot of council owned farmland. At least its council owned and not being basically stolen from a private land owner.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 1;Pewsham Link Option 3;

- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Not needed
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**

- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Easing traffic congestion and improving journey times; Reducing air/noise pollution; Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Future development of the City, particularly on the East side as nowadays it is disproportionately developed on the west side
- Q7. Please rank the three potential road route options into order of preference.**
Option B - Middle route; Option A - Outer route ; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
for me this is the best route considering the future development of the East side of Chippenham. However lacks a bit of connection to the existing areas/roads
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
for me this is the best options as it balances all aspects of future developments, ability to connect other existing roads, particularly to existing roundabouts which will help to traffic flow. The main issue I have noticed on this road is the intersection between zone 2 and 3. That should be a roundabout and not an inserction, otherwise traffic congestion will be a future problem here.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
One of the main issues of this route is that it does not start on the Lackham roundabout, therefore becoming a point of major traffic congestion between Lackham roundabout and the new roundabout being built on the beginning of this route. This inner route lacks vision for future development of the city and in some places is pretty much a parallel road to the existing ones, therefore being a bit redundant. For me this

is the least viable option. Furthermore the link road to Pewsham, makes more sense on the option A and B.

Q11. Please rank the potential Pewsham link road options into order of preference.
Pewsham Link Option 3;Pewsham Link Option 1;

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

I think this option is not central enough on the Pewsham area in order to distribute traffic not only from Pewsham itself, but also from people that come from the Eastern areas of the city

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

Because of what I said above, I think this is a more viable option. However instead of a intersection connecting the link road to the route being constructed, whichever option is chosen, it must be a roundabout. Otherwise, this will be for sure a major point of traffic and the council will have problems in the future if this is not addressed now.

Q14. How do you travel to/from Chippenham town centre?

Car;

Q15. Why do you travel to/from Chippenham town centre?

For leisure/social engagements;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Not applicable - I do not travel to/from Chippenham as part of a commute for work;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

Car;

As an individual
- Q2. If you are responding on behalf of a business or organisation, please tell us which one.**
- Q3. Which age bracket do you fall into?**
Over 66 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets; There is no case at all for this road.;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Post pandemic many people will be working, shopping etc. from home. Those who have to travel to work locally should cycle, walk or use green public transport. We also have a climate emergency and globally the birth rate is plummeting, so we won't need to build houses on all this farmland. The money squandered on constructing this unnecessary road and destruction of countryside, should be spent on green initiatives.
- Q7. Please rank the three potential road route options into order of preference.**
Option C - Inner route; Option B - Middle route; Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
All routes are an environmental disaster opening up large swathes of good quality agricultural to be developed. This route opens up a little less.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
As above but with even more potential to destroy countryside.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
As above. All planned routes are horrendous. There is no case for this road at all.

- Q11. Please rank the potential Pewsham link road options into order of preference.**
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Again, both are hugely destructive and wholly unnecessary.
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
As above,
- Q14. How do you travel to/from Chippenham town centre?**
Car;
- Q15. Why do you travel to/from Chippenham town centre?**
Occasionally to shop when no pandemic. Mostly shop on line now.;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Not applicable - I do not travel to/from Chippenham as part of a commute for work;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Not applicable - I do not travel to/from Chippenham for leisure/social engagements;

MSF 31

- Q1. Are you responding as an individual or on behalf of a business or organisation?**
As an individual
- Q2. If you are responding on behalf of a business or organisation, please tell us which one.**
No
- Q3. Which age bracket do you fall into?**
Between 56-65 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians;Easing traffic congestion and improving journey times;Climate change adaptation/mitigation;Reducing air/noise pollution;Protecting and enhancing biodiversity e.g. animal and plant habitats;Protecting and enhancing landscape and visual amenity;It should not be automatically accepted that any of these options are required or are acceptable in my view. The world has changed and this type of project needs to be reviewed for financial and environmental reasons. ;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
In my view, due to the rapidly changing world post Covid and the environmental disasters we are facing, the need for this type of development has evaporated. It is part of the financial assumptions that later development will finance up front publicly funded building of roads like this one. In this case that would most likely mean massive housing development, plus limited infrastructure to support it. We must stop thinking it is acceptable to build over good quality agricultural land which is required for growing and rearing food for this country's population. Brown field sites and redundant office blocks etc. should always be prioritised before agricultural land. The world has changed; the funding allocated for this project (assuming of course its still going to available) should be spent on more worthwhile projects.
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ;Option B - Middle route;Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
None of these routes are acceptable or even required. They irrevocably damage farmland wild habitats and ecology. This particular route is the furthest out from the current urban boundary and would only lead to potentially more unnecessary development to justify it's construction.

- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
None of these routes are acceptable or even required. They irrevocably damage farmland wild habitats and ecology. This particular route is still way out from the current urban boundary and would only potentially lead to more unnecessary development.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
None of these routes are acceptable or even required. They irrevocably damage farmland wild habitats and ecology. Whilst this particular route is the least farthest out from the current urban boundary it would still potentially lead to more unnecessary development.
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 3;Pewsham Link Option 1;
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
see reply to 8 above.
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
see reply to 10 above.
- Q14. How do you travel to/from Chippenham town centre?**
Car;
- Q15. Why do you travel to/from Chippenham town centre?**
Mainly for shopping (otherwise done online) ;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Not applicable - I do not travel to/from Chippenham as part of a commute for work;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Car;

MSF 32

- Q1. Are you responding as an individual or on behalf of a business or organisation?**
As an individual
- Q2. If you are responding on behalf of a business or organisation, please tell us which one.**

- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Protecting and enhancing biodiversity e.g. animal and plant habitats; Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
I do not agree with the plan for a relief road. There needs to be investment in public transport and cycle and walking routes. The pandemic has shown we need to value our natural spaces more. To meet the climate change commitments we need less cars on the roads even electric cars and reduce short journeys by car. I don't believe any of the options should be built
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ; Option B - Middle route; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Don't build it
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Don't build it
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Don't build it
- Q11. Please rank the potential Pewsham link road options into order of preference.**
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Not needed as relief road not needed

- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
Not needed
- Q14. How do you travel to/from Chippenham town centre?**
On foot;Car;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;

- Q1. Are you responding as an individual or on behalf of a business or organisation?**
As an individual
- Q2. If you are responding on behalf of a business or organisation, please tell us which one.**
- Q3. Which age bracket do you fall into?**
Between 26-35 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Reducing air/noise pollution;Climate change adaptation/mitigation;Protecting and enhancing landscape and visual amenity;Preserving and protecting heritage assets;Protecting and enhancing biodiversity e.g. animal and plant habitats;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
- Q7. Please rank the three potential road route options into order of preference.**
Option B - Middle route;Option C - Inner route;Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
The route is so vast more land will be used for housing, a smaller route will minimise green space being turned into housing.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Though it still has a sider sprawl than the inner route it impacts less on current infrastructure such as football club.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Has less land being turned into urban development, but has impacts on current infrastructure
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 1;Pewsham Link Option 3;
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Seems more effective to join to existing road network, pewsham already has many roundabouts.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

Pewsham doesn't need more roundabouts.

Q14. How do you travel to/from Chippenham town centre?

On foot;

Q15. Why do you travel to/from Chippenham town centre?

For leisure/social engagements;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Walking;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

Walking;Car;

n/a

Q3. Which age bracket do you fall into?

Between 46-55 years old

Q4. Please let us know your post code.

██████████

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians;Easing traffic congestion and improving journey times;Reducing air/noise pollution;Making Chippenham and sustainable town for workers to stay town based and avoid commuting outwards;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

We need a plan that will bring sustainable change into the long term, not a plan that will be overwhelmed within a few years. Taking traffic off the A420 is vital. Not just from a transport perspective. The A420, from Bumpers Farm to the Folly Roundabout, is becoming increasingly residential with more individual households using it to leave the developments such as Bythebrook, Willowbank and now Middlefield, then travel into Chippenham and beyond. There are two high schools that are also driven to by parents and student transport - this already creates a large amount of traffic and road noise. Further increases in traffic will make the route even more congested.

In addition, there is a large amount of pedestrian traffic, many who are children in the morning and evening, using the footpaths on the A420 with no crossings at all requiring residents and children to dash across the road. Cars do not stop at the traffic islands as drivers see this is a 'fast' route from the dual carriageway to town. The footpaths are not wide enough for the existing foot traffic, as can be seen by the damage to the grass verges where pedestrians are forced to walk on to pass others or to step into the road. Add to this the lack of cycle ways. Overall, the A420 road, the 1-way system it leads to, footpaths and cycle ways are woefully inadequate for current use, let alone an increase.

Q7. Please rank the three potential road route options into order of preference.

Option A - Outer route ;Option B - Middle route;Option C - Inner route;

- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**

Not applicable.
- Q3. Which age bracket do you fall into?**
Between 56-65 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians;Easing traffic congestion and improving journey times;Climate change adaptation/mitigation;Reducing air/noise pollution;Ideally all of the above, but the first four are 'more' important!;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
The government grant offers the opportunity to massively improve the transport infrastructure of Chippenham, while preparing the surrounding area for the inevitable growth. The routing of the future 'by-pass' will by necessity be a compromise, but the major considerations must surely be the practical ones.
- Q7. Please rank the three potential road route options into order of preference.**
Option B - Middle route;Option C - Inner route;Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Zone 1. Good to start from an existing roundabout, but much longer bridge required.
Zone 2. First crossing of Wilts & Berks Canal means additional cost and poor visual aspect.
Zone 3. Second crossing of Wilts & Berks Canal means additional cost and poor visual aspect. Seems a very 'wide' routing around the east side.
Zone 4. Long!
Overall, option A would appear to be more akin to an outer by-pass with no immediate relevance to people actually living in Chippenham!
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Zone 1. Good to start from the existing roundabout on the A350, and this routing appears to remove less natural habitat.

Zone 2. The routing would take the road alongside the Wilts & Berks Canal at Pewsham Locks. This would offer good access to the locks, the canal and walks. I also believe that members of the W&BC Trust are interested in forming a small 'lake'

in the area that appears to be constantly flooded to the south of the A4! The routing of option B is also very close to the line of an existing footpath.

Zone 3. This option utilizes a nice 'gap' on the A4, but I consider that a roundabout would be much superior option to the proposed staggered junction. The routing from this position to Rawlings Green would appear to be the most sensible of all three options.

Overall - option B would be my preferred option, but I believe a hybrid option (as mentioned in 10) would be better.

Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

Zone 1. The additional cost of a brand new roundabout, already on a 'B', road is not ideal.

Zone 2. The link road option to join at Canal Road roundabout is really dreadful! It would surely be much better to use a similar routing to options A or B.

Zone 3. The whole 'debacle' at the A4, including: the infringing of Stanley Park, passing very close between housing, the required re-housing of protected newts and the addition of a pointless roundabout NE of Stanley park seems chaotic. The large sweep between Harden's Farm and New Leaze Farm can only be because the designer knows something that the public are not privy to!

Overall I believe a 'hybrid' routing would serve the people of Chippenham better.

Zone 1 - option B initially with the road starting at the roundabout, but the routing then towards the bridge option of C.

Zone 2 - option C to the edge of the Wilts & Berks Canal, but then option B to the A4. However, I believe it is essential that the junction on the A4 is a roundabout rather than a staggered junction.

Zone 3 - obviously the initial routing of B, and then either B or A as dependent on the wider housing plan!

Zone 4 would therefore be dependent on the routing through Zone 3.

Q11. Please rank the potential Pewsham link road options into order of preference. Pewsham Link Option 3; Pewsham Link Option 1;

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

A ridiculous option to cross the valley at the Canal Road roundabout! The additional cost would seem a waste of many! During the morning rush hour the traffic often gets backed up to the Canal Road roundabout - especially if the traffic lights are not sequencing correctly at the Bridge Street intersection! Also, there have been numerous reports of a strong smell of gas in this area for many years. As a 'dog walker' who lives in Pewsham I have detected the smell of gas myself.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

More sensible, much less cost and more natural than option 1.

- Q14. How do you travel to/from Chippenham town centre?**
Car;Bicycle;On foot;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;General shopping in town centre.;

Option B - Middle route; Option A - Outer route ; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
None of the options are preferable as Chippenham already has huge housing developments under way. If the road is tied up with more housing would rather not have it. Many car journeys cover very small distances for leisure, need to make Chippenham better connected for walking and cycling - make it safer to cycle and discourage car use. Climate change is here - more brave thinking outside the box is needed
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Climate change adaptation/mitigation;Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians;Protecting and enhancing biodiversity e.g. animal and plant habitats;Protecting and enhancing landscape and visual amenity;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
There is a major concern about the need for perpetual growth. In Chippenham's case growth for growths sake is not good for the local setting and there are no new jobs being created locally to even justify it. I am not in favour as it is unsustainable and will only be detrimental and create more ecological, pollution, congestion issues and I do not believe the premise it is based on.
- Q7. Please rank the three potential road route options into order of preference.**
Option C - Inner route;Option B - Middle route;Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
It is too impactful on the external rural setting

■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Preserving the countryside surrounding Chippenham; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets; Climate change adaptation/mitigation; Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
One of the best things about Chippenham and in particular Pewsham is that it is surrounded by countryside. I do not wish to see this destroyed and I am against all of these options and any development which significantly impacts the existing local environment. Acknowledging that this consultation is about selecting the best of the proposed options I will complete it as such, but the Council needs to be clear about how to voice opposition to all of the proposals.
- Q7. Please rank the three potential road route options into order of preference.**
Option B - Middle route; Option A - Outer route ; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
As a frequent walker of the Wilts & Berks canal path, this would destroy the character and peace of the walk. However it is preferable to Option C since it is further out. Concerns about visibility are misplaced in my view as future housing would be visible from everywhere anyway and would likely obscure the road itself in many places. This road (and all the planned housing development areas) would ruin all the countryside to the south and east of Chippenham. That is far too high a price to pay, and I am completely against it.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This seems like the most sensible choice given the topography and proximity to future housing areas, although it is a close call with Option A as to which is the least-awful. Again, it would destroy the character of the fields south of Pewsham where I

regularly go walking and see wildlife such as owls, deer, hares and bats - all that would be gone. The peace and quiet which is so beneficial and only a few minutes' walk away would be destroyed. As a Pewsham resident I do not foresee any benefit from this road beyond a few minutes saved on journeys out of Chippenham to the north or south - which I couldn't care less about and is in no way (to anyone) worth the cost of destroying the surrounding landscape. I have never experienced traffic problems in the town centre beyond short periods of slow-moving traffic, and besides, future planning should not be based on encouraging car usage, especially given the number of daily commuters is likely to drop post-covid. The awkward right-left junction (presumably a double roundabout) with the A4 shown on the video would be unnecessary and should be replaced with a simple roundabout.

Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

This route would be utterly awful and destroy the character of Pewsham. I cannot imagine a worse proposal. It is far too close and would create a narrow strip of land between two main roads. Why would both be required? I can understand the idea of connecting Pewsham with Lackham roundabout so surely a better idea would be to do that and perhaps widen Pewsham Way through zone 2, with another connecting road from somewhere closer to the existing A4 roundabout to Rawlings Green? Still, that would only be a slight improvement, and I am completely against this proposal (as I am all the proposals).

Q11. Please rank the potential Pewsham link road options into order of preference.
Pewsham Link Option 3; Pewsham Link Option 1;

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

Since Option 1 is linked only with Option C it is certainly the least preferable. It also seems unnecessary to build a bridge at this location when Option 2 does not require one.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

It is better than Option 1 but I would hate to see any of this actually built.

Q14. How do you travel to/from Chippenham town centre?

On foot;

Q15. Why do you travel to/from Chippenham town centre?

As part of my commute to/from work; For leisure/social engagements; Shops;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Walking;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

Walking;

I think we need to protect our landscape and keep our fields as fields, I do not see how this in the long run is a good thing we already have a relief road which works perfectly well. Which would work better if the council did not grant planning permission for McDonalds and KFC which causes / will cause more traffic build up - this is not for the greater good of the community we do not need new housing - where is the social infrastructure to support additional persons to chippenham.
- Q7. Please rank the three potential road route options into order of preference.**

Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
I think it's important that the needs of pedestrians and cyclists are considered with any of the three route options. Any of the three routes could potentially be fantastic for walking, cycling and running. However my biggest concern is that there will be no pavements included in these plans. I often run along Pewsham Way and Avenue La Fleche which both don't have pavements. This can be intimidating as the traffic can move fast along these roads.
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ;Option B - Middle route;Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I might be being unrealistic here as I have no idea about how much of an impact on cost this would be - but it would be fantastic if this entire route from the Lackham College roundabout all the way to Rawlings Green had pavements on both sides of the road. This would ensure a safe route for pedestrians including parents with young children.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets; Reducing our reliance on fossil fuel based vehicles and in general reducing vehicle usage;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

I would like to understand how this proposal intends to lead to a sustainable zero carbon future. We need to be reducing this level of destructive development. We need to make the roads we have work by reducing the number of road users, not building more. Any new housing needs to focus on delivering public transport so fewer cars are required.

Q7. Please rank the three potential road route options into order of preference.

Option C - Inner route; Option B - Middle route; Option A - Outer route ;

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

You are basically surrounding an area one assumes you consider will then be available for development. Therefore this should be reduced.

The question to ask is why do we need it? How are you moving to zero carbon, what are you doing to commit to zero carbon development, retrofit and addressing our emptying town centres, why don't you look at repurposing buildings with the town centre and improving public transport this is poor.

Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

It seems to have some more crucial impact on visual and environmental aspects.

The question to ask is why do we need it? How are you moving to zero carbon, what are you doing to commit to zero carbon development, retrofit and addressing our emptying town centres, why don't you look at repurposing buildings with the town centre and improving public transport this is poor.

Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

A smaller/shorter route.

The question to ask is why do we need it? How are you moving to zero carbon, what are you doing to commit to zero carbon development, retrofit and addressing our emptying town centres, why don't you look at repurposing buildings with the town centre and improving public transport this is poor.

Q11. Please rank the potential Pewsham link road options into order of preference.

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

The question to ask is why do we need it? How are you moving to zero carbon, what are you doing to commit to zero carbon development, retrofit and addressing our emptying town centres, why don't you look at repurposing buildings with the town centre and improving public transport this is poor.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

The question to ask is why do we need it? How are you moving to zero carbon, what are you doing to commit to zero carbon development, retrofit and addressing our emptying town centres, why don't you look at repurposing buildings with the town centre and improving public transport this is poor.

Between 26-35 years old
- Q4. Please let us know your post code.**
██████
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Easing traffic congestion and improving journey times; Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Protecting and enhancing biodiversity e.g. animal and plant habitats;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Providing an effective route which does not result in traffic being routed through newly built-up areas. Which would ultimately increase noise-pollution, air pollution and become a safety hazard to the newly developed areas. All of the options appear to result in this by routing the road through the middle of development areas and not around them.
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ; Option B - Middle route; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Zone 1 - I support the route joining the Lackham/A350 roundabout. Provides a strong link and avoids unnecessary junctions.
Zone 2 - I strongly support link road 3.
Zone 3 - this route is advantageous as it avoids impacting Stanley park
Zone 4 - I strongly support the route avoiding going through the middle of the housing development area
Zone 5 - I strongly disagree with the route going through the middle of the development area. (traffic = safety issues, barrier to walking/cycling, noise and pollution).
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Zone 1 - I support the route joining the Lackham/A350 roundabout. Provides a strong link and avoids unnecessary junctions.

Zone 2 - I strongly support link road 3, however this route is closer to the development area which will have a greater negative impact on the housing development.

Zone 3 - I do not support this route as it is close to Stanley park and therefore will negatively impact the green space.

Zone 4 - I strongly disagree with the route going through the middle of the development area.

Zone 5 - I strongly disagree with the route going through the middle of the development area (traffic = safety issues, barrier to walking/cycling, noise and pollution).

Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

I strongly disagree with this route - as it tracks too close to Chippenham, resulting in bad connections to the A350 (not connected to the roundabout).

Furthermore the entire route goes through the middle of the development areas. This will bring traffic to the areas where people are walking and living (rather than bypassing those areas). A busy road will divide the communities and presents a safety risk to pedestrians, children playing and cyclists. As well as the resulting in traffic pollution (noise and air pollution).

I fundamentally disagree with route Option C. It is clearly the worst route.

Please don't pander to the 'cheapest is best' approach to development. This will negatively impact the town and be a blight on the area compared to the other routes.

Q11. Please rank the potential Pewsham link road options into order of preference.
Pewsham Link Option 3;Pewsham Link Option 1;

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

Shortest route, therefore advantageous.

Q14. How do you travel to/from Chippenham town centre?

Bicycle;On foot;Car;

Q15. Why do you travel to/from Chippenham town centre?

MSF57 (cont.)

My one of my many many questions as a resident/homeowner living at Spires View (if your not familiar to where this is we are located as Stanley Park sports grounds closest neighbours ...) is why as a property owner who is going to be greatly affected to all three options but mainly by option C have never been consulted by our council out of common courtesy prior to it becoming public I not only speak for myself but also for my fellow two neighbours.....

If you choose not to answer my question live on this webinar todayI would appreciate some form of personal contact from a member of the Future Chippenham team in respect of our concerns and our future....

I await your reply

Option A - Outer route ;Option B - Middle route;Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Section 1 use of the lackham roundabout is good, however the right hand turn seems to be worse than route B's route in section 1. I would prefer section 1 and 2 of B with the rest of the sections following option A
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I like section ones start on lackham roundabout. I dislike section 3's road crossing. On the video it looks like a staggered crossroads, which I would prefer to be a roundabout if possible.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Section 1 is, In my opinion, not started in a great place as I would prefer the lackham roundabout to be used for the start of the route instead of a new roundabout. I am also not enthused about section 3 as I believe a roundabout equivalent to a 90 degree turn is not a good option just after the sports park and I would prefer a turn instead.
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 1;Pewsham Link Option 3;

- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Existing roundabout use is good. However roundabout may want to be expanded as current roundabout is a bit on the small side for the current road and speed.
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
Not overley keen on another roundabout on the pewsham road as the current road is already annoying due to the speed limit and roundabout combo making it so you have to accelerate and decelerate often. A road design or speed change would probably be a good idea if implimented

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Easing traffic congestion and improving journey times; Climate change adaptation/mitigation; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

Reference the objective 'to reduce congestion in the town centre' – I'm not sure that there is congestion currently, but there will be with another 75,000 houses. The main problem is the knock-on effect of 'not enough parking' leading to 'nobody shopping' leading to 'closure of shops' leading to 'no reason to go to Chippenham'.

Yes, people will want to go to Chippenham if it has shop and looks like the pretty pictures in your brochure. But please 'put your money where your vision is'.

1. I accept that it is inevitable that money will be spent on a major road scheme such as this, and that 75,000 houses will be built on this green and pleasant land; I accept that it is inevitable that there will be lasting damage to the environment. However, I strongly urge the Council to work with developers and all involved to spend SIGNIFICANT amounts of money on remediation work: commit resources to provide footpaths, cycle paths, Park & Ride facilities and bus lanes / bus routes; commit resources to protect large areas of open land, woodland, green spaces, wildlife habitats and play areas. Do not simply 'put in a ring road' but plan for the future and understand how people in those 75,000 houses will live, where they will work, when and where they will drive to and from work, and drive to and from school, and drive to and from shops. And commit money to support any 'green initiative' into the foreseeable future: do not simply say 'we have left x acres of open land' but say 'we will pay for somebody to ensure that those animal and plant habitats are protected, supported and enhanced forever. And that includes a 'green avenue' on both sides of the Distributor Road, to be used by humans and by wildlife, and managed by funded 'rangers' or wardens.
2. The Council – and the developers – need to deliver on the stated Overarching Priority No 3: Tackling the causes and effects of climate change.

3. It is difficult to understand how this programme will deliver the stated Environmental Objectives:
- >minimising the impact on the quality of the environment
 - >improving accessibility for non-car users by promoting sustainable forms of transport
 - >through infrastructure-led delivery seek opportunities to reduce the carbon footprint of the road and scheme.

Please demonstrate that these are not just bland statements and convince me that money and human resources will be committed to the issue.

4. Please note that any planning needs to take into account not just the impact on Chippenham but the impact on the wider North Wilts area, especially within the Chippenham – Lyneham – Calne triangle. There will almost certainly be an increase in traffic both ways between M4 J17 and Calne / Devizes (and beyond). This needs to be taken into account in any planning.
5. I am not sure what the Council can do about reducing noise / air pollution when delivering this Road. Please explain
6. If 'preserving and protecting heritage assets' includes 'preserving and protecting and enhancing the Wilts/Berks Canal', then please assume that I have ticked that box as well.

Q7. Please rank the three potential road route options into order of preference.

Option A - Outer route ;Option B - Middle route;Option C - Inner route;

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

I accept that this Distributor Road is necessary, and I accept that 75,000 houses will be built. If that is the case, then it is pointless to opt for either B or C; the Distributor Road has to go as far outside the houses as possible to make sense.

I accept that 'the three options through the landscape following higher ground and is therefore more likely to remain within views from Derry Hill, Bencroft Hill and surrounding villages.'

Therefore please note my comments at Q6 (above): please commit to spending significant amounts of money on mitigation. Do not just say 'where possible' but put your money into delivering on Overarching Priority No3 and the stated Environmental Objectives.

a. Comparison Zone (1)

No comments on the route.

I suggest that, as part of the commitment to delivering on Overarching Priority No3 and the stated Environmental Objectives, the entire Distributor Road should be side enough to include both a cycle lane and a footpath (perhaps separated from the road by a hedgerow). These could be part of a demonstrable commitment by Chippenham to create a 'Green Ring Road' around the town to attract long-distance walkers and cyclists.

As stated in the video, the route crosses two footpaths; please confirm whether footbridges will be built over the road to enable pedestrians to carry on using these footpaths. If not, what is the solution? The 'Ring Road' footpath should connect with these two footpaths.

b. Comparison Zone (2)

No comments on the route.

As stated in the video, the route bridges the Canal; there is a designated Cycle Route along the canal. The 'Ring Road' footpath and cycle path should connect with this Cycle Route, and with the east-west footpath from Middle Lodge Farm to the A4 (and Derry Hill).

I suggest that there should be at least two Park & Ride facilities adjacent to the Distributor Road. These should be planned for and costed as part of the overall programme. The ideal place for the southern P&R would be adjacent to the Junction with the Link Road to Pewsham. Buses should run at frequent / regular / convenient times from the P&R, through the southern half of the 75,000 houses, to Chippenham Centre and the Railway Station (and return).

The junction of the A4 and A342 is a major accident blackspot. Adding the roundabout to connect the Distributor Road will not improve matters, by itself, but will be an opportunity to carry out other roadworks to slow down traffic descending towards it from both Derry Hill and Calne. Please confirm that this will be addressed.

Will the planning take into account the huge increase in traffic that is likely as traffic – and especially HVGs – begin to use this route for travelling (both ways) between J17 and Calne, Marlborough, Devizes, etc?

c. Comparison Zone (3)

No comments on the route.

As stated in the video, the route bridges the Canal again close to Green Lane Farm; can Distributor Road 'green funds' be used to extend the Cycle Route / footpath along this stretch of the canal. The 'Ring Road' footpath and cycle path should connect with the Canal Towpath here (and with a future Cycle Route, delivered as part of the Council's Green initiative).

As stated in the video, the route crosses Stanley Lane between Hither Farm and Middle Farm. Is it on a bridge or will there be a junction / roundabout? If the latter, what will be done to prevent Stanley Lan becoming a 'rat run'?

d. Comparison Zone (4)

No comments on the route.

As stated in the video, the route crosses National Cycle Route (NCR) 403 / footpath along this stretch of the canal. The 'Ring Road' footpath and cycle path should connect with NCR 403; Distributor Road 'green funds' should be used to improve the Cycle Route / footpath in both directions, and ensure that it is protected from being lost in the middle of 75,000 houses. There should be some sort of green 'buffer' on both sides

Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

It looks like I reached a limit in allowable text in Q9. This answer continues my response for the Outer Route.

Zone (4) ctd

There should be some sort of green 'buffer' on both sides of the Distributor Road; do not just plan to build houses and roads alongside it! Please confirm that you will work with the developers to ensure that there is the commitment to the Overarching Priority No3 and the stated Environmental Objectives, and not just a commitment to build 75,000 houses.

As stated in the video, the route parallels the River Marden and crosses two footpaths linking Stanley and Tytherton Lucas with NCR 403. Please confirm whether footbridges will be built over the road to enable pedestrians to carry on using these footpaths. If not, what is the solution? The 'Ring Road' footpath should connect with these two footpaths, and the Ring Road cycle track should connect with NCR 403 from here.

As stated in the video, the route crosses the River Avon before skirting the Rawlings Farm development.

There is no reference to the two footpaths which are then crossed; the one linking Cocklebury (and NCR 403) and Peckingell. Please confirm whether footbridges will be built over the road to enable pedestrians to carry on using these footpaths. If not, what is the solution? The Ring Road footpath should connect with these two footpaths, and the Ring Road cycle track should connect with NCR 403 from here.

e. Comparison Zone (5)

A major criticism is the lack of information about Zone 5, the links to J17, Chippenham.

How will traffic get from 'the improved J17' to the 'Rawlings Farm end of the Distributor Road'? What will those 'improvements' to J17 be, and what will they achieve?

More traffic will undoubtedly use the B4122 and B4069 (or the 'short cut' along Plough Lane through Kington Langley) as a 'rat run' to travel between J17 and Calne, Devizes, etc; what will be done to prevent this?

What will be done to prevent further encroachment into the unspoilt countryside north of Parsonage Way and the Bird's Marsh development?

As previously mentioned, I suggest that there should be at least two Park & Ride facilities adjacent to the Distributor Road. These should be planned for and costed as part of the overall programme.

The ideal place for the northern P&R would be adjacent to the Rawlings Farm development, allowing easy access from the Distributor Road to the Railway Station and town centre (and return) via an improved Cocklebury Road.

Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

See above. I have not considered Inner and Middle Options

Q11. Please rank the potential Pewsham link road options into order of preference. Pewsham Link Option 3; Pewsham Link Option 1;

Not applicable - I do not travel to/from Chippenham for leisure/social engagements;

MSF62 (cont.)

There are many towns of a comparable size to Chippenham that have Country Parks, or are planning for them as part of future expansion. But a quick glance at the Ordnance Survey map of Chippenham (OS Explorer No 156) shows that there is very little that is shaded green in or around Chippenham; indeed, there is virtually nothing in the 16 square miles to the east and north (that is, east of the B4069 and north of Stanley Lane). Neither Pewsham nor Monkton Park have any significant recreational areas, and something much larger than Cepen Park's Vincients Wood is needed for town the size of Future Chippenham.

As part of the planned 7500 houses, and the plan for a Distributor Road, would the Council consider setting aside a substantial area of land and planting trees for a Country Park? If work was to start in the near future, the Country Park could become a reality by the end of 2030s. An area equivalent to Bird's Marsh (at least 300 acres, or at least 0.5 square miles) would go a long way to demonstrating a commitment to:

a) the Overarching Priority No 3: Tackling the causes and effects of climate change and

b) the stated Environmental Objectives, including

- minimising the impact on the quality of the environment
- through infrastructure-led delivery seek opportunities to reduce the carbon footprint of the road and scheme.

Note also that such a commitment might unlock additional grant funding from other sources

Please can you confirm what processes you have in place to acknowledge receipt of emails such as this, with questions for the webinar and/or comments or questions for the consultation process?

It has been suggested that 'the road will be a low speed distributor road running through housing developments, not a relief road'.

Please can you confirm whether the road is planned as a dual carriageway around the housing or as a single-lane low-speed road running through the housing?

Please can you confirm how many junctions and/or roundabouts and/or traffic lights will be included on the Distributor Road to facilitate access to/from the additional 7500 houses?

Thank you for sending the 'update' to the written 'answers' but I am extremely disappointed with the bulk of the responses from your Team. Please can you tell me what plans you have to facilitate meaningful dialogue with members of the public who would like the opportunity to engage with two-way discussions on the key issues. I find that many of your answers do not provide sufficient information; indeed, it is as if you either do not understand the questions raised, or you are deliberately avoiding the issues.

I would be extremely happy to take part in a full and open discussion, and would hope that your Team would also be willing to do so.

Option A - Outer route ;Option B - Middle route;Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This one is better due to it going more around the local farm, cycle paths and fields. I don't see how in the other plans how appropriate it is having such a main busy road will be safe near local cycle paths and so close to farm houses and farmland near crops and animals.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This route would cut in too much to the much loved cycle path that many use. I know people who travel from ceoen Park North and south to walk along this beautiful cycle path and enjoy the nature it brings. I would also be interested how light pollution will be affected and the how safe a major road will be so close to a cycle path where people of all ages use.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This cuts far to close the main road on the outskirts of pewsham and is a main concern for road safety. It also destroys the cycle path route that is the main beneficial thing to the people living on Pewsham. I know many people who live on the other side of town near ceoen Park North and south but travel to Pewsham and walk along the cycle path. It will be a horrific thing to build and interfere with it.
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 1;Pewsham Link Option 3;

- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
- Q14. How do you travel to/from Chippenham town centre?**
Train;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Not applicable - I do not travel to/from Chippenham as part of a commute for work;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Train;

MSF 67

- Q1. Are you responding as an individual or on behalf of a business or organisation?**
As an individual
- Q2. If you are responding on behalf of a business or organisation, please tell us which one.**
n/a
- Q3. Which age bracket do you fall into?**
Between 36-45 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Protecting and enhancing biodiversity e.g. animal and plant habitats; Preserving and protecting heritage assets; Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Reducing air/noise pollution; Climate change adaptation/mitigation;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ; Option B - Middle route; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Option A would be my most preferred option, as it minimises the impact on the local countryside but gives better links to the Pewsham and the Derry hill area, in particular I am referring to zones 3-5.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This option seems to be the most negative for the local countryside and wildlife habitats, looking at zones 3-5 they are completely cutting through several fields which will obviously have a detrimental impact upon the local wildlife and i imagine would have severe impacts upon the households living in these zones.
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 1; Pewsham Link Option 3;

- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Option one has the benefit of opening up links to Pewsham without hopefully severely impacting upon the estate and local area too much. In addition there is an existing roundabout on the Webbington Rd entrance to the estate so that would help with the flow of traffic in that area.
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
Option 3 looks like it would cause traffic to back up, without some kind of roundabout and road on the other side of that section of Pewsham Way (which would mean another road into the estate and destruction of the public footpath) this would just potentially cause more congestion at that junction.
- Q14. How do you travel to/from Chippenham town centre?**
On foot;Car;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;As part of my commute to/from work;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Walking;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Walking;

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets; Reducing air/noise pollution; Climate change adaptation/mitigation;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Any of these road options are going to plough through areas of agriculture, footpaths and cycleways and just create more air pollution for the surrounding countryside. You are planning to develop Chippenham taking in hamlets and villages as you go and it will become a monstrosity like Swindon. You are going to ruin the area. Chippenham has a terrible infrastructure and does not have the facilities for people you have living there now, without putting in more and more houses - its being used to satisfy the housing targets.
- Q7. Please rank the three potential road route options into order of preference.**
Option C - Inner route; Option B - Middle route; Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
this is awful - it ploughs up and destroys vast areas of farmland and recreation spaces - of which there aren't many in Chippenham. Will be a total blot on the landscape - AWFUL AWFUL. If people want to use the limited facilities in the town centre - it will still be busy - doesn't solve much except an excuse to build more houses
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Nearly as bad as Option A - just destroying the environment and recreation areas
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Still awful - least awful of the 3 - doesn't remove the problem of congestion in the town centre

- Q11. Please rank the potential Pewsham link road options into order of preference.**
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Too near the farms - but you are destroying the lives of families who live and work in these farms by building these horrendous roads - what about air pollution levels
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
too near the farms
- Q14. How do you travel to/from Chippenham town centre?**

Between 26-35 years old
- Q4. Please let us know your post code.**
■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
No road;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Consultation on the distributor road is predetermines the outcome of the Local Plan and so is premature. The £75million funding for the road is based on the development of 7500 houses in south and east Chippenham but where is the evidence that we need this number of houses. The consultation on the road should not be held until the number of houses and their location is approved.
- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Wiltshire Council's Future Chippenham project team is rushing through the design and approval of the distributor road, in order to meet the grant timescale conditions, not because we have determined that we need a road. What's more zones 3&4 are located in Bremhill Parish Council, which is not supported by the parish's Neighbourhood Plan. Route option A which follows the river Marden and bisects the central settlement area of Stanley will have the greatest adverse impact on biodiversity, surrounding settlements and will create an urban extension along the cycle track between the river Avon and Stanley. Route options A & B are highly visible from Bremhill Parish, which does not support the road.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Route options A & B are not supported in Zones 3 & 4. They are highly visible from Bremhill Parish and located in the Marden Valley thereby impacting on the natural habitat.

- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**

Protecting and enhancing landscape and visual amenity; Protecting and enhancing biodiversity e.g. animal and plant habitats; Climate change adaptation/mitigation;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
None of the routes options are compatible with my concerns. On top of this I feel that building this road, and 7500 homes would lead to a significant increase in traffic, particularly on the North and South edges where the 2 bypass roads join/split. This of course would cause a significant rise in both air and noise pollution.

- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
There is not much to choose between these options. I am generally against road building as it is bad for the environment and our carbon footprint. I want to know why this road is needed, especially since many more people now work from home and for many (me included) that will not change even after Covid. Any roads built should be low speed 30mph and have proper segregated walking and cycling routes, Dutch style. If the council thinks more cars and road building is the solution they are stuck in the 1990s!

- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
There is not much to choose between these options. I am generally against road building as it is bad for the environment and our carbon footprint. I want to know why this road is needed, especially since many more people now work from home and for

many (me included) that will not change even after Covid. Any roads built should be low speed 30mph and have proper segregated walking and cycling routes, Dutch style. If the council thinks more cars and road building is the solution they are stuck in the 1990s!

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

Q14. How do you travel to/from Chippenham town centre?

Bicycle;On foot;Car;Bus;

Q15. Why do you travel to/from Chippenham town centre?

For leisure/social engagements;As part of my commute to/from work;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Bicycle;Walking;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

Walking;Bicycle;Car;

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Easing traffic congestion and improving journey times;Reducing air/noise pollution;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Living on Park Lane, I know only too well about Chippenham's traffic congestion problem, and particularly the lack of places to cross the railway line. Our road is busy most of the day. A large percentage of the cars that come down our road are going to or coming from the M4. A percentage of them are coming from the east side of town. A railway crossing on the east side of town would hopefully alleviate congestion.
- Q7. Please rank the three potential road route options into order of preference.**

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Not creating congestion on existing local routes;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Concerned about congestion on the existing portion of the London road between avenue Avenue La Fleche and Pewsham Way. This would become the most direct route from a large part of the proposed North Eastern developments to the town centre. This is a residential street and an important route for people walking to and from town and Abby field school. Already the road design leads to people using this route as a shortcut to town, the straightness of the route also leads to very high speeds at non peak times. Will there be measures put in place to manage traffic on this road?
- Q7. Please rank the three potential road route options into order of preference.**
Option B - Middle route; Option C - Inner route; Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Concerned the lack of radial links to Chippenham town. This gives me concerns about congestion on the existing portion of the London road between avenue Avenue La Fleche and Pewsham Way. This would become the most direct route from a large part of the proposed North Eastern developments to the town centre. This is a residential street and an important route for people walking to and from town and Abbeyfield school. Already the road design leads to people using this route as a shortcut to town, the straightness of the route also leads to very high speeds at non peak times. Will there be measures put in place to manage traffic on this road?

Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

Concerned about the impact on the existing well used paths to and from Hardens farm, the Chippenham, Calne Cycle way and path alongside the Avon. These routes are extremely popular and busy routes though green space within walking distance of a significant number of the residents of Chippenham. The degradation of these routes and green space surrounding these routes would represent a significant loss of amenity to a very large number of Chippenham residents.

Between 56-65 years old
- Q4. Please let us know your post code.**
████████
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Easing traffic congestion and improving journey times; Reducing air/noise pollution; Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Clearly a large number of additional houses will increase traffic congestion (which is bad enough as it is) so, the infrastructure that accompanies any new houses should be designed to significantly improve traffic flow. Additionally a reduction in air/noise pollution should be intrinsic in the design.
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ; Option B - Middle route; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Option A is described as a ring road and it does have some notable disadvantages. However given the assumed huge increase in traffic, this seems to be the most efficient way of moving people (in their electric cars) around the circumference of Chippenham. My assumption is that it will not have housing on either side of the road and that there will be feeder roads into the housing estates. For these reasons, A is my preferred route.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Given the information provided, this option (B) appears to be the favoured route and is described as a distributor road. However, I do not think it is a good idea to design for huge volumes of traffic to travel through the housing development (houses on either side of the road) given probable noise and air pollution and the safety aspects of mixing people with traffic.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This option (C) is my least favoured route because it impacts too much on existing development, is too close to the Town and would appear to have a negative impact

on Stanley Park sports ground. My comments for option B also apply to this inner route.

Q11. Please rank the potential Pewsham link road options into order of preference.
Pewsham Link Option 3;Pewsham Link Option 1;

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

I prefer option 3

Q14. How do you travel to/from Chippenham town centre?

On foot;

Q15. Why do you travel to/from Chippenham town centre?

- Q4. Please let us know your post code.**
████████
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Easing traffic congestion and improving journey times; Protecting and enhancing landscape and visual amenity;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Chippenham is short of public green space. Some of the best areas of Chippenham are compromised by the new road proposals. These areas include The Borough Lands Trust areas. The Chippenham to Calne cycle path, Jubilee Acres, Monkton Park. All of these areas are very popular and well used by residence from all areas of Chippenham. Option A Outer Route has the least impact on these areas and is therefore the most desirable.
- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Option A has the least impact on the well used green public spaces frequented by the people of Chippenham. It is overall the most remote route impacting less people in total.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Option B impacts more green space and residential areas and is therefore less preferable than Option A
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Option C has significant negative impact to well frequented public green space. Most notably in areas 3 and 4 where Stanley Park and the very popular walking and cycling areas such as Jubilee acres, cycle path to Calne and Hardens Lane are significantly more compromised when compared to Option A Outer Route.

- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 3;Pewsham Link Option 1;
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Compared to Option 3 it will have more impact on popular green space areas such as Wilts and Berks Canal, Borough Lands and Mortimers Wood.
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
Has the least impact on public green space
- Q14. How do you travel to/from Chippenham town centre?**
Car;Bicycle;On foot;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;I am a Driving Instructor. I use all Chippenham roads all day every day;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Car;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**

■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Climate change adaptation/mitigation; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Improving bicycle and pedestrian routes;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Don't think we need much improvement but pedestrian and cycle routes are badly in need of improvement.

Cycle routes should be smooth not littered with pot holes and rubble and reach out to surrounding villages. These will provide an alternative to cars for transport between Chippenham and surrounding villages.
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ; Option B - Middle route; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Should include a lot tree cover around outer edge to mitigate visual impact.
Provides good eastern and southern boundary for Chippenham.
Being outside area of proposed developments may be suitable for higher speed traffic flows.
Feels like least disruptive for existing population.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**

Q15. Why do you travel to/from Chippenham town centre?

For leisure/social engagements; Shopping;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Car;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

Walking;

MSF 87

- Q1. Are you responding as an individual or on behalf of a business or organisation?**
As an individual
- Q2. If you are responding on behalf of a business or organisation, please tell us which one.**
- Q3. Which age bracket do you fall into?**
Between 26-35 years old
- Q4. Please let us know your post code.**
████████
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Easing traffic congestion and improving journey times; Protecting and enhancing landscape and visual amenity; Protecting and enhancing biodiversity e.g. animal and plant habitats; Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
I definitely feel that we could improve journey times and congestion for anyone travelling from Calne to Bath, or Pewsham to Bath, vice versa. However, I definitely feel that we must tread carefully as we could easily ruin the lovely rural landscape around Chippenham the cycle paths, which I feel are some of Chippenham's most appealing features.
- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I think this makes the most sense in terms of traffic and disruption to landscape.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This is a no go for me. I feel where it connects to the A4 in zone 2 is just going to cause traffic and accidents. A roundabout is a much safer option in my opinion.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Too close to Chippenham to be useful. It connects to the B4528, which means drivers from Corsham way will need to drive down the A350 and then back on themselves to get to it. Where it joins the A4, it's too close to Chippenham, so drivers from Calne will need to travel quite close to Chippenham to use the road, at which point you could argue if the road was worth using or if they should just use Pewsham Way.

- Q11. Please rank the potential Pewsham link road options into order of preference.**
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
It looks like it makes sense for it to link onto that roundabout, however that will just increase congestion. Most of the time you don't have to stop at that roundabout, if we add another exit it will increase traffic, increase the chance of having to stop and increase congestion.
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
This option is best. As this roundabout will only have 3 exits it shouldn't affect congestion as much.
- Q14. How do you travel to/from Chippenham town centre?**
Car;On foot;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;Possibly shopping or haircut;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Car;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Car;

Between 46-55 years old

Q4. Please let us know your post code.

■■■■ ■■■■

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets; Indirectly reducing car usage viz one big trip rather than lots of little trips.;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

I do not want to see more traffic on the Chippenham roads. This is a rural area and it need to retain its character. Noise pollution travels many miles in a rural areas.

As for Q7, there should be a 4th option, none of the above.

Or at least the option to abstain - with a box to comment on why the abstention!

You are forcing me to rank them, in order to have my voice heard - this is unfair and I do not want my ranking to be reported in your figures, but only my negative vote for all proposals.

A more important question is if I think the people of the Chippenham area want to live in a town like Swindon?

I would suggest if we wanted that, we would have moved to Swindon.

Why are you asking me about unwanted roads? Next you will be asking me what type of person I want to be mugged by!

Q7. Please rank the three potential road route options into order of preference.

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

This is too invasive into the surrounding rural area it is not required.

I am EXTREMELY concerned about Wiltshire Council's development plans for this distributor road and excessive housing developments within Chippenham. These also seem unfairly focussed Predominantly on the east side of town! These plans will see Chippenham becoming another Swindon, awash with non distinct housing estates. Small rural communities will become part of this urban Sprawl losing their distinctive character. Beautiful and ancient countryside will be destroyed and habitats demolished for a completely unnecessary road. There is already perfectly good links between the two sides of town - this road is not required. Development should be focussed on infilling of existing brown sites.....leave our beautiful Wiltshire countryside alone! I am interested to know how you believe these plans can be achieved while commuting to becoming carbon neutral by 2030!
- Q7. Please rank the three potential road route options into order of preference.**

I would reject the proposal. Pewsham is a small community in the beautiful countryside. Regardless of how many attempts are made to reduce the visibility of the roads, they will still be there and will impact the views and sounds of our current walks. Furthermore, Pewsham is currently a small community and this without a doubt will affect that; increasing the population, cars/through traffic and reducing the quality of the schools.

I would like to see access improved to the countryside. With Chippenham substantially increasing in size, access using RoW is really important.

This would include sensible crossings of the road for pedestrians, car parks set up at RoW intersections and allocated greenspaces +interior or exterior of the

road) along the road such as the Westmead Open Spaces and associated car park.

I would also like to see a really good size car park (even a pub/restaurant) situated at the Pewsham Locks. This is heritage that requires better accessibility not just for car uses but for walkers and cyclists.

Is the viaduct (southern crossing of the River Avon, near Lackham) of any engineering accolade? If so, let's celebrate that built feature rather like Brunels in Chippenham. This could be a destination for education outreach and also engineering geeks. We really need to make this impressive (nothing like Chippenham Town Bridge please!) and easily accessible for groups of people whom have interest in education, sustainability, engineering and rivers. This is a great opportunity. Any chance of a carving a White Horse on Derry Hill. I not it's not chalk but what a feature that would be for people circling the town!

And finally better car parking at the National Cycle route intersection with cafe.

I would be keen to see any walkability/cycleability analysis of Chippenham to help guide the design of the infilled developments.

I travel around Oxford ring road quite a lot and I think that may be useful to study regarding interactions with water and also the A4198 in Swindon including green spaces really well.

I hope this is useful and I fully support the idea of this however we have to include greenspaces, accessibility, destinations that are interesting (engineering/heritage/leisure) for everyone to learn from and enjoy.

- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Option A is the better option in my opinion as it doesn't impact on as many floodplains as the other two. Also things like Crested Newts and other protected species are not mentioned as being affected by option A. The fact that the road is further away from existing properties is also better as the home owners won't be impacted by noise and disruption but new houses built around it won't know any different as they will be moving in with the road already there.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Option B is similar to option A but I still feel it should be further out from the city so it acts like a bypass but use can still use it to access Chippenham.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Option C seems to be the worst as it involves rehoming of protected species an get closer to important flood plains which seems ridiculous to even consider build near.

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Protecting and enhancing biodiversity e.g. animal and plant habitats; Reducing air/noise pollution; Easing traffic congestion and improving journey times; Preserving and protecting heritage assets; Protecting and enhancing landscape and visual amenity;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Consider the impact on the Wilts and Berks Canal.
- Q7. Please rank the three potential road route options into order of preference.**
Option B - Middle route; Option A - Outer route ; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I am particularly concerned on this route passing over the canal, it would seem to adversely affect the locks that are in the process of being restored.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Not keen on the staggered junction with the A4, and it's location is poor.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This seems to have too many curves, especially the northern end. Also concerned about the link road to Canal Road, it doesn't seem a good place to have that link, still quite close to the town centre.

Also cutting through Stanley Park seems a very bad idea, adversely affecting its users.
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 3; Pewsham Link Option 1;

- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Don't like it being so close to Chippenham Town centre and green zone, and fear would overload canal road roundabout.
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
Concerns too many roundabouts on Pewsham Way.
- Q14. How do you travel to/from Chippenham town centre?**
Car;On foot;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;As part of my commute to/from work;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Car;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Car;Walking;

■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Reducing air/noise pollution; Easing traffic congestion and improving journey times; Protecting and enhancing landscape and visual amenity; Protecting and enhancing biodiversity e.g. animal and plant habitats; Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
If "build back better" and "green industrial revolution" are to mean anything this is a huge opportunity to make Chippenham less car dependent. By providing bus infrastructure around which the new neighbourhoods can be built it would enable buses to provide the quickest and most direct route to the town centre and railway station. It would avoid the need for more parking (and resulting extra traffic) in the town centre, but deliver increased footfall to support the town centre businesses.
- Q7. Please rank the three potential road route options into order of preference.**
Option B - Middle route; Option C - Inner route; Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
The outer route seems to follow a prominent ridge line in zones 2 and 3 and will be more visually intrusive. Also the Pewsham link road doesn't align with any of the roads into Pewsham.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Less visually intrusive in zones 2 and 3, but the Pewsham link road connection doesn't align with any of the roads into Pewsham.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Less visually intrusive in the landscape in zones 2 and 3. Has the best connectivity with Pewsham as the link road connects at Canal Roundabout. Not so happy about the connectivity with the A350 as it doesn't go to the existing Lackham roundabout

and requires a new roundabout close to it, which will create a bottleneck as traffic will have to negotiate two closely spaced roundabouts for no apparent reason.

Q11. Please rank the potential Pewsham link road options into order of preference.
Pewsham Link Option 1;Pewsham Link Option 3;

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.
this has the best connectivity as it joins Pewsham Way at the existing Canal Roundabout and thus Canal Road.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.
This requires another roundabout on Pewsham Way and doesn't align with any of the access roads into Pewsham.

Q14. How do you travel to/from Chippenham town centre?
Bus;On foot;

Q15. Why do you travel to/from Chippenham town centre?
For leisure/social engagements;Shopping, dentist, banking;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?
Not applicable - I do not travel to/from Chippenham as part of a commute for work;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?
Bus;Walking;

MSF100 (cont.)

I am very interested in the Future Chippenham project particularly in regard to sustainable transport, and in the wider context of Wiltshire Council's climate emergency declaration, the green industrial revolution and the government's aspiration to "build back better".

To me this means we must do things differently and better than before. Looking at the Future Chipp webpages I can see sustainable transport is mentioned but only referring to walking and cycling.

The provision of bus services is a huge omission. The government is about to publish a national bus strategy, plus in 2018 the CIHT produced guidance on " Buses in Urban Developments".

<https://www.ciht.org.uk/news/ciht-launches-buses-in-urban-developments-guidance/>

I would like to know if Future Chippenham has taken/will be taking the above guidance into account, and that public transport plans will be made public very soon.

████████
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Reducing air/noise pollution;Protecting and enhancing landscape and visual amenity;Protecting and enhancing biodiversity e.g. animal and plant habitats;No more houses;Preserving and protecting heritage assets;Climate change adaptation/mitigation;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
The proposed additional houses of 7500 is frankly shocking with another 15000 cars!. We already have huge new developments at Birds marsh, Hunters moon, Rowden park, Rawlings green, etc. No more please! I don't want Chippenham to become Swindon II. We just need a short link road from Lackham roundabout to the Pewsham bypass, and a route into Monkton park via the Wavin road.

I suspect this is already a done deal and local residents opinion will be ignored as usual.

PLEASE NO MORE HOUSES!
- Q7. Please rank the three potential road route options into order of preference.**
Option C - Inner route;Option B - Middle route;Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I don't want any of these road options with the 7500 houses!
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I don't want any of these road options with the 7500 houses!

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Reducing air/noise pollution;Climate change adaptation/mitigation;Easing traffic congestion and improving journey times;Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians;Effective utilisation of already existing road network and infrastructure (A4). ;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
I feel the council could cut costs substantially by utilising and integrating the Pewsham A4 ring road more effectively into the proposals. For all three proposed routes, this would remove around 1/3 of the amount of new road required.
- Q7. Please rank the three potential road route options into order of preference.**
Option C - Inner route;Option A - Outer route ;Option B - Middle route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
There is no need for the creation of road to pass through Zones 2, 3 & 4. New road requirement for Zone 1 would simply require connection of the Lackham roundabout to existing Pewsham A4 ring road at the Canal Road roundabout. Zone 5 would need to join the Stanley Park road to the proposed new road end point. This would massively reduce the construction time, cost and resources and more effectively utilise current infrastructure with reduced impact on wildlife and environment. The new road element should include a Filling Station as there is none on the SE side of the town until you get to Calne.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
There is no need for the creation of road to pass through Zones 2, 3 & 4. Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets; Not building it at all or only to the south;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Why are you running this consultation at the same time as the local plan review?
We're being asked to comment on the scale and location of housing, etc around Chippenham with road route drawn in. The need for the level of growth and location has not been demonstrated yet, so there may not be a need for a road at all. It seems like an attempt to predetermine the outcome and is being rushed through to meet the deadline for HIF funding. Not giving us the option to indicate we oppose any road is unfair to those it will impact the most.
- Q7. Please rank the three potential road route options into order of preference.**
Option C - Inner route; Option B - Middle route; Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This creates a ring road, something you specifically said this road wouldn't be. Zones 3 and 4 are in Bremhill parish, whose neighbourhood plan specifically excludes development and housing. Are you just going to ignore that? This route would have a massive impact on Stanley and the biodiversity of the marden valley.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
The road in Zones 3 & 4 is not supported by Bremhill Parish plan and would be highly visible...not to mention to the villages near it too.

Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

This is only my preferred route because it's the best of 3 options I don't want to vote for. Why can't we indicate that to you? If you must link the A4 to the A350 you only need to do it in one place.

Q11. Please rank the potential Pewsham link road options into order of preference.

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

Why can't the road branch off the existing Pewsham road and join the A350? The Pewsham road is essentially the same design as you're proposing...why build two next to each other?

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

Q14. How do you travel to/from Chippenham town centre?

On foot;Bicycle;Train;

Q15. Why do you travel to/from Chippenham town centre?

For leisure/social engagements;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Bicycle;Walking;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

Bicycle;Walking;

- Q1. Are you responding as an individual or on behalf of a business or organisation?**
As an individual
- Q2. If you are responding on behalf of a business or organisation, please tell us which one.**
- Q3. Which age bracket do you fall into?**
Between 26-35 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Reducing air/noise pollution;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
None of the above items that I've selected align with building more roads.

We should not be building more roads – new housing should be linked to sustainable infrastructure, rather than building in car-dependency, as this road will do.

Moreover, given that the Local Plan consultation has not yet concluded, it is not yet decided where new houses are required. It is therefore too early to consult on where any infrastructure to support said housing developments is required.
- Q7. Please rank the three potential road route options into order of preference.**
Option C - Inner route; Option B - Middle route; Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**

- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**

Zone 1 - The connection from Pewsham Way to the A350 does eliminate the bottleneck at the Bridge Centre and does have some merit but should be reviewed in isolation to the road planned to the North of the A4.

Zone 2 - When we look at the new road layout the section South of the A4 is largely a duplication of Pewsham Way and so environmentally redundant. We are connecting two single carriageway roads, the A4 and A350, with two single carriageway roads.

Zone 3-5 - We all know how quickly Westmead Playing Fields floods after heavy rain. This is natural but the storm events once described as 1 in 100 are happening much more frequently due to global warming.

The rapid flood is due to the Oxford clay along the West bank of the Avon and along the Marden.

Any increase in development in roads or houses in this area will increase water run off and flooding of the Avon South of Chippenham. SUDS is often quoted to provide green field run off rates but these are always by-passed during storm events.

Perhaps this would lead to Lacock Abbey being flooded as it seems to get closer every year with the current level of development in Chippenham.

Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
building this new road and then thousands of new houses in one area will not ease congestion, it will make Chippenham more congested and increase air pollution and destroy the environment. Smaller scale local communities would be better for people, the environment and congestion. Having in the past lived in a highly congested area I know that this new road will be used as a cut through when other major roads become congested.
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ; Option B - Middle route; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
For zones 1 -5, a lot of this area is flood plain, there is no indication shown in the proposals of where the housing is going to be placed.

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Protecting and enhancing landscape and visual amenity; Climate change adaptation/mitigation; Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
This survey of local opinion presupposes support for a link road. But we first need to see what the Chippenham Local Plan proposes. It may not agree to 7500 additional homes, but fewer, and possibly not all on the 3 sites designated. You are putting the cart before the horse. First we need to see the new Local Plan - which is about 2 years off; THEN decide if there needs to be a link road at all, and if so what route would be best. The way the consultation is being done suggests the no. of homes and the building of a road are a fait accompli. To be honest and say it seems so to me. The proposed development would sit on some very attractive open countryside and farmland, which would be a terrible loss to the local community. I understand that most new development will inevitably be on greenfield sites, but good farmland and attractive landscapes should be avoided.
- Q7. Please rank the three potential road route options into order of preference.**
Option C - Inner route; Option B - Middle route; Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I suspect if Option A is chosen there would be fewer cars from it accessing the lanes to the east of Chippenham
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
No strong feelings

- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
It could lead to even more traffic wanting to use the country lanes to the east of Chippenham
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 1;Pewsham Link Option 3;
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
No strong feeling
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
None
- Q14. How do you travel to/from Chippenham town centre?**
Car;Bus;Bicycle;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;For 16 years I used it for work.;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Bus;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Bus;

Between 36-45 years old
- Q4. Please let us know your post code.**
■■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Protecting and enhancing biodiversity e.g. animal and plant habitats;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
It is unclear if the new road will include a segregated cycle lane along its whole route? Can this please be confirmed, as shared use path is not appropriate and in fact discourages people from cycling due to the fact that drivers shout at you to use the (generally narrow) shared use path, and people on foot understandably don't like sharing the pavement with people travelling by bicycle. Chippenham is the perfect size for people to cycle. There really is a need to reduce car dependancy, especially given the low incomes of many people in Chippenham, and the need for children to be able to get around independently. Would be great to see a consultation on building segregated cycle lanes across the town rather than this one to build a new road.
- Q7. Please rank the three potential road route options into order of preference.**

MSF117 (cont.)

Response to the Future Chippenham Route Options consultation

I am sending this email as a formal response to the Future Chippenham Consultation because the Consultation Form does not allow for the option of 'no road at all'.

I would like to record my complete and total opposition to the Chippenham HIF bid proposals for a distributor road, which would require and enable 7,500 houses to be built in the countryside to the East and South of Chippenham. The road and development it would serve, bears no relation to local housing needs (which are a fraction of the number houses proposed and of a different type, and in locations close to the town centre where lots of opportunity for affordable apartments exist). Neither would building a road in this location be part of an employment led strategy that would enable people to live near their place of employment, or on fact do anything to stop Chippenham growing as an even bigger commuter town, spoiling its character and removing the very things existing residents value about living here.

There is absolutely no doubt that this road, whichever route option it took, together with the 7,500+ houses that it is designed to enable, would be a disaster on so many levels.

1. It would be a disaster in relation to the climate and ecological emergency that Wiltshire Council has committed to addressing:

- permanently destroying rich organics soils that are a substantial carbon sink, releasing carbon into the atmosphere and removing the natural facility for further sequestration;
- adding vast quantities of carbon emissions (embedded in tarmac and concrete, and as a result of construction of this unnecessary infrastructure) in constructing a road plus bridges and viaducts over the river Avon and Wilts-Berks canal;
- locking in many years of future transport emissions by creating car-dependency and massive commuter suburbs in an area with almost no local employment opportunities.

Where have the carbon emissions resulting from these proposals been calculated? How could such a climate damaging proposition even be contemplated in a Climate Emergency?

2. It would be a disaster for local residents in creating far greater traffic congestion that it could possibly alleviate, being a low speed distributor to service 7,500 (and ultimately even more) houses, potentially with 15,000 additional vehicles on the roads around Chippenham and Calne, plus other traffic that naturally occurs when roads are built.

3. It would be a disaster in destroying much of what local people greatly value about living in Chippenham - beautiful surrounding countryside, the rivers Avon and Marden corridors and its wildlife, the Chippenham-Calne cycle route, clean air attractive landscapes - with absolutely no guarantee of any future benefits for the town, with any future CIL monies either spent on new site infrastructure and additional facilities needed to cope with the expanded

population, or (if CIL still exists by then) spent by a future Council administration in other parts of the county. In other words no local benefits, huge future uncertainty but plenty of downside/ disadvantage/ pain, for existing residents.

Why were residents not asked about progressing this scheme in the first place?

Why was developed in secret and with any public consultation?

4. It would be a disaster in precipitating the destruction the Avon and Marden Vale, removing high-quality farmland that will be needed by future generations, much of which is owned by Wiltshire Council (i.e. a public asset) and which could be used for local food production, renewable energy generation, re-forestation, contributing to protecting and meeting the needs of future generations.

What has Wiltshire Council done to look at these alternative uses and the future value of what already exists?

Why does Wiltshire Council place no value on its County farms and the other farms it owns?

5. It would be a disaster in destroying natural capital, wildlife habitats and biodiversity in what is a particularly valuable and sensitive area of countryside and associated river corridors, and in which a number of protected species are beginning to regain a foothold, including otters, hazel dormice, kingfishers and rare species of bat and newts – exactly the sort of area we should be protecting and enhancing, not allocating for concreting over.

Where are Wiltshire Council's strategies for protecting its natural assets and public goods?

Where is the evidence base for the impacts the road proposals would have on wildlife habitats and biodiversity, which should have preceded any application for a road grant?

In all of this, it seems that the people who live there matter very little to Wiltshire Council. They didn't consult them on at the HIF bid application stage (which was shrouded in secrecy and misinformation, for example in calling the road a 'Relief road' when it is nothing of the kind) or any subsequent stage during the HIF bid development. They then consulted on road route options, before even considering the public's views on whether a road was needed, or the scale or location of proposed development had been raised, and the public's views sought, under the Local Plan Review. They then produced a consultation form that doesn't allow for a 'no road' option, so many people felt compelled to choose something they objected to or potentially have no voice at all. Even Wiltshire Council's Deputy Leader stated publicly in a Cabinet meeting that there should have been a 'no road at all' option on the consultation form.

It is abundantly clear that the HIF bid and so-called 'Future Chippenham' development process has been designed to effectively predetermine, and severely constrain any other viewpoints on, the Local Plan's spatial strategy options for Chippenham, which would otherwise have been very different. Perhaps unsurprising then, that Wiltshire slogan of 'Where everybody matters' has been abandoned by the current Council administration. The lack of public consultation, lack of transparency, derision for local people's views and the ongoing lack of accountability for misleading our MP, local councillors and the public, including the on-going resistance to sharing information that is clearly in the public interest, is deplorable. Given the wholesale rejection of all the road options and of any road to the East of Chippenham, by Chippenham Town Council, Calne Town Council and Bremhill Parish Council, and the lack of any remaining support for a road and housing in this location, will Wiltshire Council now abandon this covert scheme and allow the £75m grant funding to be put to better use elsewhere?

I would be grateful for an acknowledgement that my response will be recorded as a legitimate response within the consultation process, along with all the others that have been submitted by necessity, without completing the form. Answers to the questions I have posed would also be appreciated.

Q3. Which age bracket do you fall into?

Between 56-65 years old

Q4. Please let us know your post code.

■■■■ ■■■■

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Easing traffic congestion and improving journey times; Protecting and enhancing landscape and visual amenity;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

Your methodology is weighted toward expanding to the east of Chippenham, to "Round Off" the town and provide walking and cycleways into the centre of Chippenham. Why?

People get into their cars for three main reasons

1 to get to work.

2 to take the children to school.

3 to buy food.

The employment is on the west side of Chippenham, Bath Road, Methuen Park, Bumpers farm.

Two of the three schools are on the west side of Chippenham.

Why are you not spending some of the £75m on new schools, doctors surgeries, dentists etc, 7500 houses will mean we have to accommodate thousands more people (15000 plus their children, another small town)

All of the supermarkets are on that side.

Use the inner route from the A4 to A350 to give that connectivity to all of the above, and free up building land around the council-owned land there, rather than having to buy land from others.

The road through Zone 1, Rawlings Farm and Birds Marsh is single track through housing, not providing traffic relief around the bridge centre.

The inner route through Zones 2 and 3, link up with a National trunk Road that is either already dualled or planned to be dualled.

- Q7. Please rank the three potential road route options into order of preference.**
Option C - Inner route; Option B - Middle route; Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
As this consultation only relates to the roads it doesn't overlay where the housing would extend to either side of the road. Zone 4 is predominately a ridge of land so this outer route will be very prominent and housing would go right to the Marden River.
In Zones 1,2 and 3, it has a much lower visual impact.
In Zone 3 it has to cross the canal twice, costly in terms of carbon and ecology.
In Zone 1 it has the longest bridge over the Avon, once again costly in terms of carbon and ecology.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
In Zone 4 the road rises and follows the ridgeline which makes it highly visible and allows housing into the environmentally sensitive Marden Valley.

In Zones 3 and 4 it allows housing to expand into Stanley Lane and the Cycle track, both of which are a valuable asset at present, used by many on Pewsham and surrounding area for pleasure walking and cycling. If you expand this side of Chippenham, those people will be removed from this asset.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
The employment is on the west side of Chippenham, Bath Road, Methuen Park, Bumpers farm.

Two of the three schools are on the west side of Chippenham.

Why are you not spending some of the £75m on new schools, doctors surgeries, dentists etc, 7500 houses will mean we have to accommodate thousands more people (15000 plus their children, another small town)

All of the supermarkets are on that side.

Use the inner route from the A4 to A350 to give that connectivity to all of the above, and free up building land around the council-owned land there, rather than having to buy land from others.

The road through Zone 1, Rawlings Farm and Birds Marsh is single track through housing, not providing traffic relief around the bridge centre.

The inner route through Zones 2 and 3, link up with a National trunk Road that is either already dualled or planned to be dualled.

In Zones 3 and 4, the road will be less prominent owing to the topography

In Zone 1 the bridge over the Avon is the shortest, cheaper in monetary value as well as carbon and ecological detriment.

I don't see that we need the Eastern section if we build the cheaper southern option.

Q11. Please rank the potential Pewsham link road options into order of preference.

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

It's the only one linked to the option C inner route

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

Q14. How do you travel to/from Chippenham town centre?

Car;

Q15. Why do you travel to/from Chippenham town centre?

I don't travel into the centre of Chippenham as everything that I need is on the Western side, Trading estates, supermarkets and petrol stations are all on the western periphery of the town.;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Not applicable - I do not travel to/from Chippenham as part of a commute for work;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

Car;

Easing traffic congestion and improving journey times;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
The essential part of this road scheme is crossing the river from Lackham to Pewsham bypass, so taking south and west-bound traffic away from the town centre, and stop them using Lacock as a cut through to Calne, Marlborough, Devizes and Salisbury. 2000 houses at Rowden - not all will want to go to the M4 or into town!

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets; Reducing air/noise pollution;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

I don't believe the need for 7500 houses around Chippenham has been proven and the reality of housing need for Chippenham is much lower than this proposal asserts. This consultation is being rushed through to meet timescales for the HIF bid and I refuse to take part until the local plan review has been agreed. The public engagement report of 13th January 2020 was conducted after the HIF bid was confirmed and was not open and honest in its design. At a time when trust in government is so low (Edelman Trust Barometer research) it is outrageous that the HIF was spun as a relief road for traffic congestion. WC have show a complete lack of ethics in how they have and continue to manipulate the situation. We need brave leadership from our council not covert operations. Even some of the CTC councillors are in dismay and our North Wilts MP James Grey has been vocal on his opinions against Future Chippenham.

Furthermore, I am at a loss to see how Future Chippenham meets WC strategic objective of tackling the causes and effects of climate change? Transport accounts for 45% of CO2 emissions (Appendix 1 for update on Councils Response to the Climate Emergency) concreting over large areas of agricultural land by building a distributor road and increasing the number of cars in the area is short sighted and there is no new public transport plan outlined or details of incentives to promote sustainable forms of transport so the car is not first choice.

Finally, the Future Chippenham proposal has a massive impact on outlying communities and villages e.g Old Derry Hill where I live and Bremhill etc. This development would mean there would no longer be a green buffer as together with the FG solar farm development proposed. (which I am in favour of) We would effectively join up with Chippenham.

- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
All options on offer would be immensely damaging in relation to environmental impact and greenhouse gas emissions.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I do not believe the road is necessary without first consulting on the number of houses needed by Chippenham and this consultation predetermines the results of the local plan review.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Why is WC planning on building 5000 more houses than the government is requesting?
- Q11. Please rank the potential Pewsham link road options into order of preference.**
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
This will worsen the traffic congestion and add to the air pollution so is not needed.
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
We need to be considering growing more food locally not importing from abroad in line with the need to reach net zero. Building over our local farms goes against this priority.

Your consultation does not allow for us to represent the view that there should be no distributor road at all.

If you are forcing us to have a distributor road, then Option A is wholly unacceptable. Your analyses and scoring have already depicted this. I struggle to see why it's in the short list at all, other than to distract from Option B or Option C, whereby Option A is such a horror that the public feel grateful for Option B or Option C.

Option A will cut through the landscape and create a tarmac scar. It worries me that you describe it as more of a 'traditional ring road' which gives way to thoughts about high speeds and bright lights.

Option A is a poor use of tax payers money, for a project that you have admitted will cost more than the £75m that you have been granted.

Option A will create a bridge over the old Wiltshire & Berkshire Canal north of the A4 at Forest Gate. This section is being restored. You have described elsewhere that a bridge would be 4 metres above the canal, which means the bridge will create a flyover effect at the back of the home at Green Lane Farm. There would be cars and lorries above head height in what is a very peaceful nature haven with very clean air. This would be absurd. You would have to cut down mature oak trees that provide habitat for many species, from insects to mammals and birds. Option A also ruins Pewsham Locks for the same reasons. Pewsham Locks is a treasure to the Chippenham area and we need all of the recreational landscape we can get.

Option A also brings a roundabout and road nearby listed buildings of Old Pewsham and Forest Gate. This is already a Noise Important Area as your PEOR states.

Option A cuts through CALW80 walking route in a very rural area which is enjoyed by the public. Having a 'ring road' there will completely spoil the tranquillity, views and air quality of this area.

Option A also cuts through a peaceful rural section of the cycle route to Calne. This provides much needed access to the natural landscape

Option A crosses a lot of surface water as depicted in your PEOR in zones 2 and 3. Much of the fields you plan to build on serve as rainwater sinks during wet weather.

Your local biodiversity assessment really misses the mark. There is a countless amount of wildlife along Option A zone 3. This is because you only did desk based research. Roe deer, buzzards, voles, hares, rabbits, foxes, badgers, long tailed tits, blue tits, great tits, dunnocks, robins, all frequent zone 3 around the old canal and the fields north of the A4.

Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

As mentioned, your consultation does not provide for the view that no distributor road is the preferred option.

Option B requires an additional roundabout in zone 2 at Pewsham Way. Surely you can connect using an existing roundabout?

The proposed staggered junction at the A4 London Road for Option B is extremely dangerous. Staggered junctions cause 29% of accidents compared to roundabouts (8%) or crossroads (9%). Roads with a speed limit between 21-30mph have the highest rate of fatal crashes (34%). These are official statistics from the Department for Transport 2018. Throw in the notion that your proposals will increase the number of pedestrians and cyclists in the area, I cannot state enough that I am deeply concerned at this proposed junction.

In addition, a staggered junction at the busy A4 will create traffic jams and with that, the air quality will drop. In this area (Old Pewsham) we are lucky to have very clean air as shown by the amount of lichen growing on the trees.

As mentioned, your local biodiversity assessment really misses the mark. There is a countless amount of wildlife along Option B zone 3. This is because you only did desk based research. Roe deer, buzzards, voles, hares, rabbits, foxes, badgers, long tailed tits, blue tits, great tits, dunnocks, robins, all frequent zone 3 around the old canal and the fields north of the A4.

Option B crosses a lot of surface water as depicted in your PEOR in zones 2 and 3. Much of the fields you plan to build on serve as rainwater sinks during wet weather.

Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

As mentioned, your consultation does not provide for the view that no distributor road is the preferred option.

You discarded Option E in your Options Assessment because of a planning application and landowner wishes. Option E was not discarded for strategic reasons. My point is, if you can join the Option C distributor road at Stanley Lane, what is the need for the rest of the Option C road to the fields south of Stanley Lane all the way to the A4 at Stanley Sports Ground? Stanley Lane meets the A4 London Road higher up already. I find this section to be pointless. I recognise you want to build housing estates in those fields in the future, but you still could and the housing can be accessed off Stanley Lane or minor access roads off the A4 further down, plus, the developers would pay to build the local residential roads.

If find it trite that you bemoan building the distributor road across Stanley Sports Ground due to historic reports of great crested newts (from your desk-based research) in one breath, and then talk about 'unlocking land for development' in the next breath. You also talk of protecting those fields for use of Stanley Sports Ground when they spend most of year drenched in rain water and are unusable. The result of which, is that you have suggested a bizarre preferred route with a long staggered junction at the A4 London Road to join Option B! Do you realise how difficult it is the turn onto that road during peak hours? You'll generate traffic jams with your proposed preferred route, drivers will make risky decisions when turning and the air quality will suffer.

Q11. Please rank the potential Pewsham link road options into order of preference.

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

Better because there is an existing roundabout and further away from the footpath, preserving a larger section of Avon Valley Walk.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

Ridiculous that you have proposed to build another roundabout on Pewsham Way.

Q14. How do you travel to/from Chippenham town centre?

Car;Bicycle;On foot;

Q15. Why do you travel to/from Chippenham town centre?

For leisure/social engagements;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Not applicable - I do not travel to/from Chippenham as part of a commute for work;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

Walking;Bicycle;Bus;

MSF126 (cont.)

I submitted my consultation responses using the form provided a couple of weeks ago. I would like this email attached to my form response. You should be able to match these using my name and email address provided.

The consultation form gave no clear mechanism to enable residents to object to all routes, there was not a 'no road' option presented. I do not want the comments I made on the merits

and objections to specific parts of each option, subsequently interpreted in the data that I am for the building of this distributor road. My preference is that there is no road at all.

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Climate change adaptation/mitigation;Reducing air/noise pollution;Protecting and enhancing biodiversity e.g. animal and plant habitats;Protecting and enhancing landscape and visual amenity;Preserving and protecting heritage assets;Light pollution;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Light pollution is already a problem in rural areas especially from street lamps and commercial premises such as Wavin Plastics. Any further spread of Chippenham into rural areas will exacerbate the issue.
- Q7. Please rank the three potential road route options into order of preference.**
Option C - Inner route;Option B - Middle route;Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Option A causes the greatest loss of green space and is the closest to the River Marden and its floodplain. It impinges most on the Chippenham to Calne cycleway in zones 4 and 5 and is the most intrusive to the hamlet of Tytherton Lucas in zone 4. The implication of increased housebuilding in all zones on both the Rivers Avon and Marden floodplains is more likely to result in localised flooding that already occurs in some parts of zones 4 and 5. It is also most likely to affect adversely the load on the infrastructure of Chippenham town.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
My comments on Option A also largely apply to Option B. There is some amelioration of the interference with Tytherton Lucas but it would still be very significant.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Option C is the least invasive. By restricting the scale of subsequent development, there is the least likelihood of the adverse consequences noted under Option A.

Whilst I do not accept that development to the east of Chippenham on the floodplains of the Rivers Avon and Marden is a sensible option at all when other locations are less likely to result in environmental issues, this is the least worst option.

Q11. Please rank the potential Pewsham link road options into order of preference.

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

No opinion on this.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

No opinion on this

longer so less likely to be used.
All zones, I note the proposal is for single lane 30mph road, this will make taking a rat run through town a more attractive option at times
It is not clear the nature of the cycle path alongside this option (if it occurs). Will it be segregated, will it be on both sides, how will it cross the proposed roundabouts/junctions, ie will cycle path have to give way to all traffic, or will they be prioritised
To have a truly informed position it would be good to see how the link road progresses once connected to Rawlings Farm development
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
More detail needed of how it crosses A4 in zone 3/4, other 2 options show roundabouts, this options shows of set junction, as if traffic on new ring road has to join A4 for a short distance.

All zones, I note the proposal is for single lane 30mph road, this will make taking a rat run through town a more attractive option at times

It is not clear the nature of the cycle path alongside this option (if it occurs). Will it be segregated, will it be on both sides, how will it cross the proposed roundabouts/junctions, ie will cycle path have to give way to all traffic, or will they be prioritised

To have a truly informed position it would be good to see how the link road progresses once connected to Rawlings Farm development

Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

Zone 1, to me it would be better to start new ring road from existing lackham roundabout than create new roundabout 100 m north west on B road. I can see this creating log jams with traffic turning onto new ring road backing up onto Lackham Roundabout. Seems very bendy without obvious places to overtake so making it a less attractive option than nipping through town. However I note that the proposal is for 30mph road, so I assume this will be a problem for all options.

It is not clear the nature of the cycle path alongside this option (if it occurs). Will it be segregated, will it be on both sides, how will it cross the proposed roundabouts/junctions, ie will cycle path have to give way to all traffic, or will they be prioritised

To have a truly informed position it would be good to see how the link road progresses once connected to Rawlings Farm development

Q11. Please rank the potential Pewsham link road options into order of preference.

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

Option 1 seems much better as it feeds directly onto existing roundabout and Pewsham spine road,

There is no indication of the nature of how cycle path from ring road will link with this link road, and how cyclist will rejoin carriageway as there is no existing cycle path on existing roads (A4 and pewsham spine road.)

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

this will increase congestion on Pewsham Way by creating new roundabout, and need more vehicles to have to share pewsham way (A4) before turning onto pewsham spine road.

This new roundabout makes using a rat run through London road to avenue le fleche a a more attractive option at times

There is no indication of the nature of how cycle path from ring road will link with this link road, and how cyclist will rejoin carriageway as there is no existing cycle path on existing road (A4)

Climate change adaptation/mitigation; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

I do not want any of these equally terrible options! There needs to be a fourth option: 'NO ROAD'.

There are few employment opportunities in Chippenham and the Council has not made a case for thousands of houses here - we do not need a new road or the associated houses. Also, why is Chippenham's housing target nearly 5000 more than the Government is requesting?

Despite the claims that this will ease congestion in the town, the road will be a distributor road to serve new housing estates and will worsen congestion and air pollution in Chippenham and its surrounding areas.

Q7. Please rank the three potential road route options into order of preference.

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

I do not want any of these equally terrible options! There needs to be a fourth option: 'NO ROAD'.

There are few employment opportunities in Chippenham and the Council has not made a case for thousands of houses here - we do not need a new road or the associated houses. Also, why is Chippenham's housing target nearly 5000 more than the Government is requesting?

Despite the claims that this will ease congestion in the town, the road will be a distributor road to serve new housing estates and will worsen congestion and air pollution in Chippenham and its surrounding areas.

Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

I do not want any of these equally terrible options! There needs to be a fourth option: 'NO ROAD'.

There are few employment opportunities in Chippenham and the Council has not made a case for thousands of houses here - we do not need a new road or the associated houses. Also, why is Chippenham's housing target nearly 5000 more than the Government is requesting?

Despite the claims that this will ease congestion in the town, the road will be a distributor road to serve new housing estates and will worsen congestion and air pollution in Chippenham and its surrounding areas.

Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

I do not want any of these equally terrible options! There needs to be a fourth option: 'NO ROAD'.

There are few employment opportunities in Chippenham and the Council has not made a case for thousands of houses here - we do not need a new road or the associated houses. Also, why is Chippenham's housing target nearly 5000 more than the Government is requesting?

Despite the claims that this will ease congestion in the town, the road will be a distributor road to serve new housing estates and will worsen congestion and air pollution in Chippenham and its surrounding areas.

Q11. Please rank the potential Pewsham link road options into order of preference.

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

I do not want any of these equally terrible options! There needs to be a fourth option: 'NO ROAD'.

There are few employment opportunities in Chippenham and the Council has not made a case for thousands of houses here - we do not need a new road or the associated houses. Also, why is Chippenham's housing target nearly 5000 more than the Government is requesting?

Despite the claims that this will ease congestion in the town, the road will be a distributor road to serve new housing estates and will worsen congestion and air pollution in Chippenham and its surrounding areas.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

I do not want any of these equally terrible options! There needs to be a fourth option: 'NO ROAD'.

There are few employment opportunities in Chippenham and the Council has not made a case for thousands of houses here - we do not need a new road or the associated houses. Also, why is Chippenham's housing target nearly 5000 more than the Government is requesting?

Despite the claims that this will ease congestion in the town, the road will be a distributor road to serve new housing estates and will worsen congestion and air pollution in Chippenham and its surrounding areas.

Q14. How do you travel to/from Chippenham town centre?

Bicycle;On foot;Car;Bus;

Q15. Why do you travel to/from Chippenham town centre?

For shopping.;For leisure/social engagements;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Car;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

Train;

- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
All these options are unnecessary unless you are planning to build 7000 houses. There needs to be an option of no extra roads otherwise the consultation has not covered all options. It is obvious to anyone that this road would not be needed nor could the full cost be afforded without the extra houses that Wilts Council wants to build causing an environmental calamity
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**

- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
The council needs to cancel the project and question their understanding of what is sustainable.
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Now many times do you say sustainable or sustainability in your video? Roads and houses! We need to start re-wilding Chippenham and the surrounding area, not building over it. Concrete, houses and more cars are not sustainable. Diverting cars out of the town center and easing traffic congestion by tarmacking over the countryside is not the same as being sustainable. STOP GREENWASHING! Growth is not sustainable. You might argue it is worth additional CO2 and loss of nature, which I do not agree with, but it is not the same as being sustainable! Future Chippenham is more of the same flawed philosophy that has us heading at a frightening speed towards extinction. If you think that is an exaggeration then you are badly informed. Why did Wiltshire bother declaring a climate emergency if you are going to keep building roads and houses, it is complete madness. Have you even bothered to work out the carbon cost, do you care?
- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Your road WILL increase flooding as you are adding to the already catastrophic CO2 levels in the atmosphere.
- NOTE: On question 7 there should be an option that none of the routes are any good. DO NOT USE this reply to say I prefer option A, then B then C. I do not agree with any of them. You probably won't even read this anyway.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Criminal! As is A!

- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Also Criminal, as is A!
- Q11. Please rank the potential Pewsham link road options into order of preference.**

Q4. Please let us know your post code.

■■■■ ■■■■

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Climate change adaptation/mitigation; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets; Increasing accessibility and parking to the town centre. Reducing light pollution. Protecting natural habitat of wildlife;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

There needs to be an option of "No Road". This is vital in a fair consultation - you need to provide a fair way of voicing this opinion.

None of the options presented offer benefit to Chippenham town centre or traffic congestion. By adding 7500 homes and the increase in traffic from the M4 the town centre and traffic congestion and emissions will be many many times worse.

The 3 options do not offer real choices - the inner route is actually nearly the same length as the middle route and the outer route covers thousands of acres and should never have been offered as an option, covering 1600 acres, doubling the town in size and the road is nearly as close to Calne as it is Chippenham!

The inner road should simply increase the width of Pewsham Way and run straight across to the Lackham Roundabout.

Q7. Please rank the three potential road route options into order of preference.

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

The 3 options do not offer real choices - the inner route is actually nearly the same length as the middle route and the outer route covers thousands of acres and should never have been offered as an option, covering 1600 acres, doubling the town in size and the road is nearly as close to Calne as it is Chippenham!

This option does not make sense! When the World is looking to reduce emissions and preserve our environment why would you even suggest an option that has zero benefits.

It is the mostly costly option and increases 100 x Noise pollution, light pollution, CO emissions – none of these have been quantified or investigated but no doubt to not support any green initiatives. It looks more like a bypass showing no roundabouts to slow down traffic and is nearly as close to Calne as it is Chippenham, a clear aim of encouraging M4 traffic along this route which is unlikely to have a 30mph speed limit! If the Future Chippenham team think they can get away with this option they will with even more properties than the 7500 already suggested.

Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

The 3 options do not offer real choices - the inner route is actually nearly the same length as the middle route and the outer route covers thousands of acres and should never have been offered as an option, covering 1600 acres, doubling the town in size and the road is nearly as close to Calne as it is Chippenham!

This looks like the option the HIF team are really looking at although it does seem worrying that they haven't really considered how the new road crosses the A4 between Stanly Park and the Hyundai Garage. It looks like it joins the A4 for a few m's then comes off it again rather than putting in a roundabout.

Surely this should be the "outer option" and option A disregarded.

Zone 3 shows a total disregard for the land and wildlife across the Marden Valley without investments into light pollution, noise pollution and saving our wildlife habitat. The only purpose of this option is to allow houses to be built on Council Land and increase traffic flow from the M4 which should actually be using existing roads on the west side of the town. Remove the road through one 3 and one 4 altogether and keep Chippenham a market town.

Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

The 3 options do not offer real choices - the inner route is actually nearly the same length as the middle route and the outer route covers thousands of acres and should never have been offered as an option, covering 1600 acres, doubling the town in size and the road is nearly as close to Calne as it is Chippenham!

This is a red herring and only presented to show a "shorter route inner route" but isn't actually much shorter than option B (only 100m) and presents more challenges going through Stanley Park (why would any option do this?!) and mitigate habitat loss to the Great Crested Newt (which has cost £1m in other similar projects). It includes an extra roundabout by Lackham which adds cost and a potential point of congestion for traffic.

Surely the Inner Route Option should be notably shorter and a more direct route, it would make more sense to run from Rawlins green directly past Abbeyfield school, then run closer to Pewsham Way (or potentially widen this existing road?) and then run straight to Lackham roundabout.

Q11. Please rank the potential Pewsham link road options into order of preference.

- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
- Q14. How do you travel to/from Chippenham town centre?**
Car;
- Q15. Why do you travel to/from Chippenham town centre?**

■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Easing traffic congestion and improving journey times; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; By expanding Chippenham to the West is a better solution for Chippenham on so many fronts.;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
By expanding Chippenham to the West you avoid the ecological damage, Carbon Footprint of building two or more bridges, and reduce reliance on the car owing to the close proximity to Bath Road, Methuen Park, and Bumpers farm employment. In addition, the supermarkets are also sited to the west, as well as two out of three Secondary Schools. Close links to the A350 Trunk Road and not building next to River Avon. The rest of your consultation is heavily biased toward which is my preferred route when I am making a valid case NOT to build any of them.

A couple of pedestrian/cycle bridges over the A350 is better than huge great long bridges over the Avon.
- Q7. Please rank the three potential road route options into order of preference.**
Option C - Inner route; Option B - Middle route; Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
It has the longest route, has the longest bridges as well as two additional bridges over the canal.
It takes the perimeter of Chippenham too far into the countryside.
Only a relatively small amount of employment land compared to the potential numbers of houses.
Takes away the the use of Stanley Lane and the National Cycleway for people in Pewsham. If you look at the number of cyclists and walkers using it now.
Makes Stanley lane a major route from both Pewsham and Bremhill directions, with cars trying to access the distributor road.

- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Once again two very long bridges.

Opens up too much area to build on.

Destroys the habitat of species.

Takes away the enjoyment of the cycle track and footpaths in open countryside for people in Pewsham.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Listening to your Zoom presentation last night I guess this is the best of a bad set of circumstances, but only to build the link from Pewsham Way to Patterdown to help with the traffic congestion at the Bridge Centre.

It gives a link to the A350 Trunk Road.
- Q11. Please rank the potential Pewsham link road options into order of preference.**
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
It the only one and should only be used for a link to Patterdown and the A350.
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
- Q14. How do you travel to/from Chippenham town centre?**
Car;Not applicable - I do not travel to/from Chippenham town centre;
- Q15. Why do you travel to/from Chippenham town centre?**
I never use the centre of Chippenham. I don't understand the facination with rejuvenating the town centre. Expand the infrastructure where the work areas are and the retail sites are as well as the two secondary Schools.;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Not applicable - I do not travel to/from Chippenham as part of a commute for work;

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Climate change adaptation/mitigation; Preserving and protecting heritage assets;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

We are in a Climate and ecological emergency. Wiltshire council has itself declared a climate emergency.

The idea of Sustainable growth is nonsense. With a growth of 3% per year you double the size of the economy every 24 years and with it resource usage. Not sustainable.

Where is the carbon budget for the proposals and how will meet Wiltshire objective of net zero?

The roads pass through farmland. With 4 degrees C of warming - more possible than people realise Richard Betts IPCC, Wiltshire temperatures will hit 40.7 degrees C in the summer - UK Met office, by 2070.

World food supplies will be disrupted. Mass migration will occur. This land will be needed to grow food.

The fact this consultation doesn't include a none of the options demonstrates how out of touch Wiltshire Town council are with current science. This is not a consultation it is an imposition at a time when 25% of UK mammals face extinction, 41% of UK species are in decline since the 1970s, and 97% of wildflower meadows have been lost since the 1930s.

You should be ashamed of yourselves. Your actions will not be judged well by Future generations. At a time when you knew the need to act now you continue on a business as usual model.

I reject all of the options and ask that you take your declaration of a climate emergency seriously.

MSF 155

Q1. Are you responding as an individual or on behalf of a business or organisation?

As an individual

Q2. If you are responding on behalf of a business or organisation, please tell us which one.

Q3. Which age bracket do you fall into?

Over 66 years old

Q4. Please let us know your post code.

■■■■ ■■■■

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Climate change adaptation/mitigation;Reducing air/noise pollution;Protecting and enhancing biodiversity e.g. animal and plant habitats;Protecting and enhancing landscape and visual amenity;Preserving and protecting heritage assets;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

Detailed information needed before one can consider Council's plans especially where alternative routes are offered for consideration . There are very important matters which have not been mentioned as follows :

Have the Rail and River Authorities agreed the construction of bridges ? Will farmland land divided by the new road be made accessible to owners of farms and how will this be achieved ? Has Wiltshire Council's costs of providing this new road been based on inflation as construction is not to take place for some time ?Do costings include compensation for compulsory purchasing of land as well as compensation to others who will be affected by this new road ? Chippenham is possibly surrounded by Anglo Saxon and Roman sites of historic significance but now buried

so has Wiltshire Council contacted appropriate interested bodies to establish which areas will need preserving ie not be covered by a new road ? Will the Council provide much more evidence that a new road is absolutely necessary

when public opinion is becoming increasingly apposed to it ?

Q7. Please rank the three potential road route options into order of preference.

Option A - Outer route ;Option B - Middle route;Option C - Inner route;

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

Please read my previous comments . This is a ruse to try to obtain confirmation that this road is required.

I will not answer this question where there is a complete lack of important information provided to enable one to decide if the road itself is necessary .

- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
See my previous comments .

- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Zones 1-5 - this whole scheme appear to go far too wide. This is supposed to be a distributor road, but having such a wide arch will only encourage development on one side of it, as has happened along Cepen Park. A distributor road should be able to distribute to both sides of itself, otherwise it just become a ring road, which I do not think it what Chippenham wants/needs
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This would appear to be the lesser of three evils in respect of the route it takes, but little regard appears to have been given to the existing farm buildings in zones 1 and 2 in particular. It would appear more logical for this route to follow the route of the outer option through zones 1 and 2 before coming back towards the route shown for the inner route through zone 3, 4 and 5
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This is an absolute travesty of a route.

In zone 1 the link to Pewsham cuts across a lovely walk that is parallel to Avenue La Fleche.

Through zones 1 and 2 it is far too close to existing farm buildings.

In zone 2 (and 3?) it cuts through part of the Stanley Park playing field. This should be the pride of the town and will be even more essential to maintain (and grow) if 7500 houses are to be added to the town. It is beyond belief that you would even consider this. Whilst the consultation document refers to mitigation, given how long the efforts were to get this facility in the first place, I have no faith that this would be have a satisfactory result and whilst the wrangling happens the children of Chippenham would lose out. If this plan were to be approved, it must be conditional upon the mitigation works for Stanley Park being fully completed and replacement facilities fully installed before works on the road commenced.

Q11. Please rank the potential Pewsham link road options into order of preference.
Pewsham Link Option 3;Pewsham Link Option 1;

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

If I could have chosen not to rank this at all, I would have done. It is far too close to Mortimer's Wood and dissects the walk that runs parallel to Avenue la Fleche

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

I don't like either option.

It would surely make more sense for the inner and outer routes to link with Avenue La Fleche at the existing roundabout at the end of King Henry Drive. There are enough roundabouts on this road to cause traffic already; why not use the existing one? Otherwise, you will have cars joining ALF at King Henry Drive and just to then a queue for the new roundabout down to the link.

Q14. How do you travel to/from Chippenham town centre?

Car;

Q15. Why do you travel to/from Chippenham town centre?

As part of my commute to/from work;For leisure/social engagements;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Car;Walking;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

Walking;

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
I am opposed to any of the 3 options;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
For many years there have been plans to build on the farmland where we live. This land frequently floods, has links to the countryside, the river, the rebuilding of Pewsham Lock and is home to wildlife including bats, squirrels, dress, foxes and owls.

I oppose all 3 options and feel Wiltshire Council are asking the wrong questions to the people of Chippenham. They should be asking 'Does the town have the infrastructure to facilitate the building of so many homes? Is the distributor road really the answer? Lastly, is it really needed through our countryside?'

The land that is being proposed for this development is farm land with diverse animal and plant habit and should remain so. I do not agree with any of the proposed routes and believe that the sheer nos of proposed houses will outway any new roads and the loss of a green landscape and will not provide any benefit. Housing should be focused to the North of the town, nr the motorway. I also don't believe that the community have been consulted sufficiently and are being forced to accept one of three options that will totally ruin the countryside around South Chippenham.

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Preserving and protecting heritage assets; Protecting and enhancing landscape and visual amenity; Protecting and enhancing biodiversity e.g. animal and plant habitats; Reducing air/noise pollution; Climate change adaptation/mitigation; This road is not needed and should not go ahead;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

Other proposals for smaller pockets of construction in this vicinity have been rejected in recent years, so one wonders why has this huge proposal for a new road and 7,500 houses has appeared now? The entire Pewsham Electoral Ward, which includes Pewsham Village as well as the large modern estate, only has around 1880 households, so the scale of the proposed house building on the west of Chippenham is massive. The proposed construction is over three times larger than the current Pewsham estate – the proposed development will have a population the size of Calne and would immediately increase the population of Chippenham by one third. It will require primary and secondary schools, health services, supermarkets, leisure facilities and more. In terms of health care facilities it will severely impact the tiny Chippenham Hospital and may well result in the sort of shortage of GP services that Melksham has seen in recent years following development there, especially as the exodus of exhausted GPs that the country has seen in recent years is forecast to increase once the pandemic has been dealt with.

Surely a scheme on this scale requires more than two months' 'consultation'? Haven't we moved on from the 1950s when massive road schemes and new towns were imposed on powerless communities by planners who thought they knew better, but have been since proved to be on the wrong side of history? Make no mistake, a proposed development that will have a population the size of Calne is a 'new town'.

The Council's consultation document says that they want the road and housing proposals to be considered separately, but they can't be because the only function and justification for this road is to facilitate the construction of the housing development. The road is simply not needed by the few people who currently live on the east side of the town. The Council's document claims that the road would facilitate access to the M4 when in fact the proposed road goes in the opposite direction.

The Council's consultation document states that their "Environmental objectives [are] • minimising the impact on the quality of the environment • improving accessibility for non-car users by promoting sustainable forms of transport • through infrastructure led delivery seek opportunities to reduce the carbon footprint of the road and scheme." The document goes on to say that "The Core Strategy will be focused on... tackling the causes and effects of climate change." It is difficult to see how this is possible by building a new road and 7,500 houses on farmland and land currently used as green leisure space.

The Road

New roads increase traffic not decrease it. As Professor Phil Goodwin has shown, there is published evidence going back many decades that new roads create more traffic rather than reducing congestion.(1) In 1994 the Standing Advisory Committee on Trunk Road Assessment showed that average traffic flow on 151 improved roads was 10.4% higher than forecast and 16.4% higher than forecast on the 85 adjacent routes that the improvements had been intended to relieve. In a dozen more cases the increase in traffic ranged from 9% to 44% in the short run and 20% to 178% in the longer run. The conclusion was: "An average road improvement...will see an additional 10% of base traffic in the short term and 20% in the long term."(2) This has been accepted by the Department of Transport and other reports from the USA and Europe have since demonstrated similar results. Furthermore, studies of bypasses such as that in Newbury have shown that reductions in town centre traffic levels were less than originally forecast and the subsequent regrowth in traffic levels on the bypassed roads and the new road resulted in a considerable overall increase in traffic.(1)

So any claim by the Council that this road will reduce congestion is wrong and the opposite has been shown time and again to be the case. CONTINUED BELOW

Q7. Please rank the three potential road route options into order of preference.

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

As the consultation document makes clear, these houses will be marketed at people working along the M4 corridor and, as the stated aim of the road is to ease access to the M4, then it is obvious that the Council intends to increase traffic on this and surrounding roads as the residents travel to their jobs. If any of the residents of the new houses wish to use the train to get to work then they will have to drive into town because many of these houses, especially in the south of the development, will be too far from the station to walk or cycle. Thus congestion in the town centre and especially on Station Hill/Cocklebury Road will be made worse.

The argument that the road is needed to ease access to the M4 for current residents is spurious because the proposed road goes nowhere near the M4. The A350 is the main route to the M4 and the idea that anyone would wish to drive a circuit of Chippenham to reach it is fanciful. So the only argument for the new road is so that houses can be built along it.

Air pollution - The UK has consistently failed to meet legally binding targets to reduce air pollution. On average transport is responsible for 80% of NOx emissions at the roadside. Air pollution poses critical threats to the health and well-being of residents. There are an estimated 23,500 UK deaths annually from nitrogen dioxide

concentrations and exposure to small particulate matter pollution is estimated to result in nearly 29,000 deaths in the UK each year. A report by the Royal College of Physicians and the Royal College of Paediatrics and Child Health(3) found that outdoor air pollution is linked to around 40,000 deaths a year and estimated that the impact on public health by this pollution costs the UK more than £20bn annually - 16% of the annual NHS budget. It found that air pollution plays a role in many chronic conditions such as cancer, asthma, heart disease, and neurological changes linked to dementia. It concluded that the concentration limits set by the government and the World Health Organization are not safe for the whole population and leave certain groups vulnerable. The Council should not be seeking to increase pollution levels by building new roads and increasing road use.

Residents do not support new roads. Opinion polls and surveys over recent years have consistently shown that most people prefer to improve public transport and, if money is to be spent on roads, they want it to be spent fixing potholes not adding new capacity. With the changes that have been wrought in working and commuting over the last year by Covid 19 the Council would be very ill judged to go ahead with this road scheme as, largely because of a rapid move to home working, fewer road journeys are being made and the public is highly supportive of expanding local transport options. A recently commissioned poll by MPs showed that fewer than one in seven people want money spent on more or bigger roads.(4) The report shows that residents want more and better cycle lanes and bus services rather than major road building investment. Wiltshire should not be encouraging more road use and instead should be seeking to be a leader in sustainable transport.

CO2e. As well as the CO2e emissions which this road will cause through the extra traffic it will generate (discussed above), the construction of the road itself will generate emissions that will exacerbate global warming. Whilst this is difficult to calculate because it depends on the sources of power used in the extraction, import and manufacturing of the aggregates, all routes require multiple flyovers which require more construction materials than a stretch of regular road. This project could result 200 tonnes of CO2e being put into the atmosphere before anyone drives on it. CONTINUED BELOW

Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

The effect on the natural environment. The current environmental crisis is not just about global warming, but is also about the catastrophic collapse of Britain's bird, mammal and insect populations which will have wide-reaching consequences for food production and the wider environment. All roads are a barrier and hazard to wildlife and roads in the wrong places can destroy and fragment wildlife habitats, as well as harming landscapes that are important for their nature, geology, historical or aesthetic value. Noise and light pollution can also cause underestimated damage. Only this week scientists have shown that noise pollution from roads diminishes birds' ability to find food and that noise pollution has "previously unconsidered consequences for wildlife"(5).

Driving a large road through an environment which currently has underused country roads and, in the case of the southern section, has no roads at all and is open countryside, will have untold consequences for birds, mammals and insects. This road scheme will both destroy and fragment wildlife habitats by driving a tarmac killing zone through existing wildlife corridors. Evidence from the annual Road Death report on animal fatalities shows that putting large roads through a rural area has a

disproportionate effect on wildlife fatalities, with deer, owls, kestrels, hares and smaller mammals that live in arable, pasture and woodland being disproportionately affected. It goes on to say, "Due to the impact of road casualties it has been suggested that barn owls are unable to sustain viable breeding populations in close proximity to...roads...and that road casualties may even be responsible for suppressing the populations of some of our common mammal species on a local scale. There are also a significant number of human fatalities and a considerable economic cost associated with collisions between vehicles and wildlife."(6)

As noted above, whilst the Council would prefer the housing development to be ignored for now, it cannot be because it is their reason for building the road.

Housing

There are already 5090 new homes planned in Chippenham 2006-2026. Which puts Chippenham in 3rd place in Wiltshire for new development behind Trowbridge and Salisbury(7). This is almost twice the development planned for any other town in Wiltshire – surely Chippenham has 'done its bit' for new housing in Wiltshire? But instead the Council seem to be burdening Chippenham with the responsibility of providing Wiltshire with almost a third of its housing target over the next 15 years (nearly 13,000 homes out of a target of 40,000 countywide by 2036).

The Council's proposal claims that 40% of the new houses will be 'affordable', but the number of new homes completed 2016-19 in Chippenham was 462 with only 31 of those being 'affordable' which less than 7%(8). This is even worse than the national picture which has less than 10% of new builds being affordable, with developers often invoking "viability assessments" to evade their obligations. So the council's suggestion that 40% of the new estate will be 'affordable' should be viewed with a very large pinch of salt. And that's before you get into the debate around whether 'affordable' homes are actually affordable.

The proposed scheme is unimaginative and short-sighted. The £6.22million that Wiltshire Council has already spent on this unwanted project could have more profitably have been spent on conducting an in-depth survey of urban and brown field spaces in its towns and focussing construction in these areas to spread the housing rather than single massive imposed developments. Empty offices, industrial units or space above existing shops could be converted into housing. There are unused and derelict spaces within Chippenham town centre which could be converted. All of this has less impact on the environment than building houses from scratch. In light of the under use of business CONTINUED BELOW

Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

spaces during the current pandemic and the commitment of many firms to their staff continuing to work from home once life returns to normal, it seems premature to commit to such a large housing and road development before the effects of the changes wrought by Covid 19 on the work patterns of the county are known – there may be many more commercial spaces freed up for development post-pandemic. The housing demand is for smaller units rather than larger detached houses, so splitting current detached houses into smaller units makes more sense. In Wiltshire there are currently 1,675 homes that have been empty for more than six months and over 1500 more are used as second homes – these should be charged full council

tax to either raise revenue or to encourage the owners to bring them back into full use(9).

Chippenham has a vibrant housing market with properties available at all sizes and prices, even before the existing developments along the A350, Rowden and Bird's Marsh are completed. But many properties take quite a while to sell – some over a year – and some change agents or leave the market temporarily to be decorated or rented out for a short time before the vendor tries again, which demonstrates that Chippenham does not have an undersupply of housing for locals and people moving to the area to work. So who are these proposed houses aimed at? The Council's consultation document says that the aim is for Chippenham to become a dormitory town for industries along the M4 corridor – thus encouraging more people to use their cars to commute along the M4 and other arterial roads – but it would be more efficient and environmentally sustainable for towns where these people work to provide desirable and affordable housing. As noted above this money should be spent on improving the current public transport infrastructure and adapting roads for safe cycling and for new cycle routes that avoid roads altogether rather than on new roads. Much of this new town will be built too far away from other infrastructure and will therefore force the inhabitants to use their cars to travel to work/schools/leisure activities/health care – indeed you will be building a new road that encourages them to do just that.

Farming Taking such a large amount of farmland out of production is very short-sighted in the light of Britain needing to grow more of its own food. There is a growing desire of many people to eat more local produce rather than imported produce to avert climate change. Coupled with this is the still unclear effect that Brexit may have on imports and food security which may result in us needing to increase UK food production.

Environment This massive housing development will also have a catastrophic effect on wildlife as habitats will be totally destroyed by the houses built on the countryside, so everything said above under The effect on the natural environment regarding the road would be incomparably worse when the housing development is considered, and that is before the new residents introduce several hundred domestic cats to finish off the remaining bird and small mammals populations which survived the developers' diggers. 26% of the UK's mammals are at risk of becoming extinct, with hedgehog and dove populations having crashed by over 95% since the 1950s and toad populations by 68%(10). We can't afford to lose greenfield sites to massive developments like this.

Pollinators. A recent project in Kent found approximately 50% fewer insects over the last 15 years. The decline in insect numbers should be regarded as an existential threat to the health of our planet and future human generations as 75% of our food crops rely on pollination by insects (as well as the insects becoming food for other animals), and habitat loss due to development is a major cause of this decline(11). Building over farmland for this road and housing project will have a seriously deleterious effect on our insect life. CONTINUED BELOW

Q11. Please rank the potential Pewsham link road options into order of preference.

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

With the numbers and diversity of our native flora and faunal species in free-fall, how can the council of a rural county contemplate habitat destruction for the road and housing development on this scale?

CO2e The effect on the environment of a new build home is to release an average of 43 tonnes of CO2e into the atmosphere, so this development would release over 300,000 tonnes of CO2e(12) into the environment (for which we would need to plant 645 hectares of woodlands to sequester the carbon) before anyone began to live in them. The effect of building on this scale would only be mitigated by ensuring that only the most environmentally friendly and insulating construction materials were used and that every house had solar panels and heat pumps.

Flooding The construction of a new town on this scale will have a massive effect on the water table. Water will not be able to soak into the farmland and will therefore exacerbate the flooding along Maud Heath's Causeway and Langley Burrell. The flooding that happens many times each year in the Westmead area of Chippenham will only be made more frequent and more far-reaching along the River Avon by this development. As flooding at the bottom of Chippenham High St has only been dealt with in recent years this flooding will in all likelihood return (especially with the increased flooding risk caused by climate change).

Local residents. The effects of Covid 19 have shown how important green spaces are for our mental and physical health. People taking their daily exercise along the Sustrans cycle route and the Wilts & Berks Canal will find themselves not walking through a green space where the only sounds are those of the natural world, but will find themselves walking under concrete flyovers with the consequent negative effects of air pollution, noise pollution, litter, toxic water run-off, etc. The views that users of these amenities will see once this development is completed will not be woodland and fields but a main road, feeder roads and houses.

In Conclusion

In February 2019 Wiltshire council 'resolved to acknowledge a climate emergency and seek to make the county of Wiltshire carbon neutral by 2030.'⁽¹³⁾ This included commitments to 'develop a woodland and tree planting policy', 'developing a new carbon reduction strategy', 'the vision for a green infrastructure network for Wiltshire', 'decarbonising our economy and helping to deliver the national climate change targets'. You also said, 'We will continue to engage with communities to work collaboratively towards achieving the country's decarbonisation goal'. It says a lot about my naivete that, following such declarations, I thought it would mean the end of such monolithic insensitive planning and would lead to smaller, more sustainable urban development which could use existing infrastructure and amenities. Where does destroying the natural environment to build an unwanted new road system and 7500 new homes fit into your climate commitments? This plan shows that your acknowledgement of a climate emergency is not worth the pixels used to publish it when Wiltshire Council over-rides local views to inflict these houses and roads on existing communities and the environment. Wiltshire CPRE had it right in their response to Wiltshire Council's climate emergency pledge citing the Council's responsibility for '...loss of green field and rural character, urban sprawl...increased traffic, lack of school places, air quality, impact on habitat and biodiversity and lack of infrastructure to support an increase in population.'⁽¹⁴⁾ Someone of a more cynical

turn of mind might wonder if the Council chose to apply for funding that was required to be spent in such a short time frame so that the plan could evade proper scrutiny.

CONTINUED BELOW

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

As members of the Council, who have a level of power and authority beyond the ordinary Wiltshire resident, when your children or grandchildren ask you in 15 years' time what you did to alleviate the climate crisis you will be able to tell them proudly that you voted to put a minimum of a third of a million more tonnes of CO₂e into the atmosphere from one small part of North Wiltshire alone. What is the point of residents trying to do their bit to cut their carbon footprints by changing their diets, changing their commuting and shopping habits, swapping to greener energy if our Council immediately negates those changes by pumping over 300,000 tonnes of carbon into the atmosphere without our consent? Public, scientific and, increasingly, political opinion is moving away from such unsustainable insensitive large developments on greenfield sites and I hope that Wiltshire Council comes to realise this before, rather than after, imposing this massive development on a rural community.

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
There needs to be a further option -NO ROAD;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Chippenham is a market Town, albeit it has quadrupled in size since my childhood. It does NOT need any further housing. If the government are forcing Wiltshire County Council to build more houses then that should be made VERY clear. As the vast majority of market towns are in the North of the County perhaps the balance needs to be redressed by creating a new town in the South of the County. Salisbury Plain would be a much better option than allowing the army to swarm all over it. The world is changing our armed forces do not need this vast area of land to practice war games.
- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Destroys green space that can never be returned to its natural state

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Climate change adaptation/mitigation; Reducing air/noise pollution; Road is not wanted, not needed and not sustainable;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

Where's the consultation on if a road is even needed or wanted? This seems like it has already been decided. It isn't wanted and nor is it needed. Congestion in chippenham is not a problem and is unlikely to be so as we all continue to work from home now. What about your climate emergency? How does rolling up prime rural landscape sand totally changing the make up of a town that people have chosen contribute to this? Plenty of brownfield sites to use first but you seem to want to fill them with retirement homes. Focus on getting people to stay one their homes and use the brownfield sites for appropriate housing.

Q7. Please rank the three potential road route options into order of preference.

Option A - Outer route ; Option B - Middle route; Option C - Inner route;

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

Not wanted, not needed, not sustainable. Where's the consultation on if a road is even needed or wanted? This seems like it has already been decided. It isn't wanted and nor is it needed. - Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Preserving and protecting heritage assets; Protecting and enhancing biodiversity e.g. animal and plant habitats; Reducing air/noise pollution; Climate change adaptation/mitigation; Road should not be built AT ALL!;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
This road is designed to encourage building of new homes which will increase damage to our environment, wildlife and heritage. The only reason to choose one of these three routes is if you support a huge expansion of our market town, which I do not. Fix what is already here before considering adding more soulless housing estates for commuters.
- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I do not wish to choose any of these options as I oppose a distributor road built to encourage expansion of our town. All options are bad for the environment, wildlife and the well being of those who already live here.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**

- Q1. Are you responding as an individual or on behalf of a business or organisation?**
As an individual
- Q2. If you are responding on behalf of a business or organisation, please tell us which one.**
- Q3. Which age bracket do you fall into?**
Between 36-45 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets; Climate emergency, Food security. Public health;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Climate emergency: building new roads increases new car journeys; we should be reducing them by improving cycle paths, footpaths and improving public transport. The plans to cross the existing cycle paths and footpaths is irresponsible.

Food security: irreversible building on farm land is contrary to food security planning; we need to protect the environment by protecting local farmland and sourcing food locally.

Public health: building of roads increases car journeys and consequently reduces the air quality for people. Additionally, building over the countryside has a negative impact on mental health.
- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Unnecessary destruction of farmland and the visual amenity of the countryside.
Severing existing cycle and footpaths
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Unnecessary destruction of farmland and the visual amenity of the countryside.
Severing existing cycle and footpaths

- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Unnecessary destruction of farmland and the visual amenity of the countryside.
Severing existing cycle and footpaths. Closer proximity to housing means greater noise and air pollution
- Q11. Please rank the potential Pewsham link road options into order of preference.**
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Unnecessary road, purely for the future building of unnecessary housing
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
Unnecessary road, purely for the future building of unnecessary housing
- Q14. How do you travel to/from Chippenham town centre?**
On foot;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements; Education, Accessing shops and services, Exercise;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Not applicable - I do not travel to/from Chippenham as part of a commute for work;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Walking;

■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Easing traffic congestion and improving journey times; Climate change adaptation/mitigation; Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Many of the options are interlinked. Congestion is the most significant issue. Addressing this will, overall, help with everything else.
- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
It seems prudent in the long term and will take more of the traffic further from the centre of the town. It carries the concern that it will facilitate the town focussing on building on green land and not developing brown field sites appropriately; loss of greenery, drainage and habitats, etc.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
It neither delivers the long term benefits of the outer route; nor the potential 'development containment' of the inner route.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Much as I would like to advocate this option, in reality this road will simply become an internal linkage surrounded by new developments within 15 years. The likely outcome will then be the building of the outer route in addition. The inner route would be nice if the town were likely to be developed within it; but given that is unlikely, the inner route actually constitutes a pointless cost.

- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 3;Pewsham Link Option 1;
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Pulls traffic towards town, rather than further away from town.
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
Pulls traffic away further away from town than Option 1.
- Q14. How do you travel to/from Chippenham town centre?**
On foot;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;To shop, subject to shops in the town centre actually surviving ;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Not applicable - I do not travel to/from Chippenham as part of a commute for work;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Walking;

Between 36-45 years old

Q4. Please let us know your post code.

■■■■ ■■■■

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Climate change adaptation/mitigation;Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians;Protecting and enhancing biodiversity e.g. animal and plant habitats;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

The Full Options report identifies a number of strategic policies that the 'distributor road' has as objectives. Including reducing the need to travel, promoting sustainable travel options and access to them etc. Section 4.2 states that the 'distributor road' will increase "walking and cycling for journey within Chippenham with the provision of safe and convenient pedestrian and cycle routes and a reduction in traffic."

I am unclear how a new distributor road will improve sustainable travel options in Chippenham, as it will not provide new or improve sustainable travel options to any existing residents of the town. There is no discussion of what funding there is for sustainable travel improvements, which are essential for meeting the scheme objectives.

In fact it appears that the 'distributor road' is reliant on new employment/local centres along or close to the route of the 'distributor road', with no improved access to the town centre or other existing employment sites.

It needs to be clearly states what funding has been secured for sustainable travel improvements and on what schemes will it be spent. At least 10% of the cost of the 'distributor road' should be secured for such improvements, as facilities within Chippenham are poor, and money can be wasted easily, i.e. the catastrophic Station Hub improvements.

Q7. Please rank the three potential road route options into order of preference.

Option B - Middle route;Option C - Inner route;Option A - Outer route ;

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

I am unsure how an outer route would work as 30mph 'distributor road' with some frontage development and safe multi modal access. The style of the 'distributor road' is largely dictated by Rawlings Green, where it will route through the development,

i.e. not like option A, which is more like how the north Chippenham link road has been designed.

- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**

■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Climate change adaptation/mitigation; Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
If I could rank these - then Climate Change and biodiversity protections are top priority - we are in a climate and ecological emergency. Sustainable transport is a means to achieving these top priorities, which will then help with air pollution too. Plans need to be revised in the post-pandemic era, with different patterns of living. Where are the carbon figures for each option plus the no-road option (status quo)? Why are you not doing all the biodiversity surveys up front, and then proposing the least disruptive option? Habitat mitigation is no replacement for maintaining existing habitats.
- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
My preferred option is 'none of the above options - no road'
All options are a sledge hammer solution to addressing congestion in the town centre, and I cannot see how a road will help with improving the town centre, employment prospects, community cohesion, affordable housing for locals or other benefits for the current residents in Chippenham. This road is simply an enabler to build thousands of commuter houses for incomers to sleep - they will spend their work, social and shopping time outside of the town. It will destroy the countryside and change the character of the historic market town for ever. As a resident living on the A4 (Rowden Hill) I selfishly might potentially benefit from some traffic (and improved air pollution, at least in the short term) being taken off my road, BUT this slight benefit is far out-weighted by the many dis-benefits of the road bringing at least 7500 houses and 15000 more cars.

- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
My preferred option is 'none of the above options - no road'

My preferred option is 'none of the above options - no road'

See above comments
- Q11. Please rank the potential Pewsham link road options into order of preference.**
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
My preferred option is 'none of the above options - no road'

See above comments
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
My preferred option is 'none of the above options - no road'

See above comments

Where is Pewsham link option 2?
- Q14. How do you travel to/from Chippenham town centre?**
On foot;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;shopping. I would love to work locally and be able to walk to work, but there is very limited local quality employment;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Not applicable - I do not travel to/from Chippenham as part of a commute for work;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Walking;

Between 46-55 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Reducing air/noise pollution; Climate change adaptation/mitigation;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Quality of life is impacted by road noise and air pollution, introducing proper ring roads, not through distributor roads, moves traffic out of built up areas to the benefit of all residents.

Any new road seems contrary to a climate change agenda and is questionable in the current global climate change situation.
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ; Option C - Inner route; Option B - Middle route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This option scores best to reduce air and noise pollution, keeping through traffic away from centres of population. None of the three routes are very palatable but this form has been constrained to not allow alternatives to be suggested, merely to constrain consultation to 3 options. For all 3 routes segregating cycle paths from pavements is essential, cycles and pedestrians on the same path are a recipient for accidents, cycles travel at speed and pedestrians don't adhere to segregation markings. For effective and safe cycle paths they must be separate.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
In zone1 why doesn't the route exactly follow the line of the electricity pylons rather than moving away in a sweeping bend immediately east of the flood plain crossing? No one wants to live next to a through distributor road nor pylons, so running both alongside each other more closely minimises the impact both have on the landscape and peoples lives.

- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
In zone 1 this route passes very close to properties at lower lodge farm, blighting them with noise and air pollution. What measures will be taken to screen the road and provide noise barriers from existing properties?
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 3;Pewsham Link Option 1;
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
Lower environmental impact
- Q14. How do you travel to/from Chippenham town centre?**
Bicycle;Car;

████████
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Protecting and enhancing biodiversity e.g. animal and plant habitats; Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
- Q7. Please rank the three potential road route options into order of preference.**
Option C - Inner route; Option A - Outer route ; Option B - Middle route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Terrible idea.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Terrible idea.
- I have read through all of the plans and justifications for these proposals and I do not agree with any of the reasoning. Simply stating that building a road and houses will improve the environment does not make it so. Let's see some scientific evidence. Perhaps money should be put into improving existing transport - green busses, cycle lanes (this time in sensible places), etc would all be good ideas. With more people now working from home, and more pressing issues to fund, such as supporting families overcome redundancy and illness, I hope this whole plan will be thoroughly reviewed.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Terrible idea. Why plan to spoil what little countryside there is for people who live in town. Mental health will take a tumble.
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 3; Pewsham Link Option 1;

- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Both options are unnecessary and will damage wildlife and the beautiful semi rural town that Chippenham is.
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
Same as above.
- Q14. How do you travel to/from Chippenham town centre?**
On foot;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements; To take children to school.;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Not applicable - I do not travel to/from Chippenham as part of a commute for work;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Walking;

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Why do the proposed three options all terminate at Rawlings Green instead of the train station, surely this means more cars on the road and not less. Does the funding and plan provide for safe cycle routes from Rawlings Green (and the up to 7,500 new homes) to the town centre and train station? Again it must overall provide a safe and easy option to leave the car at home. How will the plan enable 'placemaking' as one of the stated economic objectives? I am concerned about the word 'could' in the statement the the new road could offer opportunities for sustainable communities, big gamble. What modelling has been done to assess the effect of traffic joining at the Lackham roundabout and onwards on the A350, especially the flow towards Melksham, that is a very busy road already.
- Q7. Please rank the three potential road route options into order of preference.**

Option B - Middle route; Option A - Outer route ; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I believe this Option should be altered with Zone 4 just continuing and joining up with Calne and dropping Zone 3,2 and 1. This would have the same effect overall and it would just drop to local traffic on the A4 and areas around Pewsham, as inter-town traffic would go along this new extended option which causes the congestion today.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Again - I believe this Option should be altered with Zone 4 just continuing and joining up with Calne and dropping Zones 3,2 and 1. This would have the same effect overall and it would just drop to local traffic on the A4 and areas around Pewsham, as inter-town traffic would go along this new extended option which causes the congestion today.

A roundabout needs to be added to the design around Zone 2 and 3 to it is on par with the other design, the design as-is will not help with the flow of traffic.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Again - I believe this Option should be altered with Zone 4 just continuing and joining up with Calne and dropping Zones 3,2 and 1. This would have the same effect overall and it would just drop to local traffic on the A4 and areas around Pewsham, as inter-

town traffic would go along this new extended option which causes the congestion today.

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Climate change adaptation/mitigation; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets; Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Reducing air/noise pollution;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
I object strongly to the building of this distributor road to the east and south of Chippenham for all the reasons ticked in box 5, and because a) this consultation is taking place before the Local Plan roll forward to 2036 has been adopted b) members of the public have not been asked whether or not they agree with the building of this distributor road and c) is it not sustainable planning in the light of the urgent need to reduce emissions to zero and the changes brought about by the pandemic.

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

The plans to build this road go directly against most of the priority's for Chippenham. The fact that there is not an option "D" to say that none of the routes are desired is forcing the hand of us the residence. Why do you not give this option?6

Furthermore the fact that this is NOT a bypass but a road to service over 5100 homes should be clearly advertised. This is a clandestine way of furthering the plans of the council and is not motivated by for the well being if the current residence of Chippenham but by money, revenue and profit that is blacked out from the 136 page report.

Additionally doing the consultation during a national lockdown fails to allow residence the time or information to provide full feedback.

Q7. Please rank the three potential road route options into order of preference.

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

Over 66 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Protecting and enhancing landscape and visual amenity; Easing traffic congestion and improving journey times; Climate change adaptation/mitigation; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
If you are going to improve sustainable transport links you need to address the problems caused by the location of the Railway Station & all the buses etc which need to access it daily. The proposed roads will not solve this problem & extra housing will make it worse.
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ; Option B - Middle route; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Section 4&5 not required, a link road from the A4 near Stanley Park to Lackham Roundabout would take traffic away from Avenue La Fleche & out of the town. The bypass started in The 1990s could be finished eg made dual carriage way for its entire length. You own the land why not complete it. Traffic in 4&5 can access M4 by travelling Northwards.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Same applies as for 8
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Same applies as for 8

- Q11. Please rank the potential Pewsham link road options into order of preference.**
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**

Between 26-35 years old

Q4. Please let us know your post code.

■■■■ ■■■■

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Easing traffic congestion and improving journey times; Preserving and protecting heritage assets; Making Monkton Park more accessible for emergency services.;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

Please please please consider safety routes in this. It is true that this new road will likely ease traffic in Chippenham town centre which is great, but looking at the Monkton Park estate currently, there is one road in or out. This is a huge problem. Recently Wiltshire council has built a new multi-storey car park at Saddlers Mead, this is on top of the two station car parks, the history centre and the college all using Station Hill as the only road in or out. To me this poses a huge risk to life. The majority of the people living in Monkton Park are elderly and should they require an ambulance it may not be able to fight it's way through stand still traffic on Station Hill, likewise with fire engines or police. This problem is exacerbated by the quite frankly ludicrous decision to block traffic going to Monkton Hill. In my opinion a second road connecting to Monkton Park would be great. This could either be connecting to Cocklebury Lane or, preferably, maybe to somewhere on the proposed new road that this form exists because of. I understand that maybe some residents of Monkton Park like how quiet the actual housing estate is, and that they wouldn't want Monkton Park to become a 'shortcut' into town. This is why I wouldn't mind seeing any new road include speed bumps or other traffic calming measures.

Finally I would like to see the greatest care taken in preserving Chippenham's history as a traditional market town. Over the last 50 years the town has lost a lot of it's identity with many iconic picturesque landmarks being replaced with ugly budget friendly alternatives. This is only to the detriment of the town in the long run though. There is even a group on Facebook dedicated to old photos of Chippenham where many people regularly comment on the town's loss of identity. I know one road may not seem to have an impact on this but it is a huge part of the bigger picture going forward.

Q7. Please rank the three potential road route options into order of preference.

Option A - Outer route ; Option B - Middle route; Option C - Inner route;

- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
For me it is between the outer route and middle route for the best options. I narrowly chose this as the best because it connect to the A4 as a roundabout and not two junctions like the middle route does.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I believe this is the probably the best route HOWEVER I had to put it second to the outer route purely because it appears to connect to the A4 as pair of junctions rather than a roundabout and I can only see that leading to more traffic.... Apart from that this route is good!
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I don't like this route. It really should connect to the A350 at the Lackham roundabout, I can't understand why it wouldn't... The only thing I like about this route is how it links to Pewsham Way at the Canal Road roundabout.
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 1;Pewsham Link Option 3;
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
I think it would be best for the the new road to link to any existing roads at roundabouts rather than junctions, therefore I prefer this option.
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
I don't mind this option in terms of location I would just prefer they connect to Pewsham way as a roundabout rather than a junction.
- Q14. How do you travel to/from Chippenham town centre?**
Car;On foot;Bicycle;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Walking;Car;Train;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Car;Train;Walking;

Up to 25 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Protecting and enhancing landscape and visual amenity; Protecting and enhancing biodiversity e.g. animal and plant habitats; Climate change adaptation/mitigation; Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
We are lucky to be surrounded by countryside and protecting that and the environment should be a key priority for the council.
- Q7. Please rank the three potential road route options into order of preference.**
Option B - Middle route; Option C - Inner route; Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
The area is too large and would expand the town too much.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Good that the road links to an existing roundabout (Zone 1) and doesn't expand the town as much as the Outer route.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Good as it doesn't expand the town too much but doesn't link to an existing roundabout (Zone 1).
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 3; Pewsham Link Option 1;
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Possibly could increase traffic on the roundabout for Pewsham residents.

- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
- Q14. How do you travel to/from Chippenham town centre?**
Bus;On foot;
- Q15. Why do you travel to/from Chippenham town centre?**
As part of my commute to/from work;For leisure/social engagements;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Walking;Bus;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**

██████
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
I don't think any of the routes below are appropriate. The only reason for the road is to open the swathes of our countryside up for development. A road is needed to link the A4 at the top of Pewsham to the A350 at Lackham College. The proposed road will not improve traffic in the area once you add 15,000 cars from the new suburbs to be built. It will however destroy what is left of the green spaces in Chippenham and the character of the area. We will lose valuable leisure and recreation space in the cycle route and canal areas; not to mention the loss of wildlife - we've only just started seeing otters in the river, there are deer and other species in the green spaces. These will disappear. It's too high a price to pay for a distributor road which, 20 years down the line, will be insufficient and impossible to improve because you've built to the edges either side.
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ; Option B - Middle route; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This route carves through green spaces currently enjoyed by the people of Chippenham and will destroy the last green area available to the residents enabling the development of obscene amounts of housing.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This route goes far too close to the old canal which is currently being resound is a haven of peace and tranquility. Additionally it cuts across a busy national cycle route which has been an absolute lifeline over the past year.

Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

This route cuts extremely close to Stanley Park football ground; and by your own assessment may impact upon wildlife in the area. Just no.

Q11. Please rank the potential Pewsham link road options into order of preference.
Pewsham Link Option 1;Pewsham Link Option 3;

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

Q14. How do you travel to/from Chippenham town centre?
On foot;

Q15. Why do you travel to/from Chippenham town centre?
As part of my commute to/from work;For leisure/social engagements;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?
Train;Walking;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?
Walking;

- Q11. Please rank the potential Pewsham link road options into order of preference.**
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
The only time pewsham way is congested is when there are road works or accidents. No new road will change this.
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
Due to covid 19 less people will be travelling to work so no need for any new roads

- Q14. How do you travel to/from Chippenham town centre?**
Bicycle;On foot;
- Q15. Why do you travel to/from Chippenham town centre?**
As part of my commute to/from work;For leisure/social engagements;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Car;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Bicycle;Walking;

MSF 211

- Q1. Are you responding as an individual or on behalf of a business or organisation?**
As an individual
- Q2. If you are responding on behalf of a business or organisation, please tell us which one.**
- Q3. Which age bracket do you fall into?**
Between 36-45 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Reducing air/noise pollution;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
My concern is that these route options (and following developments) will ruin the best countryside footpaths Chippenham has. So many residents of the Pewsham area head out to these blissful connected stretches of footpath, linking the riverside walk to the canal and cycle paths, promoting exercise and mental wellbeing. We head here to escape the buildings and roads, and to be in the countryside. We stand to lose all that. To those unfamiliar with the area, they will no doubt view this land simply as 'some fields in the distance'. But, to repeat myself, this is the best countryside area Chippenham has - not simply an area that can be looked upon from a distance, but a truly outstanding green space we love to walk, run and cycle through. Please don't destroy it.
- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
- Q11. Please rank the potential Pewsham link road options into order of preference.**

- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
- Q14. How do you travel to/from Chippenham town centre?**
Not applicable - I do not travel to/from Chippenham town centre;
- Q15. Why do you travel to/from Chippenham town centre?**
Why do you assume travel to the town centre is important? Surely online and out-of-town retailers cater for most people's needs nowadays?.;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Bicycle;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**

MSF 212

- Q1. Are you responding as an individual or on behalf of a business or organisation?**
As an individual
- Q2. If you are responding on behalf of a business or organisation, please tell us which one.**
- Q3. Which age bracket do you fall into?**
Between 36-45 years old
- Q4. Please let us know your post code.**
██████
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Not building the road. You have wasted obscene amounts of money on this before ever consulting us, the public, if we want it. It will destroy the countryside, exacerbate flooding, pollution and once again line the pockets of the large developers. It will destroy the cycle path to Calne, destroy the fertile and productive farmland and destroy the local natural capital. There has been no consideration to the environmental impact of this and is completely at odds with declaring a climate emergency. Wiltshire Council are completely out of touch and need to put a stop to this terrible idea. Finally, this is a faux consultation and I will fight tooth and nail, through the courts if required, to object if this is passed. Where is the option for no road? How can you push this through before the local plan is decided - which is a farce in its own right.
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ; Option B - Middle route; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I have not answered question 7, so do NOT take the order it is preset to mean that is my preference. My preference is for no road but this faux consultation does not allow that. See q6 for my reasoning
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I have not answered question 7, so do NOT take the order it is preset to mean that is my preference. My preference is for no road but this faux consultation does not allow that. See q6 for my reasoning

- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I have not answered question 7, so do NOT take the order it is preset to to mean that is my preference. My preference is for no road but this faux consultation does not allow that. See q6 for my reasoning
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 1;Pewsham Link Option 3;
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
I have not answered question 11, so do NOT take the order it is preset to to mean that is my preference. My preference is for no road, so the link option is not needed, but this faux consultation does not allow that. See q6 for my reasoning
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
I have not answered question 11, so do NOT take the order it is preset to to mean that is my preference. My preference is for no road, so the link option is not needed, but this faux consultation does not allow that. See q6 for my reasoning
- Q14. How do you travel to/from Chippenham town centre?**
On foot;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;Children at nursery;As part of my commute to/from work;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Walking;Bicycle;

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
The most important factor is the climate emergency that Wiltshire Council has declared. It is madness to rip up farmland and other green sites and replace them with concrete. The road is only being proposed to link with the new housing and business development and, as I strongly oppose this development, I strongly oppose the road as well.
- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**

■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Climate change adaptation/mitigation;Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians;Reducing air/noise pollution;Protecting and enhancing biodiversity e.g. animal and plant habitats;Protecting and enhancing landscape and visual amenity;Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Climate change is a threat to human existence, so climate change adaptation/mitigation should be the number 1 priority of national and local government. Reducing car traffic is a major part of acheiving this. Building a new road and thousands of houses would result in more traffic of all kinds in the Chippenham area, more air and noise pollution, and would destroy more of our open space and wildlife. I am not in favour of any of the proposed options.
- Q7. Please rank the three potential road route options into order of preference.**
Option C - Inner route;Option B - Middle route;Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**

Zone 1-4 cross various farms, I would like to think access to their fields has been considered.
- This road has to be built because of the growth in the area and the known congestion within Chippenham.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Route C is in my view not the correct one. Where it is due to join the the Patterdown road will only cause more vehicle back up between this new access and the A350 towards Melksham at Lackham roundabout. We are trying to get rid of bottlenecks.
- It is so similar to Route B in other ways I think it should be discarded for it.
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 3;Pewsham Link Option 1;
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Better with a roundabout.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

Good access area.

- Q1. Are you responding as an individual or on behalf of a business or organisation?**
As an individual
- Q2. If you are responding on behalf of a business or organisation, please tell us which one.**
- Q3. Which age bracket do you fall into?**
Between 46-55 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets; not building more new road infrastructure when we have a climate emergency and the Government has a net zero target for 2050. This scheme is incompatible with both.
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
None of the proposed options are compatible with the above objectives. A short additional section of road between the Lacock College roundabout and Pewsham Way Link Road Option 1 would open up the identified development land and reduce congestion in the Town Centre at Bridge Centre junction.
- Q7. Please rank the three potential road route options into order of preference.**
Option B - Middle route; Option C - Inner route; Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Should not be built. Its clear the agenda is to create the planning conditions to favour the maximum amount of in-fill house building between the route and the town. I do not believe there is robust evidence of need for the volume of house-building this scheme is predicated on.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Should not be built. Its clear the agenda is to create the planning conditions to favour the maximum amount of in-fill house building between the route and the town. I do not believe there is robust evidence of need for the volume of house-building this scheme is predicated on.

- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
I do not agree with any of the 3 roads. We should be reducing the number of roads rather than building more. Chippenham is at risk of turning into an urban sprawl. Currently it is a lovely place to live and plenty of opportunity to avoid roads and noise from roads. There is already too much pollution in Chippenham from the existing roads. Therefore I have not selected any of the 3 roads options.
- Q7. Please rank the three potential road route options into order of preference.**

This is a disingenuous questionnaire as it gives no option to veto the proposals. I think it would be better not to build any of the proposed options. The scheme is an environmental catastrophe for Chippenham and the surrounding area which is dressed-up as fictional Utopia that will actually benefit the town in very few ways. It is totally contradictory in trying to balance heritage, self sufficiency and green issues within the new developments and fictional potential benefits to the town centre. Pictures of market stalls in out of town neighbourhoods, proximity to ancient woodland (Mortimers Wood - with plans to access it without any recourse to the landowners) and access to canal restoration projects do not justify this destruction of the Marne river valley. It is in fact a gross misrepresentation of elements that can't lawfully happen. I therefore can't use areas of this form to put my point of view forward.

Why is there not an option D - i.e. NO ROAD? It's not needed. Chippenham suffers from a complete lack of vision. It has been constantly eroded and mis-managed over the decades, losing lots of its heritage. This lack of vision and interest should not make it a target for expansive urbanisation and destruction of its surrounding countryside just because it has a junction on the M4 and a railway station.

The environmental impact is potentially catastrophic and the premise for doing it is seriously flawed. Chippenham has some very poor housing stock that should be regenerated and redeveloped within its existing boundaries. It's evident that the way people work and travel has probably changed forever.

The money would be far better spent on improving and encouraging business in the town centre and redeveloping central brownfield sites for homes so that people can walk to transport hubs and shopping and leisure areas.

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

I do not believe there is a case for the road; Preserving and protecting heritage assets;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

Having viewed the proposals I cannot understand why Wiltshire Council (WC) want to press ahead with a road for which they do not appear to have made valid, or any coherent case for constructing. I do not understand why WC are consulting on a route before even consulting on the number of houses to be built in Chippenham, let alone gaining outline planning permission for them. Building a road, purely on a speculative basis, that some houses may be built in the future, does not make economic or environmental sense. If the planning process is independent of this road, as we are told by Future Chippenham that it is, it follows that it cannot be assumed that planning permission will be granted for the 7,500 houses and 'two new suburbs' that are needed for the road to happen.

I would like to remind the Council that it (quite rightly) declared a Climate Emergency in 2019. In this is stated an intention to make Wiltshire carbon neutral, by 2030, which is now just 9 years away. It is clear that the Future Chippenham teams have not even calculated the carbon emissions from the construction of the road and 7,500 houses that would go with it. In other words, the emissions of carbon released when millions of tonnes of earth are dug up, millions of tonnes of materials created for construction and the millions of tonnes released while construction takes place. These have simply have simply been overlooked.

This is even before considering the increase in traffic the road will create, a phenomena recognised by many studies, including from the Department of Transport, and the resulting increase in emissions, including from the manufacture and running of electric vehicles- something, unbelievably just brushed aside in a recent webinar I attended. I am not aware if WC have yet calculated a 'road map' to net zero emissions in 9 years, and a yearly carbon budgets. Whether or not they have, it is clear that a development of this size is completely incompatible with net zero emissions by 2030 and will lock in carbon emissions for years to come.

In parallel to damaging the climate, the Future Chippenham proposals would destroy the Avon and Marden valley, and vast amounts of high quality farmland and natural

habitat, which is a valuable resource for Chippenham and so important for future generations. Building at such scale, so close to the river Avon and Marden, up stream of Chippenham and other towns on the Avon

I believe that Wiltshire Council to go back to the drawing board and come back with a plan that is actually fit for the future. Imposing a road to the East of Chippenham, with all the harm this would cause to the town and to the climate and natural environment, is the wrong way to go.

For this development to be sustainable, it needs to be at an appropriate scale and pace, and its needs to be in the right place. The disproportionate scale of development is completely at odds with these principles and should not go ahead

Easing traffic congestion and improving journey times; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

I have entered a long reasoned argument against the expansion of Chippenham but it has disappeared, to say I am annoyed is an understatement

Your questionnaire is skewed toward having to choose between the three options for roads, there is no option to not have any of them.

Separating out the roads from the housing is nothing short of contemptuous, the housing goes hand in hand with the roads.

You are asking me to choose an option of a road based on only a desk-based environmental impact study, you then intend to do field-based studies after this decision is made.

You went off and obtained the HIF bid without consulting with many stakeholders, in your Webinar you didn't state who was consulted and I don't expect you want to reveal them for fear of being exposed. Suffice to say that Bremhill Parish Council were not consulted and much of the eastern expansion is in their parish.

Bremhill Parish Council and Bristol Avon Rivers Trust have got results of genuine field-based studies of environmental and ecological impact.

There is lots of arguably biased reasoning in your methodology between sites around Chippenham, which tilts the preference towards the Eastern development, which I will disseminate and email you separately as the last time I did this the text disappeared.

The use of development sites to the west of Chippenham have several advantages, they are close to the A350 National Trunk Road giving good access North and South.

They are close to The employment sites of Bumpers Farm, Methuen Part and Bath Road Ind Est

They are close to Hardenhuish and Sheldon Schools, intake varies from year to year but plenty of room for expansion of these schools.

You will be developing land away from the river Avon avoiding ecological and environmental damage certain with constructing right next to the rivers Avon and Marden..

A much better chance of mitigating the inevitable problem of harvested run-off water from roofs and roads before it gets to the river.

The only negative I see is that the council doesn't own the farms here, but that should not be a reason for not developing here.

In your methodology conclusion for sites west of Chippenham you state that,

"Given the significant size of site 3666 there will be significant loss of greenfield agricultural land of medium quality"

This site is about half of the size of 506 and 455, or 456 and 809 and 494, the only land of higher grade is close to Lackham otherwise your methodology states that everywhere else is of grade 2&3 so why is site 3666 ruled out for this?

"The scale of the development likely on a site of this size will inevitably significantly increase levels of environmental pollution, including air quality, noise, light, and vibration" Why is this site any different? Only to skew the results.

Positives listed lower down the scale. Why?

"major benefits in terms of provision of significant amounts of affordable housing""major benefits for the local economy through employment, energy generation, new road infrastructure"

"Minor or neutral effects for Biodiversity, water resources, climate change, energy, landscapes. These last categories are low down on the list of positives when your stated intention is to make ecology and biodiversity your priority.

I just cannot justify my time pointing out the facts that your methodology is skewed toward expanding Chippenham to the east and south because you will benefit from the uplift in land value from agricultural to commercial and result in the removal of several County Council Starter Farms for your people to get a foothold in Agriculture.

Q7. Please rank the three potential road route options into order of preference.

Option C - Inner route;Option B - Middle route;Option A - Outer route ;

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

This option is far too far away from Chippenham it will release far too much land for housing even if you are talking 20 yrs.

It sits high ground through Zone 4 and would be an eyesore.

it makes Stanley Lane part of Chippenham and takes away the enjoyment of Stanley Lane and the Sustrans cycle route from the existing residents of Chippenham, meaning they will get in their cars to get out into the countryside.

- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
No need to expand Chippenham to the east or south
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
If you have to spend the HIF monies then spend them on linking Pewsham Way with Lackham Roundabout Only.
No need to expand Chippenham to the east or south
- Q11. Please rank the potential Pewsham link road options into order of preference.**
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
- Q14. How do you travel to/from Chippenham town centre?**
Car;

Preserving and protecting heritage assets; Protecting and enhancing landscape and visual amenity; Protecting and enhancing biodiversity e.g. animal and plant habitats; As a whole the idea is ill thought out and not required.;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
I oppose this development with vigour it has no benefit at all to Chippenham you are basically created a giant roundabout with Chippenham in the middle of it. it will create a huge bottleneck at the roundabout outside the Lackham campus it circumnavigates Chippenham in such a way that those wanted to access the A350 will do so by the route already available to them. In addition to tearing up the countryside destroying animal habitats and walk routes you plan then to develop a further 7,000 houses - how wonderful - so where are the plans for a new secondary school, a new primary school, a new doctors surgery a new hospital a new dentist - you have no plans to develop any of the infrastructure needed to support this - it is a typical lets get rich quick scheme by the council with no foresight to actually what is needed - for instance we really do not need a giant KFC drive through on the busiest roundabout alongside the McDonalds - I don't see you addressing the issues there! Along with that we now have an Aldi going up - again a traffic nightmare but don't worry the council will line their pockets so its fine Joe public will just have to put up with it. This proposal is going to destroy Chippenham it is a Market town and you are going to spoil what little loveliness is left of the place. Shame on you.

Q3. Which age bracket do you fall into?

Between 26-35 years old

Q4. Please let us know your post code.

■■■■ ■■■■

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Reducing air/noise pollution; Mental health in connection to access to countryside. This can be the difference between life and death.;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

A road (and the obvious extra housing that will follow) will have a devastating effect on declining nature. There will be increased air pollution which is damaging to the climate and ALL of our health. Wildlife and natural beauty will be destroyed. Increased noise and pollution from the road and as a result people having to drive miles to find any countryside left. There is no consideration for people needing to exercise, the peace of mind from being able to walk to the countryside from town, you will destroy peoples mental health for profit.

Its incredible we are able to walk a few minutes from our home and feel like we are in the countryside. This road will be ruinous. Chippenham will become one massive estate that could be anywhere in England.

Q7. Please rank the three potential road route options into order of preference.

Option A - Outer route ; Option B - Middle route; Option C - Inner route;

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

I specifically don't want this route. A road next to the river that is sacred for wildlife and the people of the town's want to be here would be destructive and will only have a negative impact on the desirability of Chippenham.

- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 1;Pewsham Link Option 3;
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**

As an individual
- Q2. If you are responding on behalf of a business or organisation, please tell us which one.**
- Q3. Which age bracket do you fall into?**
Between 56-65 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Reducing air/noise pollution; Protecting and enhancing biodiversity e.g. animal and plant habitats;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ; Option B - Middle route; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I live on Pewsham and as the estate is already encircled by a ring road (by-pass) I think it would be detrimental to health, access to countryside and make the estate feel hemmed in. Option A is the furthest from the Pewsham estate and would therefore be the preferred route. In an ideal world none of the road options should be being built - I feel it's a complete waste of money, detrimental to the environment and having lived happily for 28 years on Pewsham, this road has not been missed.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Too close to the Pewsham estate. Environmental issues and crosses a beautiful country path/cycle network - this has been invaluable during the current pandemic.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
As above and even closer to Pewsham - noise and pollution issues.
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 3; Pewsham Link Option 1;

- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
- Q14. How do you travel to/from Chippenham town centre?**
On foot;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Walking;

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Climate change adaptation/mitigation;Reducing air/noise pollution;Protecting and enhancing biodiversity e.g. animal and plant habitats;Protecting and enhancing landscape and visual amenity;Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
It is obvious that this will go ahead. The traffic congestion in Chippenham is nothing compared to other towns and cities I visit. Its a pleasure to drive around Chippenham The options given will destroy lands and habitats of animals, pollenating insects, and quite horribly destroy the life of Chippenham in habitants by reducing the places that they go. Increased pollution with increased traffic flow will also lead to greater increase in accidents, road death and reduce the quality for pant growth and animal welfare both wild and domesticated
- Q7. Please rank the three potential road route options into order of preference.**
Option C - Inner route;Option B - Middle route;Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
The whole route not worth the money and will destroy land, fauna and wildlife, all important for our continued life. The route crosses footpaths, bridges need constructing and the inevitable rubbish that will become prevalent throughout the route. The route will prevent fresh air movement of the public to stay healthy and fit to provide an active and healthy working population.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
An awful route designed by those who do not live not understand the area. Needs to go back to the drawing board or better still scrubbed altogether. The route destroys land and fauna, creates unnecessary building of bridges etc. Such building of he road and other infrastructure will affect the flooding of the area, even though the video and documents say not.....this will be disasterous

- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
 Destroys faunas and wildlife, needs t be re thought, again building of bridges, increased pollution and rubbish being thrown will lead to an adverse issue surrounding health and welfare of the town's population. Awful just awful
- Q11. Please rank the potential Pewsham link road options into order of preference.**
 Pewsham Link Option 3;Pewsham Link Option 1;
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
 none should happen and why need to build more bridges, the design of these bridges will destroy the look and turn Chippenham into a commuter town ,which leads to greater environmental impact
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
 awful just awful, needs re thinking and re designing
- Q14. How do you travel to/from Chippenham town centre?**
 On foot;
- Q15. Why do you travel to/from Chippenham town centre?**
 To get my shopping though tha is more difficult now as more shops have closed;

Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets; Climate change adaptation/mitigation; Reducing air/noise pollution;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Option D - No new road!
- This road will destroy our beautiful countryside and wildlife and contribute to the continued urban sprawl which is decimating the unique and individual characters of the surrounding villages and communities. It is not a relief road for the current inhabitants of Chippenham but will simply serve as a distributor road for the proposed new housing! The report outlines that there is a need to reduce traffic within Chippenham. This is a distributor road not a relief road so it won't reduce traffic only set to increase it. The new road is not required, the current bypass serves the town well. The A350 was recently dualled and has already relieved traffic congestion. Consultation on the 7,500 homes as part of the update to the local plan, with a consultation process on the road running concurrently, is confusing and no clear link has been made to how these two are related. This is a very deceitful. The funding was submitted and secured after Wiltshire County Council acknowledged a climate emergency and pledged to go carbon neutral by 2030.....how can this road and housing be justified with this in mind? There is not a robust case for the need of either, especially when the supposed additional housing is ABOVE the target for delivering new homes. The report does not even seek to address how this scheme aligns with the WCC commitment to becoming carbon neutral by 2030.

Q3. Which age bracket do you fall into?

Between 26-35 years old

Q4. Please let us know your post code.

■■■■ ■■■■

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

We do not agree that a road is necessary or that WC should be consulting upon a route before even consulting on the number of houses and their location, which by doing so attempts to predetermine the Local Plan.

The Council has not yet made a case for thousands more houses in Chippenham and its housing targets are nearly 5,000 more than even the Government is requesting.

This is not a proper use of taxpayers' money – our money! To boost developers' profits!

The road will be a distributor road to serve new housing estates and will worsen congestion and air pollution in Chippenham and its surrounding areas.

The road and the massive housing development will not only concrete over the open space between Chippenham and Calne but destroy local several working farms, just at a time when we need more locally grown food.

All the options on offer would be immensely damaging in terms of environmental impact, traffic impacts and additional greenhouse gas emissions.

Q7. Please rank the three potential road route options into order of preference.

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

- Q3. Which age bracket do you fall into?**
Up to 25 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Climate change adaptation/mitigation; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
We should be concentrating on building infrastructure that supports the environment and health of people in the community. The cycle path is a closed off path that makes it safe for cyclist, walkers and dogs. Instead of a new road, what about a new pathed cycle path. This would encourage more walking and cycling rather than promoting travel by car.
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ; Option C - Inner route; Option B - Middle route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Furthest away from the cycle path. If anyone truly wants to avoid the city centre this would be a better route.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I dislike this route. It doesn't add anything apart from disrupt the country side.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I dislike this route but at least it adds some extensions onto other routes.
- Q11. Please rank the potential Pewsham link road options into order of preference.**
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Don't like that it cross over walks. Also, I would want an environmental impact study of this option to see the impact on the woods nature reserve. It should be safer for

walkers and cyclists if you want to encourage people to travel greener and a road would disrupt that.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

Don't like that it crosses over footpaths. It should be safer for walkers and cyclists if you want to encourage people to travel greener and a road would disrupt that.

Q14. How do you travel to/from Chippenham town centre?

On foot;Bicycle;

Q15. Why do you travel to/from Chippenham town centre?

For leisure/social engagements;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Not applicable - I do not travel to/from Chippenham as part of a commute for work;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

Walking;

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Climate change adaptation/mitigation; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Above options mean the best answer is to not build a road.;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Very little need for a road to go from Lackham to Monkton Park/North East Chippenham. Anything going to the motorway would best use the A350. Masses of greenland will be destroyed by the eventual filling in with housing developments, completely the wrong direction we should be taking to become carbon neutral. The statement 'local needs for jobs and housing' - The only new jobs that this will create is the ones required to build the road and houses. Nothing when it's all finished, it's still Chippenham just with an extra massive bypass road. There are no jobs for people in Chippenham, that's why it's a commuter town. It will become even more overpopulated and still lack any sort of amenities and decent town centre. WE DON'T NEED A ROAD OR MORE HOUSES! Stop being greedy Wiltshire Council.
- Q7. Please rank the three potential road route options into order of preference.**

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
The congestion would be better if the high street was not shut instead and that would ease the one road and help retailers already struggling in the town centre since lockdown.
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ; Option B - Middle route; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
I don't like any of the road options - it would impact my house directly in terms of view and would damage the countryside but the outer one is the least impact to me. This needs to be reviewed to after the pandemic is over as people's commuting habits may never go back to what they were before with more companies having employees work from home, including myself.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This would impact my house view directly
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
This would be worse case for me
- Q11. Please rank the potential Pewsham link road options into order of preference.**
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**

- Q14. How do you travel to/from Chippenham town centre?**
Car;On foot;Bicycle;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Car;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Car;

- Q1. Are you responding as an individual or on behalf of a business or organisation?**
As an individual
- Q2. If you are responding on behalf of a business or organisation, please tell us which one.**
- Q3. Which age bracket do you fall into?**
Between 36-45 years old
- Q4. Please let us know your post code.**
■■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Reducing air/noise pollution;Preserving and protecting heritage assets;Protecting and enhancing landscape and visual amenity;Protecting and enhancing biodiversity e.g. animal and plant habitats;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Th3 whole project needs to be abandoned
- Q7. Please rank the three potential road route options into order of preference.**
Option B - Middle route;Option C - Inner route;Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
None of these options should be considered this is a disgrace that at any time this is being considered
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Abandon this
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Abandon this
- Q11. Please rank the potential Pewsham link road options into order of preference.**
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Abandon all these road ideas
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
Should be abandoned

Q14. How do you travel to/from Chippenham town centre?

Car;

Q15. Why do you travel to/from Chippenham town centre?

Chippenham town centre is an absolute disgrace the most expensive car parking in wiltshire a completely wasteful council whole income ant officials waste both government and local funds and never for the local communities ;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Car;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

- Q4. Please let us know your post code.**
████████
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Preserving and protecting heritage assets; Protecting and enhancing biodiversity e.g. animal and plant habitats; Not build the road;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
This will ruin Chippenham and the surrounding villages, it will just create an urban sprawl. The easier (and cheaper) option is to upgrade the whole of the A350 making it dual carriageway.
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ; Option B - Middle route; Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
The road will be a distributor road to serve new housing estates and will worsen congestion and air pollution in Chippenham and its surrounding areas;
The road and the massive housing development will not only concrete over the open space between Chippenham and Calne but destroy local several working farms, just at a time when we need more locally grown food;
All the options on offer would be immensely damaging in terms of environmental impact, traffic impacts and additional greenhouse gas emissions.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
The road will be a distributor road to serve new housing estates and will worsen congestion and air pollution in Chippenham and its surrounding areas;

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Climate change adaptation/mitigation;Reducing air/noise pollution;Protecting and enhancing biodiversity e.g. animal and plant habitats;Protecting and enhancing landscape and visual amenity;No Road option.;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
The road is not required.
- The local council / authority has wasted money on too many recent fiascos (i.e. the skate park, the Olympiad multi-storey car park, redundant cycle lanes), instead of using the funds to improve the existing infrastructure, high street, etc.
- We need to make the best of what we have first, instead of adding further homes, roads, etc.
- There's been no mention of how long this will even take, and at what cost to the existing residents of Chippenham, surely this would need to be shared as an absolute minimum - cost, money, time to build, benefits, additional noise, additional pollution, what additional jobs, etc.
- Q7. Please rank the three potential road route options into order of preference.**
Option A - Outer route ;Option B - Middle route;Option C - Inner route;

I'd rather not say
- Q4. Please let us know your post code.**
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
None of the above. No road yet.;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
You are doing this the wrong way around. So you don't have support. First decide on housing need, properly, 2021 and beyond. If housing is needed, go to the next step. Then decide whether it needs a road. For what purpose? For the housing or to link the A350 to the A4. Then decide on the type of road. Then decide on where a road could go. It seems you have decided everything and this is not to engage and move forward, it is to tell and ignore everyone who is trying to improve Chippenham. Even the guy from Wiltshire Council at the online Chippenham Council meeting wasn't listening to views of the public, he was chatting to friends/colleagues about something else.
- Q7. Please rank the three potential road route options into order of preference.**

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Preserving and protecting heritage assets; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

Chippenham should not have this road built - none of the options! I have lived in Chippenham for over 40 years and it has gone from being a wonderful market town to a dormitory town with Cepen Park being used mainly for commuters. Why does Chippenham have to bear the brunt of new housing - what about Melksham, Calne, Corsham, Devizes? Chippenham has reached capacity - NO MORE HOUSING!

STOP LINING THE POCKETS OF DEVELOPERS and consider the wants of Chippenham residents!

Monkton Park, where my parents live, is still a huge cul de sac with one way in and one way out. The Promised bridge over the Avon has never materialised. A useless multi-storey car park has been built in Sadlers Mead and the traffic required to fill it will bring Station Hill to a complete standstill.

Perhaps the Council should honour it's previous promises and use up some of the derelict buildings for housing - Cocklebury Road - Old College building, Rowden Hill - Old Nurses accommodation building, remainder of the Westinghouse site and many more.

Q7. Please rank the three potential road route options into order of preference.

Option A - Outer route ; Option B - Middle route; Option C - Inner route;

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

NO MORE HOUSING

Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

NO MORE HOUSING

- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
NO MORE HOUSING
- Q11. Please rank the potential Pewsham link road options into order of preference.**
- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
Do not build - we need no more housing
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
Do not build - we need no more housing
- Q14. How do you travel to/from Chippenham town centre?**
Car;On foot;Bus;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Not applicable - I do not travel to/from Chippenham as part of a commute for work;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Car;

- Q3. Which age bracket do you fall into?**
Over 66 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Not build the road ;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
The case for building this number of houses in Chippenham has not been fully debated. To build over a number of farms when there is need for our country to be more self sufficient in food does not seem good strategy. The new road combined with the large number of houses will have a big impact on the environment, cause more pollution.
- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Climate change adaptation/mitigation;Reducing air/noise pollution;Protecting and enhancing biodiversity e.g. animal and plant habitats;Protecting and enhancing landscape and visual amenity;Preserving and protecting heritage assets;Considering what it will be like for residents and making innovative, common-sense and democratic decisions.;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

1. You are assuming that any road is necessary - it is not. You have not consulted local residents on whether or not to build a road, or to build houses, and this question should be asked well before you start asking about preferences.

2. You are not dealing with climate change or any kind of pollution by building roads or houses. You will only ever add to it. If you really want to reduce the impact of climate change you need to enable people to change how they live by not using cars all the time; being able to work locally enough to use public transport or walk/cycle to work; by reducing food miles which will be impossible if you build all over productive local farms. It makes more sense to create office-hubs in town for people to work at a hot-desk for companies situated anywhere in the world without having to travel. Keep it local and be innovative instead of copying ideas that have never worked.

3. I doubt very much whether any of the proposed houses will be sustainable - they are likely to be the usual cheap builds that make large profits for building companies rather than being well-insulated, using solar panels and ground- or air-source heat pumps to enable each property to contribute to energy reserves rather than draining them.

4. There are issues of air pollution, noise pollution and environmental damage to wildlife habitats that are not being addressed - your video glosses over the negative impact to local communities and the environment. Moving wildlife is not a reasonable alternative to having the sense to leave it alone.

5. You won't improve the "viability and vitality" of businesses by increasing the number of local residents. Just make sure that the right businesses are here - a good mix rather than excessive numbers of charity shops, estate agents and phone retailers - and they will attract enough people.

6. If you build roads, people will use them. There is no road in existence that has alleviated congestion or traffic problems - they have all, without exception, added to them. Claiming that this will reduce congestion in the town centre is a fallacy. People will also use the local roads and country lanes as rat runs - I know this happens already but, with more traffic, it will only become worse.

7. The local tourist industry will not thank you for making the area so unattractive. No-one will want to visit Chippenham when it has major roads round it, no green space and ugly bridges. Screening won't mitigate this or reduce the noise. Some local residents also won't want to live in a place that is turning into a mini Swindon.

8. You mention "employment opportunities" but this is unlikely to be in the building or development stage as companies will bring in their own people. It is more likely that you will have a town full of people who work somewhere else and need to travel some distance on a new road that will very quickly be full of traffic.

9. You want Chippenham to be "self-sufficient" but this won't happen if you destroy farm land so food can't be produced locally, or if you build so many houses the population becomes unsustainable and there aren't enough local jobs. Your plans for equality in housing, with cheaper accommodation available, is unlikely to help - unless you have proper council-owned properties with fixed low rents, you won't achieve anything. The private market is unregulated in this respect - having the courage to change this (if the law allows it) would make a huge difference!

Q7. Please rank the three potential road route options into order of preference.

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

This road is not required and would have a purely negative impact on the local area.

Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

This road is not required and would have a purely negative impact on the local area.

Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

This road is not required and would have a purely negative impact on the local area.

Q11. Please rank the potential Pewsham link road options into order of preference.

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.

This road is not required and would have a purely negative impact on the local area.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.

This road is not required and would have a negative impact on the local area.

Q14. How do you travel to/from Chippenham town centre?

On foot;

Q15. Why do you travel to/from Chippenham town centre?

Shopping etc;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Not applicable - I do not travel to/from Chippenham as part of a commute for work;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

Walking;

MSF281 (cont.)

I am writing to protest against the proposals set out in the "Future Chippenham" plan which I believe will be detrimental to the town and run counter to your own over-arching principles.

1. The road is not necessary and there has been no consultation on this at all - you are asking us to choose a preferred route without even asking if we should have a road at all.

You need to go back a stage and consult properly on this.

2. You claim that the road is to reduce congestion but roads do not reduce congestion - if you build roads, people will use them. All roads built to reduce congestion are full of vehicles and subject to delays - this has failed over and over again. You only need to look as far as the A350, recently widened to help keep traffic moving at peak times, to see how ineffective this is. Local minor roads will also be increasingly used as rat runs, making the problem worse.

3. The council has not yet made a case for building so many homes and the target is so much higher than the one set by the government. This needs proper consultation as well.

4. The road would be a distributor road to service new housing estates and will simply fill up with traffic straight away. It will also cause noise pollution and air pollution - harmful and unpleasant for existing residents as well as new ones.

5. You will be concreting over open space and destroy local farms which are needed for food production. It is environmentally damaging to destroy the countryside, adding to greenhouse gases and necessitating increased food miles.

6. Your own over-arching principles are completely overlooked by this plan as you have simply copied the same format that has failed elsewhere:

a. "Create an economy fit for the future" - building houses and roads cannot achieve that.

We need a radical rethink as to how we live and work to make life sustainable and to recover from current problems. Anything designed to be future-proof has to consider the impact on the environment and climate change. Building roads won't help. Building houses won't help, especially if they are the usual cheap build with poor insulation and fossil fuel heating - if anything has to be built, insist on it being eco-friendly (good insulation, solar panels, ground- or air-source heating) and still affordable. It can be done, as it's cheaper to build like that than convert properties and building firms/councils have greater buying power than individuals. It also won't be a drain on energy reserves or contribute so much to global warming. Your plans are unlikely to create many jobs as construction companies will bring in their own staff and if they do employ locals, it will be very short term. All you will do is bring in thousands more people who will need to drive elsewhere to work. There is no hint in your plan of anyone finding work within Chippenham.

b. "Reduce disadvantages and inequalities" - I really don't see how building roads and houses will affect this at all. You say there will be affordable housing but it's likely to be minimal. Again, to achieve this you need to think differently and find a new solution rather than repeating others' mistakes. A reduction in rent, for example, will enable more people to find a reasonable home as this tends to take up a significant part of people's wages if they are on a low income. Second-home ownership also creates disadvantages and inequalities as it raises house prices and reduces the number of properties available - are you brave

enough to tackle that? It makes more sense to look at the whole problem and, if any new building needs to be done, find the place and the design that has the least impact on the environment but gives a genuine helping hand to those that need it most.

c. "Reduce the causes and effects of climate change" - well, this is laughable if you actually think that building roads and houses will make a positive difference! You will add to greenhouse gases, destroy the countryside (including any green belt land that is "protected"), destroy/adversely affect wildlife, create air and noise pollution and, as I said, the houses will use significant extra amounts of energy, almost certainly including fossil fuels. It really beggars belief that you could make these claims. This also needs new and innovative thinking to solve a massive and serious problem but you could lead the way and set a great example if you choose.

If we want to act against climate change, we have to change how we act. We don't need to lose our way of life to protect future life but we do need to adapt and learn and stop being so destructive.

The last year has shown that we are capable of doing just that. For example, many people worked successfully from home - you could create serviced office hubs to enable people to work from their home town, as being at home all the time has its own challenges. Work with local businesses, organisations and schools to find solutions and alternatives to the amount of travel required for work and school. Ask local residents to find solutions. Ask school pupils and students for innovative ideas. You could even work with other local councils to look at the issue because traffic is something that has to be considered at a more fundamental level rather than just thinking about where all the cars are going to go.

If you think local, you can drive less. You will also boost the local economy by spending locally. Local businesses could set up more delivery services (= more business and more employment) rather than getting everyone to drive to them. I know that in a rural county we tend to rely on our cars but there could be a viable alternative - decent, affordable, reliable public transport; good footpaths; good, safe cycle ways - and these are a far better, more future-proofed, more climate-friendly way of spending tax payers' money. A real investment in something that will help rather than just creating more problems for the future.

You have the chance to do something innovative and bold, to lead the way, to inspire others, to get local residents on-side and working with you - please don't waste this opportunity to do the right thing. The plans to build the road and houses will be disastrous and destructive.

You will bring in a significant amount of new traffic that will very quickly have nowhere to go.

You will bring in a significant number of new people who will need services, jobs, doctors, dentists, schools, food etc etc and your plan doesn't even begin to consider that. What are the environmental implications of this level of growth? You will also adversely affect the lives of those who live near the proposed building with noise and air pollution, increased traffic (= more stress), less countryside to enjoy and a less pleasant place to live. These things matter - please don't dismiss them.

I urge you to change your plans and start working with us to find a solution that will actually work long-term instead of doing something that has failed over and over and will leave Chippenham a poorer place.

Dear Sirs

Thank you for your response. However, your reply does not address my concerns:

1. It is disingenuous to say that people can respond in any way they like to the consultation form and that this amounts to a proper consultation. In all the information that is set out, there is an assumption that the road and houses will go ahead and at no time have you consulted residents on whether or not it should. It is not actually clear that saying "no" is an

option - the form only gives a choice of which route for the road.

2. Sorry, but roads = traffic. Also, there is no need to go through the town centre when driving east-west.

3. You still haven't made a proper case for building so many homes but there is still an implied assumption that it will happen. You are turning Chippenham into a commuter town which not only changes its character (something you would protect in a village) but also allows for climate change issues to develop as we rely increasingly on cars. There is not enough work for all these extra people to do in this area so the extra traffic will be significant.

4. These topics may have been assessed but it will clearly make no difference to your plans.

5. It sounds as though residents' concerns are really of no importance which may not be surprising but it is very disappointing. Your job is to serve and care for towns like Chippenham, not damage them.

6. You have not addressed my concerns at all in your answer. There will not be enough work for all these extra people to do so Chippenham will be a commuter town with all the environmental problems that brings. "Look at opportunities to deliver the clean energy where that is practicable and viable" clearly says it won't happen.

As for your final statement, a "possible" liaison group will not make a difference to the damage you are clearly planning now so please don't try and fob me off with this.

You clearly intend to go ahead with this development despite the strength of feeling against it. In doing so, you will make the lives of current residents so much poorer, change the character of a town you obviously don't think is worth protecting, do irreparable damage to the environment and add to climate change.

You have made it very clear what your position is and it is completely unacceptable.

- Q1. Are you responding as an individual or on behalf of a business or organisation?**
As an individual
- Q2. If you are responding on behalf of a business or organisation, please tell us which one.**
- Q3. Which age bracket do you fall into?**
Between 46-55 years old
- Q4. Please let us know your post code.**
■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Climate change adaptation/mitigation; Reducing air/noise pollution; Preserving and protecting heritage assets; Views of residents and businesses directly affected.;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
A road in addition to Pewsham Way just isn't needed. What IS needed a link between Pewsham Way to e.g. just behind the hospital, taking traffic over the river and avoiding the pinch point of the Bridge Centre. That's where the congestion problems lie and what needs a solution - not with an additional road running parallel to Pewsham Way and beyond. We don't need get more new houses on green fields - use the old police station site, use other similar sites. Birds Marsh has been wrecked: why are the council so keen to spoil our local green sites?
- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Will devastate the environment. Pointless.
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Damaging. Not required.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Disastrous. Noisy, polluting. Awful for residents.
- Q11. Please rank the potential Pewsham link road options into order of preference.**

- Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.**
- Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.**
- Q14. How do you travel to/from Chippenham town centre?**
Car;On foot;
- Q15. Why do you travel to/from Chippenham town centre?**
For leisure/social engagements;
- Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?**
Not applicable - I do not travel to/from Chippenham as part of a commute for work;
- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Car;Walking;

Don't build a road at all.

We do not agree that a road is necessary or that WC should be consulting upon a route before even consulting on the number of houses and their location, which by doing so attempts to predetermine the Local Plan;

The Council has not yet made a case for thousands more houses in Chippenham and its housing targets are nearly 5,000 more than even the Government is requesting; This is not a proper use of taxpayers' money – our money! To boost developers' profits!

The road will be a distributor road to serve new housing estates and will worsen congestion and air pollution in Chippenham and its surrounding areas; The road and the massive housing development will not only concrete over the open space between Chippenham and Calne but destroy local several working farms, just at a time when we need more locally grown food;

All the options on offer would be immensely damaging in terms of environmental impact, traffic impacts and additional greenhouse gas emissions.

- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Not build the road;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
This plan involves an area which is one of the best places in Chippenham for exercise, wildlife and provides consequent mental wellbeing to the many people who use it. I do not dispute that more affordable housing is needed in Chippenham, as in many other places, but this plan seems to be an altogether excessive way of bringing this about and the extra facilities and infrastructure needed to support it. I do not believe that Chippenham needs this road.
- Q7. Please rank the three potential road route options into order of preference.**
Option B - Middle route; Option C - Inner route; Option A - Outer route ;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
These houses are not needed in such large numbers, and Wiltshire Council has not as yet made a case for the extent of this project. Congestion and pollution will be exacerbated by such a plan, and the environmental impact will be damaging
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
These routes are not necessary
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
These routes are not necessary , and the farmland should not be sold off in order to carry this plan through.
- Q11. Please rank the potential Pewsham link road options into order of preference.**
Pewsham Link Option 3; Pewsham Link Option 1;

- Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?**
Walking;Bus;
-

MSF290 (cont.)

I have sent my views on this plan via the consultation form, but wish to reiterate that I am opposed to all aspects of a scheme which will spoil the countryside around the cycle path so widely used by walkers, cyclists and runners, adversely affecting the wildlife and atmosphere of an area which has been one of the few accessible places available for exercise during the lockdown for those of us who cannot drive or cycle.

In addition, it seems likely that if only 'up to 40%' of the proposed houses would be 'affordable', so yet again very few local people, especially young ones, will benefit. There are already several developments locally where larger and more expensive houses are being built.

Chippenham Town council is against this scheme, and I do not believe it will benefit the town as a whole

- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
The council should consider regeneration of the town centre and better leisure facilities for the people who live in chippenham already... not building more homes for people who will have to shop out of town and use leisure facilities in corsham, Trowbridge or calne.

Chippenham is the second largest town, by population, in Wiltshire, after Swindon and yet we do not have the infrastructure to support it.
- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
No thank you

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Easing traffic congestion and improving journey times;Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians;Climate change adaptation/mitigation;Reducing air/noise pollution;Protecting and enhancing biodiversity e.g. animal and plant habitats;Protecting and enhancing landscape and visual amenity;Preserving and protecting heritage assets;COST & VALUE;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
- Q7. Please rank the three potential road route options into order of preference.**
Option B - Middle route;Option A - Outer route ;Option C - Inner route;
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
2nd Choice, but generally too long and invasive? Probably most expensive and the longest bridge section at Stowell/Lackham?
- Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Sensible room allowed for later/future housing/development 'infill' - too little in Option A - too much in Option C.
- We support proposals to assist the Wilts & Berks Canal access, etc. Question a 'staggered junction/traffic lights?? at A4 (Zone 2). Why not a Roundabout? Consider use of short section of Inner Route C for this A4 link - Zone 2. Presumably ALL Footpaths & Cycle Routes will be maintained, whichever Option is chosen.
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
Insufficient room for longer term/future housing & work places? Sports Ground mitigation costs & vicinity. Why the extra roundabout and deviation at Stowell Zone

1; cost, etc? Why doesn't it link into the existing A350 Roundabout as for both other Options?

Q11. Please rank the potential Pewsham link road options into order of preference.
Pewsham Link Option 3;Pewsham Link Option 1;

Q12. Please provide any specific feedback you would like to give about 'Pewsham Link Option 1'.
No real objections, but not an available Option for Bypass Routes A & B.

Q13. Please provide any specific feedback you would like to give about 'Pewsham Link Option 3'.
Only Option for Outer and Middle Routes A & B.

Q14. How do you travel to/from Chippenham town centre?
On foot;

Q15. Why do you travel to/from Chippenham town centre?
For leisure/social engagements;Shopping & Banking;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?
Not applicable - I do not travel to/from Chippenham as part of a commute for work;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?
Walking;

Worse than C
- Q10. Please provide any specific feedback you would like to give about 'Option C - Inner route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
To be honest I hate all of these options but this is the least worse. I do not see why it is necessary to build this massive road or who asked for it! I can concede there would some advantage to be gained from a much shorter road link from the A350 to the Pewsham road roundabout at Canal Road - this would allow traffic on the A4 to avoid the town centre and would ease access to the M4 from the East. I cannot see the benefit of the wholesale destruction of countryside and productive farmland from the much larger Options offered - all of which seem to be bypasses to nowhere!!
- Q11. Please rank the potential Pewsham link road options into order of preference.**

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Climate change adaptation/mitigation; Reducing air/noise pollution;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
None of these options should be built. I cannot understand why this bypass is being called a distributor road. It shall become a rat run increasing noise, traffic and air pollution on the east side of Chippenham. Moreover, all of these roads shall destroy farmland, footpaths and biodiversity in the area, negatively impacting the quality of life for current Chippenham/ Pewsham residents. A proper assessment of biodiversity in the area has not taken place, with many assessments made over winter when there are less species. The fact this road is being built to service the thousands of houses that the council intends to build over the government advice is shameful. In a post-pandemic world where the climate crisis is of vital importance, there is less need than ever to be destroying greenfield sites and increasing Wiltshires' carbon footprint. Wiltshire council shall be on the wrong side of history if they go ahead with these plans.
- Q7. Please rank the three potential road route options into order of preference.**
- Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.**
If the road has to go ahead at all, why can it not go further out and track the river Avon closer? This would impact the least people possible and help reduce air and noise pollution closer to Chippenham.

Climate change adaptation/mitigation;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
This road will lead to the inner green spaces being filled sooner or later. This will destroy precious countryside that cannot be replaced. We have areas in Chippenham town centre that could be developed for the benefit of the local community if that's the excuse for development. This is not in keeping with the government plans to reduce carbon emissions. There is obviously strong feeling against this.
- Q7. Please rank the three potential road route options into order of preference.**

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
I object to Wiltshire Council's presumption that the new road is required. ;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
The Council advances no logical argument why the road is required. Suggesting it is needed to support new housing development is arrogant when such development is not approved. The reasons why the road should not be built are many : achieving carbon neutrality, preserving biodiversity, sustainable use of land, preserving the natural environment, value for money and more besides.

Essentially it appears that the Council is riding rough shod over due process and the wishes of the community to advance an agenda that destroys the environment and ignores the current priorities of carbon neutrality and the domestic and working environments in a post COVID world.

I have nothing positive to say about this proposal but believe passionately that we must move away from legacy approaches to development if we are to build an environment that serves future citizens and respects our rich heritage.

This plan will destroy a large swathe of beautiful Wiltshire countryside. This countryside is what sets the county apart from others and makes it a wonderful place to live. The more housing that is added detracts from this and turns the county into many others nearer London. Increasing population density directly increases crime and reduces community spirit, people begin to fight for their 'space' in the community and the good will and friendliness that is synonymous with the towns a

Is lost.

This is obviously a terrible proposal due to : increased air pollution. Loss of farm land, which we need for local food production. Massive increase in road traffic, for services to the 7,500 houses. Related increase in cars belonging to the homes' residents. Above all - why the need for theses houses in the first place? Complete madness. Chippenham is a pleasant, semi rural place in which to live, with good road and rail links. Who on earth would want to live in a monstrosity. - a polluting, crowded, super sized town, grid- locked on even more roads?
- Q7. Please rank the three potential road route options into order of preference.**

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Climate change adaptation/mitigation; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Reducing air/noise pollution;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
This is to record my objection to all of the new road options under consideration.

The area affected is of great value to Chippenham residents including myself, being valued for its environment, landscape, ecological diversity, and recreational opportunities for walking and cycling.

I feel that it is disingenuous for this large scale road project to be advertised as somehow beneficial for the environment, when clearly the opposite applies.

How does this proposal respond to government targets and your Council's own aspirations for decarbonisation?

Please take the opportunity to fully consider alternatives to road building as part of this consultation, focussing on sustainable transport -walking, cycling, bus and rail- to ensure that all views are taken properly into consideration.

It appears that more joined-up planning for new development and transport in Chippenham is required, favouring development in more sustainable and less environmentally damaging locations than is implied by this consultation.

■■■■ ■■■■
- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Not build the road;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
There is no need for this road or the huge housing development. Chippenham has always been a small to medium sized market town and with the current desecration of the green fields of Birds Marsh, there is absolutely no demand from Chippenham residents for this huge increase in housing. This will be a disaster to the local climate, ecology and green spaces that has always made Chippenham a pleasant place to live.
- Q7. Please rank the three potential road route options into order of preference.**

dont build the road- not needed ;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Chippenham is already getting bigger.Why are you asking the question- how much bigger does it need to get rather than does it need to get bigger at all? Why on earth would anybody come up with a plan to build 9200 homes when told to build 4500??Ridiculous. Its all so matter of fact, but what on earth are you proposing - simply devastating the countryside .I havent read anything that convinces me a new road is needed- we dont need a road.Why does everything always need to be bigger? Such a beautiful county utterly devastated - utterly shameful.I simply do not believe the assumptions that underpin this "plan"

Stop breeding, Stop building houses! This is a horrific appalling plan that would utterly devastate the surrounding countryside! I would lay down my life to stop this!!!!

Q14. How do you travel to/from Chippenham town centre?

On foot;

Q15. Why do you travel to/from Chippenham town centre?

To enjoy the surrounding countryside!;

Q16. If you travel to/from Chippenham as part of a commute for work, what is your preferred mode of transport?

Not applicable - I do not travel to/from Chippenham as part of a commute for work;

Q17. If you travel to/from Chippenham for leisure/social engagements, what is your preferred mode of transport?

Walking;

MSF 317

- Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?**
Protecting and enhancing biodiversity e.g. animal and plant habitats; Reducing air/noise pollution; Climate change adaptation/mitigation;
- Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.**
Protecting the green space around our current town is the key factor here. Towns in Europe are looking ahead to create a future that reduces dependency on cars, offers alternative solutions to gridlock transport issues when faced with a river and a railway line cutting through the main town centre. Improving transport issues facing Calne should not include reducing the quality of life in Chippenham. Green space is key to mental health as we have seen this past year; you have no right to take that away from people.

Q5. Thinking about the options for the potential route of the distributor road and link road, what do you consider are the most important issues that the council should be considering?

Improving the availability of sustainable transport infrastructure e.g. for buses, trains, bicycles and pedestrians; Protecting and enhancing biodiversity e.g. animal and plant habitats; Protecting and enhancing landscape and visual amenity; Preserving and protecting heritage assets;

Q6. Please provide any further details you would like to give about the preferences given in the previous question. If you answered 'Other' please provide further details here.

This proposal is a 1990s solution to a housing problem that may no longer exist. 700,000 Eastern Europeans have returned east during the pandemic and while some of them may return, many will not. That is more 1% of the population of the UK. In addition, the government's levelling up agenda is likely to reduce north to south migration.

Chippenham risks becoming the last place to build an old discredited solution, to a problem that no longer exists.

The plan makes no mention of improved public transport links or where the residents of these new houses will work. The trains are already full and there is little scope to increase capacity without massive investment. The roads to centres of implements like Bath and Bristol are already choked with vehicles. Without solution to these problems, building further housing is simply creating a bigger problem.

Q7. Please rank the three potential road route options into order of preference.

Option B - Middle route; Option C - Inner route; Option A - Outer route ;

Q8. Please provide any specific feedback you would like to give about 'Option A - Outer route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

One of the few reasons to live in Chippenham is that it is relatively easy to get out into the peace of the countryside without first having to drive. This route destroys that peace by crossing the line of the old canal just below the locks (Zone 2) and then filling in everything within the road with housing. This plan is an invitation to leave Chippenham.

Noise mitigation measures will not solve the problem. They reduce the intensity of tyre noise but it is still there. The days of listening to bird song by the canal will be over.

We used to walk these routes before the current pandemic and lockdown but necessarily have appreciated them much more in recent months. To publish a consultation now, just when people need the countryside you wish to destroy, is tone deaf at best. Wilful ignorance of the needs of the people of Chippenham feels more likely.

Q9. Please provide any specific feedback you would like to give about 'Option B - Middle route'. To help us locate any area specific comments, please specify which Comparison Zone (1-5) your comments relate to.

One of the few reasons to live in Chippenham is that it is relatively easy to get out into the peace of the countryside without first having to drive. This route destroys the peace of both the Pewsham lock area and other main walk along the old railway to Calne (Zone 3) and then filling in everything within the road with housing. This plan is an invitation to leave Chippenham.

Noise mitigation measures will not solve the problem. They reduce the intensity of tyre noise but it is still there. The days of listening to bird song by the canal will be over.

MSF319 (cont.)

It is very noticeable that your 'consultation' does not consult on the need for a bypass (euphemistically called a distributor road) or the additional housing you intend to place inside it. It only gives the opportunity to influence the route, implying that the road itself is a done deal. Whilst your consultation may comply with the letter of the law, it certainly does not comply with spirit of consulting the residents of Chippenham on the future of their town and the countryside that surrounds it.

Wiltshire Council should:

1. Scrap this consultation and start by asking what the people of Chippenham actually want.
2. Provide justification of the need for the new road and housing.
3. Explain where these new residents are going to work, shop and leisure.

It is open to question whether the large number of houses is proposed. The government's housing targets were set before Brexit and before the pandemic. The later has caused circa 700,000 Eastern Europeans to return home and while a proportion will return - they have residency rights - it is unlikely all of them will. 700,000 is more than 1% of the population of the UK. The governments levelling up agenda should reduce north to south migration within England. It is highly likely that the targets will be revised.

If Wiltshire Council takes climate change seriously it will be aware that providing faster road links does not reduce pollution but increases it as people travel further within the same time. Adding further roads when we need to encourage people to use more environmentally sustainable forms of transport is counter productive. Electric vehicles are only a partial solution as significant pollution comes from tyres.

The consultation leaflet mentions "existing footpaths and cycle routes and potential new routes". This does not constitute a sustainable transport policy. There is no mention of improved transport links from Chippenham to employment centres such as Bristol or Swindon, or any industrial areas designated in the plan for local employment. Similarly the consultation makes no mention of improved leisure facilities.

The timing of this consultation could hardly be worse. You have asked residents which of their local foot and cycle routes should be destroyed while they are out walking those same routes enjoying the natural world and sounds of the countryside around them. The countryside around Chippenham has been essential to my wellbeing and that of many others during lockdown but instead of recognising this, Wiltshire Council intends to cut the routes with a road and drown out the natural world with tyre noise. Noise mitigation measures are only ever a partial solution.

It appears that Wiltshire Council wishes to ignore the changing world around it and persist with the 1990s solution of building ever more roads, and 7500 new houses across the best outdoor leisure amenities available.

Easy access to the countryside and the station without having to drive are the only reasons I

have to live in Chippenham other than working in the town. Given my job is flexible, if you go ahead, I will be leaving Chippenham. I am sure I will not be the only one.
